Ms. Hillerich:

We are in receipt of your filing below. However, this filing is not eligible for electronic filing. Please see e-filing requirements on the PSC webpage at: <http://www.psc.state.fl.us/dockets/e-filings/> Specifically:

E-Mail Transmitting an Electronically Filed Document

- The e-mail message transmitting the document(s) to be filed is not itself considered a filing. Therefore, documents contained within the text of an e-mail transmission will not be considered filed.
- Multiple documents may be attached to the same e-mail transmittal. However, any cover letter or certificate of service must be included in the electronic document to which it relates, and shall not be submitted as a separate attachment to the e-mail.

Your filing will need to be revised and resubmitted in order to be officially accepted for filing.

Please feel free to call our office if you have any questions.

Re: Docket # 080503 Renewable Portfolio Standard Rulemaking

Dear Ms. Cole:

On behalf of The Chamber's officers, including our Green Business Leadership Committee Chair Nick Gladding, please allow me to provide input regarding the this important issue. Our organization is comprised of 2,000 employers that provide over 70,000 jobs to area residents. The Greater Sarasota Chamber of Commerce (GSCC) is committed to building a "greener" sustainable community and diversifying our local economy. Effective and ambitious implementation of renewable energy technologies is a priority strategy toward achieving this broadly supported goal. The GSCC is proud of the fact that Florida Power and Light is placing the largest solar array in the state on our Rothenbach Park, and that our county is developing landfill gas to energy projects on our landfills and is exploring a potential project to deploy solar hot water heaters on homes around our community. Our citizens have identified renewable energy as a priority at their community environmental summit held in February and set a goal of 50 percent of homes with solar hot water heaters within 5 years. These initiatives and others will be key to developing local demand for renewable energy and building the potential for green jobs in our economy, and The Chamber's Green Business Leadership Committee has embraced these and other forward-thinking initiatives.

As the Public Service Commission considers the details of the Renewable Portfolio Standard (RPS), we would like to express support for a strong standard that would increase the local opportunities for renewable energy in communities like ours. With a requirement of 20 percent of generation being driven by non-petroleum, non-natural gas sources by 2020, utilities and customers could be presented with the incentives necessary to overcome market barriers and implement alternate fuel/power sourced energy projects at a scale that would boost local economic opportunities in the industry and help achieve sustainable energy goals in the near term. In moving towards this better-balanced energy mix of the future, we ask that the PSC be mindful of the potentially damaging impacts that very large, very rapid, or very unpredictably business/commercial rate increases could have on our economy and employment base, and therefore on tax revenues to governmental entities at various levels.

Our community/market area is particularly interested in the inclusion of solar hot water offsets of electric generation. This technology has been identified by our citizens as a key tool in the implementation of renewable energy, with proven technology, rapid payback, and significant energy potential. The inclusion of solar hot water heating in the Renewable Portfolio Standard would be critical to the achievement of our community's solar thermal goals.

The Florida Solar Energy Center (FSEC) has done analysis that shows the current draft of the Renewable Portfolio Standard would put Florida last among all states with an RPS. FSEC has shown that a target of 20 percent by 2020 would be achievable and economical, returning savings to citizens around the state and inspiring innovations among local businesses. The Chamber

9/9/2008

would like to encourage the Public Service Commission to continue Florida's pattern of leadership on climate change and renewable energy, by recommending a rule that includes the 20 percent by 2020 standard and includes solar hot water among the included technologies.

Sincerely,

A handwritten signature in black ink that reads "Stephen Queior". The signature is written in a cursive, flowing style.
