Pages 748 through 921

PROCEEDINGS:

HEARING

BEFORE:

CHAIRMAN E. LEON JACOBS, JR.
COMMISSIONER J. TERRY DEASON
COMMISSIONER LILA A. JABER
COMMISSIONER BRAULIO L. BAEZ
COMMISSIONER MICHAEL A. PALECKI

DATE:

Friday, July 6, 2001

TIME:

Commenced at 9:00 a.m.

PLACE:

Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY:

JANE FAUROT, RPR
Chief, Office of Hearing Reporter

Services

FPSC Division of Commission Clerk and
Administrative Services

Appearances:

(As heretofore noted.)

CERTIFICATE OF REPORTER

921

P R O C E E D I N G S

TIMOTHY J. GATES

was called as a witness on behalf of Level 3 Communications, LLC, and, having been duly sworn, testified as follows:

DIRECT EXAMINATION

BY MR. HOFFMAN:

Q Have you been sworn, Mr. Gates?

A Yes, I have.

Q Good afternoon. Could you please state your name and business address?

A Yes. My name is Timothy J. Gates. My business address is 15712 West 72nd Circle in Arvada, A-R, V as in Victor, A-D-A, Colorado 80007.

Q By whom are you employed?

A I am employed by QSI Consulting as Senior President and partner.

Q On whose behalf are you testifying in this proceeding?

A Level 3 Communications.

Q Have you prepared and caused to be filed 43 pages of prefiled direct testimony in this proceeding?

A Yes, I have.

Q Do you have any changes or revisions to your prefiled testimony?

A No, I do not.

1 Q If I asked you the same questions set forth in your
2 prefiled direct testimony today, would your answers be the
3 same?

4 A Yes, they would.

5 MR. HOFFMAN: Mr. Chairman, I would ask that
6 Mr. Gates' prefiled direct testimony be inserted into the
7 record as though read.

8 CHAIRMAN JACOBS: Without objection, show Mr. Gates'
9 prefiled direct testimony is entered into the record as though
10 read.

11 MR. HOFFMAN: Thank you.

12 BY MR. HOFFMAN:

13 Q Mr. Gates, you have also attached Exhibit TJG-1, a
14 summary of your qualifications to your prefiled direct
15 testimony?

16 A Yes, sir.

17 MR. HOFFMAN: Mr. Chairman, I would ask that Exhibit
18 TJG-1 be marked for identification.

19 CHAIRMAN JACOBS: Show it marked as Exhibit 19.

20 MR. HOFFMAN: Thank you.

21 (Exhibit 19 marked for identification.)

22 BY MR. HOFFMAN:

23 Q Mr. Gates, you have also prepared and caused to be
24 filed 33 pages of prefiled rebuttal testimony in this case?

25 A Yes, I have.

1 Q Any changes or revisions to your prefiled rebuttal
2 testimony?

3 A No, no changes or revisions.

4 Q If I asked you the same questions contained in your
5 prefiled rebuttal testimony today, would your answers be the
6 same?

7 A Yes, they would.

8 MR. HOFFMAN: Mr. Chairman, I would ask that
9 Mr. Gates' prefiled rebuttal testimony be inserted into the
10 record as though read.

11 CHAIRMAN JACOBS: Without objection, show the
12 prefiled rebuttal testimony is entered into the record as
13 though read.

14 MR. HOFFMAN: Thank you.

1 **Q. PLEASE STATE YOUR NAME, TITLE, AND ADDRESS FOR THE**
2 **RECORD.**

3 **A:** My name is Timothy J. Gates. I am a Senior Vice President of QSI
4 Consulting. My business address is as follows: 15712 W. 72nd Circle,
5 Arvada, Colorado 80007.

6 **Q: WHO EMPLOYS YOU?**

7 **A:** I am employed by QSI Consulting, Inc., (“QSI”)

8 **Q: PLEASE DESCRIBE QSI AND IDENTIFY YOUR POSITION WITH**
9 **THE FIRM.**

10 **A:** QSI is a consulting firm specializing in the areas of telecommunications
11 policy, econometric analysis and computer aided modeling. I currently serve
12 as Senior Vice President.

13 **Q. ON WHOSE BEHALF WAS THIS TESTIMONY PREPARED?**

14 **A:** This testimony was prepared on behalf of Level 3 Communications, LLC
15 (“Level 3”).

16 **Q: PLEASE DESCRIBE YOUR EXPERIENCE WITH**
17 **TELECOMMUNICATIONS POLICY ISSUES AND YOUR**
18 **RELEVANT WORK HISTORY.**

19 **A:** Prior to joining QSI I was a Senior Executive Staff Member at MCI
20 WorldCom, Inc. (“MWCOR”). I was employed by MWCOR for 15 years
21 in various public policy positions. While at MWCOR I managed various
22 functions, including tariffing, economic and financial analysis, competitive
23 analysis, witness training and MWCOR’s use of external consultants. I

1 testified on behalf of MWCOT more than 150 times in 32 states and before
2 the FCC on various public policy issues ranging from costing, pricing, local
3 entry and universal service to strategic planning, merger and network issues.
4 Prior to joining MWCOT, I was employed as a Telephone Rate Analyst in
5 the Engineering Division at the Texas Public Utility Commission and earlier
6 as an Economic Analyst at the Oregon Public Utility Commission. I also
7 worked at the Bonneville Power Administration as a Financial Analyst doing
8 total electric use forecasts and automating the Average System Cost
9 methodology while I attended graduate school. Prior to doing my graduate
10 work, I worked for ten years as a forester in the Pacific Northwest for
11 multinational and government organizations. Exhibit __ (TJG-1) to this
12 testimony is a summary of my work experience and education.

13 **Q: HAVE YOU EVER TESTIFIED IN FLORIDA?**

14 **A:** Yes. I filed testimony in the Commission's Investigation into IntraLATA
15 Presubscription (Docket No. 930330-TP). That testimony was filed on
16 behalf of MCI Telecommunications Corporation in 1994. I also filed
17 testimony in recent arbitrations for US LEC (Docket No. 000084-TP) and
18 Level 3 (Docket No. 000907-TP).

19 **Q: WHAT IS THE PURPOSE OF YOUR DIRECT TESTIMONY?**

20 **A:** The purpose of my testimony is to address certain issues identified at the
21 Commission Staff's January 24, 2001 Issue Identification Meeting.
22 Specifically, I will address issues 13, 14 and 15.

1 **Q: PLEASE DESCRIBE THE QUESTIONS POSED BY THE**
 2 **COMMISSION FOR EACH OF THE ISSUES YOU INTEND TO**
 3 **ADDRESS.**

4 **A:** The question associated with Issue 13 asks:

5 **How should a “local calling area” be defined, for purposes of**
 6 **determining the applicability of reciprocal compensation?**

7
 8 The question associated with Issue 14 has two subparts, and asks:

9 **(a) What are the responsibilities of an originating local**
 10 **carrier to transport its traffic to another local carrier?**

11
 12 **(b) For each responsibility identified in part (a), what form of**
 13 **compensation, if any, should apply?**

14
 15 The question associated with Issue 15 also has two subparts, and asks:

16 **(a) Under what conditions, if any, should carriers be**
 17 **permitted to assign telephone numbers to end users**
 18 **outside the rate center in which the telephone number is**
 19 **homed?**

20
 21 **(b) Should the intercarrier compensation mechanism for calls**
 22 **to these telephone numbers be based upon the physical**
 23 **location of the customer, the rate center to which the**
 24 **telephone number is homed, or some other criterion?**

25
 26 **Q: HOW IS YOUR TESTIMONY ORGANIZED?**

27 **A:** My testimony is organized by issue. The various discussions of the issues
 28 can be found on the following pages:

Issue 15

Page 25

Q: PLEASE SUMMARIZE THE CONCLUSIONS YOU REACH IN YOUR TESTIMONY.

ISSUE 13 – The Commission should establish a policy that calls are “local” by comparing the NXX codes of the calling and called numbers. There are several benefits to this approach. First, this proposal continues the status quo. The industry has used this process to determine the treatment of calls for many decades. Central office switches – of both ILECs and ALECs – have this processing ability in them today. No feature or hardware development will be required. As such, there will be no additional expenses for the industry or delays in implementing this proposal. Second, this proposal will work for all providers regardless of their local calling area definition. Comparing NPA/NXX codes will provide a consistent and fair method of determining whether a call is local. Finally, this proposal avoids consumer confusion by maintaining existing conventions in rating and routing calls.

ISSUE 14 – The FCC has established rules of the road that govern LECs’ interconnection obligations. The first rule is that the ALEC may select the Point of Interconnection (“POI”) for the exchange of traffic. Congress and the FCC gave ALECs the right to select the POI because ILECs would have the incentive and ability to impose unnecessary costs on their competitors if they had the right to unilaterally designate POIs. The second rule is that each LEC is responsible for delivering its traffic to the POI and paying the other

1 LEC reciprocal compensation for accepting the traffic at the POI and
2 delivering it to the called party. Because a LEC recovers the costs of
3 originating traffic through the rates it charges its end users, the FCC prohibits
4 LECs from assessing other carriers for the costs of delivering the LEC's
5 traffic to the POI. As the Commission found in Docket 000907-TP, taken
6 together, these two rules establish that each LEC must deliver its traffic to the
7 POI selected by the ALEC and each LEC recovers the cost of delivering its
8 traffic to the POI from its end users, not its competitors.

9 **ISSUE 15** – Level 3, other ALECs, and ILECs currently assign NXX codes
10 to customers who are not physically located in the exchange area associated
11 with a particular NXX. These calls have been and are currently treated as
12 local calls. For example, BellSouth has offered “foreign exchange service”
13 (“FX”) with this capability for many years. This practice has many benefits
14 to the public, including allowing consumers and small businesses, especially
15 those in isolated or rural areas of the state, efficient, reasonably priced access
16 to Internet service providers (“ISPs”) and other businesses that otherwise
17 would be impossible if such calls were treated as toll calls or anything other
18 than local.

19 There is no economic, engineering, factual or policy basis for making
20 intercarrier compensation depend on the actual location of the terminating
21 carrier's customer. Indeed, from the standpoints of both cost and
22 functionality, the physical location of the terminating carrier's customer is

1 irrelevant. Historically, the telecommunications industry has compared NXX
2 codes to determine the appropriate treatment of calls as local or toll. Calls to
3 a given NXX code use the same path and the same equipment to reach the
4 POI and the terminating carrier's switch regardless of the location of the
5 terminating customer. To single out a class of calls and to suggest that no
6 compensation should be paid for carrying those particular calls is not
7 equitable and ignores the simple economic and engineering reality that both
8 kinds of calls are functionally identical and should be subject to the same
9 intercarrier compensation framework that the parties have negotiated. Such
10 treatment would also be inconsistent with the overarching goals and
11 objectives of the Telecommunications Act, and would violate existing FCC
12 rules and Orders. The intercarrier compensation mechanism should be based
13 on the rate center to which the telephone number is homed.

14 **ISSUE 13 – How should a “local calling area” be defined, for purposes**
15 **of determining the applicability of reciprocal compensation?**

16 **Q: PLEASE DEFINE A LOCAL CALLING AREA IN GENERAL**
17 **TERMS.**

18 **A:** Newton's Telecom Dictionary defines “Local Service Area” as “The
19 geographic area that telephones may call without incurring toll charges.”
20 That same dictionary defines a “local call” as “Any call within the local

1 service area of the calling phone.”¹ In an older reference, “Engineering and
2 Operations in the Bell System,” it states, “A local calling area, or exchange
3 area, is a geographic area within which a strong community of interest exists
4 (that is, heavy calling volume among customers within the area). It may be
5 served by several central offices.”²

6 **Q: FOR PURPOSES OF THIS PROCEEDING, HOW SHOULD THE**
7 **COMMISSION DEFINE LOCAL CALLING AREA?**

8 **A:** A concise definition is difficult because of the many different types of local
9 calling currently available to consumers and businesses. When people
10 subscribe to local service they are frequently provided with many different
11 service types to choose from – all of which might be considered local calling.

12 **Q: PLEASE PROVIDE SOME EXAMPLES.**

13 **A:** A person might select flat rate service or measured service. Flat rate service
14 results in unlimited calling within the local calling area. Local measured
15 service has a charge per unit of telephone usage – either a per minute or per
16 call charge. Mandatory local measured service – without the option of flat
17 rate service – is rare because of the distributional effects on certain classes of
18 customers (i.e., elderly, poor). Frequently a local measured service option is
19 available for those who can only afford limited use of the telephone.

¹ Newton, Harry; Newton’s Telecom Dictionary; 16th Edition; Telecom Books; 2000.

² Engineering and Operations in the Bell System, Second Edition, AT&T Bell Laboratories, Murray Hill, NJ; 1984; at 56.

1 Depending upon where the person is relative to other areas, he or she
2 may select extended area service or other local calling plans which would be
3 in addition to the basic service but which would extend their local calling
4 area. Such plans can be one-way (i.e., from calling area A to calling area B,
5 but not from calling area B to calling area A), two-way, optional or
6 mandatory.

7 **Q: ARE YOU SUGGESTING THAT THE DEFINITION OF LOCAL**
8 **CALLING AREA CAN BE DIFFERENT FOR DIFFERENT**
9 **CONSUMERS IN THE SAME AREA?**

10 **A:** Yes. It is entirely possible that five people in a cul-de-sac would have very
11 different local calling areas based upon their calling patterns, community of
12 interest, income, age, interests, etc. Indeed, the local calling area might be
13 different based upon the ALEC selected by the consumer or business.

14 **Q: CAN AN ALEC HAVE DIFFERENT LOCAL CALLING AREAS**
15 **THAN THE ILEC?**

16 **A:** Yes, it can. While this varies from state to state, it is not uncommon for
17 regulatory commissions to allow ALECs to define their local calling areas in
18 a different geographic configuration from that of the ILEC. Indeed, an ALEC
19 may use this difference in local calling scope as a way to distinguish its
20 service from that of the incumbent. With the introduction of competition at
21 the local level, carriers will seek to differentiate their service from the
22 incumbent and other ALECs. Such differentiation can take the form of

1 additional features, reduced prices, different pricing schemes, and expanded
2 local calling areas. Depending upon calling characteristics, an expanded
3 local calling area could be an important service feature in the minds of
4 discerning consumers. I have heard of examples where some ALECs have
5 offered LATA-wide local calling. I also understand that BellSouth maintains
6 intercarrier compensation arrangements with some LECs that define the local
7 calling area, as between carriers, as the entire LATA.

8 **Q: MR. GATES, YOU HAVE SUGGESTED THAT ALECS MIGHT USE**
9 **DIFFERENT LOCAL CALLING AREAS AS A MARKETING TOOL.**
10 **WOULD DIFFERENT LOCAL CALLING AREAS BE CONFUSING**
11 **FOR CONSUMERS?**

12 **A:** Yes, they might. And for that reason, most ALECs choose to have their local
13 calling areas coterminous with those of the ILEC. Nevertheless,
14 sophisticated consumers and business users may make good use of such local
15 calling area disparities.

16 **Q: HOW ARE LOCAL CALLING AREAS ESTABLISHED BY LOCAL**
17 **EXCHANGE COMPANIES – EITHER ILECS OR ALECS?**

18 **A:** Local exchange companies do not unilaterally establish local calling areas.
19 Local calling area boundaries are usually established through tariffs on file
20 with the regulatory commission. The LEC recommends a local calling area
21 and associated rates and the commission – frequently with input from other
22 parties, including consumer groups – reviews the filing. Calling patterns,

1 network considerations, communities of interest, future growth and numerous
2 other issues impact the ultimate boundaries. The approved local calling areas
3 are then tariffed and made available to consumers.

4 **Q: YOU HAVE DISCUSSED DIFFERENT SIZES AND TYPES OF**
5 **LOCAL CALLING AREAS. CAN LOCAL CALLING AREAS**
6 **TRANSIT STATE BOUNDARIES?**

7 **A:** Yes. In fact, interstate local calling is relatively common. Let me provide
8 some examples. There are many areas in the United States that have
9 communities of interest that cross state boundaries. In Tennessee, for
10 example, calls to and from Memphis, Tennessee and West Memphis,
11 Arkansas are local calls. Another example is Bristol. The state line goes
12 right through the middle of Bristol, so there are many local calls that go
13 between Tennessee and Virginia that are actually interstate. Calls from
14 Louisville, Kentucky to Jeffersonville, Indiana are local. In Mississippi,
15 you can make interstate calls to two different states on a local basis. You can
16 make local calls from Southaven, Mississippi to Memphis, Tennessee and to
17 West Memphis, Arkansas. There is also county wide local calling permitted
18 in DeSoto County, Mississippi so that consumers can reach Hernando (the
19 county seat) without having to dial a toll call. There are probably examples
20 of interstate local calling in Florida, but I am not aware of them at this time.

21 **Q: HOW DOES A LEC DETERMINE WHETHER A CALL IS LOCAL**
22 **OR TOLL?**

1 **A:** When a customer makes a call, the switch in the central office receives the
2 dialed digits. The dialed digits – specifically, the NPA/NXX of the dialed
3 number – are used to determine whether the call is to be treated as local or
4 toll.

5 **Q: BEFORE CONTINUING YOUR DISCUSSION OF HOW TO**
6 **DETERMINE LOCAL VERSUS TOLL CALLS, PLEASE EXPLAIN**
7 **WHAT YOU MEAN BY NPA/NXX.**

8 **A:** The NPA is known as the area code. NXX codes are the fourth through sixth
9 digits of a ten-digit telephone number. For example, in my office telephone
10 number, (303) 424-4433, the NPA is “303,” and the NXX code is “424”. The
11 NXX code is also known as the central office code.

12 **Q: HOW ARE CUSTOMERS ASSIGNED AN NXX CODE?**

13 **A:** Carriers, like Level 3 and BellSouth, request and are assigned blocks of
14 telephone numbers by the numbering administrator. The carriers then assign
15 numbers to their customers as requested.

16 **Q: GIVEN THAT UNDERSTANDING OF NPA/NXX CODES, HOW**
17 **DOES THE LEC DETERMINE WHETHER A CALL IS LOCAL OR**
18 **TOLL?**

19 **A:** The LEC central office switch compares the number of the calling party with
20 the number of the party being called to determine whether the call is local or
21 toll. Standard industry procedure provides that each NXX code is associated

1 with a particular rate center.³ A single rate center may have more than one
2 NXX code, but each code is assigned to one and only one rate center. The
3 NXX uniquely identifies the central office switch serving the NXX code, so
4 that each carrier that is routing a call knows to which end office switch to
5 send the call.

6 Comparing NXX codes establishes the routing and rating of the call.
7 If the NXX code of the called number is not found in the translation table of
8 the central office switch, the call is routed to the tandem for additional
9 information and routing.

10 The translation tables may also have additional information on the
11 routing of the call based on the dialed digits. The switch may have specific
12 instructions on how to route and bill certain calls to certain NXX codes.

13 **Q: IS IT POSSIBLE TO ASSIGN NXX CODES TO CUSTOMERS WHO**
14 **DO NOT PHYSICALLY RESIDE IN THE RATE CENTER**
15 **NORMALLY ASSIGNED TO THE NXX?**

16 **A:** Yes. It is not uncommon for NXX codes to be assigned to customers who are
17 not physically located in the rate center where the NXX is “homed.” When
18 an ILEC provides this arrangement, it typically is called foreign exchange or
19 FX service. This type of arrangement also may be referred to as “Virtual
20 NXX” because the customer assigned the telephone number has a “virtual”

³ A rate center is a geographic location with specific vertical and horizontal coordinates used to determine mileage, for rating local or toll calls.

1 presence in the calling area associated with that NXX. Calls to these
2 customers are still routed to the end office switch associated with the NXX
3 code, but then are routed within the terminating carrier's network to the
4 called party's actual physical location. The virtual NXX issue is discussed
5 in detail in response to Issue 15.

6 **Q: GIVEN THE DISPARITY IN THE TREATMENT OF CALLS AS**
7 **YOU'VE DESCRIBED ABOVE, HOW DO YOU PROPOSE TO**
8 **DEFINE A LOCAL CALLING AREA?**

9 **A:** The Commission should establish a policy that calls are determined to be
10 "local" by comparing the NXX codes of the calling and called numbers. The
11 only time this traditional and existing convention should be violated is when
12 the Commission has approved local calling areas – such as interstate or
13 extended area service local calls – which cannot readily conform to this
14 process. The translation tables of the central offices switches will be
15 programmed to treat these special calls as local – just as they are today.

16 **Q: WHAT ARE THE BENEFITS OF YOUR DEFINITION OF LOCAL**
17 **CALLING AREA?**

18 **A:** There are several benefits to this approach. First, this proposal continues the
19 status quo. The industry has used this process to determine the treatment of
20 calls for many decades. Central office switches – of both ILECs and ALECs
21 – have this processing ability in them today. No feature or hardware
22 development will be required. As such, there will be no additional expenses

1 for the industry or delays in implementing this proposal. Second, this
2 proposal will work for all providers regardless of their local calling area
3 definition. As illustrated above, there are a wide variety of local calling
4 scenarios being offered by carriers today. The physical locations of the
5 calling and called parties is not sufficient to determine the correct treatment
6 of calls. Comparing NPA/NXX codes will provide a consistent and fair
7 method of determining whether a call is local. Finally, this proposal avoids
8 consumer confusion by maintaining existing conventions in rating and
9 routing calls. The industry is moving towards simpler calling plans because
10 consumers have been harmed by misleading or confusing plans in the past.
11 To introduce a new method of determining what is local and what is toll
12 would be a step backwards for consumers.

13

14 **ISSUE 14 – (a) What are the responsibilities of an originating local carrier**
15 **to transport its traffic to another local carrier?**

16 **(b) For each responsibility identified in part (a), what form of**
17 **compensation, if any, should apply?**

18 **Q: ARE LECs' TRAFFIC EXCHANGE RESPONSIBILITIES**
19 **ESTABLISHED BY THE ACT AND THE FCC?**

20 **A:** Yes. The Communications Act of 1934, as amended by the
21 Telecommunications Act of 1996 ("Act"), identifies specific responsibilities
22 of both ILECs and ALECs, and the FCC has implemented those guidelines

1 in its orders and rules. The FCC has adopted “rules of the road” governing
2 LECs’ interconnection responsibilities. The first rule is that an ALEC may
3 select the POI where the parties will exchange traffic. (Mr. Hunt addresses
4 the legal basis for the first rule in his testimony.) The second rule is that each
5 LEC is responsible for delivering its originating traffic to the POI and paying
6 the other LEC reciprocal compensation for terminating such traffic. As the
7 Commission found in Docket 000907-TP, together, these two rules establish
8 that each LEC must deliver its traffic to the POI selected by the ALEC and
9 each LEC recovers the cost of delivering that traffic from its end users, not
10 its competitor.

11 **Q: ARE THERE ECONOMIC CONSIDERATIONS THAT UNDERLIE**
12 **THE FIRST RULE OF THE ROAD?**

13 **A:** Yes. As the FCC noted in implementing Section 251 of the Act:

14 Section 251(c)(2) gives *competing carriers* the right to deliver
15 traffic terminating on an incumbent LEC’s network at any
16 technically feasible point on that network, rather than
17 obligating such carriers to transport traffic to less convenient
18 or efficient interconnection points.⁴

19
20 The location and number of POIs is determined based on financial and
21 engineering parameters. Each carrier needs to install transmission facilities
22 and equipment to deliver its originating traffic to each POI, and to receive

⁴ *Implementation of the Local Competition Provisions in the Telecommunications Act of 1996, CC Docket No. 96-98, First Report and Order, 11 FCC Rcd 15499, ¶ 209 (1996) (“Local Competition Order”)* (emphasis added).

1 terminating traffic from other carriers. Of course, ILECs in Florida already
2 have ubiquitous networks throughout their service territories and can use
3 existing facilities to transport the traffic they exchange with ALECs. Thus,
4 if the volume of traffic originating from and/or terminating to a particular
5 ILEC tandem or local calling area is low, it is more efficient for such traffic
6 to be carried on the incumbent's common network capacity than to establish
7 dedicated capacity that would be used solely to carry traffic between the
8 ILEC and ALEC. In most instances, the ILEC has been in the local exchange
9 business for over 100 years and has built ubiquitous facilities to transport
10 traffic throughout its service area during that period of time. Since the ILEC
11 already has facilities in place to carry this traffic, and therefore benefits from
12 certain economies of scale, its costs to switch and transport traffic it
13 exchanges with an ALEC are relatively low. Both parties benefit from these
14 economies of scale, the ILEC for its originating traffic and the ALEC for its
15 terminating traffic. On the other hand, new entrants like Level 3 must
16 construct facilities. This requires obtaining local permits, digging up streets,
17 etc., or leasing or acquiring entirely new facilities for access to each POI.
18 Therefore, the selection of POIs has significant competitive implications.

19 The ILEC should not be permitted to impose interconnection
20 requirements that require ALECs to duplicate the ILEC's legacy network
21 architecture. Rather, new entrants should be free to deploy least cost,
22 forward-looking technology, such as the combination of a single switching

1 entity with a fiber ring to serve an area that the ILEC may serve through a
2 hub-and-spoke, switch-intensive architecture. Initial interconnection at the
3 tandem level and at a single POI per LATA is crucial to providing new
4 entrants this flexibility. For a new entrant to begin service, it requires a
5 single connection capable of handling all of its calls, including local, toll, and
6 access traffic. However, as Mr. Hunt discusses, Level 3 agrees that sound
7 engineering principles may eventually dictate that Level 3 add additional
8 POIs.

9 **Q: HAS THE FCC EXPLAINED WHY IT IS IMPORTANT THAT ALECs**
10 **BE PERMITTED TO SELECT POIs FOR THE EXCHANGE OF**
11 **TRAFFIC?**

12 **A:** Yes. At paragraph 172 of the Local Competition Order the FCC notes that
13 Section 251(c)(2) “allows competing carriers to choose the most efficient
14 points at which to exchange traffic with incumbent LECs, thereby lowering
15 the competing carrier's cost of, among other things, transport and termination
16 of traffic.” As Mr. Hunt explains, this Commission has also found that the
17 POI is where the exchange of traffic takes place.

18 The FCC explained, in part, why the right to select POIs is provided
19 to ALECs, and not ILECs, at paragraph 218 of the Local Competition Order:

20 Given that the incumbent LEC will be providing
21 interconnection to its competitors pursuant to the purpose of
22 the 1996 Act, the LEC has the incentive to discriminate
23 against its competitors by providing them less favorable terms
24 and conditions of interconnection than it provides itself.

1 Further, economics literature regularly discusses the fact that a firm, such as
2 an ILEC, may benefit from strategic behavior that raises its rivals' costs.⁵

3 **Q: MIGHT AN ILEC USE THE ABILITY TO ESTABLISH POIs TO**
4 **IMPEDE COMPETITION?**

5 **A:** Yes, it might. The FCC recognized that one of the goals of competition was
6 to eliminate this ILEC ability. At paragraph four of the Local Competition
7 Order the FCC states:

8 Competition in local exchange and exchange access markets
9 is desirable, not only because of the social and economic
10 benefits competition will bring to consumers of local services,
11 but also because competition eventually will eliminate the
12 ability of an incumbent local exchange carrier to use its
13 control of bottleneck local facilities to impede free market
14 competition. Under section 251, incumbent local exchange
15 carriers (LECs), including the Bell Operating Companies
16 (BOCs), are mandated to take several steps to open their
17 networks to competition, including providing interconnection,
18 offering access to unbundled elements of their networks, and
19 making their retail services available at wholesale rates so that
20 they can be resold.

21
22 It is clear that ALECs such as Level 3 do not have the ability – by virtue of
23 existing bottleneck facilities – to impede free market competition. Indeed,
24 companies such as Level 3 have no monopoly markets or captive customers
25 that would give them market power sufficient to harm the public interest. It
26 is for that reason that ALECs have the right to designate POIs but ILECs do
27 not.

⁵ See, Carlton and Perloff, Modern Industrial Organization, Third Edition, Addison-Wesley, 2000.

1 **Q: ARE THERE PUBLIC POLICY REASONS TO DENY AN ILEC THE**
2 **ABILITY TO ESTABLISH POIs FOR TRAFFIC IT ORIGINATES?**

3 **A:** Yes. If an ILEC were allowed to identify POIs for originating traffic it would
4 be able to disadvantage ALECs by imposing additional and unwarranted
5 costs on new entrants. Such a result is not in the public interest and would
6 severely impede the development of competition. If an ILEC were allowed
7 such discretion, it may force ALECs to essentially duplicate the incumbent's
8 network. The traffic volumes and business that new entrants are able to
9 attract as they enter a market would never support the wholesale duplication
10 of an ILEC's network. Indeed, a requirement to build or lease facilities to
11 each ILEC local calling area would discourage ALECs from ever entering
12 new markets until they could secure a customer base large enough to justify
13 such an investment.

14 An ILEC's desire to identify POIs for its originating traffic is
15 understandable, especially given its incentives discussed above, but it is not
16 in the public interest. Granting ILECs such an ability would force new
17 entrants like Level 3 to build facilities to each ILEC local calling area or to
18 pay the ILEC for transport of ILEC-originated traffic from the local calling
19 areas to Level 3's POI. Such a result would be inconsistent with the goals of
20 the Local Competition Order and the Act. Simply because an ILEC's
21 network has been in place for decades does not mean that it is the most
22 efficient network. New entrants utilizing new technology and information

1 should not be limited or hampered by the decisions of ILEC network planners
2 who established switch locations and local calling areas decades ago under
3 a legal and regulatory regime which permitted a monopoly local exchange
4 market. Rather, the promotion of efficient markets should dictate that new
5 entrants such as Level 3 only be required to interconnect in a specific area
6 where traffic volumes and customer demand justify investment in facilities
7 needed to reach that area.

8 **Q: COULD YOU PLEASE EXPLAIN THE SECOND RULE OF THE**
9 **ROAD CONCERNING EACH LEC'S OBLIGATION TO DELIVER**
10 **ITS TRAFFIC TO THE POI?**

11 **A:** Yes. Each carrier is responsible, financially and operationally, to deliver
12 traffic to the POI.

13 **Q: HAS THE FCC ISSUED ANY RECENT OPINIONS ON THE**
14 **RESPONSIBILITIES OF LECs IN THIS REGARD?**

15 **A:** Yes, it has. There has been some debate about rule 51.703(b), which states,
16 "A LEC may not assess charges on any other telecommunications carrier for
17 local telecommunications traffic that originates on the LEC's network." In
18 a recent case before the FCC, several incumbent LECs argued that this rule
19 would apply only to "traffic," and would not prevent a carrier from charging
20 an interconnecting carrier for the cost of "facilities" used in originating
21 traffic. The FCC flatly rejected that argument:

1 Defendants argue that section 51.703(b) governs only
2 the charges for “traffic” between carriers and does not
3 prevent LECs from charging for the “facilities” used
4 to transport that traffic. We find that argument
5 unpersuasive given the clear mandate of the *Local*
6 *Competition Order*. The Metzger Letter correctly
7 stated that the Commission’s rules prohibit LECs
8 from charging for facilities used to deliver
9 LEC-originated traffic, in addition to prohibiting
10 charges for the traffic itself. Since the traffic must be
11 delivered over facilities, charging carriers for facilities
12 used to deliver traffic results in those carriers paying
13 for LEC-originated traffic and would be inconsistent
14 with the rules. Moreover, the Order requires a carrier
15 to pay for dedicated facilities only to the extent it uses
16 those facilities to deliver traffic that it originates.
17 Indeed, the distinction urged by Defendants is
18 nonsensical, because LECs could continue to charge
19 carriers for the delivery of originating traffic by
20 merely re-designating the “traffic” charges as
21 “facilities” charges. Such a result would be
22 inconsistent with the language and intent of the Order
23 and the Commission’s rules.⁶

24 This Commission also rejected a similar argument raised by BellSouth in its
25 arbitration with Level 3 - Docket 000907-TP. It is clear that each LEC bears
26 the responsibility of operating and maintaining the facilities used to transport
27 and deliver traffic on its side of the POI. This responsibility extends to both
28 the facilities as well as the traffic that transits those facilities. Likewise, an
29 interconnecting LEC will bear responsibility for the facilities on its side of

⁶ *TSR WIRELESS, LLC, et al, Complainants, v. US WEST COMMUNICATIONS, INC. et al, Defendants, MEMORANDUM OPINION AND ORDER*; File Nos. E-98-13, E-98-15, E-98-16, E-98-17, E-98-18, ¶25 (rel. June 21, 2000) (*TSR Order*) (footnotes omitted, emphasis in original).

1 the POI, but then recover the costs of transporting and terminating traffic
2 over those facilities from the originating LEC.

3 **Q: DID THE FCC FURTHER EXPLAIN ITS LOGIC FOR REQUIRING**
4 **THE ORIGINATING CARRIER TO BEAR THE COSTS OF**
5 **DELIVERING ORIGINATING TRAFFIC TO THE TERMINATING**
6 **CARRIER?**

7 **A:** Yes. In the TSR Order the FCC further clarified its logic as follows:

8 According to Defendants, the Local Competition Order's
9 regulatory regime, which requires carriers to pay for facilities
10 used to deliver their originating traffic to their co-carriers,
11 represents a physical occupation of Defendants property
12 without just compensation, in violation of the Takings Clause
13 of the Constitution. We disagree. The *Local Competition*
14 *Order* requires a carrier to pay the cost of facilities used to
15 deliver traffic originated by that carrier to the network of its
16 co-carrier, who then terminates that traffic and bills the
17 originating carrier for termination compensation. In essence,
18 the originating carrier holds itself out as being capable of
19 transmitting a telephone call to any end user, and is
20 responsible for paying the cost of delivering the call to the
21 network of the co-carrier who will then terminate the call.
22 Under the Commission's regulations, the cost of the facilities
23 used to deliver this traffic is the originating carrier's
24 responsibility, because these facilities are part of the
25 originating carrier's network. The originating carrier recovers
26 the costs of these facilities through the rates it charges its own
27 customers for making calls. This regime represents "rules of
28 the road" under which all carriers operate, and which make it
29 possible for one company's customer to call any other
30 customer even if that customer is served by another telephone
31 company.⁷ (emphasis added) (footnotes omitted)
32

⁷ Id. at ¶ 34.

1 If an ALEC is forced to deploy or lease facilities from an ILEC's local calling
2 areas to the POI, the ILEC will be getting a free ride. Not only would the
3 ALEC have to provide facilities on its side of the POI, but it would also have
4 to provide (or pay for) facilities on the ILEC side of the POI. Such a
5 proposal is not equitable or consistent with this Commission's or the FCC's
6 interconnection principles.

7 **Q: IN THE PAST, BELLSOUTH HAS ARGUED THAT IT MAY**
8 **CHARGE ALECs NOT ONLY FOR THE FACILITIES FROM EACH**
9 **LOCAL CALLING AREA TO THE POI, BUT ALSO FOR THE**
10 **TRUNKS OR "LANES" ON THOSE FACILITIES. IS IT**
11 **APPROPRIATE TO IMPOSE ANY CHARGES FOR LOCAL**
12 **INTERCONNECTION TRUNKS?**

13 **A:** No. It is inappropriate to impose any charges for local interconnection
14 trunks. These are co-carrier trunks provided for the mutual benefit of the
15 parties in exchanging customer traffic, and both parties must deploy matching
16 capacity on each side of the POI. It is each carrier's financial and operational
17 responsibility to provide facilities on its side of the POI to deliver traffic to
18 the terminating carrier.

19 **Q: WHAT DO YOU MEAN WHEN YOU SAY THE TRUNKS ARE FOR**
20 **THE "MUTUAL BENEFIT" OF THE PARTIES?**

21 **A:** The interconnection trunks are as valuable to BellSouth as they are to Level
22 3 or any ALEC. They are used by BellSouth to ensure that calls between its

1 customers and Level 3 customers are completed; without such trunks,
2 BellSouth would not be able to provide the level of services demanded by its
3 own customers.⁸ Second, it is not as if Level 3 bears no cost in
4 interconnecting with BellSouth. To the contrary, for every trunk that
5 BellSouth sets up to handle Level 3 traffic, Level 3 must ensure that the
6 appropriate level of capacity is available on its own side of the POI so that
7 calls coming over the BellSouth trunks can then flow over the Level 3
8 network to their intended destination (and vice versa). Thus, it is in both
9 carriers' interest (or at least in both carriers' customers' interest) to have an
10 adequate amount of co-carrier trunks in place. Requiring each carrier to pay
11 the other for co-carrier trunks is therefore inappropriate and contrary to the
12 principles underlying cooperative reciprocal interconnection. It also conflicts
13 with the principles of interconnection compensation, since the focus should
14 only be on the carriage of traffic by one carrier for another carrier, rather than
15 the facilities used to carry that traffic.

16 **Q: CAN YOU PLEASE CLARIFY WHAT CHARGES ARE**
17 **APPROPRIATE FOR THE TERMINATION OF TRAFFIC**
18 **EXCHANGED AT THE POI?**

19 **A:** Yes. Once an ALEC hands its originating traffic to an ILEC at the POI, the
20 ALEC must pay the ILEC reciprocal compensation for the terminating

⁸ By "level of service," I am referring to the amount of blocking experienced by consumers.

1 functions the ILEC performs. The same principle applies when the ILEC
2 hands traffic off to the ALEC at the POI for termination. BellSouth, like
3 most ILECs, has developed elemental, per minute of use rates for tandem
4 switching, common transport, and end office switching. However, all three
5 rates do not always apply. For instance, some ALECs may determine that the
6 traffic volume to a particular end office justifies purchasing dedicated
7 transport to that end office. In such instances, the appropriate dedicated
8 transport rates would apply in addition to the end office switching rate.
9 However, since the dedicated transport is used to carry the traffic in lieu of
10 tandem-switched transport, the tandem switching and common transport
11 elemental rates would not apply. In either case, as illustrated above, trunk
12 charges are not appropriate.

13

14 **ISSUE 15 – (a) Under what conditions, if any, should carriers be**
15 **permitted to assign telephone numbers to end users**
16 **outside the rate center in which the telephone number is**
17 **homed?**

18 **(b) Should the intercarrier compensation mechanism for**
19 **calls to these telephone numbers be based upon the**
20 **physical location of the customer, the rate center to which**
21 **the telephone number is homed, or some other criterion?**

1 **Q: WHY WOULD CUSTOMERS WANT A TELEPHONE NUMBER**
2 **WITH A NXX CODE OUTSIDE OF THEIR LOCAL CALLING**
3 **AREA?**

4 **A:** Customers want to use these so-called virtual NXX codes because it allows
5 them to take advantage of state-of-the-art, currently available technologies
6 that allow consumers to reach their businesses without the disincentive of a
7 toll call. It also allows businesses and organizations to provide service in
8 other areas before they actually have facilities or offices in those areas.
9 Absent such calling plans, consumers would have to wait for carriers to build
10 out their networks – which could take years and millions of dollars. For
11 instance, so-called virtual NXX arrangements enable ISPs, among other
12 customers, to offer local dial-up numbers throughout Florida, including to
13 more isolated, rural, areas of the State. Access to the Internet is affordable
14 and readily available in all areas of the state because these NXX
15 arrangements allow ISPs to establish a small number of points of presence
16 (“POPs”) that can be reached by dialing a local number regardless of the
17 physical location of the Internet subscriber. Small businesses in rural areas
18 in particular, benefit from low-cost Internet access and increasingly depend
19 on such access to remain competitive. Thus, virtual NXX arrangements
20 allow for widespread affordable Internet access which benefit Florida’s
21 consumers while promoting economic development.

1 Other organizations, such as the Florida State government, may also
2 want to make use of virtual NXX arrangements to allow residents to contact
3 state agencies – which may actually reside in Tallahassee – without incurring
4 the cost of a toll call. Such an arrangement would allow the state to provide
5 services in rural areas without building or renting space in those localities and
6 without relocating employees.

7 Carriers use virtual NXX codes because they allow them to respond
8 to customer demand for new and innovative services. In 1997 and 1998,
9 there was considerable discussion about the benefits expected from
10 competition in the local exchange market. Among the more important
11 expected benefits were that competition would drive competitors to develop
12 and utilize networks efficiently in order to gain competitive advantages, by
13 allowing them to serve customers at lower cost. Prohibiting all carriers from
14 using virtual NXXs would constitute an artificial impediment to this natural
15 progression of a developing competitive market, and would deny Florida
16 residents the associated benefits.

17 **Q: IS THIS NXX CODE ISSUE SIMPLY AN ASPECT OF THE ISP**
18 **COMPENSATION ISSUE?**

19 **A:** No. Although many ISPs do use virtual NXX arrangements, these services
20 are also used by other businesses and organizations that want to maintain a
21 local telephone number in some community where they do not have a

1 physical presence. This issue therefore affects ordinary local voice telephone
2 calls as well as ISP traffic.

3 **Q: IS THE FEATURE PROVIDED WITH VIRTUAL NXX A SERVICE**
4 **THAT NEEDS TO BE TARIFFED OR OTHERWISE APPROVED BY**
5 **THE FLORIDA COMMISSION?**

6 **A:** No. Virtual NXX is not a service per se; it is a network functionality.
7 However, a LEC may have its own name for a service that is meant to
8 address this functionality, such as Foreign Exchange.

9 **Q: IS IT UNLAWFUL OR AGAINST ANY RULES FOR ALECs TO**
10 **PROVIDE VIRTUAL NXXS TO THEIR CUSTOMERS?**

11 **A:** No. The use of virtual NXX codes is not unlawful or in any other way
12 improper. ILECs provide several virtual NXX services, such as FX service,
13 to their customers, including ISPs. Indeed, nobody complained about such
14 uses of NXX codes until ALECs had some success in attracting ISP
15 customers and the ILECs began looking for ways to avoid compensating
16 them for serving and terminating calls to ISPs. From what I understand, there
17 is no dispute between the parties as to whether codes can be used in this
18 manner -- rather; the dispute is over how the parties will compensate one
19 another in exchanging such calls.

20 **Q: IF THE COMMISSION PROHIBITED USE OF VIRTUAL NXXs,**
21 **WOULD THAT MEAN THAT EXTENDED AREA SERVICE (“EAS”)**
22 **CALLS WOULD NO LONGER BE CONSIDERED LOCAL?**

1 **A:** Depending upon how the Commission chooses to address this issue, it could.
2 Any call that this Commission currently considers local, but that transits an
3 exchange boundary, could be considered a toll call. In the mid to late 80's
4 – when interexchange competition was just starting to develop – the LECs
5 requested that commissions change certain toll traffic into local traffic
6 through EAS arrangements. Now that competition is starting to develop for
7 local traffic, the LECs want the commission to change the treatment of
8 certain local traffic back to toll.

9 **Q. IN OTHER PROCEEDINGS, BELLSOUTH AND OTHER ILECs**
10 **HAVE ARGUED THAT VIRTUAL NXX IS MORE LIKE 800**
11 **SERVICE THAN FX SERVICE. DO YOU AGREE?**

12 **A.** No. Most importantly, unlike virtual NPA/NXX's, 8XX NPAs are not
13 associated with a particular geographic area – callers from many geographic
14 areas can thus place a toll-free call to an 8XX NPA. In contrast, for a virtual
15 NXX customer, only those callers located within the rate center with which
16 the customer's NXX is associated can reach them without incurring a toll
17 charge. Additionally, an 800 call is and has always been a toll call. The
18 dialing pattern – 1-8XX-NXX-XXXX – is clearly a toll-dialing pattern.
19 When the call is dialed, the local switch recognizes the call as a toll call
20 (because of the 1+ toll indicator) and routes the call to the access tandem for
21 additional routing instructions. In addition to being routed through the access
22 tandem, the call requires a database dip. The call uses the Line Information

1 Database or LIDB, over the SS7 network, to get additional routing and billing
2 instructions. The LIDB provides the long distance carrier and the actual
3 terminating number for the call. In essence, the 1-800 number is converted
4 to the “real world” telephone number for terminating the call. 1-800 service
5 is generally used for intraLATA, interLATA or inter-state calling, not for
6 local calling. There are also many different terminating options available to
7 the customer. Calls may be terminated to a PBX, over dedicated lines, on a
8 time sensitive basis to different locations across the country (i.e., for airline
9 reservations), or on a call-by-call basis to different geographic areas. There
10 are also many different billing plans for 1-800 service that are not available
11 for standard local calling or FX/virtual NXX service. Extensive call details
12 can be provided to help the customer understand geographic demand for its
13 services.

14 **Q. ARE VIRTUAL NXX CALLS ROUTED IN A SIMILAR MANNER TO**
15 **8XX CALLS?**

16 **A.** No. Virtual NXX calls are routed like all other local calls. They use standard
17 seven or ten-digit dialing and they do not go through the access tandem.
18 Database dips are not required and the number does not have to be translated
19 to yet another number for termination. Plus, there are no special billing or
20 termination plans for virtual NXX service.

21 **Q: IS VIRTUAL NXX MORE SIMILAR TO ILEC FX SERVICE?**

1 **A:** Yes. Virtual NXX and FX calls are similarly provisioned and provide the
2 same function to end-users.

3 **Q:** **DOES BELLSOUTH CHARGE ALECs LIKE LEVEL 3,**
4 **RECIPROCAL COMPENSATION WHEN AN ALEC CUSTOMER**
5 **MAKES A CALL TO THE BELLSOUTH FX CUSTOMER?**

6 **A:** Yes, it does. BellSouth also provides other services, such as Remote Call
7 Forwarding and Extended Reach Service that provide a similar functionality.
8 BellSouth charges ALECs reciprocal compensation for these services as well.

9 **Q:** **IF BELLSOUTH IS CHARGING ALECS RECIPROCAL**
10 **COMPENSATION FOR CALLS TO FX, REMOTE CALL**
11 **FORWARDING AND EXTENDED REACH CUSTOMERS, DOES**
12 **THAT MEAN BELLSOUTH CONSIDERS THESE CALLS TO BE**
13 **LOCAL CALLS FOR PURPOSES OF RECIPROCAL**
14 **COMPENSATION?**

15 **A:** Yes. Further, I expect other ILECs in Florida also treat these calls as local
16 and subject to reciprocal compensation.

17 **Q:** **PLEASE DESCRIBE THE IMPACT OF PROHIBITING VIRTUAL**
18 **NXX NUMBER ASSIGNMENT IN MORE DETAIL.**

19 **A:** Prohibiting LECs from assigning customers virtual NXX numbers would
20 have at least three significant negative impacts in Florida. First, ILECs
21 would be able to evade the intercarrier compensation arrangements they have
22 negotiated with ALECs. Second, and contrary to one of the fundamental

1 goals of the 1996 Act, such restrictions would have a negative impact on the
2 competitive deployment and use of affordable dial-up Internet services in
3 Florida. This negative impact would result from the increase in costs to both
4 consumers and providers. Finally, applying such a restriction to virtual
5 NXXs but not FX and other traditional ILEC services that offer the same
6 function would give ILECs a competitive advantage over ALECs.

7 **Q: HOW WOULD AN ILEC EVADE ITS INTERCARRIER**
8 **COMPENSATION OBLIGATIONS TO AN ALEC BY LIMITING**
9 **COMPENSATION TO CALLS TERMINATING TO A CUSTOMER**
10 **WITH A PHYSICAL PRESENCE IN THE SAME LOCAL CALLING**
11 **AREA AS THE ORIGINATING CALLER?**

12 **A:** Deviating from the historical practice of rating a call based upon the NXX
13 codes of the originating and terminating number would give ILECs the ability
14 to arbitrarily re-classify local calls as toll calls. This is because it would be
15 nearly impossible and much more economically burdensome for Level 3 (or
16 any other ALEC in a similar situation) to utilize virtual NXXs in the
17 provision of service to its customers.

18 As discussed above, Virtual NXXs are used by carriers to provide a
19 local number to customers in calling areas in which the customer is not
20 physically located. If the Commission allows ILECs to avoid rating calls
21 based on the NXX of the originating and terminating numbers, calls to
22 “virtual NXX” customers would effectively be reclassified as toll calls (at

1 least in the intercarrier environment, if not in the retail environment), and
2 ILECs would no longer be obligated to compensate ALECs for terminating
3 what for decades have been rated as simple local calls.

4 Indeed, BellSouth, and likely other ILECs, has always treated its FX
5 service as local in nature and has billed other carriers reciprocal
6 compensation for calls terminating to BellSouth FX customers. Revenues
7 from FX service are booked as local revenues by BellSouth. I understand
8 BellSouth may be changing this policy, in a belated attempt to support its
9 own efforts to have similar ALEC services treated as toll in nature.

10 **Q: DO THE COSTS INCURRED BY LECs IN ORIGINATING VIRTUAL**
11 **NXX CALLS JUSTIFY ADDITIONAL CHARGES?**

12 **A:** No. First, as mentioned elsewhere in my testimony, LECs are not allowed
13 to impose charges for the delivery of local traffic to a POI. Nevertheless, and
14 despite this specific prohibition, there is no additional cost incurred by an
15 ILEC when a virtual NXX is provided to an ALEC customer, because the
16 ILEC carries the call the same distance (to the POI) and incurs the same costs
17 (in terms of local interconnection facilities used) regardless of the physical
18 location of the “virtual NXX” customer. Therefore, the ILECs obligations
19 and costs are the same in delivering a call originated by one of its customers,
20 regardless of whether the call terminates at a so-called “virtual” or “physical”
21 NXX behind the ALEC switch.

1 **Q: DOES THE USE OF VIRTUAL NXX CODES IMPACT THE**
2 **HANDLING OR PROCESSING OF A CALL TO A CUSTOMER?**

3 **A:** No. The ILEC would always be responsible for carrying the call to the POI
4 on its own network and then paying the ALEC to transport and terminate the
5 call from that point. The use of a virtual NXX does not impact the ILEC's
6 financial and/or operational responsibilities such that it should be able to
7 avoid compensating the terminating LEC or collect additional compensation.
8 Indeed, the customer has a presence in the local calling area of the originating
9 caller; it is a virtual presence, not a physical one, but the way the call is
10 handled is the same from the originating LEC's perspective.

11 **Q: DO YOU THINK ACCESS CHARGES WOULD PROVIDE AN**
12 **APPROPRIATE MEANS OF COST RECOVERY FOR THIS**
13 **TRAFFIC?**

14 **A:** Not at all. Setting aside the fact that intercarrier compensation for local
15 traffic is governed by the reciprocal compensation rules of the FCC,⁹ and that
16 access charges are imposed on traffic other than local traffic, access charges
17 are not cost-based, and it has been federal and state policy in recent years to
18 drive access charges down to forward-looking economic cost. It makes no
19 sense to impose an out-dated compensation regime on an artificial category

⁹ FCC Rule 51.703(b) states, "A LEC may not assess charges on any other telecommunications carrier for local telecommunications traffic that originates on the LEC's network."

1 of traffic. At a time when regulators and the industry are looking to move to
2 more competitive market models by eliminating implicit subsidies in
3 telecommunications rates and intercarrier payments, it would seem contrary
4 to that movement to suddenly foist originating switched access charges on a
5 certain type of local traffic. The costs of originating this traffic do not differ
6 from any other local call, and thus there is absolutely no economic or policy
7 justification for imposing switched access charges on virtual NXX and FX
8 traffic.

9 **Q: ARE ILECs COMPENSATED FOR CARRYING THE TRAFFIC**
10 **ORIGINATED BY ITS CUSTOMERS TO THE ALEC POI?**

11 **A:** Yes. The FCC's *TSR Order* is directly on point. Although I quoted it in
12 Issue 14, it bears repeating:

13 According to Defendants, the *Local Competition Order's*
14 regulatory regime, which requires carriers to pay for facilities
15 used to deliver their originating traffic to their co-carriers,
16 represents a physical occupation of Defendants property
17 without just compensation, in violation of the Takings Clause
18 of the Constitution. We disagree. The Local Competition
19 Order requires a carrier to pay the cost of facilities used to
20 deliver traffic originated by that carrier to the network of its
21 co-carrier, who then terminates that traffic and bills the
22 originating carrier for termination compensation. In essence,
23 the originating carrier holds itself out as being capable of
24 transmitting a telephone call to any end user, and is
25 responsible for paying the cost of delivering the call to the
26 network of the co-carrier who will then terminate the call.
27 Under the Commission's regulations, the cost of the facilities
28 used to deliver this traffic is the originating carrier's
29 responsibility, because these facilities are part of the
30 originating carrier's network. The originating carrier recovers
31 the costs of these facilities through the rates it charges its own

1 customers for making calls. This regime represents “rules of
2 the road” under which all carriers operate, and which make it
3 possible for one company’s customer to call any other
4 customer even if that customer is served by another telephone
5 company.¹⁰ (emphasis added) (footnotes omitted)
6

7 **Q: THIS QUOTE SAYS THAT A LEC WOULD RECOVER ITS COSTS**
8 **THROUGH THE RATES IT CHARGES ITS OWN CUSTOMERS. DO**
9 **LOCAL RATES COVER THE COST OF CARRYING VIRTUAL NXX**
10 **AND FX TRAFFIC TO THE POI?**

11 **A:** The FCC has clearly stated that a LEC’s rates cover these costs. Let me point
12 out, however, that in my opinion this reference is not just to the basic local
13 rates. Local revenues include not only the basic local rate, but other revenues
14 from subscriber line charges, vertical services (i.e., call waiting, call
15 forwarding, anonymous call rejection and other star code features), universal
16 service surcharges, extended area service charges and contribution from
17 access charges for intraLATA and interLATA toll.

18 **Q: IF A LEC IS ESSENTIALLY INDIFFERENT FROM A COST**
19 **PERSPECTIVE, WHY DO YOU SUPPOSE THAT ILECs CONTEST**
20 **THIS ISSUE?**

21 **A:** I cannot speak for what motivates ILECs to end practices they have employed
22 for years. However, I believe it is likely that ILECs understand the
23 importance of this issue as it relates to new entrants’ such as Level 3’s ability

¹⁰ *TSR Wirelss, LLC v. US West Communications*, Memorandum Opinion and Order, ¶ 34 (June 21, 2000) (hereafter referred to as “TSR Order”).

1 to compete. Level 3 has been, and would likely continue to be, successful in
2 attracting new customers in Florida. This success is often at the expense of
3 ILECs, since many of the customers won by Level 3 were once served by
4 ILECs. Therefore, although the ILECs incur no additional costs through the
5 virtual NXX arrangement, I believe their concern has more to do with the
6 opportunity costs associated with losing a customer that Level 3 is able to
7 serve through virtual NXX. Total market dominance is a valuable asset,
8 although it is not necessarily in the public interest. It would make sense for
9 an ILEC to protect and preserve its monopoly by proposing language that
10 would make it uneconomic for Level 3 to chip away at its monopoly market
11 share.

12 **Q: IT APPEARS THAT YOU HAVE PLACED SPECIAL EMPHASIS ON**
13 **THE NEGATIVE IMPACTS ON RURAL AREAS OF THE STATE**
14 **ASSOCIATED WITH RESTRICTING THE ASSIGNMENT OF NXX**
15 **CODES. WHY WOULD RURAL AREAS BE PARTICULARLY**
16 **IMPACTED?**

17 **A:** One of the most significant advantages of incumbency is the ubiquitous
18 network of the ILEC. For the most part, this network was bought and paid
19 for by ILEC customers over time at little or no risk to the ILEC, and ILECs
20 had rates approved that would allow them to recover the costs of network
21 deployment. Providers such as Level 3 are in some cases, constrained from
22 offering services on a widespread basis because they do not have the

1 advantage of having the ratepayer financed ubiquitous network that ILECs
2 do. Therefore, market entry is often confined to the more densely populated
3 areas. Reciprocal compensation for virtual NXX service helps to equalize
4 these inherent inequities, at least for some customers, by allowing ALECs to
5 offer service state-wide, even to the more lightly populated areas of Florida.
6 Without this competitive equalization, ALECs would only be able to reach
7 such areas at some point in the future, if at all, thereby denying rural residents
8 and businesses the benefits of competition.

9 These comments should not be construed as ALECs asking for special
10 treatment because they are new competitors. Indeed, Level 3's position,
11 supported by the economic and technical arguments I have put forth above,
12 would be just as compelling if Level 3 were an ILEC. I only raise the
13 competitive ramification issue here to illustrate the negative impact of
14 restricting ALEC's assignment of virtual NXXs.

15 **Q: HOW WOULD THE EFFICIENT DEPLOYMENT OF NETWORK**
16 **FACILITIES IN FLORIDA BE IMPACTED IF THE COMMISSION**
17 **RESTRICTED THE ASSIGNMENT OF VIRTUAL NXXs?**

18 **A:** The overarching goal of the Telecommunications Act is to promote
19 competition in the local exchange market. It is recognized that such
20 competition would lead to, among other things, the efficient deployment of
21 network facilities. However, restricting number assignment, or basing
22 intercarrier compensation on physical customer location, may have the

1 impact of leading to inefficient network facilities deployment. Level 3 would
2 have to reconsider providing local services if other LECs are allowed a free
3 ride on Level 3's network for terminating calls. Even more egregious is the
4 additional cost of paying access charges on calls originated by ILEC's
5 customers as BellSouth proposed in its arbitration with Level 3. BellSouth's
6 proposal greatly reduces the incentive for ALECs to provide service in the
7 state.

8 **Q: WOULD RESTRICTING NXX ASSIGNMENT OR CHANGING**
9 **CURRENT INTERCARRIER COMPENSATION ULTIMATELY**
10 **VIOLATE THE TELECOMMUNICATIONS ACT?**

11 **A:** Yes. Not only would it lead to negative incentives for network facilities
12 deployment, the proposal would be in direct conflict with the 1996 Act, in
13 that the Act calls for consumers in all regions of the Nation, including those
14 in rural, insular, and high cost areas, to have access to telecommunications
15 and information services at just, reasonable, and comparable rates. (Sec.
16 254(b), 47 U.S.C. § 254(b)). Moreover, increasing the cost of Internet
17 access and other local calls provided through a virtual NXX, through the
18 introduction of access charges and the denial of intercarrier compensation,
19 would be inconsistent with the Act's mandate for Internet services. More
20 specifically, Section 230(b)(2) (47 U.S.C. 230) of the Act states "It is the
21 policy of the United States to preserve the vibrant and competitive free
22 market that presently exists for the Internet and other interactive computer

1 services, unfettered by Federal or state regulation.” To the extent ILEC
2 proposals to distinguish Internet usage and virtual NXX calls from other local
3 usage increases the cost and depresses demand for Internet usage, it is not in
4 the public interest.

5 **Q: WOULD BELLSOUTH’S PROPOSED COMPENSATION**
6 **ARRANGEMENT GIVE IT A COMPETITIVE ADVANTAGE IN THE**
7 **ISP MARKET?**

8 **A:** Yes. BellSouth competes with new entrants like Level 3. By precluding
9 Level 3 from receiving intercarrier compensation for these services, and then
10 imposing access charges on each call, BellSouth would create an economic
11 barrier to other carriers providing local services, and would give itself a
12 significant competitive advantage. This clear advantage for BellSouth would
13 not only stifle the ability of ALECs such as Level 3 to provide service in
14 Florida, but would essentially eliminate the prospect for competition in this
15 market.

16 **Q: CAN YOU PLEASE SUMMARIZE THE BENEFITS OF**
17 **PERMITTING VIRTUAL NXX NUMBER ASSIGNMENT AND**
18 **MAINTAINING EXISTING COMPENSATION ARRANGEMENTS**
19 **BASED ON THE COMPARISON OF NXX CODES?**

20 **A:** Yes. The pros are as follows, (1) it provides ALEC customers with a local
21 presence in additional local calling areas; (2) it allows business expansion in
22 the short-run while businesses build-out their facilities over time; (3) it

1 provides ISPs with a cost-effective way to provide local dial-up Internet
2 service to customers throughout the state without having to have offices in
3 every local calling area; (4) it provides consumers, especially those in lightly
4 populated areas, with efficient, low-cost dial-up access to the Internet; (5) it
5 treats these calls consistently with the way BellSouth treats its FX, Remote
6 Call Forwarding and Extended Reach services; and (6) it provides a
7 competitive alternative to the FX and FX-like services provided by ILECs.

8 **Q: WHAT ARE THE NEGATIVE CONSEQUENCES OF PROVIDING**
9 **VIRTUAL NXX SERVICE IN FLORIDA?**

10 **A:** I don't believe there are any negative consequences associated with providing
11 this service. These calls cost ILECs no more to deliver to Level 3 than other
12 local calls. Further, the use of virtual NXX codes is not improper, illegal or
13 in any way harmful to the public interest. As such, there is no justification
14 for denying LECs intercarrier compensation for these calls and there is no
15 justification for charging originating access charges. It is indisputable that
16 the terminating LEC is providing the originating LEC a service by
17 terminating such calls.

18 ILECs are complaining to the Commission because ALECs have been
19 successful in attracting customers with this service. ILECs can compete for
20 these customers as well. The Commission should not allow ILECs to use the
21 regulatory process to impede the development of competition in the local
22 market.

1 **Q: ARE THERE NEGATIVE CONSEQUENCES OF CHANGING**
2 **COMPENSATION ARRANGEMENTS FOR THESE CALLS?**

3 **A:** Yes. Denying intercarrier compensation and imposing access charges would
4 make it economically impractical for ALECs to offer this service. As such,
5 if Level 3 and the ISP continued to serve areas currently served through
6 virtual NXX arrangements, the cost of Internet access would increase for
7 consumers. ISPs may likely decide to use BellSouth's services rather than
8 Level 3's, thereby eliminating competition in this area of the local market.
9 These results, namely increased costs for consumers and eliminating
10 competitive alternatives, are not in the public interest.

11 **Q: PLEASE SUMMARIZE YOUR POSITION ON ISSUE 15.**

12 **A:** ILECs should be required to compensate ALECs for all calls to numbers with
13 NXX codes associated with the same local calling area. Because these local
14 calls are routed to the interconnection point for local traffic and handed off
15 just as any other local call, such calls should continue to be rated and routed
16 as local. Allowing ILECs to limit the compensation paid to ALECs to calls
17 terminated to a customer with a physical presence in the same local calling
18 area would allow ILECs to evade their intercarrier compensation obligations,
19 inhibit the provision of affordable dial-up Internet services in Florida, and
20 give ILECs an anti-competitive advantage over ALECs in the ISP market.

21 There is no economic justification for ILECs to treat calls differently
22 based on the physical location of an ALEC's customers. Because the

1 physical location of the customer is irrelevant to the costs incurred by the
2 ILEC, it would not be justified in assessing originating charges for calls
3 terminated to certain customers with a virtual local presence.

4 If ALECs are prohibited from receiving intercarrier compensation for
5 virtual NXX calls to prospective and current customers, ISPs would either
6 have to establish multiple POPs in order to allow their subscribers to access
7 the Internet via a local number, or to contract with the ILEC and subscribe to
8 the ILECs ISP products. Because each POP requires a significant investment
9 in hardware, non-recurring charges and leased line connections, and because
10 provisioning services in new areas may cause significant delays in ISP
11 service offerings, the ability to offer ISP customers local dial-up and single
12 POP capability is a critical competitive consideration. More importantly,
13 forcing ISPs and ALECs to deploy these facilities – when such deployment
14 is not at all necessary – would encourage inefficiency and a wasteful
15 allocation of an ALEC’s limited resources. Only an ILEC, with its
16 ubiquitous network of central offices developed with the support of decades
17 of subsidies, could likely offer ISPs the kind of presence required in each
18 local calling area to avoid the demonstrated need for virtual NXX services.

19 **Q: DOES THIS CONCLUDE YOUR TESTIMONY?**

20 **A:** Yes, it does.

1 ILECs' proposals – to narrowly define “local calling area” and to require the
2 ALECs to pick up the originating traffic in the local calling area – is not
3 consistent with the Act or the FCC rules and orders, and should be rejected.
4 The ILEC proposals – if accepted – would serve only to increase the costs of
5 entry for the ILEC rivals to the detriment of consumers and the development
6 of competition.

7 Level 3's position on Issue 15 is that calls between customers with
8 telephone numbers in the same local calling area have been, and should
9 continue to be, local traffic in all respects, including routing, retail billing,
10 and intercarrier billing. The ILEC positions on this issue are inconsistent
11 with the way they treat their own services, such as Extended Reach Service,
12 Remote Call Forwarding and FX service. BellSouth's proposed FX database
13 is not appropriate for several reasons. First, it was developed unilaterally
14 with no Commission oversight or order. Second, the database is limited to
15 FX numbers and does nothing to solve the same problem with Extended
16 Reach Service and Remote Call Forwarding. Finally, if such a solution were
17 to be imposed on the ALECs, it would unfairly and unnecessarily impose
18 unknown costs on new entrants and delay their entry into the Florida market.
19 The ILEC proposals are anticompetitive, not in the public interest, and should
20 be rejected. So-called virtual NXX or FX-type calls should continue to be
21 treated as local calls for all purposes, including reciprocal compensation.

1 **Q: PLEASE DESCRIBE THE QUESTIONS POSED BY THE**
 2 **COMMISSION FOR EACH OF THE ISSUES YOU INTEND TO**
 3 **ADDRESS.**

4 **A: The question associated with Issue 14 has two subparts, and asks:**

5 **(a) What are the responsibilities of an originating local carrier to**
 6 **transport its traffic to another local carrier?**

7

8 **(b) For each responsibility identified in part (a), what form of**
 9 **compensation, if any, should apply?**

10

11 The question associated with Issue 15 also has two subparts, and asks:

12

13 **(a) Under what conditions, if any, should carriers be permitted to**
 14 **assign telephone numbers to end users outside the rate center in**
 15 **which the telephone number is homed?**

16

17 **(b) Should the intercarrier compensation mechanism for calls to**
 18 **these telephone numbers be based upon the physical location of**
 19 **the customer, the rate center to which the telephone number is**
 20 **homed, or some other criterion?**

21

22

23

24 **ISSUE 14 – (a) What are the responsibilities of an originating local**
 25 **carrier to transport its traffic to another local carrier?**

26

27 **(b) For each responsibility identified in part (a), what**
 28 **form of compensation, if any, should apply?**

29

30

31

32 **Q: PLEASE BRIEFLY DESCRIBE THE DISPUTE ON THESE POINTS.**

33 **A: The dispute on this issue relates to an originating carrier's responsibility for**
 34 **getting traffic from the originating customers to the point of interconnection**
 35 **for hand-off to the terminating carrier. Under federal law, the ALEC has the**

1 right to designate the location of POIs with the ILEC. Indeed, the FCC has
2 found that an ALEC is entitled under the Act to establish one POI to cover
3 each LATA in which it operates.¹ To give ILECs the right to designate their
4 own POIs, or to undermine an ALEC's right to designate a POI by requiring
5 them to duplicate the ILEC network by building or buying transport into
6 every local calling area, would undermine the purpose of giving the ALEC
7 the right to designate the POI in the first instance, and would contradict the
8 carefully defined interconnection obligations of ILECs under the Act.

9 Despite what federal law requires, two of the three ILECs in this
10 proceeding suggest that ALECs should pick up traffic in the local calling area
11 where the traffic originates – essentially establish a POI in each local calling
12 area – as opposed to the ILEC delivering originating traffic to a POI outside
13 the local calling area.

14 **Q: WHAT ARE THE ILECs IN THIS CASE SAYING WITH RESPECT**
15 **TO WHERE POIs MUST BE ESTABLISHED?**

16 **A:** Sprint's witness Mr. Hunsucker agrees with Level 3's position that (1) federal
17 law grants the ALEC the right to select the POI for the exchange of traffic
18 and (2) it is the responsibility of the originating carrier to deliver its traffic to

¹ In the Matter of Application of SBC Communications, Inc. Pursuant to Section 271 to Provide In-Region, InterLATA Services in Texas; **MEMORANDUM OPINION AND ORDER**, CC Docket No. 00-65; Released: June 30, 2000; at para. 78 (*Texas 271 Order*).

1 the POI selected by the ALEC. (Mr. Hunsucker Direct at 12-13). Verizon
2 and BellSouth both disagree with Sprint and with the ALECs.

3 Verizon suggests that there are three options for interconnecting and
4 exchanging traffic, but upon review, each is equally flawed in ignoring the
5 terms of the Act and the policy of the FCC, and in mandating inefficient entry
6 by competitors. Under the first option, the *originating* carrier provides the
7 transport facilities *within* the local calling area to the carrier serving the user
8 to whom the call is destined. (Dr. Beauvais Direct, at 10). All other transport
9 facilities would then be the responsibility of the terminating carrier. Under
10 the second option, the *receiving* carrier provides the transport facilities within
11 the local calling area (as well as all facilities outside of the local calling area)
12 from which the call originates. (*Id.*). The third option suggested by Verizon
13 is that the interconnecting local exchange carriers could agree to a meet-point
14 with each carrier providing its own facilities to the agreed upon point. (*Id.*
15 at 11). However, Dr. Beauvais makes clear that under all three options, it is
16 Verizon's position that the ILEC should not bear financial responsibility for
17 any facilities outside of the local calling area in which its customer's call
18 originated. Similarly, BellSouth suggests, through the testimony of Mr.
19 Ruscilli, that ALECs are responsible for picking up BellSouth's originating
20 traffic in each of BellSouth's local calling areas. (See, for instance, Ruscilli
21 Direct, at 24).

1 **Q: WHAT IS YOUR REACTION TO VERIZON’S PROPOSED THREE**
2 **OPTIONS?**

3 **A:** While carriers can always negotiate for a variety of different interconnection
4 options depending upon what they are willing to bargain and exchange, the
5 Act and FCC orders are very specific on the obligations of the parties. Thus,
6 the three “options” presented by Verizon – while perhaps something parties
7 can consider in individual negotiations – do not answer the fundamental
8 question of what is required by law. Furthermore, in reviewing the specific
9 options Verizon presents, it is not clear what Verizon means by
10 interconnection in a given “local calling area.” If Dr. Beauvais is referring
11 to his definition of “local calling area” at page 8 of his testimony, then he is
12 referring to the local calling scope as reflected in the local exchange tariffs.
13 With that definition in mind, the first option – to have the originating carrier
14 provide the transport facilities within the local calling area (but no farther
15 than the boundaries of the local calling area) to the terminating carrier – is
16 insufficient.

17 **Q: PLEASE EXPLAIN.**

18 **A:** It is the responsibility of the originating carrier to get the traffic to the POI of
19 the terminating carrier wherever that POI is in the LATA. As the FCC noted
20 in implementing Section 251 of the Act, Section 251(c)(2) gives ALECs the

1 right to choose the most efficient point at which to exchange traffic.² The
2 FCC has reiterated this point and noted specifically that ALECs can choose
3 a single POI per LATA:

4 Section 251, and our implementing rules, require an
5 incumbent LEC to allow a competitive LEC to interconnect
6 at any technically feasible point. This means that a
7 competitive LEC has the option to interconnect at only one
8 technically feasible point in each LATA.³
9

10 The FCC's intent was to give ALECs a clear, low cost path of entry into the
11 local market. The ILECs' position misleadingly appears to comply with the
12 FCC's standards -- by saying that the single POI is not in dispute. But by
13 imposing additional costly restrictions on the single POI, the ILECs'
14 proposals are at odds with FCC regulations, and, if accepted, would
15 essentially bar the efficient entry for new entrants that the FCC envisioned.

16 **Q: DOES THE VERIZON PROPOSAL ADD COSTLY RESTRICTIONS**
17 **TO THE SINGLE POI DEPLOYED BY SOME ALECS?**

18 **A:** Yes. Verizon suggests that the originating carrier would only be responsible
19 for providing the transport "within the local calling area" and not to the
20 terminating carrier's POI if it happens to be outside the local calling area in
21 question. Thus, in only one instance -- when the POI happens to be in the

² In the Matter of Implementation of the Local Competition Provisions in the Telecommunications Act of 1996; CC Docket Nos. 96-98 and 95-185; **FIRST REPORT AND ORDER**; Released August 8, 1996; at ¶ 172; hereinafter referred to as the *Local Competition Order*.

³ *Texas 271 Order* at ¶ 78.

1 local calling area from which the call originates – would Verizon’s first
2 “option” be consistent with FCC rules. Under this first “option,” it seems
3 that Verizon is requiring the ALECs to build or buy facilities to pick up the
4 originating traffic at the boundary of each local calling area instead of at the
5 designated POI.

6 **Q: DO THE SECOND AND THIRD OPTIONS PROPOSED BY**
7 **VERIZON SUFFER FROM SIMILAR FLAWS?**

8 **A:** Yes. The second option would have the terminating carrier provide the
9 transport within the local calling area, and, presumably, the transport from the
10 local calling area to the POI as well. It is unclear in this case what
11 responsibility, if any, the originating carrier would bear in that case for
12 originating its own customers’ traffic. The third option would split the
13 difference between the two carriers by use of a meet-point, but it would still
14 require the terminating carrier to transport traffic on the originating carrier’s
15 side of the POI. In both cases, Verizon is proposing to shift responsibility for
16 carrying its originating calls on its side of the POI to the ALEC – thereby
17 effectively shifting the location of the POI itself. Again, while carriers can
18 negotiate any of these three “options” or any other interconnection
19 architecture they deem appropriate, the goal of this proceeding is to
20 determine the standards for what is required by law – the “rules of the road”
21 as the FCC has put it – for interconnection of competing LECs’ networks.
22 The relevant standards are those set forth in the Act and FCC orders – that the

1 ALEC has the right to designate a POI at any technically feasible point on the
2 ILEC's network, that traffic is exchanged at that POI, and that each carrier
3 bears the responsibility of bringing its own originating traffic to the
4 designated POI.

5 **Q: DOES THE ILEC HAVE THE SAME RIGHT AS ALECs TO**
6 **DESIGNATE POIs FOR ITS TRAFFIC?**

7 **A:** No. That right is limited to new entrants and does not extend to ILECs. As
8 I explained in my Direct Testimony, the FCC determined Congress did not
9 grant ILECs such a right precisely because the ILEC would be able to use the
10 placement of the POI to discriminate against its competitor.

11 **Q: HAS THE FCC CLARIFIED ITS ORDERS ON THE**
12 **RESPONSIBILITY OF ILECs TO BRING TRAFFIC TO THE POI?**

13 **A:** Yes. Specifically, as I noted in my direct testimony, the FCC's *TSR Order*
14 is directly on point. It states:

15 The *Local Competition Order* requires a carrier to pay
16 the cost of facilities used to deliver traffic originated
17 by that carrier to the network of its co-carrier, who
18 then terminates that traffic and bills the originating
19 carrier for termination compensation.⁴ (footnotes
20 omitted)
21

⁴ In the Matter of TSR Wireless, LLC, et al, Complainants, v. U S WEST Communications, Inc., et. al., Defendants; **MEMORANDUM OPINION AND ORDER**; File Nos. E-98-13; E-98-15, E-98-16, E-98-17, E-98-18; Released: June 21, 2000; at ¶ 34; hereinafter referred to as the *TSR Order*.

1 By this reasoning, Level 3 should not have to pay Verizon or BellSouth to
2 transport ILEC-originated traffic from the local calling area to the Level 3
3 POI.

4 **Q: DO THE FCC'S RULES LEAVE OPEN THE POSSIBILITY THAT**
5 **VERIZON OR BELLSOUTH COULD CHARGE FOR THE**
6 **CARRIAGE OF TRAFFIC TO A SINGLE POI?**

7 **A:** No. The FCC was careful to make clear elsewhere in the *TSR Order* that
8 ILECs may not charge ALECs for either "facilities" or "traffic" on the ILEC
9 side of the POI:

10 The Metzger Letter correctly stated that the Commission's
11 rules prohibit LECs from charging for facilities used to
12 deliver LEC-originated traffic, in addition to prohibiting
13 charges for the traffic itself.⁵ (footnotes omitted)

14
15 **Q: HAVE OTHER PARTIES SUGGESTED THAT THE LOCAL**
16 **CALLING AREA IS THE LIMIT OF THEIR TRANSPORT**
17 **RESPONSIBILITY?**

18 **A:** Yes. Like Verizon, BellSouth claims that each of its local calling areas is a
19 separate network to which the Act and FCC interconnection requirements
20 apply. (Ruscilli Direct, at 16). To the best of my knowledge, BellSouth is
21 the only ILEC to suggest that each local calling area is an individual network.
22 Mr. Ruscilli's statement that "BellSouth has a number of distinct functional
23 networks. For example, BellSouth has local networks, long distance

⁵ *TSR Order* at ¶ 25.

1 networks, packet networks, signaling networks, E911 networks, etc.” is
2 grossly misleading and incorrect. These “networks” do not exist on a
3 stand-alone basis, they are completely interdependent. They use layered
4 intelligence and have different functions, but work together in providing
5 various services. In short, BellSouth’s network is an integrated network
6 capable of providing many different telecommunications services.
7 BellSouth’s executives have also suggested that the network is interconnected
8 and integrated, as opposed to being a system of separate, distinct networks.⁶

9 **Q: WHY WOULD VERIZON AND BELLSOUTH TAKE THE POSITION**
10 **THAT ALECs MUST COLLECT ORIGINATING TRAFFIC FROM**
11 **A SEPARATE NETWORK IN EACH LOCAL CALLING AREA?**

12 **A:** Verizon and BellSouth are attempting to impose costs on their rivals, with the
13 likely intent of maintaining their monopoly in the local market. Specifically,
14 the ILECs are attempting to make ALECs carry the ILECs’ own originating
15 traffic -- for which the ILECs are financially and operationally responsible
16 -- from every local calling area to the POI. In short, the ILECs are
17 acknowledging that the ALEC can designate a single POI, and then arguing
18 in the next breath to render this right meaningless. One can see the ILECs’

⁶ See the Remarks of Duane Ackerman at the Goldman Sachs 2000 Communicopia IX Conference, October 4, 2000. Mr. Ackerman notes that the network is “...not about a series of stand-alone internet data centers,” but, “about an integrated e-business network platform, available to all of our customers wherever they are.”

1 incentives here – this is a financial issue for the ILECs (see, for instance,
2 Ruscilli Direct, at 17, lines 23-25), and it also generates inefficient costs for
3 their competitors as they enter new markets in Florida. The ILECs’
4 unsupported cries as to the costs they incur in taking calls to a single POI,
5 however, have no place in this proceeding. The cost of a single POI per
6 LATA could vary a lot depending on the facilities being used to transport
7 traffic to the POI, the traffic volumes, and mileage. Even if the ILECs
8 provided cost data to show that the specific distance and the specific amount
9 of traffic involved in a given case was imposing some excessive and
10 unreasonable cost on them (and they have not done so here), the FCC has
11 mandated that the designation of technically feasible POIs should not include
12 a consideration of cost.⁷ Thus, to the extent this is a financial issue for the
13 ILECs – a point they readily acknowledge – their cost concerns may not be
14 considered under binding FCC rules.

15 **Q: DO YOU FORESEE ANY PRACTICAL PROBLEMS THAT WOULD**
16 **ARISE IF THE VERIZON OR BELLSOUTH PROPOSALS WERE**
17 **MANDATED?**

18 **A:** Yes. Most ILECs offer customers the ability to purchase local service that
19 includes a larger calling scope, for instance, extended area service plans, than
20 the traditional local calling area. However, not all of the ILEC customers

⁷ *Local Competition Order* at ¶ 199.

1 subscribe to such plans. If, under the Verizon/BellSouth theory, ILECs are
2 required to hand off a call within the local calling area of the originating end
3 user, their obligation to transport calls to ALECs could vary customer by
4 customer. I believe this would be difficult, if even possible, to implement,
5 and points out the absurdity of their position.

6 **Q: DID THE FCC RECOGNIZE THAT NEW ENTRANTS WOULD**
7 **LIKELY DEVELOP THEIR NETWORKS WITH ONLY ONE POI**
8 **PER LATA?**

9 **A:** Yes. The FCC recognized that most, if not all, new entrants would initiate
10 service with a single POI per LATA. (*See, supra, Texas 271 Order* at ¶ 78).
11 Consistent with the FCC's approach, and recognizing that many LATAs in
12 BellSouth's network are served by more than one access tandem, this
13 Commission has found that it is technically feasible to require a single POI
14 per LATA at a BellSouth tandem (as requested by Sprint).⁸

15 **Q: BUT DO THE ILECs HERE PROPOSE TO HAVE ALECs**
16 **ESTABLISH A POI IN EVERY LOCAL CALLING AREA?**

17 **A:** While the ILECs claim they are not requiring ALECs to build to a POI in
18 every local calling area, in practice they are requiring ALECs to duplicate the

⁸ Petition by Sprint Communications Company Limited Partnership d/b/a Sprint for Arbitration with BellSouth Telecommunications, Inc Concerning Interconnection Rates, Terms and Conditions, Pursuant to the Federal Telecommunications Act of 1996, Docket No. 961150-TP, **Final Order on Arbitration**, Order No. PSC-97-0122-FOF-TP, at 9 (Feb. 3, 1997).

1 ILEC network by either building or buying facilities to reach every local
2 calling area – no matter how much or how little traffic is being exchanged
3 and no matter how close or how far a given local calling area is from the POI.
4 BellSouth witness Ruscilli suggests that ALECs are not required to build out
5 their networks because they can “...lease facilities from BellSouth or any
6 other provider to bridge the gap between its network (that is, where it
7 designates its Point of Interconnection) and each BellSouth local calling
8 area.” (Ruscilli Direct, at 14, 24-25). Dr. Beauvais also posits that ALECs
9 may build out a network or use the network of the ILEC. (Beauvais Direct,
10 at 10-11). While these options are presented as if they offer cost savings to
11 the ALEC, this is not the case. To the contrary, these proposals increase the
12 costs of entry and line the pockets of the ILECs in the process. It is true that
13 it is easier to lease facilities in many cases than build them from scratch, but
14 the point is that BellSouth and Verizon’s position would increase the cost for
15 new entrants in conflict with the clear guidelines and orders of the FCC.
16 Notably, this position would not only drive up competitors’ costs by making
17 them pay for transport before even beginning to provide service in any given
18 local calling area, but it would also result in ALECs paying ILECs – their
19 primary competitors in the local market – for this leased transport. The
20 options BellSouth and Verizon identify – leasing facilities or building
21 facilities – would only create financial barriers to competitive entry that were
22 not intended by the FCC. In each instance, Level 3 would be faced with the

1 prospect of incurring inefficient costs in order to provide service to Florida
2 consumers. As Mr. Jones of Verizon acknowledges, “Verizon is a
3 longstanding incumbent carrier of last resort, and its network is ubiquitous.”
4 (Jones Direct, at 2). Competitors should not be compelled to develop their
5 networks – whether leased or owned – along the same lines as the network
6 deployed by a “longstanding incumbent carrier” who received years of
7 monopoly rents to put that network into place. If ALECs face the prospect
8 of having to build or buy transport into every local calling area from day one
9 of market entry – even before the first customer is won or service is turned
10 up – the rational ALEC will be deterred from providing service in a wide
11 scope of local calling areas. ALECs will limit their entry initially for fear of
12 not being able to attract enough customers to support the dedicated transport
13 costs associated with extending the ALEC network into each local calling
14 area.

15 **Q: DIDN'T THE COMMISSION REJECT A SIMILAR BELLSOUTH**
16 **COMPENSATION PROPOSAL IN LEVEL 3'S ARBITRATION?**

17 **A:** Yes. In the Level 3 arbitration (Docket No. 000907-TP), the Commission
18 determined that BellSouth had failed to meet its burden of proof that
19 interconnecting at a single POI per LATA caused BellSouth to incur
20 uncompensated costs. For instance, BellSouth failed to explain why it
21 interconnected at a single POI per LATA with Level 3 under the parties' old
22 agreement but didn't submit any record evidence to show that this was

1 “expensive.” BellSouth also failed to prove that its local rates did not cover
2 its costs of delivering its end users’ calls to Level 3’s selected POI. And,
3 even if the ILECs could show that their local rates fail to recover their costs
4 of originating calls, their remedy would be to petition this Commission for
5 a rate adjustment, not to recover those costs from the terminating ALEC.
6 Nor did BellSouth submit cost studies to substantiate the “per se higher cost”
7 argument both Verizon and BellSouth are making in this proceeding. Finally,
8 the Commission was not persuaded by the argument that requiring ILECs to
9 deliver local traffic to a single POI in the LATA violated the FCC’s *TSR*
10 *Order*.

11 Neither Verizon nor BellSouth has submitted cost evidence in this
12 proceeding to substantiate their claims. Instead, they are asking the
13 Commission to assume, without reviewing any cost evidence, that they
14 should be relieved of their 251(c)(2) duty to interconnect and their FCC Rule
15 51.703(b) duty to deliver traffic to the POI selected by the ALEC. Again,
16 without submitting any cost evidence, they also argue they are entitled to
17 require ALECs to either build facilities to each ILEC local calling area or
18 they are entitled to an unspecified amount of compensation for some facility
19 that they want ALECs to lease from them into each of their local calling
20 areas. Adopting the Verizon/BellSouth position would make the FCC’s
21 single POI per LATA rule meaningless. I therefore believe that the
22 Commission should find, as it did in the Level 3 arbitration with BellSouth,

1 that absent a cost case that complies with Section 252(d)(1) of the Act,
2 binding FCC rules prohibit an ILEC from charging for dedicated facilities
3 used to haul the ILEC's traffic from the local calling area to the POI selected
4 by the ALEC.

5 **Q: ARE THERE OTHER NEGATIVE CONSEQUENCES OF THESE**
6 **PROPOSALS THAT THE COMMISSION SHOULD CONSIDER?**

7 **A:** Yes. In addition to the inefficiencies of requiring ALECs to build or lease
8 dedicated facilities on a flat-rated, non-traffic sensitive basis even when little,
9 if any, traffic actually flows over such facilities, the ILEC proposals here
10 could lead to facilities exhaust.

11 Specifically, the problem with multiple POIs grows if the ILEC does
12 not have additional capacity in place to lease dedicated facilities to each
13 ALEC. In the case of facility exhaust, the ALEC would either have to build
14 its own facilities or forego entering the market in the local calling area where
15 facilities are exhausted. As the Commission knows, the business of laying
16 fiber is a tedious process that requires permitting, tears up streets, and delays
17 the provisioning of service for months. Verizon and BellSouth have failed
18 to address the costs their proposals would impose on the public switched
19 telephone network and the manner in which their proposals may delay the
20 introduction of competition in Florida local exchange markets. The
21 Commission should weigh these problems carefully in considering this issue.

1 **Q: BUT WOULDN'T FAILURE TO ADOPT THE ILEC POSITION**
2 **HERE INCENT ALECs TO KEEP A SINGLE POI IN PLACE?**

3 **A:** Not necessarily. First, as Verizon notes, carriers can always agree to
4 additional POIs by looking to various market and engineering factors and
5 building upon the baseline requirement of a single POI in each LATA.
6 Indeed, Level 3 has entered into such agreements on a negotiated basis with
7 the former Bell Atlantic side of Verizon, with SBC, and even with BellSouth.
8 Level 3 was able to do so in part because it had experience in these markets
9 and, therefore, it had a better sense of anticipated levels of traffic and where
10 to expect traffic in relation to its customer base. Other ALECs that have been
11 in business for several years have multiple POIs per LATA as well. While
12 such additional POIs are not required, the ALECs and ILECs have agreed to
13 deploy additional POIs when sound engineering principles dictate such
14 deployment. Level 3's concern is that if multiple POIs are mandated, without
15 reference to traffic volumes, market topography, or customer base
16 development, the requirement to establish multiple POIs upon market entry,
17 one in every ILEC local calling area, would impose a barrier to entry and
18 deter competitors from serving a broader cross-section of the consumer and
19 business customers in the ILEC territory.

20 **Q: DOESN'T MR. RUSCILLI STATE AT THE OUTSET THAT**
21 **BELLSOUTH DOES NOT OBJECT TO AN ALEC DESIGNATING A**

1 **SINGLE POINT OF INTERCONNECTION? (RUSCILLI DIRECT,**
2 **AT 13).**

3 **A:** Yes, but again the devil is in the details. BellSouth's position that it does not
4 object to interconnecting at a single point on the network is tied to an
5 additional restriction: if Level 3 interconnects at a single point, BellSouth
6 would have Level 3 bear any "additional costs" that arise from bringing
7 traffic to the single POI with Level 3's network. In Mr. Ruscilli's view,
8 bearing the costs of the facilities on BellSouth's side of the POI would
9 unfairly burden BellSouth. Foisting these additional charges on Level 3 for
10 choosing a technically feasible interconnection point, however, would
11 constitute as much a barrier to entry as requiring Level 3 to establish multiple
12 POIs. Indeed, if BellSouth's proposal were accepted, BellSouth traffic
13 originated by BellSouth customers would get a free ride to the POI because
14 Level 3 would be required to pay for those facilities.

15 **Q: IF THE COMMISSION ACCEPTED THE ILECs' PROPOSAL TO**
16 **FORCE ALECs TO PAY FOR THE TRANSPORT OF ORIGINATING**
17 **LOCAL TRAFFIC TO THE POI, WHAT WOULD BE THE RESULT?**

18 **A:** The result would be one of two scenarios – uneconomic duplication of the
19 ILEC networks, and/or, elimination of competition caused by artificially
20 increasing the costs of new entrants. Imposing the cost of interconnecting
21 different network designs solely on ALECs defeats the policy of encouraging
22 network innovation and ignores the fact that the ILECs' own customers cause

1 the ILEC to incur the cost of delivering traffic to ALECs. The ILECs should
2 not be allowed to use their historic network design as an excuse to prevent
3 ALECs from selecting a technically feasible POI. If Verizon and BellSouth
4 are permitted to require a POI in each ILEC local calling area, or even to
5 require that ALECs build or lease facilities to each ILEC local calling area,
6 the Commission would be undermining Congressional and FCC intent to
7 promote competition and innovation in network design.

8 **Q: PLEASE SUMMARIZE YOUR POSITION ON ISSUE 14.**

9 **A:** The Act and the FCC's rules and orders implementing the Act are very clear
10 – ALECs are allowed to have only one POI per LATA and it is the financial
11 and operational responsibility of the ILEC to get all of its originating traffic
12 to the POI. The ILECs' proposals – to narrowly define "local calling area"
13 and to require ALECs to pick up the originating traffic in the local calling
14 area – are not consistent with the Act or FCC rules and orders, and should be
15 rejected. The ILEC proposals – if accepted – would serve only to increase
16 the costs of entry for the ILEC rivals to the detriment of consumers and the
17 development of competition.

18
19
20 **ISSUE 15 -- (a) Under what conditions, if any, should carriers be**
21 **permitted to assign telephone numbers to end users**
22 **outside the rate center in which the telephone number is**
23 **homed?**

24
25 **(b) Should the intercarrier compensation mechanism for**
26 **calls to these telephone numbers be based upon the**

1 physical location of the customer, the rate center to which
2 the telephone number is homed, or some other criterion?
3

4 **Q: PLEASE BRIEFLY DESCRIBE THE DISPUTE ON THIS POINT.**

5 **A:** The two issues in dispute are (1) whether carriers should be allowed to assign
6 a telephone number to a customer not physically located in the rate center to
7 which the telephone number is homed, and (2) what is the proper basis for
8 intercarrier compensation for calls utilizing such number assignment
9 methods, typically referred to as virtual NXX or FX-type service. From what
10 I understand, there is no dispute between the parties as to whether telephone
11 numbers can be used in this manner. Rather, the dispute is over how the
12 parties will compensate one another in exchanging such calls.

13 **Q: WHAT IS VERIZON'S POSITION ON THESE ISSUES?**

14 **A:** Verizon argues that the use of virtual NXX calling undermines the rating of
15 a call and denies Verizon compensation for the transport costs it incurs to
16 deliver calls to the ALECs. (Haynes Direct, at 8).

17 **Q: DO YOU AGREE WITH VERIZON THAT THE USE OF A VIRTUAL**
18 **NXX UNDERMINES THE RATING OF CALLS?**

19 **A:** No. Witness Haynes recognizes that the routing of the call is not impacted
20 by the use of a virtual NXX. (Haynes Direct, at 7). The use of virtual NXX
21 codes is not unlawful or in any other way improper. Verizon, itself, provides
22 several similar services, such as FX and Cyber DS1 service, to its customers
23 in Florida, including ISPs. Indeed, nobody complained about such uses of

1 NXX codes until ALECs had some success in attracting ISP customers and
2 the ILECs began looking for ways to avoid compensating them for serving
3 and terminating calls to ISPs.

4 **Q: COULD YOU PLEASE EXPLAIN THE NATURE OF THE DISPUTE**
5 **WITH RESPECT TO COMPENSATION FOR THESE CALLS?**

6 **A:** Yes. There really are two “subparts” to the compensation issue. First, the
7 ILECs object to paying ALECs any compensation for terminating the
8 so-called FX-type or virtual NXX call placed by the ILEC customer. Second,
9 the ILECs instead demand compensation from the ALEC for the apparent
10 bother of serving their customer to originate the call. In both respects, the
11 ILECs’ arguments fail because they are contrary to the historical manner in
12 which calls have been rated, the manner in which calls continued to be rated
13 at retail today, and the manner in which the calls are routed between the
14 carriers.

15 **Q: WOULD YOU PLEASE ADDRESS THE FIRST ILEC ARGUMENT**
16 **– THAT THEY NEED NOT COMPENSATE THE TERMINATING**
17 **CARRIER FOR THE TRANSPORT AND TERMINATION OF SUCH**
18 **CALLS?**

19 **A:** Verizon is obligated to pay inter-carrier compensation for all calls originated
20 by Verizon customers to ALEC telephone numbers with “NXX” codes
21 associated with the calling party’s local calling area. Calls are conventionally
22 rated and routed throughout the U.S. telephone industry based upon the NXX

1 codes of the originating and terminating numbers. Even under the proposals
2 of BellSouth and Verizon, these calls would continue to be rated as local for
3 retail purposes. (As far as I know, no ILEC is proposing to impose toll
4 charges on its own customers even though it claims that these calls are toll
5 for inter-carrier compensation purposes.) Moreover, these calls are routed to
6 the POI established by the parties for local traffic and handed off just as any
7 other local call would be. Given that the calls are routed as local and would
8 continue to be rated as local at retail, calls between an originating and
9 terminating NXX associated with the same local calling area should be rated
10 as local for inter-carrier compensation purposes as well.

11 **Q: WOULD YOU PLEASE ADDRESS THE SECOND PART OF THIS**
12 **COMPENSATION DISPUTE – WHETHER ILECs SHOULD**
13 **RECEIVE COMPENSATION FOR ORIGINATING THESE CALLS?**

14 **A:** The second “sub-issue” in dispute is whether ILECs should be allowed to
15 impose per-minute originating switched access charges for carrying such
16 calls to the parties’ POI. Access charges have never been imposed on
17 locally-dialed calls. Under any scenario involving a locally-dialed call, the
18 only costs an ILEC incurs are the transport and switching charges required
19 to bring traffic to the POI between the ILEC and the ALEC. These costs do
20 not change based upon the location of ALEC customers, so there is no
21 economic justification for treating these calls differently from any other
22 locally-dialed call. Further, it would be inconsistent and anti-competitive to

1 allow the ILECs to evade their inter-carrier compensation obligations and, at
2 the same time, to charge an ALEC originating switched access charges for
3 calls going to a particular NXX code. Not only would the ILEC
4 double-recover its costs (once through local rates paid by its customer and
5 again through access charges paid by the ALEC) for carrying the traffic over
6 local interconnection facilities to a POI, but it would be compensated for
7 costs it does not even incur and be given a free ride on the ALEC's network
8 on top of that. Each of the issues, when considered individually, would put
9 new entrants such as Level 3 at an extreme disadvantage in the marketplace
10 if the ILECs were to prevail. Taken together, the requirement to pay the
11 ILEC access charges on these locally-dialed calls, and to forego recovery of
12 expenses for terminating ILEC calls, would be detrimental to Level 3 in its
13 bid to offer competitive local exchange service in Florida.

14 **Q: MR. HAYNES SAYS THAT THE ALECS ARE "...USING THE**
15 **ILECS' NETWORKS FREE OF CHARGE TO TRANSPORT TOLL**
16 **CALLS." (HAYNES DIRECT, AT 14). PLEASE COMMENT.**

17 **A:** Verizon is suggesting that the virtual NXX calls are somehow impacting it
18 differently than other local calls. This is simply not the case. There is no
19 additional cost or activity imposed on Verizon as a result of virtual NXX
20 calls.

1 **Q: CAN YOU EXPLAIN WHY THERE IS NO ADDITIONAL COST TO**
2 **VERIZON IN ORIGINATING A LOCALLY-DIALED “VIRTUAL**
3 **NXX” CALL?**

4 **A:** Yes, but let me first explain how a call to a customer with a physical presence
5 is routed. Assuming a Verizon customer originates a call to a Level 3
6 customer, Verizon is financially and operationally responsible for getting the
7 call to Level 3’s POI. The legal and policy bases for this proposition were
8 discussed extensively in my discussion of Issue 14. Verizon switches and
9 transports the call to the POI over its own network facilities. From the POI,
10 Level 3 is responsible for terminating the call for Verizon – again, switching
11 and transporting the call to the called party, wherever that party might be
12 located. In return, Verizon pays Level 3 for terminating the call. The
13 originating carrier is compensated for its portion of the call through local
14 rates, vertical features (i.e., call waiting, call forwarding, caller ID,
15 anonymous call rejection and other star code type services), extended area
16 service arrangements, subscriber line charges and other subsidies, such as
17 universal service support where applicable, and access charges for both
18 intraLATA and interLATA toll, that support local rates. The routing and
19 compensation responsibilities are reversed if a Level 3 customer calls a
20 Verizon customer.

21 **Q: HOW DOES THIS DIFFER FOR A CALL PLACED TO A**
22 **CUSTOMER WITH A VIRTUAL PRESENCE?**

1 **A:** It doesn't. Verizon routes the call to the POI in exactly the same manner.

2 **Q:** **DOES THE USE OF VIRTUAL NXX CODES IMPACT THE**
3 **HANDLING OR PROCESSING OF A CALL TO AN ALEC**
4 **CUSTOMER?**

5 **A:** No. Verizon would always be responsible for carrying the call to the POI on
6 its own network and then paying Level 3 to transport and terminate the call
7 from that point. The use of a virtual NXX does not impact Verizon's
8 financial and/or operational responsibilities such that it would be able to
9 avoid compensating the terminating LEC, or justify collecting additional
10 compensation.

11 Mr. Haynes admitted that all traffic from Verizon customers to ALEC
12 customers – regardless of the type of traffic – is routed in the same manner.
13 Specifically, he states, "This means that all calls originated by Verizon's
14 customers to a CLEC's customers, whether local or toll, are routed to the
15 same CLEC switch." (Haynes Direct, at 8).

16 **Q:** **VERIZON CLAIMS THAT IT INCURS ADDITIONAL COSTS BY**
17 **HAVING TO TRANSPORT ALEC TRAFFIC ALL OVER THE**
18 **STATE WHEN ALECS USE VIRTUAL NXX ARRANGEMENTS.**
19 **(HAYNES DIRECT, AT 19). HOW DO YOU RESPOND TO THAT**
20 **CLAIM?**

21 **A:** Verizon is wrong, and it is really mixing up two different issues here. Mr.
22 Haynes' concerns about where ILECs have to transport a call relate to the

1 location of the POI, not the location of customers behind the POI. As
2 discussed above, under the Act and existing FCC rulings and regulations,
3 ALECs are permitted to establish a single POI per LATA to exchange traffic
4 with an ILEC. Verizon is therefore obligated to transport traffic to the ALEC
5 POI in a given LATA regardless of the location of the ALEC customer
6 behind the ALEC switch.

7 Virtual NXX calls are not handled or treated any differently than
8 other local calls. Despite the fact that Verizon cannot tell the difference
9 between virtual NXX and other local calls, and despite the fact that Verizon's
10 costs don't change for handling such calls, Verizon's solution is to have
11 ALECs terminate Verizon customer calls for free. This is not equitable, fair
12 or consistent with the way Verizon treats its own FX or FX-like services.

13 **Q: VERIZON CLAIMS THAT BECAUSE VIRTUAL NXX CALLS**
14 **TERMINATE IN A DIFFERENT EXCHANGE, THEY ARE NOT**
15 **LOCAL. (HAYNES DIRECT, AT 7, 11). ARE THERE**
16 **INTEREXCHANGE CALLS THAT ARE TREATED AS LOCAL?**

17 **A:** Yes. EAS calls immediately come to mind, but there are many different
18 types of services that provide interexchange calling but are treated as local for
19 reciprocal compensation purposes. BellSouth offers Metro Area Calling
20 ("MAC") in some states, such as Tennessee. Let me provide an example of
21 how MAC calling works. If I lived in Nashville, I would have local calling
22 within the county in which I reside and within all counties that are

1 immediately adjacent to (contiguous to) my county. All of these calls – even
2 though they cross what have historically been considered exchange
3 boundaries – are local calls. As such, reciprocal compensation would apply
4 when a carrier terminates these calls for another carrier. Another
5 interexchange service that is treated as local is BellSouth's Extended Reach
6 Service. Remote Call Forwarding also provides interexchange calling but the
7 calls are treated as local. Indeed, many areas along state boundaries have
8 interstate local calling.

9 **Q: YOU MENTIONED THAT SOME INTERSTATE CALLS ARE**
10 **LOCAL CALLS FOR PURPOSES OF RECIPROCAL**
11 **COMPENSATION. PLEASE EXPLAIN.**

12 **A:** There are many areas in the United States that have communities of interest
13 that cross state boundaries. In Florida, for instance, in the northern part of the
14 state, calls between Florida and Alabama -- in the city of Florala -- are local.
15 In Tennessee, calls to and from Memphis, Tennessee and West Memphis,
16 Arkansas are local calls. In Mississippi, you can make interstate calls to two
17 different states on a local basis. For instance, you can make local calls from
18 Southaven, Mississippi to Memphis, Tennessee and to West Memphis,
19 Arkansas. Calls between Louisville, Kentucky and Jeffersonville, Indiana are
20 local as well. These are just a few examples of interstate local calling.

21 All of these calls would be treated as local calls for purposes of
22 reciprocal compensation.

1 **Q: YOU MENTIONED THAT ILECs OFFER REMOTE CALL**
2 **FORWARDING AND EXTENDED REACH SERVICE. DO ILECs**
3 **CHARGE RECIPROCAL COMPENSATION ON SUCH CALLS?**

4 **A:** Yes, at least in the case of BellSouth. As such, it is completely inconsistent
5 for ILECs to deny reciprocal compensation to ALECs for similar traffic when
6 an ALEC terminates ILEC calls to its customers.

7 **Q: IF ILECs CHARGE ALECs RECIPROCAL COMPENSATION FOR**
8 **CALLS TO FX, REMOTE CALL FORWARDING AND EXTENDED**
9 **REACH CUSTOMERS, DOES THAT MEAN ILECs CONSIDER**
10 **THESE CALLS TO BE LOCAL CALLS FOR PURPOSES OF**
11 **RECIPROCAL COMPENSATION?**

12 **A:** Yes. These examples expose the inconsistent nature of the ILECs' position
13 in this case. ILECs cannot have it both ways; they cannot charge ALECs
14 reciprocal compensation for such calls and then deny the same compensation
15 to ALECs when ALECs terminate such calls for ILECs.

16 **Q: MR. RUSCILLI CLAIMS THAT SINCE FEBRUARY 23, 2001,**
17 **BELLSOUTH NO LONGER CHARGES RECIPROCAL**
18 **COMPENSATION FOR CALLS TO BELLSOUTH FX CUSTOMERS.**
19 **(RUSCILLI DIRECT, AT 34). PLEASE COMMENT.**

20 **A:** Since early last summer BellSouth has been talking about the database it was
21 going to develop to prevent charging of reciprocal compensation on calls to
22 its FX customers. BellSouth initiated this "fix" after it became obvious in

1 hearings that its position on virtual NXX calls was inconsistent with its own
2 business practices.

3 BellSouth claims that it made the change to be consistent with FCC
4 rules, but those rules have been in place for many years. Only now, when
5 ALECs are using virtual NXX to provide a needed service for customers, has
6 it implemented this FX database.

7 **Q: DOES THE FX DATABASE PROPOSED BY BELL SOUTH APPLY**
8 **TO JUST FX CUSTOMERS AND NUMBERS OR TO ALL SERVICES**
9 **THAT PROVIDE THIS FUNCTIONALITY TO CONSUMERS?**

10 **A:** BellSouth's plan only applies to its FX service. There is evidently no attempt
11 on the part of BellSouth to use this "fix" to prevent its billing system from
12 charging ALECs for interstate local calls or calls to EAS numbers, MAC
13 calling areas, Remote Call Forwarding numbers, or Extended Reach Service
14 customers. It appears that BellSouth is focusing on its FX service because
15 virtual NXX and FX-type calls are a successful competitive response to that
16 particular service. As such, the plan is anticompetitive and discriminatory.

17 **Q: HAS ANY COMMISSION EVER OPINED ON THE ACCURACY OR**
18 **EFFECTIVENESS OF THE BELL SOUTH FX DATABASE?**

19 **A:** No. As I noted above, BellSouth did this unilaterally with no Commission
20 oversight or order. The parties have never investigated the veracity of
21 BellSouth's claims on the accuracy, cost or effectiveness of the database.

1 **Q: WHAT WOULD IT COST ALECs TO IMPLEMENT A SIMILAR**
2 **SYSTEM?**

3 **A:** We have no idea what it would cost each ALEC to develop a similar system.
4 We do know that BellSouth has spent months and many hours developing the
5 database. We do know that ALECs do not have the resources that BellSouth
6 has – fewer people, fewer dollars and fewer resources. We also know that
7 ALECs operate in more regions of the country than the BellSouth region. To
8 the extent BellSouth prevails on this issue, then ALECs may have to develop
9 and maintain different internal systems for BellSouth as compared to the rest
10 of the country.

11 **Q: IN CLOSING, AND IN RESPONSE TO THE POINTS RAISED BY**
12 **VERIZON, CAN YOU CONTRAST THE POSITIONS OF THE**
13 **PARTIES ON THIS REMAINING ISSUE?**

14 **A:** Yes. Let's look at the pros and cons of utilizing virtual NXX codes in
15 Florida, and continuing to treat those calls as local. The pros of treating such
16 calls as local are as follows: (1) provides LEC customers with a local
17 presence in additional local calling areas; (2) allows business expansion in
18 the short-run while businesses build-out their facilities over time; (3)
19 provides ISPs with a cost-effective way to provide local dial-up Internet
20 service to customers throughout the state without having to have offices in
21 every local calling area; (4) provides consumers – both ILEC and ALEC
22 customers – with efficient, low-cost dial-up access to the Internet; (5) treats

1 these calls as local consistent with the way Verizon and BellSouth appear to
 2 treat their own FX service, EAS, MAC calling, Remote Call Forwarding,
 3 Extended Reach Service, and certain interstate local calls; and (6) provides
 4 a competitive alternative to the FX services provided by the ILECs.

5 **Q: WHAT ARE THE NEGATIVE CONSEQUENCES OF PROVIDING**
 6 **VIRTUAL NXX SERVICE IN FLORIDA?**

7 **A:** I don't believe there are any negative consequences associated with providing
 8 this service. The ILECs have not provided any evidence – and in fact, they
 9 cannot provide any evidence – that these calls cost any more to deliver than
 10 other local calls. Further, the ILECs have not shown that the use of virtual
 11 NXX codes is improper, illegal or in any way harmful to the public interest.
 12 As such, there is no justification for denying ALECs reciprocal compensation
 13 for these calls, nor is there any justification for charging originating access
 14 charges.

15 Verizon's position in this case derives from the fact that ALECs have
 16 been successful in attracting customers with this service. Verizon can
 17 compete for these customers as well. The Commission should not allow
 18 ILECs to use the regulatory process to impede the development of
 19 competition in the local market.

20 **Q: ARE THERE NEGATIVE CONSEQUENCES OF ADOPTING THE**
 21 **ILEC PROPOSAL FOR TREATMENT OF THESE CALLS?**

- 1 **A:** Yes. Denying intercarrier compensation and imposing access charges would
2 make it uneconomic for ALECs to offer this service. Consequently, if the
3 ALEC and the ISP continue to serve areas currently served through virtual
4 NXX arrangements, the cost of Internet access would increase for consumers.
5 ISPs would more likely decide not to use ALECs and would likely use ILEC
6 services -- thereby eliminating competition in this area of the local market.
7 These results -- increased costs for consumers and eliminating competitive
8 alternatives -- are not in the public interest.
- 9 **Q: DOES THIS CONCLUDE YOUR TESTIMONY?**
- 10 **A:** Yes, it does.

1 BY MR. HOFFMAN:

2 Q Mr. Gates, have you prepared a summary of your
3 prefiled direct and rebuttal testimony?

4 A Yes.

5 Q Could you provide your summary at this time?

6 A Yes, I will. Thank you.

7 Good afternoon, Mr. Chairman and Commissioners. My
8 testimony addresses three issues today, Issues 13, 14, and 15.
9 Issue 13 seeks comments on the definition of local calling
10 areas for purposes of reciprocal compensation. Issue 14
11 addresses the responsibility of the originating carrier to
12 transport traffic to another LEC. And Issue 15 deals with
13 foreign exchange type services and the appropriate treatment of
14 such calls with respect to reciprocal compensation.

15 Because Issues 13 and 15 are related, I will start my
16 summary with Issue 14, which are the interconnection
17 responsibilities of the carriers. These responsibilities have
18 been very specifically outlined by the Telecom Act, by the FCC,
19 and by this Commission. The Act says that an ILEC must allow
20 an ALEC to interconnect at any technically feasible point.

21 One of the FCC's first orders implementing the Act
22 found that under this statute the ALEC may select a point of
23 interconnection, or the POI, for the exchange of traffic. The
24 FCC's rules of the road say that incumbents are required to
25 deliver their traffic to that point and to pay the ALEC for

1 terminating those calls. In fact, this Commission specifically
2 found in the Level 3/BellSouth arbitration that the competitive
3 LEC has the authority to designate the POI and that the
4 incumbent must deliver its originating traffic to that POI
5 without charging the ALEC.

6 The Commission also found that BellSouth does not
7 have the right to designate its own points of interconnection
8 for originating traffic either in the LATA or in local calling
9 areas within the LATA. The AT&T order that was released last
10 week reached similar conclusions.

11 The incumbents' proposals here that they be allowed
12 to alternatively identify points of interconnection in every
13 local calling area or make ALEC pay facilities charges to the
14 ILECs to reach into every local calling area are
15 anticompetitive and they have the effect of dismantling the one
16 POI per LATA rule. Because of the barriers to entry that such
17 a proposal would create here in Florida, the incumbents must be
18 required to bring their originating traffic across their
19 ubiquitous networks to the ALEC's designated POI.

20 Issues 13 and 15 are related as discussed in my
21 testimony. Issue 13 addresses how the local calling areas
22 should be defined for intercarrier compensation purposes, while
23 Issue 15 addresses whether calls to customers who are not
24 physically located in the exchange normally associated with
25 their telephone number should be treated as either local or

1 toll. In both cases the incumbents here seek to change the way
2 they themselves have for years handled calls.

3 We heard today that Mr. Haynes said that they have
4 been using NPA/NXX routing for 30 or 40 years. The incumbents'
5 proposals are contrary to the way these calls are routed
6 between carriers today and in the past. The foreign exchange
7 type calls compete with foreign exchange service that the
8 incumbents have offered for decades. It is because of this
9 competition and not because of any engineering, economic, or
10 public policy reasons that the incumbents are attempting to
11 reclassify these calls as toll calls. Treating these calls as
12 anything other than local would be inconsistent with the way
13 these calls have been treated in the past and indeed are
14 treated today.

15 The so-called virtual NXX calls are locally-dialed
16 calls. They are treated as local at retail by the ILECs. They
17 are routed as local over interconnection facilities,
18 specifically the local interconnection trunks. The ILEC has no
19 more responsibility for originating these calls than it does
20 for any other local call, yet the ILECs want to deny the ALECs
21 reciprocal compensation for these calls, and to add insult to
22 injury, want to charge the ALECs originating access charges, as
23 well. As such, carriers such as Verizon would get a free ride
24 on Level 3's network and pay nothing to Level 3 for terminating
25 the calls that were originated by Verizon's customers.

1 The imposition of access charges is particularly
2 troubling. Access charges have not and should not apply to
3 locally-dialed calls as they have nothing to do with the costs
4 associated with routing locally-dialed calls. These virtual
5 NXX calls are local, they do not increase the incumbents' costs
6 one iota, and they provide a valuable service to consumers.
7 Incumbents should pay reciprocal compensation on all locally
8 dialed calls.

9 Now, Verizon argues that virtual NXX calls have a
10 negative impact on numbering resources. Such is not the case.
11 But if virtual NXX calls did impact the availability of
12 numbers, then the incumbents' FX, extended reach, Cyber DS-1,
13 and other systems have for decades also impacted the numbering
14 resources of the state. So there is nothing unique about the
15 virtual NXX services that would require any special treatment
16 or result in any special concern by this Commission.

17 Thank you.

18 Q Does that conclude your summary?

19 A Yes, it does.

20 MR. HOFFMAN: Mr. Chairman, Mr. Gates is available
21 for cross.

22 CHAIRMAN JACOBS: Let's see. Mr. Lamoureux. Mr.
23 Moyle.

24 MR. MOYLE: No questions.

25 CHAIRMAN JACOBS: Mr. McGlothlin.

1 MR. McGLOTHLIN: No questions.

2 CHAIRMAN JACOBS: Mr. Melson.

3 MR. MELSON: No questions.

4 CHAIRMAN JACOBS: Mr. Edenfield.

5 MR. EDENFIELD: Just getting my last minute
6 information there.

7 CHAIRMAN JACOBS: All right.

8 CROSS EXAMINATION

9 BY MR. EDENFIELD:

10 Q Good afternoon, Mr. Gates.

11 A Good afternoon.

12 Q How are you?

13 A I'm fine, thank you.

14 Q All right. Let's talk -- I really wanted to just
15 talk about the virtual NXX issue, but you said something in
16 your summary that caused me some concern, and that was are you
17 truly saying that for a Commission to allow BellSouth to charge
18 an ALEC for transport costs, that that would be condoning
19 anticompetitive behavior?

20 A Well, I'm certain I didn't say that in my summary the
21 way you are suggesting it.

22 Q Well, you said it was anticompetitive. You did say
23 it was anticompetitive to do that, right?

24 A It is anticompetitive for the ILECs to charge access
25 charges, or to not pay the ALECs reciprocal compensation for

1 the virtual NXX calls. Or are you talking about the POI issue?

2 Q I'm sorry, I'm talking about the POI issue.

3 A Okay. Could you ask the question a little more
4 specifically.

5 Q I thought in your summary you made the comment it was
6 anticompetitive for the ILECs to charge the ALECs transport out
7 of the local calling area, the ILEC's local calling area, when
8 it had to route a call to the ALEC's point of presence in
9 another local calling area. Did you say that was
10 anticompetitive?

11 A Yes, it is anticompetitive, and it certainly does not
12 comport with the existing rules for the one POI per LATA.

13 Q So are you suggesting then that to the extent a state
14 commission such as this one, South Carolina, and North Carolina
15 have allowed the ILEC to charge transport costs in that
16 situation that they are condoning anticompetitive behavior?

17 A I would never make that characterization about a
18 commission, per se, but I think the result is, yes, that it is
19 anticompetitive because it will eliminate or prevent
20 competition from developing from ALECs. Yes, absolutely it is
21 anticompetitive, it is not in the public interest, and it
22 certainly will not help consumers in the long-run.

23 Q All right. Let's talk about the virtual NXX issue.
24 As I understand this, and you are representing Level 3 in this
25 proceeding?

1 A Yes, sir.

2 Q And you have, I guess, represented them in most of
3 their arbitrations that you had with BellSouth?

4 A Yes, I think I did.

5 Q Okay. In this instance, Level 3 wants to be able to
6 assign NPA/NXXs to end users that are not located in the rate
7 center to which a block of numbers has been assigned by the
8 numbering administration?

9 A I would quibble a little bit with your
10 characterization, but, yes. And I don't think there is any
11 dispute about a carrier's ability to do that in terms of, you
12 know, whether they can. I think we all agree that they can.

13 Q And BellSouth does not have a problem with you
14 assigning NPA/NXXs anywhere in the LATA you want to assign
15 them.

16 A Great.

17 Q Then the issue here has become if you are going to
18 assign an NPA/NXX outside of the rate center to which it was
19 assigned, that in that instance you are still wanting BellSouth
20 to pay you reciprocal compensation. Is that your understanding
21 of the issue between us?

22 A Yes. That is exactly the point. Because those are
23 locally-dialed calls just like BellSouth's FX service, or
24 extended reach service, or even remote call forwarding. Those
25 are locally dialed and treated as local calls.

1 Q Okay. Mr. Meza is going to be handing you a copy of
2 Mr. Ruscilli's Exhibit JAR-1, which is a set of network
3 diagrams. If you would, turn to -- let's find a good one to
4 use -- turn to Page 2 of 3, if you don't mind. And what I
5 would like for you to do is you see the Lake City local calling
6 area?

7 A Yes.

8 Q Do you see the BST end user A?

9 A Yes.

10 Q Draw a circle around that guy.

11 A Okay.

12 Q Go down to the Jacksonville local calling area. Do
13 you see the ALEC end user B, kind at the bottom of that oval?

14 A Yes.

15 Q Draw a circle around that guy.

16 A Okay.

17 Q These are the two folks we are going to be talking
18 about here for the next few minutes, all right?

19 A Okay.

20 Q Will you agree with me -- well, let me make one other
21 assumption here. Assume that the Lake City local calling area
22 has been assigned by the numbering administration, assume it is
23 just a single rate center there, and the number assigned is
24 905-111, okay? That is the NPA/NXX for Lake City, all right?

25 A Well, actually you just gave me an NXX and a station

1 code, 905-1111?

2 Q No, 905-111, and then there would be just whatever
3 the next four digits would be.

4 A Okay, fine. Thank you.

5 Q 905 a being the NPA, 111 being the NXX.

6 A Great.

7 Q Okay. And that is the NPA/NXX for the folks in Lake
8 City in that calling area, okay?

9 A Okay.

10 Q Now, let's go to the Jacksonville local calling area,
11 and the NPA/NXX for the folks in there are going to be 905-222,
12 okay?

13 A Okay.

14 Q Are you with me?

15 A Yes.

16 Q All right. And those are the numbers, the NPA/NXXs
17 that have been assigned by the numbering administration, all
18 right, at least for purposes of my hypothetical?

19 A Yes. Well, I assume you requested those NPAs and
20 NXXs from the numbering administrator and you assigned them as
21 you a saw fit.

22 Q Correct.

23 A Okay.

24 Q Those are the numbers that the numbering
25 administrator has assigned.

1 A Okay.

2 Q All right. BellSouth end user A is going to make a
3 call to the ALEC end user B, the two folks we have circled
4 there. And let's assume for purposes of this discussion that
5 the NPA/NXXs that are assigned to those ones are the ones that
6 I have written here. In other words, you have got the 905-222
7 assigned to ALEC end user B, and that is the one that the plan
8 assigned to that rate center, and you have got BST end user A
9 is assigned 905-111, and that is the NPA/NXX assigned by the
10 numbering administrator for that rate center. Are you with me?

11 A Yes, I'm with you.

12 Q All right. Would you agree with me that when
13 BellSouth end user A calls ALEC end user B and it travels from
14 one local calling area to the other, that traditionally that
15 would be a toll call?

16 A Traditionally I would agree. Assuming there is no
17 other local calling plans like EAS, or the extended optional
18 EAS plan. If we are just talking about traditional calling,
19 that is correct.

20 Q Right. Lake City is its own basic local calling area
21 and Jacksonville is its own basic local calling area, and there
22 is no overlap.

23 A Okay.

24 Q All right. In that instance you would agree with me
25 that this is a toll call?

1 A The way you have described it, this is a toll call,
2 yes.

3 Q In this instance, the call goes from the BellSouth
4 end office to the BellSouth tandem. If you look at the point
5 of interconnection in the switching as set forth in this
6 diagram, the call is handed off to the ALEC, the ALEC then
7 routes it to its switch, and then the ALEC on a loop or
8 whatever facility takes it down to ALEC end user B.

9 A Well, actually I guess I have to disagree with this
10 drawing, because if this were a toll call then you would have
11 to deal with the PIC, the intraLATA PIC.

12 Q I will get to that in a second.

13 A Well, the way you have described it, it really is a
14 local call and not a toll call. Because it's going to the ALEC
15 for termination and there is no interexchange carrier involved
16 here.

17 Q Well, let's assume that the same ALEC who is
18 terminating the call is the toll carrier. Why don't we just
19 say Level 3, this ALEC end user B is a Level 3 customer and
20 Level 3 is also the BellSouth end user's toll carrier.

21 A Okay. Well, in that case, the call would be routed
22 to the point of presence for Level 3, but it would also be
23 generating, and that is the BellSouth access tandem would be
24 generating an access record. It would go through the carrier
25 access billing system so it would start a billing record for

1 that toll call. So it would have to go into the tandem, figure
2 out who the carrier is based on the translation tables, set up
3 the CABs bill and then forward to Level 3 for termination.

4 Q Sure. And here let's say it has done that.

5 A Okay.

6 Q And you would agree with me that in this scenario
7 this call originates in the local calling area for Lake City
8 and this call terminates in the local calling area for
9 Jacksonville?

10 A Yes, we have established that.

11 Q Okay. Now, let's assume that this is no -- and in
12 that instance Level 3 would be paying BellSouth originating
13 access for this call?

14 A Yes, it would.

15 Q Okay. Now, let's take this same scenario, and as I
16 understand what you guys are wanting to do is instead of having
17 the 905-222 number assigned to this ALEC end user B, you are
18 wanting to assign a 905-111 to this ALEC end user B, and that
19 would be the virtual NXX that we are talking about, right?

20 A Yes, it could be done that way so that the BellSouth
21 end user A would be calling a local number to get to that same
22 customer, but not paying the toll charges. But, of course,
23 then that call would be handled and routed completely
24 different. It would not go through the access tandem, there
25 would be no CABs billing required, you wouldn't have to set up

1 the access charge bill at all, and it would be routed over
2 local interconnection trunks. So there is a very distinct
3 difference in the way that call would be routed and billed and
4 handled by BellSouth.

5 Q And the routing is a function of the code, correct?
6 In other words, whenever the switch, BellSouth end user A picks
7 up its phone and dials a number, the switch says, okay, this is
8 a local number, therefore, it is routed one way, or this is a
9 long distance call or a toll call, therefore, it is routed a
10 different way. So the routing is actually determined by the
11 number that is being dialed?

12 A It is determined by the NPA/NXX, that is the way it
13 has been done for 40 years.

14 Q Okay.

15 COMMISSIONER JABER: Mr. Gates, may I ask you a
16 question. One of the concerns I have had the last couple of
17 days relates to being careful not to send a wrong incentive of
18 allowing a company to establish a virtual NXX to avoid toll
19 charges. Is that a legitimate concern of mine?

20 THE WITNESS: No, I don't think so.

21 COMMISSIONER JABER: Can you --

22 THE WITNESS: Yes. Could I expand just a little bit,
23 Commissioner.

24 COMMISSIONER JABER: I would like that.

25 THE WITNESS: Okay, thank you. The companies are

1 providing virtual NXX as a service to customers, it is demanded
2 by the customers. It is a competitive response to the foreign
3 exchange service that the incumbents have been providing for
4 decades.

5 Now it is provided a little bit differently from a
6 technology perspective, and that is because the networks are so
7 different. If you look at BellSouth's network, or Verizon's
8 network, they do have end offices in every local exchange,
9 okay. When they provide an FX service, they provide a private
10 line from the home exchange, let's say, to the foreign exchange
11 and they charge that to the customer, that private line.

12 Well, Level 3 and other ALECs don't have central
13 offices in every exchange. It is physically impossible for
14 them to offer a private line between the exchanges. They are
15 doing it via the number assignment, hence the virtual NXX.
16 It's really a much more efficient way to provide the service
17 because you don't have to tack up, or nail up, as they say, a
18 private line. It is solely dedicated.

19 COMMISSIONER JABER: Okay. So what I hear you saying
20 is if this Commission were to agree with your position that any
21 NXX, virtual NXX type call is local because it is originates
22 and terminates within the same calling area, that there is --

23 THE WITNESS: I'm sorry. That is not our position.
24 We are saying it is local because of the comparison of the NPA
25 and NXXs, which is the way the industry has traditionally rated

1 calls.

2 COMMISSIONER JABER: All right. I understand that,
3 and that there isn't a difference in the work performed in
4 delivering that call versus the traditional local call.

5 THE WITNESS: Yes. And it is because of the
6 different network architecture.

7 COMMISSIONER JABER: And if we were to accept that
8 and agree with you, what I hear you saying is there is no
9 potential for the ALECs to game the system, so to speak, by
10 establishing virtual NXXs?

11 THE WITNESS: Oh, no. It is not toll avoidance at
12 all. It is simply providing an FX service for the customer in
13 competition with the FX services that are being provided by the
14 incumbents. And just like the FX service provided by the
15 incumbents, it is locally dialed. And because it is locally
16 dialed that NPA/NXX, I mean, it is routed through local
17 interconnection trunks just like every other local call and
18 there is no -- there is no toll type treatment. There is no
19 CABs billing, there is no having to look up the one plus to
20 find out who the carrier is. It is simply a locally dialed
21 call and it should be treated as a locally dialed call.

22 COMMISSIONER DEASON: Excuse me. Who is responsible
23 for covering the cost of the transport of that call?

24 THE WITNESS: The transport is provided by the ALEC,
25 by Level 3. The responsibility of BellSouth and Verizon does

1 not change. It's just like every other local call. They take
2 it from the originating caller to the POI and that's it. And
3 then regardless of where that terminating call is, it is the
4 ALEC's responsibility, Level 3's responsibility to transport
5 that call and terminate that call.

6 BY MR. EDENFIELD:

7 Q Let me see if I understand what you are telling me.
8 In fact, we will go back to a couple of things. The diagram
9 you are looking at here said this is a more traditional -- how
10 a local call would be routed, is that what you told me a minute
11 ago, this diagram we are looking at?

12 A Yes. Because I don't see the IXC point of presence,
13 I don't see the BellSouth access tandem. I assume that is a
14 local tandem.

15 Q All right. In this instance, what transport is it
16 that you are offering to pay, what is the transport in this
17 diagram, assuming the call is coming over from the ALEC switch
18 on that dotted line down to end user B, what transport are you
19 offering to pay?

20 A Well, it's really the way this diagram is done that
21 it makes it a little bit confusing. If this is a virtual NXX
22 call, BellSouth customer EUA goes off hook, makes the call,
23 Dials 905-111, and then a station code, okay. BellSouth then
24 routes that call through the central office and to the POI.
25 From that point -- and if you say the POI is over here where

1 the BellSouth tandem is, we can assume that for purposes of
2 this example.

3 Q Sure.

4 A From that point, Level 3 takes the call, takes it to
5 its switch, and it is that transport between the POI and the
6 switch that BellSouth is paying reciprocal compensation for,
7 and then from the switch it is Level 3's responsibility to
8 terminate that call to the ALEC end user B.

9 Q Well, let me ask you this, Mr. Gates. If that call
10 continued from the ALEC's switch on back into the Lake City
11 local calling area, which would truly make it a local call, you
12 would still be paying the transport from the point of
13 interconnection to the ALEC switch. That is your
14 responsibility on your side of the point of interconnection
15 whether it's a virtual NXX arrangement or not. You are not
16 offering to pay for anything extra because of this, are you?

17 A No, that is what BellSouth would pay in terms of
18 reciprocal compensation, that is what that rate covers. But
19 Level 3 would carry it from the point of interconnection to the
20 ALEC switch for which they would be compensated by BellSouth in
21 terms of reciprocal compensation, then Level 3 would terminate
22 it back to the Lake City local calling area.

23 Q All right. Let me make sure I'm following this. If
24 the call were to actually come back into the Lake City local
25 calling area, BellSouth in that instance would be paying Level

1 3 reciprocal compensation for terminating that local call in
2 the form of the transport from Level 3's point of
3 interconnection to Level 3's switch?

4 A That's right.

5 Q Now, what you are saying is if you make this into a
6 virtual NXX call and the call is actually terminating at ALEC
7 end user B, you are not going to charge BellSouth reciprocal
8 compensation for that call?

9 A No, I didn't say that at all. Reciprocal
10 compensation would still apply, we would just terminate it.
11 We, Level 3, would terminate it to a different location.

12 Q So I'm still paying you reciprocal compensation
13 whether it goes back into the local calling area as a local
14 call or whether it stays in the Jacksonville local calling area
15 as a virtual NXX call, I'm still having to pay you reciprocal
16 compensation for your transport from your point of
17 interconnection to your switch, which is the same thing -- I'm
18 paying the same thing either way?

19 A That's right. And you are not paying a penny more
20 for the transport regardless of where it terminates. And these
21 are both local calls and that is the key point. It doesn't
22 increase or decrease your costs one iota.

23 Q But, in essence, what you have done is you have taken
24 a call -- well, let me ask you this. You would agree that when
25 BST end user A picks up the phone and calls ALEC end user B

1 that we are talking about, the two that we circled in the
2 beginning?

3 A Yes.

4 Q And that call originates in the Lake City local
5 calling area and that call terminates in the Jacksonville local
6 calling area, right?

7 A Yes, it does.

8 Q Okay. And you would agree with me that when a call
9 originates in one local calling area and terminates in another
10 local calling area -- and I think this is what Doctor Selwyn
11 was saying -- that that is a toll call?

12 A Well, not in every case. I mean, if BellSouth were
13 providing an FX service from BellSouth end user A to the
14 Jacksonville local calling area, that would be an FX service
15 and it would be treated as local. Now, I understand that you
16 have your FX database that you put in place in February. That
17 notwithstanding, there are many different situations where
18 calls that are interexchange in nature are local calls and they
19 have been treated that way for decades. EAS, your extended
20 optional EAS, FX calls, remote call forwarding calls. If you
21 were to use your example literally, all of those would be toll
22 calls and you would end up paying access charges on all of
23 those calls.

24 Q Assuming BellSouth is the toll carrier?

25 A No, assuming your customer originates the call and

1 you are going to pay to terminate those toll calls to another
2 carrier.

3 Q Well, it's the toll carrier, whoever the toll carrier
4 is pays originating access and terminating access?

5 A Yes, that is correct.

6 Q So you are assuming in that instance that BellSouth
7 is the toll provider?

8 A Yes.

9 Q And that is not always the case, now is it?

10 A No, it's not.

11 Q All right. So what I'm trying to get to is forget
12 the EAS, forget all the extended area plans, what I'm talking
13 about is good old fashion Lake City is a local calling area
14 unto itself, a basic local calling area, and Jacksonville is a
15 basic local calling area unto itself. There is no overlap
16 between the two. Would you agree that if this call originates
17 in Lake City and terminates in Jacksonville that that is a toll
18 call?

19 A That is one way to make that call. You could also
20 use your BellSouth FX service and that would be a local call,
21 or you could use Level 3's virtual NXX service and that would
22 be a local call, or you could use remote call forwarding, or
23 extended reach service and that would still be a local call, or
24 even Verizon's DS-1, Cyber DS-1 service and that would be a
25 local call.

1 COMMISSIONER DEASON: Let me interrupt just a second.

2 THE WITNESS: Yes.

3 COMMISSIONER DEASON: If this call were completed
4 using a BellSouth FX arrangement, you said that is a local
5 call?

6 THE WITNESS: Yes, sir.

7 COMMISSIONER DEASON: I thought earlier the
8 definition -- if I understood Doctor Selwyn correctly -- is a
9 local call is when there is no additional charge for the call,
10 correct? But I thought with an FX service while the end use
11 customer may not have an additional cost or charge for calling
12 that, the customer that enables that to happen is paying
13 something extra because BellSouth is not going to do it out of
14 the goodness of their heart, they are getting additional
15 revenue. It is from the customer that wants -- the end use
16 customer, in this example end use customer B in Jacksonville,
17 wants their customer in Lake City to be able to call them toll
18 free so they can conduct business.

19 So there is an additional charge by someone. So that
20 still makes it a local call because the end user which
21 originated the call is not paying anything extra? Explain it
22 to me. And if that were the case, an 800 number, when you
23 would call an 800 number that would be a local call because the
24 end use customer is not paying anything extra. The extra
25 revenue is coming from the person who is subscribing to the 800

1 service.

2 THE WITNESS: Yes. 1-800 calls are clearly toll
3 calls. The toll indicator, the 1 tells you that it is a toll
4 call and they have always been treated as toll calls. They are
5 separately and distinct. But you raise a good point,
6 Commissioner Deason, because we have been talking today a lot
7 about some pricing issues, and pricing issues really have
8 nothing to do with how you determine whether a call is local or
9 toll.

10 Now, BellSouth with its FX service, they have chosen
11 to charge for that private line between the two exchanges.
12 That is a pricing decision. Level 3 doesn't have private line
13 circuits between exchanges, we have talked about that, because
14 the network just doesn't exist. So they are using the virtual
15 NXX codes. Now, they may or may not decide to charge for that
16 additional transport. But those are pricing issues and pricing
17 issues have nothing to do with the way you determine whether a
18 call is local or toll. The way we have done that historically
19 and the way we still do it today is by NPA/NXX codes.

20 COMMISSIONER DEASON: And the reason it was done that
21 way historically is because it was assumed that those NPA/NXX
22 codes were a geographic indicator which was a surrogate for
23 saying this is a call originating in local calling area A and
24 terminating in another local calling area, i.e., it is a toll
25 call, correct?

1 THE WITNESS: Yes, that is correct. Historically it
2 was done that way and then the network and consumer demands
3 became a little more sophisticated, and we ended up developing
4 things like extended area service, and optional local calling
5 plans, and things like foreign exchange, and remote call
6 forwarding. And all of these features now that let your phone
7 follow you wherever you go around the country.

8 But these are still locally dialed, they are still
9 treated as local by these incumbents. That's the way the
10 revenues are booked in their accounting system, that is the way
11 the costs are booked. These are local, not toll calls. And
12 they are handled differently. Because they are routed by
13 NPA/NXX, they do go over local interconnection trunks, they
14 don't go to the access tandem.

15 And as I mentioned earlier, there is no access charge
16 bill. You don't use the carrier access billing system. You
17 don't go in and look up tables and find out who the
18 interexchange carrier is. Why, because it's a local call,
19 because of the NPA/NXX. Now, does it transit more than one
20 exchange? Yes, it does. Does BellSouth and Verizon, do their
21 FX services transit more than one exchange? Yes, they do.

22 This is a competitive response. A very creative,
23 innovative, very much more efficient way to provide FX service
24 than what the incumbents are providing today. But it is dialed
25 as a local call and it needs to be treated as a local call.

1 The only reason that BellSouth developed their FX database is
2 because the ALECs had some success with this virtual NXX
3 service.

4 You heard Doctor Selwyn say that the FX rates have
5 not gone down, haven't moved perceptively in five years. There
6 is no competition for FX service, not until now. Not until the
7 ALECs figured out a creative way, a very innovative and
8 efficient way to make a competitive offering.

9 And now that they are making some inroads, getting
10 some of those customers, now they are saying, oh, those aren't
11 local calls, those are toll calls. You know, we not going to
12 pay you reciprocal compensation. Oh, and by the way, you owe
13 us access charges. I mean, that is just an attempt to prevent
14 any competition in an area where heretofore there has been no
15 competition. Now this is a wonderful benefit to consumers who
16 need a competitive alternative to the BellSouth and Verizon FX
17 service.

18 COMMISSIONER DEASON: So what I hear you saying is
19 the determining factor is not geography, it's the dialing
20 pattern.

21 THE WITNESS: It is. And that is the way the network
22 is set up. That is the way all the switches work. All the
23 CLEC switches, the ALEC switches, all of the ILEC switches,
24 that is way they work. You heard Mr. Ruscilli and you heard
25 Verizon witnesses say that, you know, we can't tell if these

1 are virtual NXX calls. They need to tell us if they are.

2 The reason they can't tell is because that is just
3 the way the system works. It's locally dialed, therefore, they
4 treat it as a local call. And if you try to change that like
5 they have suggested here, you are going to get absurd results.
6 Kind of the results that BellSouth is trying to point out.
7 They are trying to show kind of this inconsistency. I could
8 draw some wonderful diagrams for you, I would be happy to do
9 that, showing that if we do it the way they suggest then what
10 really is a local call is going to look like a toll call and it
11 is going to be billed like a toll call.

12 So our suggestion is this, let's not change all of
13 the systems and all of the switches and the switching
14 architecture that has been deployed in the United States and
15 internationally. That's what would be required. Let's just
16 keep the status quo. Yes, there are some calls, NPA/NXX type
17 calls, virtual NXX that kind of look like toll calls, but they
18 are not. They are just a competitive response to FX.

19 Let's keep it the way it is, allow some competition
20 and see where it goes. I mean, we haven't seen any harm.
21 Nobody has shown in this docket that BellSouth is going broke
22 because of these virtual NXX calls. They have admitted in the
23 testimony and in discovery that there is no additional expense
24 whatsoever, not a penny of additional expense because of these
25 calls. So if there is no additional cost, if BellSouth isn't

1 being hurt, why would you want to deny consumers a competitive
2 response to a heretofore monopoly offered service? Let's give
3 them a chance. Let's give these ALECs an opportunity to
4 provide a creative competitive response to FX service. Let's
5 not penalize them by trying to apply access charges to a
6 locally dialed call. That is completely inappropriate.

7 BY MR. EDENFIELD:

8 Q Mr. Gates, let me ask you, you would agree that the
9 FX database that you referenced was put in place predominately
10 to ensure that BellSouth was not billing you recip comp for
11 traffic that is obviously access?

12 A Well, I think it was put in place -- first of all,
13 let me point out that your witnesses said they did that because
14 they realized that these were not local calls. Well, those
15 rules that your witnesses referred to have been in place for
16 four years, and they just decided eight months ago or ten
17 months ago that these were local calls and they needed to do
18 something about it? It wasn't because of that. They have
19 known all along how these calls were treated. The only reason
20 it is being done is because they are trying to prevent
21 competition for developing for this FX product which has never
22 had competition in the past.

23 Q Was that yes, no, or I don't know?

24 A I think I disagreed with your premise.

25 Q Okay. So that would have been a no, okay.

1 Now, let me ask you this. You also indicate that
2 BellSouth, if I understood your discussion with Commissioner
3 Deason, that BellSouth intends for these calls to be local,
4 these virtual NXX calls. Are you suggesting that if ALEC end
5 user B was assigned the number that the numbering administrator
6 had given him, the NPA/NXX assigned to that rate center, in
7 other words, 905-222, that BellSouth would be billing that call
8 as a local call, as well?

9 A No. What I'm saying is if you -- if your BellSouth
10 end user A customer had your FX service, that would be a local
11 call. I'm not disputing the fact that you could turn that into
12 a toll call, sir. I'm not disputing that. There are ways that
13 that would look the like a traditional toll call. But what I
14 am saying is that just like your FX service, ALECs are
15 providing a competitive response to that FX service and making
16 that a local call.

17 Q All right. All I'm trying to get to is you seem to
18 suggest that the jurisdiction of a call should be determined
19 based on the NPA/NXX instead of the originating and terminating
20 points?

21 A Yes, as it always has been.

22 Q Your position is that the FCC has historically
23 determined the jurisdiction of a call based on NPA/NXX and not
24 the originating and termination points?

25 A Well, in fact, the FCC has never used the origination

1 and termination points. It has been --

2 Q Yes or no, and then you can explain. Please, just
3 answer yes or no and then you can explain.

4 A I will try. Would you ask one more time.

5 Q Yes. Are you suggesting that the FCC makes
6 jurisdictional determinations based on the end points of a call
7 or on the NPA/NXX of a call?

8 A Both. Both. I think it's obvious that the
9 end-to-end analysis is used for jurisdictional determinations,
10 that is pretty obvious for interstate calling. But you can
11 also do it with the NPA/NXX. And, in fact, that is the way the
12 FCC does it. They don't go out and get V&H coordinates for
13 precise locations. They use rate centers based on the NPA/NXX.
14 That is how they do their end-to-end analysis.

15 Q So under that scenario then I take it if -- we will
16 use Verizon as the example since they don't need interLATA
17 relief in Florida. If a Verizon customer picks up the phone
18 and calls a customer in New York City, and that customer in New
19 York City has, because of the virtual NXX situation, has a
20 905-111 NPA/NXX, I guess under your theory then that would be a
21 local call, a call from Tampa to New York.

22 A Well, my daughter lives in Tampa --

23 Q Yes or no and then explain, please.

24 MR. HOFFMAN: I'm going to object. First of all, I
25 think the question is confusing, because I think we may have

1 thrown in an extra city. Second of all, I think that Mr.
2 Edenfield needs to let Mr. Gates respond to the question once
3 the question is asked.

4 MR. EDENFIELD: My apologies. I thought the
5 prehearing order said the witnesses are instructed to answer
6 yes or no and then explain. Certainly that is the practice of
7 the Commission.

8 CHAIRMAN JACOBS: Let's do this. Restate your
9 question, and I think he was giving a preliminary to his
10 answer. But yes or no as a preliminary rule would be the best
11 thing, and then give your answer.

12 THE WITNESS: Sure. Thank you, Mr. Chairman.

13 BY MR. EDENFIELD:

14 Q I'm sorry. The question is this, assume that the
15 customer -- and I will correct the three-city issue -- that the
16 end user A here that has the circle around him sitting in Lake
17 City, assume we don't have LATA issues. This person picks up
18 the phone, calls a Level 3 customer in New York City, and that
19 Level 3 customer in New York City has a 905-111 NPA/NXX
20 assigned to him.

21 Under your theory, then, since the NPA/NXX that is
22 assigned to the customer in New York City would make it look
23 like a local call to the switch, then I assume you would
24 contend that that is a local call, as well?

25 A Yes, I would, because -- and let me point out that it

1 is somewhat a ridiculous hypothesis, but it is technically
2 possible to do that. But if that call did occur,
3 BellSouth's -- or let's say Verizon's responsibilities wouldn't
4 change. Your technical and financial responsibilities would
5 end at the POI in Tampa, or, excuse me, in this Lake City
6 example, and Level 3, for whatever reason, I don't know why
7 they would ever do this, but Level 3 would be responsible for
8 terminating that call 1500 miles to New York City.

9 Now is that technically feasible? I think it might
10 be. Would it ever happen? I can't imagine how or why. I have
11 asked the company that because this example comes up every once
12 in awhile, like every hearing. And they don't offer it in that
13 manner. Usually these are intraLATA offerings. And they have
14 other services that they offer for 1500 miles of transport, and
15 it's not local calling.

16 COMMISSIONER JABER: Mr. Gates, this relates back to
17 the question I was asking you also about gaming the system.
18 What you are saying -- clarify for me what BellSouth's
19 responsibility in that hypothetical, or Verizon, what the
20 ILEC's responsibility would be for transport, where it ends?

21 THE WITNESS: Okay. That call, the person, let's say
22 it's my daughter in Tampa. I guess we are using -- let's use
23 your example here.

24 COMMISSIONER JABER: Lake City to New York.

25 THE WITNESS: Yes, Lake City to New York. The

1 BellSouth end user A customer would go off hook, would dial a
2 local number, okay, BellSouth would route the call through its
3 end office to the Level 3 POI, just like it would a local call
4 that stayed within the Lake City or, you know, one of these
5 local call areas, okay. From the POI then Level 3 would be
6 responsible for terminating the call. Now, Level 3 would
7 terminate that call all the way to New York, the 1500 miles.
8 What Level 3 would receive for that, however --

9 COMMISSIONER JABER: So from Level 3's switch to New
10 York Level 3 would be responsible. So the only distance that
11 BellSouth is responsible for would be within the Lake City
12 calling area?

13 THE WITNESS: Right, just to the POI. Just like any
14 other local call, they just take that call to the POI. From
15 there it goes to the Level 3 switch as you suggested. Now,
16 would BellSouth have to pay Level 3 any more money for the call
17 to New York? No, not a dime. All Level 3 would get is the
18 reciprocal compensation that they would normally get for any
19 local call. And that again is for getting that call from the
20 POI to the switch. That is all they would get.

21 Now, if Level 3 then wanted to transport that call
22 1500 miles, I guess that is Level 3's decision if they want to
23 go broke and do that type of business. It's very unlikely that
24 it would occur.

25 COMMISSIONER JABER: So this morning -- I think it

1 was this morning when I was asking questions about distance and
2 why it matters to BellSouth with respect to terminating a
3 virtual NXX call, I understood that testimony to be that even
4 though it is a local dialing pattern, that the ILEC has to
5 route the call a longer distance.

6 THE WITNESS: Oh, no, not at all.

7 COMMISSIONER JABER: And you would disagree with
8 that?

9 THE WITNESS: No. And I'm sure if you asked that
10 witness that question again, that he would clarify that.
11 BellSouth and Verizon's responsibilities end at the POI
12 regardless of the ultimate destination of that call.

13 BY MR. EDENFIELD:

14 Q You are not suggesting our financial responsibility
15 ends at the POI, because we have to pay you recip comp to carry
16 the call from the POI to your switch, right?

17 A Yes, but that is the same for any local call. It has
18 nothing to do with the distance. If it is ten feet, or 1500
19 miles, or 20,000 miles, that recip comp rate that you pay Level
20 3 doesn't change.

21 Q Why not?

22 A Because you are not terminating the call, Level 3 is
23 terminating the call. The recip comp that you pay to the ALEC
24 is just for getting that call from the POI to the switch. That
25 is the termination and transport, that's it, and your

1 responsibility ends.

2 Q Is the transport mileage sensitive?

3 A You know, I'm not certain, but it is just from the
4 POI to the switch. Which is, you know, a lot of times it's
5 feet and not miles, so regardless. It doesn't change, is the
6 point, whether it is -- if the call is a two-mile termination
7 or a 1500-mile termination, your costs don't change. All local
8 cost you the same in terms of your reciprocal compensation.

9 Q Well, what if Level 3 decides to have a single switch
10 in the BellSouth region? In this instance, would you be asking
11 BellSouth to pay you for switching and transport costs from the
12 point of interconnection here in Jacksonville?

13 Suppose you had a switch located in Charlotte that
14 was serving the whole region. Would you be asking us to pay
15 you reciprocal compensation for hauling that call to Charlotte
16 to your switch?

17 A Well, I can't agree with that characterization. I
18 mean, Level 3 is not just going to close down all of its
19 switches and just have one in the middle of the country. That
20 makes no sense. But it's POI per LATA, and that is the rule,
21 that is what Level 3 is doing, that is what other ALECs are
22 doing. And, yes, you bring that traffic to that single POI.
23 But that doesn't change depending on the terminating location
24 of the call.

25 Q Do you think -- I don't know if I asked you this or

1 not. I was thinking of asking you and I'm not sure if I did.
2 Do you think that the FCC would agree with your analysis that a
3 call that originated in Lake City and terminated in New York
4 City would be a local call because you have assigned a virtual
5 NXX to it?

6 A Well, yes, in one sense. If they didn't, then all of
7 your FX -- your, BellSouth FX calls, remote call forwarding
8 calls, your extended reach calls, the Cyber DS-1 calls, all of
9 those would have to be toll calls as well if they weren't
10 local. So, I mean, we just have to be consistent in the way we
11 treat the calls.

12 Q You talk about the cost that BellSouth is incurring,
13 let's talk to about what BellSouth would be giving up.
14 Traditionally this would be a toll call, and if BellSouth was
15 the -- let's say BellSouth is not the toll carrier, and in this
16 instance Level 3 is the toll carrier. Traditionally, BellSouth
17 would be receiving originating access from Level 3 for a call
18 that originates in one local calling area and terminates in
19 another, right?

20 A If Level 3 was the toll provider for the originating
21 consumer?

22 Q Right. They are the PIC.

23 A That is correct.

24 Q And so what BellSouth would be giving up in this
25 instance by you assigning a virtual NXX would be that we are no

1 longer receiving originating access in that situation and, in
2 fact, in addition to no longer receiving originating access, we
3 are now going to be required to pay you reciprocal compensation
4 under your theory?

5 A That is correct. Just exactly the way you have given
6 up originating access charges on all of your FX, EAS, and
7 extended reach services.

8 MR. EDENFIELD: I've got nothing further.

9 CHAIRMAN JACOBS: Ms. Caswell.

10 CROSS EXAMINATION

11 BY MS. CASWELL:

12 Q Good afternoon, Mr. Gates. I'm Kim Caswell with
13 Verizon.

14 A Good afternoon.

15 Q Every time you want virtual NXX capability in a
16 particular calling area, you would need to request a new
17 NPA/NXX code from the numbering administrator, is that right?

18 A No, not necessarily. If you have codes already
19 available you can use those codes, as was discussed this
20 morning. If you had a thousand block set of numbers, it
21 doesn't have to be 10,000 numbers, by the way. But if you had
22 a thousand, and you had 950 of those for normal NXX type
23 calling, and then you could assign 50 for virtual NXX calling.

24 Q Let's say it is the first time you want to assign a
25 number in an area, and you want to assign a virtual NXX number.

1 You would have to get an NPA/NXX, correct?

2 A Well, that's true about providing service anywhere.
3 Anywhere you want to provide service you have to have NXXs,
4 that is correct.

5 Q And there are 10,000 numbers in an NXX block?

6 A No. We now have -- especially in jeopardy
7 situations, we can get thousand block numbers. And depending
8 on the capabilities of your central switches, you can even
9 break those down into 500 and 100 number blocks. But frankly
10 that is pretty uncommon. But, no, you do not have to order
11 10,000 numbers. That is clearly wrong.

12 Q But that is only where, say, number pooling is in
13 effect or something like that where you would be able to get a
14 1,000 block, correct? Where there would be a jeopardy
15 situation, is that right?

16 A Yes, generally that is true.

17 Q Okay.

18 A So it's not an issue. If you are not in a jeopardy
19 situation, yes, you can get 10,000 numbers, and that is the way
20 companies grow their business.

21 Q And how many NXX codes have you obtained in Florida
22 to provide virtual NXX service?

23 A I'm sorry, I don't have that information for Level 3.

24 Q Do you have any idea?

25 A No, I don't. But as was pointed out this morning, if

1 NXX codes aren't used over a six-month period, they need to be
2 turned back in to the number administrator for reassignment.

3 Q And not used means that the carrier is not
4 terminating traffic to an exchange within six months, right?

5 A Well, that they have never been assigned. That the
6 10,000 number block or the thousand number block has not been
7 contaminated by the assignment of numbers.

8 Q Don't the central office code assignment guidelines
9 require termination of traffic to an exchange or else you need
10 to return those numbers?

11 A Well, I think we are saying the same thing, yes. I
12 mean, once they are assigned, I think you have to assume that
13 there is some traffic or you wouldn't assign them, so, yes.

14 Q But a carrier can't terminate calls in an exchange it
15 doesn't have any customers physically located there, can it?

16 A Well, you could with a virtual NXX or an FX service
17 you certainly could, yes.

18 Q You would call that call termination in an exchange
19 just because you assigned an NXX code?

20 A Well, I'm not sure if you are -- you may be talking
21 about a technicality that I'm not familiar with. But what I'm
22 saying is that you can without a physical presence have calls
23 routed from an exchange to your presence. Now, whether that
24 meet your technical definition that you are referring to, I'm
25 not sure because I'm not -- I don't know what you are reading

1 from or referring to.

2 Q Do you know how the central office code assignment
3 guidelines define call termination or consider call
4 termination?

5 A Not specifically, no.

6 Q Okay. Are you aware that this Commission has
7 received authority from the FCC to direct the numbering
8 administrator to reclaim NXXs that have not been activated in a
9 timely manner?

10 A I have heard that, and most states act on that, as
11 well. And that is a good way to manage the resource.

12 Q I think that you said earlier that if there is a
13 number conservation issue with regard to virtual NXX service
14 then that same issue exists with regard to the ILEC's FX
15 service. But it's not true that when an ILEC wants to offer FX
16 service it needs to request a new NPA/NXX, is it?

17 A Well, it would be true if you hadn't been providing
18 service there. That is the difference between an incumbent and
19 a new entrant. The incumbent already has a presence in these
20 local calling areas, they have NXXs available generally. They
21 do add to those NXXs, though, just like the ALECs request new
22 NXXs to enter a local calling area.

23 I might add that in all of my years working with
24 numbering issues in various states around the country, no one
25 has ever raised the issue of foreign exchange calls, or remote

1 call forwarding, or virtual NXX as an issue that is harming the
2 numbering resource. It has never been raised in any meeting
3 that I have attended.

4 Q Have you been to Illinois?

5 A I have been to Illinois. I have --

6 Q Then you have seen -- I'm sorry, go ahead.

7 A I have been there many times.

8 Q So you are not familiar with the discussions that
9 Mr. Haynes spoke about earlier?

10 A No, I was not involved in those numbering issues in
11 Illinois.

12 Q And you have seen the Maine decision, where Maine
13 called the virtual NXX practice an extravagant use of numbering
14 resources?

15 A Yes, and I really disagree with that. It is no more
16 extravagant, if you want to use that word, than FX service. I
17 mean, it is the same type of offering. And to the extent they
18 consider virtual NXX to be an extravagant use of numbers, so is
19 FX, and so are all the other services that companies are
20 offering that are similar to that.

21 COMMISSIONER JABER: If in some future date this
22 Commission were to find that FX service is anti-number
23 conservation, would that also be true for virtual NXX service?

24 THE WITNESS: Yes, it would.

25 BY MS. CASWELL:

1 Q Level 3's interconnection agreement with Verizon
2 defines local traffic for the purposes of interconnection and
3 mutual compensation, doesn't it?

4 MR. HOFFMAN: I'm going to object, and ask if counsel
5 is going to ask questions concerning that interconnection
6 agreement that the witness be provided a copy.

7 CHAIRMAN JACOBS: Do you have a copy of that,
8 Counsel?

9 MS. CASWELL: Yes, I have a copy here. But it is the
10 only one, though.

11 BY MS. CASWELL:

12 Q Do you know if Level 3 has adopted the AT&T
13 interconnection agreement with Verizon?

14 A No, I don't.

15 Q Can you just assume that that is true, subject to
16 check? Because what I have handed you is the AT&T agreement
17 that Level 3 adopted?

18 A I can except that subject to check, but I have never
19 seen an interconnection agreement that wasn't at least two
20 inches thick, and this is three pages.

21 Q I have just got the definitions there, I have just
22 got the local traffic definition.

23 A Okay.

24 Q And I think it is down at the bottom of one of the
25 pages. Can you read what that says?

1 A At the bottom of which page?

2 Q I don't have the page with me, but I have it
3 underlined, and it says -- I think it says local traffic.

4 A Okay. Would you like for me to read that sentence?

5 Q Well, either that, or can you verify that local
6 traffic for purposes of mutual compensation means that a call
7 originates and terminates in the same GTE exchange area?

8 A Well, let me just read it. It says, "Local traffic
9 for purposes of interconnection and mutual compensation under
10 the agreement means traffic, (1), that originates and
11 terminates in the same GTE exchange area or, (2), originates
12 and terminates in different GTE exchange areas that share a
13 common mandatory local calling area, such as mandatory extended
14 area service. Local traffic does not include optional EAS,
15 which are those arrangements where the originating end user has
16 a choice between rate plans, one rate plan which does not
17 include the identified route, and one rate plan which does not
18 include the identified route within the end user's flat rate
19 calling area."

20 Q Virtual NXX calls don't originate and terminate in
21 the same ILEC local exchange area, do they?

22 A Well, they do from the perspective of the switch.
23 Because of the NPA/NXX commonality, the switch believes that
24 those originate and terminate in the same local calling area,
25 just like FX service.

1 Q But physically they don't originate and terminate in
2 the same calling area, correct?

3 A That is correct.

4 Q And that is how we have traditionally defined local
5 and toll calls, correct? I think you --

6 A No, I wouldn't agree with that generally just because
7 of all the exceptions we have to that general statement. But
8 certainly some toll calls or toll calls do originate and
9 terminate in different exchanges.

10 Q Yes. And I think you agreed earlier with Mr.
11 Edenfield that traditionally it would be a toll call if an end
12 user in Lake City called an end user in Jacksonville?

13 A Sure. If you didn't have an FX service or an FX type
14 service that would certainly be the case.

15 Q But you seem to think that reciprocal compensation is
16 due for virtual NXX calls, but that is not consistent with the
17 parties' interconnection agreement, is it?

18 A Well, it is certainly -- well, I don't know. But I
19 do know it is consistent with the way Verizon treats its FX
20 service. How can you charge Level 3 access charges for a call
21 and then charge -- and then, you know, charge ALECs like Level
22 3 recip comp on your FX service? I mean, that is totally
23 inconsistent. You can't have it both ways.

24 Q Well, if you look at that interconnection agreement
25 it means that you don't get reciprocal compensation for virtual

1 NXX calls, does it?

2 MR. HOFFMAN: I'm going to object at this point. You
3 know, the question of what an interconnection agreement means
4 or should be interpreted to mean, as this Commission knows, can
5 often be a function of a number of different circumstances
6 arising out of the actions and intent of the two parties to
7 that agreement. And for this witness to speculate on that is
8 inappropriate.

9 MS. CASWELL: All that I asked him was what the local
10 calling definition said in the agreement, but I will go on.

11 BY MS. CASWELL:

12 Q Have you attempted to charge Verizon reciprocal
13 compensation for virtual NXX calls?

14 A I don't know. I just don't have that information.

15 Q Does Level 3 serve primarily ISPs?

16 A No, I think that would be incorrect.

17 Q Does it carry any voice traffic at all?

18 A It is carrying voice traffic, that is a service that
19 it is rolling out.

20 Q So it's not carrying it?

21 A They are carrying voice traffic today. They offer
22 about 29 different services. I don't know how those are split
23 up amongst various types of customers.

24 Q When you say they are rolling it out, does that mean
25 you are providing it now or you are just starting to provide

1 it?

2 A I know that Level 3 is offering voice services, I
3 don't know if they are offering them today in Florida. I know
4 it is still, you know, still in its infancy.

5 Q I would like for you to take a look at your rebuttal
6 testimony at Page 23, Lines 1 through 3. You state that even
7 under the proposals of BellSouth and Verizon, these calls --
8 and I believe you are referring to virtual NXX calls -- would
9 continue to be rated as local for retail purposes. Where has
10 Verizon made such a proposal?

11 A Well, your FX service is rated as local.

12 Q But Verizon hasn't proposed any use of virtual NXX
13 codes, right?

14 A It's the same thing. It is the exact same
15 functionality you are providing to your customer. The virtual
16 NXX service that the ALECs are providing, as I think Doctor
17 Selwyn said this morning, that is really physically the only
18 way that they can provide a competitive response to your FX
19 service. Absent going out and building central offices in
20 every local exchange where Verizon has a central office, I
21 mean, that is the only way that ALECs would be able to
22 physically provide that service in the same manner as Verizon.
23 So instead of duplicating your network, the ALECs are using
24 virtual NXX to provide the same functionality and service to
25 consumers.

1 Q And an ILEC charges the FX subscriber for that
2 service, correct?

3 A Yes, it does. And that is a pricing issue, that has
4 really nothing to do with the technical issue or whether or not
5 it is a local or toll call. That is simply pricing and has no
6 place in this proceeding.

7 COMMISSIONER DEASON: Well, let me interpret just a
8 second. I may have misunderstood Doctor Selwyn, but I thought
9 that he said that is precisely how you define what is toll. I
10 mean, he referred us to United States Code, and I didn't get a
11 copy of the language, I wish I had it in front of me, but I
12 tried to make notes and I may be mistaken because I don't have
13 the language, but basically a definition of toll service is
14 when you pay -- there is a charge to customers more than what
15 they get with their basic. And if they are charged for that,
16 well, then that makes it not local, which makes it toll.

17 THE WITNESS: Well, that is one way to look at it. I
18 mean, there are carriers today that are charging a flat rate
19 for all calling statewide. Local, whatever you would consider
20 to be traditional toll, internet access, all of it for a flat
21 rate.

22 And let's look at, for example, the extended optional
23 EAS that BellSouth is offering. Now, they are charging an
24 additional amount for that, okay, for LATA-wide calling. That
25 is not toll, that is local. Those calls are rated as local and

1 they are booked as local on the books of the company. That is
2 not a toll call.

3 COMMISSIONER DEASON: So how does it fit in the
4 definition under -- what is it, Section 47, United States Code,
5 Mr. Hoffman?

6 THE WITNESS: Yes. I think Mr. Hoffman might have
7 that.

8 MR. HOFFMAN: 47 USC 153, Paragraph 48. I can give
9 the witness my copy.

10 THE WITNESS: And that might be one definition of
11 toll. I used to always think of toll as having a toll
12 indicator like the 1 or a 0.

13 COMMISSIONER DEASON: Could you just look at that, 47
14 USC Section 153(48).

15 THE WITNESS: Yes.

16 COMMISSIONER DEASON: If it is not too terribly long,
17 can you read it?

18 THE WITNESS: Yes, I would be happy to. It says,
19 "Telephone toll service. The term 'telephone toll service,'
20 means telephone service between stations in different exchange
21 areas for which there is made a separate charge not included in
22 contracts with subscribers for exchange service."

23 COMMISSIONER DEASON: So under that definition, how
24 does -- what is FX service under that definition?

25 THE WITNESS: Well, under this definition FX service

1 as provided by BellSouth would be a toll service, because there
2 is an additional charge for that private line between the
3 exchanges. The inconsistency there is that they have always
4 treated it as a local service. Despite what they have said in
5 this proceeding, if you go back a year or two and you look at
6 their tariffs and you look at their books, these are local
7 services. They are not charging toll rates for FX service.
8 They are charging, yes, for that private line, but it has
9 always been booked as local. And they have always charged
10 us -- until they did their FX database, they have always
11 charged us reciprocal compensation meaning --

12 COMMISSIONER DEASON: Now, are you saying just
13 because they have done it that way that makes it right?

14 THE WITNESS: Well, I'm just trying to point out that
15 this definition which is probably, you know, dates from
16 divestiture, may not apply today. I think in the next five
17 years or so you are going to see a huge convergence of usage
18 where local and toll really isn't going to mean anything
19 anymore.

20 You are probably just going to buy some access and
21 you are going to get a certain amount of bandwidth. And you
22 can use that bandwidth for whatever you consider local calling,
23 traditional toll, video streaming, and we are not going to have
24 a description on your bill anymore that is going to say local,
25 EAS, toll. I mean, I think it is all going to be thrown in

1 there and it's going to be a real convenience, I think.

2 Now, will that raise a lot of problems for us as
3 regulators? Oh, boy, yes, it will. It will be tough, and it
4 will be a difficult transition. But once we do and there is
5 competition, then it will be much more efficient and easier to
6 understand. Because we are not talking about -- mileage
7 doesn't mean much anymore, as we have discussed over the last
8 couple of days. Transport is so cheap, 300 miles of transport
9 is only 1.6/10,000ths of a penny according to BellSouth's
10 rates, 300 miles of a DS-3. I mean, that is de minimis.

11 COMMISSIONER DEASON: Let me ask you this: How does
12 Level 3's virtual NXX service, under the definition that you
13 just read, how would that service be classified?

14 THE WITNESS: I don't know how Level 3 charges for
15 that. I know they consider it a local service. I don't know
16 how they charge for it, so I don't know if there is an
17 additional charge for the transport. But that is really why
18 you can't look at pricing. Pricing really doesn't help you
19 determine whether it is local versus toll with the existing
20 technology today.

21 COMMISSIONER DEASON: So your bottom line is that the
22 references which Doctor Selwyn gave us in the United States
23 Code doesn't help us in today's environment?

24 THE WITNESS: Well, I think they are helpful. That
25 is the traditional definition that, you know, I have been

1 talking with today with BellSouth's counsel. Yes, that is a
2 traditional definition. It may not help you going forward.
3 All we are suggesting here is let's not change the status quo,
4 and the status quo is rating calls based on NPA/NXX. Let's not
5 change that now because competition is coming. You know, let's
6 not force all of those costs on ILECs and ALECs alike just to
7 stop competition.

8 Let's just continue to use the status quo, the
9 existing technology, and encourage new entrants like Level 3 to
10 provide services like this. Let's not charge them, or tax
11 them, or penalize them for trying to figure out a new and
12 efficient way to provide a competitive response to BellSouth's
13 or Verizon's FX service. I mean, it is clearly a local
14 service. It is dialed as a local call.

15 And this is perhaps the most important point, which I
16 probably should have brought up 25 minutes ago. We need to
17 look at this from the consumers' perspective. Let's not look
18 at the switches, let's not look at the rates, let's not look at
19 the service descriptions, but what does it look like to the
20 consumer. Now, when someone picks up the phone and they dial
21 seven digits, they expect that to be a local call. They don't
22 know if whoever they are calling, they don't know if they are
23 next door, they don't know if they are ten miles away or 1500
24 miles away. But they know they are dialing a local call. The
25 switch sees it as a local call, therefore it should be treated

1 as a local call just as it has been over the years.

2 And that is consistent with the way that Verizon and
3 BellSouth have treated their FX, extended reach, RCF, all of
4 these other services, that is the way they treat them today.
5 So let's not change that. Let's not change it just because
6 there is competitive entry.

7 COMMISSIONER DEASON: Well, I agree that the customer
8 initiating the call considers it local. But the customer
9 subscribing to the FX, they may want the customer originating
10 the call to think it is local, but when they get their bill
11 every month they know it is not local because they are paying
12 dearly for that.

13 THE WITNESS: They are paying extra. And Level 3 may
14 choose to charge extra for that, as well. But since they don't
15 provide the private line, it's going to be more of a
16 competitive pricing response as opposed to a specific, you
17 know, facility price or cost. But I just think it's wrong to
18 focus on prices when you are trying to determine whether a call
19 is local or toll. That really shouldn't enter into it.

20 COMMISSIONER DEASON: So we should look at dialing
21 patterns?

22 THE WITNESS: Yes, sir.

23 COMMISSIONER JABER: And, Mr. Gates, just to take
24 that one step further, in preparing for a competitive
25 marketplace we shouldn't be looking at costs anyway, but that

1 competitive pricing pattern.

2 THE WITNESS: Well, we have to look at costs in the
3 interim because we still have the vestiges of a monopoly in the
4 incumbents. We have to make sure that they aren't gouging new
5 entrants and preventing competitive entry by imposing
6 additional costs, unwarranted costs on the new entrants. So
7 for awhile we have still got to look at costs to make sure that
8 the rates are TELRIC-based, you know, a competitive sort of
9 rate so that the competitors don't end up subsidizing the
10 incumbent.

11 COMMISSIONER JABER: Well, then in that regard, might
12 the transition, might a fair transition be the bill and keep
13 methodology?

14 THE WITNESS: Bill and keep only works if the
15 balance -- or the traffic is roughly in balance. That is the
16 only time it works. Otherwise you end up having the new
17 entrant paying costs that the incumbent never has to pay, even
18 if they are imputed. So bill and keep will work if the traffic
19 is in balance, and that's the key. And that is your dilemma, I
20 think.

21 COMMISSIONER JABER: Were you here earlier when I
22 asked that question about other states?

23 THE WITNESS: Yes, ma'am, I was.

24 COMMISSIONER JABER: I will take this opportunity to
25 try to ask you these questions then. Are you aware of any

1 other states that have implemented a bill and keep methodology?

2 THE WITNESS: I'm not sure -- I'm aware of one state,
3 my home state of Colorado, that ordered bill and keep for ISP
4 traffic only. That seems now to be, you know, null and void
5 given the FCC's ruling, but it was never implemented. Of
6 course it was appealed. So I'm not aware of any states that
7 have implemented bill and keep.

8 COMMISSIONER JABER: Do you know if Iowa has
9 implemented a bill and keep methodology for all traffic?

10 THE WITNESS: I don't know. I'm sure the lawyers
11 though in the briefs will fill us all in on that.

12 COMMISSIONER JABER: I think the layers can tell me
13 if Iowa has done that too, perhaps.

14 BY MS. CASWELL:

15 Q I just want to go back to the statement of yours
16 about a proposal of Verizon. I just wanted to be clear that
17 you agree with me that Verizon has never proposed that virtual
18 NXX calls would continue to be rated as local. Verizon hasn't
19 made such a proposal, has it?

20 A No, you have never made the proposal that virtual NXX
21 calls would be rated as local. But you continue to rate and
22 price your own FX service as local. So, I mean, we need to be
23 consistent. You can't treat your competitors one way and then
24 continue to treat your own service in another.

25 Q But your statement deals specifically with virtual

1 NXX calls, correct?

2 A Yes. Virtual NXX, which is identical from a
3 consumer's perspective and from a provisioning -- well, not
4 exactly provisioning, but from the consumer's perspective it is
5 identical to your FX service.

6 Q You won't be entitled to reciprocal compensation for
7 any virtual NXX calls unless the Commission buys your notion
8 that dialing patterns determine whether a call is local,
9 correct? They have got to accept that before you do reciprocal
10 compensation for virtual NXX calls?

11 A I would agree with that generally.

12 Q And that's a break with what they have traditionally
13 done with regard to determining whether a call is local or
14 toll, correct?

15 A No, I don't agree with that at all. They have
16 certainly approved all of the other similar FX type services
17 that the incumbents are providing today. So I think it would
18 be very consistent with the decades old policy of this
19 Commission to go ahead and say that virtual NXX calls are local
20 calls.

21 Q Don't Verizon's tariffs approved by this Commission
22 define its local calling areas?

23 A I'm sure your local calling areas are defined by the
24 Commission.

25 Q And hasn't the Commission assessed whether something

1 is local or toll based on the location of the calling party and
2 the called party?

3 A Oh, not in every case. I mean, I hate to be
4 redundant, but you have to keep looking back to your own
5 services.

6 Q So, again, you're going to talk about the FX service,
7 correct?

8 A Yes.

9 Q And that would be the only reason that you believe
10 the Commission hasn't traditionally looked at the location of
11 the customers to determine whether something is local or toll?

12 A The Commission has always relied on the industry
13 practice, which is to use the NPA/NXX codes to determine
14 whether something is local or toll. Now, there are unique
15 situations, such as EAS. And the companies deal with those
16 unique situations by going into the translation tables in the
17 switches and making that change.

18 So when that customer makes a call, not only can they
19 tell whether they have call forwarding, call waiting, you know,
20 last number redial, all of those things are in the translation
21 tables, but also the EAS routing, that is in the translation
22 table. So it tells that switch if that call goes from one NXX
23 to this one other NXX, which is within the EAS zone, to treat
24 that as local and not toll.

25 Q When Level 3 uses virtual NXX assignments, does it

1 pass any information to the ILEC to allow the ILEC to determine
2 whether that call should be rated as toll or local under the
3 ILEC's tariffs?

4 A No, of course not.

5 Q And you don't think they --

6 A Just like Verizon doesn't pass any information to
7 Level 3 when it bills us reciprocal compensation for FX calls.

8 Q Do you know that this Commission found that in an
9 arbitration between Intermedia and BellSouth that Intermedia
10 should pass such information if it wanted to use virtual NXX
11 assignments?

12 A I am generally familiar with that. I don't have any
13 personal -- I don't think I have read that order completely,
14 but I think I am familiar with that.

15 MS. CASWELL: That's all I've got. Thank you,
16 Mr. Gates.

17 THE WITNESS: Thank you.

18 CHAIRMAN JACOBS: Ms. Masterton. Commissioners.
19 Staff.

20 MS. BANKS: Yes, Mr. Chairman, staff has a few
21 questions.

22 CROSS EXAMINATION

23 BY MS. BANKS:

24 Q Good afternoon, Mr. Gates.

25 A Good afternoon.

1 Q I wanted to know if you know if Level 3 presently has
2 customers in all exchanges to which Level 3 has assigned its
3 NXX numbers in Florida?

4 A I don't personally know the answer to that question,
5 but I would assume that they do or they wouldn't have deployed
6 those numbers. But I don't know.

7 Q Okay. Changing gears a little bit, there has been a
8 lot of discussion about what calls are treated as local calls.
9 And the FCC has stated that calls to ISPs are local, is that
10 correct?

11 A They are not local?

12 Q Yes, they are not local.

13 A Yes, I think the new ruling calls them exchange
14 access or something that I think is not very well defined yet,
15 but they are not local.

16 Q Okay. Originally wouldn't you say that was because
17 the seven digit ISP call terminates at a distant website,
18 according to the FCC's declaratory ruling?

19 A The declaratory ruling was remanded back to the FCC
20 which resulted in the remand order. So are you asking me a
21 question about the declaratory ruling?

22 Q Yes.

23 A Okay. I'm sorry, what was it again?

24 Q Basically, the seven-digit ISP call termination at a
25 different website, has it originally been determined that this

1 seven-digit ISP call terminates, when it terminates at a
2 distant website, according to the FCC's declaratory ruling,
3 correct?

4 COMMISSIONER JABER: Felicia, one more time. I
5 didn't hear your question.

6 COMMISSIONER DEASON: More slowly, please.

7 THE WITNESS: Yes, please.

8 BY MS. BANKS:

9 Q You stated earlier that the FCC has stated that calls
10 to ISPs are not local, correct?

11 A Yes, based on the recent ruling. Which I know has
12 been appealed, but it's there, so.

13 Q Okay. Well, notwithstanding that, if the FCC didn't
14 consider -- and let's just changing it a little bit -- if the
15 FCC didn't consider a seven-digit call to ISPs a local call
16 because it terminates at a distant website, why would the FCC
17 consider a seven-digit call from Lake City to New York a local
18 call as you mentioned earlier?

19 A I think the FCC concluded -- I don't know what to
20 think of the FCC. I don't know how they came to their
21 conclusions.

22 COMMISSIONER DEASON: Welcome to the club.

23 THE WITNESS: All I know is they really like
24 footnotes, you know. But I don't know if I can answer that,
25 I'm sorry. I think -- I don't know. I just can't answer that.

1 I think it was because of the multiple terminations of those
2 calls to ISPs. I mean, I think they discussed it at some
3 length that they are not just terminating at the ISP, that
4 there is actually multiple calls to the URLs. And they
5 concluded that it was more like a toll call than a local call.

6 BY MS. BANKS:

7 Q Let's see if this might help. If I could clarify,
8 Mr. Gates. If a seven-digit call to an ISP is not local, why
9 would the other seven-digit call outside the local calling area
10 be considered local?

11 A Well, because for the same reason that FX calls and
12 all the other examples we have been talking about today are
13 local. There are exceptions to the originating and terminating
14 point analysis that the FCC has done, those exceptions have
15 existed for decades, and we just need to be consistent. We
16 can't treat virtual NXX calls as toll calls and then treat
17 Verizon and BellSouth's FX service as local. That would be
18 inconsistent. We are just trying to maintain the status quo
19 here on a very unique subset of calls.

20 CHAIRMAN JACOBS: You were given a hypothetical
21 earlier which had a virtual NXX in, like, New York?

22 THE WITNESS: Yes.

23 CHAIRMAN JACOBS: And you said that was technically
24 feasible. Is it feasible both for virtual NXXs and FX?

25 THE WITNESS: Yes, it is. The FX service and the

1 customer, according to BellSouth, then would buy a private line
2 between Lake City and New York City.

3 CHAIRMAN JACOBS: Thank you.

4 BY MS. BANKS:

5 Q Just curious, Mr. Gates. Kind of along those same
6 lines of what is considered to be local versus not local. If a
7 LEC carries traffic on a particular route on a seven or
8 ten-digit basis, and that IXC's carry traffic on the same route
9 on a one plus ten-digit basis, should this route be considered
10 local or toll for purposes of ILEC/ALEC intercarrier
11 compensation?

12 A No, I wouldn't characterize the route as local or
13 toll, because it's really the originating customer that
14 determines whether it is local or toll. For instance, in my
15 cul-de-sac we have five people, and depending on which calling
16 plan you choose, you could complete the same call in a number
17 of different ways.

18 Now, a customer may inadvertently dial a toll call
19 when they could have made it on an EAS basis, so the customer
20 could have gone to their local exchange carrier and said,
21 BellSouth, I want EAS between these two exchanges. But if they
22 don't do that, then when they dial they have to dial a toll
23 call. So the same route could technically be treated as local
24 in one scenario and toll in the other.

25 Q So if I understand correctly, it could depend on the

1 exchange area?

2 A Well, no, it depends on the way you dial it and the
3 package that you purchased. If you have purchased FX service,
4 it would be a local call. If you haven't purchased FX, or EAS,
5 or remote call forwarding, or one of those others, then it
6 would be a toll call. Because when you tried to dial it on a
7 seven-digit basis, it wouldn't go through. You would get some
8 sort of an intercept and they would say you have to dial one
9 before making this call.

10 So, again, it boils down to whether it is local or
11 toll depends on how you dial it, which is the comparison of the
12 NPA/NXX codes.

13 Q If this Commission were to weigh the number
14 conservation concerns with competitive flexibility afforded to
15 the ALECs by use of virtual NXX, would a viable resolution be
16 to allow the use of virtual NXX only where there is number
17 pooling?

18 A No, I don't think so. I think we are seeing a
19 sky-is-falling sort of scenario here. There has been no proof
20 that virtual NXX or even FX service for that matter has
21 impacted the numbering resource in Florida. So I think it
22 would be wrong to try and limit the availability of a service
23 based on a fact that is not in evidence.

24 I think we need to go ahead and allow the service to
25 be offered, just like FX and the other services. And then if

1 there is a numbering issue then we need to look at all the
2 services, not just one particular offering.

3 MS. BANKS: Thank you, Mr. Gates. That concludes
4 staff's cross.

5 THE WITNESS: Thank you.

6 COMMISSIONER JABER: One final question,
7 Mr. Chairman. Mr. Gates, just focusing again on what you were
8 saying. In a competitive marketplace you eventually get away
9 from costs and perhaps even the definition of toll and access
10 and all of that. And, again, keeping in mind what the purpose
11 of this docket is, which is to look at how to treat reciprocal
12 compensation, if we do, going forward.

13 THE WITNESS: Sure.

14 COMMISSIONER JABER: Might it be appropriate for the
15 Commission to consider encouraging the parties to just come
16 up -- as another provision in the interconnection agreements,
17 to just come up with a fee for delivery of virtual NXX codes?
18 I asked you about bill and keep earlier, let's set that aside.

19 If that is not appropriate because we don't know if
20 the traffic is roughly balanced, then as an alternative should
21 we just encourage the parties to come up with a one-time fee
22 that can be negotiated in the interconnection agreement for
23 delivery of all of the virtual NXX traffic?

24 THE WITNESS: Okay. Good question, Commissioner. I
25 think when you ask me that question I say to myself, well, what

1 is that fee for? What are you paying BellSouth for, what does
2 the fee represent? We know based on the evidence in this case
3 that virtual NXX doesn't increase their costs one penny. Not a
4 dime, nothing. There is no additional cost. The only costs
5 that I have seen or heard people talk about is the opportunity
6 cost of perhaps losing an FX customer to a virtual NXX
7 offering. I don't think you want to subsidize or guarantee
8 revenues to the incumbent local exchange carrier. I think that
9 is wrong when you are trying to encourage competition. So,
10 unless --

11 COMMISSIONER JABER: But, see, isn't that the same
12 theory behind looking at whether traffic is roughly balanced?
13 I mean, why should I care about that? Isn't that, in effect, a
14 subsidy for whichever side, whoever has got the lesser of the
15 traffic?

16 THE WITNESS: Well, if the traffic is in balance,
17 then no one is being disadvantaged because the costs are
18 relatively the same because you are terminating the same amount
19 here on this side as you are on this side. But absent balance,
20 then you have to have reciprocal compensation. Otherwise one
21 carrier is going to get a free ride on the facilities of the
22 other carrier. And that's why the FCC said that you have to
23 have this rough balance.

24 But you can't impose a charge on a new entrant for
25 offering a service that is a competitive response to an

1 existing service. Why would you do that? Why would you tax a
2 new entrant for making a competitive offering? I mean, if I
3 were to counsel the ALECs that I work for and there was a
4 \$50,000 charge in Florida for entering each NXX or each local
5 calling area in the state, I would say that's crazy, you can't
6 tax people for providing a competitive offering. And forgive
7 me, I didn't mean to suggest your idea was crazy.

8 COMMISSIONER JABER: That's okay, it wouldn't be the
9 first time.

10 THE WITNESS: But I just think it's wrong to charge a
11 fee that is not cost-based in an era when we are trying to get
12 away from subsidies. We are trying to drive access charges to
13 cost. We are trying to get the UNE prices down to cost so that
14 people can compete on a facilities basis. Why would we then
15 impose an artificial tax or charge on new entrants just because
16 they are offering a competitive service?

17 I just think that's wrong. I don't think there is
18 any need. There is no harm. The companies, Verizon and
19 BellSouth aren't being harmed by this offering other than the
20 fact that they might lose a customer to a competitive response.
21 But we are not increasing their costs.

22 COMMISSIONER JABER: And that's because you think the
23 true cost, which is the cost of delivering the call to at least
24 their POI, is already covered?

25 THE WITNESS: Yes. It's already there, it's already

1 covered, yes.

2 MR. EDENFIELD: Chairman Jacobs, before we do
3 redirect, Ms. Banks asked a question that gave rise to just one
4 single question I would like to ask if that is okay.

5 CHAIRMAN JACOBS: One question.

6 FURTHER CROSS EXAMINATION

7 BY MR. EDENFIELD:

8 Q Other than a number shortage situation, why would you
9 even want to use virtual NXX except to avoid toll?

10 A You use virtual NXX because Level 3 and other ALECs
11 don't have end offices in the exchanges where they want to
12 provide an FX type service. They physically don't have the
13 facilities there. So in order to provide an FX type service
14 they use the virtual NXX capability to provide the same
15 functionality. It's not toll avoidance. Level 3 offers toll.

16 COMMISSIONER DEASON: I've got a question, a
17 follow-up to your answer to Commissioner Jaber's question. And
18 I believe you indicated that in a bill and keep environment it
19 is important that the traffic be roughly balanced, because if
20 it is not balanced someone is getting a free ride. Can you
21 give me an example of how that would happen?

22 THE WITNESS: Yes. Say, for instance, in Lake
23 City -- and this is a very probable type of example. Suppose
24 BellSouth customers are calling Level 3 customers, and there
25 are many more obviously BellSouth customers than Level 3

1 customers. So let's say there is 100,000 minutes of use going
2 to Level 3 customers, okay. Level 3 is required to terminate
3 that traffic for BellSouth. Without reciprocal compensation in
4 a bill and keep scenario, Level 3 would get nothing for
5 terminating those calls.

6 Now, if Level 3 was originating 10,000 minutes on its
7 side, okay, and terminating that to the BellSouth customers,
8 100,000 here, 10,000 here, there is 90,000 minutes where Level
9 3 would not be compensated for terminating calls that were
10 originated by BellSouth customers. So BellSouth would get a
11 free ride, a free termination of those calls originated by
12 their customers on the Level 3 network. Now, if that traffic
13 --

14 COMMISSIONER DEASON: But your customers are getting
15 the benefit of having people call them, correct? I mean,
16 apparently there must be a reason for those calls to take
17 place. In fact, historically, given the ISP arrangement, there
18 has been an incentive in place for companies to go and solicit
19 that business and get the flow of traffic to go in one
20 direction, correct?

21 THE WITNESS: Well, for that particular customer
22 class that may be true. But the real benefit is from the
23 caller who makes the call. Some people would argue that
24 receiving calls is not a benefit, especially with
25 telemarketers. A lot of calls I don't want to receive. But

1 the point is --

2 COMMISSIONER DEASON: All you have got to do is
3 hang-up, and then there maybe was just one second of reciprocal
4 compensation -- I mean, one second of cost of terminating that
5 call.

6 THE WITNESS: But all of the compensation when
7 BellSouth originates those 100,000 minutes, BellSouth is being
8 compensated by those originating callers for making those
9 calls, okay.

10 Now, when those calls are terminated, there is no
11 compensation there. BellSouth is keeping all of that revenue
12 to itself. It's not passing a dime on to Level 3, and yet
13 Level 3 has to terminate all 100,000 minutes. So if the
14 traffic is not in balance, the revenues don't match and the
15 costs get way out of whack.

16 COMMISSIONER DEASON: What is the incremental cost of
17 terminating that traffic?

18 THE WITNESS: Well, there is switching and transport
19 costs.

20 COMMISSIONER DEASON: The transport costs you have
21 testified is nil, nonexistent.

22 THE WITNESS: Well, it is nil --

23 COMMISSIONER DEASON: And how much is switching, that
24 can't be very much, either.

25 THE WITNESS: Switching is expensive relative to

1 transport. But if Level 3 has to use the facilities of
2 BellSouth to terminate the call, because Level 3 doesn't have
3 local loops out there, so you have to either get, you know, UNE
4 platform or buy UNEs in order to terminate the call, it can be
5 expensive. The termination is expensive. And, you know what,
6 even if the termination only costs ten cents, if you have no
7 revenue to offset the ten cents, it's still a loss and you
8 can't stay in business if you are losing money.

9 COMMISSIONER DEASON: Well, I have another question
10 for you. You indicated that BellSouth has a lot more customers
11 than you, therefore there is a likelihood you are going to have
12 to terminate more traffic and maybe give BellSouth a free ride.
13 But it seems to me the logic is just as valid in the reverse.
14 You may have fewer customers, but there is a whole lot more
15 potential of customers out there for them to call that are
16 BellSouth customers, so it seems to me that --

17 THE WITNESS: But you don't get revenue.

18 COMMISSIONER DEASON: I'm sorry, let me finish the
19 question.

20 THE WITNESS: Yes, please.

21 COMMISSIONER DEASON: If there is no distortions like
22 ISPs out there, that if you go and you solicit business from
23 just the general body the ratepayers and you get the ones that
24 you can, and BellSouth, they keep the ones that they can, you
25 are going to have the same basic array of customers. You just

1 may have a smaller sample of the larger population, and that
2 the traffic should be roughly the same in either direction.

3 THE WITNESS: Well, I think you raise a good point,
4 and I think the point is that depending on the type of
5 customers you attract, depending on where you are, what type of
6 business is there, whether it is residential, whether it's
7 rural, the calling patterns are going to be very different. I
8 think we would agree on that.

9 So what we don't have here are the facts. You and I
10 both can come up with different scenarios that either harm, or
11 hurt, or benefit various carriers under different scenarios.
12 We just don't have any facts in this case to know whether the
13 traffic is in balance or not.

14 But I think before you order something like bill and
15 keep, you have to have the facts in place to make sure that you
16 comport with the FCC rules so that there is no competitive
17 harm.

18 COMMISSIONER DEASON: How do we go about doing that?

19 THE WITNESS: Well, we would have to request that
20 data from the carriers. Especially now after the ISP order,
21 the FCC order on remand, now that those calls have been taken
22 out of the equation, the traffic scenarios are going to look
23 very different than they did in the past. So you would have to
24 ask for that data from the carriers. And I'm not a lawyer, but
25 then I think we have the notice issue. That was never noticed

1 in the case, we don't have any testimony on it. Someone
2 suggested that might be Phase III.

3 COMMISSIONER DEASON: Well, shouldn't there be some
4 type of preliminary showing that would indicate that there is
5 some reason out there other than the ISP distortion why the
6 customers that you sign up are going to be terminating a lot
7 more traffic than make calls that are terminated on BellSouth's
8 network?

9 THE WITNESS: I think the rebuttable presumption is
10 that the traffic is not in balance because of the incumbent
11 nature versus the new entrant. I think if you are going to go
12 to bill and keep then you have to make a showing, you know, a
13 showing based on a record that the traffic is roughly in
14 balance.

15 COMMISSIONER DEASON: So you assume it's out of
16 balance and someone is going to have to prove it is in balance?

17 THE WITNESS: I would, and that's the way the rules
18 read. The rules say you can use bill and keep if it is roughly
19 in balance. So you have to show, you have to be able to have
20 some data to show that there will be no competitive harm in
21 order to use bill and keep. That's the way I read it, but I'm
22 not a lawyer, so.

23 COMMISSIONER JABER: Are you saying in, like in
24 balanced, I-N.

25 THE WITNESS: Yes, roughly balanced, in balance.

1 COMMISSIONER DEASON: In balance, two words.

2 THE WITNESS: In balance, yes. In other words, if
3 you are going to use bill and keep --

4 COMMISSIONER DEASON: In balance, two different
5 words. They are balanced. Is that what you are saying or are
6 you saying one word, I-M-B-A-L-A-N-C-E, imbalance?

7 THE WITNESS: Well, it depends on how I used it, I
8 guess. Let me restate the position.

9 COMMISSIONER JABER: But that is important.

10 THE WITNESS: Oh, it is a very important point. What
11 I'm saying is if you are going to order bill and keep, you have
12 to have data to show that the traffic is roughly in balance,
13 I-N, okay. Because I think the assumption has to be without
14 that data that the traffic is not going to be in balance.

15 COMMISSIONER DEASON: Why would you assume it is out
16 of balance?

17 THE WITNESS: Just because of the nature of a new
18 entrant. New entrants don't offer a panoply of service, they
19 offer a limited variety. Now I said Level 3 offers 29
20 services, but I bet two or three of them make up the majority
21 of their offerings. So they tend to be concentrated. Whereas
22 the ILEC, the incumbent, offers hundreds of services. So it
23 has a little different dispersion of traffic. So, I mean, I
24 don't know, I think that's why you need the data. I think if
25 you are going to go to bill and keep, where you put new

1 entrants at risk, in order to prevent harm to the competitive
2 process you have got to have some data to do that.

3 COMMISSIONER DEASON: Historically, haven't you had
4 an incentive to sign up those customers who were going to be
5 terminating more calls than they originate?

6 THE WITNESS: I don't think so.

7 COMMISSIONER DEASON: All right. You just said you
8 don't think so. All right. Given that is the situation, why
9 shouldn't we assume that everything is balanced and then
10 someone has the burden to come in and prove that they are out
11 of balance?

12 THE WITNESS: Because you don't know what the traffic
13 patterns are for various carriers. You just don't have those
14 facts before you. You can't assume that the traffic is in
15 balance just because of the different nature of new entrants
16 versus incumbents. And I'm not saying that it's not, it might
17 be, it might not. I'm just saying that you need facts in the
18 record in order to make sure because you need to make sure you
19 don't harm new entrants when we have this nascent sort of
20 competitive entry going on.

21 COMMISSIONER DEASON: So why is it that you believe
22 that your particular customers and the services that you offer
23 are going to result in you having to terminate more traffic
24 than your customers originate?

25 THE WITNESS: I don't know that. I don't know that.

1 All I'm saying is that if you are going to do something other
2 than -- if you have reciprocal compensation, you know that
3 everybody is going to get paid for terminating that traffic.
4 Whether it is one minute or 50 million minutes, everyone is
5 going to get paid.

6 But if you go to bill and keep there is a risk that
7 you are not going to get paid. And if you are going to do that
8 and risk harming any carrier, not just the ALEC, but the ILEC
9 alike. BellSouth also has a risk. So if you are going to go
10 to bill and keep, you need to have the facts in place to make
11 sure that the traffic truly is roughly in balance. I just
12 think the risk to the public interest is too great to go to a
13 scenario like that without any facts.

14 COMMISSIONER JABER: Mr. Chairman, if I could ask
15 staff a clarifying question. Do you want to take a break?

16 CHAIRMAN JACOBS: Otherwise I'm going to lose my
17 court reporter over here. We are going to take a ten-minute
18 break and come back.

19 (Recess.)

20 CHAIRMAN JACOBS: Back on the record. Commissioner,
21 you had a question?

22 COMMISSIONER JABER: Just one clarifying question of
23 staff. Mr. Gates' testimony, Beth, created a question in my
24 mind with respect to bill and keep as being an option that we
25 could exercise in this docket. And I'm not saying any of us

1 are going to go there. Obviously we need to go back and read
2 the record. But if we wanted to explore the bill and keep
3 methodology, do you agree that this Commission has to go
4 through another proceeding that takes evidence with respect to
5 whether traffic is roughly balanced between companies?

6 MS. KEATING: I think that kind of actually gets to
7 the questions that both you and Commissioner Deason had asked
8 earlier. And we talked with the parties at the lunch break,
9 and I think that is the general consensus is that if you are
10 really looking at bill and keep as an option, particularly in
11 view of the FCC's remand order on reciprocal compensation, that
12 you would probably need to take testimony on the levels of
13 traffic.

14 COMMISSIONER DEASON: Why can't we require bill and
15 keep, and if a party feels they are aggrieved come in and
16 demonstrate by evidence that their traffic is not in balance?

17 MS. KEATING: Well, the rule does provide that a
18 state commission can presume that traffic is roughly in
19 balance, but it is a rebuttable presumption. And my read is
20 that the parties would have to be allowed to at least attempt
21 to rebut that presumption.

22 COMMISSIONER JABER: So we can make it PAA?

23 COMMISSIONER DEASON: No, I'm talking about on a
24 case-by-case basis. Until you try it, you might like it. And
25 then you don't like it, come in and demonstrate why you are

1 being harmed. And if you can make your case, so be it. What
2 is wrong with that? Does that meet FCC muster?

3 MS. KEATING: That may be an option. I would be
4 interested in hearing what some of the other -- what the other
5 side of the fence thought of that.

6 COMMISSIONER DEASON: Just a thought.

7 CHAIRMAN JACOBS: Yes. We probably should at least
8 get the recommendation before we start --

9 COMMISSIONER JABER: Yes. But that's why I'm asking,
10 Beth, is for purposes of this is docket, though, as we explore
11 methods of dealing with reciprocal compensation, do you all
12 have -- does staff have enough to explore bill and keep as a
13 possible option, or does that contemplate another proceeding?
14 And we certainly don't have to have an answer today.

15 The only reason I'm asking, Chairman Jacobs, is as
16 the prehearing officer of the case, I don't recall a specific
17 issue that deals with this. We did, though, require parties to
18 file briefs informing us of what they believe the impact of the
19 new FCC decision is on this docket. Now, maybe this can be
20 incorporated somehow, I don't know.

21 CHAIRMAN JACOBS: Have we gotten any guidance about
22 implementing that decision from the FCC?

23 MS. KEATING: Well, if I could back up just a little
24 bit, and this may -- well, let me address maybe perhaps
25 Commissioner Jaber's question and then that would lead me, I

1 think, into your question, Mr. Chairman.

2 I think in view of the way the issues were set up for
3 this phase, in particular, we just don't have a whole lot of
4 information on bill and keep. So I'm getting a lot of nods, or
5 shakes of the head, actually, from staff as to whether they
6 feel like they would have enough information to give you a real
7 strong recommendation.

8 COMMISSIONER DEASON: But I thought that was one of
9 the purposes we were going to this hearing was to fully explore
10 that. I guess we didn't give enough precise direction as to
11 what we were hoping to accomplish. I mean, I thought that was
12 one of the reasons -- I remember a while back when we were
13 discussing that we needed to have some type of generic
14 proceeding on reciprocal compensation that we needed to answer
15 some basic questions, and I thought one of the things we talked
16 about then was whether a bill and keep was an appropriate
17 approach, whether there were problems with it, explore it. And
18 now we're saying, sorry, this is not -- we are going to have to
19 have another proceeding.

20 MS. KEATING: Well, actually, no. You're right,
21 Commissioner, that is one thing that we were going to be
22 looking at, and we did look at it in Phrase I in particular.
23 But that dealt a lot or mainly with traffic going to ISPs. So
24 now with the FCC's order, since it has come into play that sort
25 of changed the landscape a little bit. So that's why we are

1 sort of at a loss.

2 COMMISSIONER JABER: What we are lacking is the data
3 that would allow us to determine whether the traffic is roughly
4 balanced. That's what we don't have.

5 MS. KEATING: Correct.

6 MS. CASWELL: I would just like to point out that we
7 did submit testimony both in Phase I and Phase II on bill and
8 keep because we realized it was a potential option. And our
9 view, I think, would be consistent with Commissioner Deason's,
10 that we don't need that factual information here, and that it
11 would be a case-by-case presumption, or a case-by-case
12 determination as to whether the traffic was not in balance, a
13 rebuttable presumption. And you can make a generic decision as
14 to bill and keep without having that factual information.

15 MR. MOYLE: The question, as I thought I understood
16 it, I think there are really two distinct issues, and if I
17 recall -- and the record will speak for itself, but I think the
18 testimony in the first phase with respect to bill and keep
19 largely was that there is not a balance, therefore bill and
20 keep would not be appropriate. Now, that is subject to check
21 with respect to the testimony. But, again, I think that was
22 with the ISP question factored in.

23 Now, with the FCC decision sort of removing that ISP
24 equation, it seems to me that is a whole new issue with respect
25 to that factual matter. As I understand it you have to have a

1 factual predicate before you can make the decision. So, you
2 know, I think Mr. Gates was talking -- I'm just not sure there
3 is a sufficient factual record to establish bill and keep. And
4 I think if you had the factual record with respect to the
5 testimony that was in Phase I, that largely was that there is
6 not a balance, so it would actual already take you in a
7 different direction.

8 CHAIRMAN JACOBS: Well, it occurs to me in reading
9 the rule that either we would have, number one, had to in this
10 docket do our presumption and then have parties present
11 evidence rebutting the Commission's presumption, or we would
12 have had to undertake an evidentiary process to establish the
13 relative balance of traffic amongst the parties. It sounds
14 like we would have to do one of those two options in this
15 proceeding.

16 MS. KEATING: I'm sorry, Mr. Chairman, I missed the
17 very first part of your --

18 COMMISSIONER DEASON: In Subsection C it says we can
19 by our own presumption indicate that we think traffic is
20 roughly in balance, but that a party has the opportunity to
21 rebut our presumption. So it sounds like we would have had to
22 have done that in this, exercise our presumption in this
23 docket, and then parties should have had an opportunity to
24 provide evidence to rebut that presumption in this docket, if
25 we were going to impose it.

1 Alternatively, we could have declared that as an
2 issue in this docket and taken evidence as to the relative
3 balance of traffic amongst the parties in this docket also
4 before we would impose bill and keep. Is that consistent with
5 your reading of this rule?

6 MS. KEATING: That is an argument that could be made.
7 I'm really mainly trying to point out the two sides of the
8 argument. I think Verizon has indicated that they feel like
9 that you could go ahead and make that decision in this phrase.
10 But particularly on the break, I heard a little bit more
11 vehement reaction from the --

12 CHAIRMAN JACOBS: Before we move from that, I want to
13 understand the argument. Because if I read the rule correctly,
14 we -- there is not -- we don't have unfettered discretion to
15 put in bill and keep, and that seems to be what I'm hearing.
16 We can do bill and keep, we just have to do it on a
17 case-by-case basis. And I don't read this rule to say that.

18 COMMISSIONER JABER: I don't, either. I think we
19 have two choices. Under B we can impose bill and keep after we
20 make a finding that traffic is roughly balanced. Under C we
21 can impose bill and keep with an opportunity for parties to
22 rebut the presumption that we have made that traffic is roughly
23 balanced. And that's why I half-jokingly said PAA.

24 I mean, suppose even in this case we could find bill
25 and keep, but somehow offer an opportunity for parties to rebut

1 the presumption. Would you agree with that?

2 MS. KEATING: We have done that actually in cases,
3 had PAA issues in post-hearing decisions.

4 COMMISSIONER JABER: I think that is what Chairman
5 Jacob was saying. The statute seems to give us two choices,
6 would you agree with that?

7 MS. KEATING: Uh-huh, I do think that --

8 COMMISSIONER JABER: If that is the understanding, I
9 don't think there is anything more to be done on my concern. I
10 just -- that had not occurred to me until I heard Mr. Gates'
11 testimony.

12 CHAIRMAN JACOBS: I think I cut Ms. Caswell off.

13 MS. CASWELL: I just want to make one additional
14 observation. It seems to me that you would have to make a
15 determination of traffic balance on a case-by-case basis.
16 Because as between pairs of carriers, your traffic balance is
17 going to be different. So I don't see how you could -- even if
18 you took evidence in this proceeding, how you could determine
19 that on a generic basis traffic is balanced. It has to be a
20 case-by-case basis, it seems to me.

21 CHAIRMAN JACOBS: Less we belabor this point too
22 long, Commissioner, you had begun this, did you want to --
23 okay.

24 COMMISSIONER DEASON: No, I have stirred things up
25 enough.

1 CHAIRMAN JACOBS: I'm wondering whether or not it
2 would be useful to -- I don't know how you get to this. Under
3 a generic docket, I don't know how you get to it.

4 COMMISSIONER JABER: Right. How about we let staff
5 think about it. And if they need to come see me or the
6 Chairman later on, you all -- and talk to the parties about it.

7 MS. KEATING: Well, I think that, again, you all had
8 brought it up earlier about a briefing on the issue of what
9 other states have done, how they have -- what compensation
10 mechanisms they have implemented when they were moving to bill
11 and keep. And another issue that we had talked about on the
12 break is whether or not the three-to-one ratio in the FCC's
13 order indicates that as a matter of law any traffic flow that
14 is less than three-to-one ratio is, by its very nature, roughly
15 balanced. And if that were the case, then perhaps a decision
16 could be made. I would suggest maybe that that be included in
17 the briefs.

18 CHAIRMAN JACOBS: Okay.

19 COMMISSIONER DEASON: Well, if we are going to be
20 including things in the brief, I think that we should -- I want
21 to know what the parties feel our discretion is under the rule.
22 I mean, I read the rule, and I think right now based upon my
23 reading it seems to me that we have some discretion here. But
24 if someone feels like we don't have much discretion, I want to
25 know about it before we make a decision. We still may make the

1 decision, but then we will know how thin the ice is we are
2 treading.

3 CHAIRMAN JACOBS: So it sounds like we have at least
4 two issues to add to the brief. One is what is the range of
5 our discretion to implement bill and keep pursuant to this
6 authority under 51.713.

7 And then the other is an analysis of actions by other
8 commissions implementing bill and keep for reciprocal
9 compensation.

10 MR. EDENFIELD: Chairman Jacobs, if I may, can I add
11 maybe one issue to that and maybe we want to consider. This is
12 something that Beth and I had talked about a little bit during
13 the break is after the FCC order, really the state commission
14 is left with the ability to set rates on traffic that is a
15 three-to-one ratio or less. And I think something else you may
16 want to consider is whether as a matter of policy, or as a
17 matter of Commission discretion, or whatever you would call it,
18 you may determine as a matter of law that a three-to-one ratio
19 is balanced. Because your ratios, given the FCC ruling, that
20 is really what is left. Because anything above a three-to-one
21 ratio is presumed to be ISP traffic.

22 So you may decide as a matter of course that a
23 three-to-one ratio is, in fact, balanced. And that is
24 something else we may want to try to comment on. Mr. Melson
25 and I talked about that for a little while, and maybe add that

1 to what we are going to brief.

2 COMMISSIONER JABER: That's in the FCC order anyway,
3 right?

4 MR. EDENFIELD: It is. But all I'm saying is --

5 COMMISSIONER JABER: Well, aren't you already going
6 to talk about the FCC order in the brief?

7 Beth, wasn't that the order --

8 CHAIRMAN JACOBS: Not for Phase II, I thought, for
9 Phase I.

10 MR. EDENFIELD: We had filed the supplemental briefs,
11 and we are talking about just a briefing in this as Phase II.

12 COMMISSIONER JABER: You're saying you did not
13 include that discussion in your supplemental brief that you
14 already filed?

15 MR. EDENFIELD: Correct. We did not discuss the
16 three-to-one and the possibility for that being considered as a
17 matter of law being balanced by the Commission. At least that
18 is not something that I addressed. I didn't really think of
19 it.

20 MR. MELSON: Commissioner Jacobs, my sense is the
21 Commission is interested in knowing what the range of options
22 is on bill and keep and what other states have done. And to me
23 just a single issue where we address all of these factors, you
24 know, what is your discretion, what have other states done,
25 what does this record say, do you or don't you need, should you

1 or shouldn't you take more policy testimony, what impact, if
2 any, does a three-to-one ratio have, to me that is a single
3 discussion of the single bill and keep issue.

4 CHAIRMAN JACOBS: With that understanding then, that
5 will become a discussion that we ask for in the briefs. Okay.

6 COMMISSIONER DEASON: We may need to increase the
7 number of pages in the brief.

8 MR. MELSON: Lawyers paid by the page never object to
9 that.

10 CHAIRMAN JACOBS: Now that we have gotten over that
11 simple question by Commissioner Jaber.

12 COMMISSIONER JABER: I'm sorry.

13 CHAIRMAN JACOBS: Commissioner Palecki.

14 COMMISSIONER PALECKI: Mr. Gates, I'm going to ask
15 you a question to kind of find out what the importance of some
16 of these issues are in relation to each other. But if you were
17 negotiating with an ILEC and you had an opportunity to
18 negotiate an arrangement where your definition of toll versus
19 local was accepted, but in exchange you would have to accept a
20 bill and keep arrangement on reciprocal comp, would you take
21 the deal?

22 THE WITNESS: You know, I don't have the information
23 to be able to answer that question. I have not been involved
24 in the Level 3 negotiations. For instance, I know that with
25 BellSouth, Level 3 has LATA-wide local calling, and they also

1 have, you know, free trunks and single POI issues. But, you
2 know, there are literally dozens, perhaps hundreds of
3 trade-offs. And I don't know, I don't know what value those
4 are to the company.

5 COMMISSIONER PALECKI: But based on your testimony it
6 sounds to me as if the issue regarding what is local versus
7 what is toll and that it not be determined based on geography
8 is extremely important to you with regard to opening
9 competition in the State of Florida.

10 THE WITNESS: It really is for that one competitive
11 offering for FX service, that is true.

12 COMMISSIONER PALECKI: And I'm sure you understand
13 that a bill and keep arrangement because of the simplicity of
14 administration is attractive to us up here as regulators. I
15 was just really wondering whether you could take the one in
16 exchange for the other.

17 THE WITNESS: Well, I can't commit the company one
18 way or another, but I could speculate on that. And I would
19 also note that just because it's easy doesn't mean it is the
20 best way to go. I mean, I understand --

21 COMMISSIONER PALECKI: I would like to hear the
22 speculation.

23 THE WITNESS: Okay. The beauty of bill and keep is
24 that it is easy to administer. Which one they would take? I
25 would expect that their virtual NXX traffic is probably a

1 smaller percentage of their total traffic, but I don't know
2 that. So I don't know which one they would take. I honestly,
3 Commissioner, can't -- I just couldn't make that opinion as to
4 which is more important to them.

5 COMMISSIONER PALECKI: But if we offered the ALECs a
6 virtual NXX traffic, certainly that could result over a period
7 of time with the ILECs and the ALECs coming into balance,
8 especially in a much more expeditious manner.

9 THE WITNESS: Well, now that ISP traffic has been
10 eliminated from this virtual NXX offering, I don't know how
11 much traffic there really is. I know it's not just for ISPs, I
12 know other -- you know, florists and other companies obviously
13 use FX type service, but I just don't know. I can't tell you
14 how important that is vis-a-vis bill and keep versus, you know,
15 versus reciprocal compensation. I just don't know. I can't
16 answer that.

17 COMMISSIONER PALECKI: Well, it would certainly offer
18 consumers a very attractive choice.

19 THE WITNESS: Which would, virtual NXX?

20 COMMISSIONER PALECKI: Virtual NXX.

21 THE WITNESS: Oh, it would.

22 COMMISSIONER PALECKI: They would have a much larger
23 local calling area, and that would be a competitive choice that
24 could be offered by the ALECs, I would think, to scoop up a
25 large number of customers.

1 THE WITNESS: Yes, sir. I don't know how big the FX
2 market is compared to the total local market, I don't know.
3 But it is a valuable service to consumers. And it is in
4 demand, that is true.

5 COMMISSIONER PALECKI: Thank you.

6 COMMISSIONER DEASON: Let me ask staff a question.
7 Where do we determine -- if there is to be reciprocal
8 compensation, where do we determine what the rate is?

9 MS. KEATING: I think that would be determined in
10 individual arbitrations.

11 COMMISSIONER DEASON: It's within each individual
12 arbitration?

13 MS. KEATING: I don't believe -- if they could
14 negotiate the specific rate, or if they can't come to a rate,
15 it would be determined within the context of an arbitration.

16 COMMISSIONER DEASON: Supposedly is it cost-based?

17 MS. KEATING: That is my understanding.

18 COMMISSIONER DEASON: And we leave it to them to
19 arbitrate. And if they cannot agree, then we determine what
20 that rate is?

21 MS. KEATING: It's in the UNE docket, actually.

22 COMMISSIONER DEASON: I thought it was somewhere
23 where we were going to be determining that. Have we determined
24 that in the UNE docket for BellSouth?

25 MS. KEATING: Yes.

1 COMMISSIONER DEASON: So we still have yet to do that
2 for Sprint and for Verizon?

3 MS. KEATING: Yes, we have still got to go through
4 those two, as well.

5 COMMISSIONER DEASON: Okay. What rates did we
6 determine for BellSouth? Were they low? Because it seems to
7 me the lower the rate the closer you are to bill and keep
8 anyway.

9 MS. KEATING: David is saying yes. And he is also
10 saying that if elemental rates are the ones that are going to
11 apply for purposes of reciprocal compensation, they have been
12 set. If something else was going to apply, then it would have
13 to be done through arbitration proceedings is my take on it.
14 But otherwise, for Bell they have been set.

15 COMMISSIONER DEASON: But obviously we are not doing
16 it here.

17 MS. KEATING: No, Commissioner, not in this phase.

18 COMMISSIONER DEASON: Okay.

19 CHAIRMAN JACOBS: Now, any other questions? We are
20 to redirect, I believe, right?

21 MR. HOFFMAN: Thank you, Mr. Chairman.

22 REDIRECT EXAMINATION

23 BY MR. HOFFMAN:

24 Q Mr. Gates, let me just sort of quickly work my way
25 through about three or four topics. FX service that you

1 discussed, in your experience in the industry is an FX call
2 viewed to be a local call or a toll call?

3 A That is a local call.

4 Q Okay. And FX calls have historically been treated by
5 BellSouth and Verizon as local calls or toll call?

6 A They have been treated as local calls.

7 Q All right. Going back to the federal definition that
8 I discussed with Doctor Selwyn, and Commissioner Deason
9 discussed with you, which is the definition of toll telephone
10 service at 48 USC, Section 153, Paragraph 48. If you read that
11 definition and view it from the perspective of the calling
12 party, does virtual -- would a virtual NXX call fit the
13 definition of toll telephone service?

14 A No, it would not. It would be a local call,
15 especially from the consumer's perspective making the call.

16 Q All right. And if you again viewed it from the
17 perspective of the calling party, would your answer be the same
18 if I substituted FX service for virtual NXX service in my
19 question?

20 A Yes, it would.

21 Q Okay. Just a point of clarification. On
22 Mr. Edenfield's diagram, if you still have that?

23 A Yes, I have it.

24 Q Okay. In the Jacksonville local calling area there,
25 do you see where the point of interconnection for the ALEC is

1 located?

2 A Yes.

3 Q And then you see the ALEC switch?

4 A Yes.

5 Q Okay. Reciprocal compensation is intended to recover
6 the costs of transport and termination from the point of
7 interconnection to the switch, correct?

8 A That is correct.

9 Q Okay. Now, moving to the somewhat extended
10 discussion of bill and keep. If you had an imbalance of
11 traffic such that the ALEC was receiving or terminating
12 significantly more minutes than the ILEC, how would that affect
13 the ALEC's ability to recover its transport and termination
14 costs in that situation?

15 A Under a bill and keep scenario?

16 Q Yes.

17 A And if the traffic was not balanced?

18 Q Correct.

19 A They could not recover those costs.

20 Q Okay. Now, there also was some discussion about the
21 FCC rules which it looks as though the parties will be
22 briefing. And there was some discussion on Part C of 51.713.
23 And I know you don't have it in front of you, let me just read
24 it to you. It says, "Nothing in this section precludes a state
25 commission from presuming that the amount of local

1 telecommunications traffic from one network to the other is
2 roughly balanced with the amount of local telecommunications
3 traffic flowing in the opposite direction, and is expected to
4 remain so unless a party rebuts such a presumption." Did you
5 follow that?

6 A Yes.

7 Q Okay.

8 A So it sounds like the Commission then can presume
9 that the traffic is in balance unless someone shows otherwise.
10 That is the way I would read that.

11 Q What this rule says is nothing in this section would
12 preclude the Commission from doing so, agreed?

13 A Yes.

14 Q Would you recommend that the Commission follow that
15 approach?

16 A No, I would not, for all the reasons that
17 Commissioner Deason and I discussed. If one were to do that,
18 you would be putting the burden on, I would assume, the new
19 entrant, which is always a risky prospect, given their shaky
20 financial situation. The ALEC market has lost over half a
21 trillion dollars in value in the last 15 months. We have lost
22 dozens of competitive new entrants to bankruptcy. I can say
23 that because they still owe me money, and I probably won't get
24 it. But, no, I don't think it's a good idea to put the burden
25 on the new entrants if that is what the result would be using

1 that presumption.

2 MR. HOFFMAN: No further questions. Thank you,
3 Mr. Gates.

4 THE WITNESS: Thank you.

5 COMMISSIONER DEASON: Well, the new entrants
6 certainly have -- they can afford four of the finest attorneys
7 in Tallahassee. They must be doing something right.

8 THE WITNESS: Well, when you're desperate, you have
9 got to spend the money to make money, I guess.

10 COMMISSIONER DEASON: And I didn't include Mr.
11 Lamoureux, because -- Mr. Lamoureux, you don't reside in
12 Tallahassee, do you?

13 MR. LAMOUREUX: I do not.

14 MR. HOFFMAN: We were silently trying to determine
15 which four you meant.

16 MR. EDENFIELD: Mr. Lamoureux has got the same
17 problem I have, we're on salary.

18 MR. HOFFMAN: Mr. Chairman, I would move Exhibit 19.

19 CHAIRMAN JACOBS: Without objection, show Exhibit 19
20 is admitted.

21 (Exhibit 19 admitted into the record.)

22 CHAIRMAN JACOBS: Thank you, Mr. Gates. You are
23 excused.

24 THE WITNESS: Thank you.

25 (The transcript continues in sequence with Volume 6.)

1 STATE OF FLORIDA)
2 : CERTIFICATE OF REPORTER
3 COUNTY OF LEON)

4
5 I, JANE FAUROT, RPR, Chief, Office of Hearing Reporter
6 Services, FPSC Division of Commission Clerk and Administrative
7 Services, do hereby certify that the foregoing proceeding was
8 heard at the time and place herein stated.

9 IT IS FURTHER CERTIFIED that I stenographically
10 reported the said proceedings; that the same has been
11 transcribed under my direct supervision; and that this
12 transcript constitutes a true transcription of my notes of said
13 proceedings.

14 I FURTHER CERTIFY that I am not a relative, employee,
15 attorney or counsel of any of the parties, nor am I a relative
16 or employee of any of the parties' attorney or counsel
17 connected with the action, nor am I financially interested in
18 the action.

19 DATED THIS 20TH DAY OF JULY, 2001.
