RE: Docket No. 011392-TP – AT&T Complaint on Oddball Codes

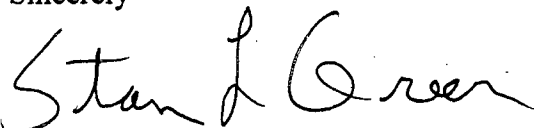

Dear Mr. Ileri:

On February 1, 2002, BellSouth provided notice to the Commission of its intent to develop a method for routing 930 traffic (BellSouth's Uniserve Service) over Alternative Local Exchange Companies ("ALECs") interconnection trunks rather than requiring the ALEC to purchase trunks to BellSouth's Traffic Operator Position System ("TOPS"). BellSouth has completed implementation of these trunks in all LATAs where there are Uniserve customers. At this time, each ALEC should have the ability to route 930 traffic over its interconnection trunks. However, BellSouth wants to make it clear that this routing process is not intended for and BellSouth will not allow the interconnection trunks to be used for, the transport of ordinary TOPS traffic to the TOPS tandem. In addition, BellSouth will remove these trunks when BellSouth Uniserve customers are transitioned to other services.

As for the other oddball codes (203, 204, 440 and 780), BellSouth is currently working to transition its current customers from services using these codes. BellSouth believes these customers will be moved from the codes before March 2003 provided there are no unforeseen problems. Unfortunately, some of the services BellSouth offers using these codes are Open Network Architecture ("ONA") services that require FCC approval.

If you have any questions, please call me at (850) 224-5139.

Sincerely

Stan L. Greer
