

BEFORE THE
FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 010007-EI

IN RE:

ENVIRONMENTAL COST RECOVERY FACTORS

PROJECTIONS

JANUARY 2002 THROUGH DECEMBER 2002

TESTIMONY

OF

GREG M. NELSON

DOCUMENT NUMBER-DATE

11816 SEP 20 05

FPSC-COMMISSION CLERK

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2 **PREPARED DIRECT TESTIMONY**

3 **OF**

4 **GREGORY M. NELSON**

5
6 **Q.** Please state your name, address, occupation and employer.

7
8 **A.** My name is Gregory M. Nelson. My mailing address is P.O.
9 Box 111, Tampa, Florida 33601, and my business address is
10 6944 U.S. Highway 41 North, Apollo Beach, Florida 33572.
11 I am employed by Tampa Electric Company ("Tampa Electric"
12 or "the company") as Director, Environmental Affairs in
13 the Environmental and Fuels Department.

14
15 **Q.** Please provide a brief outline of your educational
16 background and business experience.

17
18 **A.** I received a Bachelors Degree in Mechanical Engineering
19 from the Georgia Institute of Technology in 1982 and a
20 Masters of Business Administration from the University of
21 South Florida in 1987. I am a registered Professional
22 Engineer in the State of Florida. I began my engineering
23 career in 1982 in Tampa Electric's Engineering
24 Development Program. In 1983, I worked in the Production
25 Department where I was responsible for power plant

1 performance projects. Since 1986, I have held various
2 environmental permitting and compliance positions. In
3 1997, I was promoted to Administrator - Air Programs in
4 the Environmental Planning Department. In this position,
5 I was responsible for all air permitting and compliance
6 programs. In 1998, I was promoted to Manager,
7 Environmental Planning and in 2000 I became Director,
8 Environmental Affairs. My present responsibilities
9 include the management of Tampa Electric's environmental
10 permitting and compliance programs.

11
12 **Q.** Have you previously testified before the Florida Public
13 Service Commission ("Commission")?

14
15 **A.** Yes, I have provided testimony regarding environmental
16 projects and their associated environmental requirements
17 in Environmental Cost Recovery Clause ("ECRC")
18 proceedings before this Commission.

19
20 **Q.** What is the purpose of your testimony in this proceeding?

21
22 **A.** The purpose of my testimony is to demonstrate that the
23 activities for which Tampa Electric seeks cost recovery
24 through the ECRC are activities that are necessary for
25 the company to comply with environmental requirements.

1 Specifically, I will describe any changes to the
2 conditions of the Consent Final Judgment ("CFJ") entered
3 into with the Florida Department of Environmental
4 Protection ("DEP") and the Consent Decree ("CD") lodged
5 with the U.S. Environmental Protection Agency ("EPA") and
6 the Department of Justice ("DOJ") since the last filing.
7 In addition, I will provide an overview of ongoing
8 environmental compliance activities that are the result
9 of the CFJ and CD ("the Orders"), some of which Tampa
10 Electric has included in its 2002 ECRC projection filing.
11

12 **Q.** Please provide an overview of the environmental compliance
13 requirements of the Orders and any amendments to the
14 Orders since their entry dates.
15

16 **A.** The requirements of the Orders include repowering Gannon
17 Station and further reductions of sulfur dioxide ("SO₂"),
18 nitrogen oxides ("NO_x") and particulate matter ("PM")
19 emissions at Big Bend Station. In early 2001, Tampa
20 Electric submitted a request to the EPA to amend the SO₂
21 and NO_x requirements of the CD.
22

23 Regarding the SO₂ provisions of the Orders, Tampa Electric
24 requested that the EPA amend the CD to provide Big Bend
25 Unit 3 with 30 days of additional deintegration time, for

1 a total of 60 unscrubbed days in 2001, without penalty. In
2 addition, Tampa Electric sought clarification on the
3 definition of a deintegration day. The original CD
4 specified that any portion of a day constituted a
5 deintegration day. Tampa Electric and EPA ultimately
6 agreed that a deintegration day could span up to 24 hours
7 - on a rolling basis - before another deintegration day
8 was entered.

9
10 Regarding CD NO_x requirements, Tampa Electric also
11 received agreement from the EPA to allow Big Bend Unit 4
12 to be used as a creditable unit for the early NO_x
13 reduction program. Tampa Electric entered into these
14 amendments on May 21, 2001, thereby incorporating these
15 modifications into the CD.

16
17 **Q.** Please describe the progress of the compliance
18 requirements associated with the reduction of SO₂
19 emissions at Big Bend Station.

20
21 **A.** Beginning in October 2000, compliance with the flue gas
22 desulfurization ("FGD") system operational requirements
23 of the Orders resulted in reduction on SO₂ emissions from
24 Big Bend Station. These reductions were achieved by
25 operating the Big Bend Units 1 and 2 FGD system and the

1 Big Bend Unit 3 integrated FGD system, whenever their
2 respective units are in-service, with certain exceptions.
3 Those exceptions include a specific amount of allowances
4 of unscrubbed days for each FGD system. To date, Tampa
5 Electric has estimated that 50 unscrubbed days have been
6 avoided based on these practices.

7
8 Tampa Electric was also required by the Orders to submit a
9 plan addressing all operation and maintenance changes to
10 be made that would maximize the availability and removal
11 efficiency of the existing FGDs treating emissions of SO₂
12 from Big Bend Units 1, 2 and 3. The plan was submitted in
13 two phases. The Phase I and Phase II plans were approved
14 by the EPA on May 18, 2000 and June 9, 2001, respectively.
15 Tampa Electric also began to implement improvements to
16 provide the needed FGD reliability in 2000 and 2001, and
17 will continue to make upgrades in 2002 and beyond.
18 Details of the improvements are included in the direct
19 testimony of Tampa Electric's witness Darryl H. Scott.

20
21 **Q.** Please describe the progress of the compliance
22 requirements associated with the reduction of NO_x
23 emissions at Big Bend Station.

24
25 **A.** The amended Orders require that Tampa Electric spend a

1 minimum of \$3 million to perform projects on Big Bend
2 Units 1, 2, 3 and/or 4 that are intended to provide early
3 NO_x emissions reductions when compared to 1998 levels.
4 These early NO_x emissions reduction projects must be
5 implemented on or before December 31, 2002. Tampa
6 Electric submitted an *Early NO_x Emissions Reduction Plan*
7 ("Plan") to the EPA on February 23, 2001 and obtained EPA
8 approval on March 8, 2001. An additional \$5 to \$6
9 million must be spent to demonstrate innovative NO_x
10 control technologies on any of its units or boilers at
11 Gannon or Big Bend Station and/or reduce the NO_x emission
12 rate for any Big Bend coal-combusting unit.

13
14 To date, Tampa Electric has investigated several
15 commercially available NO_x reduction technologies, and has
16 elected to modify the burners serving Big Bend Unit 1 and
17 install a neural network on Big Bend Unit 2. These
18 modifications began in the first quarter of 2001 and are
19 more fully defined witness Scott's testimony. Once Tampa
20 Electric evaluates the impact of each technology on the
21 NO_x emissions from each boiler, the company will submit to
22 the EPA a report detailing their effectiveness and will
23 recommend future modifications to reduce NO_x emissions
24 from the Big Bend Units.

25

1 In addition, should new technologies become available
2 that could provide additional NO_x emissions reductions
3 from the Big Bend units, Tampa Electric will investigate
4 their feasibility and cost effectiveness for potential
5 inclusion in the current plan.
6

7 **Q.** Please describe the progress of the compliance
8 requirements associated with the reduction of PM
9 emissions at Big Bend Station.
10

11 **A.** The Orders require Tampa Electric to complete an
12 optimization study that recommends the best operational
13 practices to minimize PM emissions from each
14 electrostatic precipitator ("ESP") at Big Bend within 12
15 months after entry into the CD and implement the
16 recommendations within 60 days after EPA has approved
17 them. Tampa Electric is in the process of finalizing the
18 Best Operations Practices ("BOP") study and anticipates
19 submitting this document to the EPA in early October
20 2001. The BOP study examines the performance of the Big
21 Bend ESP to determine if changes to the equipment could
22 be made to improve collection efficiency and to evaluate
23 and revise, where necessary, existing operating and
24 maintenance procedures.
25

1 The Orders also required Tampa Electric to complete a
2 Best Available Control Technology ("BACT") analysis of
3 the ESPs at Big Bend Station and submit it to the EPA for
4 review and approval. This BACT analysis will be
5 submitted in early October 2001. The BACT analysis
6 reviews the results of the BOP study, which identifies
7 changes that could be made to the ESP equipment that
8 would result in PM emissions reductions, and compares the
9 options on a performance and economic basis.

10
11 Although neither the BOP study nor the BACT analysis is
12 complete, the company notified EPA of its intent and
13 began implementation of several of the identified
14 recommendations for Big Bend Unit 1 during the second
15 quarter of 2001. This was done in advance of the
16 submittal of the plans in an effort to take advantage of
17 the Unit 1 spring outage. The completion of this work
18 should achieve early PM reductions from Unit 1. This work
19 is identified in witness Scott's prepared direct
20 testimony.

21
22 Tampa Electric is also required to install and operate a
23 PM continuous emission monitor ("CEM") by March 2002 and
24 evaluate the possibility for Tampa Electric to install a
25 second PM CEM. Tampa Electric has investigated and

1 selected the PM CEM technology for Big Bend Station and
2 will perform the engineering in late 2001 with
3 installation to follow in 2002.
4

5 **Q.** What benefits will the requirements of the Orders bring
6 by way of reduced emissions?
7

8 **A.** Repowering with natural gas at Gannon Station along with
9 high-efficiency, state-of-the-art controls at Big Bend
10 Station, will enable Tampa Electric to reduce SO₂
11 emissions by almost 90 percent, reduce NO_x by more than 85
12 percent and PM emissions by more than 20 percent by the
13 year 2010. Since Tampa Electric is in the first phases
14 of implementing the requirements of the CD, the greater
15 part of the emissions reductions have not yet been
16 achieved. However, due to the installation of the FGD
17 system on Big Bend Units 1 and 2 and implementation of
18 the FGD operational limitations defined in the CD,
19 reductions of SO₂ emissions have already been achieved in
20 2001. Tampa Electric projects that SO₂ emissions in 2001
21 will be reduced by approximately 50 percent from the
22 previous year.
23

24 **Q.** Please summarize your testimony.
25

1 **A.** Tampa Electric has entered into settlement agreements with
2 DEP and EPA which require significant reductions in
3 emissions from Tampa Electric's Big Bend and Gannon
4 Stations. The Orders establish definite requirements and
5 time frames in which air quality improvements must be made
6 and result in reasonable and fair outcomes for Tampa
7 Electric, its community and customers, and the
8 environmental agencies. My testimony identifies the
9 projects which are legally required by the Orders and
10 describes the progress Tampa Electric has made towards
11 meeting the more stringent environmental standards.

12
13 **Q.** Does this conclude your testimony?

14
15 **A.** Yes it does.
