Re: Docket No. 990649B-TP
Investigation into Pricing of Unbundled Network Elements

Dear Ms. Bayo:

Per Commission Staff's request, enclosed for filing in the above matter are one confidential paper copy and three redacted paper copies of Verizon Florida Inc.'s Integrated Cost Model Study (ICM-FL) and UNE Wholesale Non-Recurring Study (NRC-FL). The studies are contained on CDs filed November 7, 2001 in this proceeding. The enclosed confidential paper copy is covered under Verizon's Notice of Intent to Seek Confidential Classification also filed on November 7.

Questions regarding the ICM-FL study can be directed to David Elhoffer in Verizon's Service Cost Group at 636-332-3790. Questions regarding the NRC-FL study can be directed to Tony Hutton at 972-718-8580.

Sincerely,

Kimberly Caswell

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

Introduction

The Unbundled Network Element (UNE) Non-recurring (NRC) Study is filed in compliance with the Florida Public Service Commission's Order Number PSC-00-1486-PCO-TP for Docket Number 990649-TP (B). The UNE NRC Study accounts for the activities required to pre-order, order, provision and install products and services for Competitive Local Exchange Carriers (CLECs).

The cost team consisting of Verizon's cost managers and Subject Matter Experts (SMEs) worked in conjunction with Arthur Andersen LLP professionals to develop the NRC Study template, to identify the process flows for ordering, provisioning and installation, and to gather cost data. This cost study is a Verizon work product.

UNE NRC Study Relationship to Other Cost Studies

The UNE NRC Study is one of Verizon's Wholesale Costs Study modules. There are four other modules: Resale NRC, Recurring Costs of Resale, Recurring Costs of UNEs, and the Expanded Interconnection Services (EIS) (collocation recurring and non-recurring) Costs. Though these costs are interrelated, they are not duplicative. Verizon has diligently reviewed all inputs to each of these modules to ensure that there are no incidents of double-counting costs.

Verizon also has recurring and non-recurring study modules for its Retail and Access products and services. To determine costs for certain UNEs where no ordering, provisioning, or installation data were available, the cost team used analogous retail or access services as proxies for the UNEs.

UNE Non-recurring Study Structure

The UNE Non-recurring Study is divided into three main sections, the summary, the section summary, and the appendix section. A description of these sections is as follows:

Summary

- Tab 1 - Summary - Includes a narrative detailing the overall design and methodology of the study, the rate development exhibits, which consolidate the section summary totals from the Tab 2 through 5 exhibits, and the study acronym glossary.

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Section Summary

- Tab 2 - Ordering - Contains a narrative detailing the ordering processes and study methodology as well as the ordering cost summary exhibit.
- Tab 3 - Provisioning - Includes a narrative detailing the provisioning processes and study methodology as well as the provisioning cost summary exhibit.
- Tab 4 - Field Work - Consists of a narrative detailing the installation processes (central office and field work) study methodology as well as the central office and field work summary exhibit.
- Tab 5 - OSS - Contains the narrative describing the Operating Support Systems (OSS) study methodology for the OSS project (Transition) costs, and OSS ongoing processing (Transaction-specific) cost.
- Tab 6 - Custom Routing - Consists of a statement on the treatment of custom routing of operator and directory assistance services.

Appendix

- Tab A1 - Ordering - Details the individual work sample studies, time study results, and minute per order development for the ordering function by various order types. The NMC shared fixed costs and the annual charge factors are developed in this section.
- Tab A2 - Provisioning - Details the costs incurred to complete provisioning activities, including weighted minutes per occurrence and a probability of occurrence, for each of the UNE products by order type.
- Tab A3 - Field Work - Details the costs incurred to complete the central office and field work activities required for the various types of UNEs.
- Tab A4 - OSS - Comprises a list of OSS project names, a description of each project, the detail of costs for each OSS project, and the ongoing costs for each OSS system for the study year.
- Tab A5 - LLRs - Contains tables of the Loaded Labor Rates used in the Ordering, Provisioning, and Field Work sections of the NRC study.

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

Study Navigation

The following techniques are designed to facilitate user navigation through Verizon's Wholesale Non-recurring Study:

- ♦ *Hyperlinks* - Hyperlinks, similar to those used in Web browsers, are an integral part of each table of contents in the study. Users can click on a specific hyperlink to quickly jump to the corresponding section of the study. Moreover, by activating the Microsoft Excel "Web" toolbar, users can access functions such as the "back" and "forward" arrows in order to navigate within the study. (To show the "Web" toolbar, select the "View Toolbars" menu option in Excel.)
- ♦ *Page Numbers* - Study pages are numbered in such a manner as to make it easy for users to identify their location within the study. For example, the footer at the bottom left-hand corner of page 15 of Summary Section 2 reads as follows: Section 2 - Page 15. Similarly, page 40 of Appendix Section 4 is shown as Section A4 - Page 40, with the "A" signifying the appendix section.

In addition, there are unique page identifiers for the different exhibits that collectively make up the study. The exhibit names are displayed in the lower right-hand corner of the page, unlike the aforementioned section summaries and appendices page numbers, which are located in the lower left-hand corner. The study exhibits have unique two- or three-character names, with multiple pages of the same exhibit having hyphenated numbers as part of the name (e.g. AAOC-1, AAOC-2, etc.)

Finally, by looking at the first letter of the exhibit name, users can quickly ascertain whether they are viewing the Summary of Rates, the Appendix, or the Section Summaries. All exhibits in the Rates section have four-character names beginning with the letter "R". All exhibits in the Appendix begin with the letter "A" and have four characters in the exhibit name. Exhibits in the Section Summaries do not begin with letters "R" or "A", and may have either three or four characters in the exhibit name.

- ♦ *Source and Destination Columns* - With the exception of the rate summary, the spreadsheets in the study have both a source and a destination column. The source indicates where or how a specific figure was derived, while the destination shows which exhibit(s) a given value is feeding. With respect to the source column, if all of the values in a column are derived from the same source, that source would be indicated in the column header (EX: C=AJSS-2). If the source for a value is the result of the calculation of two or more values from

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

different columns, the column header will show the calculation (EX: $D=C/A$). Likewise, the source may refer to a note (EX: F=Note 3), with the Note containing explanatory text. When the source column refers to the Source (EX: A=Source) --users should refer to notes or exhibits shown in the Source column.

When dealing with sources and destinations in the study, the rule of thumb is that *a value will typically reflect a single source - but that same value may have multiple destinations*. For example, the probability of occurrence for a specific activity might have been obtained from Headquarters Staff Support and shown to be 100%. In this case, the Headquarters Staff Support would be referenced by a note in the source column, and would represent the single source for this value. However, the 100% could be relevant to several different activities and feed multiple destinations.

The destination column shows the exhibit(s) that are dependent upon the result(s) of the current study page. Because a value sometimes feeds more destinations than there is room to show in the destination column, an exhibit range might be used instead. For example, if the value is used by six pages out of a twenty page exhibit, then the destination column might reference an exhibit with a range such as AOIS-1..AOIS-20. Finally, all values with a corresponding destination appear in **bold** text.

Study Methodology

The Ordering and Service Connections were developed from work sampling studies, time-and-motion studies, and estimates from Subject Matter Experts (SMEs). The most current Loaded Labor Rates for each of the workgroups was used.

The NRC rates reflect the cost of the set of activities required to pre-order, order, provision, and install a service in response to a specific Local Service Request (LSR) or Access Service Request (ASR) placed by a CLEC customer. The charge is non-recurring in that the constituent costs are encountered only once, at the time a service is activated, modified, or discontinued in response to a CLEC request.

The NRCs vary in response to the type of order and the type of product or service that is requested. In addition, the costs assume enhancements to Verizon's systems and databases resulting in increased mechanization. The standard non-recurring cost calculation is *Cost = Activity Time x Task Probability x Labor Rate*.

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

Service Classifications

NRC rate elements are classified into three major service classifications: Local Wholesale, Network Wholesale, and Miscellaneous Charges. Definitions of these service classifications are as follows:

- ♦ *Local Wholesale* - The sale of unbundled network elements such as loops, ports, common switching and common transport (separately or combined) to either a competitive local exchange carrier (CLEC) or a data local exchange carrier (DLEC). The product or product groups included in Local Wholesale services are Loops, Ports, UNE-Ps, Subloops, Line Sharing, Loop Conditioning, and Interim Number Portability (INP).
- ♦ *Network Wholesale* - The sale of unbundled network elements that apply to access services, such as common and dedicated switching and common and dedicated transport (either separately or combined) to either a CLEC or DLEC. The product or product groups included in Network Wholesale services are Dark Fiber, Dedicated Transport, Signaling System Seven (SS7), and Enhanced Extended Links (EELs).
- ♦ *Miscellaneous Charges* - Other services that the CLEC may need when processing an LSR. Miscellaneous Charges include charges for Coordinated Conversions, Expedites, Customer Record Search, and CLEC Account Establishment.

Standard Rate Structure

Within each UNE category, there are typically five standard rate elements that vary in cost depending on the type of order placed by the CLEC. Note that each order type is not applicable to every service, and some services are segregated using their own unique nomenclature. The standard order types (rate elements) are Initial, Subsequent, Changeover As Is, and Changeover As Specified. Disconnect order costs are normally included in the Initial order rate unless otherwise directed by state PUCs.

- ♦ *Initial* - New orders that establish service for the first time (new installations and initial conversions) or add additional lines at an existing CLEC customer's location.
- ♦ *Subsequent* - Represents a CLEC request to change to an existing service:

Verizon – Florida

Unbundled Network Element (UNE) Non-Recurring Study

- ♦ *Subsequent Port Feature* – Represents a request to change a feature(s) on an existing Port service, e.g. ISDN-BRI change.
 - ♦ *Subsequent Line Feature* – Represents a request to change a feature(s) on an existing line, e.g. UNE-Platform (UNE-P) change.
 - ♦ *Subsequent Switch Feature Group* – Represents a request to change a switch feature group, e.g., CentraNet change.
 - ♦ *Subsequent CO Connection* – Represents a request to change a connection within a central office (CO), e.g., jumper change.
 - ♦ *Subsequent Facility Connection* – Represents a request to change a connection to a facility in the outside plant network, e.g., subloop jumper change.
-
- ♦ *Changeover* – A Changeover order type is applicable when the CLEC requests conversion of existing services, e.g. Retail to UNE-P and Resale to UNE-P. When the service is migrated from Retail or Resale to UNE-P, Verizon must change the switch translations to measured service.
 - ♦ *Changeover As Is* – Represents a CLEC's request to change an existing end user service from Verizon to CLEC provided, while maintaining the same service/features.
 - ♦ *Changeover As Specified* – Represents a CLEC's request to change an existing end user service from Verizon to CLEC provided, while adding or deleting existing features.

Rate Elements for Ordering and Service Connection

Each rate element has a separate NRC for Ordering and Service Connection.

- ♦ *Ordering Rates* - Ordering charges vary depending upon the method the CLEC uses to transmit the LSR/ASR to Verizon. Ordering charges represent the process by which an LSR/ASR is received and a service order is created. The two types of ordering charges are Manual and Semi-Mechanized. Ordering charges are applied on a per customer per location basis and are limited to the same type of network element. For instance, if five loops and five ports are ordered by the CLEC to be provided to a single end user customer at one physical location, two separate LSRs are required and two initial ordering charges will apply since loops and ports are separate elements.
- ♦ *Service Connection Rates* - The rate elements for Service Connection include costs for provisioning , central office and field work activities associated with an LSR or ASR.
 - ♦ *Central Office Activity* - Activities to install, change, and disconnect UNEs/UNE-Ps in the central office (host offices as well as remote offices).

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Central office activities include running/breaking jumpers on the Main Distribution Frame (MDF), Intermediate Distribution Frames (IDFs), and Tie-Cable Frames.

- ♦ *Field Work* - Any activity with respect to outside plant (the facilities between the central office and the customer's premises). Field installation work includes any cross-connect activity at the Feeder/Distribution Interface (FDI), cross connect box, pedestal or pole, and Network Interface Device (NID).

In addition, the NRCs for Local Wholesale Service Connection apply on an initial unit/additional unit basis. Units vary depending on the service (i.e. loops, ports, etc.). NRCs for Network Wholesale Service Connection are applied on a per-order basis. In those circumstances, the Additional Unit column does not apply.

- ♦ Initial - encompasses the costs for Provisioning, Central Office and Field Installation for the initial line included on a LSR.
- ♦ Additional - encompasses the incremental costs for Provisioning, Central Office and Field Installation for each additional line included on the LSR for the same service at the same customer location.

Rate Categories for Ordering and Service Connection

Verizon's UNEs fall into four categories: Exchange - Basic, Exchange - Complex, Advanced/Special - Basic, and Advanced/Special -Complex. Each of these groupings has a distinct provisioning process and associated non-recurring costs. For each category, Verizon has costed the activities required to pre-order, order, provision, and install the UNEs

There are two fundamental distinctions between the UNE categories. The first distinction is whether or not a service requires design/engineering. The Exchange services provisioning activities can include facility assignment, switch translations (if required), routing instructions and service arrangements, but do not require design or engineering. For Exchange Basic services provisioning work is only required when for switch updates and to handle system fall-out requiring manual assignment. Exchange Complex services require manual provisioning.

However, the Special/Advanced services are designed/engineered products or services with variables specific to the order placed by the CLEC. Advanced products provisioning activities include facility assignment, switch translations, design/engineering, and Plant Control Office (PCO) activities such as scheduling

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

circuit testing, and order completions. The Special/Advanced services also require Circuit /Design Layout Reports (CLR/DLR).

The second distinction is between Basic and Complex services. Basic services can be provisioned using standard network components maintained in inventory, without specialized instructions for switch translations, routing, and service arrangements. The Complex services require special instructions for the provisioning of the service to meet the customer's needs. Verizon uses a Data Gathering Form (DGF) to record and organize these instructions for translations and service arrangements.

Inclusion of NMC and OSS costs in NRC Rates

In addition to the development of NRC rates described above, the rates also reflect the inclusion of applicable NMC costs. The NMC (National Market Centers) costs are applied to all classes of NRC rate elements with the exception of Dark Fiber, Loop Conditioning, Dedicated Transport, SS7, EELs and Hot-cut Coordinated Conversions. The NMC costs are not applied to the Loop Conditioning nor Hot Cut Coordinated Conversion rate elements.

OSS costs are not included in rate element development at this time. Florida OSS costs will be addressed in a separate proceeding.

The NMC costs, when applied to the elements, are applied to the ordering component of the element and will be applied to both the 100% Manual, as well as the Semi-mechanized ordering. The Provisioning portion of the elements will not have these costs applied to it.

The rate elements with the NMC costs applied reflect an additional \$4.47 per rate element added. The NMC cost of \$4.47 per rate element is derived by dividing the NMC Shared/Fixed Cost total of \$18,648,430 by a projected annual average (2001-2005) order volume of 4,169,761.

Verizon - Florida Unbundled Network Element (UNE, Non-Recurring Study)

Weighting Factors

Weighting factors are utilized in the NRC study to either combine cost elements or allocate cost elements for rate development purposes.

- ♦ Cost Combining - A percentage of each cost element is added to another percentage of a cost element to develop a rate, e.g., Bridged Tap Removal.
- ♦ Cost Allocation - A percentage of certain cost elements is added to another cost element, e.g., NMC costs.

Cost Development

UNE NRCs were developed using the following methods of data collection:

- ♦ Work sampling and SME estimates for the National Market Center (NMC) ordering activities;
- ♦ Time and motion studies for the National Accounts Customer Center (NACC) and National Order/Referral Entry Center (NOREC);
- ♦ Time and motion studies, SME inputs and database reports for the provisioning activities;
- ♦ Time and motion studies for Central Office Installation activities, and/or;
- ♦ Database reports and time and motion studies for Field Work activities.

The SMEs and cost team collected activity times and determined task probabilities. Using the most current Loaded Labor Rates, the cost team then calculated the costs for each type of UNE order using the standard non-recurring cost calculation - *Cost = Activity Time x Probability x Labor Rate.*

Ordering Modes

The SMEs and cost team identified planned and approved changes in Operations Support Systems (OSS) that would impact the process in each of Verizon's workgroups. OSS enhancements increase mechanization/flow through thus reducing the level of manual activity associated with certain types of orders.

- ♦ *Manual Order*
- ♦ *LSR* - CLEC faxes a UNE LSR to Verizon. The Verizon service representative reviews the fax to ensure all information is complete and

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

accurate. If there is an error, or missing information, the representative contacts the CLEC for the correction. The service representative then inputs all LSR information into the Secured Integrated Gateway System (SIGS) and provides Firm Order Confirmation (FOC) to the CLEC. The LSR then follows the same process as a semi-mechanized order.

- ♦ ASR - CLEC faxes a UNE ASR to Verizon, the service representative reviews the hardcopy ASR to ensure all information is complete and accurate. If there are errors, or missing information, the representative contacts the CLEC for the correction. The service representative then inputs information into the Exchange Access Control & Tracking System (EXACT). The ASR then follows the same process as a semi-mechanized order.

- ♦ *Semi-mechanized*
 - ♦ LSR - CLEC transmits the UNE LSR electronically. Verizon's Front-end edits will identify errors and return error information electronically to the CLEC. Once through the front-end edits, the order is distributed to a Verizon service representative who inputs the order into the National Order Collection Vehicle (NOCV.)

 - ♦ ASR - CLEC transmits the UNE ASR electronically. When the ASR arrives, certain screens have already been populated by the CLEC; the service representative then populates the remainder of the screens. The EXACT portion of the EXACT/TUF (Exchange Access Control And Tracking/Translator to USOCS and FIDS) system captures all the features and elements of the service requested by the CLEC including table-driven critical dates. The order is automatically edited by EXACT and the service representative corrects the errors as requested.

Cost Element Structure

There are five UNE order types typically utilized to develop non-recurring costs. Following are descriptions of each order type:

- ♦ New - a New order for Local Wholesale Service establishes a product or service for the first time or adds additional lines or telephone numbers at an existing CLEC customer's location.

- ♦ Change - a Change order applies when the CLEC requests changes in central office switch features for an existing local wholesale service; this can be either a "Change Feature" or a "Change Switch Feature Group" type order. A Change order also applies when the CLEC requests a change in Central Office

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

Connection - the cross-connect between the CLEC's cage terminal block and Verizon's terminal block(s) on the Main Distribution Frame (MDF) or changes in the field related to a subloop element.

- ◆ Disconnect - a Disconnect order for Local Wholesale Service applies when the CLEC requests that all or a portion of a local wholesale product or service be removed.
- ◆ Record - a Record order applies when the CLEC changes existing service records without changing the product or service itself. An example of a Record order is a change of the billing address.
- ◆ Migration - a Migration order type is applicable when the CLEC requests conversion of existing services: Retail to UNE-P and Resale to UNE-P. When the service is migrated from Retail or Resale to the UNE-P, Verizon must change the switch translations to measured service.
 - ◆ Migration As Is: An existing end user customer changes service from Verizon to a CLEC, or from a CLEC to another CLEC, and the end user keeps the same service. This type order requires only the ordering function and APC provisioning; it does not require central office, or field work activities. "Migration As Is" is applicable to Exchange Basic and Exchange Complex products.
 - ◆ Migration As Is + or -: The end-user requests to add or delete a vertical feature from existing service. The must electronically update the central office switch with the requested feature change.
 - ◆ Migration As Specified: The end-user converts an existing Verizon retail services (at a single location) or another CLEC's services to UNEs provided by a CLEC. The CLEC specifies the services and service arrangements to be migrated.

Unbundled Network Element (UNE) Non-Recurring Study

UNE Category Table

The table below shows each category and its associated UNEs:

<i>Exchange-Basic</i>	<i>Exchange-Complex</i>	<i>Special/Advanced-Basic</i>	<i>Special/Advanced-Complex</i>
<ul style="list-style-type: none"> • 2-Wire Voice Grade Loop ♦ Basic Analog Line Side Port ♦ Interim Number Portability (INP) • Subloop Feeder <i>2-Wire</i> <i>4-Wire</i> • Subloop Distribution <i>2-Wire</i> <i>4-Wire</i> ♦ Subloop Unbundled Customer Serving Terminal (Drop) • Network Interface Device (NID) 	<ul style="list-style-type: none"> • 2-Wire Digital Capable Loop • Loop Conditioning ♦ CentraNet Port • ISDN BRI Digital Line Side Port ♦ Line Sharing ♦ Line and Station Transfer 	<ul style="list-style-type: none"> ♦ 2-Wire Digital Loop ♦ 4-Wire Voice Grade Loop ♦ 4-Wire Digital Loop ♦ Entrance Facilities (DS0) 	<ul style="list-style-type: none"> ♦ DS1 Loop • DS3 Loop ♦ Dedicated Switched Access Line ♦ ISDN PRI Digital Trunk Side Port • DS1 Digital Trunk Side Port ♦ Dedicated Switched Access Transport ♦ Dedicated Non-switched Transport ♦ SS7 Links ♦ STP Ports ♦ Dark Fiber <i>Preordering</i> <i>Interoffice</i> <i>Facilities</i> <i>Unbundled Loop</i> <i>Subloop Feeder</i> <i>Subloop</i> <i>Distribution</i> ♦ Enhanced Extended Links (EELs) ♦ Entrance Facilities (DS1, DS3)

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Local Wholesale Product/Service Descriptions

Unbundled Loops

Unbundled loops extend from a Verizon central office to the demarcation point at an end user's premises.

Exchange Basic

- ♦ *2-wire Voice Grade Loop* is a voice frequency transmission facility suitable for the transport of analog voice signals between approximately 300 Hz to 3000 Hz, with line loss levels not to exceed 8.5 dB. A 2-wire Analog Loop may include load coils and bridged taps, as well as carrier derived facility components such as pair gain applications and loop concentrators and/or loop multiplexers.
- ♦ Note: Verizon does not guarantee data modem speeds on either 2-wire or 4-wire Analog Loops.

Exchange Complex Non-Digital

- ♦ Costs are identical to Exchange Basic.

Exchange Complex Digital

- ♦ Costs are identical to Exchange Basic.

Advanced/Special Basic

- ♦ *4-wire Voice Grade Loop* is a voice frequency transmission facility suitable for the transport of analog voice signals between approximately 300 Hz to 3000 Hz, with line loss levels not to exceed 8.5 dB. The service will operate with one of the following signaling types that may be specified when the service is ordered: Loop-start, ground-start, loop-reverse-battery, duplex, and no signaling.
- ♦ *2-wire Digital Loop* is a 2-wire transmission facility capable of transmitting digital signals up to 160 Kbps with no greater line loss than 38 dB end-to-end measured at 40 kHz without loop repeaters. Depending on loop make-up and length, midspan repeaters may be required; in which case line loss levels will be no greater than 76 dB at 40 kHz. In addition, a 2-wire Unbundled Digital Loop, dependent upon loop make-up, may be configured to support Enhanced Copper Technologies (ECTs) such as ADSL. When configured in this manner, these loops must be provisioned

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

over copper facilities that contain no load coils and minimum allowable bridged taps. Loop Conditioning rates are in addition to loop ordering and service connection rates.

- ♦ *4-wire Digital Loop* is a 4-wire copper facility suitable for the transport of digital signaling. A 4-wire Digital Loop may be used by a CLEC to provision services such as ISDN PRI or HDSL. The 4-wire digital UNE is not available where Verizon has provisioned its local network utilizing Digital Line Concentrators (DLCs), Verizon does not supply the electronics associated with these service types.

Advanced/Special Complex Digital

- ♦ *DS1 Loop* is a transmission facility that provides connectivity from the serving central office termination point to the network interface device located at the end user's premises. A DS1 Loop will support a digital transmission of 1.544 Mbps. A DS1 Unbundled Loop includes the necessary electronics to provide DS1 transmission rate. DS1 Unbundled Loop will be provided only when the electronics necessary to provide DS1 functionality are currently available for the specific loop requested.
- ♦ *DS3 Loop* is a transmission facility that provides connectivity from the serving central office DS3 termination point (typically a DS3 patch panel) to the network interface device located at the end user's premises. A DS3 will provide for 45 Mbps digital transmission channels. A DS3 Unbundled Loop offers a CLEC the ability to provision the equivalent of 28 DS1s or 672 DS0s (basic 64 Kbps digital channels). A DS3 Unbundled Loop includes the necessary electronics to provide the DS3 transmission rate. DS3 Unbundled Loops will be provided only when the electronics necessary to provide the DS3 functionality are currently available for the specific loop being requested.

Unbundled Ports

A port provides for the Connection of individual loops to the switching components of Verizon's network. In general, a port is a line card and associated peripheral equipment in a Verizon end office switch which serves as the hardware termination for the end-user's Exchange Service on that switch, generates dial tone, and provides the end-user access to the public switched telecommunications network. Each line-side port is typically associated with one telephone number, which serves as the end- user's network address.

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

Exchange Basic

- ♦ *Basic Analog Line Side Port* is a line side switch connection employed to provide basic residential and business type Exchange Service.

Exchange Complex Non-digital

- ♦ *CentraNet Line Side Port* is a line side switch connection employed to provide CentraNet type services.

Exchange Complex Digital

- ♦ *ISDN BRI Digital Line Side Port* is a Basic Rate Interface (BRI) line side switch connection employed to provide ISDN BRI Exchange service.

A Port provides access to local switching which provides the basic switching functions to originate, route and terminate traffic, and any signaling required to complete a call.

Vertical features are optional services provided through software programming in the switch, which can be added on a per-feature basis with applicable costs.

Advanced/Special Complex

- ♦ *ISDN PRI Digital Trunk Side Port* is a Primary Rate Interface (PRI) trunk side switch connection employed to provide ISDN PRI services.
- ♦ *DS1 Digital Trunk Side Port* is a trunk side switch connection employed to provide the equivalent of 24 analog ports (DID/DOD).

Interim Number Portability (INP)

INP is available to CLECs in specific Central Offices to allow former Verizon customers to maintain their existing telephone number. INP is applicable when the customer is served exclusively on the CLEC's facilities or where the CLEC serves the customer with its own switch but uses an Unbundled Loop obtained from Verizon .

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Subloop Unbundling

Exchange Basic

All Unbundled Subloops are classified as Exchange Basic.

Unbundled Subloop Feeder is a transmission path that extends from the MDF located in a Verizon central office to the FDI, or its functional equivalent, at a Verizon cross-connect box. Unbundled Subloop feeder can be configured as:

- ♦ *2-Wire Feeder* is a 2-wire transmission path that may include load coils, bridged taps. This transmission path may include carrier derived facility components (i.e. pair gain applications, loop concentrators and/or loop multiplexers).
- ♦ *4-Wire Feeder* is a 4-wire transmission path that may include load coils, bridged taps. This transmission path may include carrier derived facility components (i.e. pair gain applications, loop concentrators and/or loop multiplexers).

Unbundled Subloop Distribution is a transmission path that extends from the Feeder Distribution Interface (FDI), or its functional equivalent, at a Verizon cross-connect box, to an end user customer premises. The NID at the end user premises is included with this subloop element. Unbundled Subloop distribution can be configured as:

- ♦ *2-Wire Distribution* is a 2-wire transmission path that may include load coils, bridged tap. This transmission path may include carrier derived facility components (i.e. pair gain applications, loop concentrators and/or loop multiplexers).
- ♦ *4-Wire Distribution* is a 4-wire transmission path that may include load coils, bridged taps. This transmission path may include carrier derived facility components (i.e. pair gain applications, loop concentrators and/or loop multiplexers).
- ♦ *Unbundled Customer Serving Terminal (drop)* extends from a terminal, such as a pole or pedestal, to the end user premises and includes the NID.

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Line Sharing - Not included in this filing

Loop Conditioning

Exchange Complex

Loop Conditioning is the process of removing Load Coil(s) and/or Bridged Tap(s) from an existing or vacant analog service or pair in order to allow both analog and digital transmission signals, over the same facility. Typically, Loop Conditioning is provided in association with Line Sharing.

Verizon developed costs to remove one or multiple Bridged Tap(s) and/or Load Coil(s). Costs are reflected on per cable pair basis as "One Occurrence" or "Multiple Occurrences" for Bridged Tap removal and combinations of Bridged Tap and Load Coil removal. Separate costs have been developed for Load Coil removal only, without any Bridged Tap removal.

Line and Station Transfer (LST)

Exchange Complex

LST is to be applied when copper facilities can be freed up in order to satisfy a CLEC's request for a copper based technology. Line and Station Transfers "*are not ordered by the CLEC*", rather, Verizon determines whether to perform this type of a facility modification when attempting to provision a *pre-qualified* facility for xDSL. Line and Station Transfers can involve the "*swapping of customer from a DLC to spare copper*". It may also involved "*the rearrangement of an existing Verizon customer off a copper facility and onto a fiber supported DLC in order to free up the copper facility for a CLEC*" who needs the loop for an xDSL offering. Line and Station Transfers are not replacements for loop conditioning requests (the removal of load coils and/or bridged taps). Line and Station Transfers are applicable only to customers being served by DLC's.

UNE-P

Unbundled Network Element Platforms are combinations of Unbundled Ports, Unbundled Shared Transport, and Unbundled Loops. These platforms provide CLECs with residential and business local exchange service capability.

Exchange Basic

- ◆ *UNE Basic Analog Voice Grade Platform* consists of the following components:

2-Wire Analog Loop

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Basic Analog Line Side Port
Shared Transport

Exchange Complex Non-digital

- ◆ *UNE CentraNet Platform* consists of the following components:
 - 2-Wire Analog Loop
 - CentraNet Port
 - Shared Transport

Exchange Complex Digital

- ◆ *UNE ISDN BRI Platform* consists of the following components:
 - 2-Wire Analog Loop (Digital capable with no load coils and bridged taps)
 - ISDN BRI Digital Line Side Port
 - Shared Transport

Advanced/Special Complex

- ◆ *ISDN PRI Platform* consists of the following components:
 - DS1 Loop
 - ISDN PRI Digital Trunk Side Port
 - Shared Transport
- ◆ *DS1 Platform* consists of the following components:
 - DS1 Loop
 - DS1 Digital Trunk Side Port
 - Shared Transport

Coordinated Conversion

A Coordinated Conversion may be requested by the CLEC for Exchange - Basic and Complex UNEs to establish a specific appointment for the completion of the service order. Verizon contacts the CLEC for authorization to proceed prior to beginning work on the order, and after work is complete. This service includes only the additional costs caused by the Coordinated Conversion and is in addition to the cost of the underlying LSR. The cost is on a *per order basis*.

The NRC study develops costs for three steps required for a coordinated conversion:

Process 1 - identifies the costs for the NMC service representative's time to contact the provisioning group to establish the time of the conversion and to set the appointment.

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

Process 2 - identifies the incremental costs of Assignment Provisioning Center (APC) personnel and Central Office Technician(s) to coordinate and cut the ordered UNEs in conjunction with any outside plant work at the scheduled appointment time. The "standard interval" for this process is 15 minutes. There is an "additional interval" cost that applies for each 15 minutes beyond the standard interval.

Process 3 - identifies the costs of the field technician to coordinate and cut the ordered UNEs in conjunction with the central office and APC personnel at the scheduled appointment time. The "standard interval" for this process is 15 minutes. There is an "additional interval" cost that applies to each 15 minute interval beyond the standard interval.

Hot Cut Coordinated Conversion

This service is the same as the Coordinated Conversion mentioned above with the added feature that the CLEC, the Verizon coordinator and the Verizon technicians remain on a conference call for the duration of the service order completion process. Each step of the process is completed sequentially following authorization from the CLEC. Because there is no way for Verizon to estimate or control the amount of time required for a Hot Cut Coordinated Conversion, the cost developed is for a one-hour conversion. The additional interval cost will be incurred for each 15 minute interval beyond the standard interval.

Expedite

An Expedite refers to a request by a CLEC to advance the completion of the service order earlier than the next standard Due Date that is normally available. Instead of relying on the automated system for work schedule, an Expedite requires a manual appointment setting process in which NMC personnel must contact the Division Resource Management group to determine if the earlier completion interval is feasible. In addition to the costs shown in this study, overtime charges may apply if the work is performed outside of normal installation work time periods.

Other Services

In addition to the UNE costs, Verizon provides costs for other services the CLEC may require. These services are:

Pre-ordering

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Pre-ordering is an element of the ordering cost. A CLEC may pre-order service by fax or by sending the order electronically. Either the CLEC or NMC establish a "shell" order via SIGS. The CLEC may reserve a telephone number, verify an address as one in Verizon's territory, determine available services in central offices, etc.. The CLEC may also reserve a due date. If a valid LSR is not received from the CLEC within 24 hours the telephone number is released and the due date is canceled. Pre-ordering costs are applied on a per order basis to the manual (received via facsimile) pre-ordering activities; semi-mechanized (received electronically) pre-orders are not charged.

Record Order

Record orders change information, such as billing address, on a customer's service record. The NMC enters the information into NOCV as a change order. The customer account is updated and the order is completed. (No provisioning is required or permitted on a record order.)

Customer Service Record Search

A CLEC may request Verizon to provide a manual Customer Service Record (CSR) to obtain information about a potential customer's existing Verizon services. The NMC processes the request and returns the information to the CLEC. (If the CLEC performs a CSR search electronically via the Web-based Interactive Service Environment (WISE), there is no non-recurring cost.)

CLEC Account Establishment

Verizon establishes the CLEC account in each state requested by the CLEC. The NMC receives the CLEC profile from the CLEC's account manager, reviews it for completeness, and then enters the CLEC profile information and creates summary bill masters in NOCV. Once the CLEC account has been established for a state, the CLEC may submit an LSR for processing

Network Wholesale Product/Service Descriptions

Dark Fiber

Dark Fiber is unused fiber optic cable connecting two points within Verizon's network. It is considered "dark" because it does not have electronics (i.e., terminating multiplexing equipment, electronic-to-optic conversion equipment, etc.) on either end of the fiber segment. The CLEC provides electronics equipment and signals on the fiber to make it "lit."

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Advanced/Special Complex

- ♦ *Dark Fiber Pre-ordering:* Verizon developed costs for pre-ordering activity for Dark Fiber. These activities are the assessment and evaluation of Dark Fiber availability on a specific network segment. Verizon's Network Design group determines Dark Fiber availability for interoffice facilities, while the Access Design group determines availability for the local loop.
- ♦ *Dark Fiber - Interoffice Dedicated Transport(IDT):* An unused fiber strand that exists at the fiber splice box, or functional equivalent, located within the central office. Unbundled Dark Fiber - IDT is ordered by CLECs via the ASR process. The service order intervals mirror those for the Dedicated Non-switched Transport UNE, and billing is processed by the Carrier Access Billing System (CABS).
- ♦ *Dark Fiber -Unbundled Loop:* An unused fiber strand that exists between the fiber splice box, or functional equivalent, located within the central office, and the fiber splice box or patch panel located within a customer's premises. Unbundled Dark Fiber - Local Loop will be ordered by CLECs via the ASR process. The service order intervals mirror those for existing UNE Unbundled Loop products and billing is processed through CABS.
- ♦ *Dark Fiber - Subloop Feeder:* An unused fiber strand that exists between the fiber splice box, or functional equivalent, located within the central office, and the fiber splice box or patch panel at the Verizon Remote Hut/DLC/CEV or accessible terminal. Unbundled Dark Fiber - Subloop Feeder will be ordered by CLECs via the ASR process. The service order intervals mirror those for existing UNE subloop products, and billing is processed through CABS.
- ♦ *Dark Fiber - Subloop Distribution:* An unused fiber strand that exists between the fiber splice box or patch panel located at the Verizon Remote Hut/DLC, and the fiber splice box or patch panel located at the customer's premises. Unbundled Dark Fiber - Subloop Distribution will be ordered by CLECs via the ASR process. The service order intervals mirror those for existing UNE subloop products, and billing is processed through CABS.

Entrance Facilities

Entrance facilities provide a dedicated facility between a CLEC and Verizon's end office. Entrance Facilities may be HiCap (DS1 or DS3) or lower capacity facilities (DS0).

Verizon - Florida Unbundled Network Element (UNE) Non-Reciprocity Study

Interoffice Dedicated Transport (IDT)

Unbundled IDT is the transport facility associated with point-to-point dedicated circuits (special circuits) between Verizon serving wire centers (SWC). UNE IDT includes facilities to transport the circuit between the two Verizon SWCs and the equipment required to terminate the inter-office facility (IOF) within each of these Verizon SWCs.

CLEC Dedicated Transport (CDT)

CDT is the dedicated transport facility connecting the Verizon SWC to the CLEC's central office location. UNE CDT includes the equipment required to terminate the transport within the CLEC's central office location and within the Verizon SWC. UNE CDT also includes the transport facility between the two locations, but extends no further into Verizon's network than the SWC. The termination of the service at the Verizon SWC is at a DSX (DS3, DS1) or term block (DS0).

Signaling System 7 (SS7)

Verizon's SS7 network uses signaling links to transmit routing messages between switches, and between switches and call-related databases. The signaling network includes a link that transmits signaling information in packets from the local switch to a signaling transfer point (STP). The link terminates on an STP port. The STP processes information contained in the packets and will:

- ◆ Route the call to the terminating end office and establish a call path on the voice network between the switches.
- ◆ Query a call-related database that returns customer information or call routing instructions to the switch.

Verizon has unbundled its signaling network. The following cost elements are included in this study:

- ◆ *SS7 Links:* A Links from end offices to STPs; B Links between STPs; and D Links between STPs.
- ◆ *STP Port Termination:* Signal Transfer Point (STP) is a signaling point that transfers signaling messages from one link to another.

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

The signaling link provides a dedicated transmission path to connect the CLEC location to Verizon's STP. The links are provided in:

- 56 Kbps digital by Dedicated Switched Access Lines (DSALs)
- DS1 formats by Dedicated Switched Access Transport (DSAT).

The 56 Kbps format provides connection to one port at the STP; the DS1 format provides an equivalence of 24 56 Kbps facilities for connection of up to 24 ports at the STP.

Enhanced Extended Link (EEL)

EEL is a combination of dedicated transport, multiplexing (when required), and unbundled loops. Multiplexing is the division of two or more channels into one single channel for transmission over the telecommunications network. The NRC rates are for costs based on the multiplexing of DS-3 to DS-1 signaling. The multiplexing costs reflect the labor cost for a central office technician to install jumpers on the DSX panel. EELs do not require a collocation arrangement at each end office. The interoffice dedicated transport (IDT) and multiplexer, either DS3 or DS1 may be combined with loops, either DS3, DS1, 2 or 4-wire loops. EEL combinations may also be comprised of DS3 IDT with a DS3 loop, DS1 IDT with a DS1 loop, or voice grade transport with a voice grade loop.

Call-related Databases

Call-related databases are used in the signaling network for billing and collection, or for the transmission, routing, or other provision of telecommunications service. Access to Verizon's call-related databases, such as Line Information Database (LIDB) and Toll-free Calling Database, is provided through the physical Connection at the STP.

Advanced Intelligent Network (AIN) Platform and Architecture

Unbundled AIN is a product offering that allows the CLEC to take advantage of Verizon's AIN infrastructure in order to provide AIN services to end users. Due to the complexity and number of options for AIN platform, the CLEC must submit a bona fide request (BFR) for unbundled AIN elements; there are no NRCs for AIN platform included in this study.

Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study

OSS UNE

Verizon provides costs for interfaces with, and use of, its OSS. Verizon has identified two types of costs associated with OSS - Transition Costs and Transaction-specific Costs. Transition costs are the costs to upgrade existing OSS and the start-up costs to establish mechanized interfaces. These infrastructure changes were required to make Verizon's OSS accessible to the CLECs. The transition costs include the one-time expenses to upgrade the five categories of OSS: pre-order, order, provisioning, repair/maintenance, and billing.

Transaction-specific costs are the costs incurred each time a CLEC places an order; these are the on-going OSS costs to process an LSR or ASR. These costs pertain to the non-recurring systems for pre-order, ordering, and provisioning.

The development of OSS UNE costs is described in Tab 5-OSS. OSS costs are not included in rate element development at this time. Florida OSS costs will be addressed in a separate proceeding.

Custom Routing of Operator and Directory Assistance Service

Custom Routing provides the capability for routing of calls originating from CLEC lines to dedicated operator assisted or directory assisted trunk groups and the operator platform designated by the CLEC. A bona fide request (BFR) submitted after completion of an Inter-Connection Agreement is required for ordering of Custom Routing Service. NRCs for Custom Routing are for systems modifications, additional switch memory and labor costs for switch programming.

Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study

ACRONYM	DEFINITION
AAIS	Assignment, Activation and Inventory Services System.
ACG	Access Carrier Gateway
ACO	Area Central Office
ADSL	Asymmetrical Digital Subscriber Line
AIN	Advanced Intelligent Network
ALEC	Alternative Local Exchange Carrier
AO	Account Owner
APC	Assignment Provisioning Center
API	Application Program Interface
ASR	Access Service Request
ATCUP	Automated Tool for CLEC User Profile - This is the administrative portion of WISE.
ATP	Authorization to Proceed
AWAS	Automated Work Administration System
B & C	Billing and Collection
BEX	Business Express
BFR	Bona Fide Request
BH Table (now 148 table)	CLEC line screening table - Identifies telephone numbers of customers who have changed local service providers.
Billstar	Storage system for copies of the end-user customer bill.
BRI	Basic Rate Interface
BRPC	Business Response Provisioning Center
BVT	Billing, Voucher, Treatment (System) - Verizon system used to generate adjustments to the customer's (end user, CLEC, or access) bill.
BZT	Business Zone Technicians
CABS	Carrier Access Billing System
CAMS-CABS	Carrier Access Management System - Carrier Access Billing System
CBSS	Customer Billing Services System - Verizon system used to bill retail, resale and unbundled services.
CBSS CIA	CBSS Customer Information Application - Service order project team who performs code changes for CBSS Service Order.
CBSS MIS	CBSS Management Information System - Verizon group responsible for master depository of billing information.
CBSS WYSIWYG	Customer Billing Services System What You See Is What You Get - Team responsible for bill images/format.
CDT	CLEC Dedicated Transport
CEV	Controlled Environmental Volt
CKT ID	Circuit Identifier
CLASS	Custom Local Area Signaling Service
CLEC	Competitive Local Exchange Carrier

**Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study**

ACRONYM	DEFINITION
CLR/DLR	Circuit/Design Layout Reports
CMDS	Centralized Message Distribution System - System used to interexchange out-collect messages.
CNAS	Circuit Network Administration System - A data processing application which mechanizes assignment and administrative functions associated with the various components comprising message trunk and special service circuits.
CO	Central Office
COSS	CLEC Operational Support Systems
COT	Central Office Technician
CSI	Customer Service Inquiry
CSR	Customer Service Record - Records that contain a customer's (end user or CLEC) existing arrangements.
CZT	Customer Zone Technicians
D&E	Development of new systems and enhancements to existing systems.
DBAC	Database Administration Center
DBM	Database Management
DD	Due Date
DGF	Data Gathering Form
DID/DOD	Direct Inward Dialing/Direct Outward Dialing
DLC	Digital Line Concentrators
DLC	Digital Loop Carrier
DLEC	Data Local Exchange Carrier
DRC	Dispatch Resource Center
DRM	Division Resource Management
DSAL	Dedicated Switched Access Lines
DSAT	Dedicated Switched Access Transport
DSX	Digital System Cross-connect frame.
ECT	Enhanced Copper Technologies
EDI	Electronic Data Interchange - A series of standards which provide computer-to-computer exchange of business documents between different companies' computers over telephone lines.
EDT	Express Dial Tone
EEL	Enhanced Extended Links
EIS	Expanded Interconnection Services
EMR	Exchange Message Record - Standard used for interchange of telecommunications message information.
EXACT/TUF	Exchange Access Control and Tracking/Translation to USOCS and Fids
FDI	Feeder/Distribution Interface
FIFO	First In First Out

Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study

ACRONYM	DEFINITION
FOC	Firm Order Confirmation
GOLD	Gathering On Line Data.
ICM	Integrated Cost Model - Verizon's costing model utilized for UNEs.
IDF	Intermediate Distribution Frames
IDT	Interoffice Dedicated Transport
INP	Interim Number Portability - A service made available to CLECs to enable former Verizon end-users who become CLEC customers to continue to receive telephone calls to the same telephone number.
IOF	Inter-office Facility
IOSC	Item of Service Code
IR	Incident Report
ISDN	Intergrated Service Digital Network
ITDP	Information Technology and Data Processing
LBSC	Large Business Support Center
LC&I PMO	Local Competition and Interconnection Program Office
LEA	Local Service Request Edit Application
LIA	Local Service Request Input Application
LIDB	Line Information Database
LIJ	Left-in-Jumper
LLR	Loaded Labor Rate
LSC	Local Service Confirmation
LST	Line and Station Transfer
LSOG	Local Services Ordering Guide - Industry standard definitions and guidelines for CLEC ordering of local exchange services.
LSR	Local Service Request - Document used by the CLEC to identify the products, services, and/or service arrangements that it wishes to purchase from Verizon.
MARK	Mechanized Assignment & Record Keeping system
MDF	Main Distribution Frame
MLPQ	Mechanized Loop Pre-Qualification
MOG	Mass Order Generator
MRC	Monthly Recurring Charge
MUTS	Mechanized Uncollectibles Tracking System - System used to track uncollectible revenues.
NACC	National Access Customer Center
NASSC	National Access Subscription Services Center
NCBD	National Customer Bill Development - Responsible for bill formatting, pricing, and bill redesign.
NID	Network Interface Device

Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study

ACRONYM	DEFINITION
NMC	National Market Center - The ordering center established by Verizon to serve as the CLEC's single point of contact for pre-ordering and ordering activity for UNEs and resold services.
NOCV	National Order Collection Vehicle - This system is Verizon's automated order entry interface into CBSS billing process.
NOREC	National Order/Referral Entry Center
NRC	Non-Recurring Charges
OCS	Other Carrier Systems
OCSS	Other Carrier Settlement System - Verizon system that is used to feed data flow to determine what reimbursement a carrier is due.
OMT	Open Market Transition - Verizon's program name for local competition.
OSP	Outside Plant Engineering
OSS	Operating Support Systems - a generic term used to describe those automated and mechanized systems used to support day-to-day Telephone operations.
PCO	Plant control Office
PIC	Primary Interexchange Carrier - A numeric code which is assigned by Verizon to the telephone numbers of all the subscribers to that carrier to ensure the calls are routed over the correct network.
PON	Purchase Order Number
POP	Point Of Presence
POTS	Plain Old Telephone Service
Powerbase	Master database of customers fed by CBSS.
PRI	Primary Rate Interface
PSP	Product Service Provider
PTD	Plant Test Date
QMR	Query Management Report
RAO	Revenue Accounting Office
RCMAC	Recent Change Mechanized Assignment Center
RDM	Reporting and Distribution Module
RMG	Resource Management Group
RPMS	Retail PIC Management System
SAR	Service Activation Report
SIGS	Secured Integration Gateway System - A web browser electronic gateway that provides CLECs gated access to Verizon's pre-ordering, ordering & provisioning, repair & maintenance, billing & usage, and local account management and subscription services functions.
SIR	Systems Information Repository database
SME	Subject Matter Experts

Verizon - Florida

ACRONYM	DEFINITION
SODA/ DDM	Service Order Distribution and Analysis/Due Date Management systems
SOE	Scheduler/Screeener
SOP	Service Order Processor
SORCES	Service Office Record and Computer Entry System - This is Verizon's (excluding Verizon California) automated order entry interface into CBSS billing process which was recently replaced by NOCV.
SPAG	Special Products Assignment Group
SS	Subscription Services
STAR	Standard Time and Activity Reporting
STP	Signaling Transfer Point
SWC	Serving Wire Centers
TAS	Trouble Administration System
TBS	Telecom Business Systems
TDO	Temporary Disconnect Order
TELRIC	Total Element Long-Run Incremental Costs
TN	Telephone Number
TSLRIC	Total Service Long-Run Incremental Costs
UDF	Unbundled Dark Fiber
UMS	Usage Measurement System - This is Verizon's usage collection, aggregation and administration system for all switch recorded usage.
UNE	Unbundled Network Elements
UNE-P	Unbundled Network Element Platforms
VerizonLD	Verizon Long Distance
VFAC	Virtual Facilities Assignment Center
VerizonNS	Verizon Network Services
WCC	Work Control Center
WDA	Work Distributor Application
WISE	Wholesale Internet Service Engine. Web-based Interactive Service Environment - Internet access for performing pre-ordering and ordering functions for CLECs who choose not to utilize Verizon's SIGs interface.
WMP	WISE Measurements of Performance
XD Table	CLEC identification table - Provides CLEC ID and CLEC name.

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

Ordering Function

This section addresses the costs of the non-recurring activities to pre-order and order Local Wholesale and Network Wholesale UNEs, UNE-Ps, and other services the CLEC may request with its order.

There are three centers involved in processing Local Service Requests (LSRs) and Access Service Requests (ASRs):

- The National Open Market Center (NMC) serves as the single point of contact for pre-ordering and ordering local network UNEs/UNE-Ps. The NMC offices are located in Durham, North Carolina, Ft. Wayne, Indiana, and Coeur d'Alene, Idaho.
- There is an off-line group within the National Order/Referral Entry Center (NOREC) in San Angelo, Texas, responsible for entering all faxed LSRs (Manual Orders) into SIGS.
- The National Access Customer Center (NACC) processes all ASRs for the Network Wholesale UNEs.

Ordering Cost Methodology

Verizon's cost team documented the pre-ordering and ordering process flows in the NMC, NOREC, and NACC. The process flows take into account system enhancements that will eliminate or modify work performed by the Service Representatives.

The Pre-ordering and Ordering NRCs were developed from work sampling studies, time-and-motion studies, and estimates from Subject Matter Experts (SMEs).

The cost team used the most current Loaded Labor Rates for each of the workgroups. (See Appendix Tab 5 for Loaded Labor Rates.) The cost team calculated the costs for each type of UNE order using the standard non-recurring cost calculation -

$$\text{Activity Time} \times \text{Probability} \times \text{Labor Rate} = \text{Cost}$$

The process flows, data collection, and cost calculations for each of these centers are discussed below.

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

NMC

The NMC is staffed with Service Representatives who are involved in varying degrees with CLECs' pre-orders and orders. The LSR processing mode (manual or semi-mechanized) used by the CLEC and the complexity of the order determine the involvement of Verizon's Service Representative in the pre-ordering and ordering processes. CLECs' pre-order requests and LSRs are the cost-drivers for the NMC.

The following chart depicts the NMC's Service Representative involvement for each of the order processing modes for New Exchange - Basic UNE service:

Manual Mode ¹	Semi-mechanized Mode
<ul style="list-style-type: none">• Order entry into NOCV• Field visit determination• Telephone number assignment• Due date assignment• Provide Local Service Confirmation (LSC) to CLEC• Jeopardy notification• Follow-up phone call(s)	<ul style="list-style-type: none">• Order entry into NOCV• Provide LSC to CLEC• Jeopardy notification• Error correction

For Exchange - Complex and Advanced/Special UNE services, all orders are currently input manually by the NMC Service Representative regardless of the order receipt mode. In addition, a NMC Service Representative inputs the Data Gathering Form (DGF) into the system for Complex orders.

¹ A Service Representative in the NOREC enters the faxed LSR into SIGS.

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

NOREC

The Service Representatives in the NOREC enter all faxed orders into SIGS. The table below lists the tasks completed by the NOREC:

Manual Order Processing	Manual Order Editing
<ul style="list-style-type: none">♦ Log receipt of faxed LSR♦ Determine LSOG number♦ Manually note NMC on LSR♦ Enter LSR into tracking system♦ Enter LSR into SIGS♦ File manual LSR for editing	<ul style="list-style-type: none">♦ Access Editor♦ Review LSR for completeness♦ Correct errors♦ Verify changes; fax CLEC changes

Once the manual order is in SIGS and has been edited, the order flows to the NMC.

NMC and NOREC - Data Collection

The cost team conducted Work Sampling studies in the Durham NMC and the San Angelo NOREC in 1999. Work Sampling is a method of work measurement. In this study, the cost managers estimated the proportions of time spent by the Service Representatives on the pre-ordering and ordering activities. These estimates are based on a large number of observations. The underlying assumption is that the proportion of time the activity is observed in the sample will be the proportion of time spent on the activity in general. After the cost team recorded their observations for the Work Sampling study, they worked with SMEs to determine the frequency of the activities for each of the order processing modes. Additionally, SMEs provided time estimates for activities that were not observed during the study. (See Appendix Tab 1 for details of the Work Sampling study.)

NMC/NOREC: UNEs and Services

The NMC/NOREC process all of the CLEC LSRs for Local Wholesale Elements. Local Wholesale Elements include the following UNEs:

Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study

<p>Exchange - Basic UNEs:</p> <ul style="list-style-type: none"> ♦ 2-wire Voice Grade Loop ♦ NID ♦ Analog Line Side Port ♦ Vertical Features ♦ INP ♦ Subloop Distribution ♦ Subloop Feeder ♦ Unbundled Customer Serving Terminal (drop) 	<p>Exchange - Complex UNEs</p> <ul style="list-style-type: none"> ♦ CentraNet Port ♦ ISDN BRI Port ♦ 2-Wire Digital Capable Loop ♦ Loop Conditioning ♦ Line-sharing
<p>Advanced/Special - Basic UNEs:</p> <ul style="list-style-type: none"> ♦ 2-Wire Digital Loop ♦ 4-Wire Voice Grade Loop ♦ 4-Wire Digital Loop 	<p>Advanced/Special - Complex UNEs:</p> <ul style="list-style-type: none"> ♦ DS1 Loop ♦ DS3 Loop

The cost team calculated the ordering costs for Local Wholesale UNEs on a per order basis.

Verizon costed the following NMC/NOREC responsibilities for UNEs:

CLEC Establishment - As described in the Introduction, Verizon establishes an account in each state that the CLEC requests. Once the accounts are established, the CLEC can submit LSRs to Verizon. The NMC processes all of the CLEC Establishment requests.

Verizon's Service Representative receives and reviews the CLEC profile, then updates the billing usage tables for toll. This activity creates the bill masters in NOCV.

Pre-ordering Information - If the CLEC requests pre-order information for Exchange or Advanced/Special UNEs, the NMC Service Representative enters the end-user

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

customer information, provides a telephone number if requested, and verifies that vertical services are available if requested. The frequency of Pre-order requests was determined through Work Sampling in the NMC. The cost for the manual look-up of Pre-ordering information is on a per occurrence basis.

Customer Service Record (CSR) Request - If the CLEC requests a CSR and the request cannot be completed electronically, the Service Representative processes the request, pulls the record, then faxes (or mails) it to the CLEC. The cost is per occurrence.

New Orders for Exchange - Basic UNE- New orders can be received electronically or via facsimile. Verizon's NOREC Service Representative enters the faxed LSR into SIGS. LSRs received electronically are checked for errors by the front-end editor; if there are errors, the LSR is returned electronically to the CLEC. For both faxed and electronically submitted LSRs, the NMC representative manually enters the new order into NOCV and sends the Local Service Confirmation (LSC) to the CLEC.

New Orders for Exchange - Complex UNE - These orders can be received electronically or via facsimile. The order processing, however, currently is performed manually by the NMC Service Representative because of the complexity of the service and the number of variables. Complex services require the Data Gathering Form (DGF); the DGF details system /station features and service configuration. The NMC Service Representative enters the DGF information into the Gathering On-line Data (GOLD) system for distribution to the appropriate work centers.

New Orders for Advanced/Special - Basic and Complex UNEs - Orders for Advanced/Special Services - Basic and Complex can be received electronically or via facsimile. The order processing, however, is done manually by the NMC Service Representative due to the number of variables, the complexity of the service, and because these services require designs.

UNE-P Migration Orders - As Is + or -, and As Specified Migration orders can be received electronically or via facsimile. The front end processing and the entry into the NOCV system are the same as for "New" UNE orders.

Change Orders - When a CLEC requests changes in vertical features, central office Switch Feature Groups or in central office wiring (C.O. Connection), the change order is used. (If the CLEC wants to add loops, ports, or other UNEs to an existing service, the new order process applies.) Change orders can be received electronically or via facsimile. Verizon's NOREC Service Representative enters the faxed LSR into SIGS. LSRs received electronically are checked for errors by the front-end editor; if

Verizon - Florida Unbundled Network Element (UNE) Non-Recurring Study

there are errors, the LSR is returned electronically to the CLEC. For both faxed and electronically submitted LSRs, the NMC Representative enters the change order into NOCV and sends the LSC to the CLEC.

Disconnect Orders - Disconnect orders can be received electronically or via facsimile. Verizon's NOREC Service Representative enters the faxed LSR into SIGS. LSRs received electronically are checked for errors by the front-end editor; if there are errors, the LSR is returned electronically to the CLEC. For both faxed and electronically submitted LSRs, the NMC representative enters the disconnect order into NOCV and sends the LSC to the CLEC.

Record Orders - These orders can be received electronically or via facsimile. Verizon's NOREC Service Representative enters the faxed LSR into SIGS. LSRs received electronically are checked for errors by the front-end editor; if there are errors, the LSR is returned electronically to the CLEC. For both faxed and electronically submitted LSRs, the NMC representative keys the LSR into NOCV and sends the LSC to the CLEC.

Other Services - The NMC Service Representative is involved in other services required by the CLEC, such as Coordinated Conversion, Hot Cut Coordinated Conversion, and Expedites.

- Coordinated Conversion/ Hot Cut Coordinated Conversion - When the NMC receives the request from the CLEC, the Service Representative calls Provisioning to establish the time of the conversion and to schedule the appointment.
- Expedites - When the NMC receives the request from the CLEC, the Service Representative calls the Division Resource Management Group to establish the expedited order and schedule the due date.

NACC

The NACC processes all of the CLEC ASRs for Network Wholesale Elements. Network Wholesale Elements include the following UNEs and Access services:

Dedicated Switched Access Lines	Entrance Facilities
Dedicated Switched Access Transport	Enhanced Extended Links (EEL)
SS7 Links	Dark Fiber
STP Ports	
Dedicated Non-Switched Transport	

The CLEC sends an ASR to Verizon's NACC using the EXACT system, fax or mail. When the ASR is received in the NACC, the Service Representative performs the following tasks:

**Verizon - Florida
Unbundled Network Element (UNE) Non-Recurring Study**

Receipt via EXACT:	Receipt via fax or mail:
<ul style="list-style-type: none"> ♦ Reviews ASR for completeness and accuracy ♦ Receives facility information from other workgroups ♦ Clears any discrepancies with the CLEC ♦ Generates the Service Order Processor (SOP) to downstream workgroups. ♦ Receives a completion notice from SOP ♦ Posts completion notice in CABS and the EXACT system 	<ul style="list-style-type: none"> ♦ Logs receipt of ASR ♦ Enters ASR information into EXACT ♦ ASR is then processed like those received via the EXACT system.

The cost team conducted a time and motion study of the activities required to process ASRs in the NACC. (See Appendix Tab 1 for details of the time and motion study.)

The cost team calculated the ordering costs for Network Wholesale UNEs on a per order basis.

NACC: UNEs and Services

Verizon costed the following NACC responsibilities for UNEs:

New Order - This type of order applies when the CLEC requests the installation of EELs, facilities and/or trunks; this can be for completely new facilities/trunks, or for an augment to existing facilities/trunk groups. An order for a facility with trunks will generate two separate orders, one for the facility and one for the trunks that ride it.

Disconnect Order - This type of order applies when the CLEC requests the complete removal of an EEL, the cancellation of both the facility and associated trunks, or the reduction in the number of trunks on a facility (without canceling the facility itself.) A disconnect order for a facility with trunks will lead to the generation of two separate orders, one for the facility and one for the trunks that ride it.

Verizon - Florida

Unbundled Network Element (UNE) Non-Recurring Study

Migration As Is - This type of order applies when an IXC (with CLEC) status converts Special Access embedded facilities (combined) to EELs with UNE rates. Submitting ASRs for conversion activity is the expectation of Verizon for a quantity of less than fifty ASRs. For quantities greater than or equal to fifty, a Mass Order Generator (MOG) will be used for migrating Special Access lines to EEL combinations. The MOG cost is in addition to the costs for ordering EEL migrations.

Change Order - This type of order applies when the CLEC requests the addition, modification, or removal of a feature or option of the existing service. Change orders do not apply to adding or removing trunks/facilities. A revision to a pending ASR is not considered a change order; it is a supplemental ("supp'd") order.

There are two types of change orders: 1) Without Engineering Review, and 2) With Engineering Review. When a Verizon Design Engineer or Design Technician is involved to ensure the modification will not change the circuit transmission parameters, there are additional non-recurring costs.

Dark Fiber Pre-ordering Information - If the CLEC requests pre-order information for Dark Fiber, the NACC Service Representative contacts the appropriate provisioning group. Once the assessment of availability is made, the information is forwarded to the CLEC.

Expedite - The NACC Service Representative must contact the Business Response Provisioning Center (BRPC) to schedule the due date requested by the CLEC.

Fixed Costs of Ordering

The Summary of Costs includes certain fixed non-recurring costs of Local Wholesale activities. These costs are not attributable to any particular Local Wholesale activity or order type. The ordering fixed costs are displayed as a national aggregate amount. These costs are in addition to the shared/fixed costs of Operations Support Systems (OSS) which are a separate module of the NRC Study entitled "OSS UNE Non-recurring Study."

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

Provisioning Function

This section addresses the costs of the non-recurring activities to provision Local Wholesale and Network Wholesale UNEs, UNE-Ps, and other elements the CLEC may request with its order. Provisioning for Exchange – Basic and Complex UNE/UNE-Ps is significantly different from the provisioning required for Advanced/Special UNEs.

Exchange UNE/UNE-Ps

Provisioning activities include facility assignment and switch translations (if required). Exchange UNEs require manual provisioning. For the Exchange – Basic UNE-Ps much of the provisioning is automated. The Exchange – Basic elements can be provisioned using standard network components maintained in inventory without specialized switch translations. The Assignment Provisioning Center (APC) consists of the Select Assignment group. The Recent Change Mechanized Assignment Center (RCMAC) consists of the Special Products Assignment Group (SPAG) and Provisioning Support groups. These groups are involved only when there is system fall-out requiring manual assignment and switch updates.

The Exchange – Complex UNE/UNE-Ps require additional manual provisioning due to switch translations, routing instructions, and service arrangements. The Data Gathering Form (DGF) is used to record and organize these instructions. The Database Management (DBM) group reviews the translation requirements, codes them, and inputs the translations into the switch.

Identified below are the workgroups involved in the Exchange UNEs:

Exchange – Basic	Exchange – Complex
<ul style="list-style-type: none">• Select Assignment• APC Provisioning Support• DRC - Dispatch Resource Center• VFAC - Virtual Facilities Assignment Center	<ul style="list-style-type: none">• RCMAC - SPAG• DBM• DRC - Dispatch Resource Center• VFAC – Virtual Facilities Assignment Center

Advanced/Special UNEs

Provisioning activities for Advanced/Special UNEs include: facility assignment, switch translations, design/engineering, and Plant Control Office (PCO) activities such as scheduling, circuit testing, and order completions.

The Advanced/Special – Basic elements are unbundled loops capable of DSO transmission levels; the number of options for these loops is limited since the circuits are not as sensitive to noise and loop length as the Advanced/Special – Complex elements.

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

The Advanced/Special – Complex elements include all DS1 and DS3 elements, dedicated switched access and transport, SS7 Links and STP ports, dedicated non-switched transport, EELs, and Dark Fiber. These elements require facilities and circuit equipment assignments, design for A to Z locations, and information for updating the switch database and programming trunk translations (if required.) The Advanced – Complex elements have a greater number of service options, more stringent testing parameters, and are sensitive to noise and loop length.

Identified below are the workgroups involved in the Advanced/Special UNEs:

Advanced/Special – Basic	Advanced/Special – Complex
<ul style="list-style-type: none"> ● RCMAC ● DBM - Work Control Center (WCC) ● Business Response Provisioning Center (BRPC) <ul style="list-style-type: none"> - Scheduler/Screeener - Design Group - Testing Group - Administration ● LBSC - Large Business Support Center 	<ul style="list-style-type: none"> ● RCMAC ● Outside Plant (OSP) Engineering ● DBM – WCC ● BRPC <ul style="list-style-type: none"> - Scheduler/Screeener - HiCap Prewrite Group - Design Group - Testing Group - Administration ● LBSC - Large Business Support Center

Provisioning Work Groups

Following is a brief description of the provisioning work groups.

APC/RCMAC

The APC and RCMAC have the responsibility for assignment of central office line equipment and outside plant facilities for Exchange – Basic, Exchange – Complex, and Advanced/Special – Basic UNEs. All Exchange and Advanced/Special UNEs require manual assignment. The Assignment, Activation and Inventory System (AAIS) will automatically process an order for Exchange-Basic UNE-Ps whenever possible. However, when mechanized assignment does not happen, the APC or RCMAC will manually provision the order.

There are specialized subgroups within the RCMAC (the Multi-line group, the CentraNet group, and Special Elements) that assign plant facilities to the Exchange-Complex orders. For the Advanced/Special elements, the RCMAC determines the loop assignments for DSO circuits, while the BRPC HiCap Prewrite Group and OSP Engineering perform this task for DS1 and above.

Within the RCMAC, there is a Provisioning Support Group responsible for the simple switch translation for vertical features and functions associated with

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

subscriber lines. Provisioning Support inputs these switch translations when they cannot be electronically downloaded. Provisioning Support also works the orders that fail the Automated Service Assurance Verification Program (ASAVP) test. (ASAVP is a system that ensures that the features in the switch match both the AAIS inventory and the customer requested features on the order.)

DBM-WCC

The DBM-WCC reviews all Access Service Requests (ASRs) for completeness and routes the order to the correct DBM group. Specialists in the DBM perform translations and routing information for the Exchange – Complex UNEs such as CentraNet Port, and for the Advanced/Special – Complex UNEs such as ISDN – PRI. This group receives the information that details the specific vertical features, switch feature groups, and routing instructions of the ordered service. The DBM specialist codes this information and then enters the translations into the network switch.

BRPC

The BRPC has Plant Control Office and design/engineering responsibilities for Advanced/Special UNEs. The BRPC is comprised of five subgroups: Scheduler/Screeener (SOE), HiCap Prework, Design, Testing, and Administration (Admin).

The BRPC SOE receives orders from the NMC and NACC. The SOE group verifies that the NOCV/EXACT orders are properly entered into Telecom Business Solutions (TBS); if the orders were not downloaded electronically into TBS, the scheduler/screeener enters the order manually. The Scheduler/Screeener checks the order for accuracy and completeness, ensuring that the order contains all of the information needed by the other BRPC groups. The Scheduler/Screeener routes the order to the required work groups by entering a distribution code into TBS.

The BRPC HiCap Prework group reserves and assigns the facilities for all DS1 and above orders.

The BRPC Design group creates the Circuit Layout Report (CLR), which is used to install and test the circuit. The designer ensures that the central office has the correct equipment for the circuit, and that the facilities have been reserved for the circuit. The designer routes the completed CLR to the testing group, central office, and dispatch centers.

The BRPC Testing group is responsible for coordinating testing with the Central Office, Field, and CLEC. The testing group completes circuit tests by the Plant Test Date (PTD) or Due Date (DD) listed in TBS. When necessary, the tester will update TBS for design (i.e., equipment) changes.

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

The BRPC Admin employees handle the jeopardies, expedites, escalations, completions, and reporting for all BRPC orders.

DRC/LBSC

The DRC and the LBSC are responsible for dispatching routed orders. The LBSC handles advanced/special. Exchange orders are routed to the DRC. The orders are distributed by the Automated Work Administration System (AWAS). AWAS is a table driven distribution system that routes jobs from the provisioning centers to both the correct dispatch center and an appropriate field technician.

VFAC

The VFAC is responsible for determining, within AAIS, the FDI feeding the loop. If there are available copper feeder facilities that can be used to perform a Line Station Transfer (LST) to move the customer's Plain Old Telephone System (POTS) service to the host Central Office (CO), the VFAC uses QNAS to verify the loop's availability to provide the line sharing service. If there is an available copper pair that qualifies, the VFAC notes the order in NOCV, mortgages the pair to the order, and routes the order to the NMC. If there is no copper available or none of the copper qualifies, the order is routed back to the NMC. If the VFAC determines that there is available copper for the LST but are unable to determine the qualification of the new loop, the order is routed to Outside Plant Access Design.

Provisioning Cost Methodology

The cost team documented the process flows for the Exchange and Advanced/Special provisioning workgroups. The process flows take in to account system enhancements that will eliminate or modify performed by performed by these groups.

The provisioning NRCs were developed from system reports, order volumes, workgroup hours, time and motion studies, and SME estimates. The cost team used the most current loaded labor rates for each of the workgroups. (See Appendix Tab 6 for Loaded Labor Rates.)

The cost team calculated the provisioning costs for each type of UNE order using the standard non-recurring cost calculation –

$$\text{Activity Time} \times \text{Probability} \times \text{Labor Rate} = \text{Cost}$$

The costs for the Local Wholesale UNEs are shown on a *per-line* basis for the initial line and for additional lines. The costs for Network Wholesale UNEs are calculated and shown on a *per order* basis.

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

Data Collection

Data collection methods varied by provisioning group. Detailed information about the activity times, probability, and labor rates is provided in the cost calculation section for each workgroup. Below is an overview of the source for the cost data by workgroup.

APC/
RCMAC Verizon's management methods and reports focus on "touches" in the APC as an activity measure. The cost managers collected data from NOCV on "touches" by the various order types. Every order, whether automatically provisioned or manually provisioned by the APC, is represented by a job in NOCV. NOCV contains a comprehensive statistical view of order activity from all sources. Verizon pulled data from NOCV to determine the number of orders routed to the APC for manual assignment and the cost of provisioning those orders.

The task cost for a DSO order depends on the order type and service type. DSO orders require from one to three touches in the APC. For Advanced/Special Complex UNE/UNE-P orders, the task cost is developed by weighting the APC cost per line, the HiCap Prework group cost per line, and the OSP Engineering cost per line.

If the order requires a manual switch update, an additional APC touch is added to the cost per line.

DBM-
WCC The cost team developed the time per order worked by DBM by taking the total productive hours worked during the study period and dividing by the number of orders worked in the same time period.

BRPC Cost managers used data from the TBS database to determine the number and type of orders or lines as appropriate worked by each of the following BRPC groups: SOE, HiCap Prework, Design, and Admin. Only those orders handled by a workgroup during provisioning are included in determining that group's cost per order provisioned.

The cost per order for each workgroup is developed separately based on the number of orders worked by that group and the group's productive hours spent on those orders. The costs for Advanced/Special – Basic and Advanced/Special – Complex are calculated separately since there are different provisioning activities for each type of order.

The section manager of the BRPC Testing group conducted a time study to determine the productive hours attributed to circuit testing. This time was applied to all inward ("I") orders since all newly installed Advanced/Special UNEs require this type of testing activity. Outward ("O") orders do not require a touch by the Testing group.

Verizon – Florida Unbundled Network Element (UNE) Non-recurring Study

Costs of Exchange UNEs and Other Elements

Verizon costed the following UNE activities:

New Orders for Exchange – Basic UNE: The APC manually assigns the cable pair/central office line equipment. If the recent change translations do not download electronically into the switch, then the Provisioning Support group manually enters the translations.

New Orders for Exchange – Complex UNE: The APC manually assigns the cable pair/central office line equipment. DBM codes and inputs switch translations.

Change Orders for Exchange UNEs: There are three types of changes the CLEC can order. When the CLEC orders changes to vertical features, the translations generally flow-through to the switch electronically. Changes in Switch Feature Groups for CentraNet and ISDN BRI ports require manual coding and input by the DBM. Changes of C.O. Connection require manual assignment by the APC.

Disconnect Orders for Exchange UNE: The APC manually updates AAIS records. Vertical features are disconnected electronically. Complex switch translations are removed by the DBM.

Other Elements

The APC may be involved in Coordinated Conversion or Hot Cut Coordinated Conversion for Exchange UNEs.

The Coordinated Conversion for the APC is estimated to require 15 minutes of a service coordinator's time. If the CLEC is not ready to authorize the conversion when the APC calls for the first time, additional telephone calls will be required. The APC is involved in five or more telephone calls with the Verizon field and CLEC personnel. The 15-minute estimate is the smallest increment of time required for a Coordinated Conversion in the APC.

Hot Cut Coordinated Conversion – In addition to the activities described above for Coordinated Conversions, the parties remain on a conference call for the duration of the conversion process. This process requires a minimum of one-hour (telephone calls, the hot cut activity, and order completion). Additional time is costed in quarter hour increments at the Loaded Labor Rate for the provisioning support employees included in the study.

Costs for Advanced/Special UNEs

Verizon costed the following UNE activities:

New Orders for Advanced/Special – Basic UNE: The APC manually assigns the cable pair. The BRPC SOE ensures that TBS is updated with the correct order information and distributes the order electronically to the downstream

Verizon – Florida

Unbundled Network Element (UNE) Non-recurring Study

provisioning groups. BRPC Design reserves the facilities and equipment, creates the CLR/DLR, and distributes the CLR/DLR to involved work groups. BRPC Testing Group tests the circuits on the Plant Test Date (PTD) and coordinates tests with the Central Office Technician, Field Technician, and the CLEC on the PTD. BRPC Admin clears any jeopardy, handles escalations, and completes the order.

Disconnect Orders for Advanced/Special – Basic UNE: The APC manually verifies the cable pair to be disconnected. The BRPC SOE ensures that TBS is updated with the correct order information and distributes the order electronically to the downstream provisioning groups. BRPC Design creates the CLR/DLR and distributes the CLR/DLR to involved work groups. BRPC Admin clears any jeopardy, handles escalations, and completes the order.

New Orders for Advanced/Special – Complex UNEs: The BRPC SOE ensures that TBS is updated with the correct order information and distributes the order electronically to the downstream provisioning groups. BRPC HiCap Prework reviews the facility requirements and assigns the IOF; OSP Engineering determines the local cable make-up and assigns the cable pair. BRPC Design reserves the facilities and equipment, creates the CLR/DLR, and distributes the CLR/DLR to involved work groups. BRPC Testing tests the circuits on the PTD and coordinates tests with the Central Office Technician, Field Technician, and the CLEC on the due date. BRPC Admin clears any jeopardy, handles escalations, and completes the order.

Disconnect Orders for Advanced/Special – Basic UNE: The BRPC SOE ensures that TBS is updated with the correct order information and distributes the order electronically to the downstream provisioning groups. BRPC Design creates the CLR/DLR and distributes the CLR/DLR to involved work groups. BRPC Admin clears any jeopardy, handles escalations, and completes the order.

Inward and Outward Orders for Network Wholesale UNEs: The BRPC HiCap Prework, SOE, Design, Testing, and Admin groups manually provision the following Network Wholesale UNEs:

- ♦ Trunk Ports (includes STP Ports), Trunks (includes SS7 Links), and Trunk Facilities
- ♦ Enhanced Extended Links (EELs)
- ♦ Dark Fiber
- ♦ CLEC Dedicated Transports – CDT

Verizon – Florida

Unbundled Network Element (UNE) Non-Recurring Study

Field Work Function

This section addresses the costs of the non-recurring activities to install, change, and disconnect UNEs/UNE-Ps in the field (outside plant) and central office. Outside plant work is any non-recurring activity on the facilities between the central office and the customer's premises. This includes any cross-connect activity at the Feeder/Distribution Interface (FDI), cross-connect box, pedestal or pole, and Network Interface Device (NID).

Central office activities include running/breaking jumpers on the Main Distribution Frame (MDF), Intermediate Distribution Frames (IDFs), and Tie-Cable Frames. The Central Office Technicians are responsible for orders in the host office, as well as in remote offices.

Installation Cost Methodology

The cost team documented the installation process flows for outside plant and central office. The process flows address system enhancements that will modify work performed by these groups. The cost team also accounted for Express Dial Tone (EDT) and Left-in-Jumper (LIJ) when determining the probability of cross-connect and jumper activity.

The installation UNE/UNE-P NRCs were developed from time and motion studies, system reports, order volumes, workgroup hours and Subject Matter Experts (SME) estimates. The cost team used the most current loaded labor rates for each of the workgroups. (See Appendix Tab 6 for Loaded Labor Rates.) The cost team calculated the installation costs for each type of UNE order using the standard non-recurring cost calculation:

$$\text{Activity Time} \times \text{Probability} \times \text{Labor Rate} = \text{Cost}$$

The cost data for the Local Wholesale UNEs/UNE-Ps are expressed in terms of initial line and additional line. Costs for Network Wholesale UNEs are calculated on a *per order* basis.

Costs of Local Wholesale UNEs

Data Collection

Below is an overview of the installation workgroups, activity times, and probability of occurrence.

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

Field Installation

The outside plant work is usually performed by Customer Zone Technicians (CZTs) or Business Zone Technicians (BZTs). CZTs install all Exchange – Basic and Complex unbundled loops and sub-loops for residential customers and one- or two-line business customers throughout the state. BZTs install the unbundled loop and sub-loop orders for three or more lines within the business zones in metropolitan areas of the state.

The cost team used data from the following sources for CZT/BZT drive time and cross-connect activity times to calculate the outside plant NRCs:

- ♦ Time and motion study for drive time and cross-connects at the FDI, cross-connect box, pedestal/pole, and NID;
- ♦ Reports from National Order Collection Vehicle (NOCV) and the Standard Time and Activity Reporting (STAR) system for probability of dispatch, productive hours, and number and type of orders and corresponding lines;
- ♦ SME estimates for services such as Coordinated Conversions and Hot Cut Coordinated Conversions.

Time and Motion Study

A team of Arthur Andersen personnel conducted time and motion studies in six states to determine the CZT/BZT drive times from point-to-point during the normal workday. The study included timed observations of the technicians running and breaking cross-connects at various terminal locations in the feeder, distribution and drop plant. The drive times are used for all of the CZT/BZT UNE activities. The cost team applied the cross-connect and drive times to the CZT/BZT sub-loop activities.

System Extracts

The cost team obtained completed order files from NOCV to identify the type of service being installed or removed, and the number of lines on the order. They matched the NOCV records with STAR data to categorize the dispatched orders into the UNE categories: Exchange – Basic or Complex and Advanced/Special – Basic or Complex. The cost team used the STAR positive time reporting data to identify the average time spent on field work performed by CZTs/BZTs for each of the UNE categories.

The “Percent Load” data from NOCV and STAR were used to determine the probability of dispatch for UNE/UNE-P Exchange – Basic and Complex. For many services there is no outside plant work. For example, loops may be activated on the MDF because of EDT and LIJ procedures. Also, when a CLEC

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

migrates an existing end-user POTS to the UNE platform, there will generally be no outside plant activity.

The Probability of Occurrence of outside plant work for the Advanced/Special – Basic and Complex Loops requiring a field trip is 100% on all new or disconnect orders. All new digital loops (DS0, DS1 and higher) require cross-connect work. The BZT downloads the job from AWAS, completes the field work, cooperatively tests the line(s), and reports completion.

SME Estimates

Time estimates were used to calculate the costs for Coordinated Conversion and Hot Cut Coordinated Conversion of UNEs where the amount of time required for CZTs/BZTs, Central Office Technicians, testing and assignment personnel is not available from analogous services in the Retail market. The costs reflect estimates of the field installation time for a standard interval (base case) and for additional intervals of time when the conversion extends beyond the standard interval. The standard interval for a Coordinated Conversion is 15 minutes. The standard interval for a Hot Cut Coordinated Conversion is 1 hour. The additional interval for both Coordinated Conversion and Hot Cut Coordinated Conversion is 15 minutes.

Central Office Activity

In manned central offices, Central Office Technicians run/break the frame jumpers. Central Office Technicians download “Jumper Run Lists” from AAIS; the lists identify all instructions for running or breaking frame jumpers to complete the UNE/UNE-P orders.

All new and disconnect unbundled loop and port orders require frame work. The time required to run or break a jumper depends on the type of frame, the length of the frame and the physical location of the equipment. The cost managers used the “Jumper Study” and the “Drive Time Study” to calculate the central office costs for each type of UNE category: Exchange – Basic or Complex and Advanced/Special – Basic or Complex.

Data Collection

The cost team and Arthur Andersen personnel conducted time and motion studies to determine the activity times for all of the central office work for UNEs. Study personnel observed and timed with a stopwatch the jumper activity in ten central office locations for the period of one week. The central offices were chosen to provide a mix of size, frame types, and host vs. remote activity. To develop the average time to run a jumper in the host office, the observers included all jumper activity for new orders on the jumper run list; for breaks of jumpers, they included all jumper activity for disconnect orders.

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

A separate study was conducted to determine drive times for service order activity in remote offices. The observer calculated the percentage of time spent at the remote running or breaking jumpers versus other all other central office work. This percentage was then applied to the total drive time to the remote. To determine jumper run times for remote offices, the observer included an allocation of drive time to the remote location.

Using the number of access lines for the manned and unmanned offices, the cost team computed a host/remote ratio and then weighted the average time to run a jumper at a manned vs. unmanned location. This results in a single weighted average jumper time. The average jumper time is used in the *per-line* cost calculation for each type of UNE/UNE-P.

Probability of Jumper Activity

All unbundled loop and port orders require jumper activity. There is a 100% Probability of Occurrence of jumper activity for new UNE orders because the loop/port must be jumpered from the cable pair/office equipment to the CLEC's collocation cage terminal block. When the CLEC places a disconnect order for an unbundled loop/port, the Central Office Technician (or CZT/BZT) breaks the jumpers, leaving no jumpers between the CLEC's terminal block and Verizon's terminal blocks on the frame.

New orders for UNE-Ps are not processed. If the line is already connected from the customer's premises to the office equipment on the MDF to provide EDT (Express Dial Tone) or the loop is already connected as with LIJ, then no jumpers will be required. The data for EDT and LIJ is identified in an AAIS Central Office Activity Report.

Migration of existing POTS service to UNE-P will not require frame jumper work.

Change Central Office Connection

When the CLEC places a change order for Central Office Connection, the Central Office Technician disconnects the "out" jumpers and runs new jumpers according to the instructions on the order. The costs are determined from the Jumper Study.

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

Costs of Other Services

Central Office Technicians may be involved in Coordinated Conversions and Hot Cut Coordinated Conversions. Time estimates were used to calculate the costs for Central Office Technicians. The costs reflect estimates of the central office time for a standard interval and for additional intervals of time when the conversion extends beyond the standard interval.

Costs of Network Wholesale UNEs

Central Office and Field Installation activity are required for the Network Wholesale UNEs. Arthur Andersen personnel conducted time and motion studies to determine the activities and the time involved for new installations and disconnects for Switched and Special Access services. The Access Services correspond directly to Network Wholesale UNEs, so those activities times were used in this NRC study. Following is a brief description of the activities.

For the following Network Wholesale UNEs, Central office activities to run/break jumpers and perform call-through testing were costed:

- ♦ SS7 Links and STP Termination
- ♦ Modification of Enhanced Extended Links (EELs)

Entrance Facilities require both Central Office and Field Installation. The central office costs (running jumpers and optioning/inserting plug-in cards) are based on the results of a self-administered time-and-motion study. Field Installation costs are determined from STAR extracts for BZT/Special Services Technician installation of Special Access orders.

Costs of Loop Conditioning

This section of the NRC Study addresses the costs of Loop Conditioning. Loop Conditioning is the business process required to make a line digital-capable when Load Coil(s) and/or Bridged Tap(s)¹ are in the network. Load coils and Bridged Taps impede the transmission of digital signals. If the CLEC requires digital-capable copper pairs for the service it offers its customers, the CLEC has the option of ordering Loop Conditioning from Verizon. Loop Conditioning may be requested when technically feasible.

Removing a Load Coil and/or Bridged Tap from a cable pair requires coordination of several Verizon work groups to ensure that cable pairs for other end users are not affected.

**Verizon – Florida
Unbundled Network Element (UNE) Non-Recurring Study**

Cost Methodology

The method used to develop the time and cost factors associated with deloading (Load Coil removal) and removing Bridged Tap from cable pairs for use with high frequency equipment was completed by the Outside Plant Construction and Outside Plant Engineer support groups. Subject Matter Experts (SMEs) in conjunction with field managers developed the activities and times to accomplish loop conditioning activities. The SMEs are located in Irving, Texas and are the support group for all field forces. The SMEs consulted with the field forces to verify the time and activities were valid. This information was collected and prepared in April 2000.

Load Coil Removal

Load coils are an integral part of the copper, voice grade communications network. Their purpose is to provide for the proper operation of voice grade equipment on loops that exceed normal accepted telecommunications voice grade circuit length. Load Coils cannot be removed from exchange plant when required to ensure transmission and signaling levels. Load coils have been in the network in the past and are still used today for those loops that exceed the limits of the switching equipment. In many cases, based on previous outside plant usage, Load Coils exist on loops that no longer require them.

Load coils are not needed in the provisioning of high frequency circuits. The opposite is actually true in that the Load Coil inhibits the proper transmission of the high frequency signals of the circuit. In order for these circuits to work correctly, a properly loaded cable pair for voice grade service must be deloaded.

A conservative estimate of Load Coil(s) by loop footage is as follows:

Verizon – Florida
Unbundled Network Element (UNF) Non-Recurring Study

Cable Footage	Average Load Coils Initial Pair	Average Load Coils Additional Pair
0 to 18K	2	2
>18K to 21K	3	3
>21K to 27K	4	4

When the CLEC requests a conditioned loop for a customer and the cable pair is loaded, a request is sent to the local engineering department to analyze the network and draft a work order for the pair to be deloaded. The engineering group will create a work order that will be sent to the outside plant construction forces outlining the work necessary to deload the cable pair. The outside plant construction splicing group will work the order and advise the engineering group upon the completion of the activity. The engineering group will then advise the service office that the order can be worked as requested. All records are updated showing the change in the loading of the pair.

The cost to remove a Load Coil is weighted by the amount of aerial/buried and underground plant. The time to perform the activities is then multiplied by the Loaded Labor Rate of a construction cable splicer. The same process is performed on the multiple occurrence minutes per total activity, times the Loaded Labor Rate of a construction cable splicer. In the case of underground cable, two cable splicers are necessary to perform the task. Therefore, the time required to perform this function is doubled. Load Coil removal costs are on a per pair basis.

Bridged Tap Removal

Bridged Tap is a condition in which a cable pair branches off to serve various locations. These branches provide flexibility in the use of the cable pairs. The Bridged Taps have a negative affect on the transmission of high frequency signals. The Bridged Tap does not affect voice grade signals. This method of provisioning copper voice grade service has been an accepted method by all telecommunication companies for years.

Verizon – Florida Unbundled Network Element (UNE) Non-R curring Study

When the CLEC requests a conditioned loop that requires all the cable pair Bridged Taps to be removed, the engineering department is advised and the outside plant engineering records are examined to determine the location of the Bridged Taps. A work order is created to remove the Bridged Taps and is sent to the outside plant construction work group. A construction cable splicer is assigned to the activity and the pair is cleared of the taps. When the work order is complete both the engineering group and the service office are notified that the CLEC request can be completed.

The costs for removing Bridged Taps were determined in the same manner as the Load Coil removal. Outside plant engineering and construction support SME's in conjunction with field forces determined the activities and the time required to perform the removal. In addition it was necessary to determine the number of Bridged Taps that may need to be removed. This was determined by acknowledging that the minimum number of removals would be one, and the maximum number is unknown. To determine the maximum number it would need to be at least two, and could be three or more. A conservative estimate is to average the minimum of two and three, which results in an average of two and one-half.

Method of Calculation

Load Coils

The first criteria used in determining the cost of removal is to ascertain the footage of aerial/buried cable and underground cable. This is done because of the differences in the amount of time for the Load Coil removal in the various types of outside plant. The time for removal is then weighted by this calculation.

Load Coils are placed on copper voice grade loops based on their distance from the central office. The Load Coils are placed at engineering distances to develop the maximum result. Therefore, as the footage of the cable increases from the central office the number of Load Coils increase proportionally. The length of cable footage is used to determine the number of loads to be removed. An inventory of cable lengths is completed on the specific state. The footages are segregated into the lengths that require the addition of a Load Coil. This percentage is then used to weight the time necessary to complete the Load Coil removal in that type of plant.

The resulting calculation from the two steps above provides an amount of minutes to remove the Load Coil(s). The minutes are then multiplied by the loaded labor rate for a construction cable splicer for the specific state. This calculation provides a cost for Load Coil removal.

The engineering costs are calculated by taking the minutes required to complete a work order for the Load Coil removal, times the loaded labor rate for an outside

Verizon – Florida Unbundled Network Element (UNE) Non-Recurring Study

plant engineer. The engineering process will be the same regardless of the number of Load Coils being removed.

Bridged Tap

The calculation for Bridged Tap removal is for both single and multiple occurrences of Bridged Taps. These occurrences, single or multiple, apply to only one pair.

The calculation is based on the amount of time required to remove a Bridged Tap from the cable pair. This time is weighted by the amount of aerial/buried and underground cable in the specific state.

The calculation is based on the removal of a single Bridged Tap and multiple occurrences. The average number of multiple occurrences is based on two and one-half occurrences. The cost to remove a Bridged Tap is weighted by the amount of aerial/buried and underground plant. The time to perform the activities is then multiplied by the loaded labor rate of a construction cable splicer. The same calculation is performed on the multiple occurrences cost times the loaded labor rate of a construction cable splicer.

The engineering time for the Bridged Tap removal involves the same type functions necessary to determine the number and location of Load Coils on a cable pair. Therefore the engineering time is the same for Bridged Tap removal. The Bridged Tap costs are on a per pair basis.

Costs of Line and Station Transfer

This section of the NRC Study addresses the costs of Line and Station Transfer. Line and Station Transfer is applicable when spare facilities are available to satisfy a CLEC request for a copper-based technology. Line and Station Transfers are not replacements for Loop Conditioning requests, and therefore are not ordered by the CLEC.

Cost Methodology

The method used to develop the time and cost factors associated with Line and Station Transfer uses existing jumper elements from the Central Office cost methodology and drive time elements from the Field Installation cost methodology. Engineering times for Line and Station Transfer for xDSL-capable facility verification were obtained from Outside Plant Engineering Support.

Verizon – Florida
Unbundled Network Element (UNE) Non-Recurring Study

Method of Calculation

Line and Station Transfer

Verizon determines whether to perform Line and Station Transfer when attempting to provision xDSL service on a facility served by a DLC. Line and Station Transfers can either involve the swapping of a CLEC customer from DLC to spare copper or the rearrangement of an existing Verizon customer from a copper facility onto fiber in order to vacate the copper facility for CLEC xDSL use.

The Central Office costs for Line and Station Transfer are based on time and jumper costs from the "Jumper Study". When Line and Station Transfer involves moving a DLC-based CLEC customer to spare copper facilities, the Central Office Technician run a single jumper from the MDF to the CLEC terminal block. In the scenario where the DLC-based CLEC customer is switching facilities with a copper-based Verizon customer, the Central Office Technician must break the existing facility connection for the Verizon customer in order to run the jumper.

The Field Installation costs for Line and Station Transfer are identical to those required for Subloop activity.

40	Non-Message	Note 15	5		APRI-8
41	Message	Note 16			APRI-8

Note 1: The Service Order Entry clerks work on all service orders.

Note 2: All Basic orders are worked by the DS0 designers.

Note 3: All Basic New and Migration As Specified orders require testing.

Note 4: All Complex New orders require testing.

Note 5: All Non-message service orders are completed and monitored by the Administration group.

Note 6: The DBM-WCC works every trunk port order, thus the percent is 100%.

Note 7: The Service Order Entry clerks work all orders except Change orders without Engineering Review, therefore the percent is 100%. Change orders without Engineering Review are translation orders and require only DBM provisioning.

Note 8: Hi-Cap Prework and Local Loop Assignment work all Hi-Cap new orders, therefore the percent is 100%.

Note 9: The DS0 designers work all Trunk Port New, Change with Engineering Review and Dedicated Transport - IDT/CDT, DS0 and Fractional T-1 orders, therefore the percent is 100%.

Note 10: The Hi-Cap designers work all DS1 level Dedicated Transport - IDT/CDT, DS1 and higher orders, therefore the percent is 100%.

Note 11: The Message designers work all Trunk Port orders except Change without Engineering Review, therefore the percent is 100%.

Note 12: The DBM group works all Trunk Port orders, therefore the percent is 100%.

Note 13: Central Office Technicians perform call-through testing for all Trunk Port orders except disconnect orders, therefore the percent is 100%.

Note 14: The Testing group works all new Trunk Port orders except Trunk Only orders, therefore the percent is 100%.

Note 15: The Non-Message Admin group works all Trunk Port - Facilities and Trunks new and disconnect orders, therefore the percent is 100%.

Note 16: The Message Admin group works all Trunk Port orders, therefore the percent is 100%.

Note 17: All Basic orders require assignment by the APC, therefore the percent is 100%.

Note 18: All Dark Fiber orders require design work, therefore the percent is 100%.

Field Work Expensed Hours - Build-Out Group

The following is a summary of a productivity report for the Loop Conditioning/Build-Out Group, which is responsible for installing the package, running jumpers, checking the cable pairs back to the central office, testing the span and completing the end-to-end testing.

Description	Month	Capital Hours	Expensed Hours	Demarc Extension Hours	HiCap Installations	Time per Order	Destination
Productive Hours		A	B=Note 1	C	D=Note 2	E=B/D	
Total			5				AEEL-1, 2

Note 1: These amounts represent 90 percent of the hours expensed as approximately 10 percent of this time is related to repair work per the Verizon Subject Matter Expert.

Note 2: The productive hours and HiCap installations were obtained from the STAR reporting system.
