#### **Comments**

21. Have you experienced any significant barriers in entering Florida's local exchange markets? Please list and describe any major obstacles or barriers encountered that you believe may be impeding the growth of local competition in the state, along with any suggestions as to how to remove such obstacles. Any additional general comments or information you believe will assist staff in evaluating and reporting on the development of local exchange competition in Florida are welcome.

Yes, Covad continues to experience several barriers to entry in the Verizon West and BellSouth-controlled local exchange markets including, but not limited to, the following:

- a) Covad lacks the ability to submit orders electronically for line splitting in the BellSouth region. Out of forty-two (42) different ordering scenarios for line splitting, BellSouth has deemed it necessary to implement electronic ordering for only a handful of those scenarios despite various commission orders requiring the contrary;
- b) Covad, as well as other CLECs, are impaired without remote-terminal access via a broadband UNE in the state of Florida.

If CLECs, including Covad, are to compete fairly throughout the region, BellSouth must be required to:

- 1) Comply with various Commission orders and their obligations to CLECs by implementing electronic ordering for all forty-two (42) line splitting scenarios; and
- 2) Negotiate fairly with CLECs for economically reasonable terms and rates concerning remote-terminal access; and
- 3) Continue to comply with requirements under Section 271 of the Act obligating them to provide line sharing, loops, switching, dark fiber and transport at just and reasonable rates.

#### NOTES/INSTRUCTIONS FOR COMPLETING TABLE-1:

A. The purpose of this table is to obtain CLEC retail access lines on a VGE basis, exclusive of VoIP, wholesale platform (lines formerly known as UNE-P), any UNE-P lines that have not yet transitioned, and resale (whether leased under an Interconnection Agreement or a Commercial Agreement).

B. An access line connects the end user's customer premises equipment (CPE) to the serving switch and allows the end user to originate and/or terminate local telephone calls on the public switched telephone network (PSTN). Do NOT include VoIP lines, Wholesale Platform lines, UNE-P lines or Resold access lines (including those leased under a Commercial Agreement). Do include UNE-L and EELs obtained from ILECs even if leased under a Commercial Agreement. The access line counts in Table-1 above must be based on all of your different types of access lines (including fixed wireless) with the exception of those used to provide VoIP service.

- C. Each field must be populated. Do not use quotation marks.
- D. Residential and business VGE access line counts may be obtained by querying your billing database, provisioning database, etc.

#### TABLE COLUMN INSTRUCTIONS:

Column 1. List ILEC Territory in alphabetical order (e.g. BellSouth, Verizon, etc.).

Column 2. Enter the abbreviation Res for Residential lines or Bus for Business lines. Each type must be entered in separate rows.

Column 3. Enter line count as voice-grade equivalents (VGEs). Report VGE Access Lines based on how you bill the customer. If you bill a customer for 1 DS1, the access line count would be 24 even if the customer is not utilizing all 24 channels. If you bill a customer for 10 channels in a DS1, then the line count would be 10. Report 2 VGEs for each ISDN-BRI and 23 VGEs for each ISDN-PRI. Lines must be entered without duplication, e.g., Enhanced Extended Link (EEL) loops must not be included in UNE-L counts and vice versa. Each line count must be entered in separate rows.

CLEC TABLE-3: VolP ACCESS LINES on a VOICEGRADE EQUIVALENT (VGE) Basis

#### THIS TABLE IS INTENTED TO ONLY CAPTURE VOIP LINES. DO <u>NOT</u> INCLUDE LINES REPORTED ON TABLE 1 IN THIS TABLE

1	2	3
		Total VGE
ILEC Territory	Res or Bus	Lines
BellSouth	Bus	XXX
Verizon	Bus	XXX
Grand	XXX	

#### NOTES/INSTRUCTIONS FOR COMPLETING TABLE-3:

A. The purpose of this table is to obtain retail VoIP access lines on a VGE basis.

B. An access line connects the end user's customer premises equipment (CPE) to the serving switch and allows the end user to originate and/or terminate local telephone calls on the public switched telephone network (PSTN). The access line counts in Table 3 above must be based on all of your different types of access lines (including fixed wireless) that are used to provide VoIP service.

C. Each field must be populated. All entries must be made without quotation marks.

#### TABLE COLUMN INSTRUCTIONS:

Column 1. List ILEC Territory in alphabetical order (e.g. BellSouth, Verizon, etc.).

Column 2. Enter the abbreviation Res for Residential lines or Bus for Business lines. Each type must be entered in separate rows.

Column 3. Enter line count as voice-grade equivalents (VGEs). Report VGEs based on how the customer is billed. If the customer is billed for a dynamic bandwidth VoIP product, the line count would be the maximum number of VoIP lines available. If the customer is billed for a specific number of VoIP lines, or a range of lines, the VoIP line count would be the number of VoIP lines or the highest number of the range, respectively. Each line count must be entered in separate rows.
