Re: Docket No. 020129-TP (CCS7 Tariff)

Dear Ms. Bayó:

Enclosed is an original and fifteen copies of BellSouth Telecommunications, Inc.'s late-filed hearing exhibit (Exhibit No. 16 – Description of Signaling PIU), which we ask that you file in the captioned docket.

A copy of this letter is enclosed. Please mark it to indicate that the original was filed and return the copy to me. Copies have been served to the parties shown on the attached Certificate of Service.

Sincerely,

Patrick W. Turner

(+) Signed Protective Agreement

New Language to Update “Jurisdictional Factor Reporting Guide:”

4.11.a. BellSouth CCS7 Access Arrangement SPIU

If a carrier has access to CCS7 Signaling Services monitoring software, then that carrier may use this software to identify the appropriate jurisdictional factors (SPIU/SPLU) on its signaling with BellSouth and report these factors in the same format detailed herein.

If, however, a carrier does not have access to CCS7 Signaling Services monitoring software, then an SPIU for CCS7 Signaling Services shall be developed and reported based upon the associated billed minutes of use for SWA Usage-based services. The signals associated with billed minutes that are jurisdictionally *interstate*, as a percentage of the signals associated with total billed minutes shall be reported as the CCS7 Access SPIU. Where the customer is a “Third Party Provider” of CCS7 services then the SPIU will be developed based upon a weighted average of all of that provider’s “Third Party Customer’s” end user traffic. Carriers developing and reporting an SPIU in this manner shall inform BellSouth of the methodology used to determine the signals associated with billed minutes that are jurisdictionally interstate and the methodology used to determine the signals associated with total billed minutes

4.11.b. BellSouth CCS7 Access Arrangement SPLU

If a carrier has access to CCS7 Signaling Services monitoring software, then that carrier may use this software to identify the appropriate jurisdictional factors (SPIU/SPLU) on its signaling with BellSouth and report these factors in the same format detailed herein.

If, however, a carrier does not have access to CCS7 Signaling Services monitoring software, then an SPLU for CCS7 Signaling Services shall be developed and reported based upon the associated billed minutes of use for SWA Usage based services and Local Interconnection services. The signals associated with billed minutes that are jurisdictionally *local* as a percentage of the signals associated with total *intrastate* billed minutes shall be reported as the CCS7 Access SPLU. Where the customer is a “Third Party Provider” of CCS7 services then the SPLU will be developed based upon a weighted average of all of that provider’s “Third Party Customer’s” end user traffic. Carriers developing and reporting an SPLU in this manner shall inform BellSouth of the methodology used to determine the signals associated with billed minutes that are jurisdictionally local and the methodology used to determine the signals associated with total intrastate billed minutes.

4.11.c. BellSouth CCS7 Access Arrangement: Special Note

In determining a factor for *intrastate, non-local traffic*, consider the following example:

Based on evaluating SWA usage-based services and local interconnection services, a BellSouth carrier customer has determined that its signaling traffic merits an SPIU of 80 and an SPLU of 60. As such, the following will then be true:

80% of the carrier's signaling messages will be billed as *interstate*.
Of the remaining **20%**, 60% of the 20% ($.60 \times .20 = .12$), **12%** will be billed as *local*.
And, the final **8%** will be billed as *intrastate, non-local*.
