

PROGRESS ENERGY FLORIDA

DOCKET No. 080001-EI

Fuel and Capacity Cost Recovery Factors January through December 2009

**DIRECT TESTIMONY OF
MARCIA OLIVIER**

DOCUMENTS OF THE STATE

07899 AUG 29 8

1 Q. Do you have an exhibit to your testimony?

2 A. Yes. I have prepared Exhibit No.__(MO-2), consisting of Parts 1, 2 and 3. Part
3 1 contains our forecast assumptions on fuel costs. Part 2 contains fuel cost
4 recovery (FCR) schedules E1 through E10, H1 and the calculation of the
5 inverted fuel rate. Part 3 contains capacity cost recovery (CCR) schedules.

FUEL COST RECOVERY CLAUSE

10 A. Schedule E1 shows the calculation of the Company's basic leveled fuel cost
11 factor of 7.317 ¢/kWh. This factor consists of a fuel cost for the projection
12 period of 6.75355 ¢/kWh (adjusted for jurisdictional losses), a GPIF reward of
13 0.00533 ¢/kWh, and an estimated prior period under recovery true-up of
14 0.55323 ¢/kWh. Utilizing this basic factor, Schedule E1-D shows the
15 calculation and supporting data for the Company's final leveled fuel cost
16 factors for service taken at secondary, primary, and transmission metering
17 voltage levels. To perform this calculation, effective jurisdictional sales at the
18 secondary level are calculated by applying 1% and 2% metering reduction
19 factors to primary and transmission sales, respectively (forecasted at meter
20 level). This is consistent with the methodology used in the development of
21 the capacity cost recovery factors. The final leveled fuel cost factor for
22 residential service is 7.326 ¢/kWh. Schedule E1-D shows the Company's
23 proposed tiered rates of 6.993 ¢/kWh for the first 1,000 kWh and 7.993

1 ¢/kWh above 1,000 kWh. These rates are developed in the “Calculation of
2 Inverted Residential Fuel Rate” schedule in Part 2.

3

4 Schedule E1-E develops the Time of Use (TOU) multipliers of 1.420 On-peak
5 and 0.806 Off-peak. The multipliers are then applied to the levelized fuel cost
6 factors for each metering voltage level which results in the final TOU fuel
7 factors to be applied to customer bills during the projection period.

8

9 **Q. What is the amount of the 2008 net true-up that PEF has included in the
10 fuel cost recovery factor for 2009?**

11 A. PEF has included a projected under-recovery of \$225,094,914. This amount
12 includes a projected actual/estimated under-recovery for 2008 of
13 \$208,287,884 plus the final true-up under-recovery of \$16,807,030 for 2007
14 that was filed on March 3, 2008.

15

16 **Q. What is the change in the leveled residential fuel factor for the
17 projection period from the fuel factor currently in effect?**

18 A. The projected leveled residential fuel factor for 2009 of 7.326 ¢/kWh is an
19 increase of 2.112 ¢/kWh or 40.5% from the 2008 mid-course correction
20 leveled fuel factor of 5.214 ¢/kWh.

21

22 **Q. Please explain the reasons for the increase in the leveled fuel factor
23 compared with the 2008 forecast used in the Company’s May 2008 mid-
24 course correction filing.**

1 A. The increase in the levelized fuel factor is driven, in part, by the \$225 million
2 under-recovery for 2008, which includes the remaining \$106 million from the
3 mid-course correction that was approved in Order No. PSC-08-0495-PCO-EI.
4 Note that the fuel factor charged to customers during 2008 was reduced by a
5 \$169 million prior period over-recovery. In addition to the increase due to the
6 2008 under-recovery vs. the 2007 over-recovery, system fuel and purchased
7 power costs are projected to increase, primarily due to a shift in generation
8 mix and increases in fuel prices. The increase due to generation mix results
9 from planned outages at Crystal River nuclear and coal plants, which are
10 expected to result in an increased use of natural gas as a replacement fuel.
11 The increases in fuel prices, including transportation and hedging) are as
12 follows: Coal 24.7% increase, natural gas 11.4% increase, heavy oil 34.6%
13 increase and, light oil 45.3%. These fuel price increases continue to be driven
14 by the worldwide supply and capacity limitations coupled with increased
15 global demand and geopolitical uncertainty. As discussed in more detail in
16 the Direct Testimony of Joseph McCallister, the Company has entered into
17 hedging contracts to mitigate the price volatility risk of natural gas and oil.

18

19 **Q. Why is PEF proposing to continue use of the tiered rate structure
20 approved for use in 2006?**

21 A. In light of continually increasing fuel costs, the Company is proposing to
22 continue use of the inverted rate design for residential fuel factors to
23 encourage energy efficiency and conservation. Specifically, the Company
24 proposes to continue a two-tiered fuel charge whereby the charge for a

1 customer's monthly usage in excess of 1,000 kWh (second tier) is priced one
2 cent per kWh more than the charge for the customer's usage up to 1,000 kWh
3 (first tier). The 1,000 kWh price change breakpoint is reasonable in that
4 approximately 2/3 of all residential energy is consumed in the first tier and 1/3
5 of all energy is consumed in the second tier. The Company believes the one
6 cent higher per unit price, targeted at 1/3 of the residential class's energy
7 consumption, will promote energy efficiency and conservation. This type of
8 inverted rate design was incorporated in the Company's base rates approved in
9 Order No. 02-0655-AS-EI.

10

11 **Q. How was the inverted fuel rate calculated?**

12 A. I have included a page in Part 2 of my exhibit that shows the calculation of
13 the levelized fuel cost factors for the two tiers of residential customers. The
14 two factors are calculated on a revenue neutral basis so that the Company will
15 recover the same fuel costs as it would under the traditional levelized
16 approach. The two-tiered factors are determined by first calculating the
17 amount of revenues that would be generated by the overall levelized residential
18 factor of 7.326 ¢/kWh shown on Schedule E1-D. The two factors are then
19 calculated by allocating the total revenues to the two tiers for residential
20 customers based on the total annual energy usage for each tier.

21

22 **Q. What is included in Schedule E1, line 3, "Coal Car Investment"?**

23 A: The \$422,370 on Line 3 represents the estimated return on average
24 investment in rail cars used to transport coal to Crystal River.

1

2 **Q. What is included in Schedule E1, line 4, "Adjustment to Fuel Cost"?**

3 A. The \$5,621,247 on Line 4 represents the return on coal inventory in transit,
4 which was calculated and included in accordance with the Stipulation and
5 Settlement Agreement in Docket 050078-EI.

6

7 **Q. Are there any costs associated with natural gas storage included in the
8 2009 fuel factor?**

9 A. Yes. To further enhance system reliability, PEF has entered into gas storage
10 contracts with Bay Gas Storage Company, LTD. and SG Resources
11 Mississippi, L.L.C. These contracts will primarily increase PEF's gas supply
12 reliability and mitigate price risk. The total storage cost for 2009 is \$3.1
13 million.

14

15 **Q. How do PEF's projected gains on non-separated wholesale energy sales
16 for 2009 compare to the incentive benchmark?**

17 A. The total gain on non-separated sales for 2009 is estimated to be \$3,312,676
18 which is above the benchmark of \$2,201,929 by \$1,110,747. Therefore,
19 100% of gains below the benchmark and 80% of gains above the benchmark
20 will be distributed to customers based on the sharing mechanism approved by
21 the Commission in Order No. PSC-00-1744-PAA-EI. Further, consistent
22 with this Order, \$222,149 or 20% of the gains above the benchmark will be
23 retained for the shareholders. The benchmark of \$2,201,929 was calculated

1 based on the average of actual gains for 2006 and 2007 and estimated gains
2 for 2008 in accordance with Order No. PSC-00-1744-PAA-EI.

3

4 **Q. Please explain the entry on Schedule E1, line 17, "Fuel Cost of Stratified
5 Sales."**

6 A. PEF has several wholesale contracts with SECI. One contract provides for
7 the sale of supplemental energy to supply the portion of their load in
8 excess of SECI's own resources. The fuel costs charged to SECI for
9 supplemental sales are calculated on a "stratified" basis in a manner which
10 recovers the higher cost of intermediate/peaking generation used to
11 provide the energy. There are other SECI contracts for fixed amounts of
12 base, intermediate and peaking capacity. PEF is crediting average fuel
13 cost of the appropriate strata in accordance with Order No. PSC-97-0262-
14 FOF-EI. The fuel costs of wholesale sales are normally included in the
15 total cost of fuel and net power transactions used to calculate the average
16 system cost per kWh for fuel adjustment purposes. However, since the
17 fuel costs of the stratified sales are not recovered on an average system
18 cost basis, an adjustment has been made to remove these costs and the
19 related kWh sales from the fuel adjustment calculation in the same manner
20 that interchange sales are removed from the calculation. This adjustment
21 is necessary to avoid an over-recovery by the Company which would result
22 from the treatment of these fuel costs on an average system cost basis in
23 this proceeding, while actually recovering the costs from these customers
24 on a higher, stratified cost basis. Line 17 also includes the fuel cost of

1 sales made to the City of Tallahassee in accordance with Order No. PSC-
2 99-1741-PAA-EI, as well as sales to TECO, Reedy Creek, Gainesville, and
3 the City of Homestead.

4

5 **Q. Please give a brief overview of the procedure used in developing the**
6 **projected fuel cost data from which the Company's basic fuel cost**
7 **recovery factor was calculated.**

8 A. The process begins with a fuel price forecast and a system sales forecast.
9 These forecasts are input into the Company's production cost simulation
10 model along with purchased power information, generating unit operating
11 characteristics, maintenance schedules, and other pertinent data. The model
12 then computes system fuel consumption and fuel and purchased power
13 costs. This information is the basis for the calculation of the Company's
14 levelized fuel cost factors and supporting schedules.

15

16 **Q. What is the source of the system sales forecast?**

17 A. System sales are forecasted by the PEF Finance Department using normal
18 weather conditions, population projections from the Bureau of Economic and
19 Business Research at the University of Florida and economic assumptions
20 from Economy.Com.

21

22 **Q. Is the methodology used to prepare the sales forecast for this projection**
23 **period the same as previously used by the Company?**

1 A. Yes. The methodology employed to produce the forecast for the projection
2 period is consistent with the Company's most recent filings and was
3 developed with an econometric forecasting model.

4

5 Q. What is the source of the Company's fuel price forecast?

6 A. The fuel price forecasts for natural gas and fuel oil (residual #6 and distillate
7 #2) are based on observable market data in the industry and are prepared
8 jointly by the Company's Enterprise Risk Management Department and
9 Regulated Fuels Department. For coal, a third party forecast is used.
10 Additional details and forecast assumptions are provided in Part 2 of my
11 exhibit.

12

13 Q. Are current fuel prices the same as those used in the development of
14 the projected fuel factor?

15 A. No. Fuel prices have been very volatile these past few months and can
16 change significantly from day to day, particularly in the storm season. Since
17 the date the projection model run was completed, natural gas and oil prices
18 have decreased somewhat. Consistent with past practices, PEF will continue
19 to monitor fuel prices and update the projection filing prior to the November
20 hearing if changes in fuel prices warrant such an update.

21

CAPACITY COST RECOVERY

23 Q. How was the Capacity Cost Recovery factor developed?

1 A. The calculation of the capacity cost recovery (CCR) factor is shown in Part 3
2 of my exhibit. The factor allocates capacity costs to rate classes in the same
3 manner in which they would be allocated if they were recovered in base rates.

4

5 Q. **Please provide a brief explanation of Part 3 to your exhibit.**

6 A. Page 1, Projected Capacity Payments, provides system capacity payments to
7 Qualifying Facilities (QF) and other power suppliers as well as the recovery of
8 nuclear preconstruction and AFUDC pursuant to Rule 25-6.0423 F.A.C. The
9 retail portion of the capacity payments is calculated using separation factors
10 as agreed to in the Stipulation and Settlement Agreement under Docket
11 050078 as detailed in the Rebuttal Testimony of William C. Slusser Jr.
12 Page 2, Estimated/Actual True-Up, which was included in Exhibit __ MO-1 to
13 my direct testimony in the 2008 estimated/actual true-up filing, calculates the
14 estimated true-up balance for calendar year 2008 of \$15,292,976. This
15 balance is carried forward to Page 1 to be refunded during January through
16 December 2009.

17 Page 3, Capacity Contracts, provides dates and MW associated with the
18 various contracts.

19 Pages 4 and 5, Calculation of Capacity Clause Recovery Factor, provide the
20 calculation of the capacity cost recovery factor for each rate class based on
21 average 12 CP and 1/13 annual average demand. The CCR factor for each
22 secondary delivery rate class in cents per kWh is the product of total
23 jurisdictional capacity costs (including revenue taxes) from Page 1, multiplied
24 by the class demand allocation factor, divided by projected effective sales at

1 the secondary level. The CCR factors for primary and transmission rate
2 classes reflect the application of metering reduction factors of 1% and 2%
3 from the secondary CCR factor.

4

5 **Q. Please explain the increase in the CCR factor for the projection period**
6 **compared to the CCR factor currently in effect.**

7 A. The projected average retail CCR factor of 1.847 ¢/kWh is 81.43% higher
8 than the 2008 factor of 1.018 ¢/kWh. The increase is primary due to
9 nuclear recoveries associated with preconstruction and AFUDC on Levy
10 units 1 & 2 of \$395 million and AFUDC on the Crystal River unit 3 uprate of
11 \$25 million, offset by an expired QF contract of \$39 million, lower capacity
12 purchases of \$24 million and a refund of the prior period over-recovery of
13 \$15 million compared to a prior period under-recovery collected in 2008 of
14 \$15 million.

15

16 **Q. Has PEF included incremental security charges in the 2009 projected**
17 **capacity amount?**

18 A. Yes. PEF has included \$7.3 million of estimated incremental security costs
19 for 2009 in accordance with the Stipulation and Settlement Agreement in
20 Docket 050078-EI. Of this amount, \$4.2 million is associated with the
21 Nuclear Regulatory Commission, \$2.0 million is associated with the Maritime
22 Transportation Security Act, and \$1.1 million is associated with the North
23 American Electric Reliability Council (NERC) Cyber Security Standards CIP-
24 002-1 through CIP-009-1, effective June 1, 2006.

1

2 **Q. Does this conclude your testimony?**

3 A. Yes.

Docket 080001-EI

Exhibit No. ____ (MO-2)

Heavy and Light Oil: The base market oil price forecasts are developed by using the NYMEX forwards and applying a methodology to convert these forward prices to spot forecast prices. Oil projected prices are based on expected contract structures and specifications and incorporate current hedge positions. This table includes oil market commodity prices only; however, the fuel forecast incorporates hedges and transportation costs.

Coal: Coal price projections are based on current coal supply, transportation agreements, and forecasted deliveries. It assumes environmental restrictions on coal quality remain in effect as per current permits: 2.1 lbs. per million BTU sulfur dioxide limit for Crystal River Units 1 and 2, and, 1.2 lbs. per million BTU sulfur dioxide limit for Crystal River Units 4 and 5. This table includes transportation costs.

Natural Gas: The base market natural gas price forecast is developed by using the NYMEX forwards and applying a methodology to convert these forward prices to spot forecast prices. This table includes natural gas market commodity prices only; however, the fuel forecast incorporates hedges and transportation costs. Forecast prices are based on expected contract specifications and incorporate current hedge positions. Firm transportation costs for Florida Gas Transmission and Gulfstream pipeline are based on expected tariff rates and/or negotiated rates. Interruptible transportation rates and availability are based on expected tariff rates and market conditions.

Nuclear: The Nuclear Fuel Forecast uses known values of remaining balances of current fuel batches, projected costs of future batches, and projected batch energy production to determine a cost rate that is reported on a cost per unit of energy production basis (e.g., cents per million BTU). The projection of costs of future batches uses projections for each of the several components of nuclear fuel, and each component's projection is based on the contract portfolio and market projections in effect for that component for 2008 and 2009. The contract portfolio/market mix is determined by the procurement strategy in effect for each fuel component. Fuel requirements and individual batch energy forecasts are derived from core physics models that incorporate energy projection forecasts and operating/refueling outage strategies for 2008 through 2009. Nuclear Fuel Management & Safety Analysis is responsible for all aspects of the forecast.

Progress Energy Florida
Calculation of Generating Performance Incentive
And True-Up Adjustment Factors
Estimated for the Period of: January through December 2009

1. TOTAL AMOUNT OF ADJUSTMENTS:

A. Generating Performance Incentive Reward / (Penalty)	\$	2,167,933
B. True-Up (Over) / Under Recovery	\$	225,094,914

2. JURISDICTIONAL MWH SALES	Mwh	40,687,467
-----------------------------	-----	------------

3. ADJUSTMENT FACTORS:

A. Generating Performance Incentive Factor	Cents/kwh	0.005
B. True-Up Factor	Cents/kwh	0.553

Progress Energy Florida
Calculation of Levelized Fuel Adjustment Factors
Estimated for the Period of : January through December 2009

1. Period Jurisdictional Fuel Cost (E1, line 27)	\$	2,747,848,578
1a. Prior Period True-Up (E1, line 28)	\$	225,094,914
2. Regulatory Assessment Fee (E1, line 30)	\$	2,140,519
3. Generating Performance Incentive Factor (GPIF) (E1, line 32)	\$	2,167,933
4. Total amount to be Recovered	\$	<u>2,977,251,945</u>
5. Jurisdictional Sales (January - December 2009)	mWh	40,687,467
6. Jurisdictional Cost per Kwh Sold (Line 4 / Line 5 / 10)	Cents/kWh	7.317
7. Effective Jurisdictional Sales (See Below)	mWh	40,642,192

LEVELIZED FUEL FACTORS

8. Fuel Factor at Secondary Metering	Cents/kWh	7.326
9. Fuel Factor at Primary Metering	Cents/kWh	7.253
10. Fuel Factor at Transmission Metering	Cents/kWh	7.179
TIERED FUEL FACTORS:		
11. Fuel Factor - First Tier (0-1000 kWh)	Cents/kWh	6.993
12. Fuel Factor - Second Tier (Over 1000 kWh)	Cents/kWh	7.993

<u>JURISDICTIONAL SALES (MWH)</u>		
<u>METERING VOLTAGE:</u>	<u>METER</u>	<u>SECONDARY</u>
Distribution Secondary	36,874,099	36,874,099
