CLERK

Re: Docket No. 011605-EI

Dear Ms. Bayó:

I am enclosing for filing the original and fifteen (15) copies of the prefiled rebuttal testimony and exhibits of Florida Power & Light Company witnesses Joseph P. Stepenovitch and Korel M. Dubin.

Sincerely,

*Korel M. Dubin for JTB*

John T. Butler, P.A.

ELECTRIC UTILITIES' RISK MANAGEMENT  
POLICIES AND PROCEDURES**

**REBUTTAL TESTIMONY & EXHIBITS OF:**

**J. P. STEPENOVITCH  
K. M. DUBIN**

DOCUMENT NUMBER DATE

07748 JUL 24 02

FPSC-COMMISSION CLERK

1                                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                                   **FLORIDA POWER & LIGHT COMPANY**

3                                   **REBUTTAL TESTIMONY OF JOSEPH P. STEPENOVITCH**

4                                   **DOCKET NO. 011605-EI**

5                                   **July 24, 2002**

6   **Q.     Please state your name and business address.**

7   A.     My name is Joseph P. Stepenovitch. My business address is 11770 U.S.  
8           Highway One, North Palm Beach, Florida 33408.

9   **Q.     By whom are you employed and in what capacity?**

10  A.     I am employed by Florida Power & Light Company (FPL) as the Director of  
11           FPL's Energy Marketing & Trading Division.

12  **Q.     Have you previously filed testimony in this docket?**

13  A.     Yes, I have.

14  **Q.     Have you prepared or caused to be prepared under your direction,  
15           supervision or control an exhibit to your rebuttal testimony in this  
16           proceeding?**

17  A.     Yes, I have. It consists of the following documents:

18                 Document JPS-3, Forward Price As A Percentage Above or Below  
19                 Spot at Time of Maturity

20                 Document JPS-4, FPL Proposed Risk Sharing Program Cost/Benefit

21                 Analysis

1 **Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to comment on certain portions of the  
3 testimony of FIPUG's witness Bryan Stone and Staff's witness Todd  
4 Bohrmann. Specifically, with respect to Mr. Bohrmann's Testimony, I will  
5 address his concerns with FPL's proposed Risk Sharing Program that are  
6 identified as items 2 and 8 on pages 16 and 17 of his Testimony. The  
7 remainder of the concerns identified by Mr. Bohrmann's Testimony are  
8 addressed in Ms. Dubin's Rebuttal Testimony.

9

10 **TESTIMONY OF BRYAN STONE**

11 **Q. Would you please comment on the statement on page 12, lines 14 - 16**  
12 **of Mr. Stone's testimony that FIPUG "see[s] no need for a program with**  
13 **such an apparent lack of benefit to consumers. Rather than reducing**  
14 **fuel cost risk, in our opinion, there is an increased fuel cost risk, due to**  
15 **the potential for abuses via creative financial engineering"?**

16 A. I disagree with Mr. Stone's statement. FPL projects that, over time, its  
17 proposed Risk Sharing Program can achieve both a reduction in volatility and  
18 a reduction in fuel costs to its customers. As shown on Document JPS-3,  
19 Forward Price As A Percentage Above or Below Spot at Time of Maturity, the  
20 forward fuel markets (in particular natural gas) provide, on average over time,  
21 a forward discount to the spot market at time of maturity. Specifically, the x-  
22 axis of Document JPS-3 shows the forward term of a forward contract for a  
23 given commodity. The y-axis measures the relative premium or discount the  
24 specific commodity contract would realize at the time of maturity of the

1 forward contract, relative to the spot market price of that specific commodity  
2 at the time of maturity. The graph clearly shows that, on average over the  
3 1996 through 2001 period, providing a fixed forward price to FPL's  
4 customers, for any period greater than six months forward should provide the  
5 customer with a lower fuel price than if FPL waited until that period occurred  
6 and purchased in the spot fuel market. Financial theory on procuring a risky  
7 commodity generally supports a market discount, due to the uncertainty  
8 pertaining to future supply and demand of the commodity. Basically, this  
9 theory holds that suppliers will be willing to offer a discount on forward  
10 contracts in order to achieve certainty on their firm sales of the commodity in  
11 advance. As shown Document JPS-3, on average, the longer the forward  
12 period, the greater the discount FPL could provide to its customers.

13

14 **Q. Has FPL prepared a cost/benefit analysis of FPL's proposed Risk**  
15 **Sharing Program?**

16 A. Yes. It is provided as Document JPS-4. The cost/benefit analysis is based  
17 on a Monte Carlo simulation (i.e. randomized scenarios) of 2000 potential  
18 annual periods, all assuming that FPL would fix the price of 20% of its actual  
19 volume of residual fuel oil and natural gas burn, for a given year, in July of the  
20 prior year but each having different assumptions on the cost relationship  
21 between forward contract and spot prices for those fuels. The results show a  
22 range of net benefits or costs to customers under the varying fuel-price  
23 scenarios, but the expected value for the full set of 2000 scenarios is a net  
24 benefit to the customer of \$23 million per year. This net benefit is a result of  
25 an expected value benefit from hedging of \$41 million per year, partially offset

1 by an expected value risk premium of \$13 million per year, an expected value  
2 cost resulting from spot prices exceeding FPL's actual purchase costs of \$4  
3 million per year, and an incremental cost of FPL's hedging operations of \$1  
4 million per year.

5

6 **Q. Please explain the risk premium that is reflected in the cost/benefit**  
7 **analysis on Document JPS-4.**

8 A. A fundamental component of FPL's proposed Risk Sharing Program is that,  
9 except under conditions that qualify as a force majeure event, FPL will  
10 assume the volume risk for the difference between the projected and actual  
11 volume burned for residual fuel oil and natural gas. As partial compensation  
12 to FPL for this volume risk (and to a lesser extent for the timing and execution  
13 risk inherent in FPL's guaranteeing customers a predetermined fixed price for  
14 a predetermined percentage of residual fuel oil and natural gas), the Monte  
15 Carlo analysis assumes that the customer will pay a 5% risk premium on the  
16 fixed priced portion of the program. Please note that, consistent with FPL's  
17 proposed Risk Sharing Program, 5% is less than the full market-based  
18 premium for assuming these risks, which means in effect that FPL and its  
19 customers share in the cost of the risks.

20

21 **Q. On page 7, line 22 of his testimony, Mr. Stone states that utilities "can**  
22 **financially engineer derivative transactions to generate profit risk-**

1           **free....” Does this accurately characterize FPL’s intended use of**  
2           **hedging instruments in its fuel procurement program?**

3    A.    No. Mr. Stone asserts that there are risk-free profit opportunities in the  
4           derivatives market. To the best of my knowledge no such opportunities exist.  
5           Furthermore, Mr. Stone seems to suggest that FPL and other utilities will  
6           engage in speculation. This is not the intent of FPL’s proposed Risk Sharing  
7           Program and it is not the policy of FPL. FPL will not purchase more residual  
8           fuel oil or natural gas than what it will burn and FPL will not enter into any  
9           derivative or non-derivative transaction with the only objective to generate  
10          financial gains for FPL. FPL’s strategy for fuel procurement is to secure a  
11          balanced portfolio for FPL’s customers at the lowest possible cost.

12

13   **Q.    Mr. Stone states on pages 8-12 of his testimony that if the Commission**  
14          **approves the utilities’ hedging programs, there are “necessary**  
15          **constraints” needed to ensure the program is fair. He describes**  
16          **“necessary constraints” as independent analysis of the programs,**  
17          **limiting the types of instruments and transactions that the utilities use**  
18          **to hedge, and prohibiting trading with affiliates. Does FPL believe these**  
19          **constraints are necessary?**

20    A.    No. If the Commission approves FPL’s proposed Risk Sharing Program, the  
21          Commission will not have to place constraints on FPL to ensure the program  
22          is fair. FPL’s proposed Risk Sharing Program transfers price risk, among  
23          other risks, from FPL’s customers to FPL. Under FPL’s proposed Risk  
24          Sharing Program, FPL is seeking to modify the current fuel cost recovery

1 mechanism from actual cost to recovery that is based on a combination of an  
2 approved market-based, fixed price for a set percentage of actual volume and  
3 a market-based, spot index price, for the balance of actual volume.  
4 Therefore, FPL's customers will be insulated from any risks associated with  
5 FPL's fuel procurement practices, including the types of instruments that are  
6 used to hedge fuel. FPL's customers will always pay the market price for  
7 fuel, regardless of FPL's actual fuel costs. Lastly, the audit process that  
8 currently exists can provide the necessary information to ensure that FPL is  
9 adhering to the program and also to ensure that the program is providing its  
10 stated benefits.

11

12 **TESTIMONY OF TODD BOHRMANN**

13 **Q. Would you please comment on item no. 2 on page 16, line 6 through line**  
14 **12 of Mr. Bohrmann's testimony that "FPL's proposal seeks to recover**  
15 **the balance of its natural gas and residual oil requirements based on a**  
16 **spot index price. A stated goal of FPL's procurement efforts is to obtain**  
17 **natural gas and residual fuel at below spot market prices. This feature**  
18 **does not create any value to FPL's ratepayer, and only rewards FPL for**  
19 **actions that would have occurred regardless of any incentive."**

20 **A.** Although it is a stated goal of FPL's procurement efforts to obtain natural gas  
21 and residual fuel oil at below spot market prices, there are no guarantees. As  
22 energy markets evolve and change, market conditions occur which both  
23 historically and currently can make it difficult for FPL to achieve this goal. In  
24 particular, currently, due to conditions in the natural gas market, FPL has

1           been unable to consistently purchase natural gas below the spot market  
2           index. FPL's proposed Risk Sharing Program guarantees that FPL's  
3           customers will not be exposed to market conditions that lead to FPL  
4           purchasing above the spot market index.

5

6   **Q. Mr. Bohrmann has criticized FPL's proposal to retain twenty percent of**  
7   **the gains from all non-separated wholesale energy sales and the**  
8   **savings from all wholesale energy purchases (item no. 8, page 17 of Mr.**  
9   **Bohrmann's Testimony). Please explain why FPL has proposed this**  
10 **element of its Risk Sharing Program.**

11 A. FPL believes that wholesale power transactions (purchases and sales) are an  
12 important component of a balanced hedging program. A complete and  
13 comprehensive hedging program should include wholesale energy, as these  
14 transactions directly impact fuel requirements and provide an additional  
15 mechanism to lower overall fuel costs and volatility for its customers.

16

17 **Q. Does FPL have any comments on Exhibit TFB-11 of Mr. Bohrmann's**  
18 **testimony?**

19 A. Yes. I would like to comment on the Financial Hedging Techniques listed on  
20 Exhibit TFB-11, page 3 (page 45 of Mr. Bohrmann's testimony). FPL  
21 believes that Mr. Bohrmann's discussion of Financial Hedging Techniques is  
22 accurate, as far as it goes. However, FPL would like to add to his discussion  
23 by noting that Financial Trading involves taking not only long positions but

1 also taking short positions. For example, if FPL's view is that the residual fuel  
2 oil market will decline, FPL would like the opportunity to protect the value of  
3 the residual fuel oil in inventory for FPL's customers by selling a forward  
4 contract. Additionally, Exhibit TFB-11 refers to measures that the NYMEX  
5 futures exchange has in place to control counterparty risk for its clearing  
6 members. While these statements about NYMEX's measures to control  
7 counterparty risk are correct, FPL may also use over-the-counter swaps and  
8 options. For over-the-counter transactions, FPL has in place its own policies  
9 and procedures to mitigate counterparty credit risk.

10

11 **Q. On page 9, Lines 1-3 of Mr. Bohrmann's testimony, he states, "A utility**  
12 **should procure no less than the minimum amount of each fuel that the**  
13 **utility must dispatch on its system through one or more fixed price**  
14 **mechanisms." Does FPL believe that procuring the minimum of each**  
15 **fuel that it must dispatch on its system at a fixed price would effectively**  
16 **reduce fuel price volatility and overall fuel costs for its customers.**

17 **A.** No. As part of its response to Staff's First Set of Interrogatories in Docket No.  
18 011605-EI, FPL calculated the minimum amount of each fuel that it could  
19 dispatch on its system given certain price relationships between natural gas  
20 and residual fuel oil on randomly selected days during shoulder periods. The  
21 output data show that the minimum dispatch of natural gas on FPL's system  
22 is approximately 31,600 mmBtu/day and that there is essentially no minimum  
23 dispatch for residual fuel oil. These minimum-dispatch volumes are negligible  
24 compared to FPL's total fuel requirements and total fuel budget. For

1 example, assuming that natural gas can be fixed at a price of \$3.00/mmBtu,  
2 the total cost of fixing this minimum-dispatch volume would be approximately  
3 \$34.6 million for a one year period. FPL's total fuel budget for 2002 is  
4 approximately \$2.2 billion. This fixed price natural gas position equates to  
5 less than two percent of FPL's total fuel budget. Although FPL's system is  
6 large, its mix of generation resources provides great flexibility in dispatch,  
7 which reduces FPL's dependency on any particular fuel. This flexibility helps  
8 FPL dispatch its system in a manner that reduces its need for any one  
9 particular high-priced fuel. Therefore, minimum fuel requirements, given  
10 certain load and generation conditions, could be relatively small at any  
11 particular time compared with FPL's total average fuel requirements. For  
12 FPL, procuring only the minimum amount of natural gas and residual fuel oil  
13 at a fixed price would not significantly help reduce overall fuel price volatility.  
14 Fixing the price of any volume requirements may help reduce overall fuel  
15 costs if the spot market of that particular fuel is higher than the fixed price  
16 position.

17

18 **Q. Do you see any other problems with Mr. Bohrmann's approach?**

19 A. Yes. Regardless of the percentage of total fuel requirements that would be  
20 fixed on a forward contract basis, his approach would require the Commission  
21 to evaluate the specific forward-contract arrangements that the utility makes,  
22 but I have reservations about the effectiveness of his proposed evaluation  
23 mechanism. Staff appears to envision that reviewing and approving a utility's  
24 risk management plan will provide an effective means of evaluating the

1 utility's performance in procuring fuel on a forward contract basis. However,  
2 this may not be the case. For example, if the Commission requires that a risk  
3 management plan rigidly limit the range of permissible hedging mechanisms  
4 in order to facilitate use of the plan as an evaluation tool, then the utility may  
5 be foreclosed from taking the maximum advantage of market conditions.

6

7 **Q. Do you believe that FPL's proposed Risk Sharing Program would be**  
8 **more effective than Mr. Bohrmann's approach for limiting customers'**  
9 **exposure to fuel-cost volatility?**

10 A. Absolutely.

11

12 **Q. On page 12, Lines 12-13 of Mr. Bohrmann's testimony, he states "By**  
13 **their own admission, the utilities have little to no experience in**  
14 **executing financial hedging transactions." Would you please comment**  
15 **on this statement?**

16 A. I have two reactions to Mr. Bohrmann's statement. First, it does not have  
17 much application to FPL's proposed Risk Sharing Program. As I have made  
18 clear on several occasions, FPL relies primarily upon physical commodity  
19 transactions rather than financial instruments to hedge fuel costs. We intend  
20 to continue doing so under the proposed Risk Sharing Program. Second, to  
21 the extent that FPL does rely upon financial instruments, I disagree with Mr.  
22 Bohrmann's assessment that FPL lacks experience with such transactions.  
23 FPL has been financially hedging its natural gas and residual fuel oil

1 transactions for several years. For natural gas, FPL has been executing  
2 exchanged traded futures and options contracts, as well as over-the-counter  
3 (OTC) swaps, collars, options, and forwards. For residual fuel oil, FPL has  
4 been executing OTC swaps, options, collars and forwards. FPL's financial  
5 traders are well trained and experienced in all exchanged traded and OTC  
6 financial instruments and fully knowledgeable of the risks, limitations, and  
7 management of these tools.

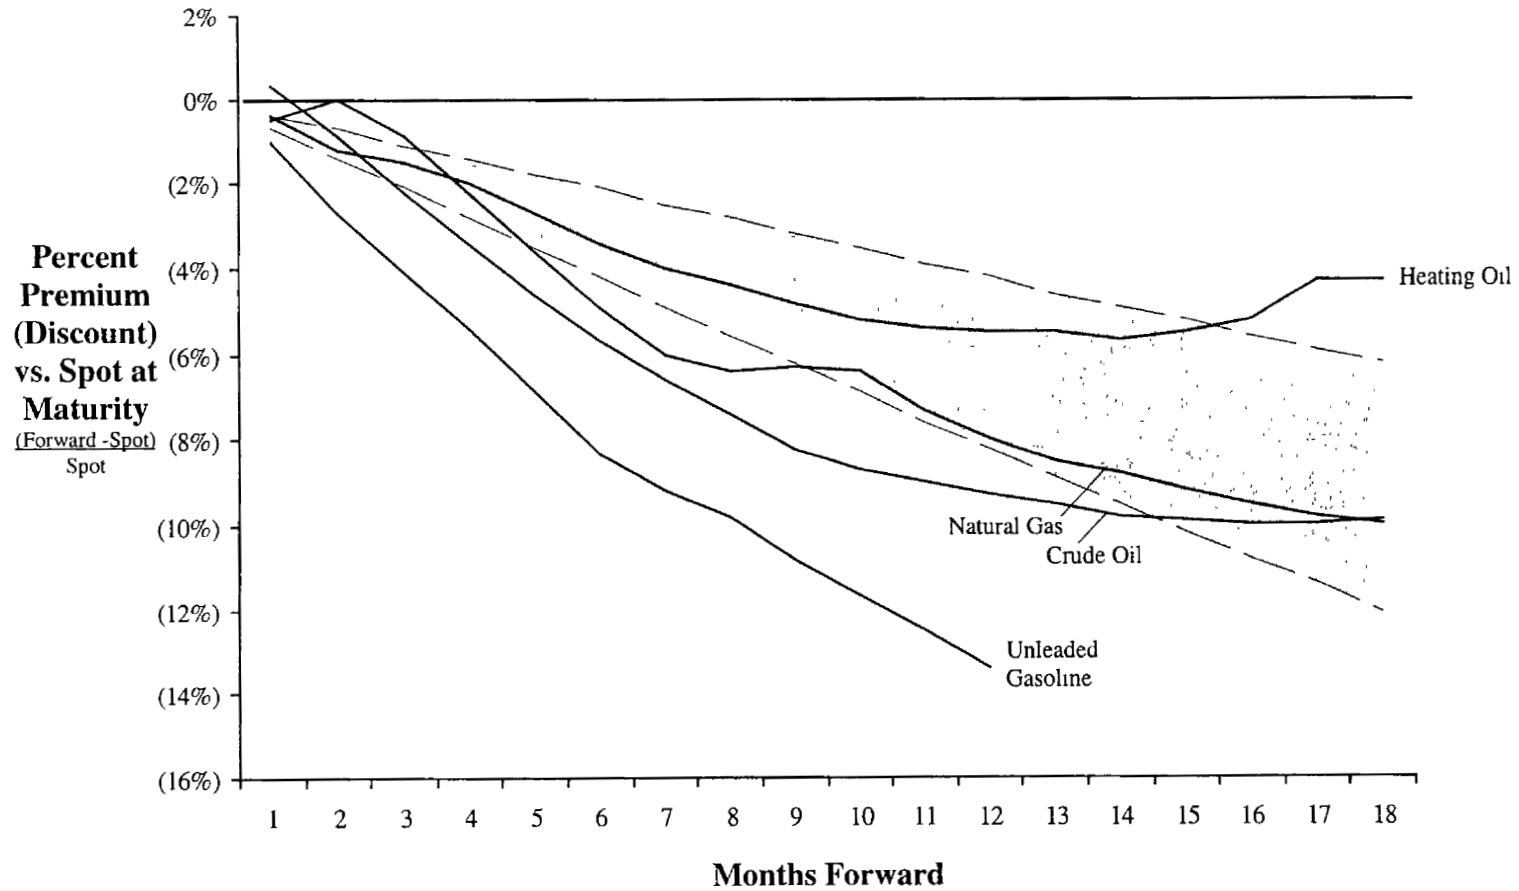

8

9 **Q. Does that conclude your rebuttal testimony?**

10 A. Yes it does.

**BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**  
**FLORIDA POWER & LIGHT COMPANY**  
**REBUTTAL TESTIMONY OF KOREL M. DUBIN**  
**DOCKET NO. 011605-EI**  
**July 24, 2002**

**Q. Please state your name and business address.**

A. My name is Korel M. Dubin, and my business address is 9250 West Flagler Street, Miami, Florida, 33174.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Florida Power & Light Company (FPL) as the Manager of Regulatory Issues in the Regulatory Affairs Department.

**Q. Have you previously filed testimony in this docket?**

A. Yes, I have.

**Q. What is the purpose of your testimony?**

A. The purpose of my testimony is to comment on certain portions of the testimony of FIPUG's witness Bryan Stone and Staff's witness Todd Bohrmann. Specifically, with respect to Mr. Bohrmann's testimony, I will address his concerns with FPL's proposed Risk Sharing Program that are identified as items 1, 3 -7, and 9 -10. The remainder of these items are addressed in Mr. Stepenovitch's Rebuttal Testimony.

1 **TESTIMONY OF BRYAN STONE**

2 **Q. On pages 10 and 11 of his testimony, Mr. Stone contends that FPL's**  
3 **proposed Risk Sharing Program should be conducted in the sunshine. Do**  
4 **you agree?**

5 **A.** I agree that all aspects of the Risk Sharing Program and its implementation  
6 should be accessible to FIPUG, as well as to Staff, Public Counsel and other  
7 parties that have been granted intervention in the fuel adjustment docket and that  
8 the Commission has determined need access in order to protect legitimate  
9 interests of FPL's retail customers. However, I caution that access must be  
10 controlled in a manner that avoids disclosure of the Program and its  
11 implementation details to FPL's competitors and vendors, so that they cannot  
12 use that information to the disadvantage of FPL and its customers. Therefore,  
13 FPL plans to request confidential treatment of this sensitive information.

14

15 **TESTIMONY OF TODD BOHRMANN**

16 **Q. Regarding item no. 6 on page 17 and specifically on page 15, line 4 of his**  
17 **testimony, Mr. Bohrmann states that the Commission should not allow the**  
18 **recovery of any incremental capital and O&M costs (e.g., personnel,**  
19 **computer hardware and software, allocated common costs) through the**  
20 **fuel clause. Such costs are "fuel procurement administrative functions"**  
21 **which the Commission has historically authorized the utilities to recover**  
22 **through its base rates as contemplated by Order No. 14546, in Docket No.**  
23 **850001-EI-B, issued July 8, 1986. Do you agree?**

1 A. No. As stated in the prefiled direct testimony of FPL Witness Joseph  
2 Stepenovitch:

3

4 "FPL believes it is appropriate for the Commission to allow recovery  
5 through the Fuel Cost Recovery Clause of the prudent costs incurred  
6 while developing and implementing the risk management and trading  
7 system necessary to monitor and successfully execute its Proposed Risk  
8 Sharing Program. FPL currently estimates its costs for development and  
9 implementation to be approximately \$3 million. Additionally, FPL believes  
10 it is appropriate for the Commission to allow recovery through the Fuel  
11 Cost Recovery Clause of the incremental cost of maintaining and  
12 operating the trading floor associated with the risk management plan.  
13 FPL currently estimates its incremental costs to be approximately \$1  
14 million, annually."

15 Of the amounts stated above, FPL has already incurred development costs of  
16 approximately \$1 million. FPL incurred these development costs in response to  
17 encouragement from the Commission at the March 13, 2001 Agenda Conference  
18 (addressing FPL's Midcourse Correction) for investor-owned electric utilities to  
19 explore the possibilities of becoming more actively involved in hedging their fuel  
20 procurement, and from Staff through their several "strawman" proposals for  
21 hedging incentive mechanisms in this docket. I do not agree with Mr.  
22 Bohrmann's characterization of these costs as simply "fuel procurement  
23 administrative functions". Instead, the costs for which FPL is seeking recovery  
24 are necessary and integral to the development and implementation of a hedging  
25 plan that provides fuel related benefits to FPL's customers. Furthermore, the

1 Commission historically has allowed recovery of certain costs through the fuel  
2 cost recovery clause when these costs have been expended to provide fuel  
3 savings to customers. In Order No. 14546, the Commission described the types  
4 of costs recoverable through the fuel cost recovery clause. One of the types of  
5 recoverable costs was for the following:

6 "Fossil fuel-related costs normally recovered through base rates but  
7 which were not recognized or anticipated in the cost levels used to  
8 determine current base rates and which, if expended, will result in fuel  
9 savings to customers. Recovery of such costs should be made on a case  
10 by case basis after Commission approval."

11 As provided in the rebuttal testimony of Mr. Stepenovitch, FPL's proposed Risk  
12 Sharing Program is projected to result in significant cost savings to FPL's  
13 customers. Therefore, FPL believes it would be appropriate to recover its  
14 development and implementation costs for the Risk Sharing Program through the  
15 fuel cost recovery clause.

16

17 **Q. Staff has expressed a concern with FPL's proposed implementation**  
18 **schedule. Staff has stated that, under FPL's proposed schedule, Staff**  
19 **does not have enough information, enough time to review, nor an**  
20 **opportunity to put forth an alternative to FPL's proposed stipulation (Mr.**  
21 **Bohrmann's Testimony pages 16 –17, items 1, 3, 4, 5, 9, and 10). Please**  
22 **comment on this concern.**

23

1 A. I understand Mr. Bohrmann's concern about Staff's needing to be  
2 interactively involved in reviewing and approving FPL's proposed Risk  
3 Sharing Program. However, I believe that this involvement can be fully  
4 achieved in time for the Program to go into effect in 2003. Under FPL's  
5 proposed implementation process, FPL plans to submit with its September  
6 2002, projection filing, a proposed stipulation (on a confidential basis)  
7 providing information describing and explaining the methodology that will be  
8 used for 2003 including all the items that Mr. Bohrmann describes in his  
9 exhibit TFB-4. Additionally, all of the following information will be fully  
10 available to the parties in this proposed stipulation: the proposed fixed price  
11 percentage of actual purchases for 2003, the proposed methodology to be  
12 used for setting the fixed prices for 2003, the proposed spot price indices to  
13 be used for the remaining percentage of residual fuel oil and natural gas  
14 actual purchases in 2003, and the proposed percent risk premium to be used  
15 in 2003 together with an explanation of the basis for proposing that  
16 percentage.

17 The parties will have approximately 6 weeks to review the proposed  
18 stipulation and a full opportunity for discovery concerning it. FPL will respond  
19 to discovery on an expedited basis. The parties can then meet to discuss  
20 FPL's proposed stipulation, ask FPL clarifying questions, and, if appropriate,  
21 agree on revisions to the proposed stipulation. If agreement is reached on the  
22 proposed stipulation, it can then be addressed at the November 2002 Fuel  
23 Hearing for Commission approval. If approved by the Commission, the Company  
24 will implement this stipulation in February 2003 rather than January 2003. (Note:  
25 One fuel factor will be set as usual for the twelve months, January through

1 December 2003.) In following years, FPL proposes to submit its hedging plan  
2 every April 1st, allowing the parties even more time to fully review and  
3 evaluate FPL's proposed stipulations for those years.

4

5 **Q. Regarding item no. 7 on page 17 of Mr. Bohrmann's Testimony, he**  
6 **states a concern, that under FPL's proposal, FPL would no longer**  
7 **record actual natural gas and residual oil costs on the monthly A**  
8 **Schedules filed with the Commission. Please comment.**

9 A. Mr. Bohrmann is correct that, under FPL's proposal the A Schedules will  
10 reflect recoverable fuel costs rather than actual fuel costs for natural gas and  
11 residual fuel oil. However, the actual costs will be available for review  
12 through the Commission's audit process and, if needed, FPL would agree to  
13 file an appropriate supplemental schedule.

14

15 **Q On page 14 of his testimony, Mr. Bohrmann states that if the**  
16 **Commission believes an incentive is warranted, it should approve the**  
17 **incentive mechanism as part of a pilot program with a minimum two**  
18 **year term. Please comment on this.**

19 A. FPL believes that a pilot program is not needed since the Commission  
20 reviews the Fuel Cost Recovery Clause on an annual basis.

21 **Q. Does that conclude your rebuttal testimony?**

22 A. Yes it does.
