TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages occasionally are added to the tariff. When a new page is added between pages already in effect, a decimal is added to the page number. For example, a new page added between pages 14 and 15 would be 14.1.

- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in its tariff approval process, the most current page number on file with the Commission is not always the tariff page in effect.

- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
 - 2.
 - 2.1.
 - 2.1.1.
 - 2.1.1.1.
 - 2.1.1.1.A.
 - 2.1.1.1.A.(a).
 - 2.1.1.1.A.(a).I.
 - 2.1.1.1.A.(a).I.(i).
 - 2.1.1.1.A.(a).I.(i).(1).

Enumerated lists are identified with successive lower-case alphabetical codes [(a), (b), (c), etc.].

- D. Check Sheets - When a tariff filing is made with the Commission an updated check sheet accompanies the tariff filing. The check sheet lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated on the check sheet by an asterisk(*). There will be no other symbols used on the check sheet if these are the only changes made to it. The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

2.16 Allowances for Interruptions in Service

2.16.1 Interruptions in service, which are not due to the negligence of, or noncompliance with the provisions of this Tariff by, the Customer or the operation or malfunction of the facilities, power or equipment provided by the Customer, will be credited to the Customer as set forth in this Section 2.16. for the part of the service that the interruption affects.

2.16.2 Credit for Interruptions

2.16.2.1 A credit allowance will be made when an interruption occurs because of a failure of any component furnished by the Company under this Tariff. SECTION 3. EXPLANATION OF RATES

The regulations set forth in this section explain how to apply the rate table associated with the various services offerings described in Section 4.

3.1 Timing of Calls

3.1.1 Billing for calls placed over the Company's underlying carrier's network is based on the duration of the call. Timing begins when the called station is answered, as determined by standard industry methods generally in use for ascertaining answers, including answer supervision hardware by which the local telephone company sends a signal to the switch or the software utilizing audio tone detection. Timing ends when either party hangs up.

3.2 Computation of Charges

3.2.1 Calls will be billed in increments consisting of an initial period followed by additional periods (which may be of the same duration as or different duration than the initial period) as specified within the applicable service description set forth in Section 4 below.

3.3 Credit for Incomplete Calls and Wrong Numbers

3.3.1 The Company will not knowingly charge for incomplete calls or wrong numbers. Upon the Customer's request and proper verification, the Company shall promptly adjust and credit the Customer's account for charges or payment for any such calls.

SECTION 3. EXPLANATION OF RATES

3.5 Calculation of Distance

Where charges for a service are specified based upon distance, the following rules apply:

3.4.1 Distance between two points is measured as airline distance between the Rate Centers of the originating and terminating telephone lines. The Rate Center is a set of geographic coordinates, as referenced in National Exchange Carrier Association, Inc. Tariff FCC No. 4, associated with each NPA-NXX combination (where NPA is the area code and NXX is the first three digits of a seven-digit telephone number). Where there is no telephone number associated with an access line on the Company's network (such as a dedicated access line), the Company will apply the Rate Center of the Customer's main billing telephone number.

3.4.2 The airline distance between any two Rate Centers is determined as follows:

- (a) Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced NECA tariff.
- (b) Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.
- (c) Square each difference obtained in step (2) above.
- (d) Add the square of the "V" difference and the square of the difference obtained in step (3) above.
- (e) Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.
