FPSC-COMMISSION CLERK

IN RE: PETITION ON BEHALF OF CITIZENS OF THE  
STATE OF FLORIDA TO REQUIRE PROGRESS ENERGY  
FLORIDA, INC. TO REFUND CUSTOMERS \$143 MILLION

FPSC DOCKET NO. 060658

**REBUTTAL TESTIMONY**

**JAMES N. HELLER**

1                   **I. INTRODUCTION AND QUALIFICATIONS.**

2

3   **Q. Please state your name and business address.**

4   **A. My name is James N. Heller. My address is 4803 Falstone Avenue, Chevy Chase,**  
5         **Maryland.**

6

7   **Q. Are you the same James N. Heller who previously filed direct testimony in**  
8         **this case?**

9   **A. Yes.**

10

11   **Q. What were you asked to do in this testimony?**

12   **A. I was asked to review the Direct Testimony of Bernard M. Windham and respond**  
13         **to his statements regarding the delivered prices and tonnages of coal procured by**  
14         **Progress Energy Florida, Inc. (PEF) and by allegedly comparable utilities in the**  
15         **1996-2005 time period.**

16

1           **II. PURPOSE, SUMMARY AND APPROACH TO TESTIMONY**

2

3   **Q.**   **What is the purpose of your testimony?**

4   **A.**   The purpose of my testimony is to address certain statements of opinion made by  
5           Mr. Windham in his testimony filed in this case on February 14, 2007. These  
6           statements include the following:

- 7           • Between 1996-2005, it “appears” PEF often did not purchase the lowest price  
8           coal, in particular foreign compliance coal;
- 9           • It “appears” PEF did not always purchase the lowest available US coal, in  
10           particular, Colorado coal.; and,
- 11           • Synfuels should have \$2/ton added to its cost to make it comparable to  
12           bituminous coal.

13

14   **Q.**   **How did you approach these issues and on what materials did you rely?**

15   **A.**   I reviewed Mr. Windham’s testimony and materials that he provided regarding the  
16           delivered prices of coal to PEF and other utilities. I reviewed similar data from  
17           Platts/RDI COALdat on delivered prices. I have previously reviewed information  
18           provided to me by PEF on their coal contracts, delivered prices, procurement  
19           policies, bids and bid evaluations. I also reviewed Mr. Windham’s deposition in  
20           this case.

21

22   **Q.**   **What analysis did you perform with the materials that you collected?**

23   **A.**   I reviewed the data on coal deliveries and coal quality to the allegedly  
24           “comparable utilities” identified by Mr. Windham, including JEA, Gulf Power

1 Company, Mississippi Power Company, Alabama Power and Alabama Electric  
2 Cooperative, Inc. I also considered information on other utilities identified by  
3 Mr. Windham in Exhibit BW-2 as being "Foreign Compliance Coal" purchasers  
4 including TECO, New England Power, Public Service Company of New  
5 Hampshire, Central Hudson Gas & Electric, and Savannah Electric. I reviewed  
6 the delivered prices, quantities and quality of foreign coals delivered to a subset of  
7 these plants from Platts FERC Form 423 data. I compared the results of those  
8 analyses with information provided in Mr. Windham's exhibits.

9

10 **Q. Please provide a summary of your testimony.**

11 **A.** Mr. Windham states that the purpose of his testimony is to "provide basic  
12 information related to the delivered prices and tonnages of coal procured by PEF  
13 and 'comparable' utilities". He does not specifically address PEF's coal  
14 procurement policies and practices during the relevant time period from 1996 to  
15 2005 and does not claim that they were flawed. He also does not calculate any  
16 damages. He simply observes that it "appears" PEF "often did not purchase the  
17 lowest price coal that met PEF's coal specifications."

18 In this testimony I will explain the nature of the data that Mr. Windham  
19 presents and how it relates to the manner in which PEF procured coal. I will also  
20 discuss the quality of the coal being compared in particular the import coals. My  
21 conclusion is that while I do not generally dispute the accuracy of the FERC Form  
22 423 data itself, I do question how useful that data is in helping make judgments  
23 about the prudence of PEF's coal procurement activities. The delivered fuel price  
24 data without additional information reveals nothing about the processes PEF

1 followed in procuring coal and the reasons for the actions that PEF took.

2                   In Mr. Windham's deposition (page 84), he eventually expresses an  
3 opinion that, "Based on the information I've seen from the data that I've reviewed  
4 and the other information in the docket, I have an opinion that there were years  
5 when Progress should have bought more foreign coal." In my opinion, Mr.  
6 Windham has done insufficient analysis to draw that conclusion. At the same  
7 time, he refuses to express an opinion about the prudence of PEF's actions, so I  
8 am a bit confused about what he intends.

9

10     **Q. Are you sponsoring any exhibits to your testimony?**

11     **A.** Yes. I am sponsoring the following exhibit that I have prepared or that was  
12 prepared under my supervision and control:

13                   Exhibit No. \_\_ (JNH-9) FERC Form 423 Platts/RDI COALdat Data on coal  
14 receipts by various utilities.

15                   This exhibit is true and correct to the best of my knowledge.

16

17                   **III. CRITIQUE OF MR. WINDHAM'S ANALYSIS**

18

19     **Q. What do you understand that Mr. Windham relied upon in preparing his  
20 analysis?**

21     **A.** Mr. Windham relied primarily upon FERC Form 423, PSC Form 423, and PSC  
22 A-Schedule data. These databases provide information on monthly coal  
23 deliveries and prices to electric generators. The FERC data covers utilities

1 nationwide while the Florida Public Service Commission (PSC) data are filed by  
2 investor owned electric utilities subject to PSC jurisdiction.

3

4 **Q. What is the nature of the FERC Form 423 data?**

5 A. The Federal Energy Regulatory Commission (FERC) requires that each electric  
6 power producer for each of its electric generating plants (above 50 MW) report on  
7 a monthly basis the cost and quality of fossil fuels delivered to each plant.  
8 Exhibit BW-5 presents a copy of the form and instructions. This information is  
9 very useful to analysts in understanding what types of coals are purchased for  
10 delivery to each of the generating units, the quality of that coal, the source, and  
11 the prices paid. However, the form does not contain information as to when the  
12 coal was procured or under what circumstances it was procured, other than a  
13 "Type" code which indicates whether the fuel is bought on a spot or contract basis  
14 and thus provides limited information about what type of contract was used for  
15 the procurement.

16

17 Q. **Can the FERC Form 423 data be used to determine whether PEF acted  
18 prudently in not making more foreign coal purchases?**

19 A. No. As I explained, the FERC data provide information on the delivered prices  
20 paid by an electric generator for coal delivered to a particular plant. The FERC  
21 data do not necessarily provide information on the prices at the time that the coal  
22 is procured. As a result, the delivered prices reported by two different utilities for  
23 the same type of coal in the same month on the FERC form in all likelihood will  
24 be the result of coal procurements conducted and contracts negotiated at different

1        periods of time. This means the markets at the time that the contracts were  
2        concluded may be quite different for the coal reported as delivered in the same  
3        month on the FERC form. The only way to determine if one of the utilities paid  
4        more or less than the other for the same type of coal is to know more about each  
5        utilities' fuel procurement processes and procedures.

6              For example, it is important to know whether the purchase resulted from a  
7        request for a contract proposal for coal or a spot offer and acceptance; what coal  
8        and how much of it was sought in the request and what coal and how much was  
9        offered in response; what were the number and extent of the bid responses; what  
10        were the market conditions at the time of the procurement; were there  
11        circumstances unique to the utility or supplier at the time which gave them the  
12        ability to extract higher prices or other concessions; and whether the  
13        transportation circumstances affected the pricing. Transportation is a critical  
14        issue. Since the reported prices are on a delivered price basis it is difficult to  
15        make any judgments about the coal price at the mine until the effects of  
16        transportation have been eliminated. The FERC data might be used to show that  
17        there should be an inquiry into these other factors regarding the utilities' coal  
18        procurement processes and procedures at the time that the coal was procured, but  
19        the FERC data cannot and does not provide the answers to the questions regarding  
20        these other factors.

21

22        Q.      **Does Mr. Windham attempt to use the FERC data to demonstrate PEF's  
23        imprudence?**

1    A.    No. He notes that during the 1996-2005 time frame other utilities purchased  
2        foreign coals (some of which is of compliance quality), at prices below the  
3        average price paid by PEF for compliance coal. He seems to imply that given the  
4        size and sophistication of PEF's coal purchasing activities, they should have  
5        achieved results at least as favorable as the prices paid by the median of the  
6        comparison group. But he maintains in his deposition that he is not testifying that  
7        PEF acted imprudently and he does not analyze or address the nature of PEF's  
8        procurement policies or practices.

9              Mr. Windham may be attempting to provide the raw materials to others to  
10       demonstrate, if they can, whether PEF acted imprudently. However, he has not  
11       provided sufficient material to make that judgment. Mr. Windham admits as  
12       much in his deposition when he says he cannot determine how much foreign coal  
13       PEF should have bought in any year from 1996 to 2005 and from whom PEF  
14       should have bought it based on his analysis. See Deposition of Mr. Windham at  
15       page 84, lines 9-25 and page 85, lines 1-16.

16

17    Q.    **Does Mr. Windham offer sufficient information to demonstrate imprudence?**

18    A.    No. The manner in which he has constructed the analysis does not comport with  
19       the manner in which one would review the prudence of the decisions made by  
20       PEF. It is a pure hindsight analysis that purports to focus on results achieved  
21       without commenting on what PEF might have done differently to achieve  
22       different results.

23              PEF was clearly aware of and focused on the coal import market; its RFPs  
24       included import coal; it received bids for such coals; it did the evaluations; and it

1           bought that coal when it evaluated the foreign coal option as least cost. To make  
2           a judgment about the prudence of PEF's decisions, Mr. Windham should have  
3           analyzed the circumstances around these bid and procurement decisions to  
4           determine if PEF made the right or wrong decision in not buying more imported  
5           coal.

6

7   **Q. Why would one need to analyze PEF's coal procurement decisions at the time  
8       they were made?**

9   **A.** While Mr. Windham's data may show that others were purchasing coal at prices  
10      lower than the delivered price paid by PEF, he must determine a number of other  
11      factors before he can answer the question about what PEF should or should not  
12      have done differently. Were those coals available in the market place at the time  
13      that PEF was making its coal purchasing decisions? (It is possible that a producer  
14      may sell out, or have a more profitable opportunity at the time of PEF's RFP).  
15      Did PEF solicit for those coals and did the potential sellers respond? (PEF can  
16      make it known that it is seeking these coals, but they cannot force a producer to  
17      bid). Were the prices offered to PEF the same as those offered to others?  
18      (Producers will vary the prices that they offer over time depending on shifts in  
19      market conditions, their mine operations, and what they perceive to be their  
20      competitive position relative to other producers at a customer). These are some  
21      examples of what one should consider in a prudence review and they can only be  
22      answered by considering all facts and circumstances surrounding PEF's coal  
23      procurement decisions at the times that they were made. To my knowledge Mr.  
24      Windham has done no such analysis.

- 1
- 2   **Q.** **What about the PEF comparison price Mr. Windham uses in his analysis. Is**
- 3   **that the appropriate price to compare to the other utility prices?**
- 4   **A.** No. Mr. Windham in exhibit BW-3 compares the average delivered PEF/U.S.
- 5   CAPP price with the median of the prices each year paid by his comparison
- 6   group. He uses the wrong PEF price. This price includes in it the average of all
- 7   prices paid under spot and contract arrangements which is an inappropriate
- 8   comparison. In any given year, coals previously committed under contracts at
- 9   prices established at the time that the commitment was made are being delivered.
- 10   So for example, PEF may have made a commitment to a CAPP coal in 1994 that
- 11   had a delivered price of \$1.90/MMBtu at the time. The contract was the lowest
- 12   cost option at the time and the price has since escalated under the terms of the
- 13   contract to \$2.00/MMBtu in 2000. In 2000, the market price of coal may have
- 14   fallen so that CAPP spot coal is now available at \$1.40/MMBtu. PEF buys the
- 15   CAPP spot coal rather than the foreign coal available that year at the median price
- 16   of \$1.44/MMBtu. Mr. Windham's analysis may well show that the average price
- 17   PEF paid in 2000 for coal is much greater than the median price of the foreign
- 18   coal bought by others, but PEF would have done nothing imprudent.
- 19
- 20   **Q.** **Is there an example of how the PEF comparison price may not reflect**
- 21   **current market conditions?**
- 22   **A.** Yes, the Massey contract which Mr. Windham discusses shows the problem of
- 23   comparing current market prices with the prices being paid under older
- 24   agreements. The long term coal supply agreement between PEF and Massey

1 provided for CAPP coal deliveries at prices which were not directly related to  
2 current import coal prices. While the Massey contract may have been the lowest  
3 priced alternative at the time it was signed, at a future point in time other lower  
4 cost alternatives may have become available as market conditions shifted. Mr.  
5 Windham apparently recognizes that problem and posits that the Massey contract  
6 could have been reopened to cause the price to readjust to market or the contract  
7 could be terminated.

8

9     **Q. Could PEF have reopened the Massey contract to reject the contract and buy  
10 foreign coal?**

11     **A.** On page 12 Mr. Wyndham notes that the Massey contract "had a reopener about  
12 every 18 months at which time changes in the terms could be made by either party  
13 with cause". In his deposition, he acknowledges that he does not recall the  
14 specific terms of the reopeners. He then talks about the commonality of how coal  
15 contract reopeners operate. My experience in the hundreds of coal supply  
16 contracts that I have reviewed is very different. Market price reopeners are  
17 individually tailored in contracts partly because they are very powerful  
18 provisions. They may vary in terms, for example of , what triggers the reopeners,  
19 how frequently they occur, how the price is set once the reopeners is triggered,  
20 whether either party has walk away rights and when, and how the volume may be  
21 reset based on the results of the reopeners. It would seem that Mr. Windham  
22 would need to review the provisions of this one carefully before commenting on  
23 whether PEF prudently administered the terms of the contract.

24

1 Q. Have you reviewed the Massey contract?

2 A Yes. The 1978 contract does contain a reopeners, but not one that allows PEF to  
3 adjust the price to the level of import coals or unilaterally terminate the contract.  
4 It is in my experience an unusual reopeners in the specificity of the conditions  
5 required to trigger the provisions. Under the "Market Adjustment" provision  
6 (section 4.04), PEF must demonstrate to Massey that it is able to purchase coal  
7 that is washed, deep-mined, 12,500 Btu/lb. min., .06% sulfur or less, under a ten  
8 year contract term with similar terms and conditions to the Massey contract from  
9 a non-affiliated producer of similar or larger size than Massey, with similar or  
10 better facilities than Massey, and located in Bureau of Mines District 8 (this is  
11 central Appalachia). Having met all of those conditions, the offered price must be  
12 15% less than the Massey price during the prior three month period. If these  
13 conditions are met, then Progress can propose changes in the base price and  
14 escalation provisions. After 180 days of negotiations if they fail to agree, then  
15 Progress can terminate the contract.

In 1983, the contract was amended and Section 4.03 “Market Adjustments” became the key provision requiring the parties to negotiate “in good faith” to reach an agreement on a new base price every three years. If they were unable to agree, the contract could terminate, but it required “best efforts to reach agreement”. In administration of the contract, I understand that PEF would conduct market price analyses to develop its position on the new base price.

23 Q. How did Mr. Windham compare the PEF prices with those of the  
24 "comparison group"?

1     A. In exhibit BW-3, Mr. Windham took the weighted average price of all of the PEF  
2                 compliance coals delivered to IMT (spot or contract) in any given year, and  
3                 compared PEF's weighted average price with the median of the prices paid by  
4                 other utilities which imported coal in that year. Based on his deposition, I believe  
5                 that Mr. Windham included all U.S. utilities which took any foreign coal  
6                 deliveries in that year. Recognizing that the transportation costs to these utilities  
7                 could be different than for deliveries to IMT, Mr. Windham chose the median  
8                 rather than the average value for his comparison. This was an attempt to  
9                 eliminate the effect of those utilities located in New England, for example, that  
10                 may have had higher transportation cost components in the delivered price than  
11                 PEF. This approach would also eliminate the effect of "outliers," meaning  
12                 reported prices that were for some reason incomparable or in error.

13

14     Q. **Is Mr. Windham's use of the median price paid for foreign bituminous coal a  
15                 proper comparison price?**

16     A. No. The use of medians may have made sense if the dataset was comparable and  
17                 Mr. Windham were simply trying to eliminate the effects of data outliers caused,  
18                 for example, by misreporting or very unusual shipping conditions. The problem  
19                 in Mr. Windham's analysis is that the dataset is inherently incomparable,  
20                 including spot and contract shipments, shipments occurring under contracts  
21                 negotiated at different points in time, coals that were not of comparable quality,  
22                 and shipping conditions that varied greatly to mention a few. Simply put, Mr.  
23                 Windham is not using comparable utility coal prices and, therefore, the use of  
24                 median price comparisons is inappropriate.

1 Q. How should the comparison be performed?

2     A. Ironically, the analysis should be performed in the manner already laid out in the  
3       testimony in this case. At the times that PEF went out for bid, they should have  
4       evaluated the available alternatives and selected the least cost option on an  
5       evaluated basis. The data to analyze this including RFPs and bid responses has  
6       been presented in this case along with the testimony of various PEF witnesses  
7       explaining the process. The issue which Mr. Windham seems to be addressing in  
8       a very shorthand manner through his delivered price comparison has already been  
9       addressed properly. The critique must consider the prudence of the decision at  
10      the time it was made, and Mr. Windham's analysis does not do that.

13 A. Yes. There are two issues related to coal quality and the treatment of  
14 transportation that deserve further comment.

16 Q. With regard to coal quality, does Mr. Windham screen the dataset properly?

17 A. No. The quality of the import coal received by the utilities in his comparison is  
18 not always compliance coal partly because some of the utilities in his comparison  
19 do not require such coals. This affects both the cost of the coal and the coal  
20 sources.

1 shown are for imported coals. The utility and plant name are shown on the center  
2 of each data grouping and the column headings indicate the data element. The  
3 organization of FERC data in Exhibit No. \_\_\_\_ (JNH-9) readily shows the  
4 differences in quantity and quality of the import coal in Mr. Windham's analysis.

5 For example in 1997, the average sulfur content of the 1.385 million tons  
6 reported by Mr. Wyndham as received by JEA had an average sulfur content of  
7 1.31#SO<sub>2</sub>/MMBtu. (Exhibit No. \_\_\_\_ (JNH-9), pg. 11). This is not compliance coal  
8 and could not be burned at CR4 and CR5. One of the fundamentals of a  
9 compliance coal comparison is that all of the coals delivered in the comparison  
10 must be of compliance quality. In his deposition, Mr. Windham indicates that he  
11 did not screen for compliance quality coals. Often there is a price difference  
12 between compliance and non-compliance coals. This is especially true at units  
13 like CR4 and CR5 subject to new source performance standards (NSPS). Mr.  
14 Windham's analysis does not account for the NSPS impacts on PEF purchases or  
15 the price differences between compliance and non-compliance coals.

16 In addition, some utilities in his comparison also received Australian and  
17 Russian coals (e.g. Exhibit No. \_\_\_\_ (JNH-9), pgs. 7, 19), which may not have  
18 been offered to PEF as part of its bid solicitations and were never test burned.  
19 Mr. Windham does not account for such additional differences in coal quality in  
20 his analysis.

21

22 Q. Does Mr. Windham do the delivered coal price analysis properly?

23 A. No. Mr. Wyndham assumes that the effect of the cross-Gulf movement will be  
24 identical for all of the coal delivered to a Gulf port. In fact, because these costs

1       are paid on a per ton basis but need to be evaluated on a delivered cents per  
2       MMBtu basis, the heating value of the coals does affect the delivered cost  
3       comparison. Assume a CAPP compliance coal with a 12,500 Btu/ lb content and  
4       a foreign coal with a Btu content of 11,700 Btu/lb are both delivered to IMT. If  
5       the IMT handling and the cross-Gulf movement cost is \$10/ton, then the transport  
6       cost of the CAPP coal is only \$.40/MMBtu while the foreign coal costs  
7       \$.43/MMBtu. The analysis should be done at the plant to properly account for  
8       these differences.

9              This is just one of the problems with the transportation aspects of Mr.  
10          Windham's analysis. There are others including variations in vessel capacity,  
11          delivery lengths and times, among others, that can impact the comparable  
12          delivered price of foreign coal to different utilities. Mr. Windham, however,  
13          admits in his deposition that he did not calculate the transportation costs  
14          associated with the foreign coal shipped to the utilities in his comparison so Mr.  
15          Windham has not considered any of these additional transportation factors in his  
16          analysis.

17  
18      **Q. Mr. Windham also comments on Colorado bituminous coal. Do you have a**  
19      **response to that analysis?**

20      **A.** Yes. Mr. Windham indicates that Colorado bituminous coal was available more  
21          cheaply than CAPP coal in some of the years from 1996 to 2005 in an analysis  
22          similar to his analysis of foreign bituminous coals. As a result, Mr. Windham's  
23          analysis of Colorado bituminous coals suffers from many of the same flaws as his  
24          analysis of foreign bituminous coals.

1                   Additionally, PEF's testimony addresses the instance where PEF's own  
2                   bid sheet analysis of a PEF request for proposal had a low cost Colorado  
3                   bituminous coal. As Mr. Windham acknowledges in his deposition, the delivered  
4                   price is not the only criteria that needs to be considered in determining what coal  
5                   should be procured. In this instance, I understand that PEF did not purchase the  
6                   Colorado bituminous coal because of concerns regarding known transportation  
7                   disruptions with respect to western coal. The coal is of no value to the plant  
8                   unless it can be delivered timely. While one may question PEF's judgment about  
9                   whether they properly assessed the transportation risks, simply pointing out what  
10                  PEF already knew that the Colorado coal at one point in time may have been  
11                  cheaper than CAPP says nothing about the prudence of their business judgment.  
12

13           **Q. Does Mr. Windham comment on any other fuel types?**

14           **A.** Yes. Mr. Windham indicates that \$2/ton should be added to the synfuels price in  
15                  order to compare it to other coals. With regard to the cheaper pricing for  
16                  synfuels, Mr. Wyndham's assumption that \$2/ton should be added to the price in  
17                  comparing it with bituminous coal prices seems unfounded. In my experience,  
18                  the discount for synfuels reflects a sharing of the producer's tax savings with the  
19                  consumer as an inducement to the customer to purchase synfuels rather than coal.  
20                  In addition, I understand that PEF blends the synfuels and this virtually minimizes  
21                  any handling problems. The interrogatory response attached to Mr. Windham's  
22                  testimony BW-10 addresses the blending solution. Therefore, adding a \$2/ton use  
23                  penalty to the synfuels would be inappropriate.

24

1    Q.    **Do you have any overall conclusion?**

2    A.    Yes. Mr. Windham's analysis adds no new or useful information to the record to  
3              establish or refute the prudence of PEF's activities. To the extent that he attempts  
4              to make comparisons they are badly flawed.

5

6    A.    **Does this conclude your testimony?**

7    A.    Yes.
