**AT&T COMMUNICATIONS OF THE SOUTHERN STATES, INC.
AND MCI WORLD.COM, INC.'S JOINT RESPONSES TO
FPSC STAFF'S FOURTH SET OF INTERROGATORIES
TO AT&T COMMUNICATIONS OF THE SOUTHERN STATES AND
FPSC STAFF'S FOURTH SET OF INTERROGATORIES
TO MCI WORLD.COM, INC.**

AT&T Communications of the Southern States, Inc. ("AT&T") and MCI WorldCom, Inc. ("WorldCom"), pursuant to Rule 28-106.206, Florida Administrative Code and Rules 1.350 and 1.280, Florida Rules of Civil Procedure, hereby submit the following Responses to FPSC Staff's Fourth Set of Interrogatories to AT&T and WorldCom.

INTERROGATORIES

8. For purposes of the following request, please refer to the rebuttal testimony of AT&T/MCI WorldCom witness Darnell, page 2, line 5. Please provide the derivation of 32.75% ratio shown.

RESPONSE: 32.75% was calculated in the following manner:

****BEGIN PROPRIETARY****

1. BellSouth's Factor FRC worksheet for the 2 wire voice grade UNE loop should be used as a reference for this calculation.

3. 51.215576 Total Annual Expense driven by Expense Factors
4. + 12.5988 Additional Annual Expense Added through the application
5. ----- of BellSouth's proposed 1.0624 Common Cost Factor.

=====

Respondent Greg Darnell

9. For purposes of the following request, please refer to the July 31, 2000, rebuttal testimony of AT&T/MCI witness Darnell, page 4, lines 13-15, where he states that "BellSouth's amount of retail expense has grown significantly as a percent of revenue and in absolute terms over the time period for which these cost studies are based." On what does witness Darnell base this statement?

RESPONSE: See Exhibit GJD-6. All information contained in this exhibit was obtained from BellSouth's reporting to the FCC in ARMIS report number 43-03. As declared in BellSouth appendix F, files 6611SC00.xls, 6612SC00.xls and 6613SC00.xls,

13. **BEGIN PROPRIETARY** 90.57% END PROPRIETARY** of account 6611,

14. **BEGIN PROPRIETARY** 73.54% **END PROPRIETARY** of account

15. 6612, and **BEGIN PROPRIETARY** 91.72% END PROPRIETARY** of account 6613 is retailing expense. Exhibit GJD-6 shows that BellSouth's expense

contained in USOA 6610 grew significantly in both real terms and as a percent of revenue from 1996 - 1999. See Exhibit GJD-3 which depicts the expense amount referenced on page 3 row 6610 divided by the revenue amount contained on page 1

row 530. In 1995 BellSouth's account 6610 divided by net revenue was **BEGIN

31. PROPRIETARY** 3.92% END PROPRIETARY**, in 1996 it was **BEGIN

DECLASSIFIED

1. PROPRIETARY** 4.4% END PROPRIETARY** and in 1998 it was **BEGIN
2. PROPRIETARY** 5.17% END PROPRIETARY**.

Respondent: Greg Darnell

10. For purposes of the following request, please refer to the July 31, 2000, rebuttal testimony of AT&T/MCI witness Darnell, page 4, lines 15-17, where he states that "... it is clear that BellSouth's \$500 million reduction in the amount of avoided retail expense is contrived through differences in cost modeling assumptions."

a) Specifically, to what cost modeling assumptions is witness Darnell referring?

RESPONSE: Given the complexity of BellSouth cost calculator, the shared and common cost application and the Cost Allocation Manual assumptions upon which it is based, it was not possible for AT&T/MCI WorldCom to determine specifically what caused this result. Witness Darnell makes this statement on his belief that it is not plausible for BellSouth's overall retail expense to grow by nearly \$150 million in BellSouth's primary retail expense accounts and at the same time its avoided retail expense to fall by \$500 million.

Respondent: Greg Darnell

b) Please provide a reference to BellSouth's cost study for each of the cost modeling assumptions identified in response to (a).

RESPONSE: There is a long, extensive list of BellSouth assumptions which are interrelated, and a change to one assumption affects others. BellSouth's cost modeling assumptions for shared and common cost can be found by: 1) accessing its cost calculator; 2) choosing inputs; 3) choosing Global; 4) choosing Shared and Common Cost

DECLASSIFIED

RESPONSE: In order to avoid including the erroneous SCIS results for remotes that were causing the SCIS/MO calculation errors, they had to be excluded from the calculations. As these 12 DMS offices are a relatively small number of the total 143 offices in the study, excluding them does not significantly affect the results (if they were calculating correctly).

Respondent: Catherine Pitts

39. For purposes of the following request, please refer to the rebuttal testimony of AT&T/MCI WorldCom witness Pitts, page 14, lines 17-19.

- a) Please define or otherwise describe a DSU2/RAF/BRCS announcement.

RESPONSE: The DSU2/RAF/BRCS is a digital announcement that is used primarily for Advanced Intelligent Network features that have screening lists, such as Automatic Recall and Automatic Callback.

Respondent: Catherine Pitts

- b) Please define or otherwise describe a SAS announcement

RESPONSE: The SAS is a high capacity announcements that can be used to replace the RAF. The SAS can coexist with the RAF's.

Respondent: Catherine Pitts

- c) Please identify the relative capacities of DSU2/RAF/BRCS and SAS announcements.

RESPONSE: For the DSU2/RAF/BRCS: The capacity of one service group (20 circuits) is
20. ***Begin Confidential*** 399 ***End Confidential*** CCS. [SCIS/IN uses an
extremely conservative ***Begin Confidential*** 300 ***End Confidential***
21. CCS utilization). Typically, more than one service group would be provisioned, and

DECLASSIFIED

as this equipment is Poisson engineered, the more service groups deployed, the higher the capacity per service group.

I do not have equivalent CCS capacity information on the SAS.

Respondent: Catherine Pitts

- d) Please identify the respective costs of DSU2/RAF/BRCS and SAS announcements.

RESPONSE: A DSU2/RAF/BRCS announcement *service group*, including the frame and cabinet and corresponding resources is ***Begin Confidential*** \$17,436 ***End Confidential*** list price. The list price of the announcement alone is ***Begin Confidential*** \$11,482 ***End Confidential*** (see 5ESS SCIS investment table item #27). The SCIS formula is the announcement price plus the cost of the termination on the switch module (see Cell H24 in the Revised Hardware Study - 'Announcement' Worksheet). [These formulas are taken from SCIS/IN and can be seen in that program when looking at the feature and requesting to view 'equations']. The discounting is not linear because the formula uses an output from SCIS/MO that would have already been discounted. In addition, only the material cost is discounted, the engineering and installation typically does not receive a discount. The Revised Hardware Study shows that if discounted at new switch prices, the cost would be ***Begin Confidential*** \$5,655.***End Confidential*** If discounted at BellSouth's original discount, the cost would be ***Begin Confidential*** \$10,899.***End Confidential***

I have no information on the SAS announcement cost -- it is not in the version of SCIS used by BellSouth for this filing.

DECLASSIFIED

call setups per feature from column CA)

CC (Getting Started cost per millisecond).

Thus, BellSouth assumes that each feature in the 5E switch uses central processor milliseconds equivalent to one call setup – exactly the same assumption used for the DMS switch.

Respondent: Catherine Pitts

- b) Please describe under what circumstances the 5E central processor would become involved in feature processing.

RESPONSE: The 5E central processor only becomes involved when ***Begin Confidential***
/ C . trunk translations are required or for a feature that uses a system-wide resource, such
1 \ , as conference circuits.***End Confidential*** Of the 56 features BellSouth-
included in its study (see POD #14(l), Attachment 1) only 22 use the central
processor. See AT&T Response to Staff POD #34.

Respondent: Catherine Pitts

43. For purposes of the following request, please refer to the rebuttal testimony of AT&T/MCI WorldCom witness Pitts, page 28, lines 10-18 - page 29, lines 1-12.

- a) By way of clarification, are the results of employing this alternative methodology shown in Mr. King's exhibit?

RESPONSE: The proposed alternative methodology was not included in Mr. King's exhibit because BellSouth's SST model could not be used. The BellSouth calculator uses a feed from the SST model and the SST model would have required a redesign.

Respondent: Catherine Pitts

DECLASSIFIED

The Centrex Functionality UNE Element was set to 0.

The percentages of lines that use Caller ID and Remote Call Forwarding were corrected that contribute to the Feature Port Element.

Respondent: Catherine Pitts

- c) If the response to (a) is negative, has the witness or AT&T/WorldCom performed the required calculations that underlie the alternative methodology?

RESPONSE: Yes, the UNE-P port and end office switch usage costs were estimated. See AT&T's Response to Staff's POD #35.

Respondent: Catherine Pitts

- d) If the response to (c) is affirmative, please identify the results of such calculations.

RESPONSE:

| | Port(P.1.2) | Switch MOU | Trunk MOU |
|---------------------------------|-------------|-------------|-------------|
| ***Begin Confidential*** | | | |
| BST Filed Cost | \$1.43 | \$0.0008941 | \$0.000191 |
| AT&T Revised Cost | \$0.60 | \$0.0004085 | \$0.0000737 |
| Alternate (BST Discounts) | \$5.24 | \$0.000561 | \$0.000114 |
| Alternate (ATT Discounts) | \$1.99 | \$0.000227 | \$0.000044 |
| ***End Confidential*** | | | |

Respondent: Catherine Pitts

44. According to the rebuttal testimony of AT&T/MCI WorldCom witnesses Pitkin/Donovan, page 7 lines 16-18, BellSouth has refused to provide parties with the information necessary to perform similar analyses on BSTLM that BellSouth=s experts have relied on in their affirmative case. Please specifically identify what information BellSouth has refused to provide.

PROPRIETARI

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

In re: Investigation Into Pricing
Of Unbundled Network Elements

) Docket No. 990649-TP
)

DECLASSIFIED

AT&T COMMUNICATIONS OF THE SOUTHERN STATES, INC.
AND MCI WORLDCOM, INC.'S JOINT RESPONSES TO
FPSC STAFF'S THIRD REQUEST FOR PRODUCTION OF DOCUMENTS TO AT&T
COMMUNICATIONS OF THE SOUTHERN STATES, INC. AND
STAFF'S THIRD REQUEST FOR PRODUCTION OF DOCUMENTS
TO MCI WORLDCOM, INC.

AT&T Communications of the Southern States, Inc. ("AT&T") and MCI WorldCom, Inc. ("WorldCom"), pursuant to Rule 28-106.206, Florida Administrative Code and Rules 1.350 and 1.280, Florida Rules of Civil Procedure, hereby submit the following Responses to FPSC Staff's Third Request for Production of Documents to AT&T and WorldCom.

DOCUMENTS REQUESTED

4. Referring to the rebuttal testimony of AT&T/MCI WorldCom witness Darnell, page 4, lines 12-17, please provide all reports, studies, analyses and other documents that support the assertion that BellSouth's retail expense has grown significantly during the past three years, in absolute terms and as a percentage of revenue.

RESPONSE: See Exhibit GJD-6. All information contained in this exhibit was obtained from BellSouth's reporting to the FCC in ARMIS report number 43-03.

Respondent: Greg Darnell

5. Referring to the rebuttal testimony of AT&T/MCI WorldCom witness Darnell, page 4, lines

12-17:

RECEIVED
SEP 1 5 2000

DIRECTOR-REG. RELATIONS¹
TALLAHASSEE, FL

HAND DELIVERED
DATE 9-15-00
TIME 4:50 PM

RESPONSE: See Excel file "% Growth Lines #32.xls". This workbook illustrates that BellSouth has purchased less than 30% of its lines as growth.

BellSouth's response to AT&T's Interrogatory #36 indicates that Florida has

4. approximately ***Begin Confidential*** 6.6 ***End Confidential*** million switched
5. lines with an average annual growth rate from 1995-1999 of ***Begin Confidential*** 4%
End Confidential. When an analog switch is replaced with a digital switch, all the replaced analog lines would have been purchased at the new switch price. Only lines purchased two to three years and later after the initial digital switch purchase may be at growth price. The later the digital switch was purchased, the fewer growth lines there would be. Assuming that 10% of analog lines were replaced annually with digital switch lines between 1990 and 1999 would result in less than 30% of lines in Florida were purchased at growth prices (see attached spreadsheet).

33. Referring to the rebuttal testimony of AT&T/MCI WorldCom witness Pitts, page 14, lines 14-16, please provide all documents that identify the number of lines that can share a CLASS Modem Resource Card.

RESPONSE: Refer to attached "Simplified Diagram of DMS-100 Switch" and the Excel file

17. 'CMR Lines Staff POD #34.xls'. ***Begin Confidential*** One CLASS Modem
18. Card is required per LGC (see DMS diagram). One LGC handles 16-20 DSA links.
19. Each LCM requires 2-6 DSA links. LCMs per LGC therefore are minimum 16/6=2
20. to a maximum of 20/2=10 LCMs per LGC. Each LCM handles 640 line cards.
21. Lines per LGC are minimum 640*2=1280 to maximum of 640*10=6400. Therefore

DECLASSIFIED

1. lines per CLASS Modem Resource Cards are 1280-6400.***End Confidential***

Note that Mr. Page's Rebuttal Testimony has increased the number of lines per CLASS Modem Resource Card fivefold (pg. 14), however, the increase should be twice that.

34. Referring to the rebuttal testimony of AT&T/MCI WorldCom witness Pitts, page 22, lines 13-16, please provide documents that indicate that the 5E switch uses distributed processors that perform the bulk of feature call processing.

RESPONSE: See BST Response to POD 14e, Proprietary Attachment 2, Bates Stamp page

4. B000159 stating ***Begin Confidential*** "The switch module processors (SMPs) perform the majority of call processing tasks." ***End Confidential*** The SMPs are the distributed processors. The Lucent switch's central processor is called the CMP. In older Lucent switches, the central processor was called the AMP. Attached is a spreadsheet excerpting information from the SCIS/IN realtime table showing which features use the central processor.

A copy of the SCIS/IN realtime table is attached. Note that the SCIS/IN realtime table column titled "Item #" refers to the feature numbering scheme in SCIS/IN. Multiple realtimes are often associated with one feature, consequently, feature 2 has a possible six different realtimes numbered 2.00 to 2.05. The column labeled '5ESS CMP' is the central processor and the column labeled '5ESS SM' is the distributed processors. Simply scanning down the columns shows that the SM processor realtimes are doing most of the work for feature call processing.

DECLASSIFIED

Pitkin, Brian

Sent: Wednesday, July 19, 2000 12:25 PM
To: Pitkin, Brian
Cc: Robert G McKnight (E-mail)
Subject: Re: DLC Investment Build-Up

Brian,

Using the BST2000 inputs and the InvestLogicChk.XLS workbook, I did review your worksheet. Using your assumption of all POTS services, my findings are noted in the comments that follow:

RT

- Just a note: Your approach assumes all outdoor DLCs. The model does install Indoor DLCs when a single location has DSO counts that trigger the placement. In this case, the model will not install a cabinet. Instead it will install a bay and batteries.

Vendor A:

- I match your numbers exactly

DECLASSIFIED

Vendor B:

- I match except for the following

- I show the need for a DSX panel for Vendor B. This adds \$820 to each row.
- The formula for the RT Channel Bank is off when the DSO capacity of your rows is not an Integer multiplier of 96 (224,, 448, 896, 1120, 1568, 1792). In these cases, your formula only puts in a fraction of a bank.

COT:

- First, both vendor worksheets seem to assume a concentration Ratio of 1 (if you are using Integrated - see following note).
- Second, the worksheets also seem to be putting in the DS1 line card required for terminating Integrated services and the POTS Line card required for Non-Integrated services. I would eliminate one or the other so that you are not double counting the required line card investment.

Vendor A:

- Noting the above COT comments, I match except for the following

- I show the need for Bay investment at the CO

Vendor B:

- Noting the above COT comments, I match except for the following

- I show the need for Bay investments and a DSX panel

- Similar to the RT Channel bank problem, the formula for the CO Channel Bank is off when the DSO capacity of your rows is not an Integer multiplier of 96 (224,, 448, 896, 1120, 1568, 1792). In these cases, your formula only puts in a fraction of a bank.

DECLASSIFIED

2. SYSTEM CAPACITY AND MEMORY EQUIPAGE

2.1 SYSTEM CAPACITY

2.1.1 OVERVIEW

The 5ESS[®] switch capacity is stated as rated call capacity. Rated call capacity is defined to be that load which the processor can sustain indefinitely while still allowing all performance criteria to be met. This capacity supports normal switch personnel operations with sufficient processor reserve capacity for maintenance and administrative functions, fault recovery, and load demand peaking. It is expressed in terms of completed calls per hour.

The communication module processor (CMP) in the message switch (MSGS) is responsible for centralized control functions such as routing and global resource allocation. The administrative module (AM) processor is responsible for administration, interfaces with operations systems (OSS) and switch personnel, and the UNIX[®] Real-Time Reliable (RTR) Operating System functions such as processor maintenance, process scheduling, memory allocation, and disk interface.

The switching module processors (SMPs) perform the majority of call processing tasks. The SMP is used to process the originating and terminating processes of a call for lines and the incoming and outgoing processes of a call for trunks.

The rated capacity of the 5ESS[®] switch is 1,100,000 equivalent plain old telephone service (POTS) calls per hour. An equivalent POTS call is defined in "Metropolitan/Equivalent POTS Office", Section 2.1.2.1. For toll/tandem 5ESS[®] switch offices with quad link package switches (QLPS), SM-2000s and a Direct Link Node 30 (DLN30), the rated call capacity is 750,000 toll or tandem calls per hour. See "Toll/Tandem Office", Section 2.1.2.4, for the toll/tandem capacity. For a metropolitan office, the rated call capacity is 650,000 calls per hour. See "Metropolitan/Equivalent POTS Office", Section 2.1.2.1, for the metropolitan capacity. See "OSPS Office", Section 2.1.2.5, for the various Operator Services Position System (OSPS) office capacities.

For additional information about the termination and traffic characteristics of the 5ESS[®] switch, see the 235-070-100, Administration and Engineering Guidelines.

2.1.2 CMP RATED CALL CAPACITY

2.1.2.1 Metropolitan/Equivalent POTS Office

The following local office call mix model is used to calculate the equivalent POTS capacity of the 5ESS[®] switch. (See Figure 2-1.)

NOTE: For further detail about the calculations, see the 235-060-110, SDOPS - Engineering Procedures, and the 235-070-100, Administration and Engineering Guidelines.

20 percent line-to-line calls [billed through the Automatic Message Accounting Teleprocessing System (AMATPS)]

40 percent line-to-trunk calls [2-way ISDN User Part (ISUP) trunk billed through AMATPS]

40 percent trunk-to-line calls (2-way ISUP trunk, not billed).

Figure 2-1 Composite Call Mix Comparison

This model assumes 100 percent intermodule calls, including calls to/from remote switching modules (RSMs), and 0 percent ineffective call attempts (that is, abandonments, partial dials, etc.). Ineffective attempts are handled entirely within the switching module (SM) and therefore have no impact on the switch capacity. Intramodule calls require less CMP real time than intermodule calls.
