4. The Conservation Cost Recovery Factor was calculated in accordance with the methodology which has been previously approved by the Commission in this docket. The factor is designed to recover the projected conservation program expenses of **SJNG** for the twelve month period ending December 31, 2006 adjusted for the net true-up (which includes the estimated conservation true-up for the Twelve month period ending December 31, 2005), as well as interest calculated in accordance with the methodology established by the Commission.

5. **SJNG** projects total conservation program expenses, net of all programs revenue of \$16,225.00 for the twelve month period ending December 31, 2006. The estimated net true-up for the twelve months ending December 31, 2005 is an over-recovery of \$6,766.00. After decreasing the projected conservation expenses by the amount of this overrecovery, a total of \$9,459.00 remains to be collected during the twelve months ending December 31, 2006. Dividing this total by the projected sales for the period of 1,212,013 therms, and expanding for taxes, results in the conservation adjustment factor of \$0.00902 per therm for residential, \$0.00737 per therm for commercial and \$0.00348 for large commercial respectively which **SJNG** seeks approval in this petition. The calculation of these factors per therm are contained in the Commission prescribed worksheets filed with this petition.
