COMMISSION  
CLERK

Re: Docket No. 030851-TP

Dear Ms. Bayó:

Enclosed are an original and fifteen copies of BellSouth Telecommunications, Inc.'s Surrebuttal Testimony of Al Varner, Ron Pate, Eric Fogle, Milton McElroy, Al Heartley, Ken Ainsworth, Christopher Pleatsikas, Debra Aron, Keith Milner Wayne Gray, Randy Billingsley, Jim Stegeman, Pam Tipton and John Ruscilli, which we ask that you file in the captioned docket.

A copy of this letter is enclosed. Please mark it to indicate that the original was filed and return the copy to me. Copies have been served to the parties shown on the attached Certificate of Service.

Sincerely,

*Nancy B. White*

1 BELL SOUTH TELECOMMUNICATIONS, INC.  
2 SURREBUTTAL TESTIMONY OF ALPHONSO J. VARNER  
3 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION  
4 FILED JANUARY 28, 2004  
5 DOCKET NO. 030851-TP

6

7 Q. PLEASE STATE YOUR NAME, YOUR POSITION WITH BELL SOUTH  
8 TELECOMMUNICATIONS, INC. ("BELL SOUTH") AND YOUR BUSINESS  
9 ADDRESS.

10

11 A. My name is Alphonso J. Varner. I am employed by BellSouth as Assistant  
12 Vice President in Interconnection Services. My business address is 675  
13 West Peachtree Street, Atlanta, Georgia 30375.

14

15 Q. ARE YOU THE SAME ALPHONSO J. VARNER WHO FILED DIRECT  
16 AND REBUTTAL TESTIMONY IN THIS PROCEEDING?

17

18 A. Yes I am.

19

20 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

21

22 A. My Surrebuttal Testimony is filed in response to several issues raised by  
23 CLEC witnesses Sherri Lichtenberg of MCI, Cheryl Bursh and Mark Van  
24 De Water of AT&T, Michael Gallagher of Florida Digital Network, Inc.,  
25 ("FDN") and Mark Neptune of Supra.

1 Q. HOW WOULD YOU GENERALLY CHARACTERIZE THE NATURE OF  
2 THE ARGUMENTS MADE BY THESE PARTIES?

3  
4 A. There are four (4) themes repeatedly asserted by the CLECs in an attempt  
5 to frustrate a finding by this Commission that they are not operationally  
6 impaired without access to local circuit switching offered as a UNE. The  
7 first assertion, and the most blatantly erroneous, is that the performance  
8 data provided in my Direct Testimony are not relevant to the issues to be  
9 addressed in this proceeding. In order to support this faulty conclusion, the  
10 CLECs engage in a narrow and clumsy interpretation of the FCC's  
11 Triennial Review Order ("TRO") and ignore other parts of the order that  
12 directly contradict their conclusion.

13  
14 Second, while claiming that the performance results are not relevant on  
15 the one hand, on the other hand the CLECs use these same data to argue  
16 that because UNE-P and UNE-L intervals are different, CLECs are  
17 automatically impaired without UNE-P. First, their conclusion does not  
18 comport with either the TRO or a practical assessment of whether  
19 impairment exists. Further, the CLECs did not fulfill the fundamental need  
20 to offer tangible evidence that the differences about which they comment  
21 constitute operational impairment.

22  
23 Next, most of the CLEC witnesses replay the contention that disaster  
24 looms in the future. Once again, they argue that unless BellSouth's  
25 systems and processes used in ordering, provisioning and maintaining

1           UNE-Loops are substantially more mechanized, the potential for errors in  
2           manual operations and the increased demand for UNE-L would cause  
3           BellSouth's performance to plummet. As a result, they claim that CLECs  
4           would be unable to compete if UNE-P was not required. In the past,  
5           CLECs claimed that this scenario was inevitable if BellSouth was allowed  
6           into the long distance business. Now, they imply that the sky will fall once  
7           again if UNE-P is eliminated and CLECs must rely on UNE-L.

8  
9           Finally, the CLECs falsely contend that unless the performance standards  
10          for UNE-P and UNE-L are exactly the same, CLECs will face operational  
11          barriers that would prohibit CLECs from competing effectively in the local  
12          mass market. In this instance, the CLECs rely on an unsound  
13          interpretation of the FCC statement in the TRO that it "is necessary to  
14          ensure that customer loops can be transferred from the [ILEC]...to a  
15          [CLEC] ...as promptly and efficiently as [ILECs] can transfer customers  
16          using local circuit switching." [fn. 1574] The CLECs raising this issue use  
17          an impractical inference as a basis to assert that any variation between  
18          UNE-P and UNE-L performance is enough to establish impairment.

19  
20   **I.    BELLSOUTH'S CURRENT PERFORMANCE RESULTS ARE NOT**  
21   **ONLY RELEVANT TO THIS PROCEEDING, BUT WITHOUT SUCH**  
22   **DATA THERE IS NO OBJECTIVE BASIS TO DETERMINE IF THE**  
23   **CLECS FACE OPERATIONAL IMPAIRMENT.**

1 Q. DO YOU HAVE ANY RESPONSE TO THE COMMENTS ON PAGE 3 OF  
2 MS. BURSH'S, PAGE 8 OF MR VAN DE WATER'S AND PAGE 2 OF MS.  
3 LICHTENBERG'S REBUTTAL TESTIMONY, WHERE EACH CITE  
4 PARAGRAPH 469 FROM THE FCC'S TRIENNIAL REVIEW ORDER AS  
5 A REASON TO CONCLUDE THAT BELLSOUTH'S CURRENT  
6 PERFORMANCE RESULTS ARE NOT RELEVANT IN THIS  
7 PROCEEDING?

8  
9 A. Yes. These witnesses cite the FCC's statement in paragraph 469 of the  
10 Triennial Review Order that "the number of hot cuts performed by BOCs in  
11 connection with the 271 process is not comparable to the number that  
12 incumbent LECs would need to perform if unbundled switching were not  
13 available for all customer locations served with voice-grade loops." This  
14 fragment is construed as the basis to declare that the current performance  
15 data are irrelevant. This conclusion is neither required by the TRO, nor is it  
16 a reasonable way for the Commission to proceed.

17  
18 Paragraph 469 merely indicates that ILECs, like BellSouth, cannot rely  
19 only on the findings in the 271 proceedings to conclude that there is no  
20 impairment for CLECs if unbundled switching is not available. The point  
21 that the FCC was making is that the question the state commissions must  
22 answer is how the ILEC will handle increased volumes. They did not  
23 dismiss current performance data as relevant evidence to be considered  
24 by state commissions. Moreover, in paragraph 512 of its Triennial Review

1 Order, the FCC encouraged the use of such data in these proceedings  
2 with respect to loop provisioning in general when it explains:

3 Evidence relevant to this inquiry might include, for example,  
4 commercial performance data demonstrating the timeliness  
5 and accuracy with which the incumbent LEC performs loop  
6 provisioning tasks and the existence of a penalty plan with  
7 respect to the applicable metrics. For the incumbent LECs  
8 that are BOCs subject to the requirements of section 271 of  
9 the Act, states may choose to rely on any performance data  
10 reports and penalty plans that might have been developed in  
11 the context of the past, pending, or planned application for  
12 long-distance authority.

13 Clearly, the FCC intended for states to use the facts of current  
14 performance instead of proceeding solely on the basis of unsupported  
15 assumptions as these witnesses propose.

16

17 The intent of the FCC's statement in paragraph 469 is to indicate why it  
18 could not find on a national basis that CLECs are not impaired without  
19 access to unbundled local switching, or hold unequivocally that they are  
20 impaired. If the FCC had made such a clear finding, there would be no  
21 need for the state proceedings. In footnote 1435 of the same paragraph  
22 469 that these witnesses cite, the FCC states: "our decision does not  
23 overlook the possibility that if in some markets the incumbents' ability to  
24 perform batch hot cuts does not pose impairment, the states may simply  
25 make the findings to this effect." In essence, these witnesses are  
26 proposing to unnecessarily restrict this Commission in its deliberations by  
27 ignoring factual data.

28

29 BellSouth's performance data evidence BellSouth's ability to perform loop  
30 provisioning in a timely and reliable manner. Hot cuts are simply a

1 specific type of loop provisioning activity. Thus, BellSouth's current  
2 exemplary performance data are relevant and important.

3

4 The performance data should be used in conjunction with the testimony of  
5 BellSouth witnesses such as Mr. McElroy and Mr. Ainsworth to determine  
6 whether operational impairment exists. The performance data calculated  
7 as prescribed by this Commission is an important part of this inquiry  
8 because it demonstrates the extent of BellSouth's commitment and action  
9 on that commitment to provide nondiscriminatory loop provisioning.  
10 BellSouth has shown a commitment to provisioning loops, including hot  
11 cuts in a timely and accurate manner for CLECs in Florida. These  
12 measurement results clearly show that performance does not pose an  
13 operational barrier to market entry for the CLECs. Performance data  
14 provided in my Direct Testimony offers a factual basis for the  
15 Commission's decisions instead of the unsupported assumptions offered  
16 by these witnesses.

17

18 Q. MS. BURSH, ON PAGE 2 OF HER REBUTTAL TESTIMONY ALLEGES  
19 THAT BELLSOUTH HAS TWISTED CURRENT PERFORMANCE DATA  
20 TO SUPPORT THE CLAIM THAT BELLSOUTH'S EXISTING  
21 PROCESSES WILL ADEQUATELY SUPPORT ANTICIPATED LOOP  
22 MIGRATION. DO YOU AGREE?

23

24 A. No, I disagree. As demonstrated in Exhibit AJV-1 to my Direct Testimony,  
25 BellSouth has shown a commitment to performing hot cuts in a timely and

1 accurate manner for CLECs in Florida. If Ms. Bursh considers the hot cut  
2 volumes to be low, they simply reflect the CLECs' choices, which  
3 according to Ms Bursh is rationale to penalize BellSouth. That aside, hot  
4 cuts are not a new process to BellSouth. The fact is BellSouth has been  
5 doing what we now call 'hot cuts' for many years. BellSouth has extensive  
6 experience in performing large numbers of hot cuts by completing the  
7 work steps required to transfer a geographic area from one wire center to  
8 another. These transfers are called 'Area Transfers.' Another example of  
9 the BellSouth's experience with 'hot cuts' is the T&F process, wherein a  
10 customer moves from one location to another within the same wire center.  
11 Both of these examples have been subject to Commission oversight for  
12 many years, even predating the Telecom Act of 1996. They have also  
13 been included in such retail measurements as Customer Trouble Report  
14 Rate.

15  
16 Further, when the Commission set performance standards for CLEC hot  
17 cuts, these standards did not have any volume limitations or constraints.  
18 BellSouth was required to meet these standards regardless of the volume  
19 offered. The data show that BellSouth has met the performance standards  
20 established by the Commission, which of course required dedication of the  
21 resources necessary to do so. Having met this challenge in the past  
22 certainly lends credence to the proposition that BellSouth will do so in the  
23 future. These are the facts and these facts cannot be disputed.

24

1 Rather than try to refute the facts, Ms. Bursh resorts to the supposition  
2 that the facts will change. The allegation that the existing processes will  
3 be inadequate to support anticipated loop migration is merely an  
4 unsupported conjecture that BellSouth will not continue to meet the  
5 standards that it has met in the past. Both current and historical data  
6 contradict her claim. Also, in the unlikely event that BellSouth does not  
7 meet the standards, there are indicators, such as measurements, and  
8 consequences such as SEEM payments, complaints and other remedies  
9 that this Commission and the FCC established that can be used to  
10 address her concerns.

11  
12 If Ms. Bursh, like Ms. Lichtenberg, is implying that the processes are not  
13 scalable with increased volumes, the FCC has at least partially addressed  
14 this issue where the agency has found in 49 decisions under section 271  
15 that incumbents could scale their hot-cut processes as necessary (*e.g.*,  
16 *New York Order* ¶ 308). While I agree that this finding was made in an  
17 environment where UNE-P was required, nonetheless, it is a recognition  
18 that a significant degree of scalability exists. Mr. McElroy (p. 22 of his  
19 Rebuttal Testimony) explains how BellSouth's batch migration process of  
20 unbundled network element platform (UNE-P) to unbundled loop (UNE-L)  
21 service will sufficiently support the batch conversion of a CLEC's  
22 embedded UNE-P customer base to UNE-L services. Furthermore, Mr.  
23 Ainsworth and Mr. Heartley describe how BellSouth's processes are also  
24 scalable and will be able to meet the standards in the future. BellSouth's  
25 performance record shows that it has, and is, meeting the challenge of

1 providing nondiscriminatory loop provisioning including hot cuts.  
2 Consequently, the CLEC witnesses can only attempt to trivialize the facts  
3 because they can't refute them. These facts coupled with the  
4 implementation of proven provisioning plans, as attested to by other  
5 BellSouth witnesses, provide a clear path to determine that anticipated  
6 performance will be commendable.

7  
8 Q. ON PAGE 3 OF HER REBUTTAL TESTIMONY, MS. LICHTENBERG  
9 CLAIMS THAT YOUR DIRECT TESTIMONY: (1) AT BEST,  
10 "ADDRESSES BELLSOUTH'S PERFORMANCE WITH RESPECT TO  
11 THE CURRENT LOW LEVEL OF UNE-L ORDERS; AND (2) "DOES NOT  
12 GIVE A CLEAR PICTURE OF BELLSOUTH'S ACTUAL PERFORMANCE  
13 ON UNE-L ORDERS." PLEASE COMMENT.

14  
15 A. With respect to her first comment, that my Direct Testimony only  
16 addresses performance with respect to the "current low level of UNE-L  
17 orders", Ms. Lichtenberg misses the obvious purpose of performance  
18 data. The only options for performance reporting are past or present  
19 results, based on whatever level of activity the CLECs generate. The  
20 only meaningful way to assess BellSouth's ability to effectively process  
21 potential increases in future demand is to consider current performance  
22 results, the commonality and capacity of systems used in processes that  
23 handle significant volumes for similar activities today, the practical options  
24 available to BellSouth (or any business for that matter) of shifting  
25 resources to meet demand, and planned improvements in processes to

1 accommodate anticipated requirements. Thus, the intent of my Direct  
2 Testimony, which provided BellSouth's performance with respect to Loop  
3 Provisioning in general and hot cuts in particular, was not for the data to  
4 be considered in isolation. Rather, as previously stated, the performance  
5 results provided in my Direct Testimony should be considered in  
6 conjunction with the testimony of other BellSouth witnesses addressing  
7 other relevant aspects of the impairment issue.

8

9 The current volumes reflect what the CLECs are ordering and BellSouth  
10 can only report what is being ordered. Ms. Lichtenberg does not  
11 adequately address why the Commission should believe that BellSouth  
12 would not be able to handle an increase in UNE-L volumes. It should be  
13 remembered that when the CLECs opposed BellSouth's long distance, the  
14 CLECs erroneously predicted a similar inability regarding BellSouth's  
15 capacity to meet future volume demands for UNE-P and ordering in  
16 general. This erroneous prediction was contradicted by the data available  
17 at the time. Of course, they were proved wrong then, and they are wrong  
18 now. Rather than rely upon the facts, she feebly postulates the vaporous  
19 notion that if it has not happened in the past, it can't happen in the future  
20 while completely ignoring the fact that both current and historical data  
21 contradict this forecast.

22

23 In addition, Ms Lichtenberg goes on to reiterate the point that some  
24 processes are manual. The thrust of her whole argument in this case is  
25 the faulty assumption that the presence of a manual procedure anywhere

1 in the stream of processes equals impairment. Indeed, there is an  
2 obvious and significant gap between quoting the percentage of UNE-L  
3 orders that were Fully Mechanized during a specific period and concluding  
4 that these percentages establish CLEC impairment. The flow-through of  
5 LSRs is only one aspect of providing UNE-Loops to CLECs and, as the  
6 FCC has clearly explained, a secondary one at that.

7

8 As a practical matter, BellSouth will obviously assign its resources to the  
9 areas that generate the most volume. Certainly, as CLECs begin to  
10 submit more UNE-L orders, and less of other order types, BellSouth  
11 would, of course, make adjustments to address the change in CLEC order  
12 types. Significantly, BellSouth's current and past performance record, in  
13 conjunction with the process and procedure plans provided by other  
14 BellSouth witnesses, is a reasonable basis to infer that its future  
15 performance will be similar. Surely, the performance results provided in  
16 my Direct Testimony provide a more rationale basis for this Commission's  
17 determinations than the pure conjecture of CLEC witnesses such as Ms.  
18 Lichtenberg. If the Commission ignores the data completely, as Ms.  
19 Lichtenberg suggests, the door is open for a wide variety of conjectures  
20 about potential problems for which there is no factual basis.

21

22 In contending that my Direct Testimony does not "give a clear picture of  
23 BellSouth's actual performance", Ms. Lichtenberg focuses on two aspects  
24 of performance, flow through and order completion interval. Of course,  
25 this approach ignores the substantial amount of data that I provided

1 demonstrating that BellSouth's UNE loop provisioning performance has  
2 been and continues at a high level. I will address her flow through  
3 testimony now and her order completion interval testimony later because it  
4 has some common elements with other witnesses.

5  
6 Any discussion of flow-through must first be placed into context with  
7 respect to its usefulness, which Ms Lichtenberg did not address. In  
8 addition, she ignored the value of the measurement results as prescribed  
9 by this Commission. First, the performance results provided in my Direct  
10 Testimony are based on the performance measures and standards  
11 established for the Flow-Through metric by this Commission and approved  
12 by the FCC. Moreover, the FCC has repeatedly stated that Flow-Through  
13 is a secondary measure and that other measures are more important  
14 indicators of performance. In particular, the FCC stated in its Texas  
15 Order:

16 We have not considered flow-through rates as the sole indicia  
17 of parity, however, and thus have not limited our analysis of  
18 a BOC's ordering processes to a review of its flow-through  
19 performance data. Instead, we have held that factors such  
20 as a BOC's overall ability to return timely order confirmation  
21 and rejection notices, accurately process manually handled  
22 orders, and scale its systems are relevant and probative for  
23 analyzing a BOC's ability to provide access to its ordering  
24 functions in a nondiscriminatory manner. See Texas Order,  
25 ¶ 179.

26 While the FCC has repeatedly expressed the secondary nature and  
27 importance of the flow-through metric, the CLECs have repeatedly raised  
28 this same issue. The FCC's statement doesn't mean that flow through is  
29 irrelevant; it simply means that its significance is dictated by performance  
30 on other measures. In this proceeding, Ms. Lichtenberg attempts to

1           overstate its importance apparently because it is being reviewed in  
2           connection with batch hot cuts. In fact, she apparently recognizes its  
3           secondary role, because she refers to service order accuracy as an  
4           important consequence of flow-through. Service Order Accuracy is one of  
5           the measures that bears upon the significance of flow-through, and is a  
6           measure that BellSouth currently reports and will continue to report in its  
7           monthly data.

8

9    Q.    MS. LICHTENBERG, ON PAGE 4 OF HER TESTIMONY, STATES THAT  
10    “LOW FLOW THROUGH MEANS THAT MOST UNE-L ORDERS MUST  
11    BE PROCESSED MANUALLY...INCREASING STILL MORE THE  
12    CHANCES FOR HUMAN ERROR AND CUSTOMER SERVICE  
13    OUTAGES AND OTHER PROBLEMS.” PLEASE COMMENT.

14

15   A.    Ms. Lichtenberg, again, makes predictions about BellSouth’s ability to  
16    process orders accurately by referring to “chances” for human error and  
17    customer service outages without indicating any factual or other rationale  
18    or basis for her predictions. Rather, than using the performance data to  
19    support her analysis, she simply opines that the prospect of excessive  
20    human errors by BellSouth or customer service outages, and the  
21    “potential” for problems is enough for this Commission to find that CLECs  
22    are impaired without access UNE-P at TELRIC rates.

23

24           If BellSouth’s performance results are reviewed, however, it is reasonable  
25           to infer that Ms. Lichtenberg’s repeated contention that unless BellSouth’s

1 ordering and provisioning processes are significantly more mechanized,  
2 CLECs will become impaired without UNE-P is without merit. For  
3 example, with respect to Ms. Lichtenberg's concern about the possibility of  
4 human errors in the ordering process, BellSouth reports its monthly  
5 performance relative to errors in the ordering process via measure P-11A  
6 (P-11 prior to September 2003), Service Order Accuracy. The following  
7 chart compares BellSouth's performance for the Service Order Accuracy  
8 measure for UNE-P versus UNE-L for the most recent three months:  
9 October, November and December 2003 (the results show the percent of  
10 orders that are accurate).

11

<u>MONTH</u>	<u>UNE-P</u>	<u>UNE-L</u>
October 2003	95.84%	97.41%
November 2003	96.41	97.94
December 2003	96.80	98.53

12  
13  
14  
15  
16

17 Based on the performance data above, the Service Order Accuracy rate  
18 was quite high. Even if the argument is made that the current UNE-L  
19 levels are much less than anticipated volumes, for December 2003, the  
20 volume for UNE-L orders was approximately 11,000 orders in Florida,  
21 which is clearly sufficient to demonstrate the level of BellSouth's  
22 performance. Moreover, the anticipated future increase in UNE-L orders  
23 would be accompanied by an anticipated significant decrease in UNE-P as  
24 well, which must be considered when predicting future performance levels.

25

1 Similarly, with respect to Ms. Lichtenberg's issue concerning potential  
2 customer service outages with UNE-L, in my Rebuttal Testimony (page 8,  
3 line 5 through page 9, line 11), I provided data for two Maintenance and  
4 Repair measures, Customer Trouble Report Rate and Maintenance  
5 Average Duration, showing UNE-P results and UNE-L results (shown as  
6 CLEC SL1). Although I do not agree that comparing UNE-L and UNE-P  
7 performance is a reasonable approach for reasons discussed in my  
8 rebuttal, as well as later in this testimony, even those comparisons do not  
9 support her claim. The data showed that for maintenance and repair,  
10 BellSouth performed comparably for UNE-P and UNE-L. In fact, the UNE-  
11 L results were better than UNE-P. Again, an argument that these are  
12 smaller UNE-L volumes than anticipated in the future, does not establish  
13 that performance levels will deteriorate to a point that CLECs are  
14 operationally impaired without UNE-P.

15  
16 Q. DO YOU HAVE OTHER EVIDENCE OF BELLSOUTH'S  
17 EFFECTIVENESS IN HOT CUT PERFORMANCE?

18  
19 A. Yes. The rebuttal testimony of Mr. Gallagher of Florida Digital Network,  
20 Inc. (FDN) contains clear and objective evidence that BellSouth's hot cut  
21 process is effective. On page 3 of his rebuttal testimony, Mr. Gallagher  
22 states "FDN believes that the hot cut process of the ILECs works well for  
23 the most part." On page 8, Mr. Gallagher states "As a UNE-L based  
24 CLEC that performs over two hundred hot cuts for DS-0 Loops daily and  
25 has performed more hot cuts than any other single CLEC in the state,

1 FDN would be hard pressed to say that the hot cut process does not work  
2 well.” Then on page 11, Mr. Gallagher notes “On a daily basis FDN and  
3 BellSouth work cooperatively together to install loops through IDLC for  
4 mass market customers.”

5

6 Q. WHY ARE THESE COMMENTS PARTICULARLY SIGNIFICANT?

7

8 A. Mr. Gallagher represents a facility-based CLEC that has first-hand  
9 knowledge and daily experience at a significant volume with hot cuts. This  
10 is in stark contrast to the testimony of other CLECs in this docket who  
11 primarily use UNE-P. Additionally, FDN has approximately 6 years of  
12 experience with UNE-L, as noted in Mr. Gallagher's testimony on page 2,  
13 and, FDN is of the opinion that it uses a significant amount of the UNE  
14 Loops provided by BellSouth. Referring to page 9 of his rebuttal  
15 testimony, Mr. Gallagher states, “there were 156,746 lines in Florida  
16 served by a combination of a BellSouth unbundled loop and a CLEC  
17 switch. “ “FDN believes it constitutes about two-thirds of that total.”

18

19 This testimony from a CLEC who actually has experience with the hot cut  
20 process is consistent with the data. This corroboration from someone with  
21 factual experience stands in stark contrast to the predictions of several  
22 other witnesses who have offered no basis for their claims that BellSouth  
23 will fail to perform in the future.

24

1 **II. THE CLAIM THAT UNLESS THE PERFORMANCE STANDARDS FOR**  
2 **UNE-L ARE EQUIVALENT TO UNE-P, CLECS ARE IMPAIRED DUE TO**  
3 **OPERATIONAL BARRIERS WITHOUT ACCESS TO LOCAL**  
4 **SWITCHING IS CONTRARY TO BOTH LOGIC AND THE TRO.**

5

6 Q. ON PAGES 3 AND 4 OF HER REBUTTAL TESTIMONY, MS. BURSH  
7 STATES THAT "BELLSOUTH USES THE WRONG STANDARD IN  
8 ATTEMPTING TO DEMONSTRATE THAT CLECS DO NOT FACE  
9 OPERATIONAL BARRIERS TO MARKET ENTRY ABSENT  
10 UNBUNDLED LOCAL SWITCHING." DOES MS. BURSH PROPOSE AN  
11 APPROPRIATE STANDARD TO COMPARE DELIVERY METHODS?

12

13 A. No, her proposal is inappropriate. First, I would like to note a bit of  
14 inconsistency in Ms Bursh's position. After claiming that BellSouth's data  
15 is irrelevant and instructing this Commission to discard the evidence, Ms.  
16 Bursh then concedes that the FCC suggested a review of performance  
17 data could be appropriate as part of the inquiry into the ILEC's "ability to  
18 transfer loops in a timely and reliable manner." (TRO at ¶ 512.) Having  
19 now agreed that the data are relevant, she disagrees with the manner in  
20 which this Commission chose to develop the data. The discussion of  
21 performance measurements data for hot cuts and UNE local loops in  
22 Exhibit AJV-1 provides the relevant information addressed by the FCC.  
23 These performance measurements were approved in this Commission's  
24 docket to establish permanent performance metrics (Docket No. 000121-  
25 TP) and further refined during the review of metrics standards during the

1 six-month review of the Performance Assessment Plan (Order No. PSC-  
2 01-1819-FOF-TP). This Commission has now completed a six-month  
3 review cycle and issued an order on April 22, 2003, which updated the  
4 Performance Assessment Plan. Instead of assessing Bellsouth's  
5 performance relative to those standards as I did in my direct testimony,  
6 Ms. Bursh claims that my "discussion provides little insight into the issue  
7 of whether BellSouth's loop provisioning is as prompt and efficient as  
8 UNE-P", Instead, Ms Bursh along with Ms. Lichtenberg and Mr. Van de  
9 Water create their own standard. None of them, however, explains how  
10 they derived their standard. As to Ms Bursh's self-proclaimed "FCC-  
11 prescribed standard of UNE-P performance", there is neither a directive  
12 that establishes this standard, nor would it be a reasonable standard by  
13 which to measure performance.

14  
15 The key point is that it is not appropriate to compare UNE-P and UNE-L  
16 processes in the instances where they are not analogous. They are not  
17 the same products and do not offer the same functionality to the CLEC.  
18 Consequently, Congress, the FCC, nor this Commission required them to  
19 be the same. The question before the Commission is NOT whether UNE-  
20 L can be made the same as UNE-P. The question before the  
21 Commission, rather, is whether an efficient CLEC can compete in a  
22 particular market using UNE-L. Because the answer to this question is  
23 unequivocally "yes," the CLECs are attempting to change the question.

24  
25 Q. ON PAGES 4 – 5 OF HER REBUTTAL TESTIMONY, FOLLOWING THE

1 SAME GENERAL APPROACH AS MS. BURSH, MS. LICHTENBURG  
2 COMPARES UNE-L INSTALLATION INTERVALS TO UNE-P  
3 INSTALLATION INTERVALS AND CONCLUDES THAT UNE-L  
4 MIGRATIONS TAKE SUBSTANTIALLY LONGER THAN UNE-P  
5 MIGRATIONS. IS THIS A FAIR COMPARISON?

6

7 A. No, this is a comparison that identifies the obvious fact that the products  
8 are different, but fails to identify the relevance or usefulness of that fact for  
9 determining operational impairment comparison. As I stated in my  
10 Rebuttal Testimony, responding to the same issue raised by AT&T  
11 witness Mark David Van De Water, there is an inherent flaw in attempting  
12 to equate two different products and processes – expecting the results to  
13 be the same. Where UNE-P orders require little more than a billing  
14 change of the existing end-user, UNE-L will always require some type of  
15 physical work whether at the central office or the customer premise. What  
16 Ms. Lichtenberg and other CLEC witnesses raising this issue fail to do is  
17 demonstrate how they are impaired because of the difference.

18

19 As already mentioned, BellSouth, the CLECs and the Commission have  
20 all spent an enormous amount of time establishing performance  
21 measurements, disaggregating products and processes, and creating  
22 performance standards based on the differences in these products and  
23 processes. In most cases, the retail analog standards are reasonable and  
24 relevant, and where they are not, the reason is that CLEC products are  
25 compared to dissimilar retail products. When this incongruity occurs, the

1 situation is considered an error, and more analysis of the data is  
2 necessary to determine whether a performance problem exists. Later, the  
3 erroneous standard can be revised in the next periodic review. However,  
4 these witnesses would have the Commission believe the far-fetched idea  
5 that a retail analog is only appropriate in this case if the retail process  
6 bears no resemblance to the CLEC process. In the absence of something  
7 more tangible, the fact that the standards adopted by all nine state  
8 commissions in BellSouth's region, and accepted by the FCC, reflect  
9 differences based on the different products and processes renders moot  
10 this point stressed by Ms. Lichtenberg, and other CLEC witnesses. I  
11 should also point out that failure to meet this Commission's prescribed  
12 standards for order completion interval, as set forth in the Performance  
13 Assessment Plan is met with immediate penalty plan consequences. This  
14 occurs in some cases even where the performance standard is clearly  
15 improper.

16  
17 Q. TURNING AGAIN TO MS. BURSH, ON PAGES 3 AND 4 OF HER  
18 REBUTTAL TESTIMONY, MS. BURSH, NOTING AS MS. LICHTENBERG  
19 DID THAT UNE-P AND UNE-L HAVE DIFFERENT INTERVALS, GOES  
20 FURTHER AND MAKES THE ASSERTION THAT IF "UNE-P IS NO  
21 LONGER AVAILABLE, THE ILEC MUST FOLLOW THE SAME  
22 STANDARD IN PERFORMING ITS REPLACEMENT." DOES THIS  
23 CONCLUSION HAVE MERIT?

24

1 A. Not entirely. It is a reasonable conclusion when the processes required to  
2 provide the two products are analogous. Ms. Bursh, however, is narrowly  
3 asserting that the only relevant standard is the Order Completion Interval  
4 (OCI) where the processes are not analogous. She then mistakenly  
5 asserts that the OCI for UNE-P and its' replacement, presumably UNE-L;  
6 must be the same.

7  
8 The only determination that the Commission need make is: 'Will  
9 BellSouth's performance for UNE-L provide the CLECs with a meaningful  
10 opportunity to compete?' Which is another way of asking: does UNE-L  
11 performance impair the CLEC's ability to compete? In making this  
12 determination, the Commission should consider not only the order  
13 completion interval but also the other measurements of maintenance,  
14 billing, provisioning, and ordering processes. The Commission should  
15 also consider the fact that UNE-L provides the CLEC with a number of  
16 competitive advantages that they do not have with UNE-P. For instance,  
17 once an end-user is served by UNE-L terminated on the CLEC's switching  
18 equipment, the CLEC can change switch dependant features and offer  
19 promotional packaging without involving BellSouth.

20  
21 Q. YOU STATED THAT MS. BURSH, MS. LICHTENBERG AND MR. VAN  
22 DE WATER ALL CLAIM THAT PERFORMANCE FOR UNE-P AND ITS'  
23 REPLACEMENT, PRESUMABLY UNE-L, MUST BE THE SAME. DO  
24 YOU AGREE WITH THEIR BASIS FOR THIS CLAIM?

25

1 A. No, in coming to the conclusion that the OCI for UNE-P and UNE-L should  
2 be the same, these witnesses cite a partial reference to footnote 1574 in  
3 the TRO, which states:

4 In determining whether granular evidence contradicts our  
5 finding that the hot cut process imposes an operational  
6 barrier, the state commission should review evidence of  
7 consistently reliable performance in three areas: (1)  
8 Timeliness: percentage of missed installation appointments  
9 and order completion interval; (2) Quality: outages and  
10 percent of provisioning troubles; and (3) Maintenance and  
11 Repair: customer trouble report rate, percentage of missed  
12 repair appointments, and percentage of repeat troubles. This  
13 review is necessary to ensure that customer loops can be  
14 transferred from the incumbent LEC main distribution frame  
15 to a competitive LEC collocation as promptly and efficiently  
16 as incumbent LECs can transfer customers using unbundled  
17 local circuit switching. This evidence will permit states to  
18 evaluate whether competitive carriers are impaired because  
19 the quality of their services is below that offered by the  
20 incumbent.

21 While the State Commission is encouraged to review performance, there  
22 is nothing in this footnote that requires an identical standard for UNE-P  
23 and UNE-L. Ms. Bursh and Mr. Van de Water cite the portion of the  
24 footnote that discusses “transferring customer loops from the incumbent  
25 LEC main distribution frame to a competitive LEC collocation.” This  
26 function has a performance standard that the activity must be completed  
27 within 15 minutes, 95% of the time. They erroneously conclude that the  
28 Order Completion Interval, which is not even a measure of the process  
29 that they address, for UNE-L must therefore be the same as UNE-P.  
30 These products are different, which means they have inherent advantages  
31 and disadvantages. For example, some forms of UNE-P will have a  
32 shorter order completion interval than some forms of UNE-L, but UNE-L  
33 as previously stated provides the CLEC with more direct control of some

1 of the services provided to their customer. There are significant parallel  
2 processes for ordering and provisioning unbundled network element  
3 platform (UNE-P) and unbundled loop (UNE-L) services but they are not  
4 analogous with respect to order completion interval. Therefore, it would  
5 be illogical to interpret this footnote as meaning that these two  
6 performance standards should be equivalent.

7  
8 Further, they fail to cite the portion of the footnote that directs “states to  
9 evaluate whether competitive carriers are impaired because the quality of  
10 their services is below that offered by the incumbent.” In other words, the  
11 FCC directed the states to use the same tests used to establish the retail  
12 analogues and benchmarks in the performance plan – substantially the  
13 same time and manner and meaningful opportunity to compete. Given  
14 that the Commission has already established analogues and benchmarks  
15 setting those standards, it should rely on that data to meet the FCC’s  
16 directive.

17  
18 Significantly, AT&T made this same argument before the FCC that the  
19 standard must be the same for UNE-P and UNE-L, contending that until  
20 ILECs offer an electronic loop provisioning (ELP) method of transferring  
21 large volumes of local customers unbundled switching for voice grade  
22 loops is essential. The FCC, in paragraph 491 of its TRO, rejected this  
23 contention stating: “the evidence in the record suggests that an ELP  
24 process, to be effective, would require significant and costly upgrades to  
25 the existing local network at both the remote terminal and the central

1 office...we, decline to require ELP at this time, although we may  
2 reexamine AT&T's proposal if hot cut processes are not, in fact, sufficient  
3 to handle necessary volumes." Clearly, the FCC did not support the idea  
4 that UNE-P and UNE-L installation intervals must be the same.  
5 Consequently, it is impractical for this Commission to superimpose such a  
6 blatantly self-serving standard simply because CLECs want to do so.

7  
8 A more rational interpretation of the TRO is that BellSouth's performance  
9 relative to the applicable standards for UNE-L should be equivalent to  
10 BellSouth's performance relative to applicable standards for UNE-P. Said  
11 another way, it means that BellSouth must provide nondiscriminatory  
12 UNE-L performance just like it must provide nondiscriminatory UNE-P  
13 performance. Of course, because the data show that BellSouth meets this  
14 rational test, the CLECs witnesses ignore it.

15  
16 Q. MS. BURSH ON PAGES 4 AND 5 PRESENTS A TABLE THAT SHE  
17 CLAIMS DEMONSTRATES THAT BELLSOUTH'S LOOP  
18 PERFORMANCE FALLS "WOEFULLY SHORT" WHEN COMPARED  
19 AGAINST UNE-P PERFORMANCE. WHAT IS THE RELEVANCE OF  
20 THIS COMPARISON IN THIS PROCEEDING?

21  
22 A. It provides no useful information to this Commission. Ms. Bursh is  
23 reiterating the same point raised by Mr. Van De Water on pages 15 and  
24 16 of his direct testimony and that I addressed in my rebuttal of Mr. Van  
25 De Water's testimony and just addressed again in this testimony. Table 1

1 (page 5) simply points out that the Order Completion Interval (OCI) is the  
2 average time interval to complete UNE-P orders, which are mostly orders  
3 requiring a records change only, and require no physical work, is less than  
4 the average time to complete 2W Analog Loop w/LNP Non-Design < 10 /  
5 Dispatch In, where some form of physical work is required. In other  
6 words, UNE-P orders are primarily "switch as is" and 2W Analog Loop  
7 w/LNP Non-Design < 10 / Dispatch In are not. Here Ms. Bursh twists her  
8 analysis as she attempts to draw conclusions by equating the installation  
9 interval for two different products and processes. As pointed out in my  
10 rebuttal testimony on page 15, an order for UNE-P has typically involved  
11 little more than changing the billing of an existing end-user from BellSouth  
12 retail, or from another CLEC, to the acquiring CLEC. It is important to  
13 note that for most UNE-P orders the following three factors apply: 1) no  
14 physical work is required, 2) no outside dispatch is needed, and 3) the  
15 order is not subject to facility shortages. The other order type listed, 2W  
16 Analog Loop w/LNP Non-Design < 10 / Dispatch In, will always require  
17 some form of physical work.

18  
19 To reiterate, the relevant question is not whether UNE-L and UNE-P are  
20 the same, but whether an efficient CLEC can compete using UNE-L.  
21 BellSouth's UNE-L performance, coupled with the advantages of UNE-L,  
22 provides CLECs a meaningful opportunity to compete. For instance, any  
23 alleged timeliness advantage that BellSouth has with respect to loops  
24 connected to its switch, becomes an advantage to the CLEC after the  
25 CLEC has acquired the customer using UNE-L. In that case, because the

1 loop is already connected to the CLEC's switch and only requires minimal  
2 work, BellSouth must perform a hot cut to win-back the customer. Other  
3 advantages include the business opportunities to perform their own work,  
4 on their own switches, and the marketing opportunities to offer their own  
5 features and functionalities that are not offered by BellSouth. I only make  
6 these points to illustrate the lack of logic surrounding the CLECs claim that  
7 Order Completion Interval results should be viewed in a vacuum and are  
8 required to be the same for UNE-P and UNE-L.

9

10 Q. ON PAGES 11-12 OF HIS TESTIMONY, MR. VAN DE WATER ARGUES  
11 THAT BELL SOUTH'S HOT CUT MEASURE BENCHMARK SHOULD BE  
12 5 MINUTES AS OPPOSED TO 15 MINUTES. DO YOU AGREE?

13

14 A. No, I do not agree. Mr. Van De Water's allegation that BellSouth insisted  
15 in performance measure proceedings to be able to keep the customer out  
16 of service for 15 minutes "should it so choose" is quite untrue. First,  
17 BellSouth does not have an average interval benchmark like the one that  
18 Mr. Van de Water describes. Instead, the standard is to complete 95% of  
19 all hot cuts within 15 minutes.

20

21 Second, the benchmark is reasonable, as the Commission already has  
22 determined. The benchmark provides for the conversion work described  
23 in BellSouth witness Mr. Ainsworth's testimony. By performing the pre-  
24 conversion work before the actual transfer from switch to switch, BellSouth

1 increases its efficiencies and minimizes the actual impact of the physical  
2 transfer to the end-user.

3  
4 Third, although AT&T was one of the primary participants in the FPSC's  
5 six-month review of the Florida Performance Assessment Plan (PAP);  
6 neither they nor other members of the ALEC Coalition proposed to modify  
7 this benchmark. In fact, in the most recent Florida PAP six-month review  
8 in Docket No. 000121A-TP, the ALEC Coalition, including AT&T, in its  
9 August 30<sup>th</sup>, 2002 filing included as Exhibit 3, an ALEC Modified Service  
10 Quality Measurement (SQM) plan that proposed absolutely no changes to  
11 this hot cut measure. The fact is, that during the six-month review  
12 workshops, this measure and the interval of 15 minutes was not even one  
13 of the topics of discussion. So, Mr. Van de Water's belated portrayal of  
14 what occurred in the measurement development process, where he was  
15 not a participant, is without merit.

16  
17 **III. BELLSOUTH HAS PROVIDED ALL OF THE UNE LOOP DATA**  
18 **NECESSARY TO ASSESS ITS PERFORMANCE AND, CONTRARY TO**  
19 **IMPLICATIONS BY THE CLECS, DID NOT "HIDE" ANY RELEVANT**  
20 **LOOP OR HOT CUT PERFORMANCE RESULTS.**

21  
22 Q. MS. BURSH, ON PAGES 5 AND 6 CLAIMS THAT CONSOLIDATING  
23 RESULTS FOR "ALL LOOPS" HIDES PERFORMANCE RESULTS  
24 RELEVANT TO THE ISSUE OF OPERATIONAL BARRIERS TO

1 MARKET ENTRY ABSENT UNBUNDLED LOCAL SWITCHING. HOW  
2 DO YOU RESPOND?

3

4 A. BellSouth did not aggregate or offset the performance assessments in a  
5 manner that masks the more relevant performance as Ms. Bursh claims  
6 on page 6. On the contrary, Exhibit AJV-1 provided overall hot cut  
7 performance in detail as well as, in Attachment 1 to the Exhibit AJV-1, the  
8 other performance data for UNE Local Loops in Florida. The data show  
9 that BellSouth met the Coordinated Customer Conversion 15-minute  
10 benchmark for over 99.9% of all cutovers in the past 12 months in Florida.  
11 This measurement reflects the average time it takes to disconnect an  
12 unbundled loop from the BellSouth switch and cross connect it to the  
13 CLEC equipment. For UNE Local Loops, BellSouth processed 95% of all  
14 LSRs by the required benchmark interval during the 12-month period  
15 (September 2002 – August 2003). For the same period, BellSouth met  
16 the performance standard for 90% of the provisioning sub-metrics and  
17 87% of the maintenance & repair sub-metrics.

18

19 Further, the detailed data for each individual sub-metric was provided.  
20 This was clearly the case, because Ms. Bursh refers to some of that data  
21 in her testimony. The problem with analyzing performance at the sub-  
22 metric level is that many of the sub-metrics have such small volumes, that  
23 they don't provide a useful basis for analysis. To help remedy that  
24 problem, I refer to aggregate statistics in the body of the testimony;  
25 however, the detail is plainly visible for anyone who wants to see it.

1 Q. ON PAGE 7, BEGINNING ON LINE 9 MS. BURSH APPEARS TO  
2 BELIEVE THAT BELL SOUTH'S AGGREGATED ASSESSMENT MAY  
3 MASK PERFORMANCE. HOW DO YOU RESPOND?  
4

5 A. As I indicated above, BellSouth did not aggregate the performance  
6 assessments to mask anything. On pages 8 and 9 of my Direct  
7 Testimony, I explain which products are included within the UNE Loop  
8 performance data. Also, as previously stated, Exhibit AJV-1 provides a  
9 detailed discussion of the data and the detailed performance results at the  
10 sub-metric level. That exhibit beginning on page 16 provided overall hot  
11 cut performance and the charts in Attachment 1 to the Exhibit AJV-1,  
12 provided the data individually. It is this detailed comparative performance  
13 data for UNE Local loops that actually facilitates evaluation of the extent to  
14 which nondiscriminatory performance is provided. But regardless of the  
15 individual or aggregated presentation of the data, the fact remains that  
16 BellSouth performance is high.  
17

18 Q. SHOULD THE COMMISSION GIVE ANY WEIGHT TO MS. BURSH'S  
19 STATEMENT ON PAGE 7 THAT "EVEN IF BELL SOUTH'S CLAIM OF  
20 COMPLIANCE FOR 90% OF THE PROVISIONING SUB-METRICS  
21 WERE TRUE, THIS IS SOMEWHAT MEANINGLESS GIVEN THAT A  
22 NUMBER OF THE MISSED SUB-METRICS WERE FOR PROVISIONING  
23 OF PRODUCT AREAS THAT WILL BE DOMINANT IF UNBUNDLED  
24 LOCAL SWITCHING IS ELIMINATED" AND CRITICISM OF THE HIGH  
25 LEVEL DATA REVIEW IN YOUR TESTIMONY?

1 A. No. Ms. Bursh on page 8, focuses on the 10% of the provisioning sub-  
2 metrics that were missed and ignores the fact that BellSouth met an  
3 average of 90% of all the UNE Loop provisioning sub-metrics over the last  
4 12 months in Florida. Ms. Bursh then implies that BellSouth may not have  
5 met 90% of the sub-metrics, but offers no basis for this derogatory remark.  
6 Her criticism of the value of a cursory review of the data is misguided. The  
7 reason for using this high level review is to demonstrate that results are  
8 good even at that level. More detailed analysis shows that the results are  
9 actually better than a cursory review indicates, not worse as Ms. Bursh  
10 insinuates. CLECs and this Commission can certainly review the detailed  
11 data to confirm this conclusion.

12  
13 For example, let's look at the details surrounding 2 of the provisioning sub-  
14 metrics that concerned Ms. Bursh. One of these sub-metrics was Order  
15 Completion Interval (OCI) for 2-W Analog Loop w/LNP Non-Design/ >10  
16 Circuits/Dispatch In. For this sub-metric, the volumes for each of the three  
17 months out of twelve that were not in parity (September 2002, December  
18 2002, and January 2003) were 30, 38, and 50 orders respectively for all of  
19 Florida, which is not a large enough volume in this case to perform a root  
20 cause analysis. Nonetheless, detailed analysis of the results for this and  
21 the other missed sub-metrics in the non-dispatch category shows that  
22 there is no significant performance problem.

23  
24 First, BellSouth data reveals that the OCI for Retail Residence and  
25 Business Orders that do not require a dispatch is typically about 2 days.

1 In contrast, the OCI for UNE Loops w/ LNP is a minimum of 3 days. The  
2 origin of this 3-day minimum is actually an industry agreement, which  
3 allows for the new service provider (either CLEC or BellSouth ) to  
4 accomplish the work and coordination necessary to perform a number  
5 port. In short, in July 2003, the Local Number Portability Administration  
6 Working Group (LNPAWG), which includes CLEC and ILEC  
7 representatives, approved a set of number porting procedures that place a  
8 lower limit on the Order Completion Interval for number ports in an NPA-  
9 NXX exchange. These procedures, in part, state: "Any subsequent port in  
10 that NPA NXX will have a due date no earlier than three (3) business days  
11 after FOC receipt." The LNPAWG is a sanctioned committee of the North  
12 American Numbering Council (NANC). AT&T is a member of the  
13 LNPAWG who approved these procedures.

14  
15 With a 3-day industry standard minimum it is unlikely that 2W Analog Loop  
16 orders that do not require an outside dispatch will be completed as quickly  
17 as retail Residence and Business Orders that do not have that  
18 requirement. Perhaps a better comparison for parity determination  
19 purposes is the interval on BellSouth retail win-backs where the process is  
20 essentially the same for both BellSouth and the CLECs. Of course, little  
21 winback activity existed when these standards were established, but that  
22 is probably no longer the case, so a more analogous standard can be set.

23  
24 Also, for all 2-W Analog Loops, including 2-W Analog Loops w/ LNP Non-  
25 Design/ <10 Circuits Dispatch In, as I explained in Exhibit 1 of my Direct

1 Testimony, at the time of scheduling, BellSouth is unable to determine  
2 whether or not a “dispatch out” is required and, therefore, must schedule  
3 all of these orders with the longer interval. When these orders are then  
4 compared with the shorter non-dispatched retail analogue results, an out  
5 of parity condition is reported. As a result, there are differences in the OCI  
6 comparisons of UNE Loop to Retail Residence and Business because the  
7 products are not as analogous as they were once believed to be. These  
8 differences between the CLEC orders and the retail analogue indicate that  
9 an out of parity condition is, in part, a result of inequality in the  
10 measurements instead of actual poor performance, as Ms. Bursh claims.  
11 While the Commission and the parties in the 6-month review established  
12 these standards of comparing UNE Loops w/LNP to Residence and  
13 Business, these standards are, in retrospect, inappropriate, particularly  
14 with regard to the Non-Dispatch comparisons raised by Ms. Bursh.

15  
16 Despite the aforementioned 3-day minimum, BellSouth is investigating  
17 ways to shorten the OCI time, particularly for UNE Loop orders not  
18 requiring a dispatch. Of course any such change must still adhere to  
19 industry standards and may be delayed by CLECs through the change  
20 control process.

21  
22 Finally, while there may be a difference in OCI time, there is limited impact  
23 to the customer experience for two obvious reasons: 1) the customer is  
24 already in service, either with retail or with UNE-P, and 2) the only  
25 difference is in planning time – the time between when the order is

1 received and when it is completed. And once the slight difference in OCI  
2 time is encountered and the CLEC has the customer in its own switch, the  
3 Commission should also consider that UNE-L provides the CLEC with a  
4 number of competitive advantages. As I mentioned earlier, this  
5 arrangement, once an end-user is served by UNE-L terminated on the  
6 CLEC's switching equipment, affords the CLEC the opportunity to change  
7 switch dependant features and offer promotional packaging and service  
8 intervals without involving BellSouth.

9

10 All of the information stated above was available to Ms. Bursh, and she  
11 was certainly free to analyze the circumstances surrounding the data.  
12 Somehow she apparently overlooked these relevant facts, an oversight  
13 which resulted in unfair criticism of BellSouth's performance.

14

15 Q. MS. BURSH AGAIN PRESENTS PERFORMANCE RESULTS (PAGE 9)  
16 FOR SUB-METRICS TO BOLSTER THE CLAIM "THAT THE  
17 PERFORMANCE FOR LOOPS COLLECTIVELY DOES NOT  
18 NECESSARILY REPRESENT THE PERFORMANCE FOR INDIVIDUAL  
19 LOOP CATEGORIES. HOW DO YOU RESPOND?

20

21 A. Ms. Bursh continues her course of identifying examples of sub-metrics  
22 where BellSouth has not obtained the benchmark and ignoring the overall  
23 performance of the measurement. In the case of FOC and Reject  
24 Response Completeness, performance actually averaged 96% over the  
25 period from September 2002 through August 2003. First, additional

1 background information is necessary to understand the measurement O-  
2 11, FOC and Reject Response Completeness - Mechanized. This  
3 measurement calculates the number of Firm Order Confirmations or Auto  
4 Clarifications sent to the CLEC from EDI, or TAG in response to  
5 electronically submitted LSRs. That is, the numerator is the total number  
6 of service requests for which a FOC or Reject is sent, and the  
7 denominator is the total number of service requests received in the report  
8 period, as the metric is designed to capture the data for the current data  
9 month. CLECs do, however, submit LSRs on the last day of the month.  
10 Fully mechanized LSRs, which are captured in the 2W Analog Loop  
11 w/LNP Design and 2W Analog Loop w/LNP Non-Design sub-metrics  
12 referenced by Ms. Bursh, that are submitted on the last day of the month  
13 have a FOC benchmark of 95% within 3 hours. This means the FOC may  
14 or may not be due in the month submitted, depending upon the actual  
15 receipt time of the LSR and as a result may not be included in the  
16 numerator, although they would be in the denominator.

17  
18 Lastly, for this measurement, FOC and Reject Response Completeness –  
19 Mechanized, in the case of the remaining 3 out of the 4 sub-metrics Ms.  
20 Bursh references, Ms. Bursh fails to account for the fact that for the period  
21 in question (September 2002 through August 2003) for many of these  
22 months the transaction volume was so low that BellSouth could not miss  
23 even a single transaction. That is, in a month where the volume of  
24 transactions for the sub-metric was less than 20, even 1 failure results in  
25 missing the 95% benchmark for this sub-metric. For example, the sub-

1 metric for 2W Analog Loop w/LNP Design/TAG did miss the benchmark of  
2 95% for 11 out of 12 months, but only one of the months in this 12-month  
3 period had a volume of greater than 11 LSRs. That month was December  
4 2002, which had a volume of 21 LSRs. Again, Ms. Bursh's interpretation  
5 of the data does not consider these pertinent facts.

6

7 Q. STARTING ON PAGE 9, LINE 16 OF HER REBUTTAL TESTIMONY, MS.  
8 BURSH APPEARS TO ALLEGE THAT BELLSOUTH IS  
9 MISREPRESENTING THE PERFORMANCE RESULTS BY INCLUDING  
10 LOOPS THAT ARE NOT MIGRATABLE FROM UNE-P? HOW DO YOU  
11 RESPOND?

12

13 A. Actually, it appears that Ms. Bursh seems to be creating confusion with  
14 the Commission by making an argument that appears to have little, if any,  
15 relevance. BellSouth is presenting performance data for all products that  
16 a CLEC might use in significant volume to provide service using UNE-L.  
17 This inquiry should not be limited simply to those loops that can be  
18 migrated from UNE-P. Also, her testimony and that of other witnesses  
19 indicate that they are certainly interested in ensuring that no operational  
20 impairment exists on loops regardless of whether they can be migrated  
21 from UNE-P. The data represents all loops including those that are newly  
22 provisioned, migrated from Retail, switched from other CLECs, as well  
23 those that are migrated from UNE-P and is not limited to hot cuts. This is  
24 the appropriate scope of the inquiry, and allows the Commission to assess

1 BellSouth's performance in provisioning UNE Loops for all relevant  
2 products.

3

4 **IV. THE EXISTING FLORIDA PERFORMANCE ASSESSMENT PLAN**  
5 **METRICS TOGETHER WITH THE PROPOSED CHANGES INCLUDED**  
6 **IN MY DIRECT TESTIMONY ARE MORE THAN SUFFICIENT TO**  
7 **ADDRESS CURRENT AND ANTICIPATED HOT CUT PERFORMANCE**  
8 **CONCERNS.**

9

10 Q. ON PAGE 10, LINES 14 - 20, MS. BURSH ASSERTS THAT  
11 BELLSOUTH'S PROPOSED ENHANCEMENTS TO THE  
12 PERFORMANCE MEASURES AND SEEM PLAN ARE INADEQUATE.  
13 HOW DO YOU RESPOND?

14

15 A. I disagree. For example, contrary to Ms. Bursh's assertion, Bellsouth  
16 indeed suffers negative consequences if elongated response intervals to  
17 the Bulk Migration Notification forms are reflected in the results for PO-3,  
18 UNE Bulk Migration – Response Time. As stated in my Direct Testimony,  
19 any extensive response intervals to the Bulk Migration Notification forms  
20 would penalize BellSouth since BellSouth's incentive is to migrate the  
21 customer to UNE-L and not to delay any response and lengthen response  
22 time of the Bulk Migration. BellSouth does not believe it should offer to  
23 write the CLECs a check for the privilege of providing them today's UNE-P  
24 after it is no longer required. Ms. Bursh's statement that "If BellSouth has  
25 no incentive to delay the response, as suggested by Mr. Varner then

1 BellSouth should have no concerns with including PO-3 in SEEM” makes  
2 absolutely no sense. The SEEM plan should be designed to penalize  
3 poor performance, not simply generate an unwarranted windfall to CLECs.  
4 Ms. Bursh’s view, that CLECs should receive payments whether they are  
5 harmed or not, is consistent with her past positions, so it comes as no  
6 surprise.

7

8 Q. ON PAGE 10, MS. BURSH CONTENDS THAT BELLSOUTH SHOULD  
9 ESTABLISH ADDITIONAL METRICS FOR MONITORING THE BATCH  
10 HOT CUT PROCESS. HOW DO YOU RESPOND?

11

12 A. The new measurements and modification to existing measurements  
13 proposed in my Direct Testimony provide sufficient additional data to  
14 monitor BellSouth’s performance during hot cuts. Although Ms. Bursh  
15 asserts that even more measurements are essential, she does not provide  
16 any specifications for the additional measurements that she claims are so  
17 desperately needed. Ms. Bursh proposes titles for new measures, such  
18 as “Percent of Batches Started on Time”, “Percent of Batches Completed  
19 On Time”, and “Percent Conversion Service Outages” but falls short of  
20 providing specific measurements. In any event, it appears that her  
21 concerns have already been addressed.

22

23 Regarding the requested “Percent Batches Started on Time” measure, this  
24 Commission has already established and BellSouth already produces a  
25 measurement, P-7A, for Hot-Cut Timeliness that measures whether or not

1 a coordinated hot cut begins within 15 minutes of the requested start time.  
2 For non-coordinated hot cuts, they simply need to start on the due date,  
3 so the missed installation appointment metric and the new measure P-7E  
4 described in my Direct Testimony and again below capture that  
5 performance.

6

7 Likewise, it appears that "Percent of Batches Completed on Time" data is  
8 already being addressed. For coordinated hot cuts, measure P-7 captures  
9 whether the cut was completed on time. To address the "Percent of  
10 Batches Completed On Time" for non-coordinated hot cuts, BellSouth has  
11 already proposed P-7E, Non-Coordinated Customer Conversions - %  
12 Completed and Notified on Due Date as referenced in my direct testimony  
13 on pages 42-43. The proposed new measure, complete with a definition,  
14 exclusions, business rules, calculation, report structure and benchmark is  
15 included in Exhibit AJV-2. To summarize, this report measures the  
16 percentage of non-coordinated conversions that BellSouth completed on  
17 the due date and provided notification to the CLEC on the same date.  
18 This measure is also proposed to be included in both Tier 1 and Tier 2 of  
19 SEEM.

20

21 Lastly, Ms. Bursh proposes the establishment of a "Percent Conversion  
22 Service Outages" measurement. It appears, however, that this  
23 performance is already covered by measures P-7B and P-7C, which are  
24 the Average Recovery Time, and Percent Provisioning Troubles in 7 Days  
25 measures.

1 As for the SEEM consequence, my disagreement with Ms. Bursh's  
2 proposal, *i.e.*, equal to the average net revenue time the average life of  
3 the customer, has already been addressed in my rebuttal to Mr. Van De  
4 Water's testimony.

5  
6 Q. MS. LICHTENBERG, ON PAGES 11 AND 12 OF HER REBUTTAL  
7 TESTIMONY, ALSO CRITICIZES THE EXISTING HOT CUT PROCESS  
8 AND CLAIMS THAT THERE IS A NEED FOR A NUMBER OF CHANGES  
9 TO BELL SOUTH'S PERFORMANCE MEASURES. MS. LICHTENBERG  
10 ALSO CITES A NEED FOR A METRIC FOR TIMELY UNLOCKING OF  
11 THE E911 DATABASE. PLEASE COMMENT.

12  
13 A. Ms. Lichtenberg begins this discussion by stating: "metrics need to be  
14 developed that address the process and its possible flaws." I underline  
15 the word "possible" here because Ms. Lichtenberg's approach is to  
16 consider any possible problem that might occur and use that contrived  
17 possibility to advocate the creation of yet another measure to address a  
18 problem that does not exist. Again, she makes general and rhetorical  
19 proposals for measurements without providing any evidence that  
20 BellSouth's existing or proposed measurements are not sufficient.  
21 Notwithstanding Ms. Lichtenberg's generalities, I will attempt to address  
22 her suggestions for measures.

23  
24 Ms. Lichtenberg's first suggestion is for some measure of "errors created  
25 by BellSouth in the multiple LSRs generated by the batch LSR." There is

1 no need for a unique measure to address this issue. The Global LSR (or  
2 “batch LSR” using Ms. Lichtenburg’s term) creates the individual LSRs  
3 and the CLEC must still enter the information for the customers included in  
4 the batch to populate the individual LSRs. Because the individual LSRs  
5 associated with the batch are entered into the systems in the same way as  
6 any other LSR, any errors in processing the multiple LSRs would be  
7 captured by the Service Order Accuracy measure, P-11A.

8

9 The next issue raised by Ms. Lichtenberg is the alleged need for “a metric  
10 for timely unlocking of the E911 database.” This issue involves cases  
11 where the customer changes from BellSouth to a CLEC, or for that matter  
12 from a CLEC to BellSouth, and the order including the request for the  
13 change must have reached completion status before an “unlock” message  
14 will be sent to Intrado. Intrado is the vendor currently maintaining the  
15 databases that are utilized by the Public Safety Answering Points (PSAPs)  
16 in handling E911 calls.

17

18 Any problems associated with unlocking the E911 database would apply  
19 whether it involves a customer changing from BellSouth to a CLEC, or  
20 from a CLEC to BellSouth. Therefore, both BellSouth and CLEC  
21 customers would be impacted in the same way by this third party.  
22 Situations where retail and CLEC customers are affected in the same way  
23 means that the process is in parity by design, so no performance  
24 measurements in the SQM or penalties under the SEEM plan are needed.  
25 If the CLECs believe that there is a problem associated with the unlocking

1 of the E911 database significant enough to establish a finding that they  
2 are operationally impaired due to the problems encountered, they should  
3 present this evidence. Simply declaring that there is a need for a metric is  
4 no basis for establishing one, particularly when there is no basis to claim  
5 discriminatory treatment.

6  
7 Ms. Lichtenberg further states: “[a] metric also is needed to track the due  
8 dates that CLECs are assigned.” It is unclear how a new metric would  
9 “track” due dates, and it is even less clear how this information is  
10 meaningful. As an example, if a new metric were to be created that  
11 ‘tracked due dates’ and the measurement showed there were 3 orders  
12 due on February 1 and 4 orders due on February 10, there is little  
13 information to be gleaned or conclusions drawn from such a report. All the  
14 report conveys is that a combination of the CLEC’s requested due date  
15 and BellSouth’s committed date resulted in 3 orders due on February 1  
16 and 4 orders due February 10. I believe the more relevant information is  
17 how well BellSouth meets due date commitments. That information is  
18 available in the existing Percent Missed Installation Appointments  
19 measurement. As an alternative, each CLEC is capable of tracking due  
20 dates that they receive from BellSouth through its own internal systems. If  
21 CLECs believe that there is a problem with the due dates that they are  
22 receiving from BellSouth, they can very easily collect and provide these  
23 data to have BellSouth solve any problem that it caused and ultimately  
24 involve this Commission, if appropriate.

25

1 Further, in order for performance metrics to be useful, there should be  
2 some objective basis for determining whether reported results are  
3 consistent with standards for relatively uniform activities. The due dates  
4 are negotiated between the CLECs and BellSouth according to many  
5 factors. This is because of the case-by-case nature of batch hot cuts.  
6 Moreover, the Ordering, Provisioning and Maintenance & Repairs  
7 domains each either already has a timeliness measure or will include a  
8 timeliness measure, based on changes proposed in my Direct Testimony,  
9 that addresses batch hot cuts. Therefore, creating a metric to track due  
10 dates that CLECs receive for batch hot cuts, which is recommended by  
11 Ms. Lichtenberg without any meaningful detail, is a suggestion that should  
12 be rejected by the Commission.

13  
14 Ms. Lichtenberg also suggests that “the number of ‘batch’ orders that are  
15 rejected needs to be tracked.” As discussed in my Direct Testimony,  
16 BellSouth has proposed modifying the measures O-7 (Percent Rejected  
17 Service Requests) and O-8 (Reject Interval) to include batch hot cuts.  
18 Since, as recognized by Ms. Lichtenberg in her Rebuttal Testimony, a  
19 batch LSR generates multiple LSRs, measure O-7 will track rejected  
20 LSRs, including batch LSRs. Also, measure O-8 will track how long it  
21 takes to reject these LSRs.

22  
23 Finally, Ms. Lichtenberg contends: “[a] separate disaggregation for batch  
24 orders is needed to ensure that the batch orders move smoothly from  
25 ordering to provisioning.” This is unnecessary. As already explained,

1 when a CLEC issues a request for a batch order, the batch order results in  
2 individual LSRs that proceed through the Ordering systems, as would any  
3 other LSR. All of the measurements that capture BellSouth's performance  
4 related to the processing of LSRs would include batch hot cuts, based on  
5 BellSouth's proposal as outlined in my Direct Testimony. Once the orders  
6 reach the provisioning process, there are five (5) measures (the existing  
7 measures P-7, P-7A, P-7B, P-7C and the proposed measure P-7E) that  
8 would monitor BellSouth's performance related to all hot cuts, including  
9 batch hot cut provisioning measures that apply. Clearly, there is no need  
10 to establish a separate disaggregation for batch hot cuts.

11  
12 Q. ON PAGE 9 OF HIS TESTIMONY, MR. GALLAGHER SUGGESTS THAT  
13 "ILECs WOULD BE INCENTED TO CURE PERCEIVED FLAWS IN THE  
14 HOT CUT PROCESS IF THE COMMISSION TILTED KEY  
15 PERFORMANCE METRICS AND COMPENSATION PAYMENTS TO  
16 FOCUS MORE ON THE REALITIES OF A UNE-L WORLD RATHER  
17 THAN A UNE-P WORLD." DO YOU AGREE?

18  
19 A. It is unclear what action Mr. Gallagher is proposing for the Commission to  
20 take. The current Performance Assessment Plan (PAP) approved by this  
21 Commission addresses UNE-P as well as UNE Loops. In fact, in the  
22 provisioning measurements, there are 25 product categories of UNE  
23 Loops including analog loops, ISDN loops and digital loops. Additionally,  
24 in my Direct Testimony, I proposed modifications to measurements in both  
25 the Ordering and Provisioning domains and the SEEM plan to more

1 closely focus on the batch hot cut processes. The Ordering  
2 measurements include PO-3: UNE Bulk Migration – Response Time, O-7:  
3 Percent Rejected Service Requests, O-8: Reject Interval, O-9: Firm Order  
4 Confirmation Timeliness, and O-11: Firm Order Confirmation and Reject  
5 Response Completeness. The Provisioning measurements include P-7:  
6 Coordinated Customer Conversions Interval and P-7E: Non-Coordinated  
7 Customer Conversions - % Completed and Notified on Due Date.

8

9 The existing PAP, coupled with these modifications is more than sufficient  
10 to address real flaws (rather than “perceived flaws”) in the hot cut process.  
11 Given the comprehensive coverage that UNE-L receives in the PAP, it  
12 does not appear that any “tilting” to favor UNE-L is necessary.

13

14 Q. IN DESCRIBING SUPRA’S EXPERIENCE WITH RESPECT TO THE  
15 ORDER COMPLETION STEP ON PAGE 6 OF HIS TESTIMONY, MR.  
16 NEPTUNE STATES “BELLSOUTH HAS NO METRIC NOR HAVE THEY  
17 OFFERED ONE SIMILAR TO VERIZON’S TO ASSURE THAT THE  
18 CENTRAL OFFICE TECHNICIAN WILL ENTER COMPLETIONS INTO  
19 THEIR SYSTEMS IN A TIMELY MANNER.” PLEASE COMMENT.

20

21 A. As discussed in my Direct Testimony pages 30 and 31, BellSouth reports  
22 the time it takes for the coordinated cutover of customer loops to CLECs  
23 (with a benchmark of 15-minutes) as part the measure P-7 (Coordinated  
24 Customer Conversions Interval), and has an objective to notify the CLEC  
25 within 5 minutes of the loop being cutover. Moreover, in my Direct

1       Testimony (pages 43 – 44) I proposed modifying this measure to include,  
2       in addition to the 15-minute requirement for cutover of the loop, a 5-minute  
3       requirement to notify the CLEC that the cutover has completed (see also  
4       Exhibit AJV-2 of my direct filing). So when, with respect to a measure of  
5       timely notice of loop completions, Mr. Neptune remarks: “BellSouth has no  
6       metric nor have they offered one”, this is inaccurate. BellSouth’s measure  
7       may differ from similar measures that Verizon may report, however, the  
8       activity of which Mr. Neptune voices a concern is captured by the  
9       BellSouth metric.

10  
11       It should also be noted that while Mr. Neptune contends that BellSouth’s  
12       coordinated conversion process does not work well, based in part on  
13       “Supra’s experience in the last 60 days with over 3,500 conversions,” he  
14       fails to point out that none of the conversions during this period  
15       (presumably November and December 2003) were ordered as  
16       “coordinated.” Mr. Neptune does admit (on page 5, lines 4 –5 of his  
17       Rebuttal Testimony) that “Supra has not used the level entitled  
18       ‘Coordinated/Time Specific’ option as yet,” but what he neglects to clarify  
19       is that neither has Supra ordered Coordinated/Non-Time Specific. In fact,  
20       for November and December 2003, all of Supra hot cut conversions were  
21       ordered as “non-coordinated.” Moreover, if we consider BellSouth’s  
22       performance in performing customer conversions for Supra for the months  
23       November and December 2003, out of \*\*\*-----\*\*\* conversions, only  
24       \*\*\*---\*\*\* due dates were missed for BellSouth reasons. This means that  
25       BellSouth performed according to Supra’s due date requirements for over

1 99.8% of these conversions. The Commission should promptly dismiss  
2 these baseless and inaccurate claims, and consider instead the more  
3 objective and verifiable performance data filed with my testimony (Direct,  
4 Rebuttal and Surrebuttal.

5

6 **V. OTHER ISSUES RAISED**

7

8 Q. MR. VAN DE WATER, ON PAGE 12 OF HIS TESTIMONY, DESCRIBES  
9 A SITUATION IN FLORIDA WHERE CUSTOMERS WERE OUT OF  
10 SERVICE FOR 17 AND 18 AND ONE HALF HOURS. PLEASE  
11 ADDRESS THIS SITUATION.

12

13 A. Although Mr. Van De Water once again presents an incomplete story, the  
14 average recovery times he describes are correct for the customers who  
15 experienced a service outage during a hot cut during October and  
16 November. However, as I noted in my rebuttal testimony to Mr. Van De  
17 Water, several key facts need to be pointed out and restated here. First,  
18 these 44 outages in the two months of October and November represent  
19 only 1.04% of the 4226 coordinated customer conversions for those same  
20 two months. Second, this 1.04% of the coordinated conversions is below  
21 the Commission's benchmark of 3% for provisioning troubles within seven  
22 days of the hot cut. And third, for the 2418 coordinated hot cuts in October  
23 2003 there were 23 service outages, 4 of which, due to an extended  
24 outage, caused the average for these 23 to be 17 hours; for the 1808  
25 coordinated hot cuts in November 2003 there were 21 service outages, 6
