CHAIRMAN JABER

CHAIRMAN LILA JABER &  
COMMISSIONERS OF THE  
PUBLIC SERVICE COMMISSION  
STATE OF FLORIDA  
2540 SHUMARD BLVD  
TALLAHASSEE, 32399-0850

July 16, 2002

Dear Chairman Lila Jaber,

RE: ALOHA UTILITIES INC.

I have been authorized to forward to you and to the Members of the Public service Commission the accompanying petition signed by **1491** individuals of **1314** households from a small but clearly defined part of the Seven Springs Area of the Aloha Utilities. A map is enclosed for identification of this area.

This petition represents close to **80%** of the domestic customers of Aloha Utilities who over a number of years have continued to experience unsatisfactory quality in their potable water in the form of 'black water', rotten egg smell, copper pipe corrosion or combinations of these manifestations. The number would have been higher if those who winter in this area of Florida were available to sign the petition.

This petition is a demonstration that Aloha Utilities has consistently misrepresented the extent of the dissatisfaction of its customers to you in its testimony at the many hearings that have been held by the PSC in the past.

In as much as neighboring Utilities such as Pasco County and Pinellas County water Utilities have been able to provide water of much better quality, the Petitioners would like you to take *all measures necessary to give them the relief that they are seeking, including transfer to Pasco County Water Utility Service.*

I have presented evidence to you over the last seven months which suggests that the processing methods used by Aloha might be inappropriate and that its physical plant may be inadequate to meet the 'competitive standard' you upheld in your order PSC 02-593-FOF-WU. I am enclosing a letter from Mr Hoofnagle, Administrator of Drinking Water program of the FDEP in Tallahassee, agreeing with this observation.

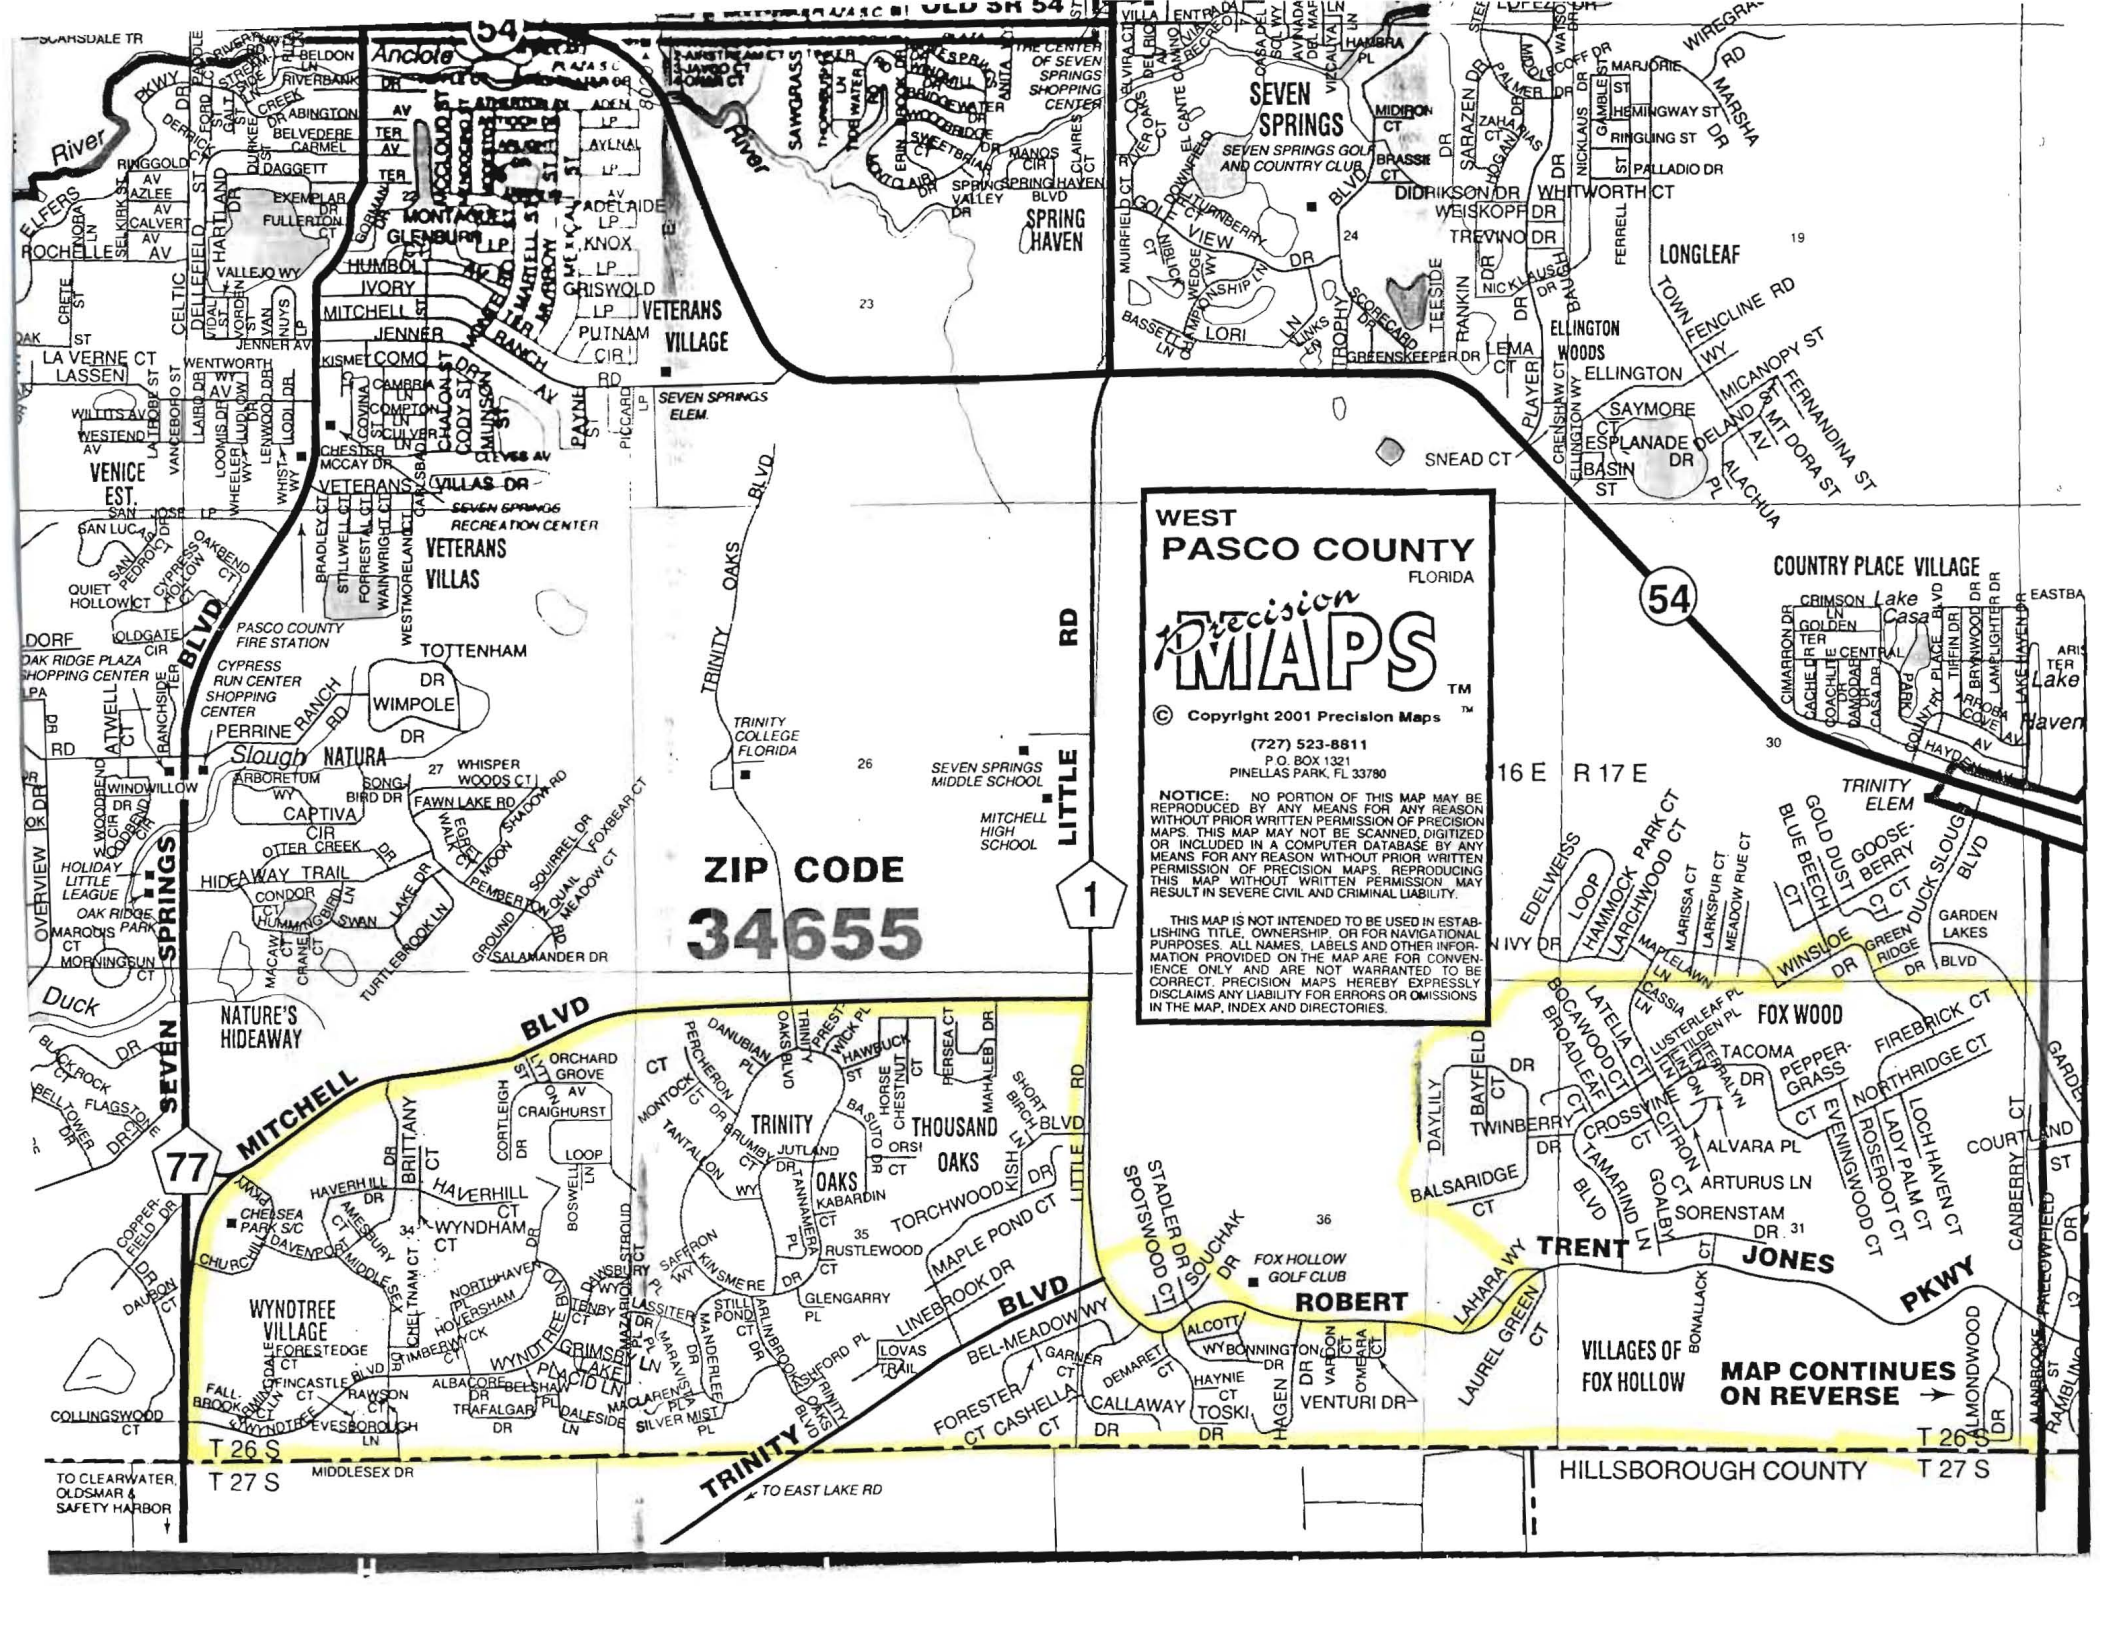

The Petitioners have instructed me to request a written acknowledgement of their petition.

Thank you for consistently giving us the opportunity to present before you our demands for better quality water and for your recent orders to the Aloha Utilities towards achieving that objective.

Yours sincerely,

*V. Abraham Kurien*  
V. Abraham Kurien, M.D.

Dr. V. Abraham Kurien, M.D.  
1822 Orchard Grove Avenue  
New Port Richey, Florida 34655-4716

Dear Dr. Kurien:

I have received your letter of June 20, 2002. Your observation that Aloha might be using inadequate methodology is correct. Unfortunately the oxidation of hydrogen sulfide to sulfur and sulfate with chlorine is not an irreversible process. Under the proper conditions, sulfur bacteria will convert the sulfates back to hydrogen sulfide. This phenomenon is common and frequent with water systems in Florida that use this method of treatment to deal with hydrogen sulfide.

The most effective method of treating for hydrogen sulfide is to remove it. Enclosed is a diagram of the Sulfide Species Distribution vs. pH.  $H_2S$  is volatile while  $HS^-$  and  $S^{2-}$  are not. The accepted practice is to lower the pH of the raw water to 6.0 to 6.5 so that 80-90% of the species is in the  $H_2S$  form and then aerate the water. That process takes out both the  $H_2S$  and a significant portion of the alkalinity as  $CO_2$ . Additional treatment is then required to raise the pH back to around 7.5 and replace the alkalinity that is needed to stabilize the water.

Aloha has stated that the company is willing to invest in the additional treatment as long as the Public Service Commission (PSC) will guarantee it a rate increase. The customers of Aloha have told the PSC on numerous occasions that they are not willing to pay higher rates, and the PSC has declined to guarantee additional rates. As a medical doctor, you can appreciate that additional, advanced treatment cannot be provided free of charge.

Your understanding of the chemical process is correct. Chlorination will reduce the pH of the water, and this very well could account for the lower pHs that we have seen. I should point out, however, that the generation of hydrogen sulfide is a natural process caused by anaerobic bacteria. As a result, amount of  $H_2S$  appearing in raw well water can vary significantly on a day-to-day basis. That said however, it certainly is desirable to have a constant pH in the range of 7.3 to 7.6. Our Tampa office will continue to investigate. We will see if there is any action we can take under other rules, like the Lead and Copper Rule, to require Aloha to stabilize the water to a more consistent level.

You inquired about the possibility of Aloha superchlorinating the water. I think that is very unlikely. Superchlorination is not a treatment technique normally used by groundwater treatment plants. Occasionally surface water treatment plants will superchlorinate to deal with

*"More Protection, Less Process"*

*Printed on recycled paper.*

Dr. V. Abraham Kurien  
July 3, 2002  
Page 2 of 2

severe tastes and odors caused by algae and other organics. The chlorine is usually injected at the beginning of treatment. Excess chlorine is then removed prior to filtration using activated carbon.

However, the state does require by rule that water systems maintain a minimum of 0.2 mg/L free chlorine at all points in the distribution system. In order to obtain that level of free chlorine, the water system must practice what we call breakpoint chlorination. I have include two pages from a US EPA reference on breakpoint chlorination.

In addition, I have reproduced a few other articles from my files on hydrogen sulfide that you might find interesting. Thank you for your interest in this problem.

If you have any questions or concerns, please call me at 487-1762.

Sincerely,

Van Hoofnagle, Administrator  
Florida Drinking Water Program

Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory of any utility" to

sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.

Customers of Aloha Utilities Inc.,  
The Seven Springs Area  
Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory of any utility" to sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.

The Seven Springs Area Customers of Aloha Utilities Inc.,  
Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC.

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methodologies (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methodology has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect minimum effective requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory" of any utility to

sequester the Seven Springs Area from Aloha Utility and make it part of the service area of Pasco County water utility system.

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory of any utility" to

sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.

Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional **processing methods**, the Public Service Commission is hereby requested to exercise its authority of "granting a **certificate** and setting the service territory of any utility" to

sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.

Customers of Aloha Utilities Inc.,  
The Seven Springs Area  
Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory of any utility" to

sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.

Customers of Aloha Utilities Inc.,  
The Seven Springs Area  
Pasco County  
Florida

The Public Service Commission  
State of Florida  
2540 Shumard Oak Boulevard,  
TALLAHASSEE, FL 32399-0850

July 15, 2002

Hon. Members of the PSC,

We the undersigned customers of Aloha Utilities Inc, request the Public Service Commission of the State of Florida, which "has exclusive jurisdiction over each utility with respect to its authority, service and rates" and which jurisdiction "includes granting of a certificate and setting its service territory" to grant us relief from being 'captive customers' of the above *utility monopoly* for the following reasons.

1. Aloha Utilities has not been providing potable water to customers in our service area that meet the concept of 'competitive standard' set out by the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU, as evidenced by the continuing high incidence of 'black water', 'rotten egg smell' and copper pipe corrosion, issues that have not been remedied since being raised almost ten years ago, whereas neighboring Utilities have effectively reduced such problems.
2. Aloha Utilities Inc. has not instituted available processing methods (adopted by neighboring Pasco and Pinellas County Utilities) that have reduced the incidence of copper pipe corrosion and 'black water' but has continued with the *sole* method of super chlorination, which has so far proved ineffective and can have serious side effects.
3. Aloha Utilities has demonstrated an unwillingness and/or inability to meaningfully address our concerns by improving the characteristics of potable water so as not to cause harm to our property and/or health, and has continually stone-walled all recommendations for solving the problems using legalistic claims that it already provides 'clean, clear and safe' drinking water.
4. Aloha Utilities' lack of transparency about its water processing plant and methods has undermined the confidence of the customers in the safety of the water it supplies.

THEREFORE, we request that the Plan of Action that Aloha Utilities has been asked to submit to the PSC in its April 30, 2002 Order No PSC 02-593-FOF-WU be approved only after an independent audit of Aloha's processing plant and methodology and only if the Action Plan contains the minimum requirements adopted by neighboring utilities for raw water processing and if a Citizens' Advisory Committee is created to monitor the effectiveness of any plan that is accepted.

We would further request the PSC to order Aloha Utilities Inc. to put into effect new minimum requirements for processing water by April 30, 2003 in the hope that an earlier institution of remedial methods will lessen the likelihood of additional damage to our copper plumbing as well as the continued formation of hydrogen sulfide in CPVC systems.

IF SIGNIFICANT RESOLUTION OF THE PROBLEMS DOES NOT OCCUR by June 30, 2003 even after the institution of additional processing methods, the Public Service Commission is hereby requested to exercise its authority of "granting a certificate and setting the service territory of any utility" to

sequester the Seven Springs Area from Aloha Utilities and make it part of the service area of Pasco County water utility system.
