## P R O C E E D I N G S

(Transcript follows in sequence from Volume 5.)

## CONTINUED CROSS EXAMINATION

BY MR. McWHIRTER:

Q Let me see if I can state it another way. Your, according to your testimony, your actual out-of-pocket costs for the storm are about a billion dollars. I haven't added up the 213 plus the 826. So that's money that the company paid out for storm damage and that's tax deductible to you, is that what you're saying, and you're giving customers the benefit of the tax deduction you received on that?

A In general, yes. But what I would point out is the actual losses as shown on Line 5 of that schedule is approximately \$1.7, \$1.8 billion, of which --

Q Uh-huh. Okay.

A -- a portion of the '04 costs were covered by the existing storm reserve. The '04 costs were further reduced by the collections that have occurred since February of '05, leaving a projected amount of \$213 million for those, and then we have the full amount of the '05 costs.

Q All right. Now on Line 16 you have replenishment of the reserves, that \$650 million, and that money is going to be subject to tax, is that correct, when you -- not when you get, not when you issues the bonds, but when the reserve is being built up?

1           A     No, that is not correct.  What will occur, what will  
2 occur is when we receive the bond proceeds, the full  
3 amount would be credit -- well, actually let's back up a step.

4                     When the Commission approves regulatory assets, which  
5 are also addressed in my testimony, we would create the reserve  
6 balance of \$650 million.  We would simultaneously create a  
7 \$650 million regulatory asset.  That asset would then be sold  
8 to the SPE, the special purpose entity, and the monies that the  
9 SPE would use to buy that regulatory asset representing future  
10 collections from customers would be the money that they derived  
11 by issuing the bonds.  We would receive that money, we would  
12 put the amount received into a storm fund, a special fund that  
13 would be held for the sole purpose of storm costs in the  
14 future.  I tried to walk through all of it.  I may have missed  
15 a piece, but --

16           Q     No.  You're doing fine.  And I appreciate your not  
17 going too much at one time.

18                     So essentially what's going to happen is you're going  
19 to issue a billion dollars worth of bonds, in round numbers,  
20 and then, or the SPE will issue it, and then you will give a  
21 security to the SPE or something and it's going to give you the  
22 million dollars, is that right, give Florida Power & Light the  
23 million dollars?

24           A     The billion dollars.  Yes, sir.

25           Q     All right.  Now do I understand from what you said

1 before that you really don't need \$1.7 million to pay for your  
2 out-of-pocket storm damages because your income tax savings  
3 paid for part of that, so you really need less than  
4 \$1.7 million?

5 A I believe that that is a fair characterization of  
6 what you see on Lines 5 through 9. When you add the targeted  
7 balance of the storm reserve, then you get back to the  
8 million -- \$1.690 billion.

9 Q All right. Now so when that million dollars in cash  
10 comes in, tell me how the company is going to use that cash.  
11 Is it going to immediately set up a \$650 million reserve fund  
12 or is it going to put part of it in deferred taxes?

13 A The -- as I indicated earlier, the reserve is created  
14 by this Commission authorizing the creation of a regulatory  
15 asset. And if we're -- are we only talking about the 650  
16 here?

17 Q Yes.

18 A If we're talking about only the 650, we'll create a  
19 regulatory asset for 650, we'll create a storm reserve.  
20 Remember, the storm reserve is the capacity to absorb losses in  
21 the future. It's not the resources to pay for the restoration,  
22 but it's the capacity to absorb that loss without, say, hitting  
23 the income statement. The --

24 Q All right. Now I'm going to stop you here because  
25 I'm a little bit confused. My question was, are you going to

1 take \$650 million and put it in the bank or some kind of  
2 short-term investments?

3 A Okay. I'll try to continue. I'm not ignoring your  
4 question.

5 Q Okay.

6 A But I was trying to follow what, at least to be as a  
7 logical sequence, may not be to anyone else --

8 Q Well, you're doing fine. You're doing fine.

9 A We have the, we have the 650 asset.

10 Q Right.

11 A The bonds are issued by the SPE, and we're  
12 only talking about the 650 here. What will happen is  
13 Florida Power & Light will sell 400 of that 650 regulatory  
14 asset to the SPE. That represents the after-tax  
15 portion of that. We will retain the tax portion on  
16 Florida Power & Light's books.

17 So what Florida Power & Light will receive relative  
18 to the 650 is 400. That 400 will be received by the company,  
19 will be immediately put into the storm fund, which is on the  
20 asset side. It's a special fund; that provides the resources.

21 The remaining \$250 million regulatory asset will  
22 remain on Florida Power & Light's books. No cash changed  
23 hands. It's sitting there as a receivable, if you will. And  
24 what -- that receivable represents the tax effect of that 650.  
25 So that when we collect the money from the customers, and the

1 money that we will collect from the customers will be to cover  
2 the 650, because when Florida Power & Light receives it, let's  
3 fast forward to the end, Florida Power & Light will have  
4 received a full 650, they will have taken 250 and used that to  
5 pay the income taxes. They will have remitted the 400 back to  
6 the SPE to pay off the bonds. I'm obviously ignoring interest  
7 and all of these other things.

8 Q I understand. But now \$400,000 (sic.) is the money  
9 that's going to draw interest. The 200 -- I mean \$400 million.  
10 The \$250 million is for the purpose of paying taxes. But the  
11 taxes aren't due at the time you receive the money, are they?

12 A That's correct.

13 Q And they'll be paid over the period of the  
14 amortization of the bonds.

15 A That's correct. And there's also -- there's -- when  
16 you start day one, you'll actually have two -- a regulatory  
17 asset and a regulatory liability.

18 Q Right.

19 A I'm sorry. A deferred tax asset and a deferred tax  
20 liability. The deferred tax asset relates to the 650 that we  
21 created in the reserve. The regulatory liability relates to  
22 the regulatory asset.

23 What will happen is that over time the regulatory --  
24 doggone it -- the deferred tax asset -- even accountants get  
25 confused with this stuff. The deferred tax asset which relates

1 to the 650 reserve, it will stay. It will not change unless  
2 and until storm costs are incurred and the storm reserve is  
3 charged.

4           However, the regulatory liability that's associated  
5 with that asset will come down as we collect the funds from the  
6 customers. So what you will wind up with is a deferred tax  
7 asset sitting in, sitting on the books of the company until the  
8 storm reserve is used.

9           Q     I'm kind of like Cuba Gooding in that Tom Cruise  
10 movie: Don't confuse me with the accounting, just tell me  
11 where the cash went.

12                   And I've gotten \$400 million in cash that you're  
13 going to get; that's going into an investment for future  
14 storms. So you have that cash in your hip pocket when a storm,  
15 catastrophic storm comes by. You're not going to need it for  
16 any current damages; it's for the future.

17                   All right. Now the \$250 million, you don't need that  
18 now to pay taxes with either because the taxes accrue over a  
19 period of time; is that correct?

20           A     The taxes would become payable as we collect the  
21 monies from the customer. But, Mr. McWhirter, I need to point  
22 out to you that the 250 that we are talking about basically was  
23 created by, you know, was, was created. It did not involve  
24 cash. It neither involved the receipt of cash nor --

25           Q     I'm not here to deal with the creator or intelligent

1 design. What I want to know is where will you put the  
2 \$250 million that you get?

3 A When I receive the \$250 million --

4 Q Yes, sir.

5 A -- from our customers --

6 Q Yes, sir?

7 A -- I will pay that to the government.

8 Q So, but you're going to receive the money from the  
9 bond issue. You're not going -- I'm talking about the  
10 \$250 million that you're going to get in the year 2006. Taxes  
11 aren't due in 2006. They're going to be due over a 12-year  
12 period. What are you going to do with that cash?

13 A As I indicated earlier, the amount that is financed,  
14 it's shown basically on Line 21, 22 of the exhibit, is only the  
15 after-tax portion. I will not receive the \$250 million that we  
16 are talking about until such time as I receive it from the  
17 customers. I will immediately turn around and pay that 250 to  
18 the government. And at the same time I will make the after-tax  
19 payment, if you will, the 400 would be paid to the SPE to pay  
20 down the bonds. I do not have cash at any point in time for  
21 any use, for any purpose associated with these taxes.

22 Q I see. Well, I somehow thought that there was a  
23 billion dollars involved in this bond issue. Isn't there a  
24 billion dollars?

25 A There is a billion dollars. But while we were --

1 when we were trying to frame this question earlier, you agreed  
2 that we would only talk about the 650, and I can do the math in  
3 my head for the 650.

4 Q Okay. I'm sorry.

5 A I have not attempted to do it for the rest.

6 Q Okay. So we've still got 350 on the table we're  
7 going to talk about in a minute.

8 A No, we actually --

9 Q The 650, we've accounted for \$400 million of that  
10 that's going to be invested. Got that. The 250, taxes aren't  
11 due now. They're due at some future time; right?

12 A And I have no cash now either. Correct.

13 Q And what are you going to do with that pot of cash?

14 A Which pot of cash?

15 Q That \$250 million.

16 A I told you, I did -- we will not receive cash --  
17 let's go back and look at the billion dollars we're going to  
18 receive.

19 Q Okay.

20 MR. ANDERSON: Chairman Edgar -- all right.

21 THE WITNESS: Approximately 400 of that relates to  
22 the 650. Okay? The remaining 600 relates to the 2004 and 2005  
23 storm costs that the, that the company has already expended.

24 BY MR. McWHIRTER:

25 Q I've got you. So what you're saying is \$400 million

1 goes into the reserve and \$600 million is going to go to pay  
2 storm damages, and then the balance of the storm damage money  
3 is coming from your tax savings. Is that the deal?

4 A That's a fair, that's a fair characterization. Yes,  
5 sir.

6 Q All right. So on the \$250 million, you didn't get  
7 that \$250 million in cash. It went for storm damage. And so  
8 you've set up a deferred tax asset, is that correct, for  
9 \$250 million?

10 MR. ANDERSON: Chairman Edgar, I believe this line  
11 has been gone through about three times now.

12 CHAIRMAN EDGAR: Mr. McWhirter, I was actually  
13 thinking the same thing. I think we've covered this ground, it  
14 seems to me.

15 MR. McWHIRTER: I'm really on another line of  
16 questioning of what the --

17 CHAIRMAN EDGAR: Well, then that was not clear to me.

18 MR. McWHIRTER: This is the accounting issue. I was  
19 talking about the cash before, and now we're talking about the  
20 accounting.

21 BY MR. McWHIRTER:

22 Q And I was wondering if you're setting up a regulatory  
23 asset, how that regulatory asset is treated in the capital  
24 structure. Is that a deferred tax that you get?

25 A The regulatory asset is separate and apart from the

1 deferred, the deferred taxes, and I would assume that it would  
2 be part of, part of rate base.

3 Q A part of rate base?

4 A Correct.

5 Q And do you get a return on the \$250 million?

6 A There -- it would certainly -- it would increase the  
7 assets upon which return requirements were, were calculated.

8 Q But there's no cash. You already told me that the  
9 cash went to pay storm damage.

10 A I'm having trouble following because you're moving  
11 back and forth between the, between the 650, which relates to  
12 the restoration of the reserve, and the numbers happen to be  
13 very similar.

14 Q I understand.

15 A If you look at the \$1.690 billion, which is on Line  
16 18, 17 or 18, the monies that are associated with the 213 from  
17 '04 and the 827 from '05, that will go to reimburse the company  
18 for costs it has already expended.

19 Q Right.

20 A Therefore, it would be used to pay down short-term  
21 debt and things like that.

22 Q But it wouldn't go into the rate base.

23 A Not in that sense. That's where you're --

24 Q That's the capitalized part.

25 A I will admit confusion there. I thought you were

1 talking about the regulatory asset that remained on FPL's books  
2 representing the, the amount due from customers for the taxes  
3 associated with the financing requirements. And as I -- I  
4 haven't visualized in my mind where, where that would go. I  
5 mean, it's an asset. It would sit there. I believe they're  
6 offsetting pieces to that, but they don't come to mind right  
7 now.

8 Q Well, the reason I asked you this tedious line of  
9 questioning, and I apologize for it, is because it's very  
10 difficult for me as well to understand it. And I noticed  
11 something that really affects your rates and your allowance for  
12 funds used during construction is the amount of deferred taxes  
13 you have in your capital structure. And I wondered if any of  
14 this money that is going to be accounted for as deferred taxes  
15 is going to affect your capital structure, if it's going to  
16 give you zero cost of capital or if it's something you're going  
17 to ask for a return on.

18 A I'm not sure I know what the question is. I'm sorry.

19 Q Well, I was just telling you what my confusion was.

20 A Well, the --

21 Q But I want to know how it goes in the capital  
22 structure. Is it cost-free capital or something you look to --

23 CHAIRMAN EDGAR: Mr. McWhirter, I'm sorry, I'm going  
24 to jump in here for a minute. Again, just kind of for planning  
25 purposes since we do have a long day, can you give me a very

1 rough idea of about how, how long, how much more you have on  
2 cross for this witness roughly?

3 MR. McWHIRTER: 22 minutes.

4 CHAIRMAN EDGAR: In that case, I would like to take a  
5 pause here, it's about that time, for a stretch, I think. My  
6 clock says 10:45. We will come back at 11:00. And let's use  
7 the break as well to rethink keeping our questions focused and  
8 concise. Okay.

9 MR. McWHIRTER: I promise to do that, Madam Chairman.  
10 Thank you.

11 CHAIRMAN EDGAR: Thank you very much. We will be  
12 back at 11:00.

13 (Recess taken.)

14 CHAIRMAN EDGAR: We will get started again here in  
15 just a moment, and we'll go back on the record.

16 And, Mr. McWhirter.

17 MR. McWHIRTER: Thank you, Madam Chairman.

18 BY MR. McWHIRTER:

19 Q Mr. Davis, I'm going to attempt to consolidate things  
20 by asking you broad general conclusions that we can rely on.  
21 And rather than going through the accounting process or how the  
22 cash is disbursed, I'll just ask you one question, and that is  
23 do you give us your assurances -- give me your title.

24 A Controller, Chief Accounting Officer.

25 Q That the deferred taxes and the income taxes

1 connected with this proceeding will in no way result in an  
2 increased return requirement that will be imposed on the  
3 customers.

4           If you'd like me to be a little more precise, I'll  
5 tell what your concern is. It has to do with AFUDC rate.  
6 And AFUDC is the money that you are able to build up the value  
7 of your assets. And if deferred taxes are cost-free capital,  
8 it's not going to build up the AFUDC rate. But if there's any  
9 way that this money can creep into the rate base and you're  
10 entitled a return on it and it's money that customers are  
11 putting in, I don't think that would be right and I don't think  
12 you would be. Can you give us your assurance that that's not  
13 going to happen?

14           A     Okay. I will, I'll try to bring both of those into,  
15 into a single answer. I'm always hesitant that I may miss some  
16 piece --

17           Q     Yeah.

18           A     -- and then be held accountable for that piece. But  
19 number one is the AFUDC rule is, is reset on an annual basis if  
20 there's, you know, any significant change in it, so that to the  
21 extent that the debt rates change or there are major shifts in  
22 capital structure, what have you, you would change the AFUDC  
23 rate. We look at it every single year, and I believe we did  
24 not make a change this year. There was an insignificant delta  
25 in the resulting AFUDC rate, so it wasn't worth the

1 administrative effort of this Commission to do so. If there is  
2 a significant change, then we file for it. I think the  
3 Commission rules require that an AFUDC rate be in place for a  
4 12-month period. So the annual resetting of it is the  
5 appropriate way.

6           And I guess the final piece of the answer that I  
7 think may help you is the fact that as we sit here today, we  
8 have more deferred tax credits on the books because we have  
9 deducted the storm losses that were incurred in '04 and '05,  
10 and we have not been reimbursed, fully reimbursed for those.  
11 Therefore, you have to remember taxes, you know, are -- it's  
12 not the same as the book income. So because of the difference,  
13 we deducted the storm losses for tax purposes. We did not take  
14 them as an expense for book because we expected the recovery of  
15 them. So we have a deferred tax liability on the books  
16 representing the fact that we deducted something for tax  
17 purposes before we did for book purposes. That will decline  
18 over time.

19           As the monies are received from customers, they would  
20 be received by Florida Power & Light. Florida Power & Light  
21 will pay the taxes on those. That will reduce the deferred tax  
22 liability associated with those storm losses. So that was my  
23 hesitation of saying, you know, won't benefit because, in fact,  
24 that zero cost of capital will decline over time as the  
25 customers pay the storm bond charge and the storm bond tax

1 charge.

2 Q Does that mean that the more the customer pays, the  
3 more the rate will go up?

4 A I mean, you can, mathematically you can characterize  
5 it that way, all other things being equal, because what's  
6 happening is the zero cost capital provided by the government  
7 via a tax deduction is declining. It's reversing, if you will.

8 Q Currently it's right at \$2 billion, and there's an  
9 inconsistency in your 10K in the surveillance report, but I'm  
10 not going to get into that.

11 Let me give you something to refresh your  
12 recollection. I'm not passing this out to save time and I'm  
13 only using it to refresh your recollection, but this is an  
14 extract from the 2005 surveillance report that your company  
15 filed on February 14th of this year.

16 In the last page of that report it looks to me like  
17 the AFUDC rate changed monthly when you do your year-end  
18 calculation.

19 A I believe that that's the result of the, of the  
20 compounding that would go on in the calculation of it that's  
21 shown in the formula immediately above it.

22 And if you're looking at the last column, the  
23 cumulative AFUDC, that would be the result of showing that the  
24 annual calculation which is reflected in the formula of  
25 7.09 percent, that, you know, as it builds over the year, it

1 ends at 7.09 percent at the end of the, at the end of the year.  
2 But the changes in the rate there are not the result of changes  
3 in the capital structure. They are the result of the  
4 compounding of it as it builds over the years so that at the  
5 end of the year our effective rate is no more than the amount  
6 calculated, properly calculated under Commission rules of  
7 7.09 percent.

8 Q Well, I go back to the basic question then. All I  
9 want you to tell us is that nothing that happens with respect  
10 to this bond issue is going to affect the rate of return that  
11 customers are required to pay in their base rates, either  
12 through the AFUDC charge or through a rate case when we have  
13 one.

14 A Aside from the effects of either increasing or  
15 decreasing deferred taxes as monies are, and in this case it  
16 would be reducing deferred taxes, as monies are received from  
17 customers in payment of the storm bond charge and the storm  
18 bond tax charge, it should have no other effects.

19 Q Well, that's the effect I'm worrying about because  
20 this is 200 -- \$650 million, and that's a big hunk of money.

21 A Well, the -- if you look at the books today, you  
22 would -- year zero of bonds we have a 250 -- after the  
23 securitization assets are created, we'll have a \$250 million  
24 deferred tax asset related to the storm reserve. That's what I  
25 had alluded to earlier. And you'd have 400 in the investment

1 fund and 650 capacity to absorb losses.

2 We will have on the books approximately \$652 million  
3 worth of deferred tax liabilities that are associated with the  
4 fact that we incurred storm losses in '04. We deducted the  
5 losses for tax purposes. We did not deduct them or show them  
6 as an expense for book purposes. Same issue for '05. And then  
7 you have the capacity to absorb the losses. That 652 will  
8 decline over time as we collect monies from our customers.

9 Q All right. Stop right there. The 652 that goes into  
10 the deferred tax liability account, that's zero cost of capital  
11 in your capital structure; is that correct?

12 A That is correct. That is correct.

13 Q So the customer should benefit from the existence of  
14 that.

15 A And the customer does benefit from the existence of  
16 that.

17 Q And they'll benefit -- we're not having a rate case,  
18 so there won't be any immediate rate benefit, but they'll  
19 benefit in the AFUDC rate that adds to the value of the assets  
20 that you're putting in the ground through your generation  
21 construction program.

22 A I would agree with that.

23 Q All right. Let's don't -- I'm not going to ask you  
24 anymore questions on that.

25 You also told me, and this is a general, another

1 conclusion, if you'll look at Issue 46. And Issue 46 asks if  
2 the income taxes -- financing cost is eligible for income taxes  
3 under the securitization law. And my only concern there was  
4 that I wanted to make sure that every dime the customers paid  
5 to you to create the storm reserve they get credit for in the  
6 storm reserve irrespective of taxes, and I think your answers  
7 to my questions lead to that conclusion. If customers pay you  
8 \$650 million for the storm reserve, they get \$650 million  
9 credit. And that's -- they're not going to get \$400 million  
10 credit when it comes time to pay for the storm as 650 is there;  
11 right?

12 A As it relates to the replenishment of the storm  
13 reserve, yes.

14 Q All right. Good. That answers my concern with  
15 respect to 46. And 47 is kind of a peculiarly worded issue.  
16 It says, "If recovery of taxes assessed on the storm recovery  
17 charges are not securitized, should the tax charge be included  
18 in the irrevocable financing order?" And it seemed to me that  
19 there wouldn't be an irrevocable financing order if there's no  
20 securitization. Is that correct?

21 A I think you're getting afield of my ability as an  
22 accountant. But let me try to answer the question in a way  
23 that I'm comfortable as an accountant.

24 Q All right.

25 A And I think what they're getting at here is if we

1 issued the bonds on an after-tax basis, in other words, giving  
2 credit to our customers for the zero cost financing, if you  
3 will, provided by government through a tax deduction,  
4 therefore, you are not including the tax element in the  
5 securitization bond bonds.

6           However, it is also true that when the customers pay  
7 the storm recovery bond charge and the storm recovery tax  
8 charge, that the combination of those two will be taxable. And  
9 FPL will be responsible for paying those taxes and then  
10 remitting the after-tax proceeds to the, to the SPE, which  
11 means that the monies coming in from customers that are  
12 remitted to the SPE is entirely consistent with the manner in  
13 which the bond amount to be issued was determined.

14           Q     But Issue 47 talks about a situation in which we  
15 don't securitize the bonds. So what -- that's your alternative  
16 proposal.

17           A     I do not agree. I think it says, "If recovery of the  
18 taxes assessed on the storm recovery charges are not  
19 securitized." I interpret that as an accountant to mean  
20 they're not covered by the financing --

21           Q     Okay. I see.

22           A     -- should the tax charge be included in the order.  
23 My answer to that is yes, because when I receive monies from  
24 the customers, I must pay taxes on it. And the only way that I  
25 will have the correct amount of, I'll call it after-tax

1 proceeds available to remit to the SPE to pay off the bonds is  
2 if I have the same right to, to a nonbypassable charge to  
3 receive the tax as well as the bond charge itself.

4 Q So this question becomes relevant only if the  
5 Commission doesn't vote to give customers the benefit of the  
6 original customer discount that you've provided?

7 A Well, the -- I don't want to call it a discount.  
8 I'll say the benefit of the tax deduction. Yes, sir.

9 Q But irrespective of all that, my concern was the  
10 storm reserve will not be impacted adversely. It will still  
11 stay at \$650 million if that's what you're authorized to  
12 collect; is that correct?

13 A That is correct. The reserve will be created at 650,  
14 the fund at 400. We have confusion at our own company. That's  
15 why I keep repeating that. You know, because it's a funded  
16 reserve, the fund is after tax, the reserve is pretax.

17 Q All right, sir. I'd like to take you back now to  
18 your Exhibit KMD-1.

19 A Yes.

20 Q For purposes of the record, I believe that is Exhibit  
21 17. Look at the total reserve, revenue requirement on Line 26,  
22 and you show how much you're going to collect through this  
23 surcharge from customers for every year. And I think there's  
24 some confusion. At some places, since you're only asking for a  
25 billion dollars in bonds, people might be led to believe you're

1 only asking for a billion dollar rate increase. And the  
2 Attorney General yesterday said it was \$1.5 or \$.7 billion.  
3 But Mr. Dewhurst and I calculated that it's really  
4 \$2.085 billion that you're asking to collect from the  
5 customers; is that correct?

6 A Over the entire 12-year period --

7 Q Yes?

8 A -- this is exactly the same way it would work with  
9 your home mortgage. You borrow \$100,000 to buy a house, you're  
10 going to pay back more than 100 because you have to pay  
11 interest. Yes, sir.

12 Q I guess this is, what is it, Regulation D that you  
13 get when you buy your house. The government asks the bank to  
14 tell you the truth, that's truth in lending. And so for truth  
15 in lending, you would tell your customers that that is really a  
16 \$2 billion rate increase; is that correct?

17 A No, sir, that is not correct. It is, number one, it  
18 is not a billion dollar rate increase. It is, it is a  
19 surcharge to be applied on the bill. I forget what the number  
20 is now, but it's around a buck fifty or so on an average, on an  
21 average basis. It is true if you use someone else's money for  
22 a period of time, you are going to incur interest.

23           Secondarily, you are also going to have to cover the  
24 tax charge. I've already given the customer, I say I, Florida  
25 Power & Light has given the customer the benefit of the tax

1 deduction, the tax savings via the tax deduction of storm  
2 losses.

3 Q You don't have to go into that.

4 A When the customer repays it, we have to pay it.

5 Q \$2 billion you want to collect and you want to  
6 collect it from the customers; right? Yes or no.

7 A If you want me to answer that, I'm going to give you  
8 the same details.

9 Q Okay. You're going to ask for less than \$2 billion?

10 A I'm asking for a surcharge on the bill, an average --  
11 well, the revenue requirements are here. \$147.91 million in  
12 year one and so forth right across the page.

13 Q If interest rates go up, this amount goes up;  
14 correct?

15 A I would not, I would not think that would be the case  
16 unless the bonds are issued on a floating rate basis.

17 Q Uh-huh. Well, I'm talking about if interest rates  
18 between now and the date of the bond issue -- the price will go  
19 up.

20 A That is correct.

21 Q And this sum does not include gross receipts tax,  
22 does it, that customers will be charged?

23 A No, sir, it does not.

24 Q And it does not include the franchise fee that you  
25 charge for the municipalities where you have streets and

1 charter counties; is that right?

2 A That is correct.

3 Q And it does not include the 10 percent municipal  
4 utility tax that people, that you put on people's bills.

5 A Let's examine why we put it on people's bill. The  
6 answer is no. And just like the gross receipts tax, it is  
7 legislatively established that Florida Power & Light Company  
8 will act as a collection agent for a --

9 Q All I'm trying to do is get a truth in lending and  
10 want to know what the customers are going to be asked to pay.  
11 It doesn't include the 7 percent sales tax that small  
12 businesses have to pay but residential customers are exempt  
13 from; is that correct?

14 A That is correct.

15 Q And so have you ever calculated what the local tax  
16 burden is on customers after they get your bill? I do mine  
17 periodically for Tampa Electric, and it runs to something like  
18 15 percent per month and I'm sales tax exempt. Is that a fair  
19 --

20 A I mean, the muni taxes, say a 10 percent gross  
21 receipt, 2.5, you're 12.5, and then you have franchise fees  
22 which often run about, I'd say, 5 to 6 percent. So actually  
23 yours sounds maybe a little low.

24 Q Okay. I'm about to wind up with you, Mr. Davis. I  
25 know you appreciate that, and I know the Commissioners do.

1           Go to Issue 24, if you would. And that's really  
2 Public Counsel's issue, and it wants to know if FP&L has  
3 charged any other costs to the storm reserve that should be  
4 expensed or capitalized. And FIPUG's approach on this is that  
5 if -- is there any money that you collect from any portion that  
6 customers ought to receive the benefit from?

7           And I'd like to dwell a minute on your experience  
8 with Edison Electric Institute. You were a major player in  
9 that institute for a number of years as I understand it; is  
10 that correct?

11          A     I serve on the Accounting Advisory Committee, yes.

12          Q     And utilities have what I think is a wonderful  
13 program where they go help one another out in times of storm  
14 costs -- I mean storm restoration. And did you get help from  
15 other utilities during the 2004, 2005 storm season?

16          A     Yes. I would say we are a net beneficiary of the  
17 Mutual Aid Program.

18          Q     The answer is yes?

19          A     I'm sorry. Yes, sir.

20          Q     Can you tell us about how much money your, your  
21 company, you're going to ask the customers to pay the storm  
22 damage that's going to be paid to those companies?

23          A     I'm sorry. I don't know off the top of my head.

24          Q     Would it be north of --

25          A     It's a substantial amount.

1 Q -- \$300 million?

2 A For both years?

3 Q Yeah.

4 A I -- it would be a guess. I would prefer not to  
5 speculate. Hold on one second.

6 I don't know the number off the top of, off the top  
7 of my head. I know -- I think Witness Williams, Geisha  
8 Williams would know the answer.

9 Q Big number; right?

10 A It's a big number. It's hundreds of millions of  
11 dollars.

12 Q Did you send your crews and trucks and materials to  
13 other utilities to help them out during their storm repairs?

14 A Yes, we did.

15 Q And did you reduce the pay of your employees during  
16 that period of time?

17 A No. We continued to pay those employees during that  
18 period of time.

19 Q And you paid them from the money you collected for  
20 base, through base rate?

21 A Yes. They -- I don't know, I don't know that I can  
22 match a dollar here, a dollar here. We paid them. We charged  
23 that -- let's put it this way. The time that the employees  
24 spend providing mutual aid assistance to other utilities, a  
25 couple of things happen. All of their costs are charged to a,

1 I'll call it a job order or a receivable that we set up so that  
2 we collect from those companies the full costs that we incur.  
3 There's one, one exception, and that is the cost, the  
4 additional costs that we incur to enable us to send those  
5 people. Again, it's the notion of backfill and catch-up, which  
6 I'm sure you will hear a lot about during these proceedings.

7 Q Well, my question is do you ever receive more money  
8 back from the utilities than you actually incur in paying to  
9 your employees?

10 A No, I don't believe so. There are other costs in  
11 there that are not paid to employees. There is their payroll,  
12 including overtime, their travel costs. There may be some  
13 materials that are involved and what have you. The amount of  
14 the bill, under the terms of the Mutual Aid Agreement, may not  
15 exceed our actual costs.

16 Q You advance the money to the employees for their  
17 travel expense or reimburse them for their travel expense, and  
18 you pay for their fuel, and you pay their salaries while  
19 they're gone; is that correct?

20 A That is correct.

21 Q All right. And then you're reimbursed by the other  
22 utility, just as you have reimbursed those utilities?

23 A That is correct.

24 Q Would you have any problem with a regulatory policy  
25 that said that any time FP&L collects more money for providing

1 storm assistance to other utilities than it actually pays out,  
2 that that additional money will go to increase the storm  
3 reserve for the benefit of your company and its customers?

4 A Yes, I would.

5 Q You would have no problem with that?

6 A I would have a lot of problem with that.

7 Q Oh. What would the problem be?

8 A I mean, the basic problem, if you want to turn base  
9 rates into essentially a clause proceeding where if I spend  
10 more money in an area, I receive more money, if I spend less  
11 money in an area, I don't, don't include that, then fine.

12 But there's, you know, there's several basic  
13 problems. Number one, it creates a disincentive to send these  
14 people off because I do not get reimbursed, as I alluded to  
15 earlier, for the overtime costs, the contractor costs that are  
16 often incurred to backfill for those people when they are off  
17 on those storms. Customer demands do not go down. We're a  
18 very cost-efficient utility. I think we rate very highly as a  
19 cost-efficient utility. And, therefore, what I will say is  
20 that our people are fully committed. We don't have people  
21 there, we don't include them in the budget unless we have the  
22 work for them to do. So when they go away, you have a choice:  
23 Either customer service is seriously eroded or you backfill.

24 Q I didn't mean to send you off on the soapbox. I just  
25 wondered if you would oppose that regulatory policy, and your

1 answer is yes; correct?

2 A Yes, sir. It certainly is yes.

3 Q When you get that money, does it come in below the  
4 line or do you, does it affect your earnings?

5 A You're mixing a couple of concepts there. It is --  
6 it does not affect earnings because all I'm being, all that's  
7 happening is I am receiving reimbursement for the costs that I  
8 incurred.

9 Q Well, the policy I suggested was that when you  
10 receive more money than your actual out-of-pocket costs, will  
11 you have any problem with letting that money go into the storm  
12 reserve? And your answer was, yes, you'd have a problem with  
13 that. So the premise is you're getting more money than you've  
14 actually expended. So how do you account for that?

15 A I guess I will plead not listening carefully to your  
16 question. Since the rules preclude us from receiving more  
17 money than we incurred, they by definition your situation  
18 cannot exist.

19 Q I see. What rule is that?

20 A The Mutual Aid Rule that is established by EEI. I  
21 think we have some quotes on it in, in my testimony, in my  
22 rebuttal testimony.

23 Q Well, your, your costs include out-of-pocket expenses  
24 and a return and taxes and so forth. When you talk about  
25 reimbursement in your costs, was a return any component of

1 those costs?

2 A No, I don't believe that's the case.

3 Q All right. So in summary, what you've said is you  
4 would be opposed to putting the excess revenue into the storm  
5 fund, and then you said there is no excess revenue. Correct?  
6 Correct?

7 A There is no revenue, period. It is a reimbursement  
8 of a receivable. The amount of that reimbursement is limited  
9 to the costs that I incurred, period. I mean, it's, it's that  
10 simple.

11 Q Costs not including return.

12 A Correct.

13 Q All right. In this case, in order to balance the  
14 incremental cost approach to the other approach that you  
15 proposed in 2004, there is an element of lost revenues, and  
16 Mr. Green has done a nice job in figuring that for every  
17 customer that didn't get service, there's something like \$32 a  
18 month you didn't collect in base rates. Did anybody in your  
19 department or any other department to your knowledge do a test  
20 to see how much the other customers paid that weren't  
21 interrupted and whether that was more than it was anticipated  
22 that they would receive -- that you would receive?

23 A I've done no, I've done no test. I do know -- well,  
24 I'm not going to speculate. I will defer to Mr. Green as to  
25 the computation, or Dr. Green. Excuse me.

1 Q And, in general, would you agree with me that it  
2 would be fair, if you're trying to calculate lost revenue, you  
3 would look at the amount of money you thought you were going to  
4 receive. And if it came in less than that, it would be lost  
5 revenue; if it came in more than that, there wouldn't be any  
6 lost revenue.

7 A I'm not sure I understand your question.

8 Q Okay. If you think you're going to sell 1,000  
9 kilowatt hours and that customer is offline and so you didn't  
10 sell that, but another customer that you thought you were going  
11 to sell 1,000 kilowatt hours to consumed 2,000 kilowatt hours,  
12 is there any lost revenue in that hypothetical example?

13 A Well, in your hypothetical example, I would, I would  
14 submit that there is still lost revenue because I believe that  
15 the existence of lost revenue, which, I will add, is only  
16 relevant as a means of refuting the presumption of double  
17 recovery, which is the premise upon which several, several of  
18 the proposed adjustments are being made, it's only relevant to  
19 that.

20 Q I wasn't asking about that. I was just asking about  
21 a mathematical calculation. If you're expecting \$10 and you  
22 get \$20, can you say you didn't get your \$10?

23 A No. Because I think by the nature of the adjustment  
24 that is proposed, which is why I went off on a bit of a  
25 tangent, it's event specific. You have to consider all

1 incremental effects having to do with that event, and,  
2 therefore, the usage of the other, the other customer in that  
3 sense is not relevant.

4 Q Okay. I'm not going to explore that with you because  
5 I'm not sure I understand it.

6 I'm going to hand you Exhibit 139, and if you'll take  
7 a moment and look at portion two of that exhibit. It has your  
8 sales and your revenue -- your sales during the storm months of  
9 2005.

10 A Okay. Are you talking -- you've got one first  
11 request of admissions or --

12 Q Well, look at the second request for admissions.  
13 There's a table that shows what you estimated in 2005 you were  
14 going to sell and what you actually did sell during the storm  
15 months.

16 A Okay. I've read.

17 Q All right. Now in admission number 3 we asked you to  
18 admit that actually you collected 25 million some odd dollars  
19 more than you anticipated you were going to collect when you  
20 filed your fuel filing in November of the preceding year, and  
21 you denied that. You said actually you collected \$8 more. But  
22 under those circumstances did you really collect \$25 million  
23 odd dollars more during the storm period than you thought you  
24 were going to collect the preceding November?

25 A I need to read three. I have not read three. I

1 looked at two. I thought you were asking about two.

2 MR. ANDERSON: Chairman Edgar, I'd just like to point  
3 out that this is beyond the scope of Mr. Davis's testimony.  
4 This is really the subject of Dr. Green's testimony. There are  
5 no computations of this type in the direct testimony of  
6 Mr. Davis. I don't have a problem with answering this  
7 question, but if there's going to be a substantial line, I'd  
8 suggest that this would be better directed to the witness Dr.  
9 Green, who was responsible for these discovery responses and  
10 the relevant computation.

11 MR. McWHIRTER: This will make you very happy. If he  
12 answers this, it's the last question I'm going to ask. But I  
13 would like him to answer.

14 THE WITNESS: I mean, all I -- the only way that I  
15 can answer this is by reading to you what is contained on here.  
16 I did not compute it. I have not seen it before.

17 BY MR. McWHIRTER:

18 Q Read your denial then, please, sir, on Item 3.

19 A The question and the denial or just the denial?

20 Q Yes. Read both. Yes.

21 A "In responding to request for admission number  
22 three, please refer to the table in FIPUG's request for  
23 admission number two above. Based on the average system-based  
24 cents per kilowatt hour charge of \$0.0352 in Exhibit Number  
25 RM-12, the actual sales over and above the forecasted sales for

1 the period July through November 2005 produced \$25,113,462.56,"  
2 and I assume there should be parentheses here, but it's  
3 "\$713,450,641."

4 Q Can you say that just in dollar sums without just  
5 reciting each number?

6 A Okay. If the court reporter can follow me.

7 Q Like \$10 or something like that.

8 A It's \$25 million, which is the product of 713,  
9 \$713 million, and I'm rounding here, if I may, kilowatt hours,  
10 times 3.52 cents per kilowatt hour more revenues than FPL  
11 projected that it would receive for this same period. Answer,  
12 "Denied."

13 And, again, I'm going to round the numbers in here to  
14 avoid the tedious repetition of commas. "As noted in FPL's  
15 response to FIPUG's first request for admissions number two,"  
16 the \$713 million is incorrect, I have to read it,  
17 "\$713,450,651 is incorrect. The correct number is  
18 \$713,450,821, which when multiplied by the 3.52 cents equals  
19 \$25,113,468.90."

20 Further answering, "While FIPUG's first request for  
21 admissions number three states an arithmetic computation which  
22 FPL has corrected as noted above, FPL notes that such  
23 computation lacks proper foundation and is potentially  
24 misleading with respect to the determination of revenues not  
25 achieved due to storms for the reasons stated in Dr. Leonardo

1 Green's rebuttal testimony dated April 10, 2006, in this  
2 proceeding."

3 MR. McWHIRTER: Thank you very much. I'd tender the  
4 witness.

5 CHAIRMAN EDGAR: Thank you, Mr. McWhirter. Before we  
6 move on with cross, Commissioner Deason, did you have a  
7 question?

8 COMMISSIONER DEASON: Yes, Madam Chairman. Thank  
9 you.

10 Mr. Davis, I want to refer you back to your Exhibit  
11 KMD-2. Are you there?

12 THE WITNESS: I was at Page 2 of 1, not at KMD-2.  
13 Yes, sir, I am there.

14 COMMISSIONER DEASON: Okay. I'm just trying to  
15 understand the mechanics of the storm recovery financing, which  
16 is the subject of the last half of this exhibit.

17 And, first of all, let me ask you this. In relation  
18 to Line 14, which is the unrecovered 2004 storm recovery costs,  
19 some \$213 million, has this amount yet been expensed for  
20 regulatory purposes?

21 THE WITNESS: Has it been expensed?

22 COMMISSIONER DEASON: Has it been expensed for -- it  
23 has not been expensed for regulatory purposes; is that correct?

24 THE WITNESS: No, sir. It was set up as part of a  
25 regulatory asset based upon the 2004 storm docket. We have

1 added to that the projected interest through July 31, and we  
2 also have the, the residual of the so-called CIAC adjustment  
3 from last year that was, that was charged to the storm reserve.  
4 Those are the three components.

5 COMMISSIONER DEASON: Now since it's not been booked  
6 for regulatory purposes, it has been taken as a deduction for  
7 income tax purposes; correct?

8 THE WITNESS: Yes, sir, that is correct.

9 COMMISSIONER DEASON: So that has created the  
10 deferred tax liability account; correct?

11 THE WITNESS: Yes, sir. That's the reason I, when I  
12 alluded to it earlier, that there's a substantial deferred tax  
13 liability on the books, and that's because we deducted the  
14 '04 and '05 storm costs.

15 COMMISSIONER DEASON: Okay. Now just for the  
16 purposes of my question assume that your requested amount of  
17 storm recovery financing is allowed by the Commission and that  
18 the special purpose entity does, in fact, issue the bonds and  
19 Florida Power & Light receives proceeds of some \$1 billion for  
20 purposes of my question. Once those proceeds are received,  
21 FPL, the operating utility company, receives that billion  
22 dollars, does it not?

23 THE WITNESS: Yes, sir, it does.

24 COMMISSIONER DEASON: Okay. Now from that billion  
25 dollars you will in essence repay yourself for the expenses of

1 the unrecovered 2004 storm recovery less the income tax effect  
2 of that; correct?

3 THE WITNESS: That is correct.

4 COMMISSIONER DEASON: And when you receive that cash,  
5 will there be an entry at that point to eliminate the  
6 regulatory asset and the related deferred tax liability at that  
7 time?

8 THE WITNESS: Only -- I'm sorry. Only the  
9 deferred -- only the regulatory asset, not the deferred tax  
10 liability because this is a nontaxable transaction, the  
11 securitization is. And when we, when the securitization  
12 repayment charges are collected from customers over the 12-year  
13 period, it's at that point in time that the deferred tax  
14 liability that's on the books today would, would decline as we  
15 pay those taxes. In other words, you've -- the taxes -- it's  
16 not like a balanced income statement. In this case we've  
17 deducted it, and that deduction effectively reverses because as  
18 we're reimbursed by the customers, that's taxable.

19 COMMISSIONER DEASON: Well, explain to me then when  
20 you say "reimbursed by the customers," I thought the special  
21 purpose entity actually collects that and remits those funds to  
22 the bondholders. So explain to me how you make the statement  
23 as the customers pay this amount, that you are made whole.

24 THE WITNESS: Okay. The -- I'll make an assumption  
25 because I don't want to test my mathematical skills here.

1 Let's assume that the total amount of the bond repayment charge  
2 and the tax charge, the two of those total \$100. Okay? What  
3 will happen is FPL will receive the \$100. It will turn around  
4 and remit \$61 to the, to the SPE that will then be used for  
5 benefit of the, of the bondholders. The remaining \$38, \$39  
6 would then be paid to the government because the collection of  
7 the full \$100 is taxable to Florida Power & Light Company  
8 incurring the tax liability of \$39.

9 COMMISSIONER DEASON: Okay. Thank you for that  
10 explanation.

11 Now I want to refer you then to Line 16, which is the  
12 replenishment of the reserve, and you're requesting  
13 \$650 million for that.

14 THE WITNESS: Yes, sir.

15 COMMISSIONER DEASON: Okay. Now I think you've  
16 indicated in answers to prior questions that the basic  
17 accounting for that is to set up a reserve of \$650 million as a  
18 liability, and that would be, the corresponding entries would  
19 be a deferred tax asset of some \$250 million and a fund of some  
20 \$400 million. Is that basically correct?

21 THE WITNESS: The -- let me take you through, through  
22 the entries. The -- with the financing order what will happen  
23 is we'll set up a regulatory asset of 650 and a storm reserve  
24 liability of 650. Now because you have a book tax basis  
25 difference for each one of those, there is also a deferred tax

1 asset that needs to be set up for the storm, creating a storm  
2 reserve. So you create a deferred tax asset for 250 that  
3 relates to the storm reserve. You also create a deferred tax  
4 liability also for 250 that relates to the regulatory asset.

5 COMMISSIONER DEASON: Now where does the \$400,000  
6 that goes into the fund, where does it fit into the --

7 THE WITNESS: Okay. Now that was the financing  
8 order.

9 COMMISSIONER DEASON: Okay. That was--

10 THE WITNESS: Now we go through -- I'm sorry.

11 COMMISSIONER DEASON: I'm sorry. Those are the  
12 entries when you actually, you get the financing order.

13 THE WITNESS: Correct, from this Commission. Stage  
14 two of that would be we'll fast-forward through the financing  
15 and we'll issue the -- in this case, since we're limiting it to  
16 the 650, in this case we would only be talking about  
17 \$400 million of financing. So what will happen is the SPE  
18 will, will issue the debt for 400. They will receive cash of  
19 400. They will take that cash and they will buy 400 of the  
20 650 million regulatory asset.

21 So now what we, what FPL has on its books is a, is a  
22 \$250 million regulatory asset left, has the 650 storm reserve  
23 and has the deferred tax asset of 250, the deferred tax  
24 liability of 250, and I'm out of balance by 400. And the  
25 400 would be the storm reserve, I'm sorry, the storm -- the

1 fund for the storm reserve, which is the 400 that we receive  
2 from the SPE.

3 COMMISSIONER DEASON: Okay. Then how is that  
4 reported on your surveillance report?

5 THE WITNESS: The 400?

6 COMMISSIONER DEASON: Yeah. What, what is taken out  
7 of rate base? You've already indicated that the fund, since  
8 it's a funded reserve and earns interest on its own, it's not  
9 part of your rate base. So obviously that would need to come  
10 out. And the corresponding source of capital that supports  
11 that would need to come out from the liability side. What  
12 happens at that point?

13 THE WITNESS: Okay. The -- I'll take you back  
14 through it mechanically because I have to get it straight in my  
15 own head.

16 The 400 would be removed, the storm reserve fund, the  
17 storm fund would come out as -- because it's an asset that  
18 earns its own return. So it's out of there. The storm  
19 reserve, the liability of 650 would also come out. What that  
20 would leave you with in rate base would be the 250 regulatory  
21 asset. And then that would be supported by the overall capital  
22 structure, and the deferred tax asset and the deferred tax  
23 liability would fit into that, would fit into the overall  
24 capital structure as components of deferred taxes.

25 COMMISSIONER DEASON: So let me see if I understand.

1 The fund of 400 would be removed from rate base; correct?

2 THE WITNESS: The 400. Yes, sir.

3 COMMISSIONER DEASON: Okay. The reserve itself which  
4 is on the credit side, that's going to be removed, which is the  
5 650; correct?

6 THE WITNESS: That is correct.

7 COMMISSIONER DEASON: Okay. Now so we're 250 out of  
8 balance right now. Where is the other 250?

9 THE WITNESS: It's the regulatory asset that remains  
10 on Florida Power & Light's books representing, I'll say, its  
11 right to receive from customers the tax equivalent portion of  
12 the monies that are, that are required for the, to repay the  
13 financing.

14 COMMISSIONER DEASON: But you said that stays in rate  
15 base?

16 THE WITNESS: I would think that would stay in rate  
17 base.

18 COMMISSIONER DEASON: Well, if we removed the fund of  
19 400 out of rate base and you're removing the reserve of 650  
20 from the credit side, you've removed 250 more from the credit  
21 side than you have the debit side. So where is the other 250,  
22 if you're going to keep the regulatory asset of 250 in rate  
23 base?

24 THE WITNESS: It would be supported by the, by the  
25 overall capital structure of the company, including, you know,

1 equity, debt, deferred taxes. The only way that the regulatory  
2 asset would be removed from rate base would be if the  
3 Commission directed that as one of the adjustments that had to  
4 be made in the surveillance report.

5 COMMISSIONER DEASON: Okay. Thank you.

6 CHAIRMAN EDGAR: Mr. Beck, are you next? Are you  
7 going next for cross?

8 MR. BECK: Yes. Uh-huh. Thank you, Madam Chairman.

9 CROSS EXAMINATION

10 BY MR. BECK:

11 Q Mr. Davis, to conclude your discussion with  
12 Commissioner Deason then, the net effect is to increase rate  
13 base by \$250 million in that transaction, is it not?

14 A In that specific instance, yes.

15 Q Could you please turn to Page 11 of your testimony.

16 A Okay.

17 Q And at Page 11 you define or cite the definition in  
18 the Florida Statutes for storm recovery costs; is that right?

19 A That is correct.

20 Q And starting on Line 4, let me read that. You say,  
21 "Storm recovery costs means, at the option and request of the  
22 electric utility, and as approved by the Commission pursuant to  
23 subparagraph (2)(b)1.b., costs incurred or to be incurred by an  
24 electric utility in undertaking a storm recovery activity." Do  
25 you see that?

1 A Yes.

2 Q And then it says that such costs are net of insurance  
3 proceeds and includes adjustments, and it goes on and sets them  
4 forth; is that right?

5 A Yes.

6 Q Okay. Would you agree with me then to understand  
7 what storm recovery costs means in the statute, you have to  
8 understand what it means to undertake a storm recovery  
9 activity?

10 A Yes. I would think that it would be driven by an  
11 activity.

12 Q All right.

13 A A storm recovery activity.

14 Q Because the definition of storm recovery costs, in  
15 part of the definition it refers to undertaking storm recovery  
16 activities; right?

17 A Yes. Utility undertaking a storm recovery activity.  
18 Yes. So it would, in my judgment, as I would read what's  
19 there, is that it would be any cost that would be driven by the  
20 fact that the utility undertook a storm recovery activity.

21 Q Right. And the term "storm recovery activity" is  
22 also defined in the statutes, is it not?

23 A If you have something to show me, that would be  
24 helpful.

25 Q Well, how about Page 23 of your testimony.

1 A Testimony. It's been a while since I wrote it.

2 Yes. Okay.

3 Q You cite the definition in the statutes for the term  
4 "storm recovery activity" that we just discussed, did you not,  
5 or you cite it there in this part of your testimony?

6 A Correct.

7 Q And let me read that, please. "The storm recovery  
8 activity means any activity or activities by or on behalf of an  
9 electric utility in connection with the restoration of service  
10 associated with electric power outages affecting customers of  
11 an electric utility as the result of a storm or storms,  
12 including, but not limited to, mobilization, staging and  
13 construction, reconstruction, replacement, or repair of  
14 electric generation, transmission, or distribution facilities."  
15 Do you see that?

16 A Yes, sir.

17 Q Okay. Would you agree with me that the -- that  
18 uncollectible accounts receivable expense is not listed as one  
19 of the storm recovery activities?

20 A I would agree that it is not a storm recovery  
21 activity. I would not agree that it is not a cost that is  
22 incurred by the utility as a result of a storm recovery  
23 activity.

24 Q Well, we've already discussed the cost, and it's  
25 included -- and it's defined in terms of storm recovery

1 activities, is it not?

2 A It says, "Costs incurred or to be incurred by an  
3 utility in undertaking a storm recovery activity."

4 Q And you agree with me that uncollectible accounts  
5 receivable expense is not a listed storm recovery activity.

6 A It is not a listed storm recovery activity. And  
7 normally FPL would not charge that into the, into the storm  
8 reserve. We did in '05 because it was approved in '04.

9 Q Okay. Would you agree with me, Mr. Davis, that  
10 vacation buybacks is not a listed storm recovery activity?

11 A Vacation is not a listed storm recovery activity. It  
12 is, however, a fallout of people working on the storm and,  
13 therefore, being unable to take their vacation. So if you look  
14 at it on a productive time basis, it clearly is an incremental  
15 cost associated with the storm.

16 Q But you do agree it's not a listed storm recovery  
17 activity as defined by the statute?

18 A I would say it is not a storm recovery activity.

19 Q How about backfill and catch-up work? Is that a  
20 listed storm recovery activity?

21 A That is not a storm recovery activity.

22 Q Okay.

23 A It is a fallout, if you will, of people going and  
24 working on storm-related activities. It is relevant to the  
25 determination of storm costs only if someone improperly applies

1 the incremental cost approach.

2 Q Mr. Davis, let's move on to Page 12 of your  
3 testimony, if we could. And this is about the 2004 storm  
4 recovery costs. And you stated at Lines 3 or beginning at Line  
5 3 that, "The total amount incurred for the 2004 storms after  
6 deducting insurance proceeds was approximately \$890 million."  
7 Is that right?

8 A That is correct.

9 Q And we can find that number in the order issued by  
10 the Commission concerning the 2004 hurricane costs, can we not?

11 A That is correct.

12 Q Okay. Let me ask if we could pass out an exhibit  
13 which is the order from that case. And when you get that,  
14 Mr. Davis, I'm going to ask you to turn to Page 22 of the  
15 order.

16 A I'm there.

17 Q The \$890 million that you reference in your testimony  
18 is shown on Page 22 of the Commission's order concerning 2004  
19 costs, is it not?

20 A That is correct.

21 Q Okay. Now the PSC made certain adjustments to that  
22 amount of \$890 million, did they not?

23 A Yes, they did.

24 Q Okay. And those are shown at the bottom of Page 22  
25 and at the top of Page 23 of the Commission's order, are they

1 not?

2 A That is correct.

3 Q For example, one of the adjustments they made to the  
4 \$890 million was a \$10.9 million adjustment for non-management  
5 payroll expense. Do you see that?

6 A Yes, I do.

7 Q And let me refer you to another part of the order  
8 just to describe what the Commission did. Right now I'm just  
9 trying to go over again what the Commission did with your 2004  
10 costs.

11 At the bottom of Page 9 the Commission addresses that  
12 adjustment. Could you look at the last paragraph on Page 9 of  
13 the order? Do you see where it says, "We agree with OPC  
14 Witness Majoros that by moving all O&M expenses associated with  
15 the storm repair to the storm reserve, without taking into  
16 account the normal level of expenditures funded by base rates  
17 that customers pay, requires customers to pay twice for the  
18 same costs." Do you see that?

19 A That's what the order says.

20 Q And then at the top of the next page it shows the  
21 calculation of the adjustment of \$10.9 million for, for that  
22 issue. Do you see that?

23 A Yes.

24 Q Okay. And then again if we go back to Page 22 of the  
25 order where it summarizes the Commission's case, that's one of

1 the listed expenses there, is that right, or one of the listed  
2 adjustments?

3 A Yes.

4 Q Okay. There's a series of other adjustments as well,  
5 such as for managerial payroll expense, tree trimming and so  
6 forth. Do you see all them?

7 A I see them.

8 Q Okay. And it's only after making those  
9 adjustments -- or the sum total of those adjustments is  
10 \$91.9 million?

11 A That's the total, that's the total system  
12 adjustments.

13 Q And then when adjusted for jurisdictional amounts,  
14 it's \$794,309,025; is that right?

15 A That's correct. But I guess I would like to point  
16 out that the, that the adjustments that are being made there  
17 are not all of the same nature. And, in fact, if you look at  
18 the \$91.900 million, that really is, represents the so-called  
19 replacement of capital costs, the cost of removal and the  
20 contributions in aid of construction. Because the Commission  
21 recognized in the '04 order that the fundamental premise upon  
22 which your 10.9 non-management payroll and other adjustments  
23 that were made there, they were founded on a premise of double  
24 recovery, and the Commission found that, in fact, the double  
25 recovery had not occurred because of lost revenues. Now some

1 people like to focus just on lost revenues. But the reality is  
2 the recognition of that was solely as a result of the absence  
3 of the premise upon which the adjustment was being made being  
4 satisfied.

5 MR. BECK: Madam Chairman, there's no question that I  
6 asked that I believe that Mr. Davis is responding to. I'd ask  
7 you to strike his response and ask him to simply answer the  
8 questions.

9 CHAIRMAN EDGAR: Let's do it this way. Mr. Davis, if  
10 you will confine your answer to the scope of the question that  
11 is posed to you. And, Mr. Beck, why don't you try again with  
12 your question.

13 BY MR. BECK:

14 Q Mr. Davis, I guess we were on the, the -- let me go  
15 back.

16 We had net storm damage costs of \$890 million; is  
17 that right? That was on the bottom of Page 22.

18 A That is correct.

19 Q And then there's a series of adjustments totaling  
20 \$91.9 million to get a system -- an adjusted amount for system  
21 adjustments of \$798.1 million; is that right?

22 A That is correct.

23 Q Okay. Now that \$91.9 million, that's the sum of the  
24 \$58 million for replacement costs that are shown above that,  
25 \$12.2 million for cost of removal, and \$21.7 million for

1 contributions in aid of construction; is that right?

2 A That's what the order says.

3 Q Okay. Would you agree that the adjustments for  
4 payroll expense, tree trimming, vehicle and advertising that  
5 are shown in there are exactly offset by adjustments for  
6 uncollectible expense and normal O&M costs offset?

7 A Yes, I would.

8 MR. BECK: Okay. Okay. I have lost my place,  
9 Mr. Davis. Please excuse me.

10 Could I have a short break, Commissioner?

11 CHAIRMAN EDGAR: One minute, two minutes, five  
12 minutes? What do you need, Mr. Beck?

13 MR. BECK: Five minutes.

14 CHAIRMAN EDGAR: We'll take a five-minute break.

15 MR. BECK: Thank you.

16 (Recess taken.)

17 CHAIRMAN EDGAR: We will go back on the record.

18 Mr. Beck.

19 MR. BECK: Thank you, Madam Chairman. I appreciate  
20 the chance to go over my notes again.

21 BY MR. BECK:

22 Q Mr. Davis, when we left, we were on the Commission  
23 order on Page 23. I think we had gone through to the adjusted  
24 jurisdictional amount of \$794,309,025. Do you recall that?

25 A Yes, sir.

1 Q Okay. On Page 33 of the order, can I take you there,  
2 please?

3 A I'm there.

4 Q Okay. There the Commission repeats the figure of  
5 \$794,309,025; is that right?

6 A Correct.

7 Q And they subtract out the 12/31/04 storm damage  
8 reserve balance that existed at that time; is that right?

9 A That is correct.

10 Q And it comes up with a net unrecovered amount to be  
11 recovered or to be collected from retail customers of  
12 \$441,990,525; is that right?

13 A Right.

14 Q Now could you please go to your Exhibit KMD-3.

15 A I'm there.

16 Q Are you there? Your exhibit in effect take, or takes  
17 that amount from the Commission order, the \$441 million figure,  
18 and that's the beginning deficiency balance that's included in  
19 your Exhibit KMD-3; is that correct?

20 A That's correct.

21 Q Okay. And then you take, you take it through  
22 July 2006 showing each month what the ending deficiency balance  
23 would be; is that right?

24 A Correct.

25 Q And on Line 22 you show a balance on July 31st, 2006,

1 of \$212,024,000; is that right?

2 A 220 -- I'm sorry. Which number. \$212,024,000 or --

3 Q \$212,024,000.

4 A Correct.

5 Q That's on Line 22 of your exhibit.

6 A Yes.

7 Q Okay. Now to that, and that's a, a reserve  
8 deficiency number, is that right, the 212?

9 A It's the remaining balance to be collected from the  
10 '04 storm costs. Yes, sir.

11 Q Okay. To that amount on Line 24 you add back in  
12 \$21.7 million, and then you adjust it for the jurisdictional  
13 amount; is that right?

14 A Correct.

15 Q Okay. Would you agree with me when we were  
16 discussing the Commission's order previously that that  
17 \$21.7 million figure had already been taken into account in  
18 deriving the balance numbers?

19 A I would ask you to define what you mean by "taken  
20 into account." I can answer it with my own definition or  
21 explanation, if that's okay.

22 Q Well, let me ask it this way.

23 Could you go back to Page 23 of the order?

24 A Page 23?

25 Q Yes.

1 A I'm there.

2 Q Okay. One of the adjustments listed there is  
3 contributions in aid of construction, and it's \$21.7 million;  
4 is that right?

5 A That's correct.

6 Q And that number was taken into account in deriving  
7 the numbers that followed from there such as total system  
8 adjustments.

9 A It was, it was taken into account. It was also  
10 subject of a follow-up staff recommendation that clarified that  
11 the \$21.7 million was an amount that would be charged to the  
12 storm reserve, left in the storm reserve as a deficit.

13 Q This order followed the staff recommendation that  
14 you're discussing, did it not?

15 A I believe this order would, would encompass that.  
16 And if you look over on Page 21, you will see that the \$21.7 is  
17 charged to Account 228.1, Storm Damage Reserve, Not Recoverable  
18 in Surcharge, which is the reason why I still consider it to be  
19 relevant in the, in the instant proceeding.

20 Q Okay. Let me ask you this, Mr. Davis. Would you  
21 agree that the effect of your adding in the \$21.7 million on  
22 your Exhibit KMD-3, is the effect the same as if you ordered,  
23 you added in that amount to the amount shown in the Commission  
24 order of the 798,100 or the 794?

25 A Yes, I would agree with that.

1 Q Okay.

2 A And if, if I -- I would like to clarify that. We can  
3 do it now, or I can assure you that Mr. Anderson will follow  
4 up.

5 Q How do you know that? I'm kidding. Go ahead.

6 A I mean, I mean, the main issue that's here is that  
7 the 21.7, it was characterized as CIAC. The accounting that we  
8 had that we were following back in the, from the '92 period up  
9 through the '04 decision was incredibly confusing. The -- it  
10 was recognized that the 217 was inadvertently pulled out.  
11 Rather than go back and revisit the entire approved amount for  
12 the '04 storm order, it was charged, if you will, to a  
13 temporary holding place, and that was creating a new deficit in  
14 the storm reserve. That means it's still out there to be  
15 recovered. That was discussed with all parties. The staff  
16 recommendation indicates that staff conducted a meeting in  
17 which all parties were invited for the purpose of discussing  
18 this proposed accounting treatment, we're talking here about  
19 the 21.7 meeting, and that all parties had agreed. I don't  
20 even understand why we're dealing with the issue now.

21 Q I think you agreed with me earlier, Mr. Davis, that  
22 the effect of your adjustment on your exhibit is the same as if  
23 we added the \$21.7 million to the 798.1 shown in the  
24 Commission's order; is that right?

25 A That is correct. And that was precisely what we

1 chose not to do in '04 is go back and revoke that issue. We  
2 would leave it in the storm reserve.

3 Q If you were to do that, Mr. Davis, you would have to  
4 account for those costs in your actuals, would you not? In  
5 other words, you'd have to have actual costs that would be,  
6 that would be used to offset the amount that was granted by the  
7 Commission.

8 A I think you're, with all due respect, you're  
9 confusing two sides of it. And one is -- let's -- you're  
10 talking now about the input side, the input side being all of  
11 the activities that gave rise to costs which were charged to  
12 the storm reserve in '04. That's, that's the side that is  
13 being referred to right now.

14 When you're dealing with the 21.7, you are looking at  
15 the output side. What did you do with it? Did you capitalize  
16 it; did you charge it to the storm reserve as a, I'll say a  
17 holding area; or did you allow it to be recovered through the  
18 surcharge; or was it already recovered through the existing  
19 storm reserve balance? So you're mixing the two.

20 The 21.7 strictly on the output side, the cost had  
21 been incurred. There is no cost CIAC in this case. That  
22 represents the cost of labor, materials and so forth that were  
23 incurred in the 2004 storm.

24 Now the question is, what do we do with them? That's  
25 all we're talking about with respect to the 21.7.

1 Q Okay. And so you would have in your KMD-3 that the  
2 Commission add that to the deficit amount as of July 2006?

3 A That --

4 Q Is that what you're --

5 A Yes. That is correct. It's offset by the  
6 '05 accrual because we still had the storm fund accrual. We  
7 accrued \$20.3 million in '05, which largely mitigates the  
8 effect of that.

9 Q And that's as opposed to booking it in 2004 or  
10 related to 2004; is that right?

11 A Well, it was booked into the storm reserve in 2004,  
12 leaving a deficit there. As an accountant, it's significant  
13 that we had moved the '04 costs over and created a regulatory  
14 asset, and that regulatory asset was to be recovered through  
15 the storm surcharge. The 21.7 was not part of that regulatory  
16 asset. It had been carved out and left in the reserve.

17 Q Okay, Mr. Davis, let's move on to a different topic.  
18 Let's talk about lost revenues, if we could.

19 Page 18 of your testimony, beginning at Line 6.

20 A Page 18, Line 6. I'm there.

21 Q Yes. You note that, "FPL believes that the method  
22 provided in the 2004 Storm Cost Recovery Order and FPL's  
23 proposed method in this proceeding would result in the same  
24 total amount of storm restoration costs for the 2005 storm  
25 season." Is that right?

1 A That is what I say.

2 MR. BECK: Okay. Let me ask that I have an exhibit  
3 handed out.

4 CHAIRMAN EDGAR: Mr. Beck, do we need to number this?

5 MR. BECK: Yes, please.

6 CHAIRMAN EDGAR: Okay. And I am showing 146.

7 MR. BECK: And we've entitled it "Comparison of  
8 Incremental Approach to Actual Restoration Cost Approaches."

9 CHAIRMAN EDGAR: Comparison of Incremental Approach  
10 to Actual Restoration Cost Approaches. Thank you.

11 MR. BECK: Thank you.

12 (Exhibit 146 marked for identification.)

13 BY MR. BECK:

14 Q Mr. Davis, do you recognize this exhibit, this  
15 document?

16 A Yes, I do.

17 Q Okay. This is a comparison that Florida  
18 Power & Light made comparing the incremental approach used by  
19 the Commission in its 2004 order and the approach that's being  
20 proposed by Florida Power & Light in this case; is that right?

21 A I think that's loosely -- I don't exactly -- I don't  
22 remember exactly what the document request made or, you know,  
23 asked for. But practically speaking, yes.

24 Q But you would agree, would you not, that this shows  
25 the very thing that you state in your testimony saying that the

1 2004 method would produce the same thing used by the  
2 Commission, and then you reply the approach you recommend in  
3 this case, they come to the same result; is that right?

4 A Yes.

5 Q Okay. Now on the exhibit, this goes through many of  
6 the same numbers that we looked at earlier in looking at the  
7 exhibit's order, would you agree?

8 A Yes, sir. The first column, Incremental Approach,  
9 was, I think, intended to replicate or mirror what was in the  
10 '04 order.

11 Q Okay. And in that there's a, a row for lost revenues  
12 of \$33.8 million; is that right?

13 A Yes.

14 Q And another for uncollectible accounts of \$6 million?

15 A That is correct.

16 Q So would you agree that your approach as proposed in  
17 this case, in order for it to be the same as the Commission's  
18 approach in the last case, the Commission would in effect have  
19 to give you lost revenues and uncollectible accounts again as  
20 adjustments?

21 A I would agree as with respect to uncollectible  
22 accounts. I would not agree with your characterization of lost  
23 revenues. I believe that the consideration of lost revenues  
24 here, as it was in the '04 docket, was within the pure context  
25 of an incremental approach. And the assertion by witnesses for

1 OPC that costs were being double recovered, the Commission  
2 recognized that when you do not realize revenues because of the  
3 same event which gave rise to these costs, that you by  
4 definition cannot have recovery if you don't have the revenues.

5 Q Okay.

6 A So I do not agree it's lost revenues per se. It's  
7 basically a recognition that the fundamental criteria for the  
8 disallowances was not satisfied.

9 Q Okay. Looking at the items under the adjustments,  
10 the first five of those are, are, are adjustments for  
11 incremental costs that the -- and we discussed one of them  
12 earlier when referring to the Commission's 2004 order. Do you  
13 see those?

14 A The first three adjustments, the 10.9 and the 21.1?

15 Q Yes. First five actually.

16 A Tree trimming and -- yeah. I would agree that the --  
17 I don't know if I would call it the incremental approach. It  
18 falls under the incremental approach, but they were removed  
19 under the premise that they were already reflected and  
20 recovered in base rates. And it's the word "recovery" that I  
21 have a problem with.

22 Q Would you agree that the Commission last time, by  
23 allowing adjustments for lost revenues and uncollectible  
24 accounts, exactly offset all the other adjustments they made or  
25 at least those five shown for incremental costs in your

1 exhibit?

2 A Yes. And that's what I was trying to explain earlier  
3 that -- I guess you had not asked the question at that point.

4 Q If I may ask one other exhibit to be handed out.

5 MR. BECK: Madam Chairman, I would like to request  
6 that this be marked as Exhibit 147 for identification.

7 CHAIRMAN EDGAR: Yes. We will mark this as Exhibit  
8 147.

9 MR. BECK: And it would be entitled "FPL's Base  
10 Revenue Variance - July, August, September, October,  
11 November 2005."

12 CHAIRMAN EDGAR: Thank you.

13 (Exhibit 147 marked for identification.)

14 BY MR. BECK:

15 Q Do you have the exhibit in front of you, Mr. Davis?

16 A Yes, sir, I do.

17 Q Florida Power & Light prepares monthly reports of  
18 variances, among other things, does it not?

19 A Yes, they do.

20 Q And one of the things it does, it compares actual  
21 results with the budget affecting the time period, does it not?

22 A Yes, we do.

23 Q And this exhibit shows the base revenue variances for  
24 five months during 2005, does it not?

25 A That is correct.

1 Q Okay. Could I -- could you turn first, please, to  
2 the month of July, 2005?

3 A Okay. That's FPL C-2. Yes.

4 Q Okay. Would you agree that the first hurricane to  
5 hit FPL's territory in 2005 was Hurricane Dennis in July of  
6 2005?

7 A I will accept that, subject to check. The only one I  
8 remember is the one I lost my roof in, and that's Wilma.

9 Q Okay. Was Wilma the last hurricane to --

10 A That was the last one.

11 Q And that hit FPL's territory in October of 2005, did  
12 it not?

13 A October 24th.

14 Q Okay. You'll see under the revenue variances, and  
15 getting back to July, and we'll go through the others, there's  
16 variances both for weather and for hurricanes. Do you see  
17 that?

18 A As well as a number of other factors. Yes.

19 Q Yes. And the variance that's listed for weather in  
20 July of 2005 is a positive \$19,257,000. Do you see that?

21 A That is correct. And it's on the same line  
22 as the year to date variance, which is a negative  
23 \$17,765,000, reflecting extremely mild weather in the first  
24 half of the year.

25 Q Okay. What does the \$19,257,000 figure for July mean

1 in plain language?

2 A In plain language it means that the kilowatt hour  
3 sales that occurred during that month were higher than would  
4 have been indicated on the basis of normal, normal weather,  
5 meaning that the month of July was an extremely warm month.

6 Q And when you say compared to normal weather, that  
7 would be the amount you budget?

8 A That would be the amount we budget. The amount you  
9 use for rate setting and so forth.

10 Q Okay. So the \$19,257,000 is the amount to which your  
11 revenues in July on account of weather exceeded the budget  
12 amounts for weather?

13 A Correct. The same as the \$17,765,000 indicates that  
14 on a year to date basis we were under normal weather.

15 Q And, again, the hurricane -- the amount you were  
16 under earlier has no -- predates your hurricane season, does it  
17 not?

18 A It's part of the same annual period. We do all of  
19 our planning on a calendar year. And the, the longer -- if you  
20 look at it on a 12-month basis, I would say that the plan with  
21 respect to that 12 months is far more accurate than it is with  
22 respect to a specific month when you're dealing with the  
23 uncertainties of weather. And I believe that Dr. Green can get  
24 into that in a great more detail, a lot more detail.

25 Q Okay. But you'd agree with me, subject to check,

1 that the first hurricane hit FPL's territory in July, and that  
2 was Hurricane Dennis?

3 A Yes.

4 Q Hurricane Katrina hit in August of 2005, did it not?

5 A Yes.

6 Q Okay. Let's turn to August. For the month of  
7 August, that shows a positive revenue variance due to weather,  
8 that would be non-hurricane weather events, of \$25,804,000,  
9 does it not?

10 A That is correct.

11 Q And then you also see a negative for hurricanes 2005  
12 of \$6.9 million approximately.

13 A Right. And I would, I would point out that on the  
14 regular weather line, that at that point the very warm weather  
15 in July and August, this is August, in July and August had  
16 wiped out the below normal weather that we had seen in the  
17 first half of the year.

18 Q Would you accept, subject to check, that Hurricane  
19 Rita affected or hit your territory in September of 2005?

20 A Yes.

21 Q Okay. Let's turn to September. September shows, you  
22 know, a positive revenue variance of \$14,103,000 and a negative  
23 for hurricanes of \$1.4 million, does it not?

24 A That is correct. And it also -- there's another  
25 usage line down there, 3.7, which basically indicates it's

1 something that we have not figured out exactly what's causing  
2 that variance. It may well be weather, it may well be the  
3 interaction of, of the economic factors, price elasticity. So  
4 the reason I bring that up is, is just to indicate that, you  
5 know, we're working with models here. And they have the same  
6 problem as all models; they don't, you know, they don't account  
7 for all of the variabilities.

8 Q Okay. Let's just turn briefly to October and  
9 November.

10 A Okay.

11 Q October 24th is when Wilma hit your territory; is  
12 that right?

13 A Yes.

14 Q Okay. And you show a positive variance of about  
15 \$15.4 million for weather, but a negative \$28 million for  
16 hurricanes in that month; is that right?

17 A That is correct. And -- yes, that's correct.

18 Q Okay. And then in November it shows \$1.5 million  
19 positive for weather, but a \$13.7 million negative for  
20 hurricanes; is that right?

21 A That is correct.

22 Q Would you agree that FPL had restored power to all of  
23 its customers on account of Hurricane Wilma by November of  
24 2005?

25 A I would say that substantially all the people that

1 could receive power should have received power. But I would, I  
2 would defer to, to Ms. Williams, if I'm in error.

3 Q Would you agree with me that if, subject to check,  
4 that if we added up the monthly non-hurricane weather variances  
5 for July through November, we would get a positive, a figure of  
6 positive \$76,203,000?

7 A I, I have not done the math.

8 Q But you would accept it, subject to check. Or you'll  
9 be back for rebuttal, if I'm wrong on this.

10 A Yes, sir. Subject to -- I would accept that, subject  
11 to check.

12 Q Okay. Okay. And for hurricane, the negative  
13 variance, if we added it up for those monthly amounts, would be  
14 \$50,168,000. Would you accept that, subject to check?

15 A Correct. But, again, I'm going to point out that if  
16 you go down to the other usage line, which is basically that  
17 which we can't totally identify, certainly on a year to date  
18 basis in November is a negative \$21 million, albeit it's  
19 slightly negative in the month and positive. So, again, I'd  
20 just caution you against applying a high degree of precision to  
21 the weather line.

22 The hurricane line actually I think is easier to  
23 calculate, but --

24 Q But you do separately identify both hurricanes and  
25 other non-weather events. Those are separate line items on

1 there, are they not?

2 A Absolutely. Yes, sir.

3 MR. BECK: Thank you, Mr. Davis. That's all I have.

4 CHAIRMAN EDGAR: Mr. Kise, cross.

5 MR. KISE: I think Mr. Wright is going to go.

6 CHAIRMAN EDGAR: Mr. Wright, are you next?

7 MR. WRIGHT: Thank you, Madam Chair. That's the  
8 order we've been following. I just have a very few questions  
9 for Mr. Davis.

10 MR. KISE: I actually tried to sit down on that end,  
11 but he wouldn't let me. Charlie wouldn't let me.

12 CHAIRMAN EDGAR: Well, as we pointed out yesterday, I  
13 have a desire for order; however, a little variety in the order  
14 is fine as well, so.

15 MR. WRIGHT: Well, Mr. Kise can surely go before me.

16 CHAIRMAN EDGAR: Mr. Wright, you're up.

17 MR. WRIGHT: Thank you, Madam Chair.

18 CROSS EXAMINATION

19 BY MR. WRIGHT:

20 Q Good afternoon, Mr. Davis.

21 A Good afternoon.

22 Q I just have a few questions for you.

23 Following along the lines of questioning and answers  
24 that you had with Mr. McWhirter, you were talking about the tax  
25 burdens, tax franchise fee, et cetera, burdens. I'm sure you

1 recall that line of discussion.

2 A Yes, sir.

3 Q I just want to, I just want to try to get an  
4 approximation of the total amount of ratepayer dollars for  
5 those things we're talking about. If I may, this will be a  
6 little bit compound, but I think it'll be a repeat of what you  
7 already said. And if there's a problem, I'll stop.

8 I think you said municipal utility tax is about  
9 10 percent, gross receipts is 2.5, franchise fees, I believe,  
10 are typically in the range of about 5.75. Does that all sound  
11 about right so far?

12 A I would accept that as reasonable.

13 Q And altogether that adds, that's going to add up to  
14 around 17 to 18 percent for a customer, a residential customer  
15 who does not have, have to pay sales tax; is that right?

16 A Correct.

17 Q Okay. Am I correct that around 70 percent of FPL's  
18 revenues are residential revenues?

19 A 70, 70 sounds a little high.

20 Q Okay. Well --

21 A But, you know, 60 to 70, somewhere in there.

22 Q Okay. Well, you want to use 60?

23 A It doesn't matter.

24 Q Ballpark is good enough for my purposes here.

25 So 60 percent of the \$2.085 billion, which is real

1 close to the total revenue requirements that you project you  
2 will recover, is -- let's say around \$1.2 billion that would be  
3 recovered from residential customers over the time period, is  
4 that pretty good?

5 A I'll accept it, subject to someone checking if it's  
6 important.

7 Q Okay. And then if you were to take, say, 17 or  
8 18 percent of, of the \$1.2 billion, you're going to be looking  
9 at something in the range of \$210 million?

10 A I'm sorry. I didn't follow the --

11 Q What I'm trying to get at is the total tax burden on  
12 residential revenues.

13 A Okay.

14 Q And I think if we used the number in the order of  
15 magnitude of 17 or 18 percent that we agreed is a fairly  
16 accurate representation for taxes and franchise fees and  
17 multiply that times 60 percent of \$2.085 billion, I'm thinking  
18 you're going to get something in the range of \$210 million or  
19 so. What did you get?

20 A I would -- I mean, if you, if you just apply -- you  
21 have the 1,700 that, you know, when you consider both taxes and  
22 the principal on the bonds, that's \$1.7 billion, you know, the  
23 taxes and the principal, and you add the interest to that and  
24 multiply it by 17, 18 percent, you're going to get between  
25 \$300 million and \$400 million.

1 Q Would you agree that the other 40 percent of FPL's  
2 revenues are commercial and industrial revenues and that they  
3 will also be subject to sales taxes?

4 A Yes.

5 Q Okay. So would you agree, would you agree the number  
6 is probably a little north of \$400 million, considering all  
7 revenues?

8 A Yes.

9 Q Thanks.

10 MR. WRIGHT: Excuse me just one minute.

11 (Pause.)

12 Thank you for your indulgence, Madam Chair.

13 BY MR. WRIGHT:

14 Q I think that I have two more questions for you,  
15 Mr. Davis. The first one is this. Could FPL, consistent with  
16 all applicable accounting principles, GAAP, et cetera, and  
17 requirements have elected to amortize part of the storm deficit  
18 rather than seeking to recover the entire amount through  
19 securitization or traditional surcharges?

20 A The -- what you were talking about there under GAAP  
21 is FAS 71, which is the bridge, if you will, between GAAP that  
22 would apply to normal commercial companies and GAAP that would  
23 apply or would allow the recognition of utility actions. If  
24 you, if you were to amortize, say, the full amount, I would  
25 think the answer to that would be clearly no because the

1 amounts are, you know, very, very large. There needs to be  
2 some rate consideration to provide that, to allow for that  
3 amortization because the fundamental criteria in 71 is that a  
4 competent regulatory commission, a regulatory commission having  
5 the authority orders you to take a particular action or treat  
6 something differently, and more often than not that would be  
7 accompanied with a revenue consequence.

8 Q Well, I thought that I was careful to phrase my  
9 question by asking you about part of the deficit and also  
10 asking whether FPL could have made that election. I was not  
11 getting into a scenario involving the Public Service Commission  
12 ordering you to do anything.

13 A Then the answer --

14 Q If you could answer the question I asked, that would  
15 be great.

16 A Clearly, no.

17 Q FPL could not have elected to amortize even part of  
18 the deficit consistent with generally accepted accounting  
19 principles?

20 A Absolutely not.

21 MR. WRIGHT: Okay. Thank you.

22 CHAIRMAN EDGAR: Mr. Kise.

23 MR. KISE: Madam Chair, do you, in view of the time,  
24 do you want me to start now and go -- I could take -- I'm  
25 probably not going to be short. I don't think I'm going to be

1 that long. And actually over -- if we take a break, the lunch  
2 break, I may be able to streamline it even further.

3 CHAIRMAN EDGAR: Okay. Mr. Twomey, comment.

4 MR. TWOMEY: I have a short line of questions, not as  
5 long as his, but --

6 CHAIRMAN EDGAR: Okay. Well, Mr. Twomey, then let's  
7 see if we can go ahead and, and take care of your questions.  
8 And then, yes, we will plan on taking a lunch break after that.

9 Thank you, Mr. Kise.

10 CROSS EXAMINATION

11 BY MR. TWOMEY:

12 Q Good afternoon, Mr. Davis.

13 A Good afternoon.

14 Q I want to ask you first, was it a conscious strategy  
15 or game plan of Florida Power & Light to accentuate the amount  
16 of money you were asking to receive permission from the  
17 Commission to finance at the expense of avoiding discussion of  
18 what the total dollar amounts would have to be paid back by the  
19 customers? Do you understand my question?

20 A I guess -- I think I can interpret your question.  
21 And I would say -- there are any number of negative  
22 connotations in your question, but what I will point to is that  
23 we are seeking a securitization order. The only thing relevant  
24 to the securitization order is that which we seek to finance.

25 The Commission certainly, in deciding the amount that

1 they would approve, may well appropriately consider all of the,  
2 you know, all of the other issues in there, but they're not  
3 part of the financing order.

4 Q Okay. If you'd turn to your Exhibit KMD-1,  
5 Page 1 of 2.

6 Now Line 26, total revenue requirements for a series  
7 of 12 years; correct?

8 A That is correct.

9 Q Okay. I've done the math on that, and I think Mr.  
10 Wright mentioned it a minute ago, but I totaled the, the  
11 different columns and I came up with \$2,086,040,000. Does that  
12 sound about right?

13 A That sounds about right.

14 Q And that is, that is, in fact, it is the revenue  
15 requirement that includes the, especially the taxes and other  
16 fees and so forth that my client's members you serve and the  
17 other customers would have to pay in toto over the course of 12  
18 years; correct?

19 A And that's certainly what is represented on Line 26.

20 Q Okay.

21 A It includes all of that. It does not, however,  
22 include those things which are not reflected in the  
23 Commission's tariff, so it would not include gross receipts  
24 tax, muni tax, franchise fees and so forth. That's imposed  
25 separately.

1 Q So the -- I take it from that the total actually paid  
2 by the customers will be some increment in excess of the two  
3 point billion dollars?

4 A I believe that's what Mr. Wright was just discussing.

5 Q Okay. The -- I want to look at the same exhibit.  
6 In, in Year 1, pardon me, Line 3, the opening balance,  
7 \$1.050 billion; correct?

8 A That is the amount of the borrowing, and it does  
9 reflect the reduction and the amount that's required to be  
10 borrowed by the assumed benefit of income taxes.

11 Q Okay. If we were to, if we were to take, if we're  
12 trying to compare the amount for the reserve fund alone  
13 vis-a-vis the \$1.050 billion, we would -- the comparative  
14 number would be the \$400 million, not the 650; correct? That  
15 is, the after-tax portion of the 650 for the reserve fund is  
16 \$400 million; correct?

17 A That is correct. You would substitute. If you were  
18 doing this solely for the, the amount that we're asking to  
19 replenish the storm fund with, instead of the \$1.050 billion,  
20 you would have a number of 400.

21 Q Okay. Which is something, something just short of,  
22 of 40 percent of the total, roughly in the range of 38 point  
23 something percent, would you agree? \$400 million as compared  
24 to --

25 A 400 divided by 1,050 is about 40 percent. Yes.

1 Q Right. So if we go down to, if we go down to Line,  
2 Line 11, we find in the first year, do we not, that the  
3 interest payment, that year alone, if that principal is the,  
4 the amount that's financed, is \$51.97 million; correct?

5 A That is correct. Line 11.

6 Q I mean, this is essentially analogous to a 12-year  
7 mortgage on a billion dollars; right?

8 A That's a good characterization.

9 Q Okay. Now if we didn't, if we didn't give you -- if  
10 the Commission didn't give you a reserve fund at all, if they  
11 stripped out the \$400 million, which is the after-tax amount,  
12 would you agree with me that that finance amount in the first  
13 year would be reduced by approximately 40 percent?

14 A Certainly the Line 10, the principal payment, Line  
15 11, the interest. I do not believe the ongoing costs would be  
16 affected. And certainly the bond issuance cost, it would be a  
17 less efficient financing, I mean, because your bond costs,  
18 aside from the underwriter discount, is not going to vary a  
19 whole lot with the principal amount.

20 Q Right. But it follows, does it not, that the fees  
21 and taxes and so forth that are related to the principal would  
22 be reduced proportionately, does it not?

23 A Lines 10 and 11, yes.

24 Q Okay.

25 A And also 21, the tax charge, because you would not

1 have, you would not be recouping the taxes payable on that, so  
2 it would also go down.

3 Q Proportionately?

4 A Yes, sir.

5 MR. TWOMEY: Okay. That's all I have. Thank you.

6 CHAIRMAN EDGAR: Thank you, Mr. Twomey.

7 Just for, for my thinking as to try to plan the  
8 afternoon a little bit while we're on the lunch break, Captain  
9 Williams, will you have questions for this witness?

10 CAPTAIN WILLIAMS: We will not.

11 CHAIRMAN EDGAR: Thank you.

12 Mr. Kise, we will come back to you after the lunch  
13 break. Will there be questions from staff?

14 MS. GERVASI: Yes, ma'am. We probably have about  
15 ten minutes or so.

16 CHAIRMAN EDGAR: Okay. Thank you very much.

17 Yes, sir.

18 MR. KISE: And might I prevail upon the Chair. I  
19 hate to bring this up, but if, if the Chair could give some  
20 thought today or maybe by tomorrow of what we will do, not to  
21 be a pessimist, if we don't make it by Friday, because I'm sure  
22 all of us, particularly the Commission, have very busy  
23 schedules. And just for planning purposes forward I would just  
24 ask --

25 CHAIRMAN EDGAR: Absolutely. I have been thinking

1 and adjusting my thinking as the hours have gone by. So one of  
2 the things that we will do at lunch is, is look ahead, I will  
3 do at lunch, and later this afternoon we will try to see if we  
4 can establish some alternative plans. Thank you, Mr. Kise, for  
5 the question.

6 It is 12:45. We will come back at 1:45, and we will  
7 begin with you, Mr. Kise. And we will see you at 1:45. Thank  
8 you.

9 THE WITNESS: Thank you, ma'am.

10 (Transcript continues in sequence with Volume 7.)

## CERTIFICATE OF REPORTER

3

4                I, LINDA BOLES, RPR, CRR, Official Commission  
Reporter, do hereby certify that the foregoing proceeding was  
5 heard at the time and place herein stated.

6                IT IS FURTHER CERTIFIED that I stenographically  
reported the said proceedings; that the same has been  
7 transcribed under my direct supervision; and that this  
transcript constitutes a true transcription of my notes of said  
8 proceedings.

9                I FURTHER CERTIFY that I am not a relative, employee,  
attorney or counsel of any of the parties, nor am I a relative  
10 or employee of any of the parties' attorneys or counsel  
connected with the action, nor am I financially interested in  
11 the action.

12                DATED THIS 21<sup>st</sup> DAY OF APRIL, 2006.
