Re: Compliance Filing Concerning Proposal to Establish GridFlorida
As a Regional Transmission Organization; Docket No. 020233-EI

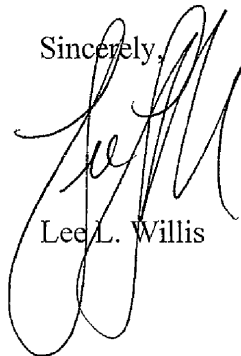

Dear Ms. Bayo:

Enclosed for filing in the above referenced are the original and fifteen (15) copies of Prepared Joint Direct Testimony of William R. Ashburn on behalf of Tampa Electric Company and Florida Power & Light Company.

Please acknowledge receipt and filing of the above by stamping the duplicate copy of this letter and returning the same to this writer.

Thank you for your assistance in connection with this matter.

Sincerely,

Lee L. Willis

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

PREPARED JOINT DIRECT TESTIMONY

OF

WILLIAM R. ASHBURN

Q. Please state your name, address, occupation and employer.

A. My name is William R. Ashburn. My business address is 702 North Franklin Street, Tampa, Florida 33602. I am Director, Pricing and Financial Analysis for Tampa Electric Company ("Tampa Electric" or "the company").

Q. Please provide a brief outline of your educational background and business experience.

A. I received a Bachelor of Science degree in Business Administration with a concentration in economics from Creighton University. Upon graduation, I joined Ebasco Business Consulting Company where my consulting assignments included the areas of cost allocation, computer software development, electric system inventory and mapping, cost of service filings and property record development.

1 In 1983, I joined Tampa Electric as a Senior Cost
2 Consultant in the Rates and Customer Accounting
3 Department. At Tampa Electric I have held a series of
4 positions with responsibility for embedded and marginal
5 cost of service studies, rate filings, marketing
6 planning, rate design, implementation of new conservation
7 and marketing programs, customer survey and various state
8 and federal regulatory filings. In March 2001, I was
9 promoted to my current position of Director, Pricing and
10 Financial Analysis in Tampa Electric's Regulatory Affairs
11 department. I am a member of the Economic Regulation and
12 Competition Committee of the Edison Electric Institute
13 and the Rate Committee of the Southeastern Electric
14 Exchange.

15
16 **Q.** Have you previously provided testimony on GridFlorida
17 transmission rates and rate design to the Florida Public
18 Service Commission ("FPSC" or "the Commission")?
19

20 **A.** Yes, I provided joint direct testimony in Docket No.
21 010577-EI on behalf of Florida Power Corporation, Florida
22 Power & Light Company and Tampa Electric (collectively
23 referred to as the "GridFlorida Companies") as well as
24 separate direct testimony in the same docket on behalf of
25 Tampa Electric. The joint direct testimony addressed the

1 features and benefits of GridFlorida's transmission
2 pricing protocol and rate design. The company-specific
3 direct testimony addressed the estimated impact on the
4 company's retail rates associated with the proposed
5 transfer of transmission assets to the proposed
6 GridFlorida.

7
8 **Q.** What is the purpose of your testimony in this proceeding
9 and on whose behalf are you presenting?

10
11 **A.** The purpose of my testimony is to address the appropriate
12 demarcation date for new contracts for transmission
13 service ("New Contract Date") which is sometimes referred
14 to as the Attachment T cutoff date. My testimony also
15 addresses the date after which the costs of new
16 transmission facilities are recovered through the system-
17 wide rate ("New Facilities Date"). I am presenting this
18 testimony on behalf of Florida Power & Light Company and
19 Tampa Electric Company.

20
21 **Q.** Have you prepared an exhibit to support your testimony?

22
23 **A.** Yes. My Exhibit No. ____ (WRA-1) was prepared under my
24 direction and supervision and consists of one document.

25

1 Q. You indicated that the New Contract Date is sometimes
2 referred to as the Attachment T cutoff date. Please
3 describe Attachment T.

4
5 A. Attachment T is the section of the GridFlorida
6 transmission tariff that, in part, describes the rules
7 applicable to existing transmission agreements, including
8 the methodology to determine whether an existing long-term
9 transmission agreement will qualify as a grandfathered
10 agreement and the subsequent treatment of such agreements.

11
12 Q. What is the significance of an existing long-term
13 transmission agreement being designated as a grandfathered
14 transmission agreement?

15
16 A. The charges under grandfathered agreements remain in
17 effect during years 1-5, and are phased out over years 6
18 through 10 of GridFlorida operations. This is an
19 important component of the measures to mitigate cost
20 shifts contained in the GridFlorida pricing plan. Any
21 "pancaked" charges under agreements entered into after the
22 New Contract Date are eliminated immediately upon
23 commencement of GridFlorida operations.

1 Q. Why is it important to phase out charges under
2 grandfathered transmission agreements over a ten-year
3 period, rather than immediately?
4

5 A. Grandfathered transmission agreements provide revenues
6 that have helped pay for the transmission revenue
7 requirements of the utilities. Immediate loss of these
8 revenues would result in an abrupt and sizable cost shift
9 of revenue requirement recovery to native load, primarily
10 retail customers. By phasing out the loss of such
11 revenues, native load is protected from an immediate cost
12 impact. The eventual impact can then be phased in over
13 time as other benefits of GridFlorida are realized. The
14 phase-out concept is also founded on equity and the
15 principle that cost incurrence should follow cost
16 causation. Some of these existing agreements have
17 required substantial construction of transmission
18 facilities within the utility's service area to provide
19 service, the cost of which is included in the overall
20 revenue requirements of the utility. Without the revenues
21 from the grandfathered contracts, the costs incurred to
22 serve those contracts shift to, and thereby increase the
23 cost of service borne by, native load customers located
24 within the zone of the grandfathered transaction.
25

1 Q. What is the New Contract Date specified in Attachment T to
2 determine what qualifies as an existing long-term
3 transmission agreement?

4
5 A. In the original GridFlorida filing at the Federal Energy
6 Regulatory Commission ("FERC"), the New Contract Date
7 specified in Attachment T was defined as December 15, 2000
8 (the date of the filing at FERC.) This New Contract Date
9 was included in Attachment T to clearly delineate whether
10 a given contract would be assigned grandfathered status.

11
12 In the March 20, 2002 compliance filing with the
13 Commission, the GridFlorida Companies changed the New
14 Contract Date to be "on or after January 1 of the year the
15 Transmission Provider begins commercial operations . . ."
16 As revised, the New Contract Date is the same as the New
17 Facilities Date which determines when existing facilities
18 (and included in the zonal rate) or new transmission
19 investment (and included in the system-wide rate). Thus,
20 investments or new agreements entered into on or after
21 January 1 of the year GridFlorida begins commercial
22 operations will be considered new transmission investment
23 and new agreements.

24

1 Q. Why was the original New Contract Date set as December 15,
2 2000?

3
4 A. The December 15, 2000 date was set in the initial filing
5 to be compatible with the FERC schedule that required
6 GridFlorida to be in service by December 2001. With the
7 commercial operation date of GridFlorida following closely
8 upon the New Contract Date, it was expected that the
9 effects of the phase-out would be synchronized with the
10 benefits to be achieved from the RTO. This was true for
11 all parts of the pricing plan.

12
13 Q. Why was December 15, 2000 originally selected as the New
14 Contract Date, rather than December 31, 2000, which was
15 originally selected as the New Facilities Date?

16
17 A. The New Contract Date was set for December 15 to coincide
18 with the date GridFlorida filed with FERC. It was also
19 established on that date to alleviate concerns that the
20 time between the filing date and December 31 would create
21 a two-week window of opportunity where parties seeking an
22 advantage might enter into a contract that would impose on
23 retail ratepayers the cost of any new facilities or remove
24 benefits from those ratepayers.

25

1 The New Facilities Date was set for December 31 to
2 facilitate plant accounting administration. The
3 GridFlorida Companies planned to make a rate filing at
4 least 60 days prior to the startup of GridFlorida
5 operations using the year ending December 31, 2000 as the
6 test year for existing facilities.

7
8 **Q.** Is there a relationship between the New Contract Date,
9 the New Facilities Date and the date GridFlorida commences
10 commercial operations?

11
12 **A.** The New Contract Date and the New Facilities Date are
13 related in that transmission agreements that are eligible
14 for grandfathered treatment (e.g., new transmission
15 service agreements under company-specific tariffs, new
16 interconnection agreements, etc.) can be a major cause of
17 new transmission investment, the rate treatment of which
18 under the GridFlorida pricing plan is dependent upon
19 whether such investment is classified as existing or new
20 facilities. And as explained above, this classification
21 is determined by the New Facilities Date. Consequently,
22 both dates should be established relatively close to the
23 date that GridFlorida commences commercial operation. For
24 this reason, the Applicant's compliance filing established

1 both dates as January 1 of the year GridFlorida commences
2 operations.

3

4 **Q.** Why did the GridFlorida Companies change the December 15,
5 2000 New Contract Date and December 31, 2000 New
6 Facilities Date to January 1 of the year GridFlorida
7 begins commercial operations in their March 20, 2002
8 compliance filing?

9

10 **A.** The GridFlorida Companies explained this change in the
11 compliance filing:

12

13 This change reflects the fact that the
14 commercial operations date for GridFlorida
15 has already been delayed beyond the original
16 proposed date. The phase-in plan was
17 designed to mitigate cost shifts to
18 GridFlorida customers. If the date
19 delineating new versus existing investment
20 was not moved, a number of facilities would
21 be considered new investment, thus charged
22 to all load through the system-wide charge.
23 This would exacerbate, rather than limit,
24 cost shifts. Further, if the date for
25 automatic phase-in of existing agreements

1 were not also moved, then facilities may be
2 put into service in response to new service
3 requests which would have to be recovered
4 from zonal load without concurrent revenues
5 from a grandfathered agreement.

6
7 The change in expected commercial operations date resulted
8 from a number of factors, including FERC decisions, the
9 Commission's December 2001 order which required a
10 compliance filing in March 2002, subsequent proceedings at
11 the Commission after that filing, as well as follow-on
12 filing(s) at FERC to reflect Commission-mandated changes.
13 The impact of maintaining the specific dates contained in
14 the original GridFlorida filing would result in immediate,
15 unmitigated cost shifts upon start-up of GridFlorida
16 operations without the desired synchronism, or reasonable
17 contemporaneity of the transition dates, with the benefits
18 from the RTO for native load customers.

19
20 **Q.** By changing the New Contract Date, will any party be
21 competitively advantaged by entering into new contracts in
22 advance of the new cutoff date?

23
24 **A.** No. By deferring the New Contract Date to January 1 of
25 the year of GridFlorida commercial operations, all

1 stakeholders will have adequate notice of the scope of
2 grandfathered transactions. This advance public notice,
3 coupled with the uncertainty of when exactly GridFlorida
4 will commence commercial operations, serves to reduce any
5 opportunity for gaming.

6
7 **Q.** How will changing the New Contract Date affect the
8 expected level of cost shift mitigation approved by the
9 Commission?

10
11 **A.** Changing the New Contract Date to on or after January 1 of
12 the year GridFlorida begins commercial operations will
13 preserve the cost shift mitigation framework previously
14 approved by the Commission. Under the original
15 GridFlorida proposal, there was only a brief delay of one
16 year between the New Contract Date and the date of
17 expected GridFlorida operations and concomitant
18 implementation of the pricing plan, including the cost
19 shift mitigation measures. As the length of time between
20 the date of commercial operations and the New Contract
21 Date increases, the amount of resultant cost shifting will
22 be greater. This is because revenues counted on to
23 benefit native load will be lost. Capital investments
24 made in one rate zone to facilitate contracts entered into
25 after the New Contract Date will be recovered from native

1 load in that zone without the benefits of revenues
2 collected from grandfathered contracts. Cost shift
3 mitigation should be implemented at the same time as the
4 start of commercial operations, so that the change in the
5 commercial operations date resulting from ongoing
6 regulatory review will not lead to increased costs to
7 native load.

8
9 It is important to note in this regard that it was equally
10 essential to move the New Facilities Date. If the New
11 Facilities Date is not moved as the start-up date moves, a
12 large accumulation of transmission additions will be
13 considered new facilities and will be immediately included
14 in the system-wide charge. For example, if GridFlorida
15 starts in 2004, that accumulation would be of the three
16 year period 2001-2003 and will result in wide-spread,
17 immediate cost shifts. The system-wide charge was
18 intended to increase over time not overnight. If the New
19 Contract Date is not also moved in tandem, then facilities
20 put into service in response to new service requests will
21 be paid by zonal load rather than system-wide load which
22 concentrates the cost shift to the zone.

23
24 Q. Can you provide an example to demonstrate this problem?
25

1 **A.** Yes. In Document No. 1 of my exhibit, I illustrate a
2 hypothetical example to demonstrate that keeping the New
3 Contract Date more than one year apart from the New
4 Facilities Date could "trap" significant transmission
5 investment costs leaving them to be paid on the first day
6 of commercial operations by native load.

7
8 Suppose Utility A (rate Zone A) had a \$120.0 million
9 transmission revenue requirement on December 31, 2000 with
10 a resulting rate of \$1.20 per kW/month and served only
11 retail load within Zone A. Suppose further that Utility A
12 receives a transmission service request from Utility B
13 under Utility A's current, company specific transmission
14 tariff which results in Utility A entering into a long-
15 term firm point-to-point transmission service agreement to
16 deliver power to the system of Utility B. Suppose that
17 requires Utility A to make investment in additional
18 transmission facilities necessary to provide service to
19 Utility B under that agreement, which would result in an
20 additional \$12.0 million in revenue requirements (a 10
21 percent increase in Zone A costs with a similar increase
22 in system load requirements.) Next assume that these
23 additional facilities must be put into service by December
24 31, 2002 to enable transmission service to commence in

1
2
3

20
21
22
23
24

2003. Finally, assume that GridFlorida does not go into commercial operation until December 31, 2004.

The \$12.0 million in additional transmission facilities revenue requirements would be recovered from Zone A rates when GridFlorida begins commercial operations. In year one of GridFlorida operations the revenue requirements for Zone A will be collected only from load within Zone A less revenues collected from any grandfathered transmission agreements.

If the New Contract Date is set at January 1 of the year commercial operations of GridFlorida begin, then the revenue requirement for Zone A would be set at the overall revenue requirement for the total transmission facilities in service at that time less the revenues collected from the grandfathered contract. As can be seen in Document No. 1, the retail load within Zone A would be protected day one from any cost shifts and would pay the same effective rate as before the additional facilities were put into service. That protection would extend for five years and then phase out 20 percent per year starting in year six under the GridFlorida pricing plan.

1 If the New Contract Date is set at the original date
2 (December 15, 2000) there would be a very different impact
3 to Zone A retail load. Under this scenario, because the
4 new transmission contract that required the expansion and
5 increase in Zone A transmission cost was executed after
6 the original New Contract Date, it is not grandfathered.
7 Consequently, revenues that would otherwise be collected
8 from the grandfathered contract under its existing
9 transmission tariff would be lost immediately, and rates
10 for Zone A (paid for by retail customers) would rise more
11 than 10 percent on day one of commercial operations of
12 GridFlorida (from \$1.20 to \$1.33 per kW) and the \$12.0
13 million would be their responsibility. This represents an
14 immediate cost shift that the pricing plan of GridFlorida
15 was designed to mitigate.

16
17 **Q.** The GridFlorida Companies made a compliance filing at FERC
18 on May 29, 2001. What were the GridFlorida Companies
19 expectations at that time with respect to the commercial
20 operations date of GridFlorida?

21
22 **A.** When the compliance filing was made with FERC on May 29,
23 2001, the GridFlorida Companies had no authority to extend
24 the effective date of operation of GridFlorida. In fact,
25 FERC was showing a great deal of resolve to assure that

1 operations would begin by the original start-up date (or a
2 date reasonably close to that date). It was not clear
3 until later in 2001 that the GridFlorida commercial
4 operations date would likely be much later than the
5 original dates mandated by FERC. Moreover, the zonal rate
6 impact from keeping the original New Contract Date
7 increases over time. The delays necessitated by the FERC
8 compliance stage coupled with the delay necessitated by
9 the Commission's review process of GridFlorida and any
10 subsequent regulatory or legal review, will increase the
11 cost impacts were the Commission to retain the original
12 New Contract Date.

13
14 **Q.** Was it reasonable for any party to rely on either the New
15 Contract Date or New Facilities Date as originally
16 proposed by the Applicants?

17
18 **A.** Although project developers and other parties actively
19 engaged in market transactions while RTOs are in their
20 formative stages may choose for their own business
21 purposes to assume the existence of certain elements of
22 RTO proposals, reliance upon the continuity of any
23 particular aspect of RTO development is inherently risky,
24 because the details of those proposals, various mechanisms
25 of implementation, and certainly the timing of commercial

1 operations are subject to continuing change. The benefits
2 of allowing an RTO proposal to evolve and adapt to
3 changing circumstances outweigh the costs and burdens of
4 maintaining a static proposal, particularly where, as is
5 the case here, the effects of precluding the proposed
6 changes will undermine core structural elements of the
7 overall RTO design.

8
9 RTO formation in Florida and nationwide has been a fluid
10 process. RTO proposals have evolved to meet changed
11 circumstances, to obtain the benefits of stakeholder
12 consensus, and to reflect current public policy objectives
13 of both state and federal regulators. GridFlorida has
14 been no exception. Utilities, generators and their
15 prospective customers are fully capable of dealing with
16 uncertainty, and in fact the ongoing difficulties in
17 developing RTOs nationwide have tested that capability.
18 Indeed, generators and their prospective customers can
19 (and have) contractually allocated the risk of all aspects
20 of RTO development, including the risk that dates may
21 change or even that the RTO may never enter commercial
22 operations at all.

23
24 Q. But did not the GridFlorida Companies specifically address
25 de-pancaking rates under certain agreement?

1 A. They did. In an answer filed at FERC on February 16, 2001
2 ("Answer"), the GridFlorida Companies addressed concerns
3 raised by Calpine Eastern Corporation ("Calpine")
4 regarding the point-to-point service agreement it intended
5 at the time to enter into with Tampa Electric for
6 transmission service from a 534 MW combined-cycle unit
7 Calpine is planning to construct to Seminole Electric
8 Cooperative ("Seminole"). The GridFlorida Companies
9 stated:

10
11 After the GridFlorida OATT is placed into
12 effect, the service Calpine obtains from
13 [Tampa Electric], like other long-term
14 transmission service entered into after
15 December 15, 2000, will be converted to
16 service under the GridFlorida OATT.
17 [citation omitted] To the extent Calpine
18 is a designated network resource to serve
19 Seminole network load under the
20 GridFlorida OATT, no additional
21 transmission charge will apply to transmit
22 power from the Calpine unit to the
23 Seminole network load, *i.e.*, Calpine will
24 not be subject to an additional point-to-
25 point charge for sales from a designated
26 network resource.

27 Answer at 116. This statement was made at an even earlier
28 stage than the May 29 compliance filing I discussed above,
29 and indeed was made prior to FERC's first order addressing
30 GridFlorida rate issues or the GridFlorida structure
31 (other than governance matters, which FERC previously had
32 addressed). For the reasons I explained above, it was

1 even less justified to rely on these statements than later
2 GridFlorida tariff language.

3

4 **Q.** What is the appropriate GridFlorida Contract Date and New
5 Facilities Date?

6

7 **A.** The appropriate dates for both should be January 1 of the
8 year of commercial operations of GridFlorida. The
9 grandfathering of existing contracts as of that date, the
10 implementation of a system-wide rate for new facilities
11 built as of that date, and the phase-out plan developed by
12 the GridFlorida Companies, synchronized with the benefits
13 that will accrue from GridFlorida operations, will provide
14 the best matching of costs with benefits for native load
15 customers of the utilities.

16

17 **Q.** Please summarize your testimony.

18

19 **A.** The original GridFlorida Contract Date and New Facilities
20 Date are now obsolete. Their retention would exacerbate
21 the cost shifts described above and negate any
22 synchronization of benefits from GridFlorida being
23 provided to native load. To avoid recurrence of this
24 problem, the GridFlorida Companies have proposed a revised
25 GridFlorida New Contract Date and New Facilities Date to

1 be January 1 of the year of commercial operations of
2 GridFlorida. These revised dates will accommodate any
3 further unanticipated delay in the startup of GridFlorida
4 operations and will preserve the benefits of the cost
5 shift mitigation aspects of the GridFlorida pricing plan.

6

7 **Q.** Does this conclude your testimony?

8

9 **A.** Yes, it does.

TREATMENT UNDER CURRENT TRANSMISSION TARIFF FOR UTILITY A

SCENARIO:

ASSUMES GRIDFLORIDA NOT YET IN EXISTENCE. UTILITY A SETS ITS TRANSMISSION SERVICE TARIFF RATES BASED ON ITS REVENUE REQUIREMENT AS OF 12/31/00. UTILITY B REQUESTS TRANSMISSION SERVICE UNDER THAT TARIFF AFTER 12/31/00. TO PROVIDE THE SERVICE, UTILITY A IS REQUIRED TO UNDERTAKE SYSTEM UPGRADES THAT ADD \$12 MILLION TO ITS REVENUE REQUIREMENT. UTILITY A RECEIVED REVENUES FROM BOTH (a) ITS NATIVE LOAD IN ITS ZONE AND (b) THE UTILITY B TRANSMISSION SERVICE AGREEMENT THAT MAKES IT WHOLE TO ITS REVENUE REQUIREMENT.

	BEFORE UTIL B'S SVC REQUEST	IMPACT OF UTILITY B'S SERVICE REQUEST	
	UTILITY A REV REQ 12/31/00	REQUIRED SYS UPGRADES	UTILITY A REV REQ 12/31/02
TRANSMISSION RATE BASE	\$ 858,000,000	\$ 65,800,000	\$ 943,800,000
TRANSMISSION REVENUE REQUIREMENT	\$ 120,000,000	\$ 12,000,000	\$ 132,000,000
LESS REVENUES FROM TRANSM AGREEMENTS	-	-	12,000,000
NET REVENUE REQUIREMENT TO NATIVE LOAD	\$ 120,000,000		\$ 120,000,000
NATIVE LOAD ZONE A (ASSUMES NO LOAD GROWTH) MW	8,300,000		
ANNUAL RATE	\$ 14.46		
MONTHLY RATE	\$ 1.20		
REVENUE FROM NATIVE LOAD IN ZONE A	\$ 120,000,000		\$ 120,000,000
REVENUE FROM CONTRACT WITH UTIL B	-		12,000,000
TOTAL REVENUE = TOTAL REV REQUIREMENT	\$ 120,000,000		\$ 132,000,000

NOTE (1)

RESULT: ALL LOAD PAYS. UTILITY A'S TOTAL REVENUE EQUALS ITS REVENUE REQUIREMENT.
NATIVE LOAD IN ZONE A IS NOT AFFECTED.

IMPACT OF DIFFERENT ATTACHMENT T CUTOFF DATES ASSUMING GRIDFLORIDA

SCENARIO: GRIDFLORIDA OPERATIONS COMMENCE 12/31/04

COLUMN 1 REFLECTS THE IMPACT OF A CUTOFF DATE OF 12/31/00.

SINCE UTILITY B REQUESTED TRANSMISSION SERVICE SUBSEQUENT TO THIS CUTOFF DATE, IT IS NOT A GRANDFATHERED EXISTING AGREEMENT AND UTILITY A RECEIVES NO REVENUES TO OFFSET ITS REVENUE REQUIREMENT RATES TO UTILITY A'S NATIVE LOAD RISE 10%.

COLUMN 2 REFLECTS THE IMPACT OF A CUTOFF DATE THAT TIES TO THE COMMENCEMENT OF GRIDFLORIDA'S OPERATIONS:

UTILITY B'S AGREEMENT IS A GRANDFATHERED EXISTING AGREEMENT. UTILITY A CONTINUES TO RECEIVE REVENUES FROM THAT AGREEMENT DURING A PHASE-OUT PERIOD. THOSE REVENUES OFFSET ITS REVENUE REQUIREMENT, MITIGATING THE IMPACT TO NATIVE LOAD RATEPAYERS IN ZONE A DURING THE PHASE-OUT PERIOD.

	(1)	(2)
	CUTOFF DATE 12/31/00	CUTOFF DATE JAN 1 of GF OPER
TRANSMISSION RATE BASE	\$ 943,800,000	\$ 943,800,000
TRANSMISSION REVENUE REQUIREMENT	\$ 132,000,000	\$ 132,000,000
LESS REVENUES FROM TRANSM AGREEMENTS	-	12,000,000
NET REVENUE REQUIREMENT TO NATIVE LOAD	\$ 132,000,000	\$ 120,000,000
NATIVE LOAD ZONE A (ASSUMES NO LOAD GROWTH)	8,300,000	8,300,000
ANNUAL RATE	\$ 15.90	\$ 14.46
MONTHLY RATE	\$ 1.33	\$ 1.20
REVENUE FROM NATIVE LOAD IN ZONE A	\$ 132,000,000	\$ 120,000,000
REVENUE FROM CONTRACT WITH UTILITY B	-	12,000,000
TOTAL REVENUE = TOTAL REV REQUIREMENT	\$ 132,000,000	\$ 132,000,000

NOTE (1)
