Re: Docket No. 070052-EI

Dear Ms. Cole:

Enclosed for filing, on behalf of the Citizens of the State of Florida, are the original and 15 copies of the Direct Testimony of Daniel J. Lawton.

Please indicate the time and date of receipt on the enclosed duplicate of this letter and return it to our office.

Sincerely,

Joe A. McGlothlin

5
6 **SECTION 1: QUALIFICATIONS, BACKGROUND AND INTRODUCTION**

7
8 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

9 A. My name is Daniel J. Lawton and my business address is 12113 Roxie Drive,
10 Suite 110 Austin, Texas 78728.

11
12 **Q. BY WHOM ARE YOU EMPLOYED?**

13 A. I am a principal in the firm of Diversified Utility Consultants, Inc. ("DUCI").
14

15 **Q. PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND**
16 **WORK EXPERIENCE.**

17 A. I have been working in the utility business as an economist for the last 25 years.
18 Consulting engagements have included electric utility load and revenue
19 forecasting, cost of capital and financial analyses, revenue requirement/cost of
20 service issues, prudence inquiries, and rate design/cost allocation studies in
21 litigated rate proceedings as well as developing rate studies for municipally
22 owned utilities. In addition to my duties at DUCI, I also have a law practice
23 based in Austin, Texas. My main areas of practice include Administrative Law

1 representing municipalities in utility rate matters before regulatory agencies and
2 contract matters and litigation. I have included a brief description of my relevant
3 educational background and professional experience in my Exhibit __ (DJI-1).

4
5 **Q. HAVE YOU PREVIOUSLY FILED TESTIMONY IN RATE**
6 **PROCEEDINGS?**

7 A. Yes. A list of cases where I have previously filed testimony is included in my
8 Exhibit __ (DJI-1).

9
10 **Q. ON WHOSE BEHALF ARE YOU FILING TESTIMONY IN THIS**
11 **PROCEEDING?**

12 A. DUCI has been retained by the Office of Public Counsel (“OPC”) to review and
13 respond to the Progress Energy Florida (“PEF” or “Company”) Petition to
14 Recover Costs of Crystal River Unit 3 (“CR3”) Uprate through the Fuel Clause
15 (“Uprate Petition”).

16
17 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**
18 **PROCEEDING?**

19 A. As noted above, the purpose of my testimony is to address the issues raised in the
20 Company’s proposal to collect base rate costs through the fuel clause. My
21 testimony is organized in the following fashion with regard to the issues I
22 specifically address:

23 Section 2: Company Uprate Proposal;

- 1 Section 3: Evaluation Standards and Ratemaking Alternatives;
- 2 Section 4: The General Rate Setting Process;
- 3 Section 5: Inappropriate Rate Components of PEF's Uprate Request
- 4 A. Depreciation
- 5 B. Accumulated Deferred Income Taxes
- 6 C. Cost of Capital
- 7 D. Timing Consideration
- 8 Section 6: Transmission and POD Proposals

9 My analysis of these issues is based on my background in utility regulation as a
10 consultant, economist and as an advisor to regulatory authorities. OPC witness
11 Merchant addresses some of these same issues from the perspective of an
12 accountant.

13

14 **Q. PLEASE PROVIDE A BRIEF SUMMARY OF YOUR FINDINGS AND**
15 **CONCLUSIONS.**

16 A. The facts and circumstances of this case do not support fuel clause treatment of
17 the Company's Uprate request. The size of this major nuclear addition is an issue
18 that is typically analyzed in the context of a major rate proceeding where all costs
19 (increases and decreases) are examined to determine the appropriate customer
20 rates. Fuel cost recovery is unwarranted, in that these amounts can and should be
21 considered timely in the context of a base rate filing. The Company is not in any
22 danger of under earning its cost of capital or revenue erosion, because it has the
23 ability and opportunity to recover this nuclear investment following a normal base

1 rate proceeding. This fact distinguishes this case from the situation envisioned in
2 the Commission order on which PEF chiefly relies. The Company's proposal
3 would result in lopsidedly enormous benefits to shareholders at the expense of
4 customers. PEF proposes accelerated recovery, guaranteed returns and
5 enhancement of shareholder values by shifting risks of recovery to customers.
6 Under PEF's proposal PEF would recover its costs from current customers on an
7 accelerated basis, but the projected fuel savings would be delayed in reaching
8 customers, creating intergenerational inequities among customers. Moreover, the
9 costs and benefits of this project are most difficult to analyze, given the very
10 preliminary nature of the cost estimates. Any material failure to adequately
11 project the costs could result in further delays in customer benefits under the
12 Company's plan.

13 Given the above, I recommend that this Commission deny the Company's
14 request to treat the proposed \$448 million of nuclear investment as a cost eligible
15 for fuel clause treatment.

16 **SECTION 2: COMPANY UPRATE PROPOSAL**

17
18 **Q. PLEASE DESCRIBE THE COMPANY'S CR3 POWER UPRATE**
19 **PROJECTS.**

20 A. The Company proposes to "uprate", (increase the power output of) CR3 by
21 approximately 180 MWe. (See Direct Testimony of Javier Portuondo at 4:20-23).
22 The uprate, if successfully completed, will increase the capability of CR3 from

1 900 MWe to 1,080 MWe. The increase of 180 MWe's of low cost CR3 nuclear
2 generation will provide customers with increased low fuel cost output resulting in
3 fuel savings, by displacing other more costly generation and/or purchased power.
4 The Company asserts that there will be \$2.6 billion (nominal) of fuel net savings
5 (net present value fuel savings ("NPV")) of \$640 million) by the end of 2036,
6 based on the numbers included in its amended filing. (Id at 7:1-3).

7 The expected investment including AFUDC to complete this uprate
8 project is a total expected outlay of about \$448 million. (PEF's response to OPC
9 Interrogatory 12 Attachment 1). This cost estimate is based on the following
10 three components; (i) a \$293 million investment required for the power uprate; (ii)
11 modifications required for transmission system reliability of \$103.9 million; and
12 (iii) point of discharge ("POD") investment to address water cooling issues from
13 the power uprate of \$51.1 million. These are not firm final cost proposals, but
14 rather Company estimates subject to refinement. (See Direct Testimony of Javier
15 Portuondo at 6:1-2). In fact, with the exception of the MUR phase scheduled for
16 installation in 2007, it is clear that PEF's estimates are preliminary
17 "placeholders," and that the studies necessary to estimate the costs have not been
18 completed. Under the Company's uprate proposal in this case, the Company
19 asserts customers are expected to enjoy lower fuel costs of about \$706 million
20 (NPV) resulting in a total \$353 million benefit (NPV) to customers. (PEF's
21 response to OPC Interrogatory No. 12 Attachment 1)

22

1 Q. HOW DOES THE COMPANY PROPOSE TO RECOVER THE COSTS
2 ASSOCIATED WITH THIS PROJECT FROM CUSTOMERS?

3 A. The Company proposes to recover the entire non-fuel base rate costs associated
4 with this nuclear investment project, approximately \$448 million of costs, (CR3
5 nuclear power plant investment, transmission investment, Point of Discharge
6 investment, O&M and auxiliary power costs) through the fuel clause. In other
7 words, the Uprate capital costs which normally are recovered through base rates
8 would instead be recovered as part of the fuel factor. The costs proposed by the
9 Company to be recovered through the fuel clause include; (i) the recovery of all
10 capital costs incurred for the CR3 power Uprate; (ii) all costs associated with
11 transmission system changes; and (iii) all costs incurred to offset the POD impact
12 for the project. (Id at 8:20 – 25). These costs include a return on average
13 investment and taxes, depreciation, deferred tax impacts and O&M, with the
14 recovery of the investment shortened from the service life (2036) to 1-year or 10-
15 year periods.

16 The Company proposes to begin recovery through the fuel clause as each
17 of the three phases of the project is completed. Phase 1 resulting in a 12 MWe
18 power uprate associated with the measurement uncertainty recovery (“MUR”)
19 project is to be completely recovered in 2008. Phase 2 and Phase 3 of this project
20 are expected to result in the start of cost recovery in of 2009 and 2011,
21 respectively.

1 SECTION 3: EVALUATION STANDARDS AND RATEMAKING
2 ALTERNATIVES

3
4 Q. HAS THE COMMISSION PREVIOUSLY ESTABLISHED STANDARDS
5 THAT ARE APPLICABLE TO ITEMS THAT ARE NORMALLY BASE
6 RATE ITEMS BUT MAY BE ALLOWED FOR RECOVERY THROUGH
7 FUEL ADJUSTMENT CLAUSES?

8 A. Yes, the Commission has previously addressed this issue in Order 14546, which
9 states at item 10:

10 Fossil fuel-related costs normally recovered through base rates but
11 which were not recognized or anticipated in the cost levels used to
12 determine current base rates and which, if expended, will result in
13 fuel savings to customers. Recovery of such costs should be made
14 on a case by case basis after Commission approval. (Emphasis
15 added).
16

17 The Commission further stated in Order No. 14546 the types of costs more
18 appropriately considered in the computation of base rates. Those items are as
19 follows.

- 20 1. Operations and maintenance expense at generating plants or
21 system storage facilities. This includes unloading and fuel
22 handling cost at the generating plant or storage facility.
23 2. Transportation charges between dedicated storage facilities and
24 generating plants.
25 3. Fuel procurement administrative functions.
26 4. Fuel additives neither blended with fuel prior to burning nor
27 injected into the boiler fire chamber along with the fuel.
28

29 Q. DID THE COMMISSION PROVIDE GUIDANCE AS TO WHY IT HAS
30 ALLOWED WHAT MIGHT NORMALLY BE CONSIDERED NON-FUEL
31 ITEMS TO BE RECOVERED THROUGH BASE RATES?

A. Yes. The Commission said it wanted to provide the utility an incentive and opportunity to take advantage of certain projects which will result in the savings of fossil fuel-related costs to customers when such costs savings arise after rates have been established and before they could be recognized in future base rates.

1

2 **Q. IN YOUR OPINION, DOES THE COMPANY'S REQUEST IN THIS**
3 **PROCEEDING MEET THE STANDARDS OR GUIDELINES**
4 **PREVIOUSLY ESTABLISHED BY THE COMMISSION?**

5 A. No. In short, the Company's argument is that these uprate costs are not in current
6 base rates and if the costs are expended the result will be fuel savings for
7 customers. (Direct Testimony Mr. Portuondo at 4:9-12). The Company's
8 approach is rather simplistic and fails to establish a reasonable basis for including
9 these costs in the fuel clause – especially given the substantial detrimental impacts
10 on customers.

11 In my opinion, the Company's proposal should be denied for the following
12 reasons;

13

14 • First, the vast majority of such costs can and should be recognized in
15 the Company's future rate proceedings that could occur in 2009. At
16 that time, such costs can be better estimated along with all other base
17 rate costs to determine the appropriate level of earnings, and will not
18 deprive the Company of a reasonable and necessary level of return on
19 such investment.

11
12
13
14
15
16
17
18
19
20
21
22
23

- Second, the costs associated with the Uprate of CR3 are not volatile in nature. This is one of the key criteria underlying the establishment of the fuel cost recovery clause in the first place. The projected investments associated with the CR3 Uprate and POD investment are one-time expenditures that have an identifiable, useful life equal to the expected life of the CR3 generating facility. Once placed into service, such expenditures are known and measurable and are not volatile over the period they will be used and useful in the providing service to customers.
- Third, the Company's request, as it pertains to the transmission related expenditures, are not associated with fuel savings. Rather, the expenditures for transmission are tied to reliability concerns necessary to meet the outage of the largest single unit on the system.
- Fourth, while the expenditures associated with the MUR investment project are anticipated to be in service prior to the next rate proceeding, these costs are not only relatively small in nature, but further have not been distinguished from other capital expenditures normally made by the Company in between rate proceedings for which it has not sought similar rate treatment.

1 • Fifth, the Company's cost recovery request incorporates a useful life
2 that is a form of accelerated depreciation that conflicts with principles
3 of normal ratemaking as well as the Federal Energy Regulatory
4 Commission's ("FERC") Uniform System of Accounts ("USOA").
5 Allowance of such artificially short depreciation periods would
6 significantly reduce NPV savings to customers during the early years
7 of the project.

8
9 • Sixth, the Company's requested overall cost of capital of 13.19%
10 (including income taxes) is excessive given that in the event the
11 Commission were to allow clause treatment, there is no risk of non-
12 recovery under the Company's proposal. The application of debt costs
13 would be the appropriate proxy for return in this situation. PEF's
14 approach therefore overstates the costs that should be borne by the
15 customers under PEF's proposal.

16
17 The Commission's Order No. 14546 clearly states that requests such as the
18 Company's will be reviewed on a case by case basis.

19 Thus, as to guidance for the consideration of the Company's proposal the
20 Commission should consider the following:

- 21 1) The Company's proposal guarantees 100% recovery of costs
22 and returns and enhances shareholder values while minimizing
23 shareholder risks;

- 1 2) Customers must wait behind shareholders for years before
- 2 enjoying any savings;
- 3 3) Cost estimates have not been refined, which would place
- 4 estimates of fuel savings to customers at more risk;
- 5 4) Most of the fuel savings are in outer years where forecast
- 6 estimates are most likely to be incorrect; and
- 7 5) The Company does not face any substantial risks if these costs
- 8 are included in base rates.

9 The bottom line is that this Uprate project can be included in base
10 rates and customer savings can be improved without jeopardizing the
11 Company's financial integrity. There is no compelling reason or necessity
12 for including the Uprate costs in the fuel clause. On the other hand, to
13 grant PEF's request would be detrimental to customers.

14

15 **Q. IF THE COMMISSION DENIES PEF'S PETITION, WILL THE**
16 **COMPANY BE ABLE TO RECOVER THE FULL REVENUE**
17 **REQUIREMENT OF THE MUR UPRATE PROJECT THAT IS**
18 **SCHEDULED FOR COMPLETION BY THE END OF 2007?**

19

20 **A.** Yes. Under any scenario, the Company's financial integrity will not be harmed
21 by requiring PEF to place the MUR-related capital costs in rate base. OPC
22 witness Merchant has calculated that, if the Company places the MUR in rate base
23 and depreciates the plant over the useful life of the asset, the full 2008 revenue

1 requirement associated with MUR will be about \$1.05 million. Absorbing this
2 amount in base rate revenues would reduce the Company's equity return from
3 10.90% to about 10.86%. Even under the Company's inappropriate cost recovery
4 request (where \$6.45 million of MUR investment is recovered in the single year
5 2008), the 2008 and 2009 total MUR-related revenue requirement would be \$8.67
6 million. If the Company is required to recover these costs in base rates, I estimate
7 that the Company's equity return would drop from about 10.90% to about 10.50%
8 based on PEF's recent return report.

9
10 **SECTION 4: BASIC RATEMAKING**

11
12 **Q. WHAT IS THE PRINCIPAL UNDERLYING BASIS ASSOCIATED WITH**
13 **THE RATE SETTING PROCESS FOR ELECTRIC UTILITIES?**

14 **A.** OPC witness Patricia Merchant will address this topic in some detail. I provide
15 the following brief summary of the differences between fuel cost recovery and
16 base rate recovery for regulated electric monopolies, from my perspective as an
17 economist. My purpose is to explain more fully why requiring PEF to place the
18 Uprate investment in rate base in the normal fashion is the appropriate regulatory
19 outcome in this case. The basic economic proposition underlying utility
20 regulation is that a utility incurs costs in order to provide electricity and customers
21 reimburse the utility for all reasonable and necessary costs. A utility recovers its
22 costs by billing its customers based on their usage.

1 Q. WHAT ARE THE COMPONENTS OF THE BILL THAT CUSTOMERS
2 NORMALLY RECEIVE?

3 A. A customer's bill typically has a base rate component and separate rate elements
4 that apply to special cost recovery mechanisms. I am informed that in Florida
5 there are several such special mechanisms. As PEF's proposal involves a decision
6 between base rates and the fuel clause, I will confine this discussion to those
7 components.

8
9 Q. WHY DOES A CUSTOMER'S BILL SHOW FUEL COSTS SEPARATELY
10 FROM BASE RATES?

11 A. Many decades ago, there was no fuel adjustment clause. Fuel costs were
12 generally stable enough and could be reasonably predicted and included along
13 with all other costs such as salaries, material costs, etc. in establishing the rates
14 charged to customers. As the cost of fuel became volatile and unpredictable,
15 utilities sought relief outside the confines of traditional rate cases. While the
16 timing of the initial implementation of a fuel clause varied between utilities, many
17 began employing fuel clauses after the 1973 Oil Embargo. Regulators allowed
18 the creation and implementation of fuel adjustment clauses that were intended to
19 recover the actual fuel costs incurred to provide electric service to customers,
20 given that fuel costs were normally outside the control of a utility. In fact,
21 regulators normally created fuel adjustment clauses with a true-up provision so
22 that a utility would not over or under recover its fuel costs and would not be
23 subject to the corresponding financial risk.

23

**Q. TRADITIONALLY, IS THERE A STRICT SEPARATION BETWEEN
BASE RATE COST AND FUEL COST?**

A. Yes. Given the underlying basis for the fuel adjustment clause and its associated reduced level of risk due to the true-up mechanism, the traditional process has been to limit costs to be recovered through the fuel clause to be those associated with the actual cost of fuel. Base rate costs continue to be reviewed in a base rate proceeding, so as to permit the establishment of a normalized level of annual costs along with a reasonable rate of return on net investment.

**Q. WHAT TYPE OF COSTS ARE INCLUDED IN THE BASE RATE
PORTION OF A BILL?**

A. The short answer is that the base rate component includes all costs excluding fuel or other clause recovered costs. This component normally includes salaries, other operating and maintenance expenses, administrative costs, depreciation of capital investment, taxes and a return on the capital investment of the utility.

Q. DO BASE RATES CHANGE ON A FREQUENT BASIS?

A. No. If annual costs and sale levels are reasonably estimated when rates are established, then as a utility continues to operate and incur different levels of costs over time, it is also anticipated that it will experience corresponding changes in the level of sales. As part of the rate setting process, per unit customer, energy, and demand charges are established so as to recover the utility's revenue

1 requirements from individual customers through their monthly bills. While
2 not normally in lock step, costs and revenues tend to move in the same direction.
3 Normally, residential and small commercial customers have a customer charge
4 and a per unit energy charge. Larger commercial and industrial customers
5 normally have a customer charge, an energy charge, and a demand charge. Each
6 of these charges is established on a per-unit basis. In other words, a customer
7 charge applies to each customer delivery point. An energy charge applies to each
8 Kilowatt hour sold, and a demand charge applies to each Kw of metered capacity.
9 Thus, as a customer uses more energy or demand, that customer also pays the unit
10 charge for each unit of use. As long as the relationship between costs and
11 revenues does not vary significantly on a per unit basis over time then the base
12 rate can continue to be used without change.

13
14 **Q. IF A UTILITY EXPERIENCES GROWTH IN SALES, DOES IT ALSO**
15 **EXPERIENCES A GROWTH IN REVENUES.**

16 A. Yes. The more units of electricity sold, the more revenues charged and collected
17 by the utility. However, just like any other business, as sales increase, so do
18 expenses. While the interrelationship between revenues and expenses is a
19 dynamic process, it normally stays within a reasonable level of equilibrium for a
20 period of time. Only when expenses change in a disproportionate manner to sales
21 is it necessary to reestablish an equilibrium through a new base rate proceeding.

22

1 Q. DOES A UTILITY NORMALLY EARN A LEVEL OF RETURN
2 DIFFERENT THAN WHAT WAS ALLOWED IN ITS LAST RATE CASE?

3 A. Yes. The allowed rate of return set in a rate proceeding is a point estimate
4 established to be representative of a reasonable range of earnings. Since, for
5 example, weather may be colder or warmer than normal, the actual level of sales
6 may be greater or less than anticipated during the rate setting process resulting in
7 a variation from the allowed rate of return. As long as the return level stays
8 within a reasonable range of the point estimate, it is assumed that base rates are
9 functioning properly.

10

11 Q. IF A UTILITY CONTINUES TO ADD INVESTMENT TO MEET THE
12 NEEDS OF EXISTING AND NEW CUSTOMERS AFTER A RATE CASE,
13 WILL THE ADDITIONAL INVESTMENT RESULT IN A NEED FOR A
14 NEW BASE RATE PROCEEDING?

15 A. No, not necessarily. For example, if sales and expenses increase by one percent
16 and the net investment level increases by one percent, then the net return remains
17 relatively constant. In other words, it is fully anticipated that a utility will make
18 expenditures for capital requirements, incur different levels of expenses, as well
19 as different types of expenses over time yet can properly function on a consistent
20 financial basis without the need for a base rate adjustment. However, if sales
21 decline or stay flat, but expenses and net investment rise appreciably then a rate
22 adjustment most likely would be required.

23

1 Q. WHAT TYPES OF COSTS ARE INCLUDED IN THE FUEL PORTION OF
2 A BILL?

3 A. Normally the fuel adjustment clause recovers only the costs of various types of
4 fuel necessary to generate electricity (i.e. natural gas, coal, oil and nuclear) paid
5 by the utility to fuel suppliers.

6

7 Q. HOW DOES THE COMPANY'S CASE IN THIS PROCEEDING
8 CONFLICT WITH THE TRADITIONAL RATE SETTING PROCESS?

9 A. The Company seeks to recover base rate costs through the fuel cost recovery
10 clause. This request is inconsistent with the traditional rate setting process.

11

12 Q. PLEASE EXPLAIN HOW THE COMPANY'S REQUEST IS
13 INCONSISTENT WITH RATEMAKING STANDARDS.

14 A. All the costs in the proposed Uprate are non fuel costs. In other words, all the
15 Uprate costs are properly included as part of non fuel base rates. As is explained
16 elsewhere in this testimony, the timing of the completion of the project is such
17 that the Company is not harmed by including these Uprate base rate costs in
18 future base rate cases. However, if the Company's requested fuel treatment of
19 those non-fuel Uprate costs is approved, customers will be harmed while
20 shareholders enjoy a substantial windfall.

21

1 Q. IN YOUR OPINION, WOULD A UTILITY PREFER TO COLLECT ITS
2 ENTIRE REVENUE REQUIREMENT THROUGH A FUEL
3 ADJUSTMENT CLAUSE?

4 A. Yes. Under a fuel adjustment mechanism, with true-up and reconciliation, a
5 utility is guaranteed 100% cost recovery. Thus, a utility would recover all costs
6 and a guarantee of its authorized return. On the other hand, when base rate
7 recovery is authorized, a utility is allowed to charge a rate that recovers costs plus
8 an opportunity to earn its cost of capital. Given the two alternative models a
9 rational company will vote for the guaranteed return – especially if that return is
10 not adjusted to reflect the much lower risk associated with a true-up mechanism..
11 In this case, the Company’s proposal would in fact be a guaranteed return to
12 equity shareholders of 11.75% after tax.

13 This argument is supported by the Company’s own analysis contained in
14 the MUR Project Plan where the following is stated:

15 Progress Energy plans to increase the electrical power output of
16 Crystal River 3 in order to minimize cost to our customers and
17 enhance shareholder value. (Project Plan at Bates PEF – CR3-
18 0482).

19
20 The Company goes on to state:

21 The business case for a series of power up-rates was developed to
22 seek funding from either corporate sources or through the Fuel
23 Adjustment Clause... The Florida Public Service Commission is
24 currently reviewing a request for approval to utilize the Fuel
25 Adjustment Clause as a source of funding for this project. The
26 strategy to minimize risk and cost exposure is to increase power
27 level in three distinct phases... (Id. at Bates PEF – CR3-0486).
28

1 The Company obviously evaluated seeking internal funding (a base rate case
2 alternative) and the Fuel Adjustment Clause approach and selected the Fuel
3 Adjustment Clause. The inclusion of the costs in fuel minimizes risk and cost
4 exposure to the Company and enhances shareholder value – both goals of the
5 Company are satisfied.

6
7 **Q. IS THE COMPANY PROPOSING TO MAKE THE UPRATE**
8 **EXPENDITURES IN ORDER TO SAVE CUSTOMERS FUEL COSTS?**

9 A. Yes.

10
11 **Q. ISN'T IT FAIR TO ALLOW THE RECOVERY OF SUCH COSTS**
12 **THROUGH THE FUEL RECOVERY CLAUSE IF IT SAVES**
13 **CUSTOMERS FUEL EXPENSE?**

14 A. No, it would be unfair to customers. Many base rate expenditures can, and do,
15 save customers fuel expense, yet they are not included in the fuel cost recovery
16 process. However, without analyzing all of the new expenditures in total along
17 with existing costs, no one can tell if a utility is over or under earning its allowed
18 return. Thus, allowing a base rate cost to be recovered through the fuel cost
19 recovery clause may result in excess earnings; once through the fuel costs and a
20 second time through the existing base rate charges. In other words, without
21 testing the entire regulatory base rate level of normalized costs in comparison to
22 normalized revenues, it is impossible to precisely determine if a utility's earnings
23 are falling outside the allowed reasonable range of earnings due to any particular

1 transaction. There may very well be costs that are decreasing that more than
2 offset costs that are increasing.

3
4 **Q. ISN'T IT A RATHER STRAIGHTFORWARD PROCESS TO**
5 **DETERMINE WHETHER THE EQUILIBRIUM LEVEL OF BASE**
6 **RATES FALLS OUTSIDE OF A REASONABLE RANGE?**

7 A. No, and that is why base rate cases are complex and time consuming. Many items
8 of cost must be properly analyzed in order to determine if they represent a
9 normalized or average expected level of cost for ratemaking purposes. For
10 example, in this proceeding the Company proposes to assign a 1-year
11 amortization "life" for the CR3 MUR uprate investment. That 1-year life assumes
12 that 100% of the investment will be recovered in the first year of service. As
13 noted elsewhere in this testimony, this is an inappropriate assumption, given the
14 life expectancy for the investment is 29 years. It is precisely for this reason that
15 expenses and other costs must be properly analyzed so that what is simply
16 reported on the Company's books or proposed by the Company is not assumed
17 and accepted as an appropriate or accurate presentation for ratemaking purposes.

18
19 **Q. IN YOUR OPINION, WHAT IS THE DANGER OF ALLOWING PEF TO**
20 **PASS BASE RATE-RELATED COSTS THROUGH THE FUEL COST**
21 **RECOVERY CLAUSE?**

22 A. The danger is that which OPC witness Merchant points out in her discussion of
23 fundamental ratemaking principles. If PEF passes the entire project costs through

1 the fuel clause when base rate revenues are adequate to cover some or all of the
2 costs and provide a fair return, then customers' total bills will be too high. PEF
3 will have circumvented the primary means of ensuring its rates are fair and
4 reasonable, and will have realized a windfall.

5

6 **Q. IN THE PAST, HAS THE COMMISSION ALLOWED CERTAIN BASE**
7 **RATE COSTS TO BE RECOVERED THROUGH A FUEL CLAUSE?**

8 A. Yes. However, the Commission requires that consideration of requests for clause
9 treatment "of such costs should be made on a case by case basis." (Order 14546
10 at page 5, item 10.) The Commission did not set forth a blanket acceptance
11 associated with the fuel saving exception to the fuel rule, but instead stated the
12 Commission would consider requests on a case by case basis. Given it is a case
13 by case standard – precedent has little value. For example, the only other case
14 that involved a nuclear plant uprate was FPL's Turkey Point facilities. (Order No.
15 PSC-96-1172-FOF-EI, Docket No. 960601-EI, September 19, 1996). The Turkey
16 Point uprate involved an investment of \$10 million, where this case entails over
17 \$448 million of investment including plant modifications. Also, FPL customers
18 received savings in the first year. These are not comparable uprate projects.

19

20 **Q. FROM A RATE SETTING PERSPECTIVE, IS THERE A**
21 **REQUIREMENT TO LOOK AT THE TIMING OF EXPENDITURES?**

22 A. Yes. For example, only the \$6 million MUR related expenditures are estimated to
23 be incurred during the current time frame. The vast majority of the Company's

1 requested expenditures are associated with projected costs to be placed into
2 service during 2009 to 2011. This is important, since the Company has the
3 opportunity and capability of returning to the Commission for base rate relief, if
4 and when, it determines that such base rate relief is necessary. Thus, the concerns
5 set forth in Commission Order 14546 relating to expenditures not reflected in the
6 last base rate proceeding also have to take into consideration that the vast majority
7 of the CR3 uprate expenditures can be captured appropriately through a base rate
8 proceeding that could occur in the 2009 time frame without the Company
9 incurring the potential loss of return in the interim.

10 The traditional rate setting process is well equipped to handle the
11 Company's proposed expenditures without undue concern for whether customers
12 are receiving benefits or the Company will be receiving benefits in the interim.
13 The bulk of the investment proposed can be properly tested along with all other
14 expenditures to make sure that the dynamic rate setting process stays in
15 equilibrium after such expenditures are incurred or, if necessary, the base rates
16 can be modified either upward or downward to once again establish an
17 equilibrium operation from a financial standpoint.

18
19 **SECTION 5: INAPPROPRIATE COMPONENTS OF PEF'S REQUEST**

20
21 **A. Depreciation**

22 **Q. OVER WHAT PERIOD OF TIME DOES A UTILITY NORMALLY**
23 **DEPRECIATE PLANT ASSETS?**

1 A. Capital investment is recovered through depreciation over the useful life of the
2 asset. In this way, costs and benefits are matched over the life of the asset. This
3 treatment is fair to both customers and investors.

4
5 **Q. HOW DOES PEF PROPOSE TO RECOVER ITS INVESTMENT FOR**
6 **THE CR3 UPRATES?**

7 A. PEF proposes a depreciation or amortization process. (PEF's response to OPC's
8 1-4 e).

9 **Q. WHAT INVESTMENT RECOVERY PERIOD IS PEF PROPOSING?**

10 A. PEF proposes to recover its investment over either a 1-year or 10-year assumed
11 life or amortization period. (PEF's response to Interrogatory 12, Attachment 1). I
12 will note that PEF's petition and PEF's testimony did not disclose PEF's intent in
13 this regard.

14
15 **Q. IS THE COMPANY'S PROPOSED DEPRECIATION OF CAPITAL**
16 **INVESTMENT REASONABLE OR APPROPRIATE?**

17 A. No. The depreciation proposal does not match costs and benefits over the useful
18 life of the asset and therefore gives rise to intergenerational inequities. The term
19 intergenerational inequity refers to the fact that today's ratepayers would be
20 required to pay for the total cost of the Uprate plant in 1 or 10 years that will
21 provide benefits to current and future ratepayers over the next 29 years. The
22 inequity is that some of today's customers that pay too much will not be around in

1 15 years and new customers will connect in 15 years that receive the service at no
2 incremental cost. The Company's proposal is unreasonable, goes beyond normal
3 regulatory parameters of matching benefits and costs, and is not consistent with
4 the FERC USOA requirements.

5
6 **Q. WHAT SPECIFIC ASPECTS OF THE COMPANY'S REQUEST EXCEED**
7 **REGULATORY PARAMETERS?**

8 A. The most striking overreaching aspect of the Company's request is its proposed 1-
9 year or 10-year depreciation life or amortization period. Normal ratemaking
10 requires the recovery of investment over the useful life of the facility so as to
11 eliminate intergenerational inequity and to comply with the traditional matching
12 principle.

13 The Company admits that it expects a 20 year license extension for CR3
14 so that its license will expire in 2036. (Mr. Roderick's Amended Testimony at
15 page 13). Moreover, PEF states that MUR equipment "is designed for the
16 extended life of the plant." (PEF's response to OPC 1-5 a). Therefore, the life
17 expectancy for the MUR will be in 29 years (2036-2008), while later portions of
18 the uprate projects are now expected to have 25-27 year lives (2036-2011 or
19 2036-2009). Thus, there is no credible basis for the Company's position as it
20 relates to depreciation/amortization of this investment.

21
22 **Q. HOW IS THIS REQUEST INCONSISTENT WITH THE FERC USOA?**

23 A. The USOA states that depreciation:

1 As applied to depreciable electric plant, means the loss in service
2 value not restored by current maintenance, incurred in connection
3 with the consumption or perspective retirement of electric plant in
4 the course of service and causes which are known to be in current
5 operation and against which the utility is not protected by
6 insurance. Among the causes to be given consideration are wear
7 and tear, decay, actions of the elements, inadequacy, obsolescence,
8 changes in the art, changes in demand and requirements of public
9 authorities. (18 Code of Federal Regulation Part 101 definition
10 12). (Emphasis added).
11

12 If depreciation must capture the loss of service in value in the course of
13 service, than it must do so over the service life of the facility. OPC
14 witness Merchant addresses additional aspects of the FERC USOA
15 requirements.
16

17 **Q. DOES THE USOA DEFINE AMORTIZATION?**

18 A. Yes. Definition 4 of the USOA states:

19 Amortization means the gradual extinguishment of an amount in
20 an account by distributing such amount over a fixed period, over
21 the life of the asset or liability to which it applies, or over the
22 period during which it is anticipated the benefits will be realized.
23 (Emphasis added).
24

25 Based on these definitions under which PEF must operate, there can be no doubt
26 that its request is inappropriate.
27

28 **Q. DOES THE COMPANY'S DEPRECIATION PROPOSAL GO BEYOND**
29 **USOA REQUIEMENTS PREVIOUSLY NOTED?**

30 A. Yes. The USOA General Instructions also demonstrate that the Company's
31 proposal is inconsistent with its requirements. Specifically, General Instruction
32 22-Depreciation Accounting Subpart A Method states;

1 Utilities must use a method of depreciation that allocates in a
2 systematic and rational manner the service value of depreciable
3 property over the service life of the property. (Emphasis added).
4

5 Further, Subpart B Service Lives states;

6 Estimated useful service life of depreciable property must be
7 supported by engineering, economic, or other depreciation studies.
8 (Emphasis added).
9

10 Obviously relying on a 1-year or 10-year life when a 25 – 29 year life is expected
11 is neither systematic nor rational. Moreover, there are no engineering, economic,
12 or other depreciation studies provided by the Company that support its over
13 reaching request.
14

15 **Q. HOW DOES PEF ATTEMPT TO JUSTIFY ITS PROPOSED**
16 **DEPRECIATION TREATMENT IN LIGHT OF THE USOA**
17 **REQUIREMENTS?**

18 A. PEF claims that it is only recovering costs annually at a level no greater than its
19 expected fuel savings. (PEF's response to OPC 1.5 b). Thus, PEF appears to
20 propose accumulating all costs in aggregate and then comparing such costs to
21 calculated savings. By employing this "lump sum" comparison approach, it
22 appears that PEF is attempting to mask its inconsistent treatment of the USOA
23 depreciation/amortization requirements rather than comply with acceptable
24 standards.
25

26 **Q. DOES PEF'S "LUMP SUM" APPROACH CURE THE MATCHING**
27 **PROBLEM CREATED BY ITS REQUEST?**

1 A. No. Artificially increasing an annual cost (i.e., depreciation/amortization) by
2 employing an admittedly short life span for the investment only creates
3 intergenerational inequities and violates the standard matching principle. The
4 “lump sum” approach only attempts to hide such problem rather than curing the
5 problem. Therefore, even if the Commission were to approve PEF’s overall
6 approach it would still need to adjust the annual cost level to comply with
7 acceptable ratemaking and accounting standards.

8
9 **Q. IS PEF’S PROPOSAL A FORM OF ACCELERATED DEPRECIATION?**

10 A. Yes.

11

12 **Q. HAS PEF JUSTIFIED THE USE OF ACCELERATED DEPRECIATION**
13 **OF UPRATE ASSETS FOR RATEMAKING PURPOSES?**

14 A. No, PEF has not justified a departure from the principle that benefits and costs
15 should be matched over the useful life of the assets.

16 **Q. IS THERE ANY REASON TO ACCEPT PEF’S PROPOSAL AS IT**
17 **RELATES TO THE RECOVERY OF ITS INVESTMENT?**

18 A. No. PEF’s ill conceived investment recovery proposal must be rejected.

19

20 **B. Accumulated Deferred Income Taxes**

21

22 **Q. DOES THE COMPANY’S PROPOSAL TO COLLECT THE UPRATE**
23 **COSTS THROUGH THE FUEL CLAUSE OVER A ONE OR TEN-YEAR**

1 **TIME HORIZON HAVE A DETRIMENTAL IMPACT ON CUSTOMERS**
2 **IN THE FORM OF INCOME TAX CONSIDERATIONS?**

3 A. Yes, by denying to customers the benefits of deferred income taxes. In the early
4 years of an asset investment life, accelerated tax depreciation is higher than
5 straight line book depreciation. This accelerated depreciation creates more
6 deductible expense, resulting in lower taxable income and lower current income
7 taxes payable. But, in later years of an asset life, after accelerated depreciation
8 reaches zero (the asset is fully depreciated for tax purposes) the book depreciation
9 exceeds tax depreciation, causing more income (less expense) and more taxes
10 payable to the government.

11 The difference between taxes actually paid and customer rate
12 reimbursements is what is referred to as a deferred tax. It is only a deferred tax
13 because, at some point, the timing difference reverses and tax payments to the
14 government will exceed customer payments for tax expense. While it is a deferred
15 tax, such amount is a cost-free loan from the government to the utility. Deferred
16 taxes are accumulated and recorded on the balance sheet, hence the name
17 “accumulated deferred income taxes”. When deferred taxes are recorded,
18 the rate treatment is to reduce invested capital by the amount of the cost-free
19 loan..

20
21 Q. **PLEASE EXPLAIN HOW THE COMPANY’S PROPOSAL TO EMPLOY**
22 **A ONE OR TEN-YEAR DEPRECIABLE LIFE FOR BOOK**

1 **RATEMAKING PURPOSES DENIES TO CUSTOMERS THE BENEFITS**
2 **OF DEFERRED TAXES.**

3 A. The tax depreciation life for the uprate Phase 1 & 2 plant is 15 years, while the tax
4 depreciation life for the transmission and POD plant is 20 years. (PEF's response
5 to Interrogatory 12). Under the Company's proposal to shorten the book
6 depreciation life there are no upfront tax benefits, deferred tax balances, to affect
7 investment levels. Rather, the Company's proposal creates an upfront cost to
8 customers and increases revenue requirements.

9
10 **Q. HAVE YOU QUANTIFIED THE IMPACT ON CUSTOMERS IN TERMS**
11 **OF INCREASED REVENUE REQUIREMENTS RESULTING FROM THE**
12 **LOSS OF DEFERRED TAX BENEFITS?**

13 A. Yes. Included in my Exhibit (DJL-2) is an estimate of the deferred tax impact on
14 revenue requirements comparing the Company's proposal to a result that
15 amortizes book depreciation over the expected life of the facilities. Under PEF's
16 proposal, customers would pay about \$3.9 million NPV in additional revenue
17 requirements because of the impact of accelerated depreciation on deferred taxes.

18
19 **C. Cost of Capital Impact**

20
21 **Q. EARLIER YOU STATED THAT THE COMPANY'S PROPOSAL**
22 **WOULD LEAD TO EXCESSIVE RATES RESULTING**
23 **FROM THE REQUESTED RETURN ON INVESTMENT. PLEASE**

1 **EXPLAIN.**

2 A. The Company has requested an equity return of 11.75% to be earned on
3 investment for the Uprate assets. An equity return includes a risk premium over
4 and above debt costs for the compensation of the risk of not earning the full
5 return. But, in this case, there is no additional risk, as the full amount ultimately
6 authorized will be reconciled and collected through the fuel clause. There is no
7 basis for including an equity return of 11.75% when all the risk has been removed
8 by the fuel clause recovery.

9

10 **Q. WHAT IS THE IMPACT ON CUSTOMERS RESULTING FROM THE**
11 **EXCESSIVE EQUITY RETURN?**

12 A. I have included in Exhibit __ (DJL -3) an estimate of the impact of the excessive
13 return included in rates by substituting a debt rate for the 11.75% equity return
14 request. This analysis shows the Company's proposal would result in \$54.93
15 million of excessive revenue requirements on a NPV basis.

16 **Q. FROM A CUSTOMER PERSPECTIVE, IS THE COMPANY'S**
17 **PROPOSAL TO ACCELERATE RECOVERY OF THE UPRATE COSTS**
18 **THROUGH THE FUEL CLAUSE FAIR AND REASONABLE?**

19 A. The simple and short answer is no. The Company's proposal allows the Company
20 to collect a majority of costs before customers see one dollar of fuel savings.
21 Customers must wait until 2016 to see fuel benefits of about \$19.3 million, but
22 shareholders will have enjoyed about \$105 million in increased equity return by
23 that time. The Company collects its investment and shareholder returns quickly

1 while customers must wait until at least 2016 to see any cash flow fuel benefits. I
2 have included a summary of this analysis in my Exhibit ____ (DJL- 4).

3 As can be seen from Exhibit 4, cumulative fuel savings become a positive
4 \$19.28 million in 2016 and equity shareholders have earned over \$119 million off
5 this project by 2016. The cumulative fuel savings do not exceed total return until
6 the Company has completely recovered its investment, i.e., after 2021. Given that
7 the project costs are only preliminary estimates, the delay of fuel savings may be
8 even longer.

9 The above analysis shows the Company receiving a guaranteed return and
10 receiving that return on an accelerated basis. Customers foot the bill and must
11 wait in line behind shareholders to enjoy the benefits of the project. This is not a
12 fair and reasonable proposal to share the risks and benefit of the project.

13
14 **D. Timing Considerations**

15
16 **Q. HAS PEF RELIED ON INAPPROPRIATE ASSUMPTIONS IN ITS
17 QUANTIFICATION OF COSTS AND NET SAVINGS TO CUSTOMERS?**

18 **A.** Yes. Not only has the Company front end loaded the cost to customers but it also
19 relied on a requested return level inconsistent with its risk exposure.

20
21 **Q. WHAT TYPES OF INAPPROPRIATE ASSUMPTIONS HAS THE
22 COMPANY INCORPORATED IN ITS ANALYSIS THAT RESULTS IN
23 FRONT END LOADING OF COSTS?**

1 A. As discussed elsewhere in my testimony, the Company's proposal in the area of
2 depreciation is inequitable and inconsistent with the USOA. However, the
3 Company's revised net savings calculation goes a step further. It now proposes
4 that the MUR related investment be recovered in its first year of operation. In
5 other words, the Company is seeking a 100% depreciation rate for that particular
6 investment. This 100% depreciation rate is requested even though the Company
7 admits that the instrumentation and other costs are designed to last for the
8 remaining 29 year lifespan of CR3. (Mr. Roderick's May 23, 2007 deposition at
9 page 22).

10 In addition to the one year depreciation assumption for the MUR
11 investment, the Company also assumes a 10-year book depreciation for the
12 remaining CR3 uprate investment. This artificially short capital recovery period
13 is inequitable and is inconsistent with the USOA. Finally, given the timing of the
14 Company's proposed depreciation, there is also a corresponding impact associated
15 with deferred taxes.

16 The Company's proposed timing of fuel savings, revenue requirements
17 and the resulting net savings are set forth in my Exhibit ___ (DJL-5).
18 As can be seen from Exhibit 5, the Company has front loaded the revenue
19 requirements over the life of the facility to such an extent that customers during
20 the last 15 years of expected operation (2021-2036) incur basically no revenue
21 requirements. This is inconsistent with the traditional matching principle. In
22 other words, costs and benefits should be aligned.

23

1 Q. GIVEN THE PATTERN OF FUEL SAVINGS AND REVENUE
2 REQUIREMENTS PROPOSED BY PEF, IS THERE ANY CERTAINTY
3 TO ITS OVERALL PROPOSED SAVINGS CALCULATION?

4 A. No. As with any estimate or projection, values estimated further out into the
5 future are less reliable. A review of PEF's proposed net savings clearly
6 demonstrates that over the near term planning horizon (2007-2015) when the
7 projected values are probably more accurate, customers receive no net savings,
8 rather they are assigned a net loss associated with the proposed Uprate. In fact, it
9 is not until 2016 that the Company's proposal provides net savings in nominal
10 dollars for customers.

11
12 Q. WHAT CAUSES THIS LEVEL OF NEGATIVE NET SAVINGS?

13 A. The front end loading of expenses along with the back end loading of savings
14 dramatically reduces the net present value savings for customers over the entire
15 life but clearly highlights the "softness" in the Company's entire presentation for
16 net savings. In fact, if non-nuclear fuel costs were to decrease during the next
17 decade from the levels projected by PEF, then the level of savings proposed by
18 the Company would shrink, and possibly shrink dramatically. PEF's proposed net
19 savings over the projected life of CR3 do not begin to materialize for at least
20 another 10 years. Moreover, what appears to be significant fuel savings in the
21 future are minimized on a NPV basis. What is certain from the Company's
22 presentation is that it will recover its costs on an accelerated basis compared to

1 traditional ratemaking while customers will be forced to wait for savings that may
2 not come at the proposed level.

3 **Q. DO ADDITIONAL CONSIDERATIONS SUPPORT AVOIDING**
4 **INTERGENERATIONAL INEQUITIES AND MAINTAINING THE**
5 **MATCHING PRINCIPLE AS IT RELATES TO THE COMPANY'S**
6 **PROPOSED DEPRECIATION PRACTICE?**

7 A. Yes. As noted elsewhere in my testimony, the Company admits that it expects the
8 useful life of the investment to be through CR3's license expiration in 2036.
9 Changing the depreciation pattern to be in compliance with traditional rate setting
10 principles and to bring it into compliance with the USOA, not only changes the
11 level of net savings, but more importantly, changes the timing and pattern of the
12 net savings.

13 The synchronization of the depreciable life with the expected useful life
14 would reduce both the nominal and NPV savings from that proposed by PEF over
15 the entire period. However, the nominal dollar and NPV savings through 2015
16 would increase. Again, it is worth emphasizing that the accuracy of future
17 projections diminishes as time progresses into the future. Thus, a higher degree
18 of certainty or probability of accuracy should be assigned to the near term
19 calculations and a lower level of accuracy or certainty should be afforded the out
20 or later years in the analysis. Moreover, NPV savings for customers are greater
21 under the standard depreciation approach than under PEF's proposal until the year
22 2026. Clearly it is unreasonable to select a process that may only become

1 beneficial to customers if values forecasted more than 20 years into the future are
2 accurate.

3

4 **Q. PLEASE SUMMARIZE THIS PORTION OF YOUR TESTIMONY.**

5 A. There can be no doubt that the Company's proposal in this proceeding is one
6 sided in favor of shareholders in comparison to standard regulatory treatment.
7 The Company's proposal is presented in a format that glosses over the pattern of
8 requested revenue requirements and resulting net savings. Even if one could
9 always rely on the accuracy of forecasts 20 to 30 years into the future, the
10 Company's request is still inequitable and one sided. However, it is simply not
11 realistic or appropriate to rely on savings for customers 20 to 30 years into the
12 future while cost recovery for shareholders are front end loaded during the near
13 term future as proposed by the Company.

14

15 **SECTION 6: TRANSMISSION AND POD PROPOSALS**

16 **Q. IN YOUR OPINION, SHOULD THE POINT OF DISCHARGE (POD) \$51**
17 **MILLION ESTIMATE BE INCLUDED AS PART OF THE UPGRADE**
18 **PROJECT AND RECOVERED THROUGH THE FUEL CLAUSE?**

19 A. No. As I understand the Company's analysis, the additional 140 MWe's
20 associated with the extended power uprate will increase the point of discharge
21 temperature and the proposed POD facilities are necessary to reduce the
22 incremental temperature increases to the temperature level prior to the uprate.
23 (Roderick Deposition Testimony at 32: 13-25). The Company has yet to

1 determine the most cost effective option to accomplish the goal of reducing
2 temperature. (Id. At 34: 20-21). Thus, cost estimates and even the preferred
3 option to solve the problem have yet to be determined. Cost estimates are
4 extremely preliminary and may change significantly.

5 The key basis or reason why the POD facilities should not be included in
6 the fuel clause is that such inclusion is not necessary or reasonable. First, these
7 costs can easily be included in the base rates, as the project will be completed in
8 the 2009-2011 period. Second, the Company has failed to identify a reasonable
9 cost estimate or even the option it will employ to address the POD issues.
10 (Roderick Deposition Testimony 35:5-14). Given the above, by waiting to
11 include these facilities in base rates – the Company will have sufficient time to
12 identify the option and quantify the costs and benefits of such base rate option.

13 Third, and most important, the POD facilities-- like transmission facilities--
14 - are not facilities that should be recovered through the fuel clause. The proposed
15 POD facilities (“cooling towers”) are not fossil-fuel related facilities and the
16 related costs are not volatile.

17
18 **Q. IN YOUR OPINION SHOULD THE TRANSMISSION UPGRADE**
19 **INVESTMENT BE INCLUDED AS PART OF THIS UPGRADE PROJECT**
20 **AND RECOVERED THROUGH THE FUEL CLAUSE?**

21 A. No. The transmission upgrade, which amounts to about \$101 million (as updated
22 from \$89 million since PEF filed its testimony) of the proposed project cost, is not
23 related to fuel savings. Instead, the transmission investment is necessitated for

1 reliability reasons. Company witness Roderick deposition testimony makes clear
2 that transmission investment is for reliability when he states:

3 Q. Bear with me for a moment while I find a reference. You
4 have identified an estimate of \$89 million associates with
5 transmission upgrades made necessary by the higher output of the
6 unit, is that correct?

7 A. Yes. The transmission upgrades—I'm going to change part
8 of your questions there. It wasn't necessarily due to the output of
9 the unit. It had to do with the unit would not be the largest single
10 load or generator in Florida. And from a transmission standpoint,
11 that change purely due to the power uprate means that we have to
12 have the capability to respond to the loss of that single largest load
13 or single largest generation unit, you know, within the stability of
14 the grid. So those are really more the driving factors of
15 transmission, not just output. (Roderick Deposition 24:14 - 25:5).

16
17 The transmission investment is necessary for reliability of the system. The
18 need for transmission reliability investment is collateral to the uprate issue. These
19 transmission investment costs should not qualify for inclusion in the fuel clause.

20
21 **Q. PLEASE SUMMARIZE YOUR TESTIMONY.**

22 A. There is no good reason to include the Company's proposed Uprate costs in the
23 fuel clause. These estimated costs can be recovered through base rates and the
24 Company will suffer no detrimental impacts. But, as discussed earlier, if the
25 Company's fuel cost proposal is adopted – customers will be unnecessarily,
26 detrimentally impacted in the early years of the Uprate project. Further,
27 shareholders would receive unwarranted benefits under the Company's proposal.
28 All these problems can be cured by including the Uprate costs in base rates.

1 Q. DOES THIS CONCLUDE YOUR TESTIMONY?

2 A. Yes.

DOCKET NO. 070052-EI
CERTIFICATE OF SERVICE

I HEREBY CERTIFY that a true and correct copy of the foregoing Direct Testimony of Daniel J. Lawton has been furnished by U.S. Mail on this 19th day of June, 2007, to the following:

Associate Public Counsel

DANIEL J. LAWTON
PRINCIPAL, DIVERSIFIED UTILITY CONSULTANTS, INC.
B.A. ECONOMICS, MERRIMACK COLLEGE
M.A. ECONOMICS, TUFTS UNIVERSITY

Prior to beginning his own consulting practice, Diversified Utility Consultants, Inc., in 1986, Mr. Lawton had been in the utility consulting business with a national engineering and consulting firm. In addition, Mr. Lawton has been employed as a senior analyst and statistical analyst with the Department of Public Service of Minnesota. Prior to Mr. Lawton's involvement in utility regulation and consulting he taught economics, econometrics, statistics and computer science at Doane College.

Mr. Lawton has conducted numerous financial and cost of capital studies on electric, gas and telephone utilities for various interveners before local, state and federal regulatory bodies. In addition, Mr. Lawton has provided studies, analyses, and expert testimony on statistics, econometrics, accounting, forecasting, and cost of service issues. Other projects in which Mr. Lawton has been involved include rate design and analyses for electric, gas and telephone utilities. Mr. Lawton has developed software systems, databases and management systems for cost of service analyses.

In addition, Mr. Lawton has developed and reviewed numerous forecasts of energy and demand used for utility generation expansion studies as well as municipal financing. Mr. Lawton has represented numerous municipalities as a negotiator in utility related matters. Such negotiations ranged from the settlement of electric rate cases to the negotiation of provisions in purchase power contracts.

A list of cases in which Mr. Lawton has provided testimony is attached.
