| Issue No. | Issue Description                                                                                                                                                                   | Additional Information                                                                                                                                                                                                                                                                                                                   |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           | Pre-Ordering/Orde                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                          |
| 1         | BellSouth continues to rely excessively on manual processing of ALEC orders.                                                                                                        | Approximately 1/3 of all ALEC orders still require manual intervention by the LCSC.                                                                                                                                                                                                                                                      |
|           |                                                                                                                                                                                     | Estimated LSR load at the LCSC in<br>November 2001 was 140,404 LSRs -<br>69% of that load (96,849 LSRs) was<br>fallout from electronically submitted<br>orders - 82% of fallouts (79,562 LSRs)<br>were caused by BellSouth system design<br>and failures. Only 12% of the LCSC<br>load (17,287 LSRs) was related to<br>ALEC input error. |
|           |                                                                                                                                                                                     | In November 2001 combined designed<br>manual fallout and BellSouth system<br>errors were 19.3% for non-LNP orders<br>and 37.7% for LNP orders.                                                                                                                                                                                           |
| 2         | Orders that fallout to the LCSC for manual<br>processing encounter delay and increased<br>error rates. This raises ALEC costs and<br>reduces the level of ALEC customer<br>service. | BellSouth's intervals to process partially<br>mechanized rejections and firm order<br>confirmations average 12 to 18 actual<br>hours (1 to 2 business days) versus the<br>15-minute average for fully mechanized<br>handling.                                                                                                            |
|           |                                                                                                                                                                                     | The impact on AT&T's orders is discussed in items 4,5, and 6 below.                                                                                                                                                                                                                                                                      |
| 3         | The Flow Through Task Force and other<br>efforts to improve / reduce the level of<br>manual processing have had no significant                                                      | 23 of 32 FTTF change requests have no scheduled implementation dates.                                                                                                                                                                                                                                                                    |
|           | impact and appear unlikely to do so in the near future.                                                                                                                             | BellSouth's FTTF project manager has<br>stated that as ALECs gain more market<br>share and the volume and mix of order<br>types changes ALECs should expect to<br>encounter more BellSouth errors as they<br>use portions of the software that have<br>not previously experienced high volume<br>usage.                                  |
| 4         | AT&T receives clarifications when orders<br>are accurate, resulting in unnecessary<br>processing expense for AT&T and delay<br>for AT&T's customers.                                | During October and November 2001<br>AT&T had 203 UNE-P orders or 619<br>lines impacted. This was done as a<br>result of a USOC conversion (1FB to<br>MFB) in the state of Florida.<br>See Attachment 1 for PONs affected.                                                                                                                |

| Issue No. | Issue Description                                                                                                                                                                                                                              | Additional Information                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5         | BellSouth's Local Carrier Service Center<br>(LCSC) introduces errors on service<br>requests causing incorrect provisioning of<br>AT&T UNE-P orders.                                                                                            | See Attachment 2: Order Typed in<br>BellSouth System Does not Match Order<br>as Submitted by AT&T for details.                                                                                                                                                                                                                                                                                                                                          |
| 6         | BellSouth provides incomplete manual<br>clarifications resulting in serial<br>clarifications that lead to delayed<br>implementation for AT&T customers.                                                                                        | Manual clarifications do not address all<br>issues. Subsequent LSRs are rejected<br>for additional reasons that existed on the<br>original LSR.<br>Example:<br>ZXMIAP0200753<br>1 <sup>ST</sup> – Incorrect floor info<br>2 <sup>nd</sup> - Invalid Act Type                                                                                                                                                                                            |
| 7         | LENS has an unacceptable level of down-<br>time and slow response time.                                                                                                                                                                        | See LENS System Outage Report<br>available at:<br><u>www.interconnection.bellsouth.com</u><br>/markets/lec/ccp/ccp_so_lens.html                                                                                                                                                                                                                                                                                                                         |
| 8         | BellSouth inadequately implements<br>capabilities that would reduce rejection of<br>ALEC orders. BellSouth still has not<br>provided fully functioning parsed CSR and<br>the ability to migrate a customer by<br>telephone number and address. | Complete and usable coding<br>specifications for the parsed CSR were<br>not provided until two weeks before the<br>scheduled implementation date.<br>At least 24 defect change requests have<br>been published by BellSouth since the<br>1/5/02 "implementation" of the parsed<br>CSR. Many are not scheduled for<br>correction until April and May.<br>When migration by TN and Name was<br>implemented the error/reject rate was<br>greater than 30%. |
|           |                                                                                                                                                                                                                                                | <ul> <li>While the limited implementation of migration by TN and House Number as a replacement performed better problems remain: <ul> <li>Improper data content in RSAG</li> <li>Mismatches between RSAG and the CSR</li> <li>LCSC Training</li> </ul> </li> <li>The resulting erroneous rejections can only be corrected by manual intervention at the LCSC.</li> </ul>                                                                                |

| Issue No. | Issue Description                                                                                                                                        | Additional Information                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 9         | BellSouth's ability to provide an accurate<br>due date calculator remains uncertain.                                                                     | <ul> <li>BellSouth's due date calculator<br/>continues to return improper (longer)<br/>intervals for various ReqType / ActType<br/>combinations</li> <li>BellSouth has admitted to<br/>problems going back to February<br/>2001</li> <li>Multiple previous correction<br/>attempts have been only partially<br/>successful</li> <li>On 1/31/02 BellSouth delayed its<br/>next fix attempt that had been<br/>scheduled for 2/2/02.</li> </ul>                        |
| 10        | BellSouth issues untimely jeopardy notices<br>for UNE-Loop orders causing provisioning<br>delays and customer relations problems for<br>ALECs            | Jeopardy notices are being issued late,<br>and in some cases on the actual day of<br>the cut, not allowing enough time to<br>make arrangements with the customer.<br>Many of these Service requests are sent<br>electronically via EDI but BellSouth is<br>sending jeopardy notices via fax,<br>frequently to the wrong telephone<br>number. Only when AT&T is in the<br>process of confirming a start cut are we<br>learning a jeopardy notice has been<br>issued. |
| 11        | Data is not available to analyze BellSouth<br>performance on important order types.<br>BellSouth excludes from raw data LSRs<br>classified as projects.  | BellSouth currently does not provide<br>raw data for LSRs classified as projects<br>(see Attachment 3 – September 13, 2001<br>letter from BellSouth). Although these<br>LSRs may be documented exclusions to<br>the performance measure calculations,<br>these LSRs should still be included in<br>raw data so ALECs can perform their<br>own performance analysis.                                                                                                 |
| 12        | BellSouth is providing incomplete raw<br>data to the ALECs in PMAP because of the<br>exclusion of dummy FOCs (for FOC<br>Timeliness performance measure) | BellSouth currently does not provide<br>raw data for Dummy FOCs. Dummy<br>FOCs are confirmations of cancelled<br>LSRs. Although these LSRs may be<br>documented exclusions to the FOC<br>Timeliness measure calculations, these<br>LSRs should still be included in raw data<br>so ALECs can perform their own<br>performance analysis.                                                                                                                             |

| Issue No.<br>13 | Issue Description<br>BellSouth is inaccurately reporting data for<br>Acknowledgment Message Timeliness and<br>Completeness. AT&T compared the LSR<br>volumes in the acknowledgment raw data<br>with the volumes in the Flow Through<br>report and discovered numerous<br>discrepancies. | Additional Information<br>Attachment 4 (January 21 letter from<br>BellSouth) indicates that EDI returns<br>one Acknowledgment per transmission<br>(or an "envelope"), and a transmission<br>may contain multiple LSRs. The Flow<br>Through report gives detail at the LSR<br>level. According to the explanation, the<br>Acknowledgment raw data may not<br>report an Acknowledgment for each<br>LSR. Therefore, it can be inferred that<br>the volume in the Flow Through report<br>will be greater than or equal to the<br>volume of EDI LSRs that the<br>Acknowledgment raw data shows. This,<br>however, is not true in the October or<br>November 2001 snapshot found in<br>Attachment 5. Additionally, BellSouth<br>states, "TAG returns acknowledgments<br>on messages related to pre-order activity,<br>which are not reflected on the Flow<br>Through report." Further, "LSRs fatally<br>rejected by TAG will receive an<br>acknowledgment raw data files, but will<br>not be counted in the Flow Through<br>report." Both of these explanations<br>suggest that the TAG volume in the<br>Acknowledgment raw data should be<br>significantly greater than the TAG and<br>LENS volume in the Flow Through<br>report. Once again, the October 2001<br>snapshot reflects just the opposite<br>scenario and the November 2001 data |
|                 |                                                                                                                                                                                                                                                                                         | shows little difference between the two data sources.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 14              | The raw data that BellSouth provides to<br>the ALECs is incomplete for the Flow<br>Through reports. BellSouth does not<br>provide a LSR detail for LNP flow-through<br>report. (Measure O-6).                                                                                           | In Georgia Docket 7892-U, BellSouth<br>indicated that a form of underlying data<br>(different from the LSR detail) was now<br>available upon request. AT&T<br>requested this information on February<br>4, 2002. AT&T will review this data<br>once it is received from BellSouth.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| FPSC Docket No.: 960786-B-TL; 981834-TP |

| Issue Description                                                                                                                                                                                                      | Additional Information                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| ALECs cannot replicate FOC and reject<br>intervals from raw data provided by<br>BellSouth                                                                                                                              | BellSouth provides raw data for the FOC<br>Timeliness and Reject Interval<br>performance measures. This data<br>contains the LSR received date, LSR<br>FOC/reject date, and FOC/reject<br>interval. The interval is reported in<br>hours and minutes, but BellSouth only<br>provides the dates of the endpoints, but<br>not the dates <i>and times</i> . Because<br>BellSouth does not provide dates and<br>times that the LSR was received and<br>FOC'd/rejected, the ALECs are unable<br>to replicate the FOC Timeliness and<br>Reject Interval performance data. For<br>examples, see Attachment 6, Part A.                                                                                                                                                                                                        |
| ALECs cannot replicate FOC and reject<br>intervals from PMAP raw data for LSRs<br>that are submitted in one month, but<br>FOC'd/rejected in different month.                                                           | BellSouth provides raw data for the FOC<br>Timeliness and Reject Interval<br>performance measures. Within the raw<br>data, there are two records for each LSR.<br>One record contains the received date of<br>the LSR. The other record contains the<br>FOC or reject/clarification date of the<br>LSR. If the LSR was received in one<br>month, but FOC'd or rejected/clarified<br>back to the ALEC in the next month,<br>then the ALEC is unable to replicate the<br>reject interval being calculated by<br>BellSouth. BellSouth is excluding the<br>record that contains the date when<br>Bellsouth received the LSR. BellSouth<br>is providing the ALEC with only one of<br>the endpoints that are used to calculate<br>the appropriate FOC/reject duration. For<br>examples, see Attachment 6, Parts B and<br>C. |

| 19        | BellSouth does not always re-use facilities<br>for UNE-P orders, which cause an<br>unnecessary disruption of the customer's<br>service.                                                                                                                                                                                   | See Attachment 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 20        | BellSouth is not providing the circuit<br>identification on the FOC returned to<br>AT&T on EDI orders.                                                                                                                                                                                                                    | When no circuit identification is on the<br>FOC cause potential errors in database<br>and mismatch between the two<br>companies as well as delays in customer<br>orders that follow.<br>For Examples: See PONs<br>ZXATLP0100195A<br>ZXATLP0100430<br>ZXATLP0100695<br>ZXATLP0101066A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 21        | BellSouth has not provided AT&T access<br>to LFACS despite a contractual obligation<br>to do so. AT&T orders are being rejected<br>following the issuance of a Firm Order<br>Confirmation because of incorrect facilities<br>assignments. To prevent this problem<br>BellSouth agreed to provide AT&T access<br>to LFACS. | AT&T receives a significant number of<br>rejections of its service requests due to<br>"busy pair" or facilities that appear as in<br>use in BellSouth's records. This causes<br>extra expense for AT&T's work centers<br>and a delay in the customer's request for<br>service. Access to this database would<br>allow AT&T to check BellSouth's<br>records and prevent these service<br>requests from being rejected.<br>The COSMOS report offered by<br>BellSouth does not deliver the<br>information that AT&T needs to deliver<br>timely and accurate service to AT&T<br>customers. In addition to being difficult<br>to use, the COSMOS report does not link<br>busy pairs as indicated in the BellSouth<br>database with a specific customer<br>location, telephone number or purchase<br>order number. This makes it impractical<br>as a tool to pre-check facilities or to<br>reconcile the databases. |

|           |                                                                                                                                                                                                                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|           | Maintenance & Rej                                                                                                                                                                                                                                 | l<br>Dair                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 25        | BellSouth maintenance technicians close<br>repair tickets without confirming with<br>AT&T that the problem has been<br>corrected.                                                                                                                 | BellSouth's maintenance technicians<br>believe that they have completed their<br>work on a given maintenance ticket.<br>However, when they fail to test with<br>AT&T's agents and confirm that the<br>trouble has indeed cleared, new tickets<br>must be opened and work duplicated.<br>This results in customer dissatisfaction<br>and delay in repairing the customer's<br>service.<br>For Example see:<br>Ticket #210202195 for<br>14-305-887-6322. NDT Trouble                                                                                                                                                        |
| 26        | Trouble Tickets are closed when<br>Maintenance Technicians attempt to make<br>after hours repair.                                                                                                                                                 | BellSouth maintenance technicians go to<br>the customer premises after hours to fix<br>a problem without making arrangements<br>for access after hours, even when access<br>is required to repair the service, e.g. the<br>demarcation point is inside the premises<br>Although AT&T specifies on the order<br>that access is available only during<br>regular business hours, BellSouth<br>disregards the comments. The<br>technician then codes the trouble ticket<br>as "no access" or closes out the trouble<br>ticket. This results in customer<br>dissatisfaction and delay in repairing the<br>customer's service. |
| 27        | The BellSouth Maintenance Center will<br>not take a report until after 5 pm even<br>though the customer's service has been<br>impaired during migration (e.g. missing<br>feature), even where BellSouth has<br>incorrectly provisioned the order. | See Issue No. 5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| 1       | Ordering/Provisioning Maintenance/& Repair                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

| 28      | BellSouth excludes directory listing orders<br>from some metrics.                                                                                                                                                                                    | BellSouth responded on its action item<br>list for the December Georgia<br>Performance Measures Workshop that it<br>now includes directory listing orders in<br>the % rejected, reject interval, FOC<br>Timeliness, and FOC and Reject<br>Response measures. Does BellSouth<br>include Directory Listing Orders in the<br>Flow-Through report? And whether or<br>not excluded from the calculation, does<br>BellSouth now include directory listings<br>orders in the raw data for all measures?<br>If not, when, by measure, will BellSouth<br>provide this raw data? |  |
| 29      | BellSouth is inaccurately reporting UNE-P<br>data for the ALECs. BellSouth has<br>duplicate reporting for UNE-P. The data is<br>being reported under the UNE Loop and<br>Port Combo category and the UNE Other<br>Non-Designed disaggregation level. | In Georgia Docket 7892-U, BellSouth<br>indicated that a change request has been<br>entered on this issue.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
