THE OFFICIAL TRANSCRIPT OF THE HEARING.
THE .PDF VERSION INCLUDES PREFILED TESTIMONY.

PROCEEDINGS: HEARING

BEFORE: CHAIRMAN MATTHEW M. CARTER, II
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER KATRINA J. McMURRIAN
COMMISSIONER NANCY ARGENZIANO
COMMISSIONER NATHAN A. SKOP

DATE: Tuesday, January 20, 2009

TIME: Commenced at 9:30 a.m.
Recessed at 5:07 p.m.

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: MARY ALLEN NEEL, RPR, FPR

APPEARANCES: (As heretofore noted.)

DOCUMENT NUMBER-DATE

00524 JAN 21 8

P R O C E E D I N G S

1
2 (Transcript continues in sequence from
3 Volume 1.)

4 CHAIRMAN CARTER: We are back on the record,
5 and thank you, one and all, for coming back after we had
6 a nice lunch, historical brunch.

7 Just a few -- just a brief, brief, ever so
8 brief reminder about my comments earlier. As your
9 witnesses go up, you know, up to five minutes in their
10 summary. Also, my comments about friendly cross. Let's
11 govern ourselves accordingly, because we really do -- we
12 have a lot of information, and we want to get it on the
13 record and we want to move forward. And I don't think
14 redundancy helps any of us, so let's move forward with
15 that.

16 And with that, let's do this. The witnesses
17 that we have for this afternoon that will be testifying,
18 would you please stand, and I can swear you in as a
19 group, and we can move forward from there.

20 MR. YOUNG: Mr. Chairman?

21 CHAIRMAN CARTER: Yes, sir.

22 MR. YOUNG: Just a reminder. TECO's witness,
23 Ms. Abbott, she's gotten ill, and I think TECO would
24 like to address the Commission.

25 CHAIRMAN CARTER: Was it something I said?

1 MR. WILLIS: No, sir. She was feeling bad
2 yesterday and felt worse this afternoon. But what we
3 would suggest is that -- I'm not sure we would get to
4 her anyway today, but that if she is still feeling bad,
5 that we proceed on with witness Murry and down the
6 witness list until she feels better.

7 CHAIRMAN CARTER: Okay. Any objections?
8 Okay. Without objection, show it done.

9 Witnesses, please stand and raise your right
10 hand.

11 (Witnesses collectively sworn.)

12 CHAIRMAN CARTER: Please be seated. You may
13 call your first witness.

14 MR. WILLIS: I call Charles R. Black.
15 Thereupon,

16 CHARLES R. BLACK

17 was called as a witness on behalf of Tampa Electric
18 Company and, having been first duly sworn, was examined
19 and testified as follows:

20 DIRECT EXAMINATION

21 BY MR. WILLIS:

22 Q. Could you please state your name, business
23 address, and occupation?

24 A. Yes. My name is Charles R. Black. My
25 business address is 702 North Franklin Street, Tampa,

1 Florida, 33602. I'm employed by Tampa Electric Company
2 as president.

3 Q. Did you prepare and cause to be prefiled
4 direct testimony of Charles R. Black consisting of 24
5 pages of testimony filed on August the 11th?

6 A. Yes, I did.

7 Q. Do you have any additions or corrections to
8 your testimony?

9 A. Yes, I do. I'm sorry. No, I don't.

10 Q. Okay. Did you prepare an exhibit under your
11 direction and supervision titled "Exhibit of Charles R.
12 Black" consisting of one document which has been
13 identified as Exhibit 14?

14 A. Yes.

15 Q. Do you have any additions or corrections to
16 your exhibit or the MFR schedules you sponsor which are
17 identified in Document 1 of your exhibit?

18 A. Yes. MFR Schedule F-9 was refiled on
19 December 1st, 2008.

20 Q. If I were to ask you the questions contained
21 in your prepared direct testimony, would your answers be
22 the same today?

23 A. Yes, they would.

24 MR. WILLIS: I would ask that the direct
25 testimony of Charles R. Black be inserted into the

1 record as though read.

2 CHAIRMAN CARTER: The prefiled testimony of
3 the witness will be inserted into the record as though
4 read.

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**2 **PREPARED DIRECT TESTIMONY**3 **OF**4 **CHARLES R. BLACK**

5
6 **Q.** Please state your name, address, occupation and
7 employer.

8
9 **A.** My name is Charles R. Black. My business address is 702
10 N. Franklin Street, Tampa, Florida 33602. I am employed
11 by Tampa Electric Company ("Tampa Electric" or
12 "company") as President.

13
14 **Q.** Please provide a brief outline of your educational
15 background and business experience.

16
17 **A.** I received a Bachelor of Chemical Engineering degree in
18 1973 from the University of South Florida and I am a
19 registered Professional Engineer in the State of
20 Florida. I joined Tampa Electric in 1973 and have held
21 various engineering and management positions at Tampa
22 Electric and TECO Power Services, TECO Energy's former
23 independent power production operations. In December
24 1991, I was named Vice President, Project Management for
25 Tampa Electric. In that capacity, I was responsible for

1 the engineering and construction of Tampa Electric's
2 Polk Power Station, a first-of-its-kind 255 MW (net
3 winter capability) integrated gasification combined
4 cycle ("IGCC") unit. From 1996 through October 2004, I
5 held leadership positions of progressively greater
6 responsibility within the organization. Most notably, I
7 was responsible for managing the repowering of Gannon
8 Station and its conversion from a coal-fired facility to
9 the natural gas facility, H. L. Bayside Power Station.
10 This was a cornerstone project in the company's
11 substantial environmental commitment made in 2000. In
12 October 2004, I assumed my current role of President of
13 Tampa Electric, and in that role I am responsible for
14 the overall management of the company.

15
16 **Q.** What is the purpose of your direct testimony?
17

18 **A.** After extensive and careful analysis, Tampa Electric is
19 requesting approval by the Commission for an increase in
20 the company's retail base rates and service charges.
21 The purpose of my direct testimony is to introduce the
22 witnesses who have filed direct testimony on Tampa
23 Electric's behalf, and to provide an overview of the
24 company's filing and its positions in this case.
25

1 Q. Have you prepared an exhibit to support your direct
2 testimony?

3
4 A. Yes. Exhibit No. ___ (CRB-1) entitled "Exhibit of
5 Charles R. Black" was prepared under my direction and
6 supervision. It consists of one document, "List Of
7 Minimum Filing Requirement Schedules Sponsored Or Co-
8 Sponsored By Charles R. Black".

9
10 Q. Briefly describe Tampa Electric.

11
12 A. Tampa Electric was incorporated in Florida in 1899 and
13 was reincorporated in 1949. In 1981, Tampa Electric
14 became a wholly owned subsidiary of TECO Energy, Inc.
15 The company is a public utility regulated by the Florida
16 Public Service Commission ("FPSC" or "Commission") and
17 the Federal Energy Regulatory Commission. The company
18 serves approximately 667,000 retail customers within
19 Hillsborough and portions of Polk, Pasco and Pinellas
20 counties, including the municipalities of Tampa, Plant
21 City, Temple Terrace, Winter Haven, Auburndale, Lake
22 Alfred, Eagle Lake, Mulberry, Dade City, San Antonio and
23 Oldsmar.

24
25 The company maintains a diverse portfolio of generating

1 facilities. Tampa Electric has five generating stations
2 that include fossil steam units, combined cycle units,
3 combustion turbine peaking units, an IGCC unit and
4 internal combustion diesel units. These units are
5 located at Big Bend Power, Bayside Power, Polk Power,
6 Phillips and Partnership Stations.

7
8 **Q.** Please summarize the company's position in this case.

9
10 **A.** Tampa Electric's primary goal is simple: safely provide
11 reliable electric service at the lowest possible cost
12 over the long term. While the goal is simple to state,
13 it is difficult to achieve. We are constantly
14 challenged by changes in the economy, shifting needs of
15 our customers and variations in weather. We are
16 challenged, too, by the ever-increasing need to protect
17 our environment and to comply with new laws and
18 regulations. Still, Tampa Electric has been
19 particularly successful in its efforts. The company has
20 met these challenges by investing billions of dollars in
21 new generating facilities, new environmental equipment,
22 transmission and distribution facilities, and other
23 infrastructure necessary to meet the increases in demand
24 from a growing customer base. We have successfully
25 achieved this goal without a base rate increase since

1 1994, but we have exhausted our options and must now
2 seek a rate increase.

3
4 **Q.** When did the company's last full revenue requirements
5 proceeding take place?

6
7 **A.** The company's last full revenue requirements proceeding
8 was filed May 22, 1992. The Commission issued its Order
9 No. PSC-93-0165-FOF-EI in Docket No. 920324-EI on
10 February 2, 1993.

11
12 **Q.** In general, what changes has Tampa Electric experienced
13 since its last base rate increase?

14
15 **A.** Since the company's last base rate increase, Tampa
16 Electric has experienced tremendous customer growth
17 while providing cost-effective, reliable electric
18 service. The company has been able to maintain its
19 retail base rates while investing \$3.4 billion in
20 generation and infrastructure additions to its system as
21 operations and maintenance ("O&M") expenses dramatically
22 increased. Since 1992, the cost of goods and services,
23 as measured by the Consumer Price Index ("CPI")
24 increased 48 percent. In addition, the costs of
25 commodities essential to the production and distribution

1 of electricity have also increased dramatically since
2 that time. Labor costs have increased 77 percent and
3 steel and concrete prices have increased 72 and 73
4 percent, respectively.

5
6 Tampa Electric has also improved efficiency and
7 performance in all major areas of operations of its
8 electric system, which has experienced an increase in
9 retail peak demand of about 50 percent. In 2007, Tampa
10 Electric served a retail peak load of 4,123 megawatts
11 ("MW") compared to 2,771 MW served in 1992. As the
12 population has grown in our service area, Tampa Electric
13 has expanded its system to meet those needs. Today,
14 Tampa Electric serves approximately 667,000 customers,
15 almost 200,000 or 42 percent more customers than in
16 1992.

17
18 Customer growth in our service area is expected to
19 continue although at a slower pace than the state has
20 experienced in the past. While customer growth and
21 increased efficiencies have allowed the company to
22 operate well, customer growth and productivity
23 efficiencies are no longer sufficient to allow Tampa
24 Electric to continue to effectively and reliably meet
25 the electric needs of existing and new customers at

1 current base rates.

2
3 **Q.** Please identify Tampa Electric's witnesses and summarize
4 the purposes of their direct testimony in this
5 proceeding.

6
7 **A.** The direct testimony submitted by other witnesses on
8 behalf of Tampa Electric and the areas each witness will
9 address are as follows:

10 • **Gordon L. Gillette**, Tampa Electric's Senior Vice
11 President and Chief Financial Officer and TECO
12 Energy's Executive Vice President and Chief
13 Financial Officer, will describe the capital
14 structure of the company, the importance of
15 maintaining the company's financial integrity, and
16 the overall fair and reasonable rate of return
17 needed to accomplish this goal.

18 • **Susan D. Abbott**, managing director with the
19 investment-banking firm of New Harbor, Inc., will
20 discuss the consequences of regulatory action,
21 Tampa Electric's credit worthiness, its credit
22 ratings and the importance of the current rate
23 request.

24 • **Donald A. Murry, Ph.D.**, Vice President and
25 Economist with C. H. Guernesey & Company, will

1 address the company's capital structure, cost of
2 capital and fair and reasonable rate of return.

3 • **Lorraine L. Cifuentes**, Tampa Electric's Manager of
4 Load Research and Forecasting, will discuss the
5 company's load forecasting process, describe the
6 methodologies and assumptions and the company's
7 inflation assumptions.

8 • **Mark J. Hornick**, Tampa Electric's General Manager
9 of Polk and Phillips Power Stations, will discuss
10 the company's construction and O&M budgets for
11 generation facilities.

12 • **Joann T. Wehle**, Tampa Electric's Director of
13 Wholesale Marketing and Fuels, will support the
14 company's fuel inventory requirements.

15 • **Regan B. Haines**, Tampa Electric's Director of
16 Engineering and Field Services, will discuss the
17 company's transmission and distribution system
18 construction and O&M budgets. He will also discuss
19 the company's reliability, service quality and
20 storm hardening activities.

21 • **Dianne S. Merrill**, Tampa Electric's Director of
22 Staffing and Development, will discuss the
23 company's employee benefit costs, its record of
24 controlling health care costs and the gross payroll
25 expenses for the company.

- 1 • **Edsel L. Carlson Jr.**, Tampa Electric's Risk
2 Manager, will address the appropriateness of the
3 proposed annual storm reserve accrual and the
4 target level for the storm reserve.
- 5 • **Steven P. Harris**, Vice President with ABS
6 Consulting, will address his study supporting our
7 proposed annual storm reserve accrual and the
8 target level for the storm reserve.
- 9 • **Alan D. Felsenthal**, Managing Director with Huron
10 Consulting Group, will support the company's income
11 tax calculations.
- 12 • **Jeffrey S. Chronister**, Tampa Electric's Assistant
13 Controller, will discuss the company's budgeted O&M
14 expenses, income statement, balance sheet and
15 ongoing capital budget and will review Tampa
16 Electric's outstanding record of managing O&M
17 expense below the Commission's O&M benchmark. In
18 addition, witness Chronister will explain the
19 calculation of Tampa Electric's revenue requirement
20 for 2009.
- 21 • **William R. Ashburn**, Tampa Electric's Director of
22 Pricing and Financial Analysis, will discuss the
23 jurisdictional separation and retail class cost of
24 service studies, billing determinants, billed
25 electric revenue budgets and rate design.

1 Q. What is the company's specific base rate relief request?

2

3 A. Tampa Electric is requesting a \$228.2 million increase
4 in base rates and service charges effective on or after
5 May 1, 2009, based on a 2009 projected test year. This
6 increase will cover our costs of service and allows us
7 the opportunity to earn an appropriate return on the
8 company's investments. In establishing an appropriate
9 rate of return for Tampa Electric, the testimonies of
10 witnesses Donald A. Murry, Ph.D. and Gordon L. Gillette
11 reflect that the midpoint of a fair return on equity
12 ("ROE") is 12.00 percent with a range of 11.00 to 13.00
13 percent.

14

15 Q. What are the major factors driving the need for this
16 base rate increase in 2009?

17

18 A. The significant cost drivers that have resulted in the
19 need for a base rate increase are summarized below. The
20 company's various witnesses in this proceeding address
21 them in more detail.

22

23 **Generation**

24 The company has added significant generating resources
25 to its system since 1994. From 1994 through 2007, Tampa

1 Electric has added approximately 1,400 MW of generation
2 to meet growing customer demand. Polk Unit 1 is an IGCC
3 power plant that has been named the cleanest coal-fired
4 unit in North America and was placed in service in 1996.
5 Polk Units 2 and 3, both simple cycle combustion
6 turbines, were placed into service in 2000 and 2002,
7 respectively. Polk Units 4 and 5 (also simple cycle
8 combustion turbines) were placed into service in 2007.
9 In addition, as part of a comprehensive environmental
10 settlement, the Gannon coal-fired generation assets were
11 repowered into the Bayside Power Station, a gas-fired
12 combined cycle plant completed in 2004. Although all of
13 these generation additions were determined to be the
14 lowest cost resources to meet customers' needs, these
15 investments have resulted in incremental costs above
16 incremental revenue to Tampa Electric's system.
17 Consequently, one of the major factors underlying the
18 need for a change in base rates is to reflect these
19 investments that are in rate base.

20
21 The company plans to construct five simple cycle
22 combustion turbines in 2009 and two simple cycle
23 combustion turbines in 2012, all to meet system peaking
24 needs. In addition to generation added since the
25 company's last rate case, Tampa Electric's current 10-

1 year generation expansion plan includes over 2,500 MW of
2 new generation. The 2,500 MW of new generation includes
3 a 533 MW natural gas combined cycle base load unit the
4 company plans to add at its Polk Power Station by 2013.
5 Finally, the company plans to invest in 2008 and 2009
6 for a rail facility at Big Bend Power Station to provide
7 the company with transportation diversity for solid
8 fuel. Tampa Electric witness Mark J. Hornick will
9 address our generation expansion plans further in his
10 direct testimony.

11 12 **Transmission and Distribution**

13 Tampa Electric made and will continue to make
14 significant capital investments in its transmission and
15 distribution infrastructure to meet its obligation to
16 reliably serve customers and to meet the new system
17 hardening requirements implemented by the FPSC after the
18 hurricanes of 2004 and 2005. Since our last rate case,
19 the company has added over 100 net miles of
20 transmission. In 2009 and beyond, transmission capital
21 expenditures are anticipated to be significant,
22 necessitated by additional generation in the state,
23 Florida Reliability Coordinating Council study impacts,
24 as well as hardening of the existing infrastructure as
25 discussed in the direct testimony of Tampa Electric

1 witness Regan B. Haines.

2
3 **Customer Demand**

4 While Tampa Electric has enjoyed strong customer growth
5 since its last base rate change, we expect it to slow
6 considerably over the next few years. Although a number
7 of factors such as increased conservation, improvements
8 in appliance efficiencies and increasing energy prices
9 have resulted in lower consumption, these reductions
10 have been offset to a large degree by the increasing
11 size of new homes and the increasing saturation of
12 electronic appliances and other electric equipment.
13 Energy consumption for the 2009 projected test year
14 includes the impacts of Tampa Electric's recently
15 approved new and modified demand side management
16 programs as well as higher appliance efficiency trends
17 associated with the Energy Policy Act of 2005. Tampa
18 Electric witness Lorraine L. Cifuentes discusses this in
19 more detail in her direct testimony.

20
21 **Operations and Maintenance Expenses**

22 For years, Tampa Electric has worked to control its O&M
23 expenses despite steady growth in demand and the number
24 of customers served, and while maintaining high levels
25 of service reliability and customer service. Total non-

1 fuel operating expenses for 2009 are expected to exceed
2 \$700 million. Tampa Electric's costs are expected to
3 continue to increase due to the cumulative effects of
4 inflation, customer growth and operational requirements.

5
6 Major impacts to the company's O&M since its last rate
7 increase include employee benefits such as healthcare
8 costs, depreciation expense, system hardening expenses,
9 storm reserve accruals and federal and state compliance
10 costs.

11
12 **Q.** Please describe the significant environmental commitment
13 the company has made.

14
15 **A.** Between November 1999 and December 2000, the U.S.
16 Department of Justice, acting on behalf of the
17 Environmental Protection Agency ("EPA"), filed lawsuits
18 against eight utility companies affecting 106 generating
19 units for perceived violations of New Source Review
20 ("NSR"), a complex program created by various provisions
21 of the Federal Clean Air Act. While Tampa Electric
22 contended it had not violated any NSR requirements, it
23 decided the best outcome for customers, the environment
24 and the company was to take early definitive action to
25 significantly lower its emissions and thereby resolve

1 the dispute. The company settled with the Florida
2 Department of Environmental Protection ("FDEP") in late
3 1999 and the EPA in 2000 and began implementing a
4 comprehensive program to decrease future emissions from
5 the company's coal-fired power plants dramatically.
6 Tampa Electric was the first utility in the country to
7 resolve issues raised by the agencies.

8
9 The emissions reduction requirements included flue gas
10 desulfurization systems ("FGDs" or "scrubbers") to help
11 reduce SO₂, projects for NO_x reduction efforts on Big
12 Bend Units 1 through 4 ("SCRs"), and the repowering of
13 the coal-fired Gannon Station to natural gas. The total
14 estimated costs are about \$1.2 billion. While most of
15 the environmental control systems are being recovered
16 through the Environmental Cost Recovery Clause ("ECRC"),
17 the repowering of Gannon Station makes up about \$750
18 million of the total commitment and it is not being
19 recovered through the ECRC nor was it taken into account
20 when the company's current base rates were approved.

21
22 **Q.** What have been the benefits of Tampa Electric's
23 settlement agreements with the EPA and FDEP?

24
25 **A.** Since 1998, Tampa Electric has reduced annual SO₂, NO_x

1 and particulate matter ("PM") from its facilities by
2 162,000 tons, 42,000 tons and 4,000 tons, respectively.
3 The reductions in SO₂ emissions were accomplished in
4 large part through the installation of scrubber systems
5 on Big Bend Units 1 and 2 in 1999. The Big Bend Unit 4
6 was originally constructed with a scrubber but it was
7 modified in 1994 to allow it to also scrub emissions
8 from Big Bend Unit 3. Currently, the scrubbers at Big
9 Bend Power Station remove more than 95 percent of the
10 SO₂ emissions from the flue gas streams.

11
12 The repowering of Gannon Station to Bayside Power
13 Station resulted in significant reductions in emissions
14 of all pollutant types. The installation of the SCRs on
15 all Big Bend units is expected to result in further
16 reduction of emissions. By 2010, these SCR projects are
17 expected to result in the total phased reduction of NO_x
18 by 62,000 tons per year, which is a 90 percent reduction
19 from 1998 levels. To date, these projects have resulted
20 in the reduction of SO₂, NO_x and PM emissions by 93
21 percent, 60 percent and 77 percent, respectively, below
22 1998 levels. In total, by 2010 Tampa Electric's system-
23 wide emission reduction initiatives will result in the
24 reduction of SO₂, NO_x and PM by 90 percent, 90 percent
25 and 72 percent, respectively.

1 Q. Has Tampa Electric reduced its greenhouse gas emissions?

2

3 A. Yes. In addition to the reductions in regulated
4 emissions listed above, since 1998, system-wide
5 emissions of CO₂ have been reduced by over 20 percent,
6 bringing emissions to below 1990 levels.

7

8 Q. What efforts has Tampa Electric taken to control
9 expenditures to avoid the need for higher rates?

10

11 A. Over the past 16 years, Tampa Electric has avoided
12 seeking a retail base rate increase despite having
13 experienced significant increases in operating costs and
14 having made significant capital investments to meet the
15 needs of its customer base. Since its last rate case
16 through year-end 2009, the company will have invested
17 more than \$1.7 billion in the construction of new
18 generating capacity and more than \$1.5 billion in the
19 expansion of Tampa Electric's transmission and
20 distribution system. During this same period of time
21 without rate relief, the CPI has increased by 48
22 percent. The company has been able to manage this
23 because of numerous initiatives. One key initiative has
24 been the concerted effort of Tampa Electric's management
25 and team members to control O&M expenses. Since its

1 last rate case, the company has succeeded in maintaining
2 its total O&M costs under the Commission's O&M benchmark
3 while customer growth increased by 42 percent during the
4 same time frame. Tampa Electric's 2009 total O&M
5 expenses are also below the Commission's benchmark.
6 Tampa Electric continues to pursue efficiency
7 improvements and cost reductions in all aspects of its
8 operations.

9
10 The performance of Tampa Electric's generating units has
11 also played a major role in Tampa Electric's ability to
12 control its base rates. The company has improved the
13 performance and availability of its existing generating
14 units. Some of these improvements have provided, in
15 effect, additional generation at a relatively low cost
16 compared to the costs of constructing new and more
17 expensive units. Additionally, Tampa Electric has
18 continued to provide aggressive demand side management
19 programs to its customers that have resulted in
20 deferring the need for approximately 660 MW of winter
21 generating capacity or the equivalent of almost four
22 simple cycle power plants.

23
24 I am proud of our team members' efforts in managing all
25 categories of expenses and I am pleased with the

1 benefits we have provided to our customers.
2 Unfortunately, we are at a point in time where these
3 actions are no longer sufficient to cover our costs to
4 provide service. For 2008, the company filed a
5 forecasted surveillance report with this Commission with
6 an expected 9.40 percent ROE, well below the bottom of
7 our authorized range. For 2009, without the revenue
8 requirements being sought, we expect the company's ROE
9 to be at 4.38 percent. It is beneficial for our
10 customers to have a financially solid electric utility
11 with access to capital markets as needed to fund a
12 robust and necessary capital program going forward at
13 prices that minimize impacts to customers, so a
14 projected ROE of 4.38 percent for 2009 is not in the
15 best interest of our customers or shareholders.

16
17 **Q.** What are the implications of Tampa Electric being
18 foreclosed from the markets?

19
20 **A.** As indicated in the direct testimony of witness Susan D.
21 Abbott, being unable to access capital markets and fund
22 company needs will increase costs, decrease reliability
23 and eventually result in higher costs to customers.
24 This is not acceptable for our customers.

25

1 Q. Has Tampa Electric considered its customers before
2 filing for an increase in rates?

3
4 A. Yes, we have. The company has carefully evaluated all
5 options before making this request. A major tenet of
6 Tampa Electric's operating philosophy is a focus on our
7 customers. While we are keenly aware of the impacts
8 that a price increase has, we remain committed to
9 continuing to find cost-effective conservation
10 initiatives, and to implementing efficiencies and other
11 prudent cost-cutting measures that minimize the need for
12 higher rates.

13
14 Q. Does Tampa Electric's proposed rate design support
15 statewide energy efficiency efforts?

16
17 A. Yes. We are proposing a two-block, inverted base energy
18 rate with the break-point at 1,000 kWh and a one cent
19 per kWh differential between the two blocks for the
20 residential standard service rate in lieu of a flat base
21 energy rate. We believe the higher rate above 1,000 kWh
22 provides an appropriate price signal to customers
23 regarding their energy usage because it can serve as a
24 means for encouraging energy conservation. To optimize
25 the advantage of this conservation-oriented rate design

1 and further motivate customers, we will also seek
2 Commission approval of a two-block inverted residential
3 fuel factor in our upcoming 2009 fuel and purchased
4 power projection filing in Docket No. 080001-EI on
5 September 2, 2008. By implementing an inverted rate
6 design for the residential base energy charge and fuel
7 factor, the company is supporting statewide efforts for
8 the efficient use of energy.

9
10 In addition, the company is proposing the continuation
11 of the RSVP rate, our critical peak pricing conservation
12 program known as Energy Planner. Energy Planner allows
13 customers to make energy consumption decisions based on
14 near real-time energy prices by using a programmable
15 "smart" thermostat provided by the company. Both the
16 RSVP and inverted rate designs reinforce state-wide
17 efforts to educate consumers regarding their energy
18 consumption while sending price signals that emphasize
19 the monetary benefits of energy conservation. Tampa
20 Electric witness William R. Ashburn discusses these
21 conservation-oriented rate designs in greater detail in
22 his direct testimony.

23
24 **Q.** Does the company have any special programs for customers
25 with special needs?

1 **A.** Yes. Our special needs programs include our 62+ program
2 and the assistance we provide to a variety of social
3 services programs, including our SHARE program, a
4 program that helps senior customers who have low-incomes
5 and/or who are medically disabled and unable to pay
6 their energy-related bills. We also provide Commission-
7 approved conservation related credits and cash
8 incentives to our customers to encourage them to use
9 electricity wisely. We attempt to communicate to our
10 customers in multiple forums and media to inform them
11 more clearly about energy issues, especially the steps
12 they can take to mitigate the effects of increasing
13 rates.

14
15 **Q.** Please discuss Tampa Electric's proposed overall rate
16 design.

17
18 **A.** Tampa Electric's proposed rates and service charges are
19 designed to produce the company's requested additional
20 revenues of \$228.2 million. Tampa Electric's proposed
21 rate design more accurately reflects the cost to serve
22 the various classes. Cost of service is a major
23 consideration in the rate design as well as revenue
24 stability and continuity. As I previously mentioned,
25 the rate designs for the residential class are designed

1 to produce conservation-oriented price signals. In
2 addition, the company is proposing to combine all demand
3 billed customers into a single rate schedule with cost-
4 effective options for customers that elect to be subject
5 to service interruption. Witness Ashburn discusses rate
6 design in greater detail in his direct testimony.

7
8 **Q.** Please summarize your direct testimony.

9
10 **A.** Tampa Electric has worked very hard to establish itself
11 as a low-cost provider of high quality electric service
12 while being sensitive to the interests of our customers
13 and the environment in which we live. We are extremely
14 proud of our environmental commitments as evidenced by
15 our Polk Unit 1 IGCC facility and our repowered Bayside
16 Power Station. Our accomplishments reflect the efforts
17 of a strong management team and dedicated team members
18 throughout the company. Collectively, our efforts have
19 succeeded in delaying as long as possible the necessary
20 increase in the company's retail base rates and service
21 charges while keeping pace with Florida's rapid growth
22 and demand for power. The central element in Tampa
23 Electric's operating philosophy is to provide customers
24 with reliable electric service at a reasonable price.
25 We know that price increases put economic pressures on

1 our customers but the declining financial condition of
2 the company coupled with our obligation to provide
3 reliable service mandate that we increase our prices in
4 order to have the opportunity to earn a fair return,
5 both in the near term and over time. This will
6 ultimately yield benefits to customers by ensuring that
7 we maintain access to capital markets in order to secure
8 the necessary funding for current and future investment
9 at a reasonable cost. After 16 years, an increase in
10 retail base rates is now necessary to ensure that Tampa
11 Electric can continue to provide reliable, cost-
12 effective electric service at the levels its customers
13 have come to expect.

14
15 **Q.** Does this conclude your direct testimony?

16
17 **A.** Yes, it does.
18
19
20
21
22
23
24
25

1 BY MR. WILLIS:

2 Q. Please summarize your testimony.

3 A. Thank you. Good afternoon, Commissioners.

4 The purpose of my testimony today is to describe Tampa
5 Electric's request to increase our base rates and to
6 identify and describe the drivers that require the
7 company to take this action.

8 We have taken aggressive action over the last
9 16 years since our last rate case to avoid asking for an
10 increase in base rates while still providing safe and
11 reliable electric service to our customers. Since the
12 company's last retail base rate proceeding in 1992,
13 Tampa Electric has added 200,000 customers and has
14 invested \$3.4 billion in generation and infrastructure
15 additions to its system while providing cost-effective,
16 reliable electric service. This has been done while
17 drastically reducing the environmental impact of our
18 system through the implementation of a 10-year,
19 \$1.2 billion commitment to significantly reduce our
20 emissions, including emissions of greenhouse gases.
21 These reductions have already achieved positive results
22 such that Tampa Electric Company is one of the cleanest
23 coal-fired utilities in the country.

24 Over the same period of time, the cost of
25 goods and services used by the company have escalated by

1 48 percent. Specifically, labor, steel, and concrete
2 prices have increased more than 70 percent. While the
3 company has taken numerous actions to help reduce its
4 cost to operate, it can no longer do so without an
5 increase in our base rates.

6 It is imperative that Tampa Electric remain
7 financially solid with access to the capital markets,
8 which is required to fund our capital investments at the
9 lowest cost to our customers. Without the base rate
10 increase being requested today, the company's 2009
11 return on equity is projected to be about 4.4 percent.
12 This is not an acceptable return for our customers or
13 for our shareholders.

14 The company is requesting an increase in base
15 rates and service charges of \$228 million. Tampa
16 Electric is also recommending certain rate design
17 changes to better reflect the cost of providing services
18 to various classes of our customers. One key change in
19 rate design is for our residential customers. The
20 company is proposing a two-block inverted base energy
21 rate in lieu of a flat base energy rate. This design
22 will support statewide efforts for the more efficient
23 use of energy.

24 Tampa Electric recognizes that there's never a
25 good time to seek higher rates, and we do not take our

1 decision to file for higher rates lightly. However, due
2 to the declining financial condition of Tampa Electric
3 company, coupled with our obligation to provide reliable
4 service, mandate that we increase our prices in order to
5 position the company with the necessary financial
6 strength to access capital markets for the benefit of
7 our customers. Unfortunately, after 16 years, an
8 increase in base rates is now necessary.

9 That concludes my summary.

10 MR. WILLIS: Tender the witness.

11 CHAIRMAN CARTER: Ms. Christensen, you're
12 recognized.

13 CROSS-EXAMINATION

14 BY MS. CHRISTENSEN:

15 Q. Good afternoon, Mr. Black. I just have a few
16 questions for you. I want to refer you to page 11 of
17 your direct testimony.

18 On page 11, you state that the five simple
19 cycle CTs are needed to meet system peak demand; is that
20 correct?

21 A. What line are you referring to?

22 Q. Twenty-one through 24.

23 A. That's correct.

24 Q. And isn't it correct that for system peak to
25 be growing, the overall sales have to be growing as

1 well?

2 A. No, that's not correct.

3 Q. Would you agree that the five simple cycle
4 units are needed to meet peak demand in 2009?

5 A. When the projects were initiated, the five CTs
6 were required to meet margin reserve requirements. As
7 we look at our revised forecast, it appears that all of
8 them may not be needed in 2009. We're evaluating that
9 situation now. But it's important to note that those
10 CTs provide benefits to the operation of our system in
11 addition to just satisfying our reserve margin
12 requirement.

13 Q. Okay. So it would be correct that the five
14 simple cycle combustion turbines will be needed not only
15 to meet peak demand and sales growth in 2009, but also
16 in subsequent years, or at least some of them will be?

17 A. Yes.

18 Q. Mr. Black, have you made a determination
19 whether or not some of those combined cycle plants will
20 not be built in 2009?

21 A. We currently don't have any combined cycle
22 plants scheduled to be constructed in 2009.

23 Q. Excuse me, the CTs. Have you made a
24 determination regarding the CTs as to whether any of
25 them will not be brought on line in 2009?

1 A. I'm sorry. Could you repeat that?

2 Q. Have you reviewed the testimony that was given
3 at the public hearing?

4 A. Yes, ma'am.

5 Q. Some of those people testified that they would
6 not be able to afford to pay their electric bills if
7 there was an increase such as that you had requested.
8 Would it be fair to say that those people are not going
9 to consider this fair and reasonable?

10 A. I think it's fair to say that we've included
11 in our filing significant conservation programs that can
12 assist folks that are having trouble meeting their
13 electric bills and provides them a way to reduce their
14 energy usage and therefore their electric bills. We
15 also have filed as part of this case for an inverted
16 residential rate that I mentioned earlier, and that's
17 going to provide a price signal to promote the
18 conservation of energy. It's also going to help that
19 rate be affordable for people that fall below the
20 initial breakpoint there.

21 So I think we have addressed some of these
22 issues as it relates to affordability. We also work
23 with local agencies such as the Share program through
24 the Salvation Army in the Tampa area that provides
25 assistance to people who have trouble making their

1 electric bill.

2 Q. Going back to my question, though, for
3 somebody that's unable to afford the rate increase and
4 has already taken steps to conserve and lower their
5 energy use, can you understand that they will not
6 consider this fair or reasonable?

7 A. I understand that this rate increase is going
8 to have impact on individuals. Our company works WITH
9 those individuals to the extent possible to mitigate the
10 impacts on them. Whether or not they consider it just
11 and reasonable is something you really need to ask them.
12 I mean, no one likes to see rates go up. No one likes
13 to see their gasoline rates go up, their food rates,
14 electric rates, or any rates, and we understand that and
15 are sensitive to those issues.

16 That does not change the fact that to provide
17 the lowest cost to our customers over the long term,
18 it's important that we have adequate access to the
19 capital markets and be able to raise capital at rates
20 that provide a lower cost for our customers not only
21 today, but over the long term.

22 Q. Are you given stock in your company each year?

23 A. Part of the incentive program is a long-term
24 incentive which has restricted stock, so it's not
25 actually given to you at that time, but it's restricted

1 over some period of time.

2 Q. So do you own shares in your company?

3 A. Yes, I do.

4 Q. And what is the salary that they pay you?

5 A. My current salary?

6 Q. Yes, sir.

7 A. \$368,000 per year.

8 Q. And is that in addition to the incentives that
9 you talked about?

10 A. Yes, it is.

11 Q. Can you understand that there are persons out
12 there that can't afford any more of an increase and that
13 looking at the salary that you're making, they may not
14 understand that?

15 A. I can understand how people may not understand
16 that, but I think it's important to note that in order
17 to provide the lowest cost service to our customers over
18 an extended period of time, we need competent, qualified
19 people in all levels of jobs in our company, including
20 the executives. And by having talented, capable
21 executives in position in our company, that's going to
22 benefit those customers over time.

23 Q. Would you be willing to lower your request for
24 a rate increase if it would allow more people to be able
25 to afford your services?

1 A. I think the rate increase we're seeking again
2 not only focuses on the short-term impact to our
3 customers, which is important, but also the longer term
4 impacts, and allows us -- the request that we've asked
5 for will allow us to provide longer term savings to our
6 customers. So in that context, I think the rate plan
7 that we have filed provides the lowest cost, long-term
8 options for our customers.

9 Q. And again, going back to my question, if you
10 would, would you be willing to lower your request for an
11 increase if it would allow more people to be able to
12 afford your services?

13 A. No. I don't believe that's appropriate in the
14 context that it may provide a short-term benefit, but is
15 not beneficial to those customers over the long term.

16 MS. BRADLEY: Nothing further, Mr. Chairman.

17 CHAIRMAN CARTER: Mr. Wright.

18 MR. WRIGHT: Thank you, Mr. Chairman.

19 CROSS-EXAMINATION

20 BY MR. WRIGHT:

21 Q. Good afternoon, Mr. Black.

22 A. Good afternoon.

23 Q. Are you familiar with the company's MFRs?

24 A. Yes.

25 Q. I'm not going --

1 A. In general.

2 Q. I'm not going to hold you to every number
3 that's in there.

4 In your summary, you remarked that without
5 rate relief, the company would earn about 4.4 percent
6 ROE.

7 A. That's correct.

8 Q. Isn't it true that the company's MFR Schedule
9 A-1, which is the first page of the executive summary,
10 shows that even without rate relief, the company will
11 recover all costs necessary to provide service?

12 A. I'm not sure I have that document.

13 Now that I'm looking at the document, could
14 you repeat the question again?

15 Q. Isn't it true that the company's MFR Schedule
16 A-1 shows that even without rate relief, the company
17 will recover all the costs necessary to provide service
18 in 2009?

19 A. By that are you asking whether the company
20 would be able to operate without incurring a loss for
21 that year?

22 Q. Yes, sir.

23 A. That's correct.

24 Q. So you could cover all your costs,
25 depreciation, interest, and everything else; correct?

1 I would also point out that a factor
2 influencing that is the way that the company has been
3 managed, as evidenced by the fact that our O&M numbers
4 for our projected test year are significantly below the
5 Commission's benchmark for O&M expenses. So I think
6 it's a number of factors, but that clearly is one of
7 them.

8 Q. Regarding your testimony just now regarding
9 your O&M costs being below the benchmark, is it your
10 testimony that just because O&M costs are below the
11 benchmark proves that they're reasonable and prudent?

12 A. No, not totally. I think the Commission needs
13 to look at all those expenses individually to determine
14 the prudence, but I think it is instructive as an
15 overall general assessment and has been used by the
16 Commission historically to determine the reasonableness
17 of your O&M program.

18 Q. Thank you. Do you know what the company's
19 base rate revenues were in 1993?

20 A. No, I don't.

21 MR. WRIGHT: Mr. Chairman, I'm going to ask
22 the Commission to take official notice or administrative
23 notice, or whatever we call it, of a number of the
24 Commission's orders, including 15451, 93-0165, and
25 others. I have complete copies of most of these orders,

1 and I have excerpts of others. For the most part, my
2 intention is to simply ask the witness to confirm
3 certain numbers in these orders. I do have sufficient
4 copies for you and the parties to look at as we go
5 through it. Otherwise --

6 CHAIRMAN CARTER: Ms. Helton, is there a more
7 efficient way to do this? Do we need to --

8 MS. HELTON: I think that the way the pendulum
9 has swung right now is that the Commission's position is
10 that we do not need to take official recognition of any
11 Commission order. I think everybody acknowledges that
12 the orders have been issued by this Commission. The
13 orders speak for themselves. And if there are numbers
14 in the orders that you want verified, I think we could
15 just make a statement that we would accept the numbers
16 as they are represented in the orders that have been
17 issued.

18 CHAIRMAN CARTER: Okay. We'll proceed
19 further.

20 MR. WRIGHT: Thank you. That will make it a
21 little bit more efficient. I would like to approach the
22 witness and show him the order coming out of --

23 CHAIRMAN CARTER: You may proceed.

24 MR. WRIGHT: -- the 1992 rate case.

25 BY MR. WRIGHT:

1 Q. This is the order from the case, and this is
2 the exhibit I want you to look at.

3 A. Okay.

4 MR. WRIGHT: Mr. Chairman, I've just handed
5 the witness a copy of Order 93-0165, which was the
6 Commission's order coming out of the 1992 rate case, and
7 I've directed his attention to page 103.

8 BY MR. WRIGHT:

9 Q. And my question, Mr. Black, is, is it correct
10 that that indicates that the company's base revenues for
11 1993 were approximately \$545 million?

12 A. Yes.

13 Q. I'll try to save time on this one. Will you
14 agree, subject to verification, that your company's MFR
15 Schedule C-5 shows projected total retail sales of
16 approximately 2 million -- I'm sorry, 2,075,000,000?

17 A. What's the basis of that again? I'm sorry.

18 Q. It's MFR C-5, page 2, for 2008.

19 A. Let me take a look at it.

20 Q. Certainly. (Tendering document.)

21 COMMISSIONER ARGENZIANO: Mr. Chairman.

22 CHAIRMAN CARTER: Commissioner Argenziano.

23 COMMISSIONER ARGENZIANO: While he's reviewing
24 that, could staff verify for me -- I have a different
25 salary for Mr. Black than was indicated. I have

1 535,712, and I would like to know if that's including
2 stocks or what's the right number.

3 CHAIRMAN CARTER: Mr. Willis, can you help us
4 out with that?

5 MR. WILLIS: I'm not sure I understood the
6 Commissioner's question.

7 COMMISSIONER ARGENZIANO: I guess, Mr. Chair,
8 I can ask Mr. Black when he's done. When we're done,
9 I'll ask him myself.

10 CHAIRMAN CARTER: Okay, because it may be
11 salary and --

12 COMMISSIONER ARGENZIANO: Right. Thank you.

13 CHAIRMAN CARTER: Thank you. Mr. Wright, you
14 can continue questioning, and we'll just take a moment
15 after you complete your questioning.

16 MR. WRIGHT: Thank you, Mr. Chairman.

17 BY MR. WRIGHT:

18 Q. Mr. Black, have you had an opportunity to look
19 at that schedule?

20 A. (Nodding head.)

21 Q. I have two questions. The first one, I think
22 the pending question is, isn't it true that the
23 company's estimated, as of the filing date, total retail
24 revenues for 2008 were approximately \$2,075,000,000?

25 A. Our witness Chronister actually sponsored this

1 exhibit and would be able to answer in more detail, but,
2 yes, that's what it indicates. However, it would seem
3 to me that that would include also revenues associated
4 with fuel recovery.

5 Q. Yes, sir. And if you would look at the
6 right-hand column of that table, would you also agree
7 that it shows that the projected base revenues, or
8 partially actual and partially projected base revenues
9 for 2008 is approximately \$847 million?

10 A. Yes.

11 Q. Thank you.

12 CHAIRMAN CARTER: While you're shifting gears,
13 I'm going to break in for Commissioner Argenziano. I
14 just saw you going to another document.

15 Commissioner Argenziano, you're recognized.

16 COMMISSIONER ARGENZIANO: Thank you.

17 Mr. Black, you had answered a different salary than what
18 I have here. I have indicated for your salary as being
19 535,712. Does that include stocks and bonuses, or can
20 you tell me what your entire salary is, including any
21 bonuses or perks or whatever they're called?

22 THE WITNESS: Okay. The interrogatory that
23 was provided, interrogatory number 2, is slightly
24 different on my base salary, but it indicates it's
25 \$370,240 per year for salary.

1 COMMISSIONER ARGENZIANO: Okay. Do you have a
2 number which includes the bonuses or stocks or anything?

3 THE WITNESS: Yes, ma'am. The stock awards
4 for 2008, 306,431; option awards, 16,279; and non-equity
5 incentive plan compensation, 202,653; other
6 compensation, 8,311.

7 COMMISSIONER ARGENZIANO: If I may ask, and
8 I'm not sure if I've got it right or not, there's a
9 parent company. Do you work for the parent company
10 also?

11 THE WITNESS: No, I do not.

12 COMMISSIONER ARGENZIANO: Okay. And could
13 somebody total that up for me real quick?

14 THE WITNESS: On the interrogatory, the total
15 comes out to be 901,938.

16 COMMISSIONER ARGENZIANO: 901 --

17 THE WITNESS: 901,938.

18 COMMISSIONER ARGENZIANO: Thank you.

19 CHAIRMAN CARTER: Mr. Wright, you may proceed.

20 MR. WRIGHT: Thank you, Mr. Chairman. I do
21 have an exhibit that I would ask be marked --

22 CHAIRMAN CARTER: You may proceed.

23 MR. WRIGHT: -- as Exhibit 90.

24 CHAIRMAN CARTER: That will be Exhibit 90.

25 MR. WRIGHT: Exhibit 90.

1 CHAIRMAN CARTER: Title?

2 MR. WRIGHT: 1993 Tampa Electric FERC Form 1
3 excerpt.

4 CHAIRMAN CARTER: '93?

5 MR. WRIGHT: Yes, sir.

6 CHAIRMAN CARTER: 1993 TECO FERC Form 1. Is
7 that what you said?

8 MR. WRIGHT: Excerpt, yes, sir. I'm trying to
9 save as many trees as possible. The whole document is
10 150 pages.

11 CHAIRMAN CARTER: Okay.

12 (Exhibit 90 was marked for identification.)

13 BY MR. WRIGHT:

14 Q. Mr. Black, I'm confident that you're familiar
15 with the company's FERC Form 1s; is that accurate?

16 A. I'm familiar with the FERC Form 1s. I'm not
17 familiar with the 1993 version of it.

18 Q. Okay. Let me just direct your attention first
19 to what is actually the third page in the packet. It's
20 a signature page averring the veracity of the filing by
21 Mr. L. L. Lefler; is that accurate?

22 A. Yes.

23 Q. And if I could ask you now to turn to the page
24 that is third from the last, at the bottom of the page
25 in the FERC Form 1 system, it says page 304A.

1 A. Okay.

2 Q. If I could ask you to look at the column
3 headed Revenue, also headed C, and look down to line
4 70 -- actually, if you would look at line 82, does that
5 show that the company's total retail revenue for 1993
6 was approximately \$946 million?

7 A. That's what's indicated on this form. Again,
8 I can't speak to what's included in that or the basis of
9 that reporting.

10 Q. But these are forms that the company routinely
11 files with the Federal Energy Regulatory Commission?

12 A. That's correct.

13 Q. Did you know Mr. Lefler in your career?

14 A. I did.

15 Q. Have you heard the proposition or what you
16 might call the old saw that public utilities typically
17 ask the regulatory authorities for twice as much as they
18 need?

19 A. I've heard that. I would not agree with it.

20 Q. Fair enough. Before we go on to discuss your
21 1992 rate case and its outcome, I would like to discuss
22 the 1985 rate increase request briefly. Have I given
23 you a copy of Order 15451 yet?

24 A. I don't think so.

25 MR. WRIGHT: Mr. Chairman, my colleague has

1 just given the witness a complete copy of Order 15451.

2 BY MR. WRIGHT:

3 Q. Mr. Black, fortunately for all of us, I only
4 want you to look at page 2 of this order, and I just
5 want to ask you to confirm that in its 1985 filing, the
6 company requested an increase of \$136 1/2 million. For
7 your convenience, you can see that in the first
8 paragraph below Roman numeral II, Background of
9 Proceedings, on that page 2.

10 A. Yes, that's correct.

11 Q. And if you look in the next to last line of
12 that paragraph, will you also confirm that the company's
13 requested increase was based on a rate of return on
14 equity of 16 percent?

15 A. That's correct.

16 Q. Looking at the first paragraph on that page,
17 will you confirm -- actually, the first and third
18 paragraphs, will you confirm that the Commission granted
19 an initial increase plus two subsequent year rate
20 increases that totaled approximately \$63.8 million?

21 A. I'm sorry. I don't see that number.

22 Q. Well, if you look in the third line of the
23 first paragraph, it will say Tampa Electric -- it says
24 the company shall receive an increase in gross revenues
25 of \$45,663,000.

1 A. Correct.

2 Q. So far so good? Now if you'll look at the
3 last three lines of the third paragraph, I would ask you
4 to confirm that the order says that it awards the
5 company subsequent year revenue increases of \$10,408,000
6 and \$7,688,000 for 1997 and 1998 respectively.

7 A. That's correct. That's what it says.

8 Q. And if you want to verify my arithmetic,
9 you're welcome to, but I submit to you that if you add
10 those numbers together, you get \$63,779,000. Does that
11 sound about right?

12 A. Sounds about right.

13 Q. Okay. And will you also agree that the
14 Commission based rates and revenues for Tampa Electric
15 in its 1985 case on a rate of return on equity of 14 1/2
16 percent?

17 A. That's correct.

18 Q. I want to ask you about the 1992 case. And I
19 believe you still have a copy of the whole order there.

20 A. What was the order number on that one?

21 Q. 93-0165.

22 A. I have a 920324.

23 Q. That's docket number. The order number is
24 right above that, 93-0165.

25 A. Okay.

1 Q. If I could ask you to look at page 3 of that
2 order.

3 A. Okay.

4 Q. I just want to ask you to confirm that the
5 company's requested increases totaled \$63.5 million in
6 1993, with a subsequent year step increase in 1994 of
7 \$34.4 million.

8 A. That's correct.

9 Q. And the company -- is it also true that the
10 company asked that a 13.75 percent return on equity be
11 used to set its revenue requirements and rates in that
12 case?

13 A. Yes.

14 Q. If I could ask you to look at page 10 of that
15 order, I would like to ask you to confirm that the
16 Commission granted the company a total increase of
17 \$18,575,000 spread over the two years, 1993 and 1994.

18 A. That's correct.

19 Q. And that the Commission used a rate of return
20 on common equity for purposes of setting rates and
21 determining revenues at 12 percent.

22 A. That's consistent with the order. I think
23 it's important to realize that all of these cases were
24 set in a specific time with specific issues associated
25 with them, and that the case we have before us now needs

1 to be looked at in the context of the current conditions
2 and the current situation. But I would agree these
3 numbers are correct.

4 Q. Thank you. To try to expedite things, are you
5 familiar with the company's performance during the
6 1990s, Mr. Black?

7 A. Specifically what did you have in mind?

8 Q. Are you aware that in -- that the company
9 agreed to reduce its rate of return on equity to
10 11.35 percent in -- I'm sorry. The year has escaped me.
11 In 1994.

12 A. That may be correct, but I don't have any
13 knowledge of it, and I wasn't involved with that
14 activity.

15 Thank you.

16 MR. WRIGHT: Mr. Chairman, my colleague has
17 just handed Mr. Black a copy of Commission Order
18 94-0337-FOF-EI.

19 BY MR. WRIGHT:

20 Q. I would like to ask you to look at page 2 of
21 that order, Mr. Black. If you'll look at the second
22 paragraph, will you agree that the order recites that
23 TECO filed a formal proposal on October 7th, 1993, to
24 reduce its ROE to 11.35 percent and implement a storm
25 damage reserve of \$4 million a year for the succeeding

1 four years?

2 A. That's correct.

3 Q. And are you aware that the company agreed to
4 absorb that \$4 million storm accrual out of existing
5 rates without increasing those rates?

6 A. My understanding is that the \$4 million was
7 roughly equivalent to the insurance premium that we had
8 been paying for T&D insurance that was no longer
9 available, so it was somewhat of an offset.

10 Q. Understanding that it was an offset, isn't it
11 true that the answer to my question is yes?

12 A. Yes.

13 Q. Are you aware of the company agreeing to
14 stipulated refunds for overearnings for 1995, 1996,
15 1997, and 1998?

16 A. I'm aware that there was a stipulation. The
17 details of that stipulation I wasn't involved with and
18 really am not in a position to speak to the details of
19 it.

20 Q. Well, subject to -- I'm trying to be as
21 efficient as I can, Mr. Chairman, without trying to hand
22 out six more orders. Will you agree, subject to
23 verification by reference to Commission orders, that in
24 1996, the company agreed to a one-time refund of
25 \$25 million for 1995 and 1996 overearnings?

1 A. Subject to verification, yes.

2 Q. And also, in 1997, the company agreed to an
3 additional refund of \$25 million for 1996 overearnings,
4 and subject to verification by reference to the
5 appropriate Commission order?

6 A. Yes.

7 Q. And that in 2000, the company agreed to a
8 one-time refund of \$13 million for 1997 and 1998
9 overearnings?

10 A. Yes.

11 Q. And in 2002, pursuant to a hearing, the
12 company was ordered to make a further one-time refund of
13 \$6.3 million for 1999 overearnings? Again, all this is
14 subject to verification by the orders.

15 A. Yes.

16 Q. Okay. So the company was really doing fine,
17 at least into 2001 and 2002, wasn't it?

18 A. Well, I think the company has been able to
19 manage since 1992 without having to come back and ask
20 for a base rate increase. There have been several
21 things that occurred in the interim that you've
22 referenced that have been part of how we've been able to
23 stay out. But the situation was such that we did not
24 need to come and seek base rates under that period, so
25 if that's what you mean by doing fine, I guess I would

1 agree.

2 Q. Well, I think what I would ask you is this.
3 Isn't it true that you were doing so well that not only
4 you didn't have to come back and ask for a rate
5 increase, you had to give money back during that time?

6 A. There were some refunds. My understanding was
7 that some of those were associated with new large
8 capital units coming into service, and those refunds
9 served to smooth the rates a little bit. There were a
10 lot of very specific things going on during that time,
11 and I think it's important as we look at those
12 situations in those particular orders to completely
13 understand the comprehensive sets of circumstances that
14 were in play at the time.

15 Q. Will you agree that the company was earning
16 near, at, or above its authorized rate of return for
17 most of the time period from 1993 through at least 2002?

18 A. I can't verify that.

19 Q. Isn't it true that the company was earning
20 within its authorized range as recently as last year?

21 A. That's correct.

22 Q. At page 20 -- I'm changing lines, just so
23 everybody will know. At page 20, Mr. Black, you make
24 the statement that the company has carefully evaluated
25 all options before making this request; correct?

1 A. I'm sorry. Page 20 of the order we're looking
2 at?

3 Q. I'm sorry, Mr. Black. Page 20 of your
4 testimony.

5 A. Yes.

6 Q. I want to ask you some specific questions
7 about what you did or did not consider. Did you
8 consider not asking for the combustion turbines to be
9 included in rate base?

10 A. We considered not asking for that, but we felt
11 that since the gas combustion turbines were being placed
12 in service in the test year and would provide benefits
13 to our customers for every year thereafter, it was
14 appropriate to include them. But it was considered.

15 Q. Did you consider at least not asking for the
16 total annualized revenue requirements to be included in
17 2009?

18 A. We also considered that. But again, we
19 believed that since they are going in service in the
20 test year, but more importantly, will provide benefits
21 to our customers every year thereafter, that it was
22 appropriate to seek annualization of those.

23 Q. In response to a question by Ms. Christensen,
24 I believe you indicated that the company is considering
25 deferring the in-service dates of the combustion

1 turbines; is that accurate?

2 A. That's one of the options we're currently
3 evaluating.

4 Q. And the company does have control over that
5 decision such that you could make the decision not to
6 bring them on line at all in 2009?

7 A. We have some flexibility with the turbines
8 that are scheduled to go in service in September. The
9 ones that are scheduled to go in service in May are far
10 enough down the construction road that I don't know that
11 there's a whole lot of savings associated with not
12 bringing those into service. But we do have some
13 flexibility with the units scheduled for September.

14 Q. Did I understand some earlier testimony
15 correctly that -- or maybe it was Mr. Willis's opening
16 statement, that there are two combustion turbines
17 scheduled to come on line in May and three in September?

18 A. That's correct.

19 Q. Thank you. Considering that the rail
20 facilities won't be in service until December, did you
21 consider not asking for the rail facilities to be
22 included in rate base for the test year in this case?

23 A. Again, we did consider that. The logic was
24 similar. The rail facilities provides very significant
25 fuel benefits to our customers and will provide those

1 benefits from the time it goes in service going forward.
2 If we had not included it, we basically would be in a
3 situation where we would not be getting rates to cover
4 that investment which are benefiting in a significant
5 way our customers, so we felt the annualization again
6 was appropriate.

7 Q. Well, you'll agree they're not providing
8 benefits at all before December, won't you?

9 A. That's correct. It's going to go in service
10 in December.

11 Q. And we also agree that the company, Tampa
12 Electric Company, chose the test year upon which it
13 filed its case?

14 A. Yes, we did.

15 Q. So wouldn't it be true that you could have
16 waited for a rate increase altogether and filed for a
17 2010 test year?

18 A. That was an option. But when considering the
19 financial deterioration of the company and the projected
20 return on equity for 2009 that we were looking at, we
21 felt that it was a situation that we could not defer the
22 test year for another year.

23 Q. And when you say you made the decision you
24 could not defer the test year, does that include your
25 making the determination that you considered but

1 rejected the option of waiting to file a rate case --

2 A. Yes.

3 Q. -- until later in 2009?

4 A. Yes.

5 Q. Thank you. Is it the company's position that
6 you would rather increase rates now in order to increase
7 the company's storm reserve so that you wouldn't have to
8 resort to seeking a surcharge in the aftermath of a
9 storm?

10 A. As described by Mr. Carlson and Mr. Harris, we
11 believe that the recovery through the storm damage
12 accrual on an annual basis is a more cost-effective way
13 to fund any potential storm damages, particularly if the
14 total amount is less than the 120 to \$150 million range.
15 So we did consider the other options available to us,
16 that being a surcharge and securitization, but we
17 believe that recovery through a storm damage accrual is
18 a smoothing and a more appropriate way to recover those
19 costs.

20 Q. Did you consider the prospects both of a
21 surcharge, such as was implemented by Progress Energy,
22 and securitization, such as was implemented by Florida
23 Power & Light Company?

24 A. Yes, we did.

25 Q. Would it be your opinion or policy that Tampa

1 Electric doesn't want to raise rates when your customers
2 are hurting?

3 A. Our policy would be that we have an obligation
4 to provide service to our customers over a long period
5 of time, and we need to do that in the lowest cost way
6 that we can. We recognize that the economic times are
7 tough, but it's important to maintain the economic
8 viability of the company on a long-term basis.

9 Q. Tampa Electric serves pretty much all of
10 Hillsborough County, does it not?

11 A. That's correct.

12 Q. And a substantial amount of what is generally
13 known as the Tampa Bay area?

14 A. We serve all the areas of Hillsborough County
15 and portions of Polk, Pasco, and Pinellas County.

16 Q. Are you generally familiar with economic
17 situation in the Tampa Bay area, Mr. Black?

18 A. Yes.

19 Q. Are you familiar with the level of
20 foreclosures on real estate?

21 A. I know that it's gone up considerably.

22 MR. WRIGHT: Mr. Chairman, I'm having another
23 exhibit distributed.

24 CHAIRMAN CARTER: You need to mark --

25 MR. WRIGHT: Ninety-one, I believe.

1 CHAIRMAN CARTER: Ninety-one. Title?

2 MR. WRIGHT: News article re Florida

3 foreclosure rates, January 16, 2009.

4 (Exhibit 91 was marked for identification.)

5 BY MR. WRIGHT:

6 Q. Mr. Black, are you familiar with the

7 tampabay.com website?

8 A. No, I'm not.

9 Q. I would like to ask you to look at the second
10 -- well, actually, the third page of the handout,
11 counting the cover sheet as the first page. Starting
12 from the top, if you would look at the item numbered 4,
13 it states that the Tampa Bay area ranked 13th in 2008
14 among major metro areas in foreclosure filings. That is
15 what the article says; correct?

16 A. I'm sorry?

17 Q. It is correct that this article says that the
18 Tampa Bay ranked 13th in 2008 among major metro areas
19 with regard to foreclosure filings?

20 A. Yes, it is.

21 Q. Is that generally consistent with your
22 knowledge of the real estate market in the Tampa Bay
23 area?

24 A. It is. As I discussed earlier, the
25 consideration of foreclosures and the general economic

1 condition is an issue that we considered as we put this
2 case together. And through our conservation efforts and
3 our rate design, we've tried to mitigate the impact of
4 that to the extent that we can.

5 We believe, again, that over the long term,
6 it's important for us to be able to access the capital
7 markets and to do that at rates that provide our
8 customers the lowest cost. If we are not able to access
9 the capital markets, we cannot make the investments that
10 we need to make to provide the reliable service to our
11 customers. And that's the balance that we try to
12 strike, and that's the basis on which we've gone forward
13 with this rate case.

14 Q. Mr. Black, did you attend the service hearings
15 in Brandon or Winter Haven in this rate case?

16 A. No, I didn't. I did not.

17 Q. Are you aware that the majority of the
18 citizens who spoke opposed the company's rate case?

19 A. I'm aware that those that appeared generally
20 were not supportive of the rate base. It's also my
21 understanding that between the two service hearings, we
22 had roughly 40 of our 667,000 customers appear.

23 MR. WRIGHT: I'm changing lines, Mr. Chairman.

24 BY MR. WRIGHT:

25 Q. I want to ask you a few questions about what

1 you testify, Mr. Black, regarding an appropriate rate of
2 return on equity. My first question for you is this:
3 What risks does Tampa Electric Company face that you as
4 the president of the company would assert justify a
5 12 percent after-tax return on common equity?

6 A. Mr. Gillette and Mr. Murry can speak to the
7 details of how we arrived at the 12 percent, but the
8 basis, the policy is that we want to have a return on
9 equity that allows the company to achieve an A bond
10 rating. We believe that maintaining an A bond rating is
11 an essential factor for us to be able to access capital
12 markets for the lowest costs for our customers. The
13 major disruptions that we've seen in the financial
14 markets recently have indicated that companies that have
15 higher credit ratings have significantly more access and
16 significantly lower costs in the capital markets.

17 So the strategy is to identify a return on
18 equity that's necessary to move our company to an A bond
19 rating, and we believe that's necessary to fund our
20 capital expansion program going forward. So that's the
21 basis for the 12. How the 12 was arrived at technically
22 is better addressed by Mr. Gillette and Dr. Murry.

23 Q. I did ask you a specific question, and if you
24 could either say yes, no, or I don't know, or I have no
25 opinion, I would appreciate it. The question was, what

1 risks does the company face that you as the president of
2 the company would assert justify a 12 percent after-tax
3 return on common equity?

4 A. I think our risks are, number one, the risk
5 that we have access to the capital markets, and that's
6 the basis of my previous answer. We also suffer the
7 risk of hurricanes. We have the risk of economic
8 downturns that affect our business, increases in our
9 costs. We have normal business risks included in our
10 business, and those are all things that go into the
11 calculation.

12 Q. Do you believe that the company faces any
13 significant risk of not being able to cover your
14 operating costs?

15 A. Again, if the question is in the context of
16 are we going to have a positive net income, I think I
17 would feel comfortable that we're going to have a
18 positive net income.

19 Again, just covering our operating costs I
20 don't believe should be the basis of our discussion
21 here. We need the ability to fund our extensive capital
22 program, and that's the requirement associated with the
23 return on equity. Many of the capital programs that we
24 face are not a function of customer growth. Things like
25 the transmission and distribution hardening activities,

1 some of the environmental work that we're doing, some of
2 the efficiency improvement things are not associated
3 with customer growth, and therefore, they need to go
4 forward, and we need to have the financial strength to
5 be able to accomplish that.

6 Q. Mr. Black, I understand your justification for
7 the return on equity. If you answered my last question,
8 I did not hear the answer. And my question was, do you
9 believe the company faces a significant risk of not
10 being able to cover its operating costs?

11 A. I do not believe the company has a significant
12 risk with respect to covering our operating costs.

13 Q. Thank you. Do you believe that the company
14 faces any significant risk of not being able to pay its
15 debt service?

16 A. Based on the economic conditions that we're
17 facing now, ability to support the debt service may be
18 an issue. Currently it's not. We don't believe it will
19 be, but it's not beyond the realm of possibility.

20 Q. In your 35 years with the company, has Tampa
21 Electric ever defaulted on its debt?

22 A. Not that I'm aware of.

23 Q. I want to put a proposition to you and ask
24 whether you agree with it. Here it is. Absent a
25 finding of gross imprudence, the Florida Public Service

1 Commission would ensure that Tampa Electric Company or
2 any other Florida investor-owned utility would have
3 sufficient funds available to pay its debt service.

4 A. I believe that's correct.

5 Q. Are you familiar with the relationship between
6 the after-tax ROE of 12 percent that the company is
7 asking for and the pre-tax ROE necessary to generate
8 that after-tax return?

9 A. No, I'm not. That would be better dealt with
10 with Mr. Gillette or Dr. Murry.

11 Q. You made the statement in some of your
12 explanatory remarks in response to my questions that you
13 believe that customer costs will be the lowest if you
14 have a high bond rating. My question -- that's an
15 accurate characterization of what you said, is it not?

16 A. Yes.

17 Q. My question for you is, have you analyzed the
18 difference between the total cost to the customer of
19 having a rate of return on equity of 12 percent as
20 compared, say, to 9.75 as advocated by our witnesses,
21 versus the increased borrowing costs that you might
22 incur if your bond rating stayed about where it is?

23 A. I believe we have, and Mr. Gillette and
24 Dr. Murry can speak to that. I would offer that in
25 addition to a total cost analysis, it's also important

1 to have access to the markets, and some of the
2 disruptions in the markets that we've seen over the last
3 two, two and a half months, there have been times when
4 access was not available in the markets for people that
5 had lower credit ratings. So it's not only a cost, but
6 it's an access issue.

7 Q. Are you specifically aware of any public
8 utility company in the United States with a BBB rating
9 that was not able to access capital in the last two and
10 a half months?

11 A. My understanding was that there was some, but
12 I would defer to Mr. Gillette on the specifics for that.

13 Q. In response to an earlier question regarding
14 risks that the company faces, you mentioned the risk of
15 exposure to storm damage, hurricanes and tropical
16 storms.

17 A. Yes.

18 Q. Is it your observation that the Florida Public
19 Service Commission ensures that the companies it
20 regulates recover one way or another the reasonable and
21 prudent costs associated with restoring service
22 following storms?

23 A. That has been the history. At the same time,
24 there have been situations like the Katrina storm in
25 New Orleans where the damage was so great, it was a

1 matter that the customer base did not exist to fund any
2 surcharges or securitization that may be out there and
3 available. So under those type of circumstances, it
4 could be a situation where there would not be a
5 mechanism for recovery. However, we've never seen that
6 in the state of Florida.

7 Q. We didn't see it with Andrew?

8 A. Not --

9 Q. We didn't see it with Wilma?

10 A. -- to my knowledge.

11 Q. We didn't see it with Ivan?

12 A. Not to my knowledge.

13 MR. WRIGHT: Madam Chairman Pro Tem, I am
14 having distributed --

15 COMMISSIONER EDGAR: Yes, Mr. Wright.

16 MR. WRIGHT: I am having distributed an
17 exhibit that I would ask me marked as Exhibit 92.

18 COMMISSIONER EDGAR: We will mark it as 92.
19 Will you give us a title?

20 MR. WRIGHT: Yes. Florida PSC typical
21 residential bill summaries.

22 COMMISSIONER EDGAR: So titled.

23 MR. WRIGHT: Thank you.

24 (Exhibit 92 was marked for identification.)

25 BY MR. WRIGHT:

1 Q. Mr. Black, this brief line of questions goes
2 to your testimony at page 23 of your testimony where you
3 claim that Tampa Electric has worked very hard to
4 establish itself as a low cost provider of high quality
5 electric service, while being sensitive to the interests
6 of our customers and the environment in which we live.
7 I'm sure you're familiar with that testimony.

8 A. Yes.

9 Q. I'm going to ask you to look at the three
10 pages that are included in this exhibit. I will aver to
11 you that these are printed from the Florida Public
12 Service Commission's website at different times during
13 2008. Actually, the last one was printed this month in
14 January of 2009. Have you seen documents like this
15 before?

16 A. I haven't seen this particular document, but
17 I've seen rate comparison sheets like this, yes.

18 Q. Okay. Will you agree that early in 2008
19 before what we all experienced as the big fuel cost
20 run-up, Tampa Electric's rates were the highest of the
21 four major investor-owned utilities in Florida?

22 A. The numbers would indicate that that's
23 correct. However, I need to point out that the Florida
24 Power & Light and the Progress Energy rates are already
25 inverted, which causes the 1,000 kWh bill to appear

1 lower than the Tampa Electric rate, which is flat during
2 2008.

3 Q. Same question for the period August through
4 December of 2008. After Florida Power & Light and
5 Progress Energy implemented mid-course fuel charge
6 corrections, will you agree that Tampa Electric's rates
7 were still the highest?

8 A. I would, with the same modifier that both
9 Power & Light and Progress had inverted rates in 2008,
10 and we did not.

11 Q. And will you agree that as of today, Tampa
12 Electric still has the second highest rates, behind only
13 Progress Energy Florida, of the four major IOUs?

14 A. I would. But again, only the fuel portion of
15 our rate is currently inverted, and when the base rate
16 -- if that is approved, that would also change the
17 relationship here.

18 Q. Well, in fact, but for Progress Energy's
19 11-plus dollar nuclear cost recovery surcharge, Tampa
20 Electric would be higher than Progress too, wouldn't it?

21 A. Yes. Again, I don't know what that would look
22 like with the inversion, but based on the current rates,
23 that's correct.

24 Q. Yes, sir. I just have I think one or possibly
25 two final questions, Mr. Black. Would you agree with me

1 that when Tampa Electric Company filed its rate requests
2 in 1985 and 1992, the company believed that it needed
3 every cent of what it asked for and that it needed the
4 rates of return on equity that it asked the Commission
5 to approve in those cases?

6 A. I wasn't directly involved with those cases,
7 and I really can't make that assessment. But what I can
8 attest to is that the case that's before us now is a
9 very reasonable and credible representation of what we
10 believe our requirements to be. I'm sorry. I wasn't
11 involved with those cases and really can't speak to the
12 basis of how they were put together.

13 Q. Well, would you agree that the company
14 believed it needed all the money it asked for?

15 A. I'm sorry?

16 Q. Would you agree that the company believed when
17 it made those filings that it needed all the money it
18 asked for?

19 A. I believe that they did think they needed all
20 the money that was being requested. At the same time,
21 as I discussed earlier, I think you have to look at what
22 was going on at that time and some specific events that
23 may have made those reductions in the request workable
24 for both the company and our customers. And I think you
25 have to look at it comprehensively. You can't just go

1 in and pick out specific relationships without looking
2 at the whole case.

3 MR. WRIGHT: Thank you very much. Madam
4 Chairman, I have no further questions of Mr. Black.
5 Thank you, Mr. Black.

6 COMMISSIONER EDGAR: Thank you, Mr. Wright.
7 Mr. Twomey, do you have questions on cross?

8 MR. TWOMEY: Yes, Madam Chair, just briefly.

9 CROSS-EXAMINATION

10 BY MR. TWOMEY:

11 Q. Good afternoon, Mr. Black. I'm Mike Twomey
12 for AARP again.

13 A. Good afternoon.

14 Q. Were you in -- did you hear that portion of my
15 prehearing statement where I averred that I believed
16 your cost in terms of the annual revenue requirements
17 for one percentage point of your equity was in the
18 neighborhood of \$20 million?

19 A. Yes, sir, I did.

20 Q. And that consequently, the spread between the
21 12 percent testified by your expert and the 9.75 percent
22 testified to by Office of Public Counsel's expert would
23 equate to about \$45 million?

24 A. I did.

25 Q. I was wrong, wasn't I?

1 A. At least with the 100 basis points of ROE.

2 Q. I've been shown a Late-filed Deposition
3 Exhibit Number 4 produced by your witness Chronister,
4 which, if my math is correct, suggests that -- well,
5 states that a drop from 12 percent return to 10 percent
6 would be about 29.9 million per percentage point. Is
7 that correct to your knowledge, per point?

8 A. The rule of thumb that I normally use is one
9 percent point is about \$30 million.

10 Q. And if that's correct, then the spread between
11 your expert's 12 percent and Public Counsel's expert of
12 9.75 would be more on the order of 67.5 million,
13 correct, if my math is right?

14 A. That sounds right if the math is right, yes.

15 MR. TWOMEY: Thank you very much. That's all.

16 THE WITNESS: Thank you.

17 COMMISSIONER EDGAR: Mr. Moyle, I believe you
18 did not ask questions previously on cross; is that
19 correct?

20 MR. MOYLE: I have a few, if I could.

21 CROSS-EXAMINATION

22 BY MR. MOYLE:

23 Q. Just to follow up on Mr. Twomey's,
24 Mr. Herndon, the expert for FIPUG, has suggested a 7 to
25 8 percent return. If the Commission went with 8, the

1 difference between 8 and 12 is 4. Four times 30 million
2 would be a \$120 million spread; correct?

3 A. That's the correct math.

4 Q. So that would take your rate increase from 228
5 down to, I guess, 108 million or so, give or take?

6 A. Again, the math is correct. As we have stated
7 and will follow up with our subsequent witnesses, we
8 don't believe the 7 1/2 percent return on equity is at
9 all reasonable and will provide testimony that supports
10 that. But the math is correct.

11 Q. Have you read the Prehearing Order in this
12 case?

13 A. Yes.

14 Q. So you're aware that there has been an order
15 entered that says witnesses -- I quote, "Witnesses are
16 reminded that on cross-examination, responses to
17 questions calling for a simple yes or no answer shall be
18 so answered first, after which the witness may explain
19 his or her answer." You're familiar with that; correct?

20 A. Yes.

21 Q. I'm going to ask you some yes or no questions.
22 I would ask you, if you would, to comply with the order
23 when answering those, and your counsel will have a
24 chance afterwards to clear things up if need be on
25 redirect. That's typically how it works, so I would --

1 MR. WILLIS: I would also point out,
2 Mr. Moyle, that the witness has been given the latitude
3 to explain an answer and not required just to provide a
4 yes or a no. They're able to explain their answer
5 afterwards.

6 COMMISSIONER EDGAR: Mr. Willis, through the
7 Chair, please.

8 Mr. Moyle, I obviously have also read the
9 Prehearing Order and agree that it does direct a yes or
10 no if possible to begin with, but I will give the
11 witness latitude to explain his answer if indeed he
12 feels the need.

13 MR. MOYLE: Sure. And I don't think I was
14 trying -- I mean, I read the portion of the order that
15 says you can explain, but please give use a yes or no.

16 COMMISSIONER EDGAR: Okay. Questions for the
17 witness?

18 BY MR. MOYLE:

19 Q. A couple of things. I have some prepared
20 questions for you, but I want to clear up a couple of
21 points that were raised. As we sit here today -- and I
22 don't really want to get into your personal business,
23 but since the ratepayers help contribute, what is your
24 total compensation package for 2008? You know, without
25 having to look at an interrogatory or anything, can you

1 tell the Commission what your total compensation package
2 for 2008 is?

3 A. Those were the numbers that I responded to
4 Commissioner Argenziano's question.

5 Q. Okay. So what's the number?

6 A. It's right around \$900,000.

7 Q. Okay. Now, as president, are you sort of the
8 quarterback of this rate case, if you will? Would that
9 be a fair characterization?

10 A. I'm more like the head coach, I think, than
11 the quarterback.

12 Q. Okay. And we'll assume that the head coach is
13 sort of the one making the calls, that we don't have to
14 go to the general manager. Is that okay for this
15 analogy?

16 A. Okay.

17 Q. Mr. Wright asked you questions about your
18 previous rate cases that Tampa Electric has been in and
19 showed you orders. Were you aware before today that
20 those were the results of Tampa Electric's previous rate
21 case filings?

22 A. Yes, I was. I've been employed with the
23 company for a long time and was part of the company when
24 those actions were taken. So I was aware of them, but
25 I'm not aware of the details that surrounded the

1 circumstances.

2 Q. I presume that in preparing for this case that
3 the previous actions of this Commission informed your
4 judgments. Am I correct in that presumption?

5 A. No. In preparing for the case, we really
6 looked at the situation that we have at hand, what our
7 situation is and what we believe we need to have going
8 forward, and that's the basis of the case that we
9 presented.

10 Q. So you didn't look at it and say, "Well,
11 geeze, in '85 we took a 50 percent haircut, and in '92
12 we took an 80 percent haircut. You know, we need to be
13 prepared to take somewhat of a haircut in this
14 proceeding"? You didn't go through that type of
15 analysis at all in this case? Is that your testimony?

16 A. Absolutely not.

17 Q. Okay. So then you're telling us that -- I
18 mean, there were questions about these CTs coming on
19 line, and I thought you said that, well, maybe three CTs
20 can be pushed back, that you're considering contingency
21 plans for that; is that correct?

22 A. That's correct. That contingency occurred
23 after we made our filing, and we continue to evaluate
24 that.

25 Q. Okay. As we sit here today, you're going to

1 have to make a judgment on that. Hasn't your growth
2 slowed down considerably in terms of new customers?

3 A. Our new customer growth has slowed down.
4 That's a yes. However, our peak demand has not slowed
5 down commensurate with the slowdown in customer growth
6 and energy sales.

7 Q. As we sit here today, if you had to make a
8 call, are we going to put those additional three CTs in
9 in 2009, could you make it?

10 A. I don't know. We'll have to take a look at
11 the demand and energy forecasts in the full-blown
12 analysis work that we do in support of our Ten-Year Site
13 Plan, and we should be able to know at that time where
14 we need to slot those units.

15 Q. Okay. So since you don't know, I'm correct to
16 say it's uncertain as to whether those three CTs need to
17 come in in '09 or not; correct?

18 A. I think that's correct, yes.

19 Q. Okay. Now, a similar question about the rail
20 facilities. Those are looking to come in in December of
21 2009, correct, so you've got one month of the test year
22 where the rail facilities would be in service?

23 A. That's correct.

24 Q. And that wasn't an issue that was looked at as
25 maybe a place where there could be some trimming of

1 hair, the rail facilities?

2 A. No. The basis for the rail facility was that
3 we have a contract with CSX to begin to take deliveries
4 beginning January the 1st. In order for us to be
5 prepared to execute our part of that contract, we had to
6 have facilities in service prior to January the 1st,
7 which currently means our plan is to have them in
8 service in December.

9 Q. Now, in response to a question Mr. Wright
10 asked you, he asked you, I think, about what risks you
11 face, and I wrote down the notes on your answer, but
12 tell me if I'm characterizing sort of an essential
13 position of TECO in this case. You think a 12 percent
14 return is necessary to get an A rating, which will
15 ensure access to capital markets. Is that essentially
16 correct or essentially TECO's position?

17 A. Essentially provide access and lower costs for
18 our customers.

19 Q. Okay. Has TECO ever been rated -- and TECO, I
20 say Tampa Electric, the regulated company. Has that
21 ever been rated A previously in its history?

22 A. I believe that it has. Mr. Gillette can speak
23 to that. I don't know the specifics, but I believe we
24 have achieved an A rating at certain times in the past.

25 Q. Do you know if you have recently, since you've

1 been with the company?

2 A. Well, I've been with the company for 35 years,
3 and during that period, I believe we've achieved an A
4 rating.

5 Q. I'll get into some of that with Mr. Gillette.
6 2008 has just concluded. You're on an
7 accounting year that coincides with the calendar year;
8 correct?

9 A. That's correct.

10 Q. Did Tampa Electric do okay in 2008?

11 A. We're still in the process of finalizing our
12 year-end numbers and are not prepared to release those
13 numbers at this time. But reporting through three
14 quarters, which is public information, our revenues were
15 considerably off of our projection, and we would expect
16 that the year-end numbers are going to represent that as
17 well.

18 Q. And you also projected a return on equity of
19 about 9.4 percent for 2008?

20 A. That's correct, based on our latest
21 assessment. Again, until our books are closed and the
22 auditors have finished their work, we can't really
23 certify it, but at this point, it looks like that number
24 is closer to 8.7 as opposed to 9.4.

25 Q. And you haven't been downgraded by any rating

1 agencies in the last 12 months, have you, Tampa Electric
2 Company?

3 A. No, I don't believe we have.

4 Q. And those rating agencies, they track things
5 like projected return on equity; correct?

6 A. I'm not clear on what their basis is. Again,
7 Mr. Gillette and Ms. Abbott would be able to speak to
8 the specifics of what the rating agencies really use in
9 the determination for their ratings.

10 Q. All right. I have some questions that center
11 on some of your direct testimony. But since the last
12 rate case, Tampa Electric has made considerable
13 investments in new generation; correct?

14 A. That's correct.

15 Q. And also in transmission and distribution
16 system?

17 A. That's correct.

18 Q. And Tampa Electric -- if I say Tampa Electric
19 or TECO, it's the same thing. If I say TECO Energy, I'm
20 referring to the parent. Are we okay on that?

21 A. That's fine.

22 Q. Tampa Electric was able to access capital
23 markets to help finance its generation projects;
24 correct?

25 A. That's correct.

1 Q. And it was also able to access these financial
2 markets for its transmission and distribution?

3 A. That's correct. That was also done in a time
4 period where our ROE was considerably higher than what
5 it is -- what it was for 2008 or what we project it to
6 be for 2009.

7 Q. Let me direct you to page 19 of your
8 testimony, specifically, line 20. You point to the
9 direct testimony of witness Abbott and seem to indicate
10 that being unable to access capital markets and fund
11 company needs will increase costs, decrease reliability,
12 and eventually result in higher costs to consumers. Do
13 you see that?

14 A. I do.

15 Q. Okay. I'm a little unclear. Is that your
16 testimony, or are you just pointing out that that is the
17 testimony of Ms. Abbott?

18 A. I'm pointing out that that's the testimony of
19 Ms. Abbott.

20 Q. So you're not offering that as your testimony;
21 correct?

22 A. I believe that to be true in a general sense,
23 but the specifics of the details of how you arrive at
24 that are included in M. Abbott's testimony.

25 Q. Okay. So I would be probably better off

1 digging into that with Ms. Abbott than you in terms of
2 access to markets and things like that?

3 A. Yes.

4 Q. Tampa Electric was founded in 1899; correct?

5 A. That's correct.

6 Q. To your knowledge, has Tampa Electric ever
7 been completely shut out of the capital markets?

8 A. I know that in the recent past, we've
9 considered moving up some debt issues that we had in our
10 plan, and because of the situation in the debt markets,
11 we were not able to get that done. So, yes, recently we
12 have had some interest in doing some debt, but we did
13 not feel that the market would allow us access.

14 Q. I'm unclear on that. Have you ever gone to
15 the market with an offering and have been unable to
16 place the debt?

17 A. We've not.

18 Q. Okay. So with respect to being unable to
19 access capital markets since 1899, then the answer would
20 be that you've been able to access capital markets for
21 over 100 years as far as you know with respect to Tampa
22 Electric's history; correct?

23 A. We've been able to access the markets, but as
24 I discussed, recently as we looked at the markets, the
25 access and the rates that were out there were such that

1 we decided not to go forward. Whether or not we could
2 have had access, I don't know, but we've not actually
3 made a filing that I'm aware of and not had access to
4 the capital markets.

5 Q. Do you have current plans to go into the debt
6 markets as we sit here today?

7 A. We have some debt scheduled to be issued later
8 this year.

9 Q. When?

10 A. I believe it's November.

11 Q. And in the period to which you are referring
12 where you had some thoughts about maybe trying to go in,
13 is that for a two-week period in September of 2008 that
14 you're referring to when there was a severe tightening
15 of credit markets?

16 A. I believe it was later than that, but
17 Mr. Gillette could provide the specifics on it.

18 Q. But the period of time which you're talking to
19 was limited; correct?

20 A. Yes.

21 Q. Are you aware whether the debt markets for
22 triple-B rated companies are currently functioning?

23 A. My understanding is that they're functioning.
24 There is access for triple-B companies, but the rates
25 are higher than historically you would expect to see

1 there.

2 Q. And you've been with the company for 30 years.

3 I mean, rates fluctuate, do they not?

4 A. They do.

5 Q. Have you done any kind of an analysis or
6 probability study to indicate what chances there may be
7 that Tampa Electric with a triple-B rating is unable to
8 access the capital markets?

9 A. Ms. Abbott can speak to the specific analysis.
10 I'm not aware of a probability type analysis, more just
11 a general knowledge that lower rated companies in times
12 that the markets are in disruption are going to have
13 access issues before higher rated companies.

14 Q. And I think that's sort of consistent, is it
15 not? I mean, if I were going to a bank to borrow money
16 and I had a net worth of \$10 million as compared to a
17 net worth of \$50,000, the bank would be more inclined to
18 make a loan to someone with a higher net worth, correct,
19 all things being equal?

20 A. All things being equal. I think in the
21 context of companies as opposed to individuals, it
22 drives off the bond rating.

23 Q. The question about the probability study, I
24 would think that with the electric company being an
25 electric company that has capital needs, that if you had

1 a concern about being able to access capital markets at
2 all, there would be some effort to quantify that. As
3 you sit here today, you haven't made any effort as
4 president of the company to quantify that risk?

5 MR. WILLIS: I object to Mr. Moyle's question,
6 which contained his own testimony before he asked a
7 question.

8 COMMISSIONER EDGAR: Mr. Moyle, can you
9 rephrase?

10 MR. MOYLE: Sure. All I'm trying to do is
11 understand. I mean, TECO is suggesting that there's a
12 concern about accessing capital markets, that they may
13 not be able to get there without an A, and I'm trying to
14 understand whether TECO has informed itself with any
15 kind of a study or an analysis or a document --

16 COMMISSIONER EDGAR: So the question for the
17 witness is?

18 MR. MOYLE: Yes, that would put the
19 probability of TECO being denied access to the capital
20 markets.

21 A. I'm not aware of a study that provided a
22 quantitative probability as much as a qualitative
23 assessment of the markets, particularly based on their
24 recent volatility.

25 Q. Okay. Again on page 19, this is the quote I

1 read you, but you talk about the inability to access
2 capital markets could eventually result in higher costs
3 to customers. Do you have information as to when
4 customers might eventually see increased costs as a
5 result of inability or having to pay higher interest
6 rates in the capital markets?

7 A. To the extent that our debt costs are higher,
8 then that will ultimately result in our projects, our
9 capital investments costing more, and through rate
10 proceedings such as this one that would ultimately flow
11 back to the customers. It would depend on when we filed
12 a case.

13 Q. Okay. But if I understand it, then, the
14 higher potential debt costs wouldn't be realized by my
15 clients and AARP's clients and others unless and until
16 you file another rate case; correct?

17 A. That would be correct. However, the magnitude
18 of that premium that we had to pay may cause us to take
19 rate action that we might not otherwise have to do.

20 Q. Okay. And I'm just -- you know, at this
21 point, I'm talking about a timing aspect. Customers, if
22 you have to pay a little higher on the debt because
23 you're triple-B and not A, they would see that increase
24 cost at your next rate case?

25 A. They would see it at the next rate case, and

1 they would see it over the life of those bonds, which is
2 a very substantial period of time.

3 Q. Okay. And Mr. Wright asked you if you had
4 done an analysis to compare, you know, higher ROE
5 requirements as compared to what you might pay in higher
6 debt costs, and I think you said check with Ms. Abbott
7 or Mr. Gillette; correct?

8 A. That's correct.

9 Q. All right. And we'll do that.

10 With the ROE request, which you said is
11 \$30 million per point, wouldn't ratepayers see that --
12 if the Commission approved the 12 percent, wouldn't they
13 see that in their rates this summer?

14 A. That would be correct.

15 Q. So from a consumer's standpoint, the consumer
16 would prefer lower ROE, I'll take the risk on the debt
17 that may go up, and I'll see it in my next rate case, as
18 compared to getting hit with higher ROE this summer,
19 wouldn't you agree?

20 A. No, not necessarily. I think from the
21 customer's perspective, a lot of the decisions that
22 utilities make are based on total life cycle costs, not
23 what the cost is right now. And I think to the extent
24 that a higher bond rating translates to lower total
25 capital investment costs, it may be in the customer's

1 long-term best interest to go ahead and pay those
2 additional funds now.

3 Q. But there's no analysis on that that you can
4 point to as we sit here today; correct?

5 A. Not that I can point to, no, sir.

6 Q. Going back to Mr. Wright's previous rate
7 cases -- I use the term "haircut." That's colloquial.
8 We'll just agree it's less than asked for. How's that?

9 A. Okay.

10 Q. On your ROE, you received less than asked for
11 in both your previous rate cases; correct?

12 A. It would seem that way from the orders, yes.

13 Q. And did that fact inform any of your decisions
14 and judgments in this case with respect to where you
15 might come in on an ROE request?

16 A. No, it did not.

17 Q. So are you aware that you're requesting this
18 Commission to grant a ROE that, as I understand it,
19 would be the highest ROE presently approved for any
20 regulated utility in the country?

21 A. I'm not aware of that. I'm not sure of the
22 accuracy of that.

23 Q. You don't know one way or the other?

24 A. I do not. My understanding is that there are
25 other utilities with that high an ROE. Mr. Gillette can

1 address the specifics, but I don't believe that's a
2 correct statement.

3 Q. Okay. Do you have any understanding of any
4 utilities outside of the state of Florida that have that
5 high of an ROE, or is that just Florida utilities?

6 A. I believe there are some outside the state,
7 but Mr. Gillette has the details.

8 Q. Okay. Did you personally approve the
9 12 percent ROE request?

10 A. I approved the case strategy development in
11 total, which the 12 percent was part of.

12 Q. Were there specific discussions about that?

13 A. Yes, there was.

14 Q. Do you take that to your board? Do you take
15 that request to your board, and do they have to approve
16 that, that 12 percent ROE request, or is that delegated
17 to you as the general manager? I'm sorry, the coach.

18 A. The decision to go forth with a rate case
19 proceeding was taken to our board of directors. But as
20 far as the specifics of the rate case filing itself,
21 that was left to management.

22 Q. And you had said that there were some
23 discussions about the 12 percent ROE request. During
24 those discussions, was there any argument or suggestion
25 that a rate less than 12 percent be pursued?

1 A. There was discussion, yes.

2 Q. I think that may be just about it. If you
3 would give me just a minute to check my notes, I would
4 appreciate it.

5 A. Okay.

6 Q. I had asked you about when you were going to
7 go into the market for debt, and I think you had said
8 toward, I guess, the fourth quarter of 2009.

9 A. Yes.

10 Q. Did Tampa Electric have occasion to go into
11 the debt market in 2008?

12 A. We did.

13 Q. When did you go into that market?

14 A. I believe we went in in May.

15 Q. Do you know how much money you raised in debt?

16 A. It was \$100 million.

17 Q. Do you know what rate you paid?

18 A. Not off the top of my head.

19 Q. Did you have difficulty raising that
20 \$100 million?

21 A. I think Mr. Gillette probably ought to address
22 how difficult or not it was.

23 Q. Okay. And are you aware of a recent renewal
24 of a credit facility for debt that Tampa Electric
25 executed?

1 A. Yes.

2 Q. What caused that to be renewed or executed?

3 A. I think that's with respect to our short-term
4 credit line.

5 Q. How much is that for? Do you know?

6 A. We have two lines, a primary line that's
7 \$325 million and an additional credit line of
8 \$150 million that's secured by our accounts receivable.

9 Q. And the credit facility that was reauthorized,
10 which was that? Was that for both of them or for the
11 325 or the 150?

12 A. I believe it was for the 150. I'm not sure
13 about the 325, but Mr. Gillette could provide the
14 details.

15 Q. And you did that in the fourth quarter of
16 2008; correct?

17 A. Correct. We also paid a significantly higher
18 price than we had with the prior renewal.

19 Q. Right. It struck me as curious, because we're
20 talking about credit being tight and whatnot.
21 Congratulations on being able to go into the market and
22 get a \$150 million credit facility extended.

23 Those are all the questions I have. Thank
24 you.

25 COMMISSIONER EDGAR: Commissioner Argenziano.

1 COMMISSIONER ARGENZIANO: Yes. I just have
2 some questions that briefly may be part of what was
3 already asked. I believe I heard you say before that,
4 of course, you must maintain the economic viability of
5 the company, and of course, I think everybody agrees
6 with that.

7 But as a monopoly with a high degree of
8 revenue certainty and very reduced risk -- you know, I
9 guess it's greatly reduced with the regulatory scheme
10 that's in place that basically ensures that your company
11 recovers a high percentage of its total costs through
12 the clauses and so on.

13 Wouldn't that plus -- and I was reading in the
14 direct testimony of Ms. Abbott, who I will ask when she
15 comes up. Hopefully she's feeling better -- about the
16 Regulatory Research Associates, and it basically goes on
17 that they're an entity that has been created for 20 or
18 30 years that basically provides extensive research on
19 rates and cases throughout the nation. And basically,
20 if I may steal a line here from her testimony, and I'm
21 quoting on line 4, "But if they're concerned about
22 regulation, they might want to go to somebody who has an
23 Above Average 2 rating like Wisconsin." And as I look
24 at the rating for Florida, it is an Above 2 rating.

25 So with all those things combined, and with

1 the certainty that you have here and the low risk,
2 doesn't that help maintain your economic viability of
3 your company? Isn't that a substantial -- isn't that
4 what makes common stocks, I guess, an attractive
5 investment?

6 THE WITNESS: It puts us in a better position.
7 But I think you also have to look at it in the context
8 of what our company requirements are. And as I
9 mentioned, we're seeing very significant capital
10 investments that are not being driven by customer
11 growth, transmission additions that are being required
12 to satisfy new federal reliability standards, capital
13 expenditures and O&M expenditures that we're making to
14 comply with Commission orders relative to storm
15 hardening and things like that. And in that same
16 context, we're in a time period when our customer growth
17 numbers and our energy sales numbers are not continuing
18 to grow as they historically have. So when you look at
19 all of that together, we believe that the 12 percent
20 return is what we need to achieve the A rating, and that
21 the A rating will provide benefits to our customers over
22 the long term.

23 COMMISSIONER ARGENZIANO: Let me see if I
24 can -- well, I guess maybe I'll ask, out of all the
25 companies to look at in the State of Florida, I would

1 think that a utility in the state of Florida, especially
2 an electric utility, is probably the safest investment
3 out there. Do you agree with that?

4 THE WITNESS: I think it's a relatively safe
5 investment, yes, ma'am. I think at the same time, as
6 you look at the property insurance issues that we have
7 in the state and the property tax issues and the
8 declining growth rate of our state as a whole, those are
9 all things that affect the businesses that operate in
10 our state, and the utilities are not immune from that
11 impact as well.

12 COMMISSIONER ARGENZIANO: But I guess your
13 difference is that you're a monopoly with no
14 competition -- I guess that's what a monopoly is -- and
15 that your risks are so minimal compared -- extremely
16 minimal compared to other businesses. And I just look
17 at if I wanted to invest, and in looking at all the
18 entities that are available, such as the Regulatory
19 Research Associates, I would think that you're still
20 viably healthy, even given those circumstances that you
21 explained.

22 And I guess there are some other questions
23 I'll ask some of the other witnesses when they come up.
24 Its just seems that it would be where I would want to
25 invest, and it would be, I think, a place where there

1 would be, I guess, viability, a certainty there. And I
2 know what you're saying. I'm trying to grasp the other
3 things you're saying. But I just see you as being so
4 strong, in this environment especially.

5 THE WITNESS: And I think the performance over
6 our last 16 years with the cost controls that we've
7 implemented, plus that good strong growth in customer
8 growth and usage per customer, I think that really
9 created the situation that you're describing.

10 The other thing I would point out is that what
11 the ROE should be is not only relative to the strength
12 of our company, but it's looked at in the context of the
13 overall economy and the overall debt markets and the
14 overall requirements for debt. So that's the other
15 piece that Ms. Abbott can kind of fill the blanks in on
16 there. But there's a couple pieces to it.

17 COMMISSIONER ARGENZIANO: I guess depending on
18 which formulas that Ms. Abbott depends on.

19 THE WITNESS: Yes.

20 COMMISSIONER ARGENZIANO: Okay. Thank you.

21 COMMISSIONER EDGAR: Commissioner Skop.

22 COMMISSIONER SKOP: Thank you, Madam Chair.

23 Good afternoon, Mr. Black.

24 THE WITNESS: Good afternoon.

25 COMMISSIONER SKOP: I guess it goes without

1 saying that ROE is definitely at issue, if not hotly
2 contested, within this case, and there has been a lot of
3 discussion this morning and through the afternoon. And
4 based on current economic conditions and the change over
5 the past year, I think that requires the Commission to
6 take a critical look at what ROE is appropriate on a
7 forward-going basis for each of our respective
8 utilities.

9 But in that regard, there has been a lot of
10 discussion this morning about past decisions of the
11 Commission. And since each case stands on its own
12 individual merits, I think that it's important that we
13 limit the discussion to the facts in this particular
14 case. And in that regard, the one question I had
15 regarded the increase in the financing or the interest
16 rates on the credit facility, and I think that you
17 answered Mr. Moyle's question, so that was one less
18 question I had. And I think the record reflects that
19 those borrowing costs have actually gone up due to the
20 tightening of the credit markets. Would that be
21 correct?

22 THE WITNESS: Yes, they have.

23 COMMISSIONER SKOP: And then with respect to
24 some of the other discussion that was made -- and I'll
25 temper that with the premise from two United States

1 Supreme Court cases, which should be binding precedent
2 on the Commissioners. But under the United States
3 Supreme Court decisions in Bluefield and Hope, a public
4 utility is entitled to earn a fair and reasonable rate
5 of return on the value of property placed in service for
6 the convenience of the public that is sufficient to
7 ensure the financial integrity of the utility, maintain
8 its creditworthiness, and to attract capital.

9 So with that central premise and that case law
10 in mind, or the holdings of the case law, the discussion
11 -- I believe Mr. Wright had asked with respect to would
12 TECO be able to have a positive NOI or net operating
13 income under its current rates, and I think that you
14 mentioned that the answer to that was yes, but that the
15 effective ROE would be somewhere in the 4.5 percentage
16 range; is that correct?

17 THE WITNESS: That's correct.

18 COMMISSIONER SKOP: Okay. And do you feel
19 that a 4 1/2 percent ROE comports with the decisions
20 under those two United States Supreme Court cases,
21 Bluefield and Hope, to the extent that it would allow a
22 utility to attract capital at that return on equity
23 rate?

24 THE WITNESS: I don't think so, and I don't
25 think it's comparable to other utilities either in the

1 state or in the country. The specifics as to how that
2 might limit our access to the capital markets Ms. Abbott
3 can speak to, but I'm quite sure in a general sense that
4 that's a true statement.

5 COMMISSIONER SKOP: And if that were indeed
6 the case and the ROE, the equivalent ROE or effective
7 ROE was 4 1/2 percent, would you expect to see a flight
8 of capital to other investments offering a higher return
9 for investors?

10 THE WITNESS: Yes, I would.

11 COMMISSIONER SKOP: Okay. Moving on to, I
12 guess, another witness that will be testifying, I guess
13 it's witness Herndon, and I guess some discussion has
14 been mentioned that he'll suggest that an ROE of 7 1/2
15 percent would be appropriate, and I guess that would be
16 425 basis points lower than the existing ROE that was
17 previously set by the Commission. Do you feel that that
18 would be an appropriate ROE in light of the decisions in
19 Bluefield and Hope to the extent that it would maintain
20 the creditworthiness of the utility and allow the
21 utility to attract capital?

22 THE WITNESS: I do not.

23 COMMISSIONER SKOP: All right. And I guess
24 I'm reserving judgment, because I know ROE is hotly
25 contested, and I appreciate the concerns raised by the

1 consumer advocate, and we'll get to that. But again,
2 I'm trying to separate the wheat from the chaff to the
3 extent that, again, there has been a lot of discussion
4 on past precedent and things that just don't seem to be
5 realistic, so I thought it was important to get your
6 opinion on the record with respect to that. So I'll
7 leave ROE for the moment.

8 I did want to touch briefly upon the issue of
9 storm reserves. And I know historically Florida has had
10 many hurricanes, and there has been times where reserves
11 were not adequate to cover the repairs that were
12 necessary to restore or harden the system and maintain
13 the level of reliability that Florida consumers and
14 ratepayers have come to expect.

15 In this tight economy or the current economic
16 challenges that many consumers are facing, and noting
17 that the storm reserve may or may not be adequately
18 funded, would you consider funding in the near term of
19 that reserve to be discretionary in the sense that it
20 could be temporarily suspended to provide some small
21 measure of rate relief to consumers and then maybe
22 reinstated to the extent that, you know, maybe it's
23 suspended for a year or two, and then, you know, under
24 this case perhaps allowed to kick in when -- you know,
25 at a period of time in the future where economic times

1 may not be as challenging?

2 THE WITNESS: I think that would be an option
3 for us. One of the other concerns on the storm damage
4 is that while there are other options for dealing with
5 the costs, like surcharges or securitization, if we have
6 a very significant event, the company is going to need
7 liquidity at that time, not recovered over some period
8 through a surcharge or through a long, drawn-out bond
9 process. And the storm reserve provides ready access to
10 those funds, which may be important. But as far as a
11 suspension, that's something we could certainly take a
12 look at.

13 COMMISSIONER SKOP: Okay. And I think the
14 point that you made is well taken, to the extent that
15 you need the liquidity and immediate access to funds to
16 the extent that it would be necessary to effect repairs
17 should a major storm come through, so I think that's a
18 good countervailing consideration.

19 I'm just looking for, for lack of a better
20 word, low-hanging fruit or opportunities that, you know,
21 are there that are purely discretionary, to the extent
22 that the consumer ratepayer may be willing to bear -- I
23 don't want to say bear the risk, because that's probably
24 a bad thing, but basically forgo having to pay more now
25 as opposed to being, you know, on the hook for it later

1 should a storm arise.

2 But, you know, to the extent that the utility
3 doesn't earn a return on reserves, storm reserves or
4 anything like that, it's not detrimental to the utility.
5 It's just a policy decision as to whether consumers
6 should be asked to pay more now as an insurance policy
7 versus, you know, saving for a rainy day versus taking
8 the rainy day when it comes and having to pay more
9 later.

10 But again, I think in light of the current
11 economic or prevailing economic conditions, I think
12 that's a consideration that the Commission might want to
13 take a look at one way or the other.

14 THE WITNESS: It's certainly an option, yes,
15 sir.

16 COMMISSIONER SKOP: Thank you.

17 COMMISSIONER EDGAR: And I understand no
18 questions from staff?

19 MR. YOUNG: No questions.

20 COMMISSIONER EDGAR: No questions from staff.
21 Okay. I would like -- before I go for redirect, I would
22 like to ask one or two questions myself.

23 Mr. Black, earlier, a little while ago this
24 afternoon, you answered some questions, I think, posed
25 by Ms. Bradley on the issues having to do with the

1 annualization, the request for annualization of the five
2 CT and the rail facilities.

3 THE WITNESS: Yes.

4 COMMISSIONER EDGAR: Could you -- and you may
5 have already answered this, but could you again if you
6 didn't, or if you did, speak to what, in your opinion,
7 would be the advantages both to the customers and to the
8 company for that to be accounted for in the way TECO has
9 requested?

10 THE WITNESS: The CTs going in service in May
11 are basically coincident with the same time the new
12 rates would be in effect, so that timing ties up pretty
13 well. With the other three CTs in September, the logic
14 is that those are going to provide very significant
15 benefits to our customers for many years, and if we get
16 less than a full year revenue requirement associated
17 with those, then the company has invested into an asset
18 that's providing value to our customers that's not fully
19 being represented in our rate base. And our position is
20 that it's logical to annualize those costs and recognize
21 that they do provide benefits on a long-term basis and
22 that we should have a full year's rate base impact from
23 those assets.

24 COMMISSIONER EDGAR: So if the annualization
25 of those, the five CT and the rail facilities, were not

1 to be included in the annualization based upon the 2009
2 test year, then how would the company handle that in the
3 future? Would you come in with a request to add those
4 after they have gone on line?

5 THE WITNESS: We would have to look at the
6 magnitude of the impacts and the other things going on
7 in the business. I think it's fair to say it would
8 cause us to come back in sooner than we might otherwise.

9 COMMISSIONER EDGAR: Thank you. Commissioner
10 Skop.

11 COMMISSIONER SKOP: Thank you, Madam Chair.

12 Just as a follow-on to the question that
13 Commissioner Edgar asked, because I had the same
14 question, but I just did not think -- there may be more
15 appropriate witnesses to ask that of, but since the
16 question was asked, and it's a question that I think was
17 well posed.

18 To the point you made that it may cause TECO
19 to come back in sooner rather than later to seek an
20 adjustment to rate base for those assets, has any
21 analysis been given on the incremental cost of going
22 through that process versus the incremental cost on
23 including them now within the proceeding? I know this
24 is a hotly contested issue, but again, I think earlier
25 in opening statements, the discussion was made that they

1 may have to come in sooner rather than later if those
2 are left out. And anytime there's a rate case
3 proceeding, obviously, there's significant cost to the
4 consumers of having to go through those rate case
5 proceedings. So I was just wondering, has any analysis
6 been done on the cost of having a whole 'nother
7 proceeding as opposed to trying to find some sort of --
8 either via a stipulation or something that could
9 accommodate or encompass those at the appropriate time
10 when they do come into service?

11 THE WITNESS: Yes. I think to the extent that
12 there could be consideration for inclusion into rate
13 base at the time that they went into service, that would
14 certainly be something that would be agreeable to the
15 company.

16 As far as an incremental cost analysis, it
17 really kind of depends on the other factors going on in
18 the business. I don't think either of these investments
19 are large enough to cause an additional rate case
20 standing alone just because of themselves, but they
21 would be additive to the other things going on with the
22 business. So it is hard to quantify when exactly we
23 would have to come back in if we did not annualize
24 these.

25 COMMISSIONER SKOP: Okay. Thank you for that

1 clarification, because, again, what I had heard earlier
2 made me think that it might require a little bit more
3 effort on that part. But thank you.

4 THE WITNESS: Thank you.

5 COMMISSIONER EDGAR: Thank you. And I agree.
6 I think that may be a point for further discussion with
7 another witness in addition to the discussion we've had.

8 Mr. Willis, redirect?

9 MR. WILLIS: No redirect, but we would ask
10 that Exhibit 14 be received into evidence.

11 COMMISSIONER EDGAR: Do we want to do 14
12 through 17?

13 MR. WILLIS: Yes.

14 COMMISSIONER EDGAR: Okay. Seeing no
15 objection, then Exhibits 14, 15, 16, and 17 will be
16 entered into the record, which brings us to Mr. Wright.

17 (Exhibits 14, 15, 16, and 17 were admitted
18 into the record.)

19 MR. WRIGHT: Madam Chairman, I would move the
20 admission of Exhibits 90, 91, and 92.

21 COMMISSIONER EDGAR: Seeing no objection,
22 Exhibits 90, 91, and 92 will be entered into the record.

23 (Exhibits 90, 91, and 92 were admitted into
24 the record.)

25 COMMISSIONER EDGAR: And the witness may be

1 excused. Thank you.

2 Commissioners, this seems like perhaps a good
3 time for a short stretch, and so I would say let's come
4 back at 10 minutes to by the clock on the wall, and we
5 are on break.

6 (Short recess.)

7 COMMISSIONER EDGAR: We will go back on the
8 record, come back from our break. And, Mr. Willis, it
9 is your witness.

10 MR. WILLIS: I call Mr. Gordon L. Gillette.
11 Thereupon,

12 GORDON L. GILLETTE
13 was called as a witness on behalf of Tampa Electric
14 Company and, having been first duly sworn, was examined
15 and testified as follows:

16 DIRECT EXAMINATION

17 BY MR. WILLIS:

18 Q. Could you please state your name, business
19 address, occupation, and employer?

20 A. I'm Gordon L. Gillette, 702 North Franklin
21 Street, Tampa, Florida, 33602. I'm the senior vice
22 president and CFO of Tampa Electric and the executive
23 vice president and chief financial officer of TECO
24 Energy.

25 Q. Did you prepare and cause to be prefiled on

1 August the 11th, 2008, prepared direct testimony
2 consisting of 38 pages entitled "Testimony and Exhibit
3 of Gordon L. Gillette"?

4 A. I did.

5 Q. Do you have any corrections to your direct
6 testimony?

7 A. I do not.

8 Q. Do you have any corrections to your exhibit
9 which is attached to your testimony?

10 A. Yes, I do. Document Number 5 of my exhibit
11 was revised and refiled on January 9rd, 2009. And my
12 Document 1 describes MFR schedules that I sponsor, and
13 MFR Schedules D-2 and D-9 were refiled on October 3rd,
14 2008.

15 MR. WILLIS: Mr. Gillette's exhibit to his
16 direct testimony has been identified as Exhibit 18, and
17 we would request that his corrected Document 5 be
18 substituted for the document originally filed.

19 COMMISSIONER EDGAR: So noted for the record.

20 BY MR. WILLIS:

21 Q. If I were to ask you the questions contained
22 in your prefiled direct testimony today, would your
23 answers be the same?

24 A. Yes.

25 MR. WILLIS: I would ask that Mr. Gillette's

1 prepared direct testimony be inserted into the record as
2 though read.

3 COMMISSIONER EDGAR: The prefiled testimony
4 will be entered into the record as though read.

1 **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**2 **PREPARED DIRECT TESTIMONY**3 **OF**4 **GORDON L. GILLETTE**5
6 **Q.** Please state your name, business address, occupation and
7 employer.8
9 **A.** My name is Gordon L. Gillette. My business address is
10 702 N. Franklin Street, Tampa, Florida 33602. I am
11 Senior Vice President and Chief Financial Officer of
12 Tampa Electric Company ("Tampa Electric" or "company")
13 and Executive Vice President and Chief Financial Officer
14 of TECO Energy, Inc ("TECO Energy" or "Parent Company").15
16 **Q.** Please provide a brief outline of your educational
17 background and business experience.18
19 **A.** I received a Bachelor of Science in Mechanical
20 Engineering in 1981 and a Masters of Science in
21 Engineering Management in 1985 from the University of
22 South Florida. In 2007, I completed the Advanced
23 Management Program at Harvard Business School. I am a
24 registered professional engineer in the state of Florida.

25

1 I joined Tampa Electric in 1981 as an engineer and worked
2 in the production and planning areas. I was promoted to
3 Manager of Generation Planning in May 1986 and later
4 served as Manager of Bulk Power and Generation Planning.
5 I then became Director of Project Services for TECO Power
6 Services ("TPS"), responsible for fuel procurement,
7 environmental permitting and compliance, and power sales
8 contract administration.

9
10 In November 1994, I was promoted to Vice President of
11 Regulatory Affairs for Tampa Electric, and in November
12 1995, was named Vice President of Regulatory and Business
13 Strategy for Tampa Electric. In March 1998, I was
14 appointed Vice President of Finance and Chief Financial
15 Officer of TECO Energy and Tampa Electric. In 2001, I
16 was appointed Senior Vice President and Chief Financial
17 Officer for TECO Energy.

18
19 I was promoted to my current position of Executive Vice
20 President and Chief Financial Officer of TECO Energy in
21 July 2004. I also serve as the Senior Vice President and
22 Chief Financial Officer of Tampa Electric. As Chief
23 Financial Officer, I am responsible for financial
24 planning and reporting, financing strategies and
25 activities, and contact with the financial community,

1 including investors and rating agencies.

2
3 **Q.** What is the purpose of your direct testimony?

4
5 **A.** The purpose of my direct testimony is to provide
6 financial background on Tampa Electric's base rate
7 request by discussing some of the key financial, business
8 and regulatory events that have occurred at the national
9 and state levels and their impacts on Tampa Electric
10 since its last base rate proceeding in 1992. I will
11 describe how these events have affected the company's
12 capital spending and the cost to serve customers. I will
13 also explain the reasons for the requested base rate
14 increase and the key financial components on which it is
15 based. In addition, I will describe how Tampa Electric's
16 projected 2009 through 2013 capital expenditure program
17 will impact the need for external capital and explain the
18 company's capital structure and financial targets.
19 Finally, I will explain why a parent company debt
20 adjustment is unwarranted.

21
22 **Q.** Have you prepared an exhibit for presentation in this
23 proceeding?

24
25 **A.** Yes. Exhibit No. ____ (GLG-1) entitled "Exhibit of

1 Gordon L. Gillette", was prepared under my direction and
2 supervision and consists of five documents. These
3 documents include:

4 Document No. 1 List Of Minimum Filing Requirement
5 Schedules Sponsored Or Co-Sponsored
6 By Gordon L. Gillette
7 Document No. 2 1992 - 2007 Relative Rate Base And
8 Base Revenue Comparison
9 Document No. 3 1992 - 2007 Relative Non-Fuel O&M
10 And Base Revenue Comparison
11 Document No. 4 Utility Credit Ratings
12 Document No. 5 Tampa Electric's Credit Metrics
13 (2004 - 2009 Test Year)
14

15 **BACKGROUND**

16 **Q.** Provide a brief overview of the major changes in the
17 electric industry since Tampa Electric's last rate case
18 and how they have impacted the company and its customers.
19

20 **A.** Since the company's last rate case in 1992, there have
21 been major industry developments in the areas of
22 environmental regulation and legislation, generation
23 pricing, national and state requirements for generation
24 and transmission reliability, and transmission and
25 distribution ("T&D") storm hardening. These developments

1 have impacted Tampa Electric's historical and current
2 capital spending, operations and maintenance ("O&M")
3 spending, and overall risk profile. As a result of these
4 changes, Tampa Electric operates in a much riskier and
5 more challenging environment than it did in 1992.

6
7 **Q.** How have environmental legislation and regulation
8 affected Tampa Electric's cost of serving its customers?

9
10 **A.** Environmental legislation and regulation have affected
11 the company in numerous ways, including in the areas of
12 power plant site selection and permitting, new generating
13 unit type selection, and transmission siting. For
14 example, in response to claims by regulators under the
15 Clean Air Act and New Source Review, the company settled
16 with the Florida Department of Environmental Protection
17 ("FDEP") in 1999 and with the U.S. Environmental
18 Protection Agency ("EPA") in 2000, and began implementing
19 a comprehensive \$1.2 billion capital program to
20 dramatically decrease emissions from the company's coal-
21 fired power plants, becoming the first utility in the
22 country to resolve the issues raised by these
23 environmental agencies. These settlements and the
24 associated benefits are discussed in more detail in the
25 direct testimonies of Tampa Electric witnesses Charles R.

1 Black and Mark J. Hornick.

2
3 **Q.** Please describe how generation costs have affected Tampa
4 Electric.

5
6 **A.** As discussed in more detail by witness Hornick, per unit
7 generation construction costs have increased
8 significantly for all types of power plants due to
9 increases in the price of steel and other construction
10 materials and labor. These increasing costs affect all
11 of Tampa Electric's planned and proposed future
12 generation additions. For example, in 2000, the
13 installed cost of a General Electric 7F based combustion
14 turbine was approximately \$300/kW. Today, the projected
15 installed cost for a similar turbine is approximately
16 \$500/kW, which represents more than a 60 percent
17 increase. Similar increases have been experienced for
18 the costs of combined cycle units.

19
20 **Q.** Please describe how T&D costs have affected Tampa
21 Electric.

22
23 **A.** As discussed in the direct testimony of Tampa Electric
24 witness Regan B. Haines, the approximate per mile cost of
25 a 230 kV transmission line has increased from \$700,000

1 per mile in 2000 to almost three times that amount today.
2 Moreover, the company has experienced dramatic increases
3 in the cost of basic components essential to T&D
4 construction and operations. In addition, the siting of
5 transmission lines has become more challenging for the
6 entire industry.

7
8 **Q.** Please provide an overview of the changing national and
9 state requirements for generation and transmission
10 reliability and T&D storm hardening and how they have
11 impacted the cost to serve customers.

12
13 **A.** In Florida, the requirements for generation and T&D
14 system reliability have increased and become more
15 codified in state and federal legislation. This, in
16 turn, has led to a need for increased investment in
17 generation and T&D infrastructure. In 1999, the required
18 aggregate reserve margins for Tampa Electric and other
19 Florida utilities increased from 15 to 20 percent as a
20 result of the Florida Public Service Commission's
21 ("Commission") investigation into electric generation
22 planning reserves. Transmission has received significant
23 scrutiny over the past several years, which has resulted
24 in new Federal Energy Regulatory Commission and North
25 American Electric Reliability Corporation mandates aimed

1 at strengthening the reliability of the current
2 transmission system through expansions and upgrades.

3
4 As discussed in more detail by witness Haines, the
5 extensive storm damage and resulting power outages in the
6 2004 and 2005 hurricane seasons led to an increased focus
7 on T&D system hardening. The Commission issued a series
8 of orders in an effort to improve the resilience of
9 electric utility infrastructure to withstand severe
10 weather. This has resulted in significant O&M and
11 capital spending to comply with the required guidelines,
12 which in turn, has increased external financing needs.
13 As a result of these changes along with others, Tampa
14 Electric currently operates in a much more costly and
15 more risky environment than it did at the time of its
16 last rate proceeding in 1992.

17
18 **NEED FOR BASE RATE INCREASE**

19 **Q.** Describe any significant investments the company has made
20 since its last rate proceeding in 1992.

21
22 **A.** Tampa Electric has grown substantially since its last
23 rate case due to significant investments, some of which
24 were driven or impacted by the changes I described
25 earlier. These investments have included the addition of

1 Polk Unit 1, the repowering of Gannon Station to the H.
2 L. Culbreath Bayside Power Station, the addition of four
3 combustion turbines at Polk Power Station, as well as
4 numerous transmission, distribution, environmental and
5 storm hardening projects.

6
7 **Q.** How has Tampa Electric avoided a base rate proceeding for
8 the last 16 years?

9
10 **A.** The company has taken numerous actions and made
11 significant changes to avoid a base rate increase. They
12 include sound cost management, strong customer and
13 revenue growth, innovative regulatory settlements,
14 lowering of O&M costs through technology and process
15 improvements, and the legislature's creation of the
16 environmental cost recovery clause for recovering certain
17 environmental related costs and investments that are not
18 recovered through base rates.

19
20 **Q.** Why is Tampa Electric making its base rate request now
21 after so many years of successfully avoiding an increase?

22
23 **A.** Tampa Electric is facing an extremely large capital
24 expenditure program over the next five years. As a
25 result, its credit parameters and return on equity

1 ("ROE"), which have been declining in recent years, are
2 expected to decline even further absent rate relief. As
3 discussed in the direct testimony of Tampa Electric
4 witness Susan D. Abbott, a continuing decline in credit
5 quality could threaten the company's ability to raise the
6 capital needed to serve customers reliably. The company
7 needs sufficient new revenues to ensure its credit rating
8 and ROE are adequate to provide the company the necessary
9 access to external debt and equity capital markets and to
10 maintain its financial integrity.

11
12 **Q.** Have you prepared any documents to help further explain
13 the drivers causing this base rate filing?

14
15 **A.** Yes. Document Nos. 2 and 3 of my exhibit compare
16 historical non-fuel O&M and rate base to base revenues as
17 reported on the company's Surveillance Report filings.
18 The analyses illustrate the trends that helped the
19 company during the 1990's and early 2000 timeframe to
20 avoid a base rate increase. During this timeframe, the
21 increase in customers resulted in base revenues keeping
22 pace with, and even exceeding in some years, the increase
23 in non-fuel O&M and rate base. However, the analyses
24 also show that the increases in rate base and non-fuel
25 O&M started to exceed the increases in base revenues in

1 2004 and 2006, respectively. This recent trend has led
2 to declining credit parameters and lower returns on
3 equity and is expected to accelerate, given the company's
4 significant capital spending program planned for 2009
5 through 2013, combined with slower base revenue growth.
6

7 **Q.** What is the company's requested revenue requirement
8 increase and what are the key components of the increase?
9

10 **A.** The company is requesting a base revenue increase of
11 \$228,167,000. The increase represents the amount
12 necessary to raise the company's projected 2009 net
13 operating income ("NOI") level to the required amount of
14 \$322.5 million. The required NOI is based on the
15 company's projected 2009 13-month average jurisdictional
16 adjusted rate base of \$3.657 billion and a weighted
17 average cost of capital of 8.82 percent. The 8.82
18 percent weighted cost of capital assumes a jurisdictional
19 adjusted 13-month average capital structure consisting of
20 55.3 percent equity, assuming investor sources of
21 capital, including off-balance sheet purchased power
22 obligations. It also includes a ROE of 12.00 percent, a
23 long-term debt rate of 6.80 percent, and a short-term
24 debt rate of 4.63 percent. Tampa Electric witness Dr.
25 Donald A. Murry, Ph.D. provides the support for the

1 company's requested ROE in his direct testimony and
2 witness Abbott supports the need to improve the company's
3 financial integrity profile. Tampa Electric witness
4 Jeffrey S. Chronister's direct testimony explains the
5 details of the company's revenue requirement based on the
6 2009 projected test year, as well as the budget process
7 used to develop sound and reliable projected test year
8 financial statements.

9
10 **Q.** How will this base rate increase affect Tampa Electric's
11 financial integrity?

12
13 **A.** The requested base rate increase will place Tampa
14 Electric in an appropriate financial position to fund its
15 significant capital program. Without the increase, the
16 company will not be in a position to effectively raise
17 the necessary capital to continue providing the high
18 level of reliable service to its customer base that it
19 has in the past. In order to raise the required capital,
20 the company must be able to provide fair returns to
21 investors commensurate with the risks they assume. The
22 lowest cost and most reliable stream of external capital
23 is achieved by maintaining a strong financial position,
24 so that, in turn, the company's capital spending needs
25 can be met in the most cost-effective and timely manner.

1 Financial strength is often referred to in regulatory
2 circles as "financial integrity". If the company and its
3 regulators act in ways that maintain or enhance the
4 company's financial integrity, customers will ultimately
5 benefit. The Commission has a history of performing the
6 delicate balancing act between rate increases and
7 maintaining financial integrity very well. The rating
8 agencies and Wall Street alike have long recognized the
9 Commission for its constructive regulatory decision
10 making. The Commission is viewed by Wall Street and the
11 public as being tough but fair in reaching an appropriate
12 balance between the interests of customers and investors.

13
14 **CREDIT RATING OBJECTIVE**

15 **Q.** What is Tampa Electric's current credit rating?

16
17 **A.** Tampa Electric is currently rated in the BBB range by the
18 three major rating agencies: Standard & Poor's ("S&P"),
19 Moody's Investor Service ("Moody's") and Fitch Ratings
20 ("Fitch"). In her direct testimony, witness Abbott
21 explains in more detail how the rating agencies currently
22 view Tampa Electric and how they have derived their
23 ratings for the company.

24
25 **Q.** What credit rating is the company targeting in the future

1 and why?

2

3 **A.** The company is targeting ratings in the single A range
4 for two reasons. First, Tampa Electric is facing higher
5 capital spending requirements and debt ratings in the
6 single A range would ensure that Tampa Electric has
7 adequate credit quality to raise the capital necessary to
8 meet these requirements. Second, having ratings in the
9 single A range will provide a ratings "safety net" in the
10 event of a catastrophe, such as a hurricane.

11

12 **Q.** Why is a ratings "safety net" important?

13

14 **A.** Given the capital intensive nature of the utility
15 industry, it is paramount that utilities maintain credit
16 ratings well above the investment grade threshold to
17 retain uninterrupted access to capital. The breakpoint
18 between investment grade and non-investment grade is such
19 that BBB- (S&P/Fitch) and Baa3 (Moody's) is the lowest
20 investment grade rating and BB+ (S&P/Fitch) and Ba1
21 (Moody's) is the highest non-investment grade rating. A
22 company raising debt that has non-investment grade
23 ratings is subject to occasional lapses in availability
24 of debt capital, onerous debt covenants and higher
25 borrowing costs. Given the high capital needs and the

1 obligation to serve existing and new customers that
2 electric utilities have, having non-investment grade
3 ratings is unacceptable. Since ratings in the single A
4 range are above the BBB range, there would be sufficient
5 room if an unanticipated event occurs, for the ratings to
6 slip before becoming non-investment grade.

7
8 Document No. 4 of my exhibit shows overall industry
9 credit ratings along with the ratings of the southeastern
10 U.S. utilities. Utilities across the southeast are
11 confronted with hurricane risk and have maintained
12 ratings that, on average, are higher than the electric
13 industry as a whole. In addition to hurricanes, these
14 utilities have experienced higher customer growth
15 compared to the rest of the industry. The stronger
16 credit ratings help ensure that the utilities in the
17 southeast can meet the required capital spending levels
18 associated with this growth and have a "safety net" in
19 the event of a catastrophic hurricane.

20
21 **Q.** Why are ratings in the single A range important in light
22 of the company's future capital needs?

23
24 **A.** In order to reliably serve its customers, Tampa Electric
25 is planning a very substantial construction program for

1 the period 2009 through 2013. This capital expenditure
2 program is driven by several factors including: 1) the
3 need for continued investment in generation, 2) needed
4 investment in hardening the T&D system to improve overall
5 reliability, 3) funding the company's share of investment
6 in transmission facilities supporting peninsular Florida
7 and 4) continued compliance with environmental
8 requirements mandated by the EPA and FDEP. The magnitude
9 of this capital program is compounded by the impact of
10 the significantly higher costs of materials and labor
11 that have occurred in the last several years.

12
13 **Q.** How will this substantial construction program impact
14 Tampa Electric and its need for external capital?

15
16 **A.** Tampa Electric has funded large capital programs in the
17 past, but never as large as the one the company currently
18 faces. Without base rate relief, only about half of the
19 funding will come from internally generated funds on
20 average over the next five years, with only 40 percent
21 being internally generated in 2009 and 2010. The
22 remainder of the funding must come from externally
23 generated funds including debt from external capital
24 markets and equity infusions from TECO Energy.

25

1 Q. Do the credit rating agencies publicly announce or
2 publish what it takes to achieve certain credit ratings?

3
4 A. No. The processes used by the rating agencies to
5 determine credit ratings are complex and consider many
6 qualitative and quantitative factors. The ratings
7 process typically provides little transparency, and the
8 rating agencies publish no precise guidelines regarding
9 how to achieve a certain rating. S&P is the only rating
10 agency that has even attempted to provide some level of
11 quantitative guidance. Some years ago, S&P published a
12 matrix that identified ranges of credit parameters, such
13 as coverage ratios, necessary to achieve certain credit
14 ratings. However, S&P has recently modified this matrix,
15 broadening the ranges for the ratings and leaving more
16 room for judgment on their part, but creating greater
17 uncertainty on the part of debt issuers, like Tampa
18 Electric, on the exact quantitative targets needed to
19 achieve certain credit ratings. In addition, since the
20 rating agencies consider qualitative factors as well,
21 achieving the quantitative parameters does not ensure
22 that a particular rating will actually be achieved.

23

24 **CAPITAL STRUCTURE**

25 Q. What capital structure is Tampa Electric proposing in its

1 test year?

2

3 **A.** Tampa Electric is projecting, for the 2009 test year, a
4 jurisdictional adjusted 13-month average financial
5 capital structure consisting of 44.7 percent debt,
6 including off-balance sheet purchased power obligations,
7 and 55.3 percent common equity. This 55.3 percent equity
8 ratio is necessary since the company believes the
9 combination of this capital structure and the resulting
10 coverage ratios should enable the achievement of credit
11 parameters commensurate with debt ratings in the single A
12 range.

13

14 **Q.** What coverage ratios are important to rating agencies?

15

16 **A.** As part of their quantitative analyses, rating agencies
17 focus on cash coverage ratios to determine a company's
18 ability to meet its interest payments and debt
19 obligations. Typical coverage ratios reviewed by the
20 agencies are Funds from Operations to Interest
21 (FFO/Interest) and Funds from Operations to Total Debt
22 (FFO/Debt). Document No. 5 of my exhibit shows Tampa
23 Electric's credit parameters on a historical and
24 projected basis. It shows that there has been a
25 significant deterioration in Tampa Electric's credit

1 metrics as used by the credit rating agencies. If Tampa
2 Electric's requested rate increase was not granted and
3 the capital structure remained at the 2007 level, there
4 would be another significant decline in the credit
5 parameters. For Tampa Electric to improve its credit
6 metrics, equity infusions from TECO Energy and base rate
7 relief are needed. In her direct testimony, witness
8 Abbott further addresses these credit parameters and the
9 effect these factors have on Tampa Electric's credit
10 ratings.

11
12 **Q.** Did you consider other credit parameters when targeting
13 ratings in the single A range?

14
15 **A.** Yes. Although the rating agencies tend to focus on cash
16 coverage ratios, another commonly used parameter in the
17 utility industry is an Earnings Before Interest and Taxes
18 to Interest (EBIT/Interest) coverage ratio. This
19 coverage ratio is included in the company's MFR Schedule
20 D-9 and is reported in Schedule 5 of the company's
21 monthly Surveillance Report filings. Tampa Electric's
22 coverage ratio for EBIT/Interest has been declining and
23 is projected to be 2.1 times in 2009. This same coverage
24 ratio averaged 4.6 times in 1992 through 2000 and 3.5
25 times in 2001 through 2007. The 2.1 times represents an

1 unacceptable level and is expected to continue to decline
2 without rate relief. The company believes that, given
3 its extensive five-year capital spending program, a more
4 appropriate coverage ratio for 2009 is in the range of 4
5 times, which can be achieved by providing the company's
6 requested rate relief.

7
8 **Q.** How does the company's proposed 55.3 percent equity ratio
9 compare with the allowed capital structures of other
10 investor-owned electric utilities in Florida?

11
12 **A.** The proposed 55.3 percent equity ratio is consistent with
13 past Commission decisions that approved equity ratios
14 above the level requested in this case. In Tampa
15 Electric's 1996 earnings review, the Commission capped
16 the company's equity ratio at 58.7 percent. In Florida
17 Power & Light's ("FP&L") recent rate settlement, the
18 Commission confirmed an equity ratio of 55.83 percent.
19 The Commission as part of Progress Energy Florida Inc.'s
20 ("PEF") recent rate case settlement approved a similar
21 equity ratio, capped at 57.83 percent.

22
23 **Q.** Has Tampa Electric included in its capital structure the
24 effect of off-balance sheet obligations, like long-term
25 purchased power agreements?

1 **A.** Yes. Since the rating agencies consider portions of
2 long-term fixed payments associated with purchased power
3 agreements as debt and analyze company credit profiles
4 with an adjustment to its credit parameters, the
5 company's proposed capital structure reflects an
6 adjustment for this imputation of additional debt.

7
8 **Q.** Using the S&P methodology, please describe the
9 calculation for the additional debt that reflects the
10 associated risk of long-term purchased power agreements
11 in Tampa Electric's capital structure.

12
13 **A.** S&P discounts future capacity payments using a discount
14 rate based on the cost of debt, and then applies a "risk
15 factor" to determine the amount of imputed debt to
16 include in the adjusted debt to total capital. For
17 similarly situated electric utilities as Tampa Electric,
18 S&P uses a risk factor of 25 percent. S&P also imputes
19 an annual amount for interest expense in cash coverage
20 ratios for the imputed debt.

21
22 **Q.** Using S&P's methodology, how much debt and interest
23 expense has been imputed to recognize the impact of
24 purchased power agreements on Tampa Electric's capital
25 structure for 2009?

1 **A.** The present value to January 2009 of Tampa Electric's
2 future capacity payments for its purchased power
3 agreements is \$307 million, when multiplied by the S&P
4 risk factor of 25 percent, results in approximately \$77
5 million of imputed debt and \$5 million of additional
6 interest expense.

7
8 **Q.** Has the Commission recognized the effect of off-balance
9 sheet obligations like purchased power agreements on a
10 utility's capital structure in the past?

11
12 **A.** Yes. Rule 25-22.081(7), Florida Administrative Code
13 ("F.A.C."), Contents of Petition requires utilities to
14 include a discussion of the potential for increases or
15 decreases in its cost of capital associated with
16 purchased power in a petition for determination for need
17 for new generation. Also, in both FP&L's and PEF's
18 recent rate settlements, the Commission allowed off-
19 balance sheet obligations for purchased power to be
20 incorporated into the capital structure and weighted
21 average cost of capital.

22
23 **Q.** Was Tampa Electric's capital structure adjusted to
24 mitigate the effect of imputed debt associated with long-
25 term purchased power contracts?

1 **A.** Yes. As the Commission has seen in the cases of other
2 utilities in rate proceedings, Tampa Electric has
3 adjusted its weighted average cost of capital to mitigate
4 the effect of imputed off-balance sheet debt associated
5 with long-term purchased power agreements. This was
6 accomplished by recognizing, on a pro forma basis and as
7 included in the direct testimony of witness Chronister,
8 \$77 million of additional equity necessary to offset the
9 imputed debt. This, in effect, leaves the capital
10 structure at the same common equity ratio before and
11 after the imputation of the debt to account for purchased
12 power obligations.

13
14 **Q.** Given the company's proposed capital structure of 55.3
15 percent equity, what are the equity infusions from TECO
16 Energy for 2008 and 2009 that are necessary to achieve
17 this capital structure?

18
19 **A.** The 2008 and 2009 planned equity infusions from TECO
20 Energy to Tampa Electric are \$350 million and \$285
21 million, respectively. These significant equity
22 infusions are in addition to the 2007 actual equity
23 infusion of \$82 million. Through July 2008, \$150 million
24 of the total \$350 million of equity for 2008 has been
25 contributed.

1 Q. What are TECO Energy's plans for making the remaining
2 equity infusions in 2008 and 2009?

3
4 A. The remaining 2008 equity infusions of \$200 million and
5 the 2009 contribution of \$285 million will be made from
6 available operating cash flows of TECO Energy. TECO
7 Energy is committed to making these contributions and
8 anticipates they will be completed by year-end 2009. The
9 timing of these contributions will depend on TECO
10 Energy's actual monthly cash flows, which can be impacted
11 by unexpected events, such as higher under-recoveries of
12 fuel at the utility companies. Hence, the timing of the
13 actual equity contributions may not occur precisely as
14 assumed in Tampa Electric's 2009 test year and could
15 result in the company not reaching its targeted 13-month
16 average 55.3 percent equity ratio. However, the company
17 believes that with adequate levels of fuel recovery and
18 base rate increases, the 55.3 percent equity ratio can be
19 achieved before year-end 2009.

20

21 **PARENT COMPANY DEBT**

22 Q. Did Tampa Electric make a parent company debt adjustment
23 in accordance with F.A.C. Rule 25-14.004 F.A.C. ("Rule
24 25-14.004" or "the Rule")?

25

1 **A.** No. As in Tampa Electric's last rate case, an
2 adjustment is inappropriate. Although the TECO Energy
3 parent company currently has \$404 million of long-term
4 debt, this debt is related to TECO Energy's investments
5 in its failed TPS merchant power projects and was not
6 used to invest as equity in Tampa Electric. TPS was a
7 subsidiary of TECO Energy that is no longer in
8 existence.

9
10 The intent of the rule is to require an adjustment to
11 the income tax expense of a regulated company to reflect
12 the income tax expense benefit of the parent debt that
13 may have been invested as equity of the subsidiary. The
14 rule also states that it shall be a rebuttable
15 presumption that a parent's investment in any subsidiary
16 or in its own operations shall be considered to have
17 been made in the same ratios as exist in the parent's
18 overall capital structure. However, the rule allows a
19 utility to demonstrate to the Commission that in certain
20 circumstances it is appropriate not to make the
21 adjustment. TECO Energy did not raise debt to invest in
22 Tampa Electric, nor did it invest the proceeds of the
23 debt it did raise as equity in Tampa Electric.
24 Therefore, a parent company debt adjustment is not
25 appropriate.

1 Q. Please explain further why the Commission should not
2 make the parent company debt adjustment in this
3 proceeding.

4
5 A. The Commission should not make the adjustment for the
6 following reasons: 1) as stated above, the debt that
7 exists at the parent was raised for TECO Energy's
8 merchant power plant investments at TPS and was not used
9 to invest in Tampa Electric, 2) imputing parent debt
10 would result in an inappropriate imputed capital
11 structure given how TECO Energy raises capital on behalf
12 of its regulated and unregulated companies, 3) imputing
13 debt for the cumulative equity infused to Tampa Electric
14 over time ignores that the vast majority of the equity
15 that exists at Tampa Electric was invested by TECO
16 Energy in Tampa Electric during times when either no
17 parent debt existed or at a time when parent debt was
18 actually being repaid, and 4) TECO Energy's internal
19 subsidiary 100 percent net income dividend policy
20 results in an overstatement of the paid in capital
21 equity amounts that have required the investment of
22 parent capital as used in the parent company debt rule
23 calculation.

24
25 Q. How does TECO Energy support the funding needs for Tampa

1 Electric?

2

3 **A.** TECO Energy provides only equity contributions to Tampa
4 Electric. Tampa Electric raises its own debt and has
5 separate credit ratings for this purpose. Tampa
6 Electric's credit ratings have been and are expected to
7 remain higher than TECO Energy's ratings.

8

9 **Q.** How does TECO Energy fund its unregulated operations?

10

11 **A.** Since TECO Energy's unregulated companies do not have
12 their own credit ratings, TECO Energy raises both debt
13 and equity capital for these companies. A large amount
14 of both equity and debt capital was raised at the parent
15 company for investments in TPS to fund significant
16 merchant power plant investments from 1998 through 2003,
17 which subsequently failed and/or were sold. Some of
18 this debt remains at the parent company, but should be
19 ignored when considering the capital structure used to
20 fund equity for Tampa Electric since this debt was
21 raised for investment in TPS.

22

23 **Q.** Please describe the debt at TECO Energy.

24

25 **A.** Prior to 1998, the only debt at the parent was \$100

1 million and it was specifically related to the company's
2 Employee Stock Option Plan trust. This debt existed
3 during the time of the company's last rate case in 1992,
4 and it was not imputed as debt to Tampa Electric. TECO
5 Energy currently has about \$400 million of debt at the
6 parent level associated with its investments in TPS.
7 This debt is part of a larger amount of capital (both
8 equity and debt) raised for investment in TPS.

9
10 **Q.** You mentioned the \$400 million of existing debt was part
11 of a larger overall capital amount raised for investment
12 in TPS. Please describe this further.

13
14 **A.** Beginning in 1998 and through 2003, the parent company
15 raised a total of \$3.4 billion of external capital (both
16 equity and debt) to invest in TPS and other unregulated
17 operations. Specifically, the parent company raised
18 approximately \$2.1 billion of debt and \$1.3 billion of
19 equity and also had internally generated funds of \$300
20 million.

21
22 During this very same period, TECO Energy invested \$3.3
23 billion in its unregulated operations. About \$3.1
24 billion of the \$3.3 billion went to TPS, with the
25 remainder being invested in the other unregulated

1 entities. During this time, \$285 million of equity was
2 infused to Tampa Electric and \$119 million to Peoples
3 Gas, the other regulated utility company. Since only
4 \$2.1 billion of the total \$3.3 billion invested in the
5 unregulated companies was raised in the form of debt,
6 the remainder of the unregulated investment was made
7 from external equity capital and internally generated
8 funds. In addition, since Tampa Electric raised its own
9 debt, the \$285 million of equity that it received from
10 the parent company represented only a small portion of
11 the \$1.4 billion of externally raised equity capital and
12 \$300 million of internally generated funds.

13
14 **Q.** Has the parent company raised any debt outside of this
15 timeframe?

16
17 **A.** No. The period from 1998 through 2003 was the only
18 period of time since the company's last rate case when
19 the parent company raised any amount of new incremental
20 external debt. During the period from 2004 to 2007, the
21 parent company actually paid down significant amounts of
22 debt and wrote off equity associated with its failed TPS
23 merchant power investments. Since 2003, TECO Energy has
24 not increased and, in fact, has significantly decreased
25 its debt obligations. Thus, the \$285 million of equity

1 infused to Tampa Electric during 1998 through 2003
2 represents the only equity infusions that could have
3 been possibly funded from debt at the parent level.
4 Tampa Electric is projected to have a 13-month average
5 paid in capital balance in 2009 of \$1.9 billion or \$2.0
6 billion by year-end 2009. Hence, the vast majority of
7 the equity that exists at Tampa Electric was infused by
8 TECO Energy during times when either no parent debt
9 existed or at a time when parent debt was actually being
10 repaid. Out of the total paid in capital, the amount
11 infused in 1998 through 2003 total \$285 million.

12
13 **Q.** Was any part of the debt raised during 1998 through 2003
14 actually used by TECO Energy to invest the \$285 million
15 of equity in Tampa Electric?

16
17 **A.** No. Although tracing funds is a complicated and
18 difficult exercise, it is clear that the need for
19 external capital was driven by the large investments in
20 TPS. The equity infusions to Tampa Electric were funded
21 with the parent company's internally generated funds and
22 externally raised equity.

23
24 **Q.** How much of the total \$2.1 billion of debt raised by
25 TECO Energy still remains at the parent company?

1 **A.** Only \$400 million. Since 2003, the parent company has
2 reduced the debt associated with the merchant power
3 investment through a comprehensive debt management plan.
4 Many unregulated operating companies of TECO Energy,
5 including various subsidiaries of TPS and TECO
6 Transport, were sold to generate cash to reduce the debt
7 burden. Most recently, TECO Energy used the proceeds
8 from the sale of TECO Transport to execute a debt
9 redemption and exchange offer that reduced the overall
10 debt balance by another \$300 million, extended the
11 maturity of \$300 million of debt and transferred, as
12 part of a bond exchange offer, \$900 million of TECO
13 Energy debt to TECO Finance.

14
15 **Q.** Why wasn't the \$400 million transferred to TECO Finance
16 along with the \$900 million?

17
18 **A.** The majority of the \$400 million was included as part of
19 the exchange offer to bondholders in 2007; however, not
20 all bondholders chose to exchange their TECO Energy
21 bonds for TECO Finance bonds. Therefore, the \$400
22 million of the debt raised at TECO Energy for TPS
23 remains.

24
25 **Q.** You stated that TECO Energy's internal subsidiary 100

1 percent net income dividend policy results in an
2 overstatement of the paid in capital equity amounts that
3 have required the investment of parent capital as used
4 in the parent company debt rule calculation. Please
5 explain.

6
7 **A.** TECO Energy's internal 100 percent dividend policy
8 ("dividend policy") requires all subsidiaries, including
9 Tampa Electric, to dividend to TECO Energy cash amounts
10 equal to 100 percent of each subsidiary's net income.
11 TECO Energy uses these internally generated funds for
12 two purposes. It uses the majority of these funds to
13 pay dividends to its shareholders. TECO Energy pays
14 about 60 to 80 percent of its consolidated net income to
15 its external shareholders in the form of a quarterly
16 dividend. The remainder of the internal dividends from
17 TECO Energy's subsidiaries is invested back in the
18 subsidiaries.

19
20 Although these funds are invested back in the regulated
21 companies in the form of equity infusions, the
22 accounting treatment changes the equity classification
23 of this amount from retained earnings to paid in capital
24 at the subsidiary level. By doing so, this
25 inappropriately increases the impact of a parent company

1 debt adjustment under the rule. In other words, this
2 simple reclassification of funds that were paid out of
3 and then invested back into Tampa Electric causes the
4 paid in capital balance at Tampa Electric to be
5 effectively overstated and, in turn, the balance of
6 retained earnings to be understated for these purposes.
7 The accounting for the dividends and equity
8 contributions does not change the source of these funds,
9 i.e., the funds that were paid as dividends to TECO
10 Energy and, in turn, reinvested, were actually
11 internally generated by Tampa Electric and, in essence,
12 did not require funding from the parent company.

13
14 From most financial and regulatory perspectives, the
15 distinction between retained earnings and paid in
16 capital are not important. For instance, both retained
17 earnings and paid in capital are considered to be
18 owner's equity within the capital structure for
19 regulatory and financial integrity purposes. However,
20 in the instance of the parent company debt rule, the
21 distinction is very important, due to the focus on paid
22 in capital.

23
24 Since the parent company debt rule excludes retained
25 earnings and focuses solely on paid in capital, the

1 relative amount of owners' equity that is classified as
2 retained earnings versus paid in capital becomes
3 important. TECO Energy's internal dividend policy
4 creates a situation whereby the imputation of any parent
5 debt percentage would be incorrectly applied to a
6 portion of owners' equity that has actually been
7 internally generated.

8
9 **Q.** What is Tampa Electric's paid in capital balance, and
10 how has it been impacted by TECO Energy's dividend
11 policy?

12
13 **A.** The company's paid in capital balance is expected to be
14 approximately \$1.9 billion by 2009. Because of the
15 dividend policy, Tampa Electric's retained earnings
16 balance has remained relatively flat since 1981, the
17 year that TECO Energy was formed, and all of the
18 company's growth in common equity has occurred in the
19 form of paid in capital. Had Tampa Electric paid less
20 dividends and "retained" more of its earnings, "paid in
21 capital" would be less and, therefore, any potential
22 adjustment under the rule would be less.

23
24 **Q.** Why does the parent company debt rule focus solely on
25 paid in capital?

1 **A.** The intent of the rule is to focus on the external
2 capital of the parent that may have been raised to
3 support the external capital needs of the utility. To
4 accomplish this goal, Rule 25-14.004 excludes the
5 retained earnings of both the utility and the parent
6 company. Since TECO Energy's dividend policy overstates
7 paid in capital and the external capital needs of Tampa
8 Electric, applying the Rule overstates the intended
9 impact of the Rule. Hence, before any type of
10 adjustment is considered under Rule 25-14.004, an
11 adjustment should be made to reduce the paid in capital
12 balance to reflect a dividend based on Tampa Electric's
13 share of TECO Energy's dividend.

14
15 As I stated above, of the \$1.9 billion of the "paid in
16 capital" expected to reside on Tampa Electric's books by
17 2009, only \$285 million was infused as equity by TECO
18 Energy during the 1998 through 2003 period when it was
19 raising debt and equity. If this \$285 million were
20 adjusted using the Massachusetts Method of allocation to
21 reflect only Tampa Electric's allocated share of TECO
22 Energy's dividend, the net equity infusion requirement
23 would be \$72 million. Thus, Tampa Electric's equity
24 needs from 1998 through 2003, when adjusted to remove
25 the dividend policy effects and net out internally

1 generated funds, were \$72 million. Even if a parent
2 debt adjustment was to be applied, it should be applied
3 to only \$72 million of "paid in capital".
4

5 **Q.** Please summarize your position on the parent company
6 debt adjustment.
7

8 **A.** Although the TECO Energy parent company currently has
9 \$400 million of debt, this debt is related to TECO
10 Energy's investments in its failed TPS merchant power
11 projects. When all of the facts and circumstances are
12 considered, it is clear that this debt was not used to
13 invest as equity in Tampa Electric. This debt exists
14 because of the parent company's investments in its
15 unregulated subsidiaries, specifically the failed TPS
16 merchant power investments. The intent of Rule 25-
17 14.004 is to adjust the tax expense of the regulated
18 company when the holding company raises debt to invest
19 as equity in the regulated company. TECO Energy did not
20 raise debt to invest in Tampa Electric nor did it invest
21 the proceeds from the debt it did raise as equity in
22 Tampa Electric. Furthermore, given TECO Energy's and
23 Tampa Electric's internal and external dividend
24 policies, the application of the rule would impute
25 parent company debt to an overstated paid in capital

1 balance. A parent company debt adjustment is
2 inappropriate.

3
4 **SUMMARY**

5 **Q.** Please summarize your direct testimony.

6
7 **A.** Since its last base rate case in 1992, Tampa Electric has
8 had significant customer and revenue growth and has
9 worked to manage costs and undertake innovative
10 regulatory settlements to avoid the need to raise base
11 rates. This has been done in an environment in which
12 significant generation additions were required to meet
13 customer growth. The company has made these significant
14 generation additions and other asset additions while
15 being able to keep itself within its allowed ROE range
16 and maintain its financial integrity until recently.

17
18 More recently, the company has faced new environmental,
19 reliability and storm hardening requirements. In
20 addition, the cost for new equipment has increased
21 considerably in recent years.

22
23 These factors have now come together to make an increase
24 in Tampa Electric's base rates necessary in order to stop
25 significant recent erosion in Tampa Electric's financial

1 integrity. Tampa Electric needs to be financially strong
2 to be able to raise the capital required to meet its
3 significant capital investment requirements in 2009 and
4 beyond.

5
6 Tampa Electric is requesting a base revenue increase of
7 \$228,167,000. The financial basis for this revenue
8 requirement is a weighted cost of capital of 8.82
9 percent, which includes a 12.00 percent ROE and a
10 financial equity ratio, with appropriate purchased power
11 adjustments, of 55.3 percent. The requested ROE and
12 equity ratio are important for the company to maintain
13 and enhance its financial position to target credit
14 parameters and debt ratings in the single A range.
15 Finally, a parent company debt adjustment is
16 inappropriate in the case of Tampa Electric and TECO
17 Energy, as all equity infusions to Tampa Electric in the
18 relevant time periods were made from internally generated
19 funds or externally raised equity at the parent level.

20
21 **Q.** Does this complete your direct testimony?

22
23 **A.** Yes.

24
25

1 BY MR. WILLIS:

2 Q. Did you prepare and cause to be prefiled on
3 December the 17th the prepared rebuttal testimony and
4 exhibit of Gordon L. Gillette consisting of 25 pages of
5 testimony and a rebuttal exhibit containing two
6 documents?

7 A. Yes, I did.

8 Q. Do you have any additions or corrections to
9 your rebuttal testimony or rebuttal exhibit which has
10 been identified as Exhibit 80?

11 A. No, I do not.

12 Q. If I were to ask you the questions contained
13 in your rebuttal testimony, would your answers be the
14 same today?

15 A. Yes, they would.

16 MR. WILLIS: I would ask that Mr. Gillette's
17 prepared rebuttal testimony be inserted into the record
18 as though read.

19 COMMISSIONER EDGAR: The prefiled rebuttal
20 testimony of the witness will be entered into the record
21 as though read.

22

23

24

25

TAMPA ELECTRIC COMPANY
DOCKET NO. 080317-EI
FILED: 12/17/08

1 **BEFORE THE PUBLIC SERVICE COMMISSION**

2 **REBUTTAL TESTIMONY**

3 **OF**

4 **GORDON L. GILLETTE**

5
6 **Q.** Please state your name, business address, occupation and
7 employer.

8
9 **A.** My name is Gordon L. Gillette. My business address is
10 702 North Franklin Street, Tampa, Florida 33602. I am
11 employed by Tampa Electric Company ("Tampa Electric" or
12 "company") as Senior Vice President Finance and Chief
13 Financial Officer.

14
15 **Q.** Are you the same Gordon L. Gillette who filed direct
16 testimony in this proceeding?

17
18 **A.** Yes I am.

19
20 **Q.** What is the purpose of your rebuttal testimony?

21
22 **A.** The purpose of my rebuttal testimony is to address issues
23 in the prepared direct testimony of witnesses J. Randall
24 Woolridge and Hugh Larkin, testifying on behalf of the
25 Office of Public Counsel, Kevin O'Donnell, testifying on

1 behalf of the Florida Retail Federation, Thomas Herndon,
2 testifying on behalf of the Florida Industrial Power
3 Users Group, and Stephen Stewart, testifying on behalf of
4 AARP.

5
6 **Q.** Have you prepared an exhibit supporting your rebuttal
7 testimony?

8
9 **A.** Yes I have. My Rebuttal Exhibit No. ___ (GLG-2) consists
10 of two documents that were prepared under my direction
11 and supervision. These consist of:

12 Document No. 1 Standard & Poor's Methodology for
13 Imputing Debt for U.S. Utilities' Power
14 Purchase Agreements

15 Document No. 2 New Issue Summary - 2008 Utility New
16 Issuance

17
18 **Q.** Please summarize the key concerns and disagreements you
19 have regarding the substance of the various witnesses'
20 testimony.

21
22 **A.** My key concerns and disagreements are with the following
23 matters:

- 24 • Dr. Woolridge challenges the level of support provided
25 by Tampa Electric to justify its targeted single A bond

- 1 rating;
- 2 • Dr. Woolridge and Mr. O'Donnell suggest alternatives to
3 the capital structure proposed by Tampa Electric. Dr.
4 Woolridge also takes issue with the company's proposed
5 power purchase agreement ("PPA") adjustment to the
6 capital structure;
- 7 • Dr. Woolridge and Messrs. O'Donnell and Herndon suggest
8 that utility bonds are cheaper in the current market
9 than in the past and make assertions on the cost of
10 short-term debt;
- 11 • Dr. Woolridge claims that Tampa Electric witness Susan
12 Abbott did not compare the magnitude of Tampa
13 Electric's construction program relative to those of
14 other electric utilities;
- 15 • Messers. Larkin and Stewart argue that the company's
16 recommended annual storm damage reserve accrual is
17 inappropriate and, rather than changing it, it would be
18 better to rely on surcharges and securitization to
19 recover costs in the event of a storm;
- 20 • Mr. O'Donnell suggests that Tampa Electric's witness
21 Abbott provides no substantive contribution to the
22 case.

23

24

25

Because of the overlap of topics and issues, I have divided my testimony into six sections: 1) Single A Bond

1 Rating, 2) Capital Structure, 3) Recent Market Effects on
2 Debt and Equity Costs, 4) Relative Capital Expenditures,
3 5) Storm Damage Cost Recovery, and 6) Testimony of Susan
4 Abbott.

5
6 **SINGLE A BOND RATING**

7 **Q.** Dr. Woolridge challenges the level of support provided by
8 Tampa Electric to justify its targeted single A bond
9 rating. Do you take issue with this?

10
11 **A.** I do. On pages 86 and 87 of his direct testimony, Dr.
12 Woolridge makes three points with which I disagree. He
13 states that: 1) Ms. Abbott's ratings parameters exhibit
14 shows that Tampa Electric is on the high end of the BBB
15 range, even without rate relief, 2) neither Ms. Abbott
16 nor I have performed a cost benefit analysis of Tampa
17 Electric targeting a single A rating, and 3) the rating
18 agencies have affirmed or enhanced their outlooks on
19 Tampa Electric, with an important driver being the de-
20 leveraging of the parent company, TECO Energy. I
21 disagree with all three points.

22
23 **Q.** What is your comment on Dr. Woolridge's assertion that
24 Ms. Abbott's ratings parameters exhibit shows that Tampa
25 Electric is on the high end of the BBB range even without

1 rate relief?

2
3 **A.** Ms. Abbott and I had complementary exhibits in our direct
4 testimonies showing projected coverage ratios. Her
5 exhibit showed coverage ratios with Tampa Electric at the
6 targeted 55.3 percent equity ratio, with and without the
7 proposed rate increase. The exhibit in my testimony had
8 an additional column showing the coverage ratios with the
9 equity ratio at the 2007 level of about 46 percent and
10 without the proposed rate increase. This column shows
11 coverage ratios in the low BBB range. My exhibit
12 illustrates that the company needs both rate relief and
13 the proposed 55.3 percent jurisdictional financial equity
14 ratio in order to be more certain of achieving credit
15 rating parameters commensurate with its targeted single A
16 debt rating.

17
18 **Q.** Please comment on Dr. Woolridge's assertion that no cost
19 benefit analysis of Tampa Electric targeting a single A
20 rating was preformed.

21
22 **A.** Dr. Woolridge seems to be implying that the company was
23 remiss in not performing a cost benefit analysis of its
24 targeted single A credit rating versus, I presume,
25 staying at the current BBB rating or going lower in the

1 credit ratings spectrum. Whether or not the company
2 targets an A rating is not simply a question of costs and
3 benefits. It is a broader and more challenging question
4 of risks, rewards, and access to capital. Within
5 reasonable ranges, the cost of equity is higher than debt
6 and, therefore, more equity in the capital structure
7 costs more. However, a balance must be maintained.
8 Carrying too much debt will cause lower credit ratings,
9 higher debt costs and limit overall access to capital.
10 Given the extensive construction program and need for
11 access to maintain the capital spending planned by Tampa
12 Electric over the next several years, the realization of
13 significant risk of hurricanes, the unprecedented
14 upheaval that is currently occurring in the financial
15 markets, and the significant amount of fuel the company
16 buys, Tampa Electric needs to have strong investment
17 grade ratings in order to ensure that it will have access
18 to the debt capital markets as needed to fund its
19 construction program. I believe that targeting credit
20 ratings in the A range is appropriate for these purposes.

21
22 **Q.** Please describe why an A rating is so important to
23 maintain access to the credit markets.

24
25 **A.** The utility sector is very capital intensive and relies

1 heavily on the capital markets to provide funding for
2 growth, system reliability and environmental compliance.
3 While utilities have been able to meet their short-term
4 funding needs during financial market disruptions by
5 issuing highly-rated, short-dated commercial paper or
6 tapping existing credit lines, access to longer-term
7 financial markets is essential to fund long-term projects
8 and maintain financial flexibility. The current
9 financial crisis has impacted and disrupted all sectors
10 of the capital markets, not only on the cost side but
11 with regard to access to capital as well. As Ms. Abbott
12 discusses in her rebuttal testimony, access to the credit
13 markets has recently been especially challenging. During
14 recent months, there have been periods of time when the
15 debt capital markets were ostensibly closed for all new
16 issuance, as was the case from September 10 through 22.
17 When the debt capital markets eventually opened,
18 providing small windows of opportunity for new issuances
19 beginning in late September, only highly rated (strong
20 single A or better) issuers were able to access the
21 markets. It was several weeks later before a BBB rated
22 utility was able to access the bond market, and the deals
23 that were done by BBB issuers were mostly secured and at
24 very high interest rates. This most recent period of
25 financial market distress highlights the fact that highly

1 rated issuers have more efficient and consistent access
2 to the capital markets than lower rated issuers. It
3 further supports the company's conclusion that the single
4 A rating is necessary and indeed critical during times of
5 national and international financial distress in order to
6 maintain access.

7
8 Further, as I describe in my direct testimony, a single A
9 rating leaves a "safety net" in the event of a
10 significant hurricane. With single A ratings, the company
11 would be less likely to be downgraded to below investment
12 grade, a close to catastrophic occurrence for a utility
13 company, than if the company were maintaining a BBB
14 rating before a major storm event occurred. I believe
15 this is the reason more utilities in the southeast
16 maintain debt ratings in the A range. On average, 58
17 percent of the electric utilities in the southeast have
18 single A ratings or above. This compares to 28 percent
19 across the U.S.

20
21 Q. Messrs. Woolridge, O'Donnell and Herndon question the
22 benefits of being an A rated utility. Did they provide
23 any evidence to suggest that a lower rating would provide
24 adequate financial integrity and access to the capital
25 markets?

1 **A.** No. None of these witnesses provide any evidence to
2 suggest that a rating lower than single A would provide
3 adequate financial integrity and appropriate and
4 consistent access to the capital markets.

5
6 **Q.** Please describe the types of ratings that rating agencies
7 use.

8
9 **A.** The rating agencies have two categories in which they
10 provide information on a company. They provide an actual
11 debt rating, which when changed up or down is termed a
12 "ratings action". They also provide outlooks, typically
13 either "positive", "stable", or "negative," to give
14 institutional investors a sense of the direction that the
15 rating might go in the future, pending certain future
16 events such as key regulatory decisions.

17
18 **Q.** Dr. Woolridge states "the three major rating agencies
19 have most recently affirmed or enhanced the outlook for
20 the ratings of Tampa Electric," and that "an important
21 factor in these decisions appears to be the deleveraging
22 of the parent company, TECO Energy." How do you respond?

23
24 **A.** Dr. Woolridge is correct in his first statement where he
25 indicates that "the three major rating agencies have most

1 recently affirmed or enhanced the outlook for the ratings
2 of Tampa Electric." I disagree, however, with his second
3 statement where he indicates that this is driven by the
4 deleveraging of TECO Energy. While this may be partially
5 the cause, the rating agencies are very focused on the
6 outcome of this proceeding as well. They know that the
7 company is moving aggressively to improve its equity
8 ratio, capital structure, and overall financial
9 integrity. I believe that an affirmation of the
10 appropriateness of these actions by the Commission will
11 potentially allow the agencies to take actions to upgrade
12 Tampa Electric. By the same token, if the Commission
13 were to accept the capital structure recommendations of
14 the intervenors' witnesses in this case, I am very
15 concerned that the rating agencies could downgrade Tampa
16 Electric.

17
18 The most recent ratings changes by the rating agencies
19 have been as follows:

- 20
21 • On November 27, 2007, S&P upgraded the unsecured debt
22 of TECO Energy to BB+ and maintained the rating at
23 Tampa Electric at BBB- (one notch above non-investment
24 grade), citing TECO Energy's commitment to credit
25 quality by shedding most of its unregulated businesses

1 and restoring its balance sheet;

- 2 • On December 5, 2007, Moody's upgraded the unsecured
3 debt of TECO Energy to Baa3 (investment grade)
4 reflecting the company's reduced business risk profile
5 resulting from the sale of unregulated businesses and
6 retirement of parent company debt. In the December 5,
7 2007 report, Moody's maintained the rating at Tampa
8 Electric at Baa2, indicating that Tampa Electric's
9 ratings could move up with additional clarity on the
10 size and timing of its capital expenditure program and
11 the magnitude and regulatory response to potential rate
12 increases related to these capital expenditures; and
- 13 • On March 26, 2008, Fitch upgraded the unsecured debt of
14 TECO Energy to BBB-, citing reduction in business risk
15 and retirement of parent debt and affirmed the BBB+
16 unsecured debt rating of Tampa Electric, citing credit
17 concerns for Tampa Electric, including an increasing
18 reliance on gas-fired generation capacity, more
19 stringent environmental regulations, lower sales growth
20 and the need for base rate relief.

21
22 So while all three agencies upgraded TECO Energy, all
23 three left Tampa Electric's ratings where they had been.
24 This indicates that, as one would expect, deleveraging
25 TECO Energy is driving TECO Energy's ratings more than it

1 is Tampa Electric's. Additionally, recent discussions
2 with the rating agencies suggest that Tampa Electric's
3 current credit parameters, including its equity ratio,
4 are not sufficient to justify a single A rating. Hence,
5 the more important factors for Tampa Electric to obtain
6 stronger debt ratings are for the company to receive the
7 rate relief requested, including the proposed equity
8 ratio and return on equity.

9
10 **CAPITAL STRUCTURE**

11 **Q.** Messrs. Woolridge and O'Donnell suggest alternatives to
12 the 55.32 percent equity ratio proposed by Tampa
13 Electric. Why should the Commission reject their
14 recommendations and use the company's proposed equity
15 ratio?

16
17 **A.** In the interest of lowering the revenue requirement, the
18 intervenor witnesses have recommended much lower equity
19 ratios than the company has proposed. Although they
20 derived their recommended equity ratios using different
21 arguments or justifications which I will discuss later in
22 my testimony, their recommendations were similar (48.9
23 percent and 49.6 percent) compared to the company's
24 proposed 55.32 percent. While Mr. O'Donnell's 49.6
25 percent recommendation was not stated directly in his

1 testimony, I calculated it using his proposed overall
2 capital structure, which used all regulatory sources of
3 capital. If the Commission were to adopt these
4 significantly lower equity ratios, the company would not
5 be able to achieve its goal of having credit parameters
6 in the single A range. As discussed in both Ms. Abbott's
7 and my direct testimony, the 55.32 percent equity ratio
8 the company has proposed should result in credit
9 parameters that best enable the company to achieve a
10 single A rating.

11
12 **Q.** How do the equity ratio recommendations of Messrs.
13 Woolridge and O'Donnell of 48.9 percent and 49.6 percent,
14 respectively, compare to the allowed capital structures
15 of other investor-owned utilities in Florida?

16
17 **A.** The recommended equity ratios are substantially lower
18 than the most recently approved capital structures for
19 Progress Energy Florida, Inc. ("PEF") and Florida Power &
20 Light Company ("FP&L"). In their recent rate case
21 proceedings, the Commission approved PEF and FPL's equity
22 ratios at 57.83 percent and 55.83 percent, respectively.
23 Furthermore, in Tampa Electric's 1996 earnings review,
24 the Commission capped the company's equity ratio at 58.7
25 percent. These equity ratio decisions demonstrate the

1 long history of this Commission's support for utility
2 financial integrity and the reasonableness of the
3 company's requested 55.32 percent equity ratio.
4

5 **Q.** Dr. Woolridge states that the 48.89 percent equity ratio
6 more accurately reflects how the company has been
7 financed in the past. Is he correct?
8

9 **A.** No. He used an outdated time period that is not
10 reflective of how the company is currently financed and
11 will be financed in the future. By using the 2007 and
12 2008 13-month average capital structures to derive his
13 proposed ratio, Dr. Woolridge did not account for the
14 full effect of the equity infusions TECO Energy has
15 already made and plans to make to Tampa Electric. The
16 difference can be better understood by comparing the
17 year-end equity ratio in the company's September 2008
18 Surveillance Report to the 48.89 percent recommended
19 equity ratio by Dr. Woolridge. The company's equity ratio
20 as of September 2008 is 51.9 percent. While this ratio
21 only reflects equity infusions made through September, it
22 will continue to increase as TECO Energy makes additional
23 equity infusions.
24

25 As I stated earlier in my testimony, given what we know

1 about the current situation in the financial markets, the
2 risk of hurricanes and the extensive capital expenditure
3 needs of Tampa Electric going forward, it would be a
4 mistake to leave the capital structure and resulting debt
5 ratings where they were in 2007 and early 2008.

6
7 **Q.** Dr. Woolridge also states that the 48.89 percent equity
8 ratio more accurately reflects the capitalization of
9 other electric utility companies. Is he correct?

10
11 **A.** No. Dr. Murry's rebuttal testimony addresses the
12 problems associated with Dr. Woolridge's proposed proxy
13 group; however, I would like to address one of the
14 particular proxy companies selected by Dr. Woolridge.
15 Progress Energy, Inc. (the holding company) is listed in
16 his proposed proxy group exhibit and it is shown to have
17 an equity ratio of only 43 percent. It evidently does
18 not reflect PEF's most recent Commission approved 57.83
19 percent equity ratio, which is more comparable to and
20 supportive of the 55.32 percent equity ratio requested by
21 Tampa Electric in this proceeding.

22
23 **Q.** Dr. Woolridge takes issue with the company's proposed PPA
24 adjustment to the capital structure. What is your
25 response?

1 **A.** Dr. Woolridge makes three basic points in support of his
2 position that a PPA adjustment is not warranted; 1) the
3 risk factor is not defined, 2) the adjustment is not in
4 accordance with GAAP accounting, and 3) the PPA payments
5 are unlike debt. While Ms. Abbott addresses some of
6 these issues in her rebuttal testimony, I have a few
7 additional comments regarding his first and third points.

8
9 In his first point, Dr. Woolridge questions the use of
10 the 25 percent risk factor in calculating the imputed
11 debt amount and he states that the "S&P risk factor for
12 imputing debt is not well defined and cannot be assessed
13 in this situation." To the contrary, through direct
14 discussions with S&P, the company is aware that S&P has
15 been and continues to impute debt for PPAs in its credit
16 rating analysis of Tampa Electric by applying a 25
17 percent factor to the present value of the PPA capacity
18 payments. This is exactly what Tampa Electric has done
19 in preparing the projected adjustment in this proceeding.
20 This is further supported by Document No. 1 of my
21 Rebuttal Exhibit No. __ (GLG-2) which is an article that
22 suggests that S&P would use a 25 percent factor for
23 companies with recovery clause mechanisms similar to
24 Tampa Electric's.

25

1 With regard to Dr. Woolridge's third argument, I believe
2 he ignores this Commission's history of recognizing the
3 S&P imputation of off-balance sheet debt for PPAs in its
4 prior rulings. As I mention in my direct testimony, Rule
5 25-22.081(7), Florida Administrative Code, Contents of
6 Petition, requires utilities to include a discussion of
7 the potential for increases and decreases in its cost of
8 capital associated with purchased power in a petition for
9 determination of need for new generation. Also, in both
10 FP&L's and PEF's recent base rate proceedings, the
11 Commission approved off-balance sheet obligations for
12 PPAs to be incorporated into the capital structure and
13 weighted average cost of capital.

14
15 **Q.** Do you agree with Mr. O'Donnell's statement that his
16 adjustment in the proposed capital structure for this
17 issue is "in keeping with Commission Rule 25-14.004"?

18
19 **A.** No. Mr. O'Donnell's proposed adjustment to the capital
20 structure is not consistent with the Commission's parent
21 company debt rule. Furthermore, Mr. O'Donnell's
22 recommended adjustment to the equity in the capital
23 structure is neither supportable nor appropriate.

24
25 **RECENT MARKET EFFECTS ON DEBT AND EQUITY COSTS**

1 Q. Messrs. Woolridge, O'Donnell and Herndon suggest that
2 interest rates and equity risk premiums are currently at
3 historically low levels and therefore, the return on
4 equity set in this case should be lower. Do you agree
5 with these assertions?
6

7 A. No, I do not. While it is true that current interest
8 rates on Treasury securities have been bid down to
9 historically low levels, credit spreads, which are the
10 amounts added to the Treasury rate to derive the "all-in"
11 price of corporate debt, are at historically wide levels
12 resulting in yields for bonds, including utility bonds,
13 at significantly higher than historical levels. Recent
14 trading yields of 10-year utility debt are higher than
15 any period since 2000 and since 1992 before that. In
16 addition, recent new utility debt issues have been priced
17 with significant new issue premiums over and above
18 current trading yields. The cost of capital for debt and
19 equity issuers has increased in response to the current
20 financial market crisis and investors' quest for quality.
21 In Document No. 2 of my rebuttal exhibit GLG-2, I provide
22 a list of the various utility bond deals that have been
23 recently executed along with the respective company's
24 credit rating. This list clearly demonstrates the higher
25 rates associated with debt in this current financial

1 market.

2

3 **Q.** Please address the difference between Dr. Woolridge's
4 proposed cost of short-term debt compared to the
5 company's.

6

7 **A.** Because of the volatility and uncertainty surrounding
8 short-term interest rates, the company utilized average
9 historical LIBOR rates in developing its proposed short-
10 term interest rate of 4.5 percent based on a LIBOR rate
11 of 4.37 percent. Dr. Woolridge indicates that the more
12 appropriate LIBOR rate should be based off of the
13 November 13, 2008 rate of 2.15 percent which happens to
14 be near the absolute lowest rate seen in the last four
15 years. Dr. Woolridge's Exhibit JRW-4, page 5 of 6, shows
16 LIBOR rates from January 2, 2004 to November 2, 2008.
17 The average rate over this selected time period is 3.8
18 percent. However, over the last three years, LIBOR rates
19 have averaged 4.5 percent. Current LIBOR rates have been
20 driven down by the billions of dollars of liquidity the
21 Federal Reserve, Treasury Department, and U.S. Government
22 have flooded into the market to entice banks to begin
23 lending to each other in the current financial crisis.
24 As evidenced by the significant spike in LIBOR rates in
25 September to 4.75 percent, these rates have been

1 extremely volatile and presumably will continue to be
2 volatile for the foreseeable future. It is therefore
3 prudent to use a historical average LIBOR rate as the
4 company proposed rather than a rate at a particular point
5 in time as Dr. Woolridge has done to determine future
6 short-term funding costs.

7
8 **RELATIVE CAPITAL EXPENDITURES**

9 **Q.** Dr. Woolridge alleges that Ms. Abbott made no comparison
10 of the magnitude of Tampa Electric's construction program
11 to those of other electric utilities and/or to the
12 electric utilities included in Dr. Murry's proxy group.
13 How do you respond?

14
15 **A.** While Ms. Abbott may not have discussed the company's
16 capital expenditure program in relation to the
17 requirements of the industry, I did. In my direct
18 testimony, I discuss the significant capital expenditures
19 since Tampa Electric's last base rate case in 1992 along
20 with the more recent capital spending trends that have
21 affected the electric industry and, specifically, the
22 company's levels of capital spending. I discuss the
23 significant recent increase in Tampa Electric's rate base
24 and the significant needs over the next several years for
25 capital spending. I describe that only about half of

1 Tampa Electric's projected construction expenditures over
2 the next five years will be made with internally
3 generated funds and the remainder must be made with
4 external funding.

5
6 For 2008 through 2010, Tampa Electric's projected capital
7 expenditures are estimated at \$1.8 billion, and more than
8 60 percent of this amount will need to be sourced
9 externally. According to a recent report prepared by an
10 investment bank, the electric utility industry's capital
11 expenditures for 2008 through 2010 are estimated at \$276
12 billion which represents about 41 percent of the
13 industry's market value. This same report cites Tampa
14 Electric's 2008 through 2010 capital expenditures
15 representing about 44 percent of market value. This
16 clearly illustrates that the company's capital
17 expenditure needs are significant relative to the
18 industry's significant needs and it underscores the
19 importance of maintaining a high level of financial
20 integrity and a strong credit rating going forward.

21
22 **STORM DAMAGE COST RECOVERY**

23 **Q.** Messrs. Larkin and Stewart argue that the level of Tampa
24 Electric's proposed storm damage accrual and reserve is
25 inappropriate and they support surcharges and

1 securitization for future needs. Do you agree?

2
3 **A.** No. Since Florida's 2004 hurricane season experience,
4 three storm cost recovery mechanisms have been used: an
5 annual reserve accrual included in base rates, a storm
6 surcharge or pass-through added to base rates for two to
7 three years, and securitization, which is a financing
8 mechanism that effectively spreads a surcharge over a
9 longer period of time. Both witnesses state that the
10 company's existing annual accrual and reserve target are
11 appropriate and recommend, in the event that the reserve
12 is not adequate following a significant storm, the
13 company can simply rely on a surcharge and
14 securitization. In his rebuttal testimony, Tampa
15 Electric witness Jeffrey Chronister addresses why their
16 recommendation is not appropriate nor is it in the best
17 interest of customers. However, I would like to address
18 the limitations of securitization as a financing
19 mechanism for storm costs.

20
21 While securitization can be a very effective financing
22 mechanism, it may not be economic or feasible for amounts
23 less than \$150 to \$200 million. The fixed costs of the
24 securitized debt issuance and the ongoing cost of
25 administration, which are higher than for unstructured

1 financings, would make a small issue size very expensive.
2 More importantly, it is difficult to attract investors to
3 small issue sizes, primarily because investors desire the
4 liquidity of a large transaction. Because of the size
5 considerations, securitization represents a realistic
6 solution for only the large and low probability events,
7 such as Category 3 or higher storms. At the current
8 accrual and reserve level, this would leave a fairly
9 large gap that would fall to a short-term surcharge. As
10 Tampa Electric witness Stephen Harris states in his
11 rebuttal testimony, at the current annual accrual of \$4
12 million, there is a greater than 50 percent chance of a
13 negative reserve balance within the next five years. The
14 company's recommended increase to the storm damage
15 accrual is necessary and appropriate.

16
17 **TESTIMONY OF SUSAN ABBOTT**

18 **Q.** Mr. O'Donnell suggests that Tampa Electric's witness
19 Abbott provides no return on equity or capital structure
20 recommendation and makes no substantive contribution to
21 the case. Do you agree?

22
23 **A.** No, I do not. Ms. Abbott's role is not to testify in
24 support of the company's requested return on equity and
25 its requested capital structure. Dr. Murry and I provide

1 complete testimony in these areas. Ms. Abbott was hired
2 because of her background and expertise on rating
3 agencies and her understanding of how regulatory
4 commissions' base rate decisions can impact a company's
5 ratings. She has provided insight into rating agencies'
6 processes and perspectives, analyzed the company's
7 current creditworthiness, helped determine a necessary
8 rating to ensure access to the debt and equity markets,
9 and provided direct and rebuttal testimony. The
10 Commission has a long history of considering the
11 testimony of financial integrity witnesses similar to
12 that provided by Ms. Abbott.

13
14 **Q.** Do you agree with Mr. O'Donnell's recommendation that Ms.
15 Abbott's fees should be excluded from rate case expense
16 because she makes no substantive contribution to the case
17 and they are too high?

18
19 **A.** No, I do not. She is an integral part to the company's
20 comprehensive case and her fees are competitive and
21 appropriate. Mr. Chronister addresses overall rate case
22 expense in his rebuttal testimony and, while he does not
23 specifically address Ms. Abbott's fee, he addresses the
24 appropriateness of the company's proposed rate case
25 expense.

1 **SUMMARY OF REBUTTAL TESTIMONY**

2 **Q.** Please summarize your rebuttal testimony.

3

4 **A.** My rebuttal testimony has addressed the primary concerns
5 and disagreements I have regarding the testimonies of the
6 intervenors' witnesses Woolridge, Larkin, O'Donnell,
7 Herndon, and Stewart. They all make assertions that are
8 not accurate, not appropriate or not applicable to the
9 issues in this proceeding. While they raise a variety of
10 issues including the company's proposed capital
11 structure, its targeted credit rating, the recent market
12 effects on the cost of debt and equity, and other various
13 projected costs such as storm damage accrual and rate
14 case expense, none of them present sufficient evidence to
15 support any adjustments to the company's proposed revenue
16 requirement. The company has presented facts and
17 information that support its petition and the
18 appropriateness of the revenue requirement contained in
19 its filing.

20

21 **Q.** Does this conclude your rebuttal testimony?

22

23 **A.** Yes, it does.

24

25

1 BY MR. WILLIS:

2 Q. Please summarize your testimony.

3 A. Good afternoon, Commissioners. My testimony
4 focuses on the financial aspects of Tampa Electric's
5 proposed rate increase.

6 Mr. Black has described some of the
7 significant changes that have occurred at Tampa Electric
8 over the 16 years since we were last in for a base rate
9 increase, so I won't repeat them. Over the last few
10 years, the company has entered a period of unprecedented
11 needs for capital expenditures and operations
12 expenditures for generation additions and transmission
13 and distributions additions as well for storm hardening
14 and reliability. Adding to this challenge is the fact
15 that the cost of new equipment has increased very
16 significantly, in some cases, almost doubling in recent
17 years.

18 These factors have come together to cause the
19 recent and expected future rate of growth of our rate
20 base to be much greater than the expected growth in base
21 revenues. This makes an increase in Tampa Electric's
22 base rates necessary to stop a significant erosion in
23 Tampa Electric's return on equity and overall financial
24 integrity.

25 Tampa Electric needs to be financially strong

1 to be able to access the capital markets when necessary
2 in order to procure the capital required to meet its
3 significant capital expenditure needs in 2009 and
4 beyond. Over the next few years, Tampa Electric's needs
5 for external financing will exceed its internally
6 generated funds to the point that 60 percent of its
7 financing will need to be done externally. This higher
8 percentage -- this percentage is much higher than in the
9 past for Tampa Electric, and it's also in general high
10 for electric utilities.

11 Tampa Electric is requesting a rate increase
12 of \$228 million in this proceeding. The financial basis
13 for the proposed revenue increase is a weighted average
14 cost of capital of 8.82 percent, which includes a
15 12 percent return on equity and a financial equity ratio
16 of 55.3 percent.

17 The requested return on equity and equity
18 ratio are important for the company to maintain its
19 financial integrity and for the company to reach its
20 targeted credit ratings parameters and targeted debt
21 ratings of single-A. Consistent with the majority of
22 other utilities in the Southeast, debt ratings in the
23 single-A range are necessary, given the company's future
24 capital spending program to maintain reliable service,
25 and acknowledge the risks, the risk of things like

1 hurricanes, and especially the very high financial
2 market uncertainty that we face today. With your
3 approval of the requested rate increase, the company's
4 coverage ratios should fall within the range necessary
5 to achieve the targeted single-A credit ratings.

6 Another area that I address in my testimony is
7 parent company debt and Rule 25-14.004. It is our
8 position that an adjustment under this rule is not
9 appropriate for Tampa Electric. Under the rule, Tampa
10 Electric has the opportunity to rebut the presumption
11 that any debt at the parent company was raised to
12 support equity infusions to the utility. All of the
13 debt that currently exists at the TECO Energy parent
14 level was raised on behalf of TECO Power Services for
15 its investments in merchant power projects, and no
16 amount of this debt was raised to infuse equity into
17 Tampa Electric. Therefore, A parent company debt
18 adjustment is not required or warranted.

19 My rebuttal testimony addresses numerous
20 deficiencies in the direct testimony of the intervenors'
21 financial witnesses. The intervenor witnesses have
22 coalesced around a 49 to 50 percent equity ratio on a
23 financial basis that I believe is insufficient for Tampa
24 Electric to achieve its targeted single-A credit
25 ratings. This combined with the intervenors' proposal

1 on return on equity and other factors would cause a
2 significant degradation in Tampa Electric's financial
3 integrity. Our requested 55.3 percent equity ratio is
4 appropriate and consistent with the approved equity
5 ratios of other electric utilities in Florida.

6 Finally, contrary to the assertions of the
7 intervenor witnesses, the financial crises that we're
8 now seeing in the world and in the nation have served to
9 limit our access to debt and equity financing and have
10 served to cause interest rates and the overall cost of
11 capital to rise very significantly. Rather than
12 supporting a lower return on equity as the intervenors
13 suggest, today's conditions underscore the need for a
14 strong return on equity like our proposed 12 percent.

15 Commissioners, your decisions in this
16 proceeding are critical to Tampa Electric's financial
17 integrity. Granting Tampa Electric's requests in the
18 area of capital structure and cost of capital is
19 especially important in this tenuous financial market
20 environment that exists today.

21 That concludes my summary.

22 MR. WILLIS: I tender the witness.

23 COMMISSIONER EDGAR: Ms. Christensen.

24 MS. CHRISTENSEN: Thank you.

25

CROSS-EXAMINATION

1
2 BY MS. CHRISTENSEN:

3 Q. Good afternoon, Mr. Gillette. I just have a
4 few quick questions for you.

5 Is it correct that TECO Energy has written off
6 its investment in the TPS merchant power plants?

7 A. That is correct.

8 Q. And is it also correct that you stated the
9 company has \$404 million of long-term debt on TECO
10 Energy's balance sheets?

11 A. That's correct.

12 Q. Okay. And wouldn't you agree the Generally
13 Accepted Accounting Principles do not allow a company to
14 maintain equity or debt on its books for an investment
15 that has already been written off?

16 A. Well, no, I don't agree with that, and I'll
17 supplement my answer by saying in the case of the
18 write-offs, we wrote off equity. We didn't write off
19 debt. And that in fact is the reason that the
20 \$400 million of parent debt remains.

21 Q. Okay. If you had written off the debt, you
22 would not be allowed to maintain that on your books; is
23 that correct?

24 A. Well, you really can't write off debt, and the
25 reason is that that debt still exists.

1 Q. Let me move on. In order for a company to
2 keep debt on its books, it has to support an asset
3 that's currently used and useful; is that correct?

4 A. No. Debt is a liability of the company, and
5 the debt that remains on TECO Energy's books is in fact
6 a carry-over from our investments in merchant power.
7 But it is still an obligation of the company, one that
8 we pay debt service on on a regular basis.

9 Q. Let me ask you this, changing subjects. Have
10 you requested recovery for storm hardening activities in
11 this rate case?

12 A. We have.

13 Q. Okay. And regarding the 12 percent ROE that
14 the company is requesting in this case, is that an
15 after-tax ROE number?

16 A. It is.

17 Q. And then that would be grossed up at
18 approximately a 1.6 percent rate for taxes?

19 A. That's correct. On a pre-tax basis, the
20 return would be approximately 19 percent.

21 MS. CHRISTENSEN: Thank you. I have no
22 further questions.

23 THE WITNESS: I would just supplement my
24 answer by saying that the returns on equity are
25 generally quoted after tax. And the returns on equity

1 of some of the other companies that exist in Florida,
2 for instance, Publix Super Markets, is about 20 percent
3 on an after-tax basis, and Mosaic recently is at about a
4 54 percent return on equity.

5 MS. CHRISTENSEN: I have no further questions.

6 COMMISSIONER EDGAR: Ms. Bradley.

7 MS. BRADLEY: Thank you.

8 CROSS-EXAMINATION

9 BY MS. BRADLEY:

10 Q. Mr. Gillette, Mr. Black indicated that you
11 were going to talk about a fair and reasonable return on
12 equity. Is that fair or reasonable for TECO or for your
13 customers?

14 A. It's fair and reasonable in order for us to be
15 able to attract the capital that we need in order to
16 finance our investments going forward. What we're, I
17 think, attempting to do in this proceeding is establish
18 a cost of capital that on the one hand is as low as
19 possible for ratepayers, but on the other hand, allows
20 the company to access the capital markets in ways that
21 it can compete for equity capital. And in that context,
22 we believe that the 12 percent equity is appropriate.

23 Q. So going back to my question, that would be
24 fair and reasonable for TECO?

25 A. Fair and reasonable for TECO and the other

1 utilities that are requesting rates at this point in
2 time. There are numerous rate cases that are under way
3 across the United States at this point in time, several
4 in the Southeast, and there are five utilities in the
5 Southeast that have requested returns on equity in the
6 12 percent range.

7 Q. And looking at the return on equity, did you
8 do an analysis of how many customers you might lose
9 because of this increase?

10 A. I'm having trouble getting the correlation
11 here. You're talking about rate increase and loss in
12 customers?

13 Q. Yes. Did you do an analysis? As you were
14 looking at this return on equity and requested rate
15 increase, did you analyze how many customers that might
16 cost you?

17 A. We did not. However, we do track bad debt
18 expense very closely, and our bad debt expense has, even
19 in these times when fuel costs have increased fairly
20 significantly, stayed fairly low. And so we don't see
21 ourselves, in effect, losing customers due to cost.

22 Q. So you did not analyze that?

23 A. Well, I think bad debt expense is a fairly
24 good way to analogize what's going on in the customer
25 base. The customers --

1 Q. Did you go to --

2 A. -- that are in our service -- we don't track
3 the customers that move out of our service territory due
4 to electric rates. And I would venture to say that it's
5 unlikely that there were many that moved out of the
6 service territory just due to electric rates.

7 Q. Did you go to the public hearings that were
8 held in Tampa?

9 A. I did not.

10 Q. Have you reviewed the testimony from the
11 public hearings?

12 A. I have reviewed summaries of the public
13 hearings.

14 Q. Did those summaries indicate that there were
15 people that testified they could not afford the rate
16 increase?

17 A. Yes.

18 Q. And did you then do an analysis of how many
19 customers you might lose because they couldn't pay for
20 your utility?

21 A. We did not, or I did not.

22 MS. BRADLEY: Nothing further.

23 COMMISSIONER EDGAR: Mr. Moyle.

24 MR. MOYLE: Thank you, Madam Chairman.

25

CROSS-EXAMINATION

1
2 BY MR. MOYLE:

3 Q. Mr. Gillette, good afternoon. Jon Moyle on
4 behalf of FIPUG.

5 In preparing some questions to ask you, I read
6 your testimony to be offered as the chief financial
7 officer of TECO Energy and the CFO of Tampa Electric.
8 Is that correct?

9 A. That's correct.

10 Q. And in your summary on page 37, you provide
11 background about what the company has faced since 1992,
12 and you go through the customer and revenue growth, some
13 of the regulatory settlements that you've done with the
14 Florida Department of Environmental Protection and EPA,
15 and some storm hardening requirements, and what you need
16 to be financially sound. That's generally correct,
17 isn't it?

18 A. The first part of my testimony speaks to those
19 points, yes.

20 Q. I'm correct then, am I not, to assume that
21 you're testifying as a fact witness in this case?

22 A. I'll look to my attorneys on that.

23 Q. Well, I guess the question is, do you consider
24 yourself -- have you given any opinions or do you think
25 you're an expert and you're going to give opinions, or

1 are you kind of testifying about here's the road TECO
2 has traveled to get to this point today? And you can
3 answer. I mean, if you consider yourself an expert,
4 then I'll have some questions on that. If you don't,
5 tell me you don't.

6 MR. WILLIS: Madam Chairman, Mr. Gillette is
7 offered both as a fact and as an expert. He has --

8 MR. MOYLE: Well, let --

9 MR. WILLIS: -- a lot of experience as a chief
10 financial officer of both Tampa Electric and TECO Energy
11 and is eminently qualified as an expert to express his
12 opinions in this case.

13 COMMISSIONER EDGAR: Mr. Moyle.

14 MR. MOYLE: Can I voir dire him, then?

15 BY MR. MOYLE:

16 Q. What areas do you have expertise in, do you
17 consider yourself to have expertise in?

18 A. On general utility business management and
19 financial issues. I've been with the company for 26
20 years.

21 Q. Is there anything beyond that?

22 A. All my experience has been with TECO Energy
23 and Tampa Electric. I joined the company when I was 21
24 years old.

25 COMMISSIONER EDGAR: Mr. Moyle, where are we

1 going?

2 MR. MOYLE: Well, here's the thing. I mean,
3 you read his direct testimony, and he tells you all
4 these facts about what TECO is doing. You're preparing
5 -- you know, I don't perceive him as being an expert.
6 I'm trying to confirm he's not an expert, and then
7 his --

8 MS. HELTON: Madam Chairman.

9 MR. MOYLE: -- lawyer is saying, well, he is
10 an expert. So if he is an expert, I want to know what
11 he contends he's a expert in so that we can limit the
12 opinion testimony. I don't think he's an expert in what
13 the bond rating agencies will do, so if he's not, then I
14 want to -- you know, I want to confine it a little bit.

15 COMMISSIONER EDGAR: Ms. Helton.

16 MR. WILLIS: Mr. Moyle, he is an expert --

17 COMMISSIONER EDGAR: No, no, no. Hold on.
18 Ms. Helton, did you want to speak?

19 MS. HELTON: Yes, ma'am, I would appreciate
20 that. If you'll hold on one minute, I'm looking for a
21 reference in the order establishing procedure.

22 COMMISSIONER EDGAR: Mr. Willis, I will come
23 back to you in just a moment.

24 MS. HELTON: On page 5 of the Order
25 Establishing Procedure issued in this docket, and it's

1 Order No. PSC-08-0557-PCO-EI, the parties are directed
2 in their prehearing statements to address certain
3 matters, and subsection (8) of those matters is, "Any
4 objection to a witness's qualifications as an expert.
5 Failure to identify such objection will result in
6 restriction of a party's ability to conduct voir dire
7 absent a showing of good cause at the time the witness
8 is offered for cross-examination at hearing." And I'm
9 not sure that I've heard Mr. Moyle express good cause
10 for the need for us to go through this exercise this
11 afternoon.

12 MR. MOYLE: Well, I guess --

13 COMMISSIONER EDGAR: Just a moment.

14 Mr. Moyle, what I heard you say is that in your
15 opinion -- is that the same as good cause?

16 MR. MOYLE: Well, I guess here's sort of the
17 problem. Mr. Gillette, you know, he has prefiled
18 testimony. You can read it.

19 COMMISSIONER EDGAR: I have.

20 MR. MOYLE: And I think fairly it
21 characterizes what the history of Tampa Electric has
22 been since the last rate case, their deal with the -- I
23 mean, it's a lot of factual stuff that he has
24 information of, having served as the CFO, distinct
25 materially from Dr. Murry, who is a professor at

1 Oklahoma who says, "Here. Here's your ROE. Here's a
2 discounted cash flow model." I mean, that puts me on
3 notice that Dr. Murry is an expert. I don't have that
4 notice with Mr. Gillette. I'm assuming that he's
5 testifying as a fact witness based on what I read.

6 You know, there can be a fuel witness, here's
7 what we've done with respect to fuel, and all of a
8 sudden, you know, they're going to offer an opinion, and
9 we're not clear. It's mushy as to who's an expert and
10 who's not. I looked at his testimony, and I think it's
11 factual, and I just want to try to confirm it's factual.
12 Now his lawyer -- he kind of said, "Well, I'm not really
13 sure. Let me ask my lawyer," and then his lawyer says,
14 "Well, you're an expert in finance." So if he's an
15 expert in finance, I want to limit it to that. I think
16 it's fair game.

17 COMMISSIONER EDGAR: My opinion --

18 MR. WILLIS: May I respond?

19 COMMISSIONER EDGAR: Yes, in just a moment,
20 Mr. Willis. My thinking is that our time is better
21 spent with you asking your questions to the witness and
22 the witness responding, with an opportunity, of course,
23 for the same with the future witnesses.

24 Commissioner, let me hear from Mr. Willis, and
25 then I absolutely will come to you. Mr. Willis.

1 MR. WILLIS: Not only was he required to do
2 this previously, but he has raised a motion to strike
3 trying to strike this testimony, which has been denied
4 by the Prehearing Officer here.

5 And in fact, a witness is qualified not only
6 through educational background but through experience,
7 and he has certainly shown that he has the experience to
8 express the opinions, and all the opinions that he
9 expresses in his testimony he's qualified to give.

10 COMMISSIONER EDGAR: I have not heard anything
11 that rises to the level of good cause in my mind to
12 change the way that we would proceed with this witness.

13 Commissioner Argenziano, did you have any
14 additional comments?

15 COMMISSIONER ARGENZIANO: Yes, I do. Since
16 I'm not an attorney, I would like to know -- I mean, I'm
17 looking at -- I'm reading and I'm trying to figure out
18 what is factual, what isn't, who is qualified to give me
19 factual information, and I think it is pertinent to me
20 making a decision to find out.

21 I mean, I'm confused as to whether the
22 gentleman has the expertise to give the information or
23 not, so somebody needs to better explain to me why it's
24 not important to figure out whether it's factual or not
25 factual or what his experience is in his testimony, or

1 does it not matter? Or just me saying that on the
2 record, does that indicate that I'm not sure that the
3 individual has the background -- and I don't know. I'm
4 not saying he doesn't. But how would it be not
5 pertinent to making a decision? And when I'm reading
6 his statements in his direct testimony as factual, am I
7 supposed to take them as factual or not?

8 Staff is saying yes.

9 MR. WILLIS: The testimony has already been
10 inserted into the record, so it is in evidence.

11 COMMISSIONER ARGENZIANO: And his expertise?

12 MR. WILLIS: His expertise is established
13 through his testimony. He testifies that he has been
14 the chief financial officer since 1998, I believe, and
15 in that capacity, he knows and has personal knowledge of
16 the things that he is testifying on and has formed
17 opinions based on facts.

18 This was raised previously to this hearing by
19 Mr. Moyle. It was denied by Commissioner Skop, and he
20 was required to challenge in the procedural order before
21 now, so --

22 COMMISSIONER ARGENZIANO: Well, can I do this?
23 Not getting into all the legalese of everything, because
24 I would much rather have it not get to that part, what
25 you're indicating to me is that through his experience,

1 that makes him --

2 MR. WILLIS: Yes.

3 COMMISSIONER ARGENZIANO: Okay. That's what I
4 needed to know.

5 MR. WILLIS: Yes, absolutely.

6 COMMISSIONER ARGENZIANO: And all the legalese
7 -- through his years of experience, that is what brings
8 him to testify, and that is what I'm taking to the bank.

9 MR. WILLIS: Yes.

10 COMMISSIONER ARGENZIANO: Okay. That's what I
11 needed.

12 COMMISSIONER EDGAR: And then, of course,
13 Commissioner, as with every witness and every bit of
14 evidence that comes before us, you in your independent
15 capacity give it the weight that you deem it to deserve.

16 COMMISSIONER ARGENZIANO: Trust me, I will.

17 COMMISSIONER EDGAR: And Mr. Willis will, of
18 course, have the opportunity on redirect as well.

19 Mr. Wright.

20 MR. WRIGHT: May I just be heard briefly on
21 this issue?

22 COMMISSIONER EDGAR: I have recognized you.

23 MR. WRIGHT: Thank you very much.

24 The problem is this. Normally in a DOAH type
25 hearing, one is put on notice. All the parties are put

1 on notice as to whether a witness is tendered as an
2 expert. In a DOAH proceeding, it's live testimony, and
3 you go through a bunch of questions and qualify the
4 expert, and then you ask the administrative law judge to
5 accept the witness as an expert, and people have the
6 opportunity to voir dire and object and all that stuff.

7 Now, we don't object to Mr. Gillette's
8 testimony, but Mr. Moyle's point goes to the question
9 whether his testimony is just fact testimony or whether
10 it's expert testimony. In a due process sense, I don't
11 believe we were put on notice that Mr. Gillette is being
12 offered as an expert. There's no question in there that
13 says, "Are you an expert in utility bond ratings," or in
14 what the financial agencies do, or whatever else.
15 That's the point.

16 My own belief is that, following what you
17 said, Madam Chairman Pro Tem, is that Mr. Moyle could
18 probably ask all the questions he wants to ask in any
19 event. They're just not necessarily voir dire. They're
20 appropriate questioning that would go to the witness's
21 credibility as to opinion testimony.

22 Thank you for hearing me.

23 COMMISSIONER EDGAR: Thank you, Mr. Wright.
24 Which brings me back to where I was a few moments ago,
25 which is, I think our time would be better spent with

1 each of the parties posing their questions to the
2 witness, affording then that same opportunity to
3 Commissioners and to staff and then on redirect. So,
4 Mr. Moyle, let's move along. Do you have questions for
5 this witness?

6 MR. MOYLE: Sure. I'll be fine. Just for
7 purposes that we have a clear record, because I don't
8 think it is clear, there's nothing in his direct
9 testimony that indicates he professes to have expertise
10 in any particular field, and so that was the reason why
11 I asked the question. His lawyer says he has expertise
12 in finance. I can ask him the question, what does he
13 have, you know, expertise in, and he can answer it if --

14 COMMISSIONER EDGAR: Mr. Moyle, if you have
15 questions for this witness that you would like to ask as
16 to his background, education, work experience,
17 et cetera, we can certainly do that for a short period
18 of time. However, you have made your point. I think it
19 is clear on the record what your point or question is,
20 and I would like to move along.

21 MR. MOYLE: That's fine. And so the ruling is
22 that he is admitted as an expert?

23 COMMISSIONER EDGAR: The ruling is that you
24 have made your point on the record. We will as
25 decision-makers give the weight of -- the testimony the

1 weight that we deem it to require, deserve.

2 MR. MOYLE: Okay. I'll move on.

3 COMMISSIONER EDGAR: Thank you.

4 BY MR. MOYLE:

5 Q. Mr. Gillette, your educational background is
6 in engineering; correct?

7 A. That's correct.

8 Q. It's not in finance?

9 A. That's correct.

10 Q. Now, in your testimony, you talk about rating
11 agencies. Do you communicate regularly with rating
12 agencies either by speaking with them or e-mailing them?

13 A. I do. In my capacity as CFO for the past 10
14 years, I've regularly communicated with the rating
15 agencies.

16 Q. Do you speak to them more often than you
17 e-mail them, or do you e-mail them as well?

18 A. For the most part, my contacts with the rating
19 agencies are either in face-to-face meetings in New York
20 or occasional conference calls.

21 Q. You would agree that the rating process is
22 quite complex; correct?

23 A. I would.

24 Q. And also that it's not very open or
25 transparent; correct?

1 A. I agree with that statement. I would
2 supplement my answer by saying that to varying degrees,
3 the rating agencies have attempted to be more
4 transparent. S&P, for instance, one of the three rating
5 agencies, has issued lists of guidelines and ranges of
6 various ratings parameters to achieve ratings of various
7 levels over time. And in meetings between the company
8 and the rating agencies, I think we get a pretty good
9 sense of what's important to the rating agencies in
10 terms of things like coverage ratios and capital
11 structure.

12 Q. You talked about S&P issuing a matrix. That's
13 a financial matrix; is that right?

14 A. That's correct.

15 Q. The other two rating agencies that follow
16 Tampa Electric are Fitch and Standard & Poor's; correct?

17 A. Standard & Poor's is the one that publishes
18 the ratings matrix. Moody's and Fitch are the other two
19 rating agencies.

20 Q. I'm sorry. Moody's and Fitch, neither one of
21 them publish any kind of similar financial matrix;
22 correct?

23 A. No, they do not. However, I would say, just
24 as a point of information for the Commissioners, as an
25 industry group, periodically we go to presentations by

1 rating agencies and get a sense for their views on the
2 utility industry and understand that the rating agencies
3 attempt to be very consistent in their ratings
4 methodology as it applies to utility companies across
5 the industry.

6 Q. And when you say consistent, you're not
7 talking about -- they don't try to be consistent with
8 one another, do they?

9 A. No, they don't.

10 Q. Because, really, what rating agencies do is
11 form opinions on the creditworthiness of a company.

12 A. That's correct.

13 Q. And some rating agencies will form different
14 opinions than others; correct?

15 A. That's correct. They are all independent of
16 one another.

17 Q. And at the end of the day, a rating agency
18 judgment about whether to grant a triple-B or an A or
19 whatnot, that is not a function of any kind of a
20 formula. It's a judgment that's made by each rating
21 agency independently; correct?

22 A. It is, that's correct. However, I would say
23 that, again, in the instance of S&P, they have been
24 pretty transparent in publishing ranges which are
25 included in Document 4 of Ms. Abbott's testimony that

1 state the ranges on coverage ratio and capital structure
2 needed to obtain certain ratings levels. And we have a
3 pretty good sense of what's required with Moody's and
4 Fitch as well.

5 Q. All right. As we sit here today, nobody with
6 Standard & Poor's, Moody's, or Fitch -- those are the
7 three rating agencies that track you; is that right?

8 A. That's correct.

9 Q. Nobody with those agencies has told you what
10 subsequent action the agency would take as a result of
11 the PSC's action in this case; correct?

12 A. That's correct.

13 Q. And --

14 A. I would say, however, in their published
15 documents, they've been very clear that the outcome of
16 this case is very important to them, and in fact, two of
17 the three rating agencies have us on positive outlook
18 for ratings upgrade pending the outcome of this case.

19 Q. Again, I just want to be clear on that. They
20 publish things that people can look at, but as we sit
21 here today -- because a lot of testimony as I read it
22 says, you know, we need this 12 percent ROE because it
23 will help us get an A rating, and an A rating will lower
24 our debt rating. But as we sit here today, nobody in
25 any rating agency has told you or guaranteed or assured

1 you or signaled to you that if you got a 12 percent ROE
2 as requested, that you would get an A rating as a
3 result; is that correct?

4 A. That's correct. And it's my testimony that
5 it's going to take more than just ROE. It's also going
6 to take capital structure as well. We proposed a
7 12 percent ROE and a 55.3 percent capital structure.
8 And what we have done is, we've actually taken a look at
9 on a projected basis for the test years what the
10 coverage ratios will be and what the capital structure
11 will be for the company, and we've determined that it
12 takes both a strong ROE and a strong capital structure
13 in order for us to lie within the ranges that are
14 commensurate with S&P's published parameters for an A
15 rating.

16 Q. I appreciate that, and a lot of that was in
17 your direct testimony.

18 A. Yes, sir.

19 Q. You know, I'm cross-examining you, so I'm
20 trying to get you to try to admit some points that I
21 think help my client's case. And as we sit here today,
22 you know, I think that there's guidelines that say it's
23 unethical for rating agencies to tell anyone what their
24 future actions may be. And I'm just trying to get you
25 to confirm that if everything you asked for in your

1 filing, 228 million, the capital structure, the ROE, no
2 one has told you in any rating agency that that's going
3 to translate into an A rating; correct?

4 A. That's correct. And in my experience --

5 Q. Thank you.

6 A. -- with the rating agencies, the way they work
7 is, they meet with the company, they monitor the
8 external environment, and then they have a committee of
9 professionals, not just the analysts that we meet with,
10 but a group that reviews all of the quantitative and
11 qualitative thinking on the company before they make a
12 change in rating.

13 Q. Do you know how rating agencies make their
14 money?

15 A. Issuers pay them fees.

16 Q. So Tampa Electric pays them when they issue
17 debt?

18 A. Tampa Electric does pay fees to the rating
19 agencies.

20 Q. And is that fee based on how much debt you
21 issue them -- I mean, how much debt you're going to
22 issue? Let's say you're going to issue 100 million in
23 debt. If they go in and look at it and rate it, then
24 you pay them some percentage of the 100 million for the
25 purposes of providing a rating; is that correct?

1 A. There are two types of fees that issuers pay
2 the rating agencies. And this is not just electric
3 utilities. This is across broad industry. And those
4 two types of fees, there's an annual retainer fee, and
5 in addition, on an issue-by-issue basis, because the
6 rating agencies have to make sure that the rating is
7 what they've been saying it is before an issuer issues
8 debt, a second fee for the -- when an issuer issues
9 debt.

10 Q. How much is the annual retainer that you pay
11 Standard & Poor's?

12 A. For Tampa Electric Company, I've got the
13 figures someplace here, and I could get them, but I
14 would say it's on the order of about \$60,000.

15 Q. How about Moody's and Fitch? When we talked
16 in our deposition, you thought it was low six figures?

17 A. Yes. And when we talked in the deposition, I
18 was quoting both TECO Energy and Tampa Electric. Since
19 Tampa Electric is the subject of this case, the numbers
20 that I'm quoting now are Tampa Electric. Moody's is
21 about the same. Fitch is a little lower.

22 Q. So Tampa Electric is 60,000, but if you
23 combine TECO Energy, it's the six-figure number?

24 A. Just a little over 100,000 on the fixed fee.

25 Q. Isn't it true that rating agencies share

1 copies of their reports and releases with Tampa Electric
2 prior to issuing them to investors who subscribe for
3 those reports?

4 A. It's partially true. The practice has changed
5 substantially over the time that I've been dealing with
6 the rating agencies. The rating agencies want to be
7 sure that there is no illusion of any influence on the
8 part of the issuer when they are issuing a report. At
9 the same time, they want to make sure that it's
10 factually correct, and so the typical practice nowadays
11 is that they will give a report to an issuer no more
12 than an hour before it is released to the public in
13 order for the issuer to quickly scan it to make sure
14 that there are no factual misstatements. But there's no
15 ability on an issuer's part to make any changes in the
16 outcome or changes in the way that -- changes in what
17 the rating agency is saying in general.

18 Q. Do you know if that's the same practice for
19 all three ratings agencies that track you?

20 A. It absolutely is.

21 Q. And that's a change from what it used to be
22 previously, where they would provide you copies of their
23 reports and give you time to review them?

24 A. I would say many years ago when I first
25 started with the rating agencies, they would sometimes

1 give us two or three hours to make the review. But they
2 are very cautious on that, and that has really been
3 since about 2002.

4 Q. Ms. Abbott in her deposition testimony
5 indicated from her perspective that rating agencies
6 would allow companies that they were following to
7 present new information in response to a draft report.
8 Was she incorrect in that testimony?

9 A. I don't recall her saying that. I know the
10 admonishment that we get from the rating agencies that
11 we deal with is that they're only looking for factual
12 corrections.

13 Q. Are you aware of the criticism that rating
14 agencies are too close to the companies that they follow
15 and track?

16 A. I'm aware of that criticism. I generally
17 disagree with it. In my experience in dealing with the
18 rating agencies, their ultimate client is the
19 institutional investor, is the large investor that is
20 actually buying the debt the companies are issuing. The
21 way the system works, the companies -- the issuers pay,
22 but the institutional investor is in fact the ultimate
23 client. And I will tell you from dealing with
24 institutional investors, they are very sophisticated and
25 really keep the rating agencies on their toes.

1 Q. And when you talk about institutional
2 investors, that's things like pension funds and
3 insurance companies; is that right?

4 A. That's correct.

5 Q. Mr. Herndon, he was an institutional investor
6 when he headed SBA, from your perspective; is that
7 right?

8 A. I don't know a great deal about his
9 background.

10 Q. Assuming he headed the State SBA, is that --
11 are you familiar with the State Board of Administration?

12 A. Yes. And it is my understanding that they do
13 invest in securities on behalf of the state pension
14 plan.

15 Q. And that would be an institutional investor,
16 according to your definition; correct?

17 A. Correct.

18 Q. Let me refer you to page 22 of your testimony.
19 This is a discussion about an adjustment, a capital
20 adjustment related to purchased power agreements, so
21 we'll shift gears a little bit and get away from the
22 rating agencies and talk about an adjustment to the
23 purchased power contracts.

24 Isn't it true that you're asking this
25 Commission to charge ratepayers approximately

1 \$5 million in additional rates as a result of your
2 current purchased power agreements?

3 A. Yes, it is. We filed a late-filed exhibit to
4 that effect. We are requesting a \$77 million adjustment
5 to equity associated with offsetting the imputation of
6 debt that Standard & Poor's does and the other rating
7 agencies do in their ratings processes to account for
8 the fact that purchased power has debt-like
9 characteristics.

10 Q. And the debt-like characteristics is
11 essentially that you have to pay for the power you get.
12 If you have a 20-year purchased power agreement, you've
13 got to pay for the power over 20 years; correct?

14 A. That's correct. Most purchased power
15 agreements, and in fact, the four that we have are with
16 entities that are structured in ways that have capacity
17 charges that require essentially a fixed payment over
18 the duration of the contract, and that fixed obligation
19 looks an awful lot like the fixed obligations associated
20 with interest expenses and debt.

21 Q. Okay. And --

22 COMMISSIONER EDGAR: Mr. Moyle, I'm sorry.
23 I'm going to interrupt you for a moment.

24 Commissioner Skop, did you have a question at
25 this time?

1 COMMISSIONER SKOP: Yes, Madam Chair. Thank
2 you.

3 To Mr. Moyle's point, I had a concern, and I
4 wanted to flesh this issue out a little bit more. Why
5 is such an adjustment appropriate? I know that you've
6 hinted towards how Standard & Poor's imputes the debt,
7 but I'm trying to rationalize that to the extent that
8 for purchased power, you know, basically, prudently
9 incurred costs are recovered annually to avoid
10 regulatory lag through the cost recovery proceedings.
11 So if you could flesh that out a little bit, I would
12 appreciate that.

13 THE WITNESS: Sure. I would be happy to.
14 What S&P has done is, they've issued a ratings paper or
15 a ratings directive, which I did include as an
16 attachment to my rebuttal testimony, that describes
17 their process. But essentially, their process is to
18 take the present value of the capacity payments that are
19 paid, or those fixed obligations that are paid under
20 power purchase agreements and then affix a risk factor
21 to that present value number in order to determine an
22 amount of debt that they impute when they calculate
23 internally their coverage ratios for purposes of rating
24 a company.

25 And so in our case, the process is essentially

1 this. When we present value under the Standard & Poor's
2 methodology, all of the capacity payments under the four
3 contracts that we have with Hardee, Calpine, Reliant,
4 and Pasco Cogen, we come up with a present value of
5 about \$300 million when we present value at our average
6 cost of debt, which is what S&P prescribes in their
7 document.

8 In turn, S&P affixes different risk levels to
9 the recovery of those capacity charges through rates.
10 In cases where it's only in a rate case that a utility
11 would be able to recover the cost of those payments, S&P
12 will affix a risk factor of anything from 50 to 100
13 percent. But because in Florida we in fact do have the
14 capacity recovery clause, S&P in our case -- and they've
15 been very specific with us and told us this is exactly
16 what they do -- they affix a 25 percent risk factor,
17 because to your point, Commissioner Skop, there's less
18 lag, there's less risk of recovery through the
19 regulatory process. And that's in fact the lowest
20 percentage or risk factor that they affix. So when you
21 take our \$300 million times 25 percent, you come up with
22 a \$77 million adjustment.

23 And the only thing I would, Commissioner, is
24 that --

25 COMMISSIONER SKOP: Actually, I think it would

1 be 75 million.

2 THE WITNESS: The other -- and by the way, I
3 was generalizing. I think it's -- \$308 million is the
4 total present value.

5 But the only other thing I would add is that
6 in Florida, for some time the utilities have been under
7 this methodology by S&P, as utilities have throughout
8 the United States, and this Commission has acknowledged
9 that process in previous orders before this Commission
10 on such topics as equity ratio and ROE and in the
11 various stipulations that have been reached in various
12 base rate proceedings before the Commission.

13 COMMISSIONER SKOP: I'm going to stop you
14 there and do some quick follow-up so Mr. Moyle can get
15 back to his questions. I know that you mentioned how
16 Standard & Poor's imputes it for power purchase
17 agreements. Do Fitch and Moody's do the same thing, or
18 is Standard & Poor's the only rating agency that would
19 do that?

20 THE WITNESS: Interestingly enough, and
21 Mr. Moyle has pointed it out in his questions, Moody's
22 and Fitch in this area as well are a little less
23 transparent in terms of exactly how they treat the
24 purchased power. S&P again has been more transparent
25 and has actually published papers on it. I do

1 understand, though, from talking with our contacts at
2 Moody's that they in fact do make a similar type of
3 adjustment, and so they impute debt in calculating their
4 coverage ratios to determine how well the company is
5 meeting its fixed obligations for purchased power
6 agreements. Fitch, I'm not sure.

7 COMMISSIONER SKOP: Okay. But in that equal
8 regard, as you mentioned, such rating agencies would
9 take into account states like Florida that have a cost
10 recovery provision, I mean, a clause for cost recovery
11 provision to the extent that there is no regulatory lag.
12 So again, that substantially mitigates any perceived
13 risk; would that be correct?

14 THE WITNESS: I think that's generally
15 correct, but I would just clarify by saying, in my mind,
16 apparently S&P still perceives a certain amount of risk,
17 because they attach that 25 percent risk factor.

18 COMMISSIONER SKOP: Okay. And just one quick
19 follow-up. I guess to the extent that the equity
20 adjustment would be allowed that would increase the
21 equity ratio or result in a higher equity ratio, and
22 essentially if the ROE is set at whatever constant
23 number is warranted, the higher amount of equity,
24 obviously, you're earning larger earnings based on the
25 higher equity. How would you rebut OPC's concern in

1 that regard to the extent this would not impact or
2 favorably impact the overall capital structure for TECO
3 by allowing such an adjustment to be made?

4 THE WITNESS: You know, I think the facts are
5 clear. We filed a late-filed exhibit that shows that
6 revenue requirements do increase to the tune of
7 \$5 million as a result of this.

8 I would point out, though, that in the ratings
9 context, the rating agencies are less concerned about
10 earnings and ROEs and more concerned about cash flows.
11 And what the rating agencies want to do is, they want to
12 make sure that you've got enough cash coming in the door
13 to be very, very sure that you're going to be able to
14 meet your fixed obligations. And those fixed
15 obligations include both interest expense, which we're
16 talking about today in part as part of our cap structure
17 in this rate case, and we contend those fixed
18 obligations also include the capacity payments under
19 power contracts.

20 COMMISSIONER SKOP: Thank you. And, Madam
21 Chair, at the appropriate time, at the end of the
22 questioning, I have additional questions on the debt
23 issue that was previously raised.

24 COMMISSIONER EDGAR: Sure. Thank you.
25 Mr. Moyle, thank you.

1 MR. MOYLE: Thank you. And I appreciate that.

2 BY MR. MOYLE:

3 Q. I think some of the questions we touched on.
4 Fitch, you don't know whether they have any imputation
5 or not; correct?

6 A. I do not.

7 Q. Okay. And then on Moody's, you've reviewed
8 Mr. Woolridge's testimony. I think you filed some
9 rebuttal testimony on that; correct?

10 A. I have.

11 Q. All right. I'm going to read something to
12 you. If you want to see it, we can dig up a copy of his
13 testimony, but he talks about that, and he references
14 guidance that Moody's has provided, and I'm going to
15 quote. "If a PPA is entered into for the purpose of
16 providing an assured supply of electricity and there is
17 a reasonable assurance that the regulators will allow
18 the cost to be recovered in regulated rates, Moody's may
19 view the PPA as akin to an operating cost. In this
20 case, there most likely will be no imputed adjustments
21 to the obligations of the utility."

22 Are you familiar with that statement as being
23 made by Moody's?

24 MR. WILLIS: Excuse me, Madam Chairman. Could
25 you -- I would like to request Mr. Moyle give a

1 reference to that testimony, the page that he's reading
2 from.

3 MR. MOYLE: Sure. Mr. Woolridge's testimony,
4 and it's page 57, lines 9 through 14, if I copied it
5 down properly.

6 MR. WILLIS: Okay.

7 COMMISSIONER EDGAR: Okay. Thank you.

8 BY MR. MOYLE:

9 Q. Do you want to see a copy of it?

10 A. I don't have a copy of it in front of me.

11 Mr. Moyle, I'm sorry. What page was that on?

12 Q. Page 57.

13 A. Thank you.

14 Q. I think it was lines 9 through 14.

15 A. Thank you.

16 I'm sorry, Schef. This is Mr. Larkin's
17 testimony.

18 COMMISSIONER EDGAR: We'll give it one more
19 try.

20 THE WITNESS: Thank you. I've got it.

21 Yes, I've read it, and I think my suggestion
22 on this would be that this might be a question better
23 addressed to Ms. Abbott on behalf of the company.
24 Witness Abbott worked for Moody's for a long period of
25 time and in fact rated our company when she was employed

1 by Moody's, and I think she can maybe speak specifically
2 to what they do.

3 As I testified, it's less transparent to us
4 exactly what Moody's does, but it's our understanding
5 that Moody's does in some way take into account the fact
6 that we have purchased power obligations when they do
7 the debt ratings on Tampa Electric.

8 BY MR. MOYLE:

9 Q. You follow the rating agencies'
10 pronouncements, do you not?

11 A. I do, especially as they relate to our
12 company.

13 Q. Okay. Do you know as we sit here today
14 whether the quoted language is a true and accurate
15 pronouncement of Moody's? I can ask Ms. Abbott those
16 questions. I have a few for you.

17 A. Well, I would say that, you know, provided
18 that the cite is right, because there is a cite to
19 Moody's rating methodology, Global Regulated Electric
20 Utilities, March 2005, that that looks like it's
21 something that came from Moody's.

22 Q. And the reason I'm asking is because, you
23 know, it's a \$5 million issue to the customers,
24 77 million in imputed debt. It seems that Standard &
25 Poor's is the only one for sure that makes an

1 adjustment; correct?

2 A. We know that Moody's and Fitch consider it,
3 but it's not clear to us in our case exactly how they
4 consider it. In the case of S&P, it's clear to us. We
5 know exactly what they do. But it's my understanding
6 that both -- either on a quantitative basis or a
7 qualitative basis, Moody's and Fitch both make
8 assessments of the amount of purchased power we have and
9 the viability of recovery of purchased power costs
10 through our clauses, and as a result, factor that into
11 their ratings process.

12 Q. And just so I'm clear, I thought you said you
13 didn't know what Fitch did in terms of imputing debt.
14 Is that --

15 A. Well, I don't know the specifics of Fitch's
16 methodology, and I don't know whether Fitch, when they
17 take our funds from operation and divide it by interest
18 expense to come up with a coverage ratio, make any
19 specific adjustments for purchased power. I do know,
20 however, in the case of Fitch that they consider our
21 purchased power obligations, because they ask us about
22 them.

23 Q. All right. And with respect to Moody's,
24 you're not exactly sure what Moody's does either with
25 the information. They consider it, but you don't know

1 if they apply any kind of calculus like the Standard &
2 Poor's 25 percent; correct?

3 A. I do not know. We have been told, however, in
4 the case of Moody's that it is a definite consideration
5 in their ratings process for our company.

6 Q. So for purposes -- just a few more questions
7 on this, and I'm sorry we're kind of getting bogged
8 down. But if you assume the statement referenced in
9 here as attributable to Moody's is true, you would
10 agree, would you not, that the Florida Commission allows
11 purchased power costs to be recovered on an annual basis
12 and is -- has done so in a way that purchased power is
13 regularly and routinely recovered through the clause;
14 correct?

15 A. Well, you know, obviously, the statement
16 that's in Mr. Woolridge's testimony is taken somewhat
17 out of context from a whole report here. Reading what's
18 shown here, they say that Moody's may view the PPA as
19 being akin to an operating cost. And in that context,
20 it's not exactly clear to me, you know, whether it's
21 treated as a fixed obligation or not.

22 Q. Has this Commission ever denied TECO's request
23 for recovery of a purchased power expenditure?

24 A. Not to my knowledge. I would say, on the
25 other hand, there is a certain amount of lag associated

1 with that recovery.

2 Q. Okay. With respect to saying, "You know what?
3 We're not going to allow you to recover a contracted-for
4 energy and capacity price," this Commission has never
5 disallowed that, correct, to your knowledge?

6 A. Not to my knowledge.

7 Q. You interact with CFOs from around the
8 country, don't you? Don't you all have conferences and
9 occasions when you get together?

10 A. I do.

11 Q. You're not aware of any other commission in
12 the country which allows for an imputed debt adjustment
13 related to purchased power agreement obligations, are
14 you?

15 A. I wouldn't say that has been a topic of
16 discussion with my colleagues in the industry. I am
17 aware in Florida it is a practice. I'm also aware that
18 the rating agencies on this issue are very consistent in
19 what they do with utilities across the United States,
20 and so I would suspect that it has been dealt with in
21 some way in other regulatory jurisdictions.

22 Q. When I asked you the question in your
23 deposition, you weren't aware. I can show you your
24 deposition. But as you sit here today, you're not aware
25 of any other regulatory jurisdiction in the country

1 which allows for an adjustment for imputed debt related
2 to purchased power agreements, are you?

3 A. I'm not aware, but I haven't researched it.

4 Q. Okay. Just a couple more questions on these
5 purchased power agreements, because it's a policy issue
6 in a lot of respects. Let's take Standard & Poor's.
7 They make a 25 percent adjustment; correct?

8 A. That's correct.

9 Q. And do you know if there is a commission --
10 let's say it's the Georgia Commission, and the Georgia
11 Commission has an annual recovery clause, but if you
12 looked at their history, they have a situation where
13 they've denied requests for purchased power 50 percent
14 of the time. Do you have know if Standard & Poor's
15 simply looks at whether there's a recovery clause in
16 place, and if there is, then they apply the 25 percent,
17 or whether they do a more detailed analysis?

18 A. My understanding is that S&P does in fact
19 analyze fairly rigorously what the regulatory mechanism
20 is. And I would point to page 29 of my rebuttal
21 testimony, Document 1, page 2 of 5, in which S&P clearly
22 articulates in paragraph 3 of their risk factor
23 discussion what their methodology is. And I would
24 assume that for Georgia Power or Mississippi Power or
25 Pacific Gas & Electric, they do the same thing.

1 Q. Now, with respect to benefits of a purchased
2 power agreement, would you agree, would you not, that
3 the construction risk associated with building a plant
4 is something that is shifted from Tampa Electric in a
5 purchased power agreement?

6 A. I would agree with that.

7 Q. And the same with the permitting risk? That's
8 a risk that you don't have to bear?

9 A. I would agree with that.

10 Q. And you don't have to raise the capital for
11 energy coming from a purchased power relationship;
12 correct?

13 A. That's correct. I would say, though, that
14 there are risks associated with ongoing performance of
15 power generators. There are also risks on the front end
16 of a contract when you sign it with a potential person
17 that's going to provide power or an entity that's going
18 to provide power under a PPA that they will actually get
19 over the hurdles that you just mentioned to get the
20 plant built.

21 Q. Do you know if Standard & Poor's takes into
22 account those things I just mentioned, the shifting of
23 risk to the entity building the plant through the
24 purchased power agreement?

25 A. Reading their methodology, it speaks more to

1 the regulatory recovery of such costs. But I think
2 behind their methodology, the application of a risk
3 factor speaks not only to the ability to recover costs
4 vis-a-vis the regulatory mechanism, but the ability to
5 get the power that you're in fact purchasing. That
6 would be my feeling.

7 Q. Based on your experience with the Florida PSC
8 and your purchased power agreements that you have --
9 you've identified them with Calpine and some others --
10 wouldn't you agree that the risk of you not being able
11 to recover those purchased power agreements is not
12 significant?

13 A. No, I wouldn't agree with that. And the
14 reason I wouldn't agree with it is, all manner of power
15 plants are subject to problems and issues and breakdowns
16 and those kinds of things, and I could posit a scenario
17 where a power supplier doesn't perform under the
18 agreement, contends we should continue to pay them, we
19 get into litigation with them, the Commission isn't sure
20 whether the costs should be passed through to
21 ratepayers, and there's regulatory lag associated with
22 recovery of those costs. It doesn't get heard until the
23 November fuel adjustment time period. And so I could
24 posit a scenario where there is a risk to the company in
25 being caught in the middle, if you will, between

1 regulation and the performance of a power generator.

2 Q. Have you had any litigation in any of the
3 current purchased power agreements that you currently
4 have such as you just described in your hypothetical?

5 A. Not that I'm aware of in the case of Tampa
6 Electric, but I'm generally aware of such litigation
7 with those types of agreements.

8 Q. Well, it may have happened with other
9 companies. I'm asking you specifically related to your
10 company. And the answer is no; correct?

11 A. That's correct.

12 Q. Now, let me try it this way. Assume that the
13 power plants don't break down and that they work. Given
14 your knowledge of the Public Service Commission and how
15 it handles purchased power agreements, wouldn't you
16 agree that the risk associated with recovering that is
17 not significant? When I say that, that's the purchased
18 power expenditures that Tampa Electric Company makes.

19 A. I think this Commission has been very fair and
20 balanced in its decisions on pass-through costs like
21 purchased power agreements. But I would hasten to say
22 that S&P is very aware of the regulatory situation as it
23 exists in Florida, and nonetheless, they continue to
24 impute this debt when they do ratings on our company.

25 Q. Would you assess it at 25 percent, that

1 there's a 25 percent chance that the Commission may not
2 approve a purchased power contract expenditure?

3 A. I don't think that's mine to speculate on. I
4 think that's S&P's to speculate on. This is their
5 adjustment. And I don't even know that that's the way
6 they came about their 25 percent, was to say that there
7 was a 25 percent chance that it wouldn't be recovered.
8 I think S&P in an abundance of conservatism is simply
9 attempting to quantify the fact that fixed obligations
10 under PPAs are large and represent potential risks. And
11 I would hasten to say -- we've spent a lot of time on
12 this issue. In our case, the amount of purchased power
13 that we buy on a proportional basis to the other Florida
14 utilities is very small. FP&L and Progress for many
15 years have had much greater amounts of purchased power
16 and have had this type of mechanism in their regulator
17 stipulations.

18 Q. So the fact that you have smaller purchased
19 power, that would even reduce that risk further, would
20 it not?

21 A. No, not that I -- I mean, the risk is the
22 risk. They're independent events.

23 MR. MOYLE: Let's talk a little bit -- Madam
24 Chair, I'm sorry it's taking a while?

25 COMMISSIONER EDGAR: That's okay.

1 BY MR. MOYLE:

2 Q. ROE. You were in the room for the opening
3 statements, were you not?

4 A. I was.

5 Q. Did my hamburger analogy generally accurately
6 portray the return on equity?

7 A. Well, I guess I heard the hamburger analogy.
8 I think in this context, a very important thing for this
9 Commission to consider if we want to use the hamburger
10 analogy is that if you or I wanted to start a hamburger
11 stand and we didn't have any money to invest in the
12 hamburger stand, and it was going to be a big hamburger
13 stand, \$100,000 investment, do you think if we weren't
14 putting any of our own money at risk that a bank would
15 lend us \$100,000 to build the hamburger stand? In my
16 opinion and my experience, they wouldn't.

17 And I would go a step further. When you
18 consider the fact that we are as investors in our
19 hamburger stand behind the bank in terms of being able
20 to collect if anything bad happens at our hamburger
21 stand and it goes out of business, I would think that
22 you or I would want to have a higher return than the
23 bank, because we are subordinated. And I think that's a
24 pretty central concept to this case.

25 Interest rates in the last few months have

1 risen to a very high rate. Triple-B issuers are issuing
2 debt at 8, 9 percent. Single-A issuers even are issuing
3 debt at 6 and 7 percent. And so debt rates have risen
4 very significantly. And as you'll hear from witness
5 Murry, that overall increase in the cost of debt also
6 implies that if equity is behind debt in the capital
7 structure, that the cost of capital and in fact the cost
8 of equity capital has increased as well.

9 Q. Okay. Maybe you didn't hear. The example I
10 had was the bank was going to loan 60, and 40 was going
11 go in as equity. So that makes it a little bit more
12 like your electric company, correct, in terms of the
13 capital structure?

14 A. Yes. In this case, we're asking for a 55
15 equity and 45 debt.

16 Q. Right. And with respect to the earnings on
17 the hamburger, if you got -- I think you answered the
18 question, but the earnings that you all are seeking, the
19 12 percent, is net of taxes, correct, so that the real
20 rate of return is around 19 percent?

21 A. It is in fact net of taxes, as those other
22 ROEs for Moasic and Publix are that I quoted.

23 Q. That Publix you quoted, how did you calculate
24 their ROE? I thought they were a privately traded
25 company.

1 A. Their data -- they actually file with the SEC
2 their earnings, and we used a source called Capital IQ
3 for those figures.

4 Q. All right. I have some ROE questions for you.

5 COMMISSIONER EDGAR: Mr. Moyle, let me just
6 ask, since I think the Chairman had said earlier that he
7 wanted us to wrap up around 5:00 for today, but I hate
8 to interrupt in the middle of a stream of questioning.

9 MR. MOYLE: That's fine. I'm okay on doing
10 that.

11 COMMISSIONER EDGAR: Let me ask, if I may --

12 MR. MOYLE: This is a great point from a
13 subject matter area.

14 COMMISSIONER EDGAR: Commissioner Skop, did
15 you have --

16 MR. WILLIS: Can you --

17 COMMISSIONER EDGAR: Just a moment. Did you
18 have other questions that you want to pose to this
19 witness at this time?

20 COMMISSIONER SKOP: I'll reserve those
21 questions until the end of Mr. Moyle's direct and other
22 questions.

23 COMMISSIONER EDGAR: Okay. Commissioner
24 Argenziano.

25 COMMISSIONER ARGENZIANO: Just one question,

1 if you could help me, because if I wait till tomorrow,
2 I'm going to lose it. And I don't know, maybe both of
3 you can answer it, and it has to do with the hamburger
4 stand. Okay? Not only am I getting hungry now, but I
5 guess what I want to know, and I guess both of you can
6 answer. And I may be totally off the mark, but if the
7 hamburger stand is guaranteed a certain return and
8 guaranteed a recovery of most of its costs, wouldn't the
9 bank be more likely to lend it money? Doesn't that
10 change the scenario you and even you had suggested?

11 THE WITNESS: Yes. I think, Commissioner,
12 obviously, the bank would look at the certainty of the
13 revenue stream associated with the hamburger stand.

14 COMMISSIONER ARGENZIANO: And risk is a factor
15 that has to be --

16 THE WITNESS: No question. But I would say as
17 we kind of take that over to the electric utility side,
18 having been in the business for 26 years, you're right,
19 the fact that we're a natural monopoly and those kinds
20 of things does afford us certain knowledge about our
21 customer base and those kinds of things that other
22 businesses don't have.

23 Having said that, there are no guarantees.
24 And as a for instance, in our case, we saw much, much
25 lower customer growth in our service territory in 2008,

1 and we expect much lower customer growth in 2009 than we
2 expected when we filed this case. And so our revenue
3 stream, in effect, at Tampa Electric for our hamburger
4 stand is going to be lower than we expected.

5 COMMISSIONER ARGENZIANO: I appreciate that.
6 Madam Chair, I won't ask this today, but is it
7 appropriate to ask you tomorrow about I guess the
8 differences between the way the ROE is configured, the
9 formulas, CAPM and risk premium and the beta factor,
10 because I have questions that go deep into that. Would
11 you be the person --

12 THE WITNESS: Actually, that gets into witness
13 Murry's testimony, and he is, depending on whether
14 Ms. Abbott is able to come back, either going to be
15 right after me, or Ms. Abbott will be in between, as I
16 understand it.

17 COMMISSIONER ARGENZIANO: Okay. Thank you.

18 COMMISSIONER EDGAR: Thank you. Commissioner
19 Skop.

20 COMMISSIONER SKOP: Thank you, Madam Chair.
21 Just to Mr. Gillette, again, I appreciate the discussion
22 that we've had on this issue, Mr. Moyle for raising it
23 and fleshing it out. I think that this issue is one of
24 first impression upon the Commission. I think under
25 generally accepted accounting practices, certainly the

1 PPAs would not be treated as debt. If rating agencies
2 are extending the doctrine to look at imputation as a
3 way that they view ratings, then it's certainly relevant
4 in the discussion. But I think a critical vetting of
5 this is in due course, and I'm happy that we've had an
6 extensive discussion and hope to continue that tomorrow.
7 Thank you.

8 COMMISSIONER EDGAR: Thank you. Mr. Moyle,
9 you had indicated this might be a good breaking point.
10 Is that still your thinking?

11 MR. MOYLE: Yes, ma'am.

12 COMMISSIONER EDGAR: All right. With that,
13 again, as the -- I would kind of like to keep rolling
14 myself, but the Chairman had indicated he would like us
15 to break around 5:00, and I want to honor that
16 direction, of course. So, Mr. Gillette, we are going to
17 ask you to join us back right there in that same seat at
18 9:30 tomorrow morning.

19 Mr. Willis, did you have a comment or a
20 question?

21 MR. WILLIS: I was just going to see if
22 Mr. Moyle was close to finishing his questions, if we
23 could wind up at least his questions.

24 COMMISSIONER EDGAR: Mr. Moyle, can you give
25 us an indication for --

1 MR. MOYLE: I have probably 20 or 30 minutes.
2 ROE is going to -- and candidly, the answers are --

3 COMMISSIONER EDGAR: Of course. Of course.
4 Mr. Willis, does that help you for kind of planning
5 purposes?

6 MR. WILLIS: Yes. Thank you.

7 COMMISSIONER EDGAR: Thank you. Okay. Any
8 other comments? Anything from staff before we break for
9 the evening?

10 MR. YOUNG: No, ma'am.

11 COMMISSIONER EDGAR: Okay. Seeing none, then
12 we will pick up at this point, Mr. Moyle, with you, and
13 then you will be on deck, Mr. Wright. And we are on
14 break until tomorrow morning at 9:30.

15 (Proceedings recessed at 5:07 p.m.)

16 (Transcript continues in sequence in
17 Volume 3.)

CERTIFICATE OF REPORTER

STATE OF FLORIDA:

COUNTY OF LEON:

I, MARY ALLEN NEEL, Registered Professional Reporter, do hereby certify that the foregoing proceedings were taken before me at the time and place therein designated; that my shorthand notes were thereafter translated under my supervision; and the foregoing pages numbered 72 through 299 are a true and correct record of the aforesaid proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor relative or employee of such attorney or counsel, or financially interested in the foregoing action.

DATED THIS 21st day of January, 2008.

MARY ALLEN NEEL, RPR, FPR
