PROCEEDINGS: HEARING

BEFORE: CHAIRMAN MATTHEW M. CARTER, II
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER KATRINA J. McMURRIAN
COMMISSIONER NANCY ARGENZIANO
COMMISSIONER NATHAN A. SKOP

DATE: Wednesday, January 28, 2009

TIME: Recommended at 9:00 a.m.
Recessed at 8:10 p.m.

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: MARY ALLEN NEEL, RPR, FPR

APPEARANCES: (As heretofore noted.)

DOCUMENT NUMBER - DATE

00744 JAN 29 08

FPSC-COMMISSION CLERK

P R O C E E D I N G S

1
2 (Transcript continues in sequence from
3 Volume 12.)

4 CHAIRMAN CARTER: Commissioner Skop, you're
5 recognized, sir.

6 COMMISSIONER SKOP: Thank you, Mr. Chairman.
7 Just quickly so I can follow along with the discussion
8 and the examination.

9 Mr. Woolridge, I'm looking for it in the
10 voluminous information I have, but can you briefly
11 repeat what your calculations for both the DCF and the
12 CAPM models would be in terms of the appropriate ROE
13 that you calculated, or can you refer me to what
14 specific page if you --

15 THE WITNESS: Yes, I can. And actually, it's
16 easier if you just go to the exhibit number. It's
17 Exhibit JRW-10, page 1.

18 COMMISSIONER SKOP: And that's what I'm
19 looking at. But typically, is there a range? Did you
20 provide a range or just one specific number?

21 THE WITNESS: I just used a specific number.

22 COMMISSIONER SKOP: Okay. And with respect to
23 that exhibit on JRW-10, page 1 of 6, the dividend yield
24 is asterisked, and it's at 5.2 percent, and the asterisk
25 refers to page 2 of Exhibit JRW-6. And I flipped there

1 briefly, and I don't know whether it's a typo or not,
2 but I see on page 2 of that exhibit a water utility
3 chart, so I'm wondering if that's a typo in that
4 asterisk.

5 THE WITNESS: Yes. I'm sorry. That is page 2
6 of this exhibit, JRW-10.

7 COMMISSIONER SKOP: Okay. Thank you. And
8 I'll reserve any questions towards the end of the
9 discussion. Thank you.

10 CHAIRMAN CARTER: Thank you. Ms. Bradley.

11 MS. BRADLEY: Mr. Woolridge, let me ask you --
12 are we coming to me first or them first?

13 MS. CHRISTENSEN: TECO? Wasn't TECO --

14 CHAIRMAN CARTER: Oh, I was in that mode from
15 going so long. Hang on. Commissioner Skop.

16 COMMISSIONER SKOP: Thank you, Mr. Chairman.
17 Mr. Woolridge, with respect to that dividend yield,
18 having taken a quick glance at the yields that were used
19 for the electric proxy group, and noting that the
20 dividend yield has increased significantly as the market
21 has declined for various publicly traded companies, are
22 those yields still accurate? I mean, because they're
23 dated April through November 2008, and we're in early
24 January, where the yields have increased significantly,
25 or can you briefly comment on that?

1 THE WITNESS: They have not increased
2 significantly since that time. I mean, if you want to
3 compare, say, electric utilities to companies in
4 general, this particular group of electric utilities,
5 the 13 that I've used, they haven't -- they declined --
6 I just updated a study I did on these companies, and
7 over the last six months of 2008, they lost 3 percent of
8 their value, where as the S&P 500 lost 26 or 27 percent
9 of its value. So they lost value early in the
10 September, October time frame. After that, they
11 stabilized.

12 CHAIRMAN CARTER: Thank you. And thank you,
13 Ms. Bradley, for reminding me. I had gotten into a
14 spin.

15 Mr. Willis or --

16 MR. BEASLEY: Mr. Chairman, we would request
17 to go last. I think the other parties are aligned, and
18 I believe the Attorney General's Office has adopted
19 pretty much the positions, all of the positions of OPC,
20 and so we would like to go last if we could.

21 MS. CHRISTENSEN: Commissioners, I would
22 object to that. I think the normal course is that --

23 CHAIRMAN CARTER: I'm going to sustain the
24 objection. You may proceed.

25 MR. BEASLEY: All right, sir.

BY MR. BEASLEY:

Q. Good afternoon, Dr. Woolridge.

A. Hello.

Q. On page 59 of your testimony, one of your four principal criticisms of Dr. Murry's testimony regarding ROE and his recommendation is that he uses what you consider to be an inappropriate group of comparable companies; is that correct?

A. Yes.

Q. In that regard, you say that Dr. Murry should not have relied on four of the companies that he relied on because they derive too much of their revenues, in your opinion, from non-regulated utility activities; is that correct?

A. No. It's from other non-electric sources.

Q. Yes.

A. And those -- I mean, as I said in my opening, that's not one of the biggest issues I have with Dr. Murry's testimony, but there were some companies there whose percent of regulated electric revenue was low. That was my opinion.

Q. But that is one of the four principal concerns stated on page 59 that you have difficulties with Dr. Murry's conclusion on ROE?

1 A. Yes.

2 Q. And those included the OGE Energy Corporation,
3 PEPCO Holdings, SCANA Corporation, and Wisconsin Energy.
4 Is that --

5 A. Yes.

6 Q. -- your testimony? Have you reviewed
7 Mr. O'Donnell's testimony on ROE in this proceeding?

8 A. No.

9 Q. Let me give you an exhibit, if I could, if we
10 could distribute to the witness an exhibit from
11 Mr. O'Donnell's testimony.

12 CHAIRMAN CARTER: Are you going to use it for
13 cross-examination, or do you need a number for
14 identification?

15 MR. BEASLEY: Just for cross-examination, sir.
16 It's going to be an exhibit of Mr. O'Donnell.

17 CHAIRMAN CARTER: Okay. You may proceed.

18 BY MR. BEASLEY:

19 Q. Dr. Woolridge, Mr. O'Donnell includes three of
20 the four companies in his group of comparable companies
21 that you contend that Dr. Murry should not have used,
22 doesn't he?

23 A. Yes.

24 Q. Dr. Woolridge, isn't it true that in the
25 recent Florida Power & Light rate proceeding before this

1 Commission, you used in your comparable company group
2 all four of the companies that you have criticized
3 Dr. Murry for including in his group in this case?

4 A. I do not recall.

5 MR. BEASLEY: Let me distribute another
6 exhibit. And I would like to have this marked for
7 identification, if I could.

8 CHAIRMAN CARTER: Okay. Commissioners, for
9 the record, that will be Exhibit Number 119. Title,
10 short title?

11 MR. BEASLEY: Dr. Woolridge's Florida Power &
12 Light exhibit.

13 CHAIRMAN CARTER: Okay.

14 (Exhibit 119 was marked for identification.)

15 BY MR. BEASLEY:

16 Q. Dr. Woolridge, have you had an opportunity to
17 review that document?

18 A. Yes, I have.

19 Q. You included in your comparable companies in
20 that case all four of the companies that you criticized
21 Dr. Murry for including in this case in his comparable
22 companies; is that correct?

23 A. Yes. I mean, if you look at this group,
24 obviously, this group has a much lower percent of
25 revenues from regulated electricity. In this particular

1 proceeding, I've tried to create a group that's a fairly
2 pure group of electric utilities. I don't remember
3 exactly, but I believe in the FP&L case, Dr. Avera was
4 the witness, and I think I pretty much just used his
5 group, so that the group wasn't an issue. But in most
6 cases -- I don't think the group itself is the biggest
7 issue here, and I think I've highlighted that. But I
8 just tried to keep a fairly -- put together a fairly
9 pure group of electric utilities. That's what I've done
10 in this case.

11 Q. Is your answer yes, that you included the same
12 four utilities that you criticized Dr. Murry for
13 including in this proceeding in your exhibit in the
14 Florida Power & Light case?

15 A. I believe I said yes, and then I explained it.

16 Q. All right. Let's look at the percentages of
17 revenues derived in this case that you mention on pages
18 17 and 18 of your testimony compared to those shown in
19 the FPL exhibit. It's true, isn't it, that the
20 percentages are approximately the same in both the FPL
21 case and in this case for those four companies?

22 A. Yes.

23 Q. Thank you. Dr. Woolridge, on page 4 of your
24 testimony at lines 11 through 13, you fault Dr. Murry
25 for relying on forecasted earnings per share growth rate

1 of Wall Street analysts and Value Line, saying that
2 these forecasted earnings are upwardly biased; is that
3 correct?

4 A. Yes.

5 Q. And isn't it true that you rely on forecasted
6 Value Line projections and analysts' forecasts on pages
7 31 through 33 of your testimony?

8 A. Oh, yes. I do use them, but again, I
9 recognize that there's other indicators of growth, and I
10 represent the fact that these things are upwardly
11 biased.

12 Q. Okay. Well, on page 5 of your testimony at
13 lines 4 through 6, this time you fault Dr. Murry for
14 relying on historical data, saying that that historical
15 data is upwardly biased. That's true, isn't it?

16 A. Well, historic measures of returns. I think I
17 have about 10 or 15 pages explaining how historic
18 returns overstate expected market returns, and I think
19 that's -- I highlighted that in my summary at the
20 beginning.

21 Q. And on page 11 of your testimony at line 21
22 through page 12, line 2, you reject the company's use of
23 projected 2009 test year capital structure that will be
24 in place when the new rates set by the Commission are in
25 place; is that correct?

1 A. Yes.

2 Q. And it's true, isn't it, that you instead rely
3 on a historical two-year average for your capital
4 structure?

5 A. Yes.

6 Q. That produces a lower equity component, does
7 it not?

8 A. Yes.

9 Q. On pages 13 and 14 of your testimony, you
10 revert back to the latest available LIBOR rates as your
11 basis for determining short-term debt capital costs or
12 debt costs; is that correct?

13 A. I've looked at current LIBOR rates, yes.

14 Q. And you fault Tampa Electric for using
15 historical LIBOR rates through 2008?

16 A. Yes, because they don't reflect current rates.
17 And in fact, if I updated them today, the numbers would
18 be lower.

19 Q. And on page 4 of your testimony, you say that
20 you used both historical and projected growth rates in
21 your DCF analysis; isn't that correct?

22 A. Yes.

23 Q. But isn't it true that you actually exclude
24 the historical growth to get your final average that you
25 use for your DCF growth rate at the top of page 33?

1 A. In the end, yes. I feel that the historic
2 growth rates had some figures which were extremely low,
3 so I relied on three different measures of expected
4 growth rates, which include Value Line projections of
5 dividends, earnings, book value per share, as well as
6 internal growth and analysts' projections of earnings
7 growth. So I took into account a number of projected
8 figures and not just the analysts' growth rates.

9 Q. Isn't it true that in your testimony in this
10 case, you have switched back and forth between
11 historical data for some purposes and forecasted data
12 for others?

13 A. No.

14 Q. Haven't I given you just about five examples
15 or six examples where you've done that?

16 A. Well, I have used where -- for example, I've
17 reviewed the historical figures in terms of the DCF
18 growth rate. As it turns out, obviously, analysts and
19 Value Line know what these numbers are when they make
20 projections of the future. But, no, I would say that's
21 just not true. I have used projections of expected
22 stock returns. I've used historic stock returns.

23 I would say, in fact, probably the truth is
24 actually true for Dr. Murry's testimony, where for the
25 DCF growth rate, he has used analysts' projections of

1 earnings per share, and then for the -- to develop a
2 risk premium, he simply uses historic returns. So in
3 one case, he rejected -- he rejects historic growth
4 rates for the DCF model. On the other hand, he rejects
5 projections of market returns for the capital asset
6 pricing model.

7 Q. I'm talking about in your testimony. In
8 deciding whether to use historical data or forecasted
9 data for any particular calculation, it's true, isn't
10 it, that you've simply opted for that which produces the
11 lower result?

12 A. No, that's totally untrue. What I did was, I
13 did what was appropriate. On the capital structure,
14 it's very clear that you have to have a capitalization
15 that reflects the capitalization of the company as it
16 has been financed and the capitalization of the proxy
17 companies you're using in your group. And it's clear
18 the proposed capitalization includes some assumptions of
19 the future. The company has recommended a common equity
20 ratio which is well above that of publicly traded
21 electric utilities.

22 Q. Dr. Woolridge, on page 48 of your testimony,
23 you state that stock prices are relatively high at the
24 present time relative to earnings and dividends.

25 A. Yes.

1 Q. My question to you is, isn't it true that
2 stocks in general as measured by the S&P 500 have lost
3 about 35 to 40 percent of their valuation over the last
4 year?

5 A. Yes. And PE ratios and dividend yields are
6 still high.

7 Q. You also say on page 48 that interest rates
8 are relatively low. Would you agree that the current
9 yield on triple-B rated corporate bonds are around
10 9 percent?

11 A. No. That is clearly out of date. First of
12 all, I think it's more relevant to look at triple-B
13 public utility bonds. And the most recent data I have
14 was last week, and they were 6.75 percent.

15 Q. I asked you about triple-B rated corporate
16 bonds, and you're saying that's totally out of date. I
17 want to hand you a copy of the Wall Street Journal
18 excerpt from this past Friday and ask you to tell me
19 what the triple-B rated corporate bonds latest yield is.

20 A. For the numbers listed here, which is from the
21 Friday, January 23, 2009, they rated triple-B
22 corporates. They said the latest -- now, I don't know
23 what that is. They say latest. I assume it's a --

24 Q. Isn't it the latest yield?

25 A. It doesn't say it's a yield.

1 Q. The top line doesn't say yield?

2 A. No, it doesn't. But I would think -- it looks
3 like a yield number, but those numbers aren't -- first
4 of all, I don't know what index they use and where
5 they're getting their numbers. I use Bloomberg as a
6 source. If I look at the most recent Bloomberg numbers,
7 public utility bonds, triple-B public utility bonds are
8 at 6.75 percent, and corporates are a little bit higher.
9 And that's part of the -- I think the issue that has
10 come out earlier in this hearing, that the public
11 utility sector and the bonds have done quite well in the
12 last month or so. The public utility triple-B rating
13 that I've seen most recently last week on Bloomberg was
14 6.75 percent.

15 Q. Is the yield that I just handed to you for
16 triple-B rated corporate bonds 9.120 percent?

17 A. Yes, but I don't know what index. They don't
18 really say where they're getting that, you know, what --
19 I mean, obviously, there's different indexes, for
20 corporate bonds, for public utility bonds. And I use
21 Bloomberg numbers, and these are certainly not in line
22 with what I see on Bloomberg.

23 Q. But they are reported for triple-B rated
24 corporate bonds?

25 A. Yes.

1 Q. Could you turn to your Exhibit JRW-7 attached
2 to your testimony?

3 A. Yes.

4 Q. The first page of that exhibit, which is A
5 rated public utility bonds, it's true, is it not, that
6 there is no information in that exhibit except for data
7 from 2007 and earlier?

8 A. That is correct. That is an exhibit I update
9 annually. If I updated it to last week, last week,
10 according to Bloomberg, A rated public utility bonds,
11 long term, were yielding 6.0 percent.

12 Q. If you look at the second page, that's the Dow
13 Jones utilities dividend yield. The same is true there,
14 that there's nothing on that exhibit that's any later
15 than calendar year 2007; is that correct?

16 A. That is correct. I prepared this testimony in
17 November, so I didn't have 2008 data for it.

18 Q. The same is true on the third page of that
19 exhibit for the Dow Jones utilities market to book and
20 ROE? That's all 2007 and earlier; correct?

21 A. Yes.

22 Q. So all the data in this exhibit came from 2007
23 or earlier?

24 A. Yes. I was showing a long-term perspective.
25 The 2008 data wasn't available, so I couldn't put it in

1 there.

2 MR. BEASLEY: Those are all the questions we
3 have, Madam Chair. I would like to move admission of --
4 well, I'll wait.

5 COMMISSIONER EDGAR: Yes, let's wait and do
6 those at the end, if that's okay. That helps me.

7 Ms. Bradley.

8 MS. BRADLEY: Thank you.

9 CROSS-EXAMINATION

10 BY MS. BRADLEY:

11 Q. A few minutes ago Commissioner Skop asked you
12 about the loss for the period -- I think it was July 1
13 of '08 to January 1 of '09, and you indicated that the
14 electric utility stocks had suffered much less loss than
15 the general stocks?

16 A. Yes.

17 Q. Can you determine the risk associated with one
18 versus the other of those stocks?

19 A. Well, I mean, you've got to look at the
20 volatility. In that case, I compare like the volatility
21 of the S&P to the volatility of the 10 stocks. And the
22 overall market has been much more volatile than the
23 electric utility sector, obviously, in particular, the
24 stocks that I follow. I mean, clearly, the S&P has been
25 very volatile. Especially in the September to November

1 time frame, it was extremely volatile. The volatility
2 has settled down a lot since then. But during that time
3 frame, clearly, the overall market was much more
4 volatile than the electric utility sector.

5 Q. Is there any way to quantify that risk?

6 A. Well, I mean, there's different ways. As a
7 matter of fact, I use the coefficient of variation as a
8 measure of volatility, because you have different mean
9 values, so you have to standardize them by the mean, and
10 that's what the coefficient of variation does. And I
11 find that, you know, using that as a measure, certainly
12 the S&P has been much more volatile, two to three times
13 as volatile as utility stocks, but I don't think that
14 should surprise anybody.

15 MS. BRADLEY: Thank you. No further
16 questions.

17 COMMISSIONER EDGAR: Mr. Moyle.

18 MR. MOYLE: Thank you. I have a few.

19 CROSS-EXAMINATION

20 BY MR. MOYLE:

21 Q. Can I refer you to the two exhibits that Tampa
22 Electric just provided to you?

23 A. Yes.

24 Q. One was, I guess, a document that you were
25 involved with in a previous case, and I just was looking

1 at the chart in the column on return on equity. Alliant
2 Energy had a 6.8 return on equity; is that right?

3 A. Yes.

4 Q. Are you aware, has Alliant Energy been unable
5 to raise debt in any capital markets that you're aware
6 of as we sit here today?

7 A. I don't know.

8 MR. BEASLEY: Madam Chair, I would object to
9 that question on the grounds that it's friendly
10 cross-examination. I didn't present that document to
11 Dr. Woolridge for any reason other than to talk about
12 the four companies that he criticized Dr. Murry for
13 including in his testimony.

14 COMMISSIONER EDGAR: Mr. Moyle.

15 MR. MOYLE: Well, I mean, it's a Tampa
16 Electric document. I just got it handed to me a couple
17 of minutes ago. I had a couple of follow-up questions
18 related to the document. I think it's, you know, an
19 issue in the case. I think Dr. Woolridge also is at a
20 position that's a little -- it's better than Dr. Murry's
21 position, but it's not as good as the position advocated
22 by my client, FIPUG, with respect to ROE. So I don't
23 know if I would call him adverse, but he's at a higher
24 number than Mr. Herndon is.

25 COMMISSIONER EDGAR: Thank you, Mr. Moyle, for

1 that additional advocacy on behalf of your client. I'm
2 actually going to sustain the objection, and I would
3 like you to move on.

4 MR. MOYLE: Okay.

5 BY MR. MOYLE:

6 Q. Is it true that the trend, based on your
7 expertise, has been coming down in the country for
8 commissions awarding ROEs?

9 MR. BEASLEY: I renew the objection, Madam
10 Chair. That is friendly cross, and it's -- my objection
11 is consistent with the one that Ms. Kaufman presented
12 earlier.

13 COMMISSIONER EDGAR: I'm sorry. With -- oh,
14 with Ms. Kaufman. I didn't quite catch the end of your
15 statement. Mr. Moyle, I think he has a point.

16 MR. MOYLE: All right. Well, I know the
17 Chairman had said he would give a little leeway.
18 Mr. Twomey got a little leeway. I don't think I've
19 gotten a question out yet. But, you know, I'll defer to
20 your judgment on it, obviously.

21 Is that question objectionable just in terms
22 of asking him, you know, from sort of an overall trend,
23 what the ROE has been doing? I mean, he's talked about
24 markets and things like that.

25 COMMISSIONER EDGAR: It's last week all over

1 again.

2 MR. MOYLE: I'm sorry? It's what? Oh.

3 COMMISSIONER EDGAR: Deja vu. I will sustain
4 the objection on the line of questioning that I think
5 originated this discussion. Mr. Moyle, do you have any
6 other questions?

7 MR. MOYLE: I do have one. There has been a
8 lot of testimony in this case about the high ROE as a
9 need for something that will help finance debt, and I
10 want to ask him, if I can -- I'll tell you the question
11 I want to ask him is whether he's aware of credit
12 enhancing vehicles --

13 COMMISSIONER EDGAR: Not to me. Pose the
14 question to the witness.

15 MR. MOYLE: Okay.

16 COMMISSIONER EDGAR: And if there is an
17 objection, we will move on it, and if not, we'll go
18 forward.

19 BY MR. MOYLE:

20 Q. Sir, are you aware that debt such as bonds can
21 be enhanced through credit enhancement vehicles or
22 insurance for bonds?

23 A. Yes.

24 Q. And isn't it true that that credit enhancement
25 and insurance can be purchased for a fraction of the

1 cost in terms of the basis points for the issuance of
2 the bonds?

3 MR. BEASLEY: Madam Chair, I renew the
4 objection. It's friendly cross, and it's not really
5 adding to the proceeding.

6 MS. CHRISTENSEN: May I be heard on this? I
7 mean, I know I'm in an unusual position, but I did want
8 to point out, there really is no objection called
9 friendly cross. There's repetitive, you know, overly
10 burdensome, but friendly cross is not an actual hearing
11 objection.

12 COMMISSIONER EDGAR: Okay. Ms. Christensen --

13 MS. CHRISTENSEN: And I do realize --

14 COMMISSIONER EDGAR: Ms. Christensen, quite
15 frankly, it was your objection that got us into this
16 position.

17 Mr. Moyle, do you have questions along a
18 different line?

19 MR. MOYLE: I had one other question that's on
20 a different line.

21 COMMISSIONER EDGAR: One more try, Jon.

22 MR. MOYLE: Okay. I'll tell you what. I
23 won't ask that question. I'm done.

24 COMMISSIONER EDGAR: Mr. Wright.

25 MR. WRIGHT: Thank you, Madam Chairman. I

1 have a few lines of questions. Just as an initial
2 proffer, I have a few lines of questioning for this
3 witness that address specifically differences and some
4 clarifications as between his testimony and my
5 witnesses', plural, testimony, Mr. O'Donnell's and
6 Mr. Herndon's.

7 CROSS-EXAMINATION

8 BY MR. WRIGHT:

9 Q. Mr. Woolridge, I would like to ask you to look
10 at page 13 of your testimony. Near the top of that page
11 in line 5, you make the statement -- you make a
12 reference, "My capital structure, with a common equity
13 ratio of 48.89 percent." Now, are you aware that
14 Mr. O'Donnell has recommended an equity ratio of
15 44 percent in this case?

16 A. I think I was aware of that, yes.

17 Q. This is a potential source of confusion. Is
18 that equity ratio of 48.89 percent, is that an equity
19 ratio that relates only to investor sources of capital?

20 A. Yes.

21 Q. I'm sure you've reviewed the company's
22 testimony.

23 A. Yes.

24 Q. And in their MFRs, isn't it correct that the
25 company's testimony shows, using the total capital

1 structure, an equity ratio of 50.21 percent for the 2009
2 test year? It's D-1a.

3 A. I know it's about that. I don't know if that
4 -- I don't have that MFR with me. I'm just looking a --
5 I know it's about that. I don't know if it's exactly
6 that or not.

7 Q. My question for you is, what number in your
8 testimony or exhibits is comparable to the company's
9 50.21 percent? I think the answer is found on your
10 Exhibit JRW-4, but I'm confused between your testimony
11 on page 13 and JRW-4, I just want that clear for the
12 record.

13 A. On JRW-4, at the bottom, I show the capital
14 structure including all sources of capital and the
15 capital structure which has investor sources only.

16 Q. And so what's your common equity ratio for all
17 sources of capital?

18 A. 42.498 percent.

19 Q. Thank you. At page 53 of your testimony,
20 Dr. Woolridge, you testify that the appropriate equity
21 cost rate for the proxy group is in the 8.2 percent to
22 9.8 percent range. Is it an accurate characterization
23 of this testimony plus your testimony at lines 3 and 4
24 on page 53 that the appropriate range for the cost rates
25 for return on equity for Tampa Electric Company is

1 between 8.2 percent and 9.8 percent?

2 A. Yes.

3 Q. I want to ask you about your CAPM results.
4 The CAPM results -- and I'm looking at page 1 of 10 of
5 Exhibit JRW-11. Your CAPM result is where you got the
6 8.2 percent; correct?

7 A. Yes.

8 Q. And you go on to testify that you chose a
9 9.75 percent recommended rate of return because of
10 recent stock market volatility; correct?

11 A. Yes.

12 Q. Now, I think you've already testified to this,
13 and this is a predicate to a follow-up question. You've
14 testified that utility stock volatility has been less
15 than the general stock market volatility.

16 A. Yes.

17 Q. Shouldn't that lead you to recommend a lower
18 return on equity, i.e., lower within your appropriate
19 range, say, closer to 8.2 percent?

20 A. No. The point of saying that is, we all
21 have -- Dr. Murry and myself, we have an estimate of the
22 market risk premium. The market risk premium reflects
23 the risk of the volatility of the overall market. And
24 so in a CAPM type approach, that volatility is reflected
25 in the equity risk premium. And the fact that the

1 volatility of the September to November time frame -- I
2 mean, in that case, that's the reason I picked the
3 higher end of the range, is because, obviously, back
4 then, the stock market was very volatile, especially
5 relative to bonds.

6 Q. You used the 30-year Treasury bond interest
7 rate as your risk-free rate; correct?

8 A. Yes.

9 Q. If you were to update your CAPM study as of
10 today, what would the Treasury bond rate be? I'm going
11 to have a --

12 MR. BEASLEY: I'm going to have to object to
13 this. It's additional direct testimony of the witness,
14 in addition to being friendly to the interests of
15 Mr. Wright's client.

16 COMMISSIONER EDGAR: I'll allow.

17 MR. WRIGHT: Thank you.

18 Madam Chairman, a document very much like this
19 has already come into evidence. It's simply the United
20 States Treasury daily Treasury yield curve rates. I
21 would ask that this be marked, and I believe that's
22 going to be 120. It's the most current available. It
23 was printed today, so it's through yesterday.

24 COMMISSIONER EDGAR: Okay. Yes, it will be
25 120. Title, Mr. Wright.

1 MR. WRIGHT: U.S. Treasury yields as of
2 1/27/2009.

3 COMMISSIONER EDGAR: Thank you.

4 (Exhibit 120 was marked for identification.)

5 BY MR. WRIGHT:

6 Q. Dr. Woolridge, I'm looking at the table, and
7 it appears to me that the most recent 30-year Treasury
8 bond yields are right around 3.3 percent; correct?

9 A. Yes.

10 Q. Now, if you were to apply that to your CAPM
11 analysis, wouldn't that produce a lower indicated return
12 on equity?

13 A. Yes.

14 Q. In fact, just following your model by itself,
15 it would knock it down under 8 percent, wouldn't it?

16 A. Yes. But, I mean, if I was updating this, I
17 would also update the equity risk premium study as well,
18 so I wouldn't do one without the other.

19 Q. Now, you did rely more on the DCF methodology
20 than perhaps -- well, let me put it this way. Is it
21 true -- you give the DCF methodology more weight than
22 the CAPM; correct?

23 A. Yes. In terms of the upper end of my range,
24 yes.

25 Q. And why is that?

1 A. Because the result -- I mean, at the time I
2 did this study, it was the middle of November.
3 Obviously, that was a time of high market volatility, so
4 I picked the upper end of the range to represent that
5 high level of market volatility.

6 Q. Methodologically, would it be your
7 professional opinion to give less weight to CAPM versus
8 DCF, i.e., or give more weight to DCF versus CAPM?

9 A. From a general framework, yes. I just believe
10 that it gives a better indicator of an equity cost rate.

11 Q. Have you updated your DCF analyses?

12 A. No.

13 Q. Finally, I have a couple of questions for you
14 about your comparable group, which as we've already
15 discussed, or you've already discussed with Mr. Beasley,
16 is somewhat different from Mr. O'Donnell's. I do note
17 that both of you included Progress Energy in your
18 comparable group; correct?

19 A. Yes.

20 Q. Are you familiar with a document that has
21 already come into evidence, and this relates to Progress
22 Energy in particular, a document that has already come
23 into evidence as Exhibit Number 99? And it's the Wall
24 Street Journal article from January 13th.

25 A. Yes.

1 Q. You've seen this article; yes?

2 A. Yes. I read it and passed it on to my
3 counsel.

4 Q. And you're aware that in this article that
5 there's a report that Progress Energy, Inc., as the
6 article states, recently issued 10-year bonds with a
7 coupon rate of 5.3 percent?

8 A. Yes.

9 Q. What is Progress Energy, Inc.'s current debt
10 rating?

11 MR. BEASLEY: Mr. Chairman, if I could, I'm
12 not sure which article Mr. Wright is referring to, and
13 it hasn't been introduced during the course of
14 Dr. Woolridge's testimony up to this point, I don't
15 believe.

16 MR. WRIGHT: It's already in the record as
17 Exhibit 99. It came in through my cross-examination of
18 Mr. Gillette, Mr. Chairman.

19 MR. BEASLEY: It hasn't been addressed by
20 Dr. Woolridge until just now, as Mr. Wright --

21 MR. WRIGHT: I've asked him --

22 CHAIRMAN CARTER: Let's see how far you're
23 going.

24 MR. WRIGHT: Thank you, Mr. Chairman.

25 CHAIRMAN CARTER: And just in case, I've done

1 you guys a great favor. I've appealed to our friends at
2 DMS, and they're going to unlock the doors for you at
3 6:00 so you can get back in. So I'm being nice, so you
4 be nice. You may proceed.

5 MR. WRIGHT: Thank you, Mr. Chairman, and
6 thank you for your niceness.

7 BY MR. WRIGHT:

8 Q. Dr. Woolridge, I think the pending question
9 is, what is Progress Energy, Inc.'s bond rating?

10 A. Triple-B plus.

11 Q. What is Progress Energy Florida's current bond
12 rating?

13 A. Triple-B plus.

14 Q. What is Progress Energy Carolinas' current
15 bond rating?

16 A. Triple-B plus.

17 Q. Thank you. What's your source for having that
18 information?

19 A. Standard & Poor's.

20 Q. Published report, website?

21 A. Website.

22 MR. WRIGHT: Thank you, Mr. Chairman, and
23 thank you, Dr. Woolridge. That's all the questions I
24 have.

25 CHAIRMAN CARTER: Thank you. Commissioners,

1 I'm going to go to staff first and then --

2 MR. BEASLEY: Mr. Chairman, I have a
3 follow-up, if I could, regarding a document that
4 Mr. Wright distributed to the witness after my
5 cross-examination.

6 MS. CHRISTENSEN: Objection.

7 CHAIRMAN CARTER: It's highly irregular. Let
8 me hear the basis of your --

9 MR. BEASLEY: I just want to inquire as to
10 when the witness received this document.

11 CHAIRMAN CARTER: Which document would that
12 be?

13 MR. BEASLEY: This would be the document
14 marked Exhibit 120 that was furnished to him by
15 Mr. Wright during his questioning. It will be very
16 brief.

17 CHAIRMAN CARTER: And the basis for that is?

18 MR. BEASLEY: Just to determine whether the
19 witness has reviewed this prior to taking the witness
20 stand and being presented the document by Mr. Wright.

21 MS. CHRISTENSEN: Commissioner, I renew the
22 objection. I think it's -- as you said, it's highly
23 irregular to allow somebody to go back and ask
24 supplemental questions over additional
25 cross-examination.

1 MR. BEASLEY: It's a question about a
2 document, Mr. Chairman, that I could not ask a question
3 about before because I hadn't seen it when I concluded
4 my cross-examination.

5 CHAIRMAN CARTER: Ms. Helton.

6 While she's look through her book on
7 procedure, I'm inclined not to go down this road. I'm
8 just telling you what my inclinations are. It's highly
9 irregular. And, of course, obviously, you know, the
10 Supreme Court is across the street to do those kinds of
11 things, but I'm just going to -- I'm going to rule
12 against that.

13 MR. BEASLEY: We'll withdraw the question.

14 CHAIRMAN CARTER: You can always -- I mean, it
15 is what it is, and that's all it is. So let's do this.
16 Redirect?

17 Wait a minute. Staff, and then I'll come back
18 to the bench. Sorry.

19 MR. YOUNG: Staff has no questions.

20 CHAIRMAN CARTER: Okay. Commissioners?
21 Commissioner Skop, you're recognized, sir.

22 COMMISSIONER SKOP: Thank you. Good
23 afternoon, Dr. Woolridge. Just some quick questions
24 with respect to your analysis. And I've had a few
25 minutes to look over it and to review your assumptions.

1 Would you agree that the inputs into both the
2 DCF and CAPM models are subjective inputs and could
3 cause variation in the result that both of those models
4 would provide?

5 THE WITNESS: Yes.

6 COMMISSIONER SKOP: Okay. And focusing on
7 your analysis and the assumptions you chose -- and I'm
8 going to limit this strictly to the CAPM result of
9 8.2 percent return on equity. I guess, subject to
10 check, my math would be a 330 basis point reduction over
11 the current ROE of TECO. And I was wondering if I could
12 get your expert opinion as to if that rate of return
13 were accepted by the Commission, what regulatory signal
14 would such a reduction of 330 basis points send to the
15 capital markets?

16 THE WITNESS: I don't think it would be
17 particularly good, and I haven't recommended that
18 number. And again, I feel it's because of the market
19 volatility and the fact that the risk premiums are above
20 the 4.5 percent I estimated at that time. That's why
21 I've recommended 9.75. But I agree. If it was 8.2,
22 that would be below what I would expect and I think the
23 market would expect.

24 COMMISSIONER SKOP: Okay. And then following
25 up on a previous line of questioning that has occurred,

1 I believe, yesterday, and I believe it's in -- I don't
2 know if you have this in front of you, but it would be
3 Hearing Exhibit 98 on page 116. The suggestion that was
4 posed to a prior witness was that in lieu of using the
5 traditional CAPM or DCF models, which again could be
6 influenced by what choice of variables, and the results
7 differ according to what assumptions are made, that a
8 more appropriate benchmark might be to look towards
9 recent rate case authorized returns from various
10 commissions in the Southeast. Could you -- that's
11 listed on page 116. Again, I don't know if you have
12 that available to you, but just generally, what would
13 you think about looking towards those in lieu of a
14 critical analysis on the models?

15 THE WITNESS: Initially, I do not have the
16 document you're talking about.

17 MR. MOYLE: I can give it to him.

18 COMMISSIONER SKOP: Can we do that?

19 And for the purposes of the record, it would
20 be on page 116 of Exhibit 93, and it would be the last
21 five entries at the bottom reflecting the five most
22 recent rate case decisions, showing the requested return
23 on equity versus the authorized return on equity by the
24 respective commissions.

25 THE WITNESS: Well, a couple of thoughts I

1 would have. First of all, I'm familiar with this
2 database that has been discussed here, and there has
3 been some discussion about cases that are there, what
4 they're missing or whether the numbers are right. One
5 of the things you have to recognize is that in every
6 rate case it's different. There are different elements.
7 Many of these are settlements, and in settlements, you
8 have something else going on. So to say these are exact
9 numbers I have a little bit of trouble with. And
10 obviously, presumably, there's hearings and there's
11 adjustments and there's agreements that are made.

12 So just looking at these, first of all, it's
13 very circular. These particular ones that are listed on
14 116 are all from 2007. A lot of times they come from
15 states where they may have commissions that tend to
16 grant higher ROEs for a particular risk factor or
17 something. So I think I generally disagree with this
18 approach, just because if you're involved in these
19 cases, you know there's a lot more going on than just in
20 the end there's a number, and it's a function of the
21 models that are used and the special circumstances of
22 the cases.

23 COMMISSIONER SKOP: Okay. And just one final
24 question in follow-up. And I respect that point of
25 view. With respect to if that benchmark were to be

1 looked at, would you agree that the authorized returns
2 on equity, the most recent, noting they were in late
3 2007, which a lot of time and circumstances have changed
4 since then, are higher than the recommended ROE that
5 you've recommended, in your opinion?

6 THE WITNESS: And if you update this to 2008,
7 you're going to find the numbers are lower. There's a
8 broad range. I mean, there's a broad range of these
9 decisions.

10 COMMISSIONER SKOP: No, I understand. And I'm
11 not trying to press you in any direction. I'm just
12 trying to get your expert opinion with respect to what
13 tools the Commission should use and weigh over others in
14 trying to ascertain what the appropriate ROE would be,
15 in light of extreme market volatility and some of the
16 things that have a profound impact on the respective
17 models. You know, what should the Commission do to make
18 the appropriate ROE choice?

19 THE WITNESS: I mean, I think as a Commission,
20 you'll see ranges. I mean, I'm sure as a Commission,
21 you go through a lot in terms of making these decisions.
22 And obviously, using up-to-date information is
23 important, but understanding what the elements of the
24 case is. I mean, I was just involved in a case in
25 Connecticut during this market turmoil, and the proposed

1 decision came out two days ago, and the ROE is
2 8.75 percent. Now, that's a proposed decision, and it's
3 going to go one way or another, but as you know as a
4 Commission, you deal with a lot of factors one way or
5 another when you set an ROE.

6 COMMISSIONER SKOP: Okay. Thank you.

7 CHAIRMAN CARTER: Commissioners, anything else
8 from the bench? Redirect.

9 MS. CHRISTENSEN: Hopefully briefly.

10 REDIRECT EXAMINATION

11 BY MS. CHRISTENSEN:

12 Q. Dr. Woolridge, I think you were just having a
13 discussion with Commissioner Skop regarding looking at
14 the ROEs particularly out of the Southeast. In your
15 opinion, is it that appropriate just to look at one
16 particular region of the country for determining what an
17 appropriate ROE would be?

18 A. Well, I think different commissions have
19 different attitudes and also different risk factors they
20 deal with. I mean, I think from a recommendation
21 standpoint, looking at ranges are probably more
22 important than looking at specific numbers, because
23 sometimes these numbers that are published by RRA may
24 have a number of decisions from one commission or one
25 company. And so there's unique risk factors, but I

1 think the range is probably something to consider.

2 Q. Okay. Dr. Woolridge, you've testified in
3 other states. Do they use DCF and CAPM modeling in
4 arriving at their ROE decisions?

5 A. I mean, virtually every state I've testified
6 in, you see the DCF and the CAPM model. Sometimes you
7 see additional models, different measures, different --
8 risk premium models, comparable earnings models, but
9 definitely the two that are standard are DCF and CAPM.

10 Q. And I think there was some questioning from
11 Mr. Beasley regarding your choice to eliminate some of
12 the companies, and you stated you were trying to reach a
13 more purely electrical group. Can you explain why you
14 chose to do that with Tampa Electric and not with FPL?

15 A. I don't remember. I mean, the FPL case was
16 four or five years ago. And as I look at that group, it
17 looks like a group that Dr. Avera would have selected.
18 So I assume that I probably -- instead of making the
19 comparable group an issue, I used his group. I'm not
20 sure.

21 But in my case, I'm just trying to find fairly
22 pure electric utilities. For example, the utilities
23 that were used in FP&L, a number of those are huge
24 electric utilities. Well, you know, Tampa Electric is
25 not a huge electric utility, so I don't think they would

1 be comparable. Obviously, their percent of regulated
2 electric revenue was all over the map. So in this case,
3 I've just tried to find a fairly pure set of electric
4 utilities.

5 Q. Okay. I just want to make sure I understand.
6 When you talk about pure electric utilities, you're
7 talking about what?

8 A. Well, utilities that are primarily electric
9 utilities, they don't have a lot of gas, unregulated
10 revenues, and that sort of thing.

11 MS. CHRISTENSEN: Okay. I have no further
12 redirect.

13 CHAIRMAN CARTER: Commissioner Argenziano.

14 COMMISSIONER ARGENZIANO: Yes, just a quick
15 question. That brought to mind some questions that I
16 asked yesterday. Of the evaluation methods that are
17 used, the CAPM, DCF, and risk premium, how come risk
18 premium is not used more often if CAPM and DCF are so
19 subjective and could be manipulated, so to speak?

20 THE WITNESS: First of all, the CAPM is a
21 version of the risk premium model.

22 COMMISSIONER ARGENZIANO: Right.

23 THE WITNESS: And there's different ways of
24 addressing a risk premium model, and they're all
25 subjective. There's subjectivity in all these things.

1 It's not an exact number.

2 COMMISSIONER ARGENZIANO: Okay. But isn't
3 the -- I guess in the risk premium, isn't there a factor
4 which is, I guess, more -- I don't know the term to use?

5 THE WITNESS: No. It's subjective too.

6 COMMISSIONER ARGENZIANO: But not as easily
7 manipulated if it's based on, let's say, Treasury bills
8 that are averaged over an identified period and factored
9 in?

10 THE WITNESS: But the issue is what's the risk
11 premium, when do you measure it, how do you measure it.
12 I mean, it's sort of like in the capital asset pricing
13 model: The big issue is what's the market risk premium,
14 what's the equity risk premium, how do we measure it.
15 It's the same thing. The concept is the same thing,
16 what is the equity risk premium.

17 COMMISSIONER ARGENZIANO: Okay. Then I guess
18 the question would be, is it -- I don't know if
19 "manipulated" is the right word, but you can put inputs
20 where you want and change so much CAPM and DCF, it
21 appears to me from what I'm learning very quickly. And
22 it seems to me with risk premium, if you -- it seems to
23 permit reliance on a more identifiable factor. If
24 you're using the Treasury bills, isn't that a more --
25 can you not manipulate it?

1 THE WITNESS: No. No.

2 COMMISSIONER ARGENZIANO: Can you manipulate
3 it as much?

4 THE WITNESS: Oh, yeah. It's a matter of
5 what's the equity risk premium, how do you measure it.
6 It's the same issue.

7 COMMISSIONER ARGENZIANO: Okay. Thank you.

8 CHAIRMAN CARTER: Thank you. Commissioner
9 Skop.

10 COMMISSIONER SKOP: Thank you, Mr. Chair. And
11 would that be influenced in the CAPM by the choice of
12 beta also, to the extent that if you pick your beta
13 wrong, you would have that direct --

14 THE WITNESS: Yes. I mean, there's a lot of
15 sources of beta. I mean, I think Dr. Murry and I both
16 use Value Line. But probably the issue with beta, it's
17 measured with error as well, because you use historic
18 data and they make adjustments to it. So it's measured
19 with error as well.

20 COMMISSIONER SKOP: Thank you.

21 CHAIRMAN CARTER: Commissioner Argenziano.

22 COMMISSIONER ARGENZIANO: Just to ask the
23 question, not get back on beta.

24 CHAIRMAN CARTER: Beta. I was hoping he
25 didn't say that, but he used the B word.

1 COMMISSIONER ARGENZIANO: I won't go there.
2 But beta really has no predictive value, does it?

3 THE WITNESS: Beta basically says this:
4 Electric utilities are less volatile than the market.
5 The question is, beta captures how much less volatile.
6 How do we measure? We regress five years of stock
7 returns on the market and then use -- there's an
8 adjustment factor to account for the fact that betas
9 historically have moved towards one. But if you go to
10 Yahoo or something like that, they publish betas, but
11 they don't make any adjustments. It's a pure
12 regression. So they measure it over different time
13 frames. Sometimes they use weekly results, not yearly
14 results. Obviously, risk changes over time, and so it's
15 measured with error like anything else.

16 COMMISSIONER ARGENZIANO: Thank you.

17 CHAIRMAN CARTER: Okay. I'm beginning to
18 regret getting the doors unlocked for you guys.

19 No, just kidding, just kidding. Let's deal
20 with our exhibits. Ms. Christensen?

21 MS. CHRISTENSEN: Yes. Commissioner, I would
22 ask to move Dr. Randall -- Dr. Randy Woolridge's
23 Exhibits, number 32, I believe, through 48 into the
24 record.

25 CHAIRMAN CARTER: Thirty-two through 48. Any

1 objections? Without objection, show it done.

2 (Exhibits 32 through 48 were admitted into the
3 record.)

4 MR. BEASLEY: Mr. Chairman, I would like to
5 move Exhibit 119 into the record.

6 CHAIRMAN CARTER: 119, any objections?
7 Without objection, show it done.

8 (Exhibit 119 was admitted into the record.)

9 MR. WRIGHT: And, Mr. Chairman, I move Exhibit
10 120.

11 CHAIRMAN CARTER: Hold on. Mr. Wright, do you
12 have a witness that you can authenticate this, because I
13 really would rather give the parties at least far more
14 advance notice than -- you know.

15 MR. WRIGHT: Well, Mr. Chairman, this is a
16 print of a readily available website of the United
17 States Government Treasury Department. Except for the
18 updated dates, which actually show higher yields than
19 those that Mr. Gillette identified without any objection
20 by anybody last week, all it does is show five extra
21 days of information that actually show higher rates on
22 the bonds. It's authentic. I don't really think it's
23 subject to debate, and it's completely appropriate
24 within the scope of evidence allowed under the Florida
25 APA.

1 MR. BEASLEY: Mr. Chairman, my only problem
2 was we weren't aware of it, we weren't allowed to ask
3 any questions about it, and it seems like that should be
4 at least permitted.

5 CHAIRMAN CARTER: Ms. Helton?

6 MS. HELTON: My suggestion, Mr. Chairman,
7 would be to let it in, and then we can give it the
8 weight that it's due.

9 CHAIRMAN CARTER: Okay. Show it done.

10 (Exhibit 120 was admitted into the record.)

11 MR. YOUNG: Mr. Chairman?

12 CHAIRMAN CARTER: Yes, sir.

13 MR. YOUNG: I'll wait until you're through
14 with Dr. Woolridge.

15 CHAIRMAN CARTER: Any further questions for
16 this witness from any of the parties?

17 You may be excused. Thank you.

18 Yes, sir, Mr. Young.

19 MR. YOUNG: Mr. Chairman, what Ms. Martha
20 Carter Brown just handed out to everyone was staff's
21 Exhibit Number 117. It's staff's RRA report generated
22 1/12/2008 -- I mean 2009. I'm sorry. I should know
23 that. That's my birthday, but I should know that.

24 CHAIRMAN CARTER: Are you trying to get an
25 early birthday present out of us? Is that the plan?

1 Okay. Just for the record, this is Exhibit 117 staff
2 has provided for you.

3 Call your next witness.

4 MS. CHRISTENSEN: Commissioner, the Office of
5 Public Counsel would like to call Mr. Hugh Larkin to the
6 stand.

7 Thereupon,

8 HUGH LARKIN, JR.

9 was called as a witness on behalf of the Citizens of the
10 State of Florida and, having been first duly sworn, was
11 examined and testified as follows:

12 DIRECT EXAMINATION

13 BY MS. CHRISTENSEN:

14 Q. Mr. Larkin, when you're ready.

15 A. Yes, I'm ready.

16 Q. Okay. Can you please state your name and your
17 business address for the record?

18 A. My name is Hugh Larkin, Jr. My business
19 address is 15728 Farmington Road, Lavonia, Michigan,
20 48154.

21 Q. And did you cause to be prefiled direct
22 testimony November 26, 2008, in this docket?

23 A. Yes, I did.

24 Q. And do you have any changes to your testimony?

25 A. Yes, I do. I have three changes I want to

1 make. On page 3, line 21, I want to take out the words
2 "debt with a," and on the next line, to take out
3 "corresponding increase to," so that the sentence will
4 now read, "The first of these is to add 77 million to
5 the company's equity."

6 My next change is on page 38, line 8. I would
7 add "capitalized and" after the word "costs," so that
8 the sentence reads, "The net amount of storm costs
9 capitalized and charged to the reserve for depreciation
10 was \$35,689,935."

11 And the last change is on page 46, line 15.
12 After the word "ratepayers," I would add "due to," so
13 that the sentence reads, "The Commission should not
14 build into rates charges to ratepayers due to economic
15 downturns."

16 Q. Mr. Larkin, with those modifications, if I
17 were to ask you the same questions today, would your
18 answers be the same?

19 A. Yes, they would.

20 MS. CHRISTENSEN: I would request that
21 Mr. Larkin's prefiled testimony be entered into the
22 record as though read.

23 CHAIRMAN CARTER: The prefiled testimony of
24 the witness will be entered into the record as though
25 read.

1 DIRECT TESTIMONY OF HUGH LARKIN, JR.
2 ON BEHALF OF THE CITIZENS OF FLORIDA
3 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION
4 TAMPA ELECTRIC COMPANY
5 DOCKET NO. 080317-EI
6

7 I INTRODUCTION

8 Q. WHAT IS YOUR NAME, OCCUPATION AND BUSINESS ADDRESS?

9 A. My name is Hugh Larkin, Jr. I am a Certified Public Accountant licensed
10 in the States of Michigan and Florida and the senior partner of the firm of
11 Larkin & Associates, PLLC, Certified Public Accountants, with offices at
12 15728 Farmington Road, Livonia, Michigan 48154.

13
14 Q. PLEASE DESCRIBE THE FIRM LARKIN & ASSOCIATES, PLLC.

15 A. Larkin & Associates, PLLC, is a Certified Public Accounting and
16 Regulatory Consulting Firm. The firm performs independent regulatory
17 consulting primarily for public service/utility commission staffs and
18 consumer interest groups (public counsels, public advocates, consumer
19 counsels, attorney general, etc.). Larkin & Associates, PLLC, has
20 extensive experience in the utility regulatory field as expert witnesses in
21 more than 800 regulatory proceedings including numerous electric, water
22 and sewer, gas and telephone utilities.

23

1 Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE FLORIDA PUBLIC
2 COMMISSION?

3 A. Yes. I have testified before the Florida Public Service Commission on
4 numerous occasions during the last 32 years.

5
6 Q. HAVE YOU PREPARED AN APPENDIX WHICH DESCRIBES YOUR
7 QUALIFICATIONS AND EXPERIENCE?

8 A. Yes. I have attached Appendix I which is a summary of my regulatory
9 qualifications and experience.

10

11 Q. BY WHOM WERE YOU RETAINED?

12 A. Larkin & Associates, PLLC was retained by the Florida Office of Public
13 Counsel ("OPC"). Accordingly, I am appearing on behalf of the Citizens of
14 Florida ("Citizens").

15

16 II PURPOSE OF TESTIMONY

17 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

18 A. Our firm was asked by the Public Counsel to analyze the \$228,167,000
19 rate increase requested by Tampa Electric and provide our analysis of
20 what rate increase is justified. The increase requested amounts to a
21 26.4% increase in base rates over the projected 2009 base rate revenue.
22 This increase would be in addition to the fuel cost increases already being
23 passed on to ratepayers.

1

2 Q. WHAT ARE THE RESULTS OF YOUR ANALYSIS AND WHAT IS YOUR
3 RECOMMENDED INCREASE FOR TAMPA ELECTRIC?

4 A. We are recommending that the Commission allow a rate increase no
5 greater than \$38,689,000 for the Tampa Electric. This recommendation is
6 shown on my Exhibit HL-1, Schedule A, line 8. My Exhibit HL-1
7 incorporates the recommendations of Dr. J. Randall Woolridge and
8 Helmuth W. Schultz, III. I am sponsoring Exhibits HL-1 and HL-2.

9

10 Q. HOW WOULD YOU CHARACTERIZE THE COMPANY'S REQUESTED
11 INCREASE?

12 A. I would characterize the Company's filing as grossly overstated. The
13 Company has included a number of gimmicks and cost over statements
14 that have added significantly to the Company's revenue requirement
15 request.

16

17 Q. WHAT PARTICULAR REQUESTS DO YOU VIEW AS THE MOST
18 EGREGIOUS?

19 A. 1) The Company has made two adjustments to its capital structure which I
20 would consider gimmicks or attempts to end run prior Commission policy.
21 The first of these is to add \$77 million to the Company's ~~debt with a~~
22 ~~corresponding increase to~~ equity. The Company states that this
23 adjustment is necessary to account for additional risks associated with

1 long-term purchased power agreements that are not accounted for as
2 liabilities on the Company's balance sheet. Dr. Woolridge has addressed
3 this in his testimony and has stated that such an adjustment is not
4 reasonable or necessary.

5
6 2) The second adjustment to the capital structure was made to the
7 Company's short-term debt and deferred income tax components to
8 reduce those components for what the Company states are the debt and
9 deferred income tax associated with financing under recoveries of fuel and
10 purchased power costs. The effect of this adjustment is to raise the
11 overall cost of capital and thereby allow the Company to earn a rate of
12 return through the cost of capital in addition to the rate of return which the
13 Commission allows when these under recoveries are passed on to
14 ratepayers in subsequent fuel proceedings. This is an end run of the
15 Commission's prior policy of not allowing receivables from customers for
16 under recovered fuel in the working capital requirements. Also, as
17 discussed by Dr. Woolridge, the Company's request for a 12% return on
18 equity is well above current requirements.

19
20 3) In addition, Tampa Electric has included in the filing the annualization
21 of certain costs for construction projects, which in my view, violates the
22 projected test year principles and my understanding of past Commission
23 policy. These annualizations have the effect of increasing the revenue

1 requirement by approximately \$29 million. Even though the Company has
2 been asked on two separate occasions to provide references to
3 Commission orders which allow these types of annualizations, the
4 Company has refused to do so.

5
6 4) The Company is also proposing certain changes to the rate structure to
7 invert the energy and fuel charge, change service charges and
8 consolidate lighting tariffs and changes to interruptible customer rates and
9 time of day rates. Even though changes to rate schedules are common in
10 the industry, particularly after changes in fuel costs or base rates, the
11 Company proposes to increase plant in service by \$2.4 million and
12 amortization expenses by approximately \$550,000 to account for
13 estimated cost to change the Customer Information System for the above
14 listed changes. The impact of the rate base addition and the amortization
15 would increase rates by \$630,000.

16
17 5) The Company is proposing a 400% increase in the storm damage
18 accrual. The accrual would increase from \$4 million to \$20 million
19 annually. This increase has been requested even though the Company
20 has only experienced one year in which storms have struck its service
21 territory, and the reserve was more than adequate to reimburse the
22 Company for costs normally recognized by this Commission as
23 recoverable as storm damage.

12

13

14

15

16

17

18

19

20

21

22

23

6) The Company is also asking for an automatic adjustment clause to recoup investments in transmission facilities referred to as a "Transmission Base Rate Adjustment Clause". I am unaware of this Commission or any other state utility commission in the country authorizing an automatic adjustment clause for the recovery of transmission facilities. As discussed in detail later in this testimony, base rates are designed to recoup this type of cost. With the lead time involved in a transmission project, if the Company were not earning within its authorized ROE it would have plenty of opportunity to seek a rate increase. However, customers will pay more for transmission if the Company is earning within its authorized ROE and the Company was also permitted to recoup transmission costs through an automatic adjustment clause.

7) The Company is proposing through an outside consultant a change in the amortization of investment tax credits which would increase rates by \$3,365,000. The Company has been audited by the IRS for numerous years and the IRS has never challenged the amortization of the investment tax credit. This is a proposed change for a problem which does not exist and will increase rates. Mr. Schultz addresses this issue in his testimony.

1 8) The Company is proposing another tax change. Although it does not
2 have a major impact on revenue requirements (\$230,000), the Company
3 is proposing, through the same outside consultant, a change in the
4 calculation of deferred income taxes. This change, as testified to by Mr.
5 Schultz, is not justified. It is based on private letter rulings to other utilities
6 and not to Tampa Electric. Even if one were to apply those letter rulings
7 to Tampa Electric, the factual situation set out in those letter rulings does
8 not match this Commission's ratemaking methodology.

9
10 9) The Company is proposing to add to rate base a deferral for dredging
11 costs for which there is no justification. The Company states that the
12 dredging costs will amount to \$6.9 million and occur every five years.
13 However, the last time the Company incurred dredging costs was in 2002
14 and the net cost was \$1,288,169.73, far less than the requested \$6.9
15 million. Additionally, under the Company's purported five year schedule,
16 dredging would have occurred in 2007, not 2009.

17
18 10) Finally, the Company wants to collect a bad debt provision on Sale for
19 Resale. These are sales to municipalities and have not been subject to
20 bad debt provisions in the past. It is unlikely that this type of customer
21 would fail to pay their bill.

22

1 III TRANSMISSION BASE RATE ADJUSTMENT CLAUSE

2 Q. TAMPA ELECTRIC HAS REQUESTED THAT THE COMMISSION
3 APPROVE WHAT IT TERMS A "TRANSMISSION BASE RATE
4 ADJUSTMENT" ("TBRA"). IS AN AUTOMATIC ADJUSTMENT CLAUSE
5 FOR TRANSMISSION INVESTMENT EITHER NECESSARY OR
6 JUSTIFIED?

7 A. Definitely not. The justification for Tampa Electric requesting an automatic
8 adjustment clause to recover transmission investment is contained in the
9 testimony of Witness Regan B. Haines. Starting at page 40, Mr. Haines
10 discusses the history of transmission planning in the state of Florida; this
11 includes the failure of the implementation of a Regional Transmission
12 Organization ("RTO") which would have been known as GridFlorida. He
13 states that the Florida Public Service Commission is interested in
14 promoting wholesale competition in peninsula Florida and to that end will
15 monitor and promote areas where efficiencies may be gained in a cost-
16 effective manner. One of the processes which the Commission quoted in
17 its GridFlorida order was the initiative that regional transmission planning
18 be reviewed and monitored by the Florida Reliability Coordinating Council,
19 Inc. ("FRCC"). The FRCC is the regional reliability coordinator with the
20 authority to act and direct actions in accordance with relevant North
21 American Electric Reliability Council ("NERC") requirements. NERC sets
22 reliability standards for most entities transmitting energy in the United
23 States and Canada. The FRCC has specific procedures and guidelines to

1 support and supplement NERC reliability standards that ensure reliability
2 for the region is maintained by all operating entities which might affect the
3 reliability of the bulk power transmission system in Florida.

4
5 Q. WHAT RELEVANCE DOES THE FRCC HAVE TO TAMPA ELECTRIC'S
6 REQUEST FOR AN AUTOMATIC ADJUSTMENT CLAUSE FOR
7 TRANSMISSION INVESTMENT?

8 A. Tampa Electric states that because the FRCC is reviewing regional
9 transmission planning documents and that the Federal Energy Regulatory
10 Commission ("FERC") has required the development of a cost allocation
11 methodology for regional transmission expansion which the FRCC has
12 developed to comply with the FERC requirements, this process might
13 require Tampa Electric to incur transmission expansion costs. Tampa
14 Electric implies that the FRCC review may somehow impose costs on
15 Tampa Electric for transmission development over the next five years,
16 which it states would be ". . . virtually impossible to predict Tampa
17 Electric's share of expected expenditures accurately."¹ Presumably, this is
18 the basis for Tampa Electric's request for an automatic adjustment clause
19 for transmission investment.

20
21 Q. IS IT YOUR UNDERSTANDING THAT THE FRCC CAN IMPOSE
22 CONSTRUCTIONAL REQUIREMENTS ON TAMPA ELECTRIC?

¹ Testimony of Regan B. Haines, p. 47.

1 A. No, it is not. The facilities which are constructed on the Tampa Electric
2 system are fully under the control of the Company and the Florida Public
3 Service Commission. While the FRCC may suggest that a particular
4 construction project be undertaken by Tampa Electric, they cannot require
5 them to do so. Tampa Electric states the following:

6 However, given the regional planning process and the
7 dynamic nature of generation and transmission needs for the
8 next five years, it is virtually impossible to predict Tampa
9 Electric's share of expected expenditures accurately.²
10

11 The fact that FRCC is reviewing regional transmission plans does not
12 impose any additional financial requirements on Tampa Electric.
13 Construction expenditures over lengthy periods of time have always been
14 difficult to project. However, that does not require or support an automatic
15 adjustment clause.

16
17 Q. THE COMMISSION HAS APPROVED OTHER AUTOMATIC
18 ADJUSTMENT CLAUSES. CAN YOU DISCUSS THOSE CLAUSES AND
19 HOW THEY DIFFER FROM TRANSMISSION COST EXPENDITURES?

20 A. Yes. The major automatic recovery clause which the Commission has
21 authorized is the Fuel and Purchased Power Cost Recovery Clause. This
22 clause is designed to compensate for day-to-day fluctuations in the cost of
23 fuel which cannot be anticipated in base rates. Since fuel varies both as
24 to price and the amount consumed almost on a daily basis, it is not

² Ibid.

1 possible to anticipate the actual level or cost of fuel for any length of time.
2 The clause is necessary to ensure that there is a reasonable matching of
3 fuel costs with fuel revenues. The fuel clause recovers both internally
4 generated fuel costs, that is, fuel used in generators on the Company's
5 own system, and also the fuel component of Purchased Power Cost.

6
7 The Commission has also authorized a Capacity Cost Recovery Clause.
8 This clause is designed to recover the capacity component of Purchased
9 Power Cost. This clause was designed in order to allocate capacity cost
10 to customer classes based on demand rather than energy consumption.
11 Like the fuel costs, capacity costs related to Purchased Power are difficult
12 to predict and control on a long-term basis and cannot be accurately
13 anticipated in order to be included in rate base.

14
15 The Commission has authorized a Generating Performance Incentive
16 Factor ("GPIF"). The GPIF program is part of the Fuel Cost Recovery
17 Clause. It was designed to promote the efficient operation of electric
18 generating units. By promoting the efficient operation of the electric
19 generating units, fuel costs are reduced and thus, a benefit is given to
20 ratepayers through the reduction of fuel costs.

21
22 The Environmental Cost Recovery Clause ("ECRC") is designed to
23 recover environmental costs. This clause was designed to allow investor-

1 owned utilities the opportunity to recover costs incurred in complying with
2 new environmental requirements. This clause allows the utility to recover
3 incremental changes in environmental regulations that result in cost
4 increases. Since environmental costs are not under the control of the
5 utilities, but are mandated by regulatory agencies, the clause allows the
6 company to recover environmental costs not under its control and not
7 included in base rates.

8
9 The Energy Conservation Recovery Clause ("ECRC") allows the investor-
10 owned utility the opportunity to recover costs associated with Demand
11 Side Management Programs. Demand Side Management Programs are
12 designed to effectively reduce electric consumption and/or lower peak
13 demand. This is beneficial to ratepayers since lower demand and
14 consumption will reduce the need for new generating facilities and
15 purchased power.

16
17 In addition, recently enacted Florida law created clause recovery of certain
18 nuclear construction costs and costs associated with coal gasification
19 projects. This law provides that the recovery of these costs is necessary
20 outside of base rates.

21
22 The above paragraphs briefly summarize the reason and purpose of the
23 six adjustment clauses which are available for use by electric utilities in

1 Florida. Each of the clauses provides recovery of costs outside of base
2 rates. Although each of these costs is under the control of the utility, the
3 Commission or Legislature have decided to diminish the utilities exposure
4 to the under-recovery of these costs. Some of the clauses provide a
5 benefit to ratepayers through the reduction of costs. There is no need to
6 remove transmission costs from base rates which will, in effect, reduce the
7 Company's risk to plan and properly build transmission facilities. There is
8 also no benefit to ratepayers to do so.

9
10 Transmission facilities are planned several years in advance. First, a cost
11 benefit analysis must be made to determine whether the proposed
12 transmission facility is really needed and necessary. After it is approved,
13 the right-of-way for a transmission facility must be purchased and
14 environmental concerns dealt with and then the utility can estimate the
15 cost associated with constructing this facility. This takes several years
16 and is not a cost which is unknown, or uncontrollable by a utility. If, in fact,
17 base rates are not sufficient to provide a return on these facilities, then the
18 utility has ample time to file a rate request which incorporates the
19 projected cost of this construction and any operating expenses. There is
20 no need for an automatic adjustment clause since the time frame in
21 determining the need and construction of any facilities allows the utility
22 ample time to request changes in base rates, if necessary.

23

1 The Company, at present, recovers almost 60% of its revenue
2 requirements through adjustment clauses. Adding another clause will shift
3 additional risk to ratepayers and add additional administrative costs to the
4 Commission staff and the OPC. The timeframe for reviewing and auditing
5 another clause would be relatively short and will place additional burdens
6 on the Commission.

7
8 I am recommending that the Commission not allow the Company's
9 requested Transmission Base Rate Adjustment ("TBRA"), because it is
10 bad public policy for the reasons stated above and there is no justification
11 for such a clause.

12 13 IV RATE BASE

14 Annualization of Plant-In-Service

15 Q. WOULD YOU PLEASE DESCRIBE WHAT THE COMPANY IS
16 PROPOSING REGARDING CERTAIN PLANT ADDITIONS WHICH
17 WOULD OCCUR IN THE MONTHS OF MAY, SEPTEMBER AND
18 DECEMBER OF 2009?

19 A. The Company is proposing to annualize the costs of two combustion
20 turbines ("CTs") that are currently scheduled to go into service in May of
21 2009, three combustion turbines, that are scheduled to go into service in
22 September 2009, and a rail facility that is scheduled to be finished in

1 December of 2009. That is, the Company is stating that these facilities
2 should be assumed to be in-service as of January 1, 2009, and not the
3 actual in-service date. This has the effect of increasing the Company's
4 rate request by approximately \$29 million.

5
6 Q. HAS THE COMPANY BEEN ASKED TO PROVIDE REFERENCES TO
7 COMMISSION ORDERS OR PRECEDENT WHICH ALLOWS FOR THE
8 ANNUALIZATION OF PLANT AS IF IT HAD BEEN IN SERVICE FOR
9 THE ENTIRE TEST YEAR?

10 A. Yes. However, the Company has refused to provide any references.

11 When asked, the Company has stated on two occasions that:

12 The company objected to this request on the grounds that it
13 cannot respond to the request without disclosing materials
14 prepared in anticipation of litigation and the mental
15 impressions and trial strategies of its attorneys, all of which
16 are privileged and beyond the scope of discovery.
17

18 Obviously, if the Company cannot provide documentation as to the basis
19 of these adjustments, they should not be approved by the Commission.

20
21 Q. WHAT IS YOUR UNDERSTANDING OF THE COMMISSION'S POLICY
22 REGARDING THE USE OF FUTURE TEST YEARS?

23 A. Up until the early part of 1981, this Commission used a historical test year
24 to set rates in rate cases. Annualization adjustments, such as what the
25 Company is proposing, were used to adjust an historical test period so
26 that the test year was representative of the costs that would be incurred

1 when the new rates were implemented. Additionally, corresponding
2 changes in the number of customers and revenues were also annualized
3 along with certain expenses. At one point before 1981, the Commission
4 sought to use an end of test year rate base with historical average
5 revenues and expenses. This methodology was rejected by the Florida
6 Supreme Court because of the mismatching of investment and earnings.
7 Subsequently, the Commission adopted a projected test year. This
8 methodology, which uses forecasted data for a subsequent 12-month
9 period, matched average rate base investment to average expenses and
10 revenues. Thus, the projected test year is supposed to result in a
11 matching of the Company's projected investment with its projected
12 earnings during the future test period on a month-to-month basis and
13 annual basis.

14
15 Generally, a Company brings on plant as new customer growth can
16 support the additional kilowatts generated by the new plant plus meeting
17 the required reserve margin. When the costs of new plant is included in
18 rates without accounting for the new customer growth that would
19 otherwise support the new plant, current customers end up paying more
20 than they should for the additional plant. Under Tampa Electric's
21 annualization proposal, the cost of the new plant would be put in rates
22 without accounting for the new customer growth that would otherwise
23 support those costs. As a result, the increased costs are spread over a

1 smaller customer base and the current customers pay more than their fair
2 share.

3
4 Thus, no annualizations of plant additions should be allowed when plant
5 additions are revenue-producing or growth-related assets designed to
6 increase the Company's ability to generate, transmit and deliver additional
7 kilowatt hours of generation. If the Commission allows an adjustment for
8 revenue-producing plant that increases capacity without an adjustment to
9 recognize the increased customers and/or demand, this will overstate the
10 revenue requirements used to create the rates charged to customers.

11 This type of allowance will create a mismatch between the projected test
12 year revenues and expenses and the projected investment related to
13 assets (such as the CT's) that generated the test period revenues. The
14 end result in setting rates should be an appropriate matching of the period
15 used for forecasting generally coinciding with the period in which rates
16 would become effective, there would be a matching of investment and
17 operating revenues and expenses.

18
19 Q. WHAT DOES THE COMPANY STATE REGARDING THE PURPOSES
20 OF ADDING THE COMBUSTION TURBINES AND THE RAIL FACILITY?

21 A. The Company states that the two combustion turbines to be added in May
22 and the three to be added in September are necessary to maintain the
23 Company's reserve at 20% as agreed to in a stipulation regarding Tampa

1 Electric, Florida Progress and FP&L. See Order No. PSC-99-2507-S-EU,
2 issued December 22, 1999, in Docket No. 981890-EU. In order for the
3 reserve margin to be in a state of decline, that is, the reserves decreasing
4 below a 20% reserve margin there has to be growth in sales. In other
5 words, if, in fact, these combustion turbines are necessary and used and
6 useful, the Company must be projecting additional sales so that the
7 utilization of the combustion turbines is a necessary addition to the
8 Company's generation portfolio. The sales growth would be generating
9 additional income as sales growth would require the CTs be in service to
10 meet demand. By annualizing these plant additions and pretending that
11 they went into service on January 1, 2009, any sales growth which the
12 Company experiences because of the availability of the CT's in 2010 will
13 not be reflected in the test year. Sales growth in the year 2010, when
14 these units will provide a full year of service and beyond, will not be
15 matched with the cost because that cost will have been already reflected
16 in rates established for the test year 2009 when these assets would only
17 be in service for part of the year. Revenues generated from these
18 facilities in 2010 and beyond will be a windfall to the Company.

19
20 In addition, there are cost savings which the Company did not reflect in
21 the annualization of these units. Company witness Mark J. Hornick states,
22 at page 12 of his testimony:

1 These machines offer a more economic option for meeting
2 the company's operating reserve requirements than by
3 spinning reserve, which requires keeping large units running.
4

5

6 Q. PLEASE ADDRESS THE RAIL PROJECT.

7 A. The rail project, which the Company states will be in-service December
8 2009, is designed to ". . . afford the company more options to procure coal
9 from additional sources resulting in customer benefits."³

10

11 Also in response to OPC's Interrogatory No. 107, the Company stated the
12 following:

13 During Tampa Electric's solicitation for coal and solid fuel
14 transportation in 2008 for services beginning in 2009, the
15 company issued a request for proposals and determined,
16 with the assistance of its third-party consultant, Energy
17 Ventures Analysis, Inc., that bimodal sources of solid fuel
18 transportation combined with certain coal mines yielded
19 cost-effective alternatives. Upon final review, the company
20 determined that the most cost effective delivered cost of coal
21 varies by mine, with some coals being more cost-effective
22 via a waterborne route while others are most cost-effective
23 delivered by rail. A bimodal solution broadens Tampa
24 Electric's fuel source options and provides a stimulus for
25 lower delivered cost of fuel. The results of the 2008
26 solicitation for coal and solid fuel transportation services
27 supports the conclusions reached in the Hill & Associates rail
28 feasibility study. (Emphasis added.)
29

30 The benefits to customers can only be a reduction in fuel cost. Reduced
31 fuel costs will stimulate additional sales and thus, provide a return on the
32 Company's investment. The facility used to provide the lower cost coal is

³ Testimony of Mark J. Hornick, pp. 15 and 16.

1 utilized to reduce fuel costs. By annualizing the rail facility for the entire
2 year 2009 (when they have only been in service for one month or less),
3 the Company earns a return as if the lower fuel costs would not exist in
4 future periods. Moreover, the future increases in sales in the year 2010
5 and beyond when this rail facility will be fully in-service and utilized for an
6 entire 12-month period will only fall to the benefit of the shareholders while
7 the ratepayers have the burden of providing the carrying cost as if this
8 facility had no productive benefit to the Company.

9

10 Q. DID YOU ASK FOR A COST BENEFIT ANALYSIS RELATED TO THE
11 CONSTRUCTION OF THIS FACILITY?

12 A. Yes. The OPC's POD No. 103 required that the Company "Provide the
13 documentation including contracts, cost benefit analysis, detailed project
14 costs and any other supporting project documents which support the cost
15 of \$46,468,000 on a total Company basis of the rail project shown on
16 Schedule B-2, page 2 of 4."

17

18 Q. DID YOU RECEIVE A COST BENEFIT ANALYSIS?

19 A. No, we did not. We received some documents which purport to be the
20 cost analysis for the construction of the project which the Company says
21 were preliminary and depended on inputs by the rail provider. In OPC
22 Interrogatory No.107, the Company stated there was a cost benefit
23 analysis, but it was not provided. I question the accuracy of what the

1 Company has provided as backup for this adjustment. Although the
2 Company's testimony and descriptions describe this as an offloading
3 facility, the cost documents indicate there is an Option Two which is a train
4 loading structure. It is not clear why the Company would need a train
5 loading facility in addition to an offloading facility. There would be
6 substantial reductions in the costs the Company is projecting if only the
7 offloading facility were included.

8
9 Q. ARE THERE OTHER CONCERNS WITH THE RAIL FACILITY COST?

10 A. Yes. The Company was requested in OPC Interrogatory No. 46 to explain
11 whether the rail carrier was going to absorb some of the cost associated
12 with this expansion and if not, explain why not. The response was that it
13 was premature to address this matter. This is not an appropriate
14 response. Since the Company is seeking recovery of the facilities in rates
15 any cost reimbursed is significant. The rail carrier stands to benefit
16 significantly from the movement of additional coal and it would be
17 appropriate for the rail carrier to absorb at least some of the costs. This
18 would not be uncommon.

19
20 Q. WHAT IS YOUR RECOMMENDATION REGARDING THE REQUESTED
21 ANNUALIZATION ADJUSTMENTS?

22 A. I am of the opinion that the requested annualizations are a violation of the
23 basic ratemaking principle of matching costs with benefits. The matching

1 principle would not allow the annualization of production facilities which
2 would have the impact of producing additional kilowatt hours, or facilities
3 which have the affect of reducing costs or making a facility more
4 productive, which the rail facility would have. I am recommending that the
5 annualization of the five combustion turbines and the rail facility not be
6 approved by the Commission. These costs should be reflected in rate
7 base and the operating income statement as of the projected date that the
8 assets are placed into service. Schedule B-2 shows the adjustments I am
9 recommending to Plant-In-Service and O&M expense to remove these
10 annualizations.

11
12 Plant in Service Projections

13 Q. WHAT ADJUSTMENTS ARE YOU PROPOSING TO THE COMPANY'S
14 PLANT IN SERVICE?

15 A. The rate base requested by the Company utilizes a projected test year
16 ending December 31, 2009. That means the Company must project by
17 month each component of the rate base, i.e., plant in service,
18 accumulated depreciation, plant held for future use and working capital. It
19 is unlikely that the Company's projected balances almost two years into
20 the future are without inaccuracies. The best method of testing the
21 Company's projection methodologies is to compare actual results to
22 projections and draw a conclusion regarding whether the projected

1 amounts are overstated or understated based on comparisons of actual to
2 projected amounts.

3

4 Q. HAVE YOU PERFORMED SUCH AN ANALYSIS?

5 A. Yes. I have been able to compare the Company's projections of plant in
6 service balances for the months January through September of 2008 of
7 the 13-month average for the year ending December 31, 2008, which is
8 the year prior to the projected test year. The Company was only able to
9 provide actual data through September 2008.

10

11 Q. HAVE YOU PREPARED A SCHEDULE THAT SHOWS THE RESULTS
12 OF YOUR COMPARISON?

13 A. Yes, I have. On my Schedule B-3, attached to my prefiled testimony as
14 Exhibit HL-1, I have compared the Tampa Electric projected plant in
15 service balance to the actual plant in service balance as found in Tampa
16 Electric's General Ledger, Trial Balance and Balance Sheet reports
17 provided in response to OPC POD Nos. 5, 47 and 116 for the year 2008.

18

19 Q. WOULD YOU DISCUSS THOSE COMPARISONS AND YOUR
20 PROPOSED ADJUSTMENT TO PLANT IN SERVICE?

21 A. On Exhibit HL-1, Schedule B-3, I have compared the actual balances of
22 electric plant in service to the Company's projections on MFR Schedule B-
23 3, page 4 of 9, for the projected prior year ended December 31, 2008.

1 This comparison of actual balances, as reported in the Company's
2 accounting records, to the Company's projected balances will indicate
3 whether there is a trend in the Company's projection methodology. In
4 other words, if all of the projections exceed the actuals in months in which
5 the Company only had to project expenditures and retirements for nine
6 months into the future, then it is likely that the same trend of over
7 projecting plant balances would continue into the future and would affect
8 the test year 13-month average ending December 31, 2009.

9
10 Looking at the results shown on my Schedule B-3, each month (January
11 2008 through September 2008) shows that the Company's projected plant
12 in service balance exceeded the actual in every month.

13
14 Q. WHAT RELEVANCE DOES THE YEAR 2008 HAVE TO THE
15 PROJECTED TEST YEAR 2009?

16 A. The Company likely utilized the same projection methodology for both the
17 prior year ended December 31, 2008, and the test year ended December
18 31, 2009. The 13-month average for the plant in service balance for the
19 test year ended December 31, 2009, starts out with the same balance for
20 December resulting from the projections for the prior year ended
21 December 31, 2008. Any inaccuracies in 2008 are carried forward into the
22 2009 test year because the December 31, 2008, balance becomes the

1 first month in the 13-month future test year average, and the same
2 projection methodology is used.

3

4 Q. WHAT ADJUSTMENT ARE YOU PROPOSING?

5 A. I have calculated the difference between the actual plant in service
6 balance and the projected plant in service balance for each of the actual
7 months available. I have also calculated the percentage difference by
8 which the projected balance exceeded the actual balance. I then took the
9 average percentage overstatement of the balance of plant in service and
10 applied it to the 13-month average plant in service balance projected by
11 the Company on MFR Schedule B-3 for the 13-month average ending
12 December 31, 2009. This results in a reduction to plant in service for the
13 projected test year 2009 of \$53,958,000 on a total Company basis. The
14 jurisdictional adjustment is \$51,969,000.

15

16 Q. DID YOU DO A SIMILAR STUDY RELATED TO THE ACCUMULATED
17 PROVISION FOR DEPRECIATION AND AMORTIZATION?

18 A. Yes, I did.

19

20 Q. WHAT WERE THE RESULTS OF THAT STUDY?

21 A. I found the average balance for the months January through July of 2008⁴
22 to be overstated as well. Accordingly, I have made a similar adjustment to

⁴ The information provided by the Company for August 2008 and September 2008 did not show the actual accumulated provisions for depreciation.

1 Accumulated Provision for Depreciation and Amortization. This results in
2 a reduction to Accumulated Provision for Depreciation and Amortization in
3 the amount of \$8,500,000 on a total Company basis and \$8,187,000 on a
4 jurisdictional Company basis. Additionally, Depreciation expense should
5 also be adjusted since any overstatement of the Accumulated Provision
6 resulted from the overstatement of Depreciation expense.

7
8 CIS Upgrades

9 Q. TAMPA ELECTRIC HAS ADDED TO JURISDICTIONAL RATE BASE AN
10 AMOUNT OF \$2,445,000 WHICH IS LABELED AS CIS UPGRADE. IN
11 ADDITION, OPERATING EXPENSES HAVE BEEN INCREASED BY
12 \$558,000 RELATED TO THE AMORTIZATION OF THIS UPGRADE. DO
13 YOU AGREE THAT SUCH AN ADJUSTMENT SHOULD BE MADE?

14 A. No. The Company's justification for this increase in rate base and
15 depreciation expense is that the Company will be requesting changes in
16 customer rates and that the implementation of these changes will
17 necessitate the Company making changes to the customer rate schedules
18 included within the customer information system ("CIS"). Included as
19 Exhibit HL-2, Schedule 1, is the Company's response to OPC's POD No.
20 98. This document is a Tampa Electric internal document which
21 summarizes program costs. This document only discusses in generalities
22 the changes proposed to customer information system. None of the items
23 are unusual changes to a customer information system and would be

1 done routinely when rates are changed. Additionally, the changes which
2 the Company anticipates may never be approved by the Commission.
3 There is no cost benefit analysis provided nor is there any detailed
4 calculation of how the proposed dollars would be used. It is my opinion
5 that these costs, if they are incurred, would be incurred in the normal
6 course of business in any year base rates or fuel rate changes are made
7 and does not justify separate adjustment. I am therefore recommending
8 that the Company's request for an increase in rate base of \$2,445,000 for
9 the supposedly extraordinary CIS upgrade not be approved and that
10 depreciation expenses be decreased by \$558,000.

11
12 Amortize Dredging O&M

13 Q. TAMPA ELECTRIC IS REQUESTING A RATE BASE ADJUSTMENT TO
14 INCLUDE THE UNAMORTIZED PORTION OF \$6.9 MILLION DREDGING
15 COSTS AT ITS BIG BEND FACILITY. WOULD YOU PLEASE DISCUSS
16 THAT ADJUSTMENT?

17 A. Tampa Electric claims that it incurs costs to dredge out the channel at the
18 Big Bend generating station. The Company claims that these costs are
19 incurred every five years and that dredging costs will be incurred in the
20 year 2009. Tampa Electric witness Hornick states that Tampa Electric has
21 included "roughly" \$6.9 million (total Company) in its 2009 production
22 O&M budget for channel dredging expense. Tampa Electric has removed
23 from operating expenses \$5,320,000 (jurisdictional) of the \$6.9 million

1 (total Company), which leaves an expense of \$1,330,000 (jurisdictional).

2 Tampa Electric has added to the rate base an amount of \$2,657,000

3 which it states represents the 13-month average of the unamortized

4 jurisdictional balance.

5

6 Q. DO YOU AGREE WITH WHAT THE COMPANY IS PROPOSING?

7 A. No, I do not. We asked the Company to provide the costs associated with

8 the last two dredgings which took place at the Big Bend generating

9 station. In response to OPC POD No. 100, we were able to determine

10 that in the year 2002 the Company incurred total dredging costs of

11 \$2,346,105.81, with \$1,288,169.73 allocated to Tampa Electric and the

12 remainder of \$1,057,936.08 allocated to an organization designated as

13 IMC. Prior to the 2002 dredging, the Company incurred dredging costs

14 which started in 1997 and finished in 1998. The total cost of the 1997

15 dredging was \$1,329,989.47 with \$228,400 allocated to IMC. This left

16 dredging costs expensed by Tampa Electric of \$1,101,589.47. Based on

17 the history of allocating dredging costs between Tampa Electric and IMC,

18 at most only half the requested dredging cost should have been included

19 in the request or \$665,000 (jurisdictional expense $\$1,330,000 / 2 =$

20 \$665,000). Additionally, this should be amortized over five years and only

21 \$133,000 included in the test year.

22

23 Q. WHAT DOES THE HISTORICAL INFORMATION INDICATE?

1 A. The historical information indicates that the Company has never incurred
2 dredging costs which approach \$6.9 million. Additionally, the historical
3 information indicates that if dredging costs were incurred in the year
4 1997/1998 and 2002, the next five year period should have been in the
5 year 2007 and not 2009. Thus, dredging costs would not occur in the year
6 2009.

7

8 Q. DID YOU ASK TAMPA ELECTRIC TO SUPPORT OR PROVIDE
9 DOCUMENTATION OF THE \$6,900,000 OF DREDGING COSTS?

10 A. Yes, we did. We asked Tampa Electric to provide in the same OPC POD
11 No. 100 "Documentation regarding the bid the Company received for
12 dredging costs for 2009."

13

14 Q. DID THE COMPANY PROVIDE ANY DOCUMENTATION?

15 A. No, it did not. The Company has stated verbally that the information
16 contained in OPC POD No. 100 contained all the information they had
17 regarding dredging costs. The Company, in OPC POD No. 100, did not
18 provide any information to support that 2009 would be the year in which
19 the dredging cost would occur, or the \$6.9 million amount they state will
20 be the cost of the dredging.

21

22 Q. WHAT ADJUSTMENT HAVE YOU MADE REGARDING DREDGING
23 COSTS?

1 A. I have removed from the rate base the Company's deferred dredging cost
2 balance of \$2,657,000 (jurisdictional) and I have also removed from
3 operating expenses the remaining amount which the Company did not
4 remove of \$1,330,000. The Company has failed to provide any
5 documentation to meet its burden of proof that 1) dredging costs will reach
6 \$6.9 million and 2) that the dredging cost will occur in the year 2009.

7

8 Plant Held for Future Use ("PHFU")

9 Q. DOES IT APPEAR THAT THE PROJECTIONS FOR PLANT HELD FOR
10 FUTURE USE ARE CORRECT?

11 A. No. In response to OPC Interrogatory No. 89, which requested the basis
12 on which the Company projected Plant Held for Future Use, the Company
13 responded as follows:

14 The projected balance in the property held for future use
15 account was based on the budgeted land acquisition
16 requirements for each respective year. The company
17 forecasts what the future growth rate of the population may
18 be and ensures that it is more than able to supply the needs
19 of its current and future customers.

20
21

22 Q. DOES IT APPEAR THAT THE COMPANY ACTUALLY FOLLOWED
23 THEIR RESPONSE AND ATTEMPTED TO BUDGET THE ACTUAL
24 ADDITIONS AND REDUCTIONS TO PLANT HELD FOR FUTURE USE
25 TEST YEAR AND THE PROJECTED 2008 AND 2009 YEARS?

1 A. No, it did not. For the year 2008, the Company utilized the ending balance
2 at December 31, 2007 for each month of the 2008 year with exception of
3 December 2008 when the balance was increased by \$2,713,000. In the
4 test year 2009, the Company used the December 2008 balance for
5 property held for future use for each month of the test year except
6 December 2009 where the balance was increased by \$1,326,000.
7 Therefore, it is obvious that the Company did not project monthly additions
8 and uses during either the projected prior year ending December 31, 2008
9 or the projected test year ended December 31, 2009. If it had projected
10 monthly, the PHFU balance would not have remained the same for each
11 month except for December of each of the years.

12

13 Q. WHY IS IT NOT POSSIBLE FOR THE PROPERTY HELD FOR FUTURE
14 USE TO HAVE THE SAME BALANCE IN EACH MONTH OF 2008
15 EXCEPT FOR DECEMBER AND HAVE THE SAME BALANCE IN 2009
16 FOR EACH MONTH EXCEPT DECEMBER?

17 A. In OPC Interrogatory No. 87, we asked the Company to provide for the
18 historical year ended December 31, 2007 a list of each property held for
19 future use. We asked if the Company to state the date it was acquired, its
20 original cost and the projected use date. In that response, the following
21 projects were projected to go into service in 2008:

		2007 Number	Originally	Projected	
Acct.	Name	of Months	Acquired Date	Use Date	Cost (\$)
105.05	Dale Mabry Sub	12	3/30/1973	2008	368,966.60
105.09	Silver Dollar Sub	12	10/30/2001	In Service 2008	546,940.43
105.27	Palm River Operating	12	6/30/1987	In Service 2008	<u>618,703.87</u>
	Center - Add'l Lan				
	Total				<u>1,534,610.90</u>

As can be seen in the above schedule, projects of \$1,534,610.90 were projected to go into service in 2008. Additionally, that same interrogatory shows the projects that were projected to go into service in the year 2009. In fact, the major component of property held for future use was projected to go into service in 2009. Inclusion of this major property component in the 2009 plant in service would have reduced the plant held for future use substantially. The following data shows the projects listed as of December 31, 2007, which was scheduled to go into service in 2009:

		2007 Number	Originally	Projected	
Acct.	Name	of Months	Acquired Date	Use Date	Cost (\$)
105.19	Handcart Sub	12	1/18/2006	2009	634,360.91
105.03	River to S. Hillsborough	12	6/30/1973	2009	23,752,289.05
	Trans RW				
105.11	New Tampa	12	12/4/2004	2009	<u>778,124.83</u>
	Transmission Easement				
	Total				<u>25,164,774.79</u>

1 In OPC Interrogatory No.118, we asked why the amounts were still in
2 Plant Held for Future Use when they show in service dates from 2008 and
3 2009. The Company responded by changing the in service dates on
4 major PHFU amounts and removing others from the balance.

5
6 The Company stated in response to OPC Interrogatory No. 118:

7 These adjustments do not change the total system rate base since
8 the reduction in Plant Held For Future Use would be offset by a
9 corresponding increase in Electric Plant In Service.
10
11

12 The Company has also stated that its projection of plant in service is
13 accurate and reflects the cost of plant to be placed in service. Both
14 statements cannot be true. Since the Company claims to have adjusted
15 plant in service to reflect all plant placed in service in 2009, I have
16 adjusted (decreased) the Company PHFU by \$2,328,354 on a
17 jurisdictional basis to reflect the change which the Company made.
18

19 Construction Work In Progress ("CWIP")

20 Q. ARE YOU PROPOSING ANY ADJUSTMENTS TO THE COMPANY'S
21 PROJECTED CONSTRUCTION WORK IN PROGRESS?

22 A. Yes. Similar to my analysis of Plant In Service and Accumulated
23 Provision for Depreciation, I have compared the actual Construction Work
24 in Progress ("CWIP") balance for the first nine months of 2008 with the
25 Company's projected balance. On average the Company's projected

1 balance was understated by 1.90%. I have adjusted the Company's
2 jurisdictional CWIP balance by 1.90% for 2009. I also have adjusted the
3 Company's calculation of the Commission adjustment to remove from the
4 CWIP balance which earns a rate of return through the Allowance for
5 Funds Used During Construction ("AFUDC"). I have deducted the
6 Company's adjustment to remove the current balance of CWIP reflected in
7 rates of \$36,171,000. This results in a higher construction work in
8 progress balance than the Company has used in its filing. I am
9 recommending a balance of \$103,679,000 which is greater than the
10 Company's balance by \$2,608,000 on a jurisdictional basis.

11
12 Working Capital Adjustment

13 Q. ARE YOU PROPOSING ANY ADJUSTMENTS TO THE COMPANY'S
14 WORKING CAPITAL REQUEST?

15 A. Yes. The Company has included Account 143 - Other Accounts
16 Receivable in its working capital requirement. The Company has made an
17 adjustment to remove job orders receivable in the amount of \$1,717,000
18 that it attributes to adjustments the Commission has made in prior cases.
19 The Uniform System of Accounts states that this account shall include
20 amounts due the utility upon opening accounts other than amounts due
21 from associated companies and from current customers for utility service.
22 The utility should be required to show that all of the accounts receivable in
23 Account 143 - Other Accounts Receivable are related to utility services

1 and that the cost or revenue associated with these accounts receivable
2 have been included in jurisdictional operating income. The Company has
3 yet to show that these accounts are all related to utility service, thus the
4 exclusion I have made of the entire account is justified. I have removed
5 the remainder of Other Accounts Receivable in the amount of \$10,959,000
6 on a jurisdictional basis

7
8 I have also excluded the entire balance in Account 146 - Accounts
9 Receivable from Associated Companies. Again, the utility should be
10 required to show that this entire balance of \$6,309,000 is a necessary
11 working capital requirement for ratepayers to bear and is directly related to
12 the provision of utility services. The Company should be required to
13 document that such receivables are on the Company's books as a result
14 of providing service to jurisdictional ratepayers. They have not done so.

15
16 Q. IS THERE ANY OTHER ADJUSTMENT YOU ARE PROPOSING?

17 A. Yes. There has been a recent reduction in the price of fuel. I have
18 reduced the Company's fuel stock by 10% to reflect current reductions
19 which might have occurred in coal, oil and gas prices. The Company
20 should be required to re-price its fuel stock inventory to accurately reflect
21 the current price of fuel. The adjustment I have made does not accurately
22 reflect an estimate of the decline in fuel prices because I do not have all
23 necessary information available to me. Therefore, it is necessary for the

1 Company to make an accurate reassessment of fuel inventory costs
2 based on current prices.

3

4 Q. ARE THERE ANY OTHER ADJUSTMENTS TO WORKING CAPITAL
5 THAT YOU HAVE MADE?

6 A. Yes, there are other adjustments to working capital that have been
7 discussed in other parts of my testimony.

8

9 V OPERATING EXPENSES

10 Storm Damage Accrual

11 Q. TAMPA ELECTRIC IS REQUESTING THAT THE STORM DAMAGE
12 ACCRUAL BE INCREASED FROM THE CURRENT LEVEL OF \$4
13 MILLION ANNUALLY TO \$20 MILLION ANNUALLY. DO YOU AGREE
14 WITH THE COMPANY'S PROPOSAL?

15 A. No, I do not. I believe that the current level of \$4 million of storm damage
16 accrual is adequate given the Company's past history and the current
17 guarantee by the Commission that costs incurred over the storm damage
18 accrual would be reimbursed to the Company through future surcharges
19 on ratepayers.

20

21 The Commission has allowed companies to recover excesses incurred in
22 storm damage costs over storm damage reserves on a regular basis.

23 Most of the Florida electric companies incurred substantial storm damage

1 costs in 2004 and 2005, and several incurred damage that exceeded the
2 amounts included in the storm damage reserve in 2004 and/or 2005. The
3 Commission expeditiously authorized several companies to collect
4 surcharges to recover any costs in excess of storm damage accruals and
5 held hearings to determine the appropriate mechanism for cost recovery
6 and level of cost recovery. Based on the storm recovery that the
7 Commission has approved, there is no likelihood that Tampa Electric, or
8 for that matter any other utility in the State of Florida, would not fully
9 recover any prudently incurred storm damage costs which have not been
10 recovered from the storm damage reserve.

11
12 Q. HAVE YOU EXAMINED THE HISTORICAL ADEQUACY OF THE STORM
13 DAMAGE RESERVE FOR TAMPA ELECTRIC?

14 A. Yes. On Schedule C-2, attached to my testimony, I have shown the
15 historical accumulation of the storm reserve and charges against that
16 reserve through December 31, 2008, assuming that there will be no
17 hurricane damage or storm damage in the final month of the year 2008.
18 The storm reserve at the end of 2008 should be \$24,310,365 as shown on
19 my Schedule C-2. The only year that the Company incurred storm
20 damage costs since the inception of the accrual for storm damage was
21 2004. My Schedule C-2, shows the total of these costs as provided by the
22 Company in response to OPC Interrogatory No. 24. I have shown the
23 total costs in the year 2004, although the Company charged the reserve

1 from some of these costs in 2005, and subsequently made corrections to
2 the 2004 storm cost in the years 2006 and 2007. The \$74,567,219 in
3 storm costs charged to the reserve including \$38,877,284 in costs which
4 the Company stipulated, should have been capitalized. See Order No.
5 PSC-05-0675-PAA-EI, issued June 20, 2005, in Docket No. 050225-EI.

6 As shown on Schedule C-2, I have increased the reserve in 2004 by the
7 \$38,877,284 that the Company eventually capitalized, or charged the

8 reserve for depreciation in the year 2005. The net amount of storm costs *capitalized*

9 *and* charged to the reserve for depreciation was \$35,689,935. When this

10 amount is netted against the storm reserve in 2004 there was a balance
11 left in the storm reserve of \$8,310,065. Obviously, the accrual approved
12 by the Commission and the accumulated reserve which were accumulated
13 was more than sufficient to handle the costs the Company incurred when
14 hurricanes hit the Company's system in 2004.

15
16 Q. WOULD THE COMPANY HAVE BEEN ENTITLED TO RECOVER THE
17 FULL \$74.5 MILLION BY CHARGING IT TO THE RESERVE FOR
18 STORM DAMAGE?

19 A. In my opinion, it would not. Every storm recovery case that I have been
20 involved with, which includes cases in the states of Florida, Louisiana,
21 Mississippi and Hawaii requires that the Company only recover
22 incremental costs of operating and maintenance expense and construction
23 costs for replacement assets that are capitalized. The capitalized costs

1 are not considered storm damage costs recoverable through the reserve
2 for storm damage loss, but are considered assets which the Company will
3 receive a rate of return on and recovery of through depreciation. Even
4 though the Company implies that it was only as a result of the stipulation
5 that there were capitalized costs, I believe that the Commission would not
6 have allowed the full charging of these costs against the reserve for storm
7 losses. In fact, the Commission has codified the incremental cost
8 approach by rule.

9

10 Q. HAS THE COMMISSION APPROVED THE FULL COST RECOVERY
11 METHOD FOR UTILITIES THAT INCURRED STORM DAMAGE SINCE
12 2004?

13 A. No, it has not. Either as a result of litigated (Progress Energy Florida and
14 Florida Power and Light) or stipulated cases (Gulf Power, Tampa Electric
15 and several others), the Commission has allowed the incremental cost
16 recovery method for storm costs. To codify this policy, the Commission
17 modified Rule 25-6.0143, Florida Administrative Code, to address
18 specifically what types of costs can be charged to the storm reserve and
19 how those costs should be accounted.

20

21 Q. IN YOUR OPINION IS THE LEVEL OF TAMPA ELECTRIC'S STORM
22 RESERVE SUFFICIENT?

1 A. Yes. The relevant point that I am trying to make is that the level of accrual
2 that the Commission authorized and the reserve which was accumulated
3 were more than adequate to cover storm damage costs which the
4 Company incurred in the year 2004.

5
6 Q. ONE OF THE ARGUMENTS WHICH THE COMPANY MAKES FOR
7 INCREASING THE RESERVE IS THAT THE VALUE OF THE
8 COMPANY'S TRANSMISSION AND DISTRIBUTION SYSTEM HAS
9 INCREASED SINCE 1994 WHEN THE INITIAL ACCRUAL WAS
10 ESTABLISHED AND THEREFORE, THE HIGHER VALUE OF THE
11 ASSETS JUSTIFIES AN INCREASE IN THE ACCRUAL. DO YOU
12 AGREE WITH THAT?

13 A. No. While I do agree that the value of the Company's transmission and
14 distribution system has increased since 1994, it is clear that the reserve
15 was adequate in the year 2004 to cover the higher value of assets
16 damaged by the storms which struck in that year. Historically, Tampa
17 Electric's reserve has functioned exactly as the Commission thought it
18 would and how it was designed to operate. At the end of 2008, the
19 reserve will have reached the level of approximately \$24 million. Further,
20 the Company's estimate of possible future storm damage was based on a
21 full cost recovery basis, not the incremental recovery basis required under
22 Rule 25-6.0143, Florida Administrative Code. As shown above, in the
23 Company's actual 2004 storm costs, more than 50 percent of the costs did

1 not flow through the reserve and instead were accounted for in base rate
2 recovery.

3

4 Q. ANOTHER ARGUMENT THAT THE COMPANY HAS ADVANCED IS
5 THAT THERE COULD BE STORM DAMAGE OF A CATASTROPHIC
6 NATURE, WHICH COULD OVERWHELM WHATEVER RESERVE THE
7 COMPANY HAS ACCUMULATED. DO YOU AGREE THAT COULD BE
8 A LIKELIHOOD?

9 A. Yes, of course. No one knows when or if a hurricane will strike any
10 particular area in the State of Florida. However, that could occur even if
11 the Commission were to increase the accrual by the \$16 million per year
12 which the company is requesting. That would not avoid having the
13 ratepayers pay for the storm damage in excess of the reserve. It only
14 means that instead of paying up front by giving up the use of their funds
15 currently, the ratepayer will pay when the damage actually exceeds the
16 storm reserve. From a financial point of view, this is more beneficial to the
17 ratepayer then having the Company collect huge amounts of reserves
18 prior to the occurrence of a storm.

19

20 Q. WOULDN'T IT BE BETTER FOR THE COMPANY TO HAVE THESE
21 FUNDS ON HAND WHEN THE STORM OCCURS RATHER THEN TO
22 COLLECT THEM LATER FROM THE RATEPAYERS THROUGH A
23 SURCHARGE?

1 A. The Company will not have these funds on hand. Tampa Electric does
2 not have a funded storm reserve. If the Commission were to increase the
3 storm reserve accrual from \$4 million to \$20 million, the total funds that
4 the Company collects, that is, the \$20 million will not be set aside and be
5 available in the form of cash or cash equivalents to fund storm damage
6 restoration. Since Tampa Electric does not have a funded reserve, the
7 funds that the Company will (and has collected) will be treated as normal
8 cash flow to the Company, funds that they will use in their operations, to
9 fund plant additions, operating expense, or to pay dividends or interest on
10 bonds. If the Commission were to authorize a higher accrual only means
11 that ratepayers will pay a smaller surcharge when and if a storm does
12 overwhelm the reserve for storm damage.

13
14 It should be kept in mind that this is not a self-insurance reserve that the
15 Company is funding through stockholder funds. This is a ratepayer
16 provided insurance plan which is funded through charges included in rates
17 charged to retail customers. Since the ratepayer is in fact the insurer and
18 not the Company, the ratepayer should have the final say on how and
19 when storm costs should be funded. Ratepayers always have a higher
20 cost of capital than utilities. It is in the best interest of ratepayers to fund
21 the reserve at the level which has historically proven to be adequate and
22 to fund any excess over the storm reserve, should one occur, through
23 surcharges when and if such an event occurs.

1

2 Q. DOES TAMPA ELECTRIC HAVE ADDITIONAL PROTECTION FROM
3 EXCESS STORM DAMAGE COST?

4 A. Yes. Florida law has authorized Securitization financing for storm
5 recovery which is another vehicle which the Commission has at its
6 disposal to deal with excessive storm damage cost. Section 366.8260,
7 Florida Statutes, would allow for the securitization of storm damage in the
8 form of bonds. This guarantees that all prudent storm damage losses
9 would be recovered on a current basis by any utility which had storm
10 damage losses.

11

12 Q. WHAT IS YOUR RECOMMENDATION?

13 A. My recommendation is that the current level of accrual of \$4 million
14 annually has proven adequate when a storm has actually hit the Tampa
15 Electric system. The Commission should continue with that level of storm
16 accrual and when, and if, a storm occurs which is in excess of the reserve
17 the Commission should then deal with that through a surcharge on rates if
18 necessary or securitization. I have adjusted operating expense to reduce
19 them by the \$16 million increase requested by the Company. I have also
20 increased the working capital by \$8 million to remove the effect of
21 increasing the storm reserve on Tampa Electric's rate base.

22

1 Uncollectible Expense

2 Q. WHAT AMOUNT OF UNCOLLECTIBLE EXPENSE HAS THE COMPANY
3 INCLUDED IN THE TEST YEAR?

4 A. The Company has projected uncollectible expense of \$7,971,000 in the
5 test year compared to \$5,527,000 actually expensed in 2007. This is an
6 increase of 44% over 2007 levels.

7
8 Q. HAS THE COMPANY OFFERED AN EXPLANATION FOR THE
9 SIGNIFICANT INCREASE TO UNCOLLECTIBLE EXPENSE?

10 A. Yes. The Company indicated in response to OPC Interrogatory No. 43
11 that:

12 Due to deterioration in the economic conditions in the Tampa
13 Bay area a significant increase in the net writeoffs is
14 projected for 2009. The 2008 budget was developed during
15 Q3 2007 which was before the significant increase to net
16 write-offs was being experienced.

17
18 However, it is not clear from the Company's filing how the Company
19 derived the bad debt factor of 3.49% in its determination of uncollectible
20 expense for the test year ended December 31, 2009.

21
22 Q. PLEASE DESCRIBE THE COMPANY'S PRESENTATION OF
23 HISTORICAL AND PROJECTED UNCOLLECTIBLE EXPENSE SHOWN
24 ON MFR SCHEDULE C-11.

25 A. MFP Schedule C-11 shows write offs (retail), gross revenues from sales of
26 electricity (retail) and the resulting bad debt factor for the years 2004

1 through 2009. The bad debt factor is derived by dividing the write-offs by
2 the gross revenues from sales of electricity. For the years 2004 through
3 2007, the gross revenues from sales of electricity is comprised of
4 accounts 440 - 446 Retail Billed Sales and account 451 Miscellaneous
5 Service Revenue.

6
7 Q. HOW DID THE COMPANY PROJECT THE BAD DEBT WRITE-OFFS
8 FOR THE YEARS 2008 AND 2009?

9 A. As I have previously stated, the Company used Accounts 440 through
10 446-Retail Billed Sales and Account 451 - Miscellaneous Service Revenue
11 in the years 2004 through 2007. However, for the years 2008 and 2009,
12 the Company also included as sales subject to bad debt write-off Account
13 447 - Sales for Resale, Account 456 - Unbilled Revenue and Accounts
14 407.3 and 407.4 - Deferred Clause Revenues. Sales for Resale Account
15 447 would include those sales to municipalities and other wholesale
16 customers who resale the electricity. It is unlikely that any of these
17 customers would actually result in a bad debt write-off. Unbilled and
18 deferred clause revenues have been included in retail billed sales for
19 accruals and deferrals made in prior periods. They are not actually billed
20 in the current period and should not be included for bad debt write-off
21 calculations.

22
23

1 Q. WHAT LEVEL OF UNCOLLECTIBLE EXPENSE DO YOU PROPOSE?

2 A. Taking a five year average (2003 through 2007) of the Company's Bad
3 Debt Factor and applying that to the company's projected gross revenues
4 from sales of electricity (Accounts 440-446 and 451) would yield a more
5 consistent and representative level of uncollectible expense for the test
6 year.

7

8 Using a historical period will give an average of the Company's bad debt
9 write-offs over a longer period of time and reflect a reasonable estimate of
10 what the Company's write-offs will be in future periods.

11

12 Q. WHAT ABOUT THE COMPANY'S CONTENTION THAT

13 DETERIORATING ECONOMIC CONDITIONS IN THE TAMPA BAY

14 AREA MAY INCREASE BAD DEBT IN 2009?

15 A. The Commission should not build into rates charged to ratepayers *due to*
16 economic downturns. This would protect Tampa Electric from the effects
17 of the economy and pass onto ratepayers in economic bad times
18 increased bad debt expense during economic bad times. Historical data
19 will reflect ongoing bad debt expense not influenced by unusual temporary
20 effects of economic downturns.

21

1 Q. WHAT ADJUSTMENT SHOULD BE MADE TO THE COMPANY'S
2 PROPOSED UNCOLLECTIBLE EXPENSE TO REFLECT A MORE
3 REPRESENTATIVE LEVEL OF THIS EXPENSE?

4 A. As shown on Schedule C-3, I have reduced uncollectible expense by
5 \$2,409,000 and the jurisdictional adjustment is \$2,342,000. I have also
6 adjusted the revenue conversion factor to reflect the Bad Debt Factor I am
7 proposing.

8

9 Capital Structure

10 Q. WOULD YOU PLEASE EXPLAIN THE ADJUSTMENTS YOU HAVE
11 MADE TO THE CAPITAL STRUCTURE TO REFLECT YOUR RATE
12 BASE ADJUSTMENTS?

13 A. Dr. Woolridge has recommended a capital structure which utilizes the
14 average of the 2007 and 2008 capital structure components. By utilizing
15 the 2007 and 2008 capital structure components, Dr. Woolridge has, in
16 effect, removed the specific adjustments which the Company has made to
17 the equity component and short-term debt component. This is because
18 the actual capital structure for those periods does not include the rate
19 case adjustment to the capital structure which the Company is proposing.
20 On my Schedule D, in the second column, I have adjusted the Company's
21 rate base to comport with Dr. Woolridge's capital structure. The adjusted
22 amount shown in Column 3 is the Company's beginning rate base
23 allocated based on Dr. Woolridge's capital structure. In the next column,

1 Column 4, I have allocated the rate base adjustments we are
2 recommending based on Dr. Woolridge's capital structure. The next
3 column, Column 5, is the OPC's recommended capital structure based on
4 Dr. Woolridge's recommended capital structure. The final three columns
5 calculate OPC weighted cost of capital based on Dr. Woolridge's
6 recommendation.

7

8 Q DOES THIS COMPLETE YOUR TESTIMONY?

9 A. Yes, it does at this time. However, there are still outstanding discovery
10 requests which may affect my adjustments or require additional
11 adjustments.

12

1 BY MS. CHRISTENSEN:

2 Q. Mr. Larkin, attached to your prefiled
3 testimony, did you have an Appendix 1 along with Exhibit
4 HL-1?

5 A. Yes.

6 Q. And do you have any changes to your appendix
7 or HL-1 today?

8 A. No, I do not.

9 Q. Mr. Larkin, can you please summarize your
10 testimony?

11 A. There is an Exhibit HL-2 too.

12 Q. Oh, I'm sorry. HL-2 as well.

13 A. Yes. The purpose of my testimony is to
14 summarize the recommendations of both Dr. Woolridge and
15 Mr. Schultz and to make additional recommendations
16 related to the company's requested rate increase. It is
17 our opinion that the company should not receive a rate
18 increase greater than \$38,689,000.

19 My testimony also deals with the company's
20 request for the transmission rate base adjustment, which
21 I state is not justified. There is not justification
22 for implementing an automatic adjustment cause for
23 transmission investment. This is not justified, and the
24 Commission has not -- in fact, no commission that I know
25 of in the country has ever authorized an automatic

1 adjustment clause for transmission investment.

2 A major adjustment that I am making is to
3 remove from the company's filing the annualization of
4 plant in service for three -- two CTs which will go into
5 service in May, three in September, and the
6 annualization of the company's coal unloading facility
7 at the Big Bend facilities.

8 Ratemaking principles state -- or should
9 apply, which means that an investment should be matched
10 with the revenue that is generated in that period. When
11 one annualizes an investment, you're in effect ignoring
12 the revenue which would be generated in subsequent
13 periods when these units or these facilities are in
14 service.

15 In addition, the company's recommendation
16 regarding the coal facility, the accounting for that
17 coal facility is inappropriate. It's not a beneficial
18 adjustment to the ratepayer. The company will receive
19 contributions from CSX to offset most, if not all, of
20 the investment. That should be reflected as a reduction
21 of that investment and not any of it flowed through the
22 fuel adjustment clause.

23 Now, I want to explain why that's not
24 reasonable. First, the accounting doesn't follow the
25 Uniform System of Accounts. Secondly, if you do that,

1 what you'll be doing is, you'll be asking the ratepayer
2 to pay a rate of return at the overall rate of return on
3 this investment for 20 years and pay depreciation on
4 that investment, while at the same time, if they do
5 receive anything back through the fuel adjustment
6 clause, the only return they will get will be at the
7 commercial paper rate. There's definitely a
8 disadvantage to the ratepayer of paying the overall rate
9 of return and receiving back a commercial paper rate,
10 especially when it's strung out over 20 years.

11 I've made adjustments to the company's plant
12 in service projections. I think that they're
13 overstated.

14 I've removed the company's CIS upgrade
15 because, number one, these flow through the company's
16 normal accounting procedures, and to put this in here as
17 a separate adjustment is really a double count.

18 I have removed the company's amortization of
19 dredging costs because there's no substantiation both to
20 the dollar amount and that this will take place in the
21 year 2009.

22 I've adjusted the plant held for future use to
23 remove overstatements which the company has in that
24 account.

25 I've increased the construction work in

1 progress because my analysis indicates that it was
2 understated.

3 I've made adjustments to the working capital.
4 The two major adjustments that I've made -- well,
5 actually, three major. The first is to remove all of
6 the other accounts receivable. The other accounts
7 receivable represent sales to other electric utilities.
8 This is a nonjurisdictional. It's not a retail sale.
9 Retail customers should not be paying a rate of return
10 on the receivable from other electric utilities.

11 Now, Mr. Chronister says, "Well, if you don't
12 put it here, you have to put it in fuel cost." You
13 don't put it any place, because they don't -- the retail
14 ratepayers shouldn't be paying a rate of return on a
15 wholesale sale, either through working capital or
16 through fuel cost. If these are to earn a rate of
17 return, then they have to earn it through the costs
18 charged to the utility that's buying the power.

19 The other receivable I've removed is those
20 receivables related to associated companies. The
21 company provides services to those other companies and
22 charges them the cost of those services. That
23 receivable is in the company's working capital. Well,
24 that's unrelated to providing any service to retail
25 ratepayers. If any rate of return should be paid on it,

1 it should be paid by the companies receiving the
2 services.

3 Now, Mr. Chronister says, "Well, there's an
4 offset over here in Peoples Gas for this big receivable
5 we put in working capital." We don't know that there's
6 an offset over there, and even if there is, there is no
7 justification for electric customers paying more and the
8 gas customers paying less. If there's something in the
9 gas that shouldn't be here, take it out. But these
10 receivables should not be in working capital.

11 I've also adjusted the storm damage accrual.
12 We think that \$4 million is adequate.

13 CHAIRMAN CARTER: Mr. Larkin, thank you for
14 your summary. Thank you.

15 THE WITNESS: Well, I was almost finished.

16 CHAIRMAN CARTER: You are finished. I told
17 the attorneys, I told you to let your witnesses know --
18 I did give a little extra time on that, but we're going
19 to kind of stay on track. We were almost about to make
20 some progress.

21 Anyway, Commissioners, we're about six minutes
22 before dinner, so we'll just go on our dinner break and
23 be back at 6:30.

24 (Recess from 5:54 to 6:44 p.m.)

25 CHAIRMAN CARTER: We're back on the record.

1 Before we begin, Ms. Christensen had a preliminary
2 matter.

3 MS. CHRISTENSEN: Yes, Commissioner. I
4 believe inadvertently Hugh Larkin's HL-2 got left off
5 the Comprehensive Exhibit List. And my recommendation
6 would be to just separately number that as Exhibit 121
7 and just admit it in due course.

8 CHAIRMAN CARTER: Okay. That will be fine.
9 (Exhibit 121 was marked for identification.)

10 MS. CHRISTENSEN: And I would then tender the
11 witness for cross.

12 CHAIRMAN CARTER: Staff, anything preliminary
13 before we go?

14 MR. YOUNG: No, sir.

15 CHAIRMAN CARTER: Okay. Is everybody ready?
16 Okay. You may proceed.

17 CROSS-EXAMINATION

18 BY MR. HART:

19 Q. Mr. Larkin, if we could look at the bottom of
20 page 27 and the top of page 28 with regard to your
21 testimony on dredging.

22 A. Yes.

23 Q. You understood the company's testimony to be,
24 did you not, that their estimated dredging cost was
25 6.9 million?

1 A. Total company, yeah.

2 Q. And you also understood that they removed part
3 of that in order to achieve a five-year amortization?

4 A. That's correct.

5 Q. And that's why on the top of page 28, you show
6 an expense item of 1,330,000; is that correct?

7 A. That's correct.

8 Q. Now, did you listen to the testimony involving
9 dredging in this hearing so far?

10 A. Just Mr. Chronister's.

11 Q. Have you read the rebuttal testimony that's
12 related to your testimony?

13 A. Yes.

14 Q. Okay. Now, you now understand, do you not,
15 that the company's estimate of 6.9 is only for their
16 share of the joint costs?

17 A. Yes, I understood that.

18 Q. So then on line 19, when you took the
19 five-year amortization number and divided it by two, you
20 knew, and you state in your testimony you're doing that
21 because those costs are normally allocated between two
22 people.

23 A. Yes, and that's about the level that would
24 have been allocated to Tampa Electric.

25 Q. Well, we may disagree with the number, but you

1 understood that when you divided the number by two, and
2 you said you were dividing what the company estimated to
3 be their only cost, and you said you were dividing it
4 because it was to be allocated between two companies?

5 A. Yes. But I took it all out. I didn't leave
6 any of it in there.

7 Q. You mean your proposal for dredging expense?

8 A. Yes.

9 Q. You didn't take page 28 out of your testimony,
10 though, did you?

11 A. No, I didn't.

12 Q. And when you were asked for corrections to
13 your testimony, you didn't change anything on page 28,
14 did you?

15 A. No.

16 Q. Even though you knew that the 1,330,000 should
17 not have been divided by two because these were not
18 costs to be allocated, but were rather costs that were
19 already allocated?

20 A. Well, my judgment, I said if this is a cost
21 that's going to be incurred for dredging, then half of
22 it should have been shared, but I took it out in its
23 entirety. This calculation on page 28 has nothing to do
24 with my recommendation.

25 Q. Well, should we just strike all of this

1 testimony?

2 A. No. It's informative.

3 Q. Yes, but we probably disagree about what.

4 Now, on the next line, when you took the
5 five-year amortization number, divided it by two, and
6 then divided it by five again to come up with the number
7 of 133,000, you were attempting to amortize over five
8 years what had already been amortized over five years,
9 weren't you?

10 A. According to you, but in my estimation, it
11 wasn't. It wasn't the right number.

12 Q. Well, no, the question is not whether or not
13 it's the right number. The question is whether or not
14 when you took the company's number and made these
15 allocations -- for example, on page 20, when you said
16 this should be amortized over five years, you were
17 making an amortization calculation. You were not trying
18 to calculate just an abstract number that you thought
19 was the appropriate number.

20 A. I said it should be spread over five years,
21 but I took out the total. I didn't use any of this
22 information at the bottom.

23 Q. The question I'm asking you is, did you know
24 this calculation was wrong when you were asked do you
25 have any corrections and changes to your testimony?

1 A. I don't think it's wrong. I think it's --

2 CHAIRMAN CARTER: Hang on a second.

3 Mr. Larkin, if you could answer yes or no, answer yes or
4 no, and then you --

5 THE WITNESS: All right.

6 CHAIRMAN CARTER: -- can explain your answer.
7 But we'll make a lot more progress if you'll answer the
8 question, and then we'll give you an opportunity to
9 explain your answer.

10 Restate the question.

11 BY MR. HART:

12 Q. At this point, Mr. Larkin, I'm not attempting
13 to argue with you about the number. I'm just talking
14 about the mathematical calculation you made. You took a
15 number, and at the top of the page, you just said you
16 knew that was a number that had already been amortized
17 over five years, and that five-year amortization is how
18 you got the 1,330,000.

19 A. Yes.

20 Q. At the bottom, you take the 1,330,000, divide
21 it by two, and then you take that 665 and you amortize
22 it over five years again, and you know mathematically
23 that's an incorrect calculation, don't you?

24 MS. CHRISTENSEN: Objection. I believe he's
25 mischaracterizing the witness's testimony.

1 CHAIRMAN CARTER: He can say that's not his --
2 he hasn't answered the question yet.

3 A. I took the 1,300,000 as the total and said
4 half of it should have been allocated, and then what
5 should be remaining should be amortized. But I didn't
6 use any of those calculations. That's not what I did.

7 Q. But at the top of the page, you already have
8 testified and acknowledged that the number had already
9 been amortized over five years once and that the number
10 at the bottom was being amortized over five years for
11 the second time.

12 A. In my view of what should have been done,
13 that's what I calculated, yes. It's taking the
14 1,300,000, allocating it to the other company, and
15 amortizing the remainder over five years. But that's
16 not in -- that's not the adjustment I made.

17 Q. Okay. And you know, do you not, that if the
18 number really is 6.9, that at 133 amortization, it would
19 take 50 years to recover the 6.9 million?

20 A. I didn't make that calculation, but I don't
21 believe 6.9 is right.

22 Q. Well, the question I'm trying to ask you --
23 well, let me ask you this way. Are there any more
24 mathematical calculations like this in your testimony
25 that even though you don't rely on them, you don't now

1 think they're accurate?

2 A. I didn't say this wasn't accurate. I just
3 said that this is what I gave as an example.

4 Q. Okay. And you think that it was an accurate
5 calculation to amortize it over five years and then take
6 the one-fifth of the number and amortize it again over
7 five years?

8 A. I said if that's a reasonable amount of
9 expense for the dredging, it should have been split and
10 then amortized over five years.

11 Q. You've talked with regard to the construction
12 (sic) turbines, and I want to talk about the two that
13 are going into service in May.

14 A. Yes.

15 Q. You've talked a lot about the matching of the
16 cost recovery of the turbines and their usefulness to
17 the customers; isn't that correct?

18 A. That's correct.

19 Q. Now, the record, the way it stands right now,
20 says that these turbines are going to go into service in
21 May, and at least on our projected schedule, the new
22 rates are going to go in in May. To the extent those
23 turbines go into service in May and the new rates go in
24 in May, then the rates that recover the cost of the
25 turbines and the turbines starting in service will all

1 occur simultaneously, won't they?

2 A. Those two will occur at the same time, but the
3 cost will not be incurred fully until 2010. So if you
4 put it into rates, you will be asking the ratepayers to
5 pay a carrying cost, return on depreciation, and O&M
6 expenses as if they got the value of the service from
7 January 1, 2009, which didn't occur.

8 Q. Okay. Now, which turbines did you think I
9 just asked you about?

10 A. The ones that went in in May 2009.

11 Q. And why do you think the cost of the turbines
12 that will be -- construction will be completed and
13 they'll be in service in May. Why do you think all the
14 costs of the turbines will not be included until 2010?

15 A. Because they won't fully be in service for a
16 year until 2010, and you've treated them as if they were
17 completed and in service January 1, 2009.

18 Q. Well, that's the test year calculation, but
19 the question I'm asking you is whether or not the cost
20 recovery of the turbines, their use and the cost that's
21 actually incurred for them will not all start at the
22 same time. You agree that that's true, don't you?

23 A. Well, I agree if they are in service on May
24 1st or when the rates go into effect that the rates and
25 the turbines will go into service at the same time, but

1 that's a different issue.

2 Q. It's not different than the issue that I asked
3 you about, is it?

4 A. No. I mean, what you asked me is are these
5 two dates the same, and I said yes, they are, but that's
6 irrelevant.

7 Q. Now, in your testimony, you haven't proposed
8 disallowing any of the CTs. You've just argued over the
9 annualization of the expense; correct?

10 A. That's correct. I'm assuming that the company
11 is correct that they will build them and they will come
12 on at that point in time.

13 Q. On page -- I guess it's 44 of your testimony,
14 or 46, what is the bad debt number -- you reduced the
15 uncollectible -- excuse me. On page 47, you reduced the
16 uncollectible expense number by 2,409,000. What is the
17 amount that's left in your proposal?

18 A. 5,562,000.

19 Q. Now, do you have MFR C-11 there with you?

20 A. No.

21 MR. HART: Okay.

22 (Document distributed by Mr. Wahlen.)

23 BY MR. HART:

24 Q. Mr. Larkin, if I could call your attention to
25 the 2007 actual write-off numbers which are shown here

1 as 5,527,000. Do you see that number?

2 A. Yes.

3 Q. Now, that's within 35,000 of the number that
4 you propose to include for bad debt expense in this
5 case; is that correct?

6 A. That's correct.

7 Q. Now, basically, what that does is, it doesn't
8 account -- it uses the same bad debt expense that
9 occurred in 2007, which does not account for any
10 increase in sales or any change in economic conditions;
11 is that correct?

12 A. What it does is, it applies the historical
13 rate of bad debt factor to the current sales. It does
14 account for whatever the 2009 sales were. I applied the
15 average of the years 2003 through 2007 to the adjusted
16 gross revenue for Tampa Electric, and that's the number
17 I arrive at. And it's an average.

18 Q. I didn't ask you how you calculated your
19 deduction. I asked you about how your results related
20 to the results for 2007.

21 A. Yes, and I said that they're a little bit
22 higher by about 35,000, but they're higher than 2003,
23 2004, 2005, 2006. So bad debts vary. They vary with
24 the economy, and it's appropriate to use an average.

25 Q. You want -- the question that I asked you was

1 about your actual projected bad debt expense and how it
2 relates to the 2007 number, and we just talked about the
3 fact that there's only a \$35,000 difference.

4 A. I agree.

5 Q. What that means, though, is that the projected
6 results for 2009 that are being used by you are similar
7 or equivalent to the actual results achieved in 2007,
8 even though the sales in 2009 are projected to be
9 higher, and we all know there's more accounts not being
10 collected in 2009; isn't that correct?

11 A. No. And it's not correct because what I did
12 was to use an average factor. And when you use an
13 average factor, that average says that based on the 2009
14 revenues, the bad debt expense will be 5,562,000.

15 Q. Did I ask you any questions about how you
16 calculated the bad debt number?

17 A. Well, you've asked me a question that leads to
18 that. You said how does this relate to the 2009
19 revenue, and I just explained, well, it relates to the
20 2009 revenue because you use an average factor and you
21 apply that factor to the 2009 revenues, and that's what
22 gives you the bad debt expense. What you want to do is,
23 you want to say, "well, you can't do that."

24 CHAIRMAN CARTER: Mr. Larkin, you can -- as I
25 said to you earlier, you can explain your answer, but

1 answer the question first and then go from there. That
2 will help us all out.

3 THE WITNESS: I thought I had.

4 CHAIRMAN CARTER: That will help us all out.
5 You may proceed. Would you ask your question again,
6 please?

7 MR. HART: Mr. Chairman, I have no further
8 questions of this witness. Thank you.

9 CHAIRMAN CARTER: Are you sure?

10 MR. HART: Unless he puts in some more
11 redirect as -- I mean more direct evidence as a result
12 of the friendly cross. I might ask at that point to be
13 able to ask a few more question, but at this point, I
14 have no more questions for him.

15 CHAIRMAN CARTER: Commissioner Skop.

16 COMMISSIONER SKOP: Thank you, Mr. Chairman.
17 Good evening, Mr. Larkin.

18 THE WITNESS: Good evening.

19 COMMISSIONER SKOP: Just a quick question with
20 respect to -- I was looking through your prefiled
21 testimony, and on page 35, beginning with line 16
22 through 23, you talk about an additional adjustment
23 being proposed to the company's fuel stock inventory.
24 Why is it appropriate, or why do you seem to be
25 suggesting a marked-to-market approach with respect to

1 the proposed adjustment there? Why is that appropriate?

2 THE WITNESS: Well, it's appropriate to
3 reflect the fuel cost, or the inventories at the current
4 level of cost.

5 COMMISSIONER SKOP: So you're essentially
6 marking down, if I'm correct, or advocating that the
7 inventories be marked down to reflect market prices,
8 irrespective of what the cost of those inventories were
9 that would be consumed in the generation process.

10 THE WITNESS: First of all, let me say that
11 they're not -- in your question is the assumption that
12 they're at their current market price or at an actual
13 price.

14 COMMISSIONER SKOP: Well, I don't think they
15 would be stated at an inflated price. I mean, they're
16 probably carried at what they were paid for. But again,
17 to do a marked-to-market adjustment, how does that
18 reflect the accurate cost of generation?

19 THE WITNESS: I think we're talking past each
20 other. The company used an estimate. These aren't the
21 actual prices. The company's prices are not actual.
22 They used an estimate of what they thought fuel prices
23 would be in 2009. Those aren't actual paid-for prices.
24 Those are estimated 2009 costs multiplied by inventory
25 volumes. And I'm saying, well, here is the current 2009

1 prices. Let's revalue the inventory at -- so I'm not
2 marking it down from what they actually paid. What I'm
3 marking it down from is what they estimated the 2009
4 cost to be.

5 COMMISSIONER SKOP: I understand, but there's
6 more into -- at least from my understanding of fuel
7 procurement, and correct me if I'm wrong, but again,
8 when you project a price, it's based on a multitude of
9 things. It's not just the -- the forward curves go into
10 that, but also too the hedging practices and a multitude
11 of decisions.

12 So it just seems to me on its face, unless I'm
13 missing something, that it's very arbitrary to just say,
14 "Oh, this is the current spot price today," and
15 unilaterally come in and make an adjustment, because
16 again, there's some lag time to the extent that -- I
17 wish there was a one-to-one correlation, but there's
18 not, so I'm trying to understand how it is appropriate
19 to make that type of adjustment.

20 THE WITNESS: Well, that's what the company
21 did. They used a factor. They looked at market prices,
22 and then they valued the inventory. So I'm doing the
23 exact same thing or recommending the exact same thing
24 the company did, except I'm using current prices. There
25 are no other factors in there. There is no other cost

1 in there.

2 COMMISSIONER SKOP: Thank you.

3 CHAIRMAN CARTER: Commissioner Edgar.

4 COMMISSIONER EDGAR: Thank you, Mr. Chairman.

5 On a different issue, Mr. Larkin, you've been
6 asked some questions about the requested annualization
7 of the five CT units, and in Issue 5 of the Prehearing
8 Order, which addressed that issue, the stated position
9 from TECO is that the units are not revenue-producing or
10 growth-related, but are intended to improve system
11 reliability, and therefore appropriate for
12 annualization. And the OPC position in the issue
13 statement seems to be that the CT units would be
14 revenue-producing or growth-related. Could you speak to
15 that, please?

16 THE WITNESS: Sure. The CTs or peaking units
17 are an integrated part of the system. You can't operate
18 the system or deliver power or have a secure system or a
19 reliable system without CTs. So it's like saying a
20 transmission line, because it doesn't produce any power,
21 is not of value, it doesn't produce revenue. Well, it
22 delivers the power. So the CT is an integral part of
23 the company's system. It's the same -- it serves a
24 different purpose than the base load unit, but it allows
25 the company to make sales, to have a secure system, that

1 the system is reliable, and it's an integral part of the
2 operation of the utility, the same as the transmission
3 system is, the distribution system is, even though some
4 parts of that system may not operate all the time.

5 COMMISSIONER EDGAR: Thank you.

6 CHAIRMAN CARTER: Anything further from the
7 bench?

8 Ms. Bradley.

9 MS. BRADLEY: No questions.

10 CHAIRMAN CARTER: Ms. Kaufman.

11 MS. KAUFMAN: No questions, Mr. Chairman.

12 CHAIRMAN CARTER: Mr. Wright, you want my copy
13 of this?

14 MR. WRIGHT: No, sir.

15 CHAIRMAN CARTER: Okay.

16 MR. WRIGHT: I have one follow-up question
17 about the September CTs based on new evidence that came
18 in earlier in the hearing.

19 CROSS-EXAMINATION

20 BY MR. WRIGHT:

21 Q. Mr. Larkin, in response to a question by
22 Mr. Hart, you made the statement that you're assuming
23 that the CTs will come on line in 2009 as projected by
24 the company.

25 A. That's correct.

1 Q. Okay. Now, we've got two CTs that are
2 continual on line in May and then three more that are
3 supposed to come on line in September?

4 A. Yes.

5 Q. If the three CTs were not to -- the three
6 September CTs were not to come on line until after
7 January 1, 2010, how should the costs be treated for the
8 purposes of setting rates in this case?

9 A. It should all be removed. There should be no
10 cost.

11 MR. WRIGHT: Thank you. Thank you,
12 Mr. Chairman.

13 CHAIRMAN CARTER: Mr. Twomey.

14 MR. TWOMEY: No questions, sir.

15 CHAIRMAN CARTER: Commissioners, I'm going to
16 go to staff before I come back to the bench. Staff?

17 MS. BROWN: No questions.

18 CHAIRMAN CARTER: Okay. Anything further from
19 the bench?

20 Had you completed all your questions?

21 MR. HART: Yes, I have. Thank you,
22 Mr. Chairman.

23 CHAIRMAN CARTER: All right, then. Let's
24 proceed with -- oh, sorry.

25 MS. CHRISTENSEN: Commissioner, brief

1 redirect.

2 CHAIRMAN CARTER: What time is it? Redirect.

3 REDIRECT EXAMINATION

4 BY MS. CHRISTENSEN:

5 Q. Mr. Larkin, you were asked some questions
6 regarding the dredging costs.

7 A. Yes.

8 Q. And you were asked to explain an informational
9 adjustment that you made. Can you explain why you put
10 that example in there?

11 A. Well, what I meant to show was that if that
12 were the total cost the company incurred for all the
13 dredging, then half of it would have been shared, and it
14 would have been amortized over five years, and here
15 would be the numbers. I didn't make any adjustment
16 based on that.

17 Q. Would it be -- is it then your testimony you
18 were doing a comparison for the historical costs that
19 the company incurred in the past and what the current
20 request was?

21 A. No, because the historical cost is a little
22 bit higher.

23 Q. Okay.

24 A. It's a little bit higher than that.

25 Q. Okay. Let me return to an exhibit that the

1 company passed out referring to your bad debt and the
2 methodology.

3 A. Yes.

4 Q. Can you explain -- you said that averaging was
5 appropriate for bad debt. Can you explain why you
6 believe averaging is appropriate?

7 A. Well, because there are changes in the
8 economy, and we don't want to build into rates economic
9 downturns if there is an economic downturn. As an
10 example, if the weather were warmer or colder than
11 usual, we would use a historical average or a weather
12 average to normalize the sales. Well, bad debt acts the
13 same way, except the factor that changes them is the
14 state of the economy, employment, economic activity in
15 the state of Florida.

16 2008 and 2009 are going to be years in which
17 the economy is going to be affected by a recession. You
18 wouldn't build rates based on a recession, because you
19 expect the recession to end and things to go back to
20 normal, so the company should not get revenues,
21 expenses, or anything else that reflects the effects of
22 the recession. And the way you remove that is to look
23 at a historical average and use that average to set
24 items such as bad debts, and that's the reason I did
25 this.

1 MS. CHRISTENSEN: I have nothing further.

2 CHAIRMAN CARTER: Okay. Exhibits.

3 MS. CHRISTENSEN: I would move Exhibits Number
4 49, 50, and 121 into the --

5 CHAIRMAN CARTER: Does anybody have any
6 objections?

7 MR. HART: No.

8 CHAIRMAN CARTER: Without objection, show it
9 done.

10 (Exhibits 49, 50, and 121 were admitted into
11 the record.)

12 CHAIRMAN CARTER: Call your next witness.

13 MS. CHRISTENSEN: The Office of Public Counsel
14 would call Helmuth Schultz to the stand, please.
15 Thereupon,

16 HELMUTH W. SCHULTZ III
17 was called as a witness on behalf of the Citizens of the
18 State of Florida and, having been first duly sworn, was
19 examined and testified as follows:

20 DIRECT EXAMINATION

21 BY MS. CHRISTENSEN:

22 Q. Can you please state your name and your
23 business address for the record?

24 A. My name is Helmuth W. Schultz III. My
25 business address is 15728 Farmington Road, Lavonia,

1 Michigan.

2 Q. And, Mr. Schultz, did you cause to be prefiled
3 direct testimony on November 26, 2008, in this docket?

4 A. Yes, I did.

5 Q. And, Mr. Schultz, do you have any changes to
6 your testimony?

7 A. On December 11th, there were some -- an errata
8 prepared that revised page 1 and page 15. In addition
9 to that, I have subsequently discovered a couple of
10 minor changes that would be required.

11 On page 23, line 15, it states, Schedule C-5.
12 It should state Schedule C-6.

13 On page 24, line 7, the question starts out,
14 "Are they." It should be, "Are there."

15 And on page 32 of my testimony, line 22, it
16 references interrogatory number 86. It should be
17 interrogatory number 85.

18 Q. With those corrections, as well as the
19 previously filed corrections to your testimony, if I
20 were to ask you the same questions today, would your
21 answers be the same?

22 A. Yes, they would.

23 MS. CHRISTENSEN: I would ask that
24 Mr. Schultz's prefiled testimony be entered into the
25 record as though read.

1 CHAIRMAN CARTER: The prefiled testimony of
2 the witness will be entered into the record as though
3 read.

1 DIRECT TESTIMONY OF HELMUTH W. SCHULTZ, III
2 ON BEHALF OF THE CITIZENS OF FLORIDA
3 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION
4 TAMPA ELECTRIC COMPANY
5 DOCKET NO. 080317-EI
6

7 I. INTRODUCTION

8 Q. WHAT IS YOUR NAME, OCCUPATION AND BUSINESS ADDRESS?

9 A. My name is Helmuth W. Schultz, III. I am a Certified Public Accountant
10 licensed in the State of Michigan and a partner of the firm of Larkin &
11 Associates, PLLC, Certified Public Accountants, with offices at 15728
12 Farmington Road, Livonia, Michigan 48154.

13

14 Q. PLEASE DESCRIBE THE FIRM LARKIN & ASSOCIATES, PLLC.

15 A. Larkin & Associates, PLLC, is a Certified Public Accounting and
16 Regulatory Consulting Firm. The firm performs independent regulatory
17 consulting primarily for public service/utility commission staffs and
18 consumer interest groups (public counsels, public advocates, consumer
19 counsels, attorney general, etc.). Larkin & Associates, PLLC, has
20 extensive experience in the utility regulatory field as expert witnesses in
21 over 800 regulatory proceedings including numerous electric, water and
22 sewer, gas and telephone utilities.

1 Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE FLORIDA PUBLIC
2 COMMISSION?

3 A. Yes. I have testified before the Florida Public Service Commission on a
4 number of occasions.

5

6 Q. HAVE YOU PREPARED AN APPENDIX WHICH DESCRIBES YOUR
7 QUALIFICATIONS AND EXPERIENCE?

8 A. Yes. I have attached Appendix I which is a summary of my regulatory
9 qualifications and experience.

10

11 Q. BY WHOM WERE YOU RETAINED?

12 A. Larkin & Associates, PLLC was retained by the Florida Office of Public
13 Counsel ("OPC"). Accordingly, I am appearing on behalf of the Citizens of
14 Florida ("Citizens").

15

16 II. PURPOSE OF TESTIMONY

17 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

18 A. Our firm was asked by the Public Counsel to analyze the requested rate
19 increase requested by Tampa Electric and provide our analysis of what
20 rate increase is justified.

21

22 Q. WHAT ARE THE RESULTS OF YOUR ANALYSIS OF THE REQUESTED
23 INCREASE FOR TAMPA ELECTRIC?

1 A. We are recommending that the Commission adjust various expenses
2 requested by Tampa Electric, because the Company's requested expense
3 levels were not justified. My testimony addresses operating expense
4 issues related to payroll and employee benefits, directors and officers
5 insurance expense, storm hardening activities such as tree trimming,
6 inspections and maintenance, rate case expense and office supplies
7 expense. I also address capital structure issues related to deferred income
8 taxes and investment tax credits

9

10 Q. DO YOU HAVE ANY EXHIBITS ATTACHED TO YOUR TESTIMONY?

11 A. Yes. I have attached Exhibit HWS-1, which consists of Schedules C-4
12 through C-12, which support my adjustments. Hugh Larkin's Exhibit HL-1
13 contains Schedules A, B and C-1 through C-3. My adjustments have
14 been reflected in the exhibit of Mr. Hugh Larkin, Jr.

15

16 III. PAYROLL

17 Q. ARE THERE CONCERNS WITH THE COMPANY'S PAYROLL
18 REQUEST FOR THE PROJECTED TEST YEAR?

19 A. Yes. I have three concerns with the Company's requested payroll: 1) the
20 overtime dollars included in the filing have not been identified or tracked
21 by the Company; 2) the Company has requested 151 additional
22 employees above the 2007 levels; and 3) the Company's requested
23 incentive compensation plan is problematic.

1

2 Q. WHAT IS THE PROBLEM WITH THE OVERTIME DOLLARS IN THE
3 PROJECTED TEST YEAR?

4 A. The problem with the Company's proposed overtime dollars is that we
5 have no idea what amount is included in the test year. The response to
6 OPC Interrogatory No. 35 states that the Company's budget system does
7 not have a detail breakout of overtime and other pay for 2008 and 2009. It
8 is astonishing that a company the size of Tampa Electric does not have a
9 budgeting system sophisticated enough to be able to identify the overtime
10 included in its budget. That raises serious concerns as to how the
11 Company can measure performance when an important component of
12 payroll is not tracked and/or monitored.

13

14 Q. WHY IS THERE A CONCERN WITH THE COMPANY'S PROPOSED
15 ADDITION OF 151 EMPLOYEES?

16 A. There is no justification provided in Tampa Electric's filing for an increase
17 in the employee complement of this magnitude. Based on the response to
18 OPC Interrogatory No. 56, the Company has decreased its employee
19 complement in 11 of the last 15 years (since 1992). Only in 2006 and
20 2007 did Tampa Electric have consecutive increases in its employees.
21 However, any additional employee increase beyond 2007 does not appear
22 to be justified. According to the Company's testimony, this filing is driven
23 by the following: 1) customer growth that is projected at an annual rate of

1 2.1% over the next ten years; 2) increased customer demand; 3)
2 maintenance on an aging infrastructure; 4) increases in materials costs;
3 and 5) weather and regulatory compliance. The increase in materials
4 costs, customer demand and weather do not have any impact on the
5 number of employees. The annual customer growth of 2.1% is less than
6 the 2.8% annual customer growth experienced over the last 16 years
7 where Tampa Electric has reduced the number of required employees by
8 approximately 24%. While increased maintenance and regulatory
9 compliance may require a minimal addition to the employee complement,
10 it does not justify the 151 positions the Company has reflected in the filing.
11

12 Q. WHAT CHANGES HAVE OCCURRED IN 2008 WITH THE EMPLOYEE
13 COMPLEMENT?

14 A. The Company had 2,531 employees as of December 31, 2007. While the
15 employee compliment has fluctuated monthly in 2008, as of September
16 30, 2008, the employee count was 2,531. Based on my analysis, I believe
17 that the Company's employee complement of 2,638 for the projected test
18 year is overstated.
19

20 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO THE
21 EMPLOYEE COMPLEMENT?

22 A. The Company's request should be reduced by 90 positions to a
23 complement of 2,548. This is 17 positions more than year end 2007 and

1 the September 30, 2008, level, and 61 positions more than the average for
2 the historical test year 2007. As shown on Exhibit HWS-1, Schedule C-4,
3 the reduction of 90 positions reduces O&M expense by \$3,676,382 to a
4 more reasonable expense level of \$104,082,450. This is a reduction of
5 \$3,568,109 on a jurisdictional basis.

6
7 IV. INCENTIVE COMPENSATION

8 Q. HAVE YOU REVIEWED THE COMPANY'S REQUEST FOR INCENTIVE
9 COMPENSATION?

10 A. Yes. The Company is requesting recovery of \$11,574,843 for incentive
11 compensation. The Company has opined that the incentive compensation
12 is required to attract, retain and motivate high performing goal-oriented
13 team members and is "at risk" pay because it is based on meeting
14 performance goals. However, the description of the plans objectives is
15 misleading from a ratemaking perspective, in that the plan heavily favors
16 shareholder oriented objectives/goals. There are significant doubts as to
17 whether this incentive pay is truly "at risk" based on the target setting.
18 Moreover, ratepayers are being requested to pay more than their fair
19 share of the incentive plan, even assuming that this type of incentive plan
20 is reasonable.

21
22 Q. ARE YOU RECOMMENDING THAT AN ADJUSTMENT TO THE
23 COMPANY'S REQUEST BE MADE?

1 A. Yes. The entire cost of the plan should be excluded from rates. The
2 Company has failed to document the need to add incentive pay above
3 employee salaries to retain or motivate its employees. The Company can
4 continue the plan; however, shareholders should be responsible for the
5 entire cost of the plan. Even if the Company could demonstrate some
6 ratepayer benefit from this type of incentive plan, the ratepayers and the
7 shareholders should share the target level cost of the plan equally.

8

9 Q. DOES THE PLAN ACTUALLY CREATE PERFORMANCE INCENTIVES
10 THAT PLACE EMPLOYEE PAY "AT RISK" BASED ON MEETING
11 MEANINGFUL TARGETS?

12 A. No. A review of the goals and achievements of goals for the period of
13 2003-2007 raised a number of concerns. First, the goals set by the
14 Company and the determination of eligibility payments under the plan is
15 seriously flawed, particularly from a ratemaking and ratepayer prospective.
16 I cite several troubling examples of the Company setting targets and goals
17 so that the employees are not required to improve performance in order to
18 receive incentive pay which I found in my review of the plan.

19

20 For example in 2003, the Company had a target goal for customer
21 satisfaction of 94% and the Company achieved a 95% customer
22 satisfaction rate that year. The following year in 2004, the Company
23 should have raised its target to at least 95%, but instead kept the target

1 level at 94%. The Company met its 2004 goal with a 96% customer
2 satisfaction rating. Again in the next year, 2005, the Company failed to
3 raise the target level to the actual 2004 customer satisfaction rating of
4 96%, instead the target was set at 95%. The target has remained at 95%
5 since 2005. As one can see from this example, employees were not
6 required to improve their performance to receive incentive pay, but could
7 have, in fact, decreased their performance from the previous year and
8 receive incentive pay.

9
10 Another example is the 2006 SAIDI target. The 2006 SAIDI target was set
11 at a no more than 90 minute average annual outage time that was
12 achieved with an actual of 83.22 minutes. The 2007 target goal was
13 reduced, not to the 2006 achievement level, but to 85 minutes. Thus, all
14 the Company employees had to do is continue to perform at the same or
15 lower level and they would accomplish the goal without improving
16 reliability. You can not call this an incentive plan if the goals are not
17 increased to a level that provides incentives to improve the actual
18 performance year to year.

19
20 Q. ARE THERE OTHER CONCERNS WITH THE GOALS THAT THE
21 COMPANY SET DURING THE PERIOD OF YOUR REVIEW?

22 A. Yes. In 2005, the Company failed to meet the Success Sharing goals for
23 safety. Instead of maintaining the goals at the 2005 level, the Company

1 changed its goals for 2006 to allow for more preventable accidents and an
2 increased incident rate. This has two down sides. First, it suggests that
3 safety is not a priority if you were willing to accept more accidents.
4 Second, it suggests that this plan is being designed to assure that
5 payments will be made.

6
7 Next, the Company did not meet reliability goals for SAIDI in 2003, 2004
8 or 2005. In 2006, the target for SAIDI minutes was increased from "no
9 more than" 67 minutes for average annual outage time to 90 minutes for
10 an average annual outage time. It is not appropriate for the Company to
11 lower its standards to make them easier to achieve so that incentive
12 compensation can be paid out. The Company has sent the wrong signal
13 to its employees by lowering targets and suggesting that a lower level of
14 performance is acceptable.

15
16 Q. WHAT DID YOUR REVIEW INDICATE WITH RESPECT TO THE
17 RESULTS OF THOSE GOALS?

18 A. Based on the response to OPC Interrogatory No. 30, the Company failed
19 to achieve its target for five of the seven Success Sharing goals in 2003.
20 In 2004, two of seven goals were not achieved. In 2005, five of seven
21 goals were not achieved. In 2006, two of seven goals were not achieved
22 and in 2007, two of seven goals were not achieved. Yet despite the fact
23 that goals were not achieved in each of the five years, the Company still

1 expensed and paid 18%-49% more than the target level of incentive
2 compensation budgeted during the years 2004-2007.

3
4 More astounding is that the 2005 Success Sharing results showed that the
5 Company failed to meet five of seven targets (the safety target, the
6 environmental target, the SAIDI target, its cost recovery clause target and
7 Tampa Electric's net income target). Even after missing five of the
8 targets, Tampa Electric still had an expense for incentive compensation
9 that was more than 49% above the target incentive amount. This payout is
10 troubling since the Company stated in response to OPC Interrogatory No.
11 54 that if goals are not achieved, no Success Sharing payout is made.

12
13 Q. DID YOU INQUIRE AS TO HOW THIS COULD OCCUR?

14 A. Yes, the Company was requested in OPC Interrogatory No. 98 to explain
15 how incentive pay can be in excess of target when goals were not
16 achieved. Tampa Electric indicated in its response that because some
17 goals may have been achieved above the target level that those better
18 than expected results could offset the below target results. In describing
19 the goals, Tampa Electric's response stated that the corporate and
20 operating financial goals are quantitative and the individual goals are
21 qualitative. However, this response is very broad and generic and it did
22 not answer the question asked. Specifically, the response did not explain

1 how the 2004-2007 incentive costs were above target when approximately
2 half of the goals in each of the respective years were not achieved.

3
4 Given the fact that the Success Sharing is the major component of the
5 incentive compensation expense, this response suggests that the majority
6 of the weighting is on the two shareholder financial goals with less
7 weighting on the five non-financial goals that deal with customer concerns.
8 Since the financial goals are shareholder related, shareholders should be
9 responsible for the cost of the incentive compensation plan. It is not
10 appropriate for ratepayers to pay for incentive compensation that places
11 shareholder benefits above customer benefits.

12
13 Q. WHY DID YOU STATE THAT THE OBJECTIVES OF THE PLAN ARE
14 MISLEADING?

15 A. There is no evidence that the payment of incentive compensation is
16 required to attract and retain employees. While incentive compensation is
17 offered by many companies, there also is no evidence that it has to be
18 included in rates to attract and retain employees. Moreover, the Company
19 has conducted no studies that demonstrate the compensation levels prior
20 to adding the incentive compensation are not adequate in and of
21 themselves to attract and retain employees.

22

1 Q. HOW HAS THE COMPANY PERFORMED OVER THE YEARS THAT
2 YOU REVIEWED?

3 A. While the shareholders financial results were favorable (i.e. generally
4 above target), the environmental achievement was not favorable and the
5 reliability and safety achievement was less than favorable (less than the
6 target level). Based on the response to OPC Interrogatory No. 31, the
7 financial goals are what are emphasized the most and the financial goals
8 are more shareholder oriented.

9

10 Q. WHAT DID YOU MEAN THAT THERE ARE SERIOUS CONCERNS
11 ABOUT THE GOALS AND THE DETERMINATION OF THE PAYMENT
12 TO ELIGIBLE PARTICIPANTS OF THE PLAN?

13 A. As discussed above, the major concern with the goal setting is that they
14 do not provide sufficient incentive to perform at a level that would result in
15 improvements in operations and customer service. The ratepayer benefit
16 does not exist. The concern with the determination of payments to eligible
17 participants of plan is that in each of the years 2004-2007 the incentive
18 payout exceeded the target even though there were goals that were not
19 achieved. To add to that concern, the Company's response to OPC
20 Interrogatory No. 53 indicates that during the time period 2004-2007, the
21 only year an eligible employee did not receive an award was 2004. And in
22 2004, there was only one eligible employee that did not receive an award
23 of the 2,435 employees that were eligible. Based on these results there

1 does not appear to be any pay that is "at risk." Incentive compensation is
2 extra compensation that is added to base compensation.

3

4 Q. ARE THERE ANY OTHER PROBLEMS WITH THE COMPANY'S
5 INCENTIVE COMPENSATION REQUEST?

6 A. Yes. The incentive compensation amount is based on the employees pay.
7 Some employee pay is capitalized, yet 100% of incentive compensation is
8 expensed. Generally accepted accounting principles and FERC
9 accounting requires that costs directly related to payroll be capitalized.
10 The Company's costs for medical insurance, pensions and payroll taxes
11 are subject to capitalization and so should incentive compensation.

12

13 Q. DID YOU INQUIRE AS TO WHETHER THE INCENTIVE
14 COMPENSATION WAS CAPITALIZED OR NOT?

15 A. Yes. The Company was asked in OPC Interrogatory No. 100 about
16 capitalization. In its response, the Company stated that "Incentive
17 compensation is allocated based on the internal labor charges to expense,
18 capital and other activities" which is in direct contradiction to the
19 information the Company supplied in response to OPC Interrogatory No.
20 29 and OPC Interrogatory No. 35. The response to OPC Interrogatory No.
21 35 identified the incentive compensation in 2007 included in gross pay to
22 be \$12,762,948. The response to OPC Interrogatory No. 29 specifically
23 indicated that the 2007 actual expensed incentive compensation was

1 \$12,762,948. Based on the responses to OPC Interrogatory No. 29 and
2 OPC Interrogatory No. 35, the incentive compensation is 100% expensed.

3
4 Q. WHAT IS YOUR RECOMMENDATION ON THE COMPANY'S REQUEST
5 FOR INCENTIVE COMPENSATION?

6 A. The entire \$11,574,843 (\$11,233,952 on a jurisdictional basis) should be
7 disallowed because the Company's goals are not sufficiently established
8 to require improvements that will provide either a cost benefit or safer and
9 more reliable service to customers. If the Commission were to conclude
10 that some expense is justified, the Commission should first limit the
11 amount to the same expense percentage used for base payroll and
12 overtime, and then limit the amount expensed to ratepayers to no more
13 than 50% of the amount presumed to be justified. Because shareholders
14 and ratepayers would conceptually benefit from a true incentive plan, the
15 cost of that plan should be shared equally.

16
17 V. EMPLOYEE BENEFITS

18 Q. WHAT IS THE COMPANY REQUESTING FOR EMPLOYEE BENEFITS
19 IN 2009?

20 A. The Company's request for 2009 includes \$73,804,000 for employee
21 benefits and according to the response to OPC Interrogatory No. 43 the
22 amount expensed is \$44,030,377.

23

1 Q. ARE THERE PROBLEMS WITH THE COMPANY'S REQUEST?

2 A. Yes. The first concern is that the amount requested is overstated. As
3 noted earlier in this testimony, the Company has requested the addition of
4 151 positions that are not justified by the filing. Second, there are
5 problems with the Company's increase in 401(k) matching that took effect
6 in April of 2007. Finally, the level of employee sharing in health care is
7 also a concern because they may not include a proper amount of
8 employee contribution. However, the Company failed to provide sufficient
9 documentation to recommend an adjustment at this time.

10

11 Q. WHAT IS THE PROBLEM WITH THE COMPANY'S 401(K) MATCHING?

12 A. Effective April 2007, the fixed match was increased from .30 to .50. The
13 problem with the Company's increase is that the economy has forced a lot
14 of changes on individuals and companies alike, as discussed below, yet
15 Tampa Electric seems to be ignoring these changes. For example, some
16 utilities have gone from a defined benefit retirement plan to a cash plan
17 and others have ended the enrollment of employees in the defined benefit
18 plans opting for cash plans or enhanced 401(k) plans. It is not appropriate
19 for the Company to increase the contribution to its employee's second
20 retirement plan when some ratepayers do not even have one retirement
21 plan, especially in today's economy. It also ignores the changes that other
22 companies have been making in their attempt to reduce costs.

23

1 Q. WHAT ABOUT THE STUDIES THAT COMPANY WITNESS MERRILL
2 REFERS TO?

3 A. Those studies are based only on companies that participate in surveys
4 and reflect a limited sample. What is not reflected in those surveys are all
5 the small companies that offer limited health care and/or retirement plans
6 or do not offer any health care or retirement plans. The employees of
7 those very companies may be customers of Tampa Electric.

8

9 Q. ARE YOU RECOMMENDING ANY ADJUSTMENT TO THE 401(K)
10 EXPENSE?

11 A. Yes. The Company 401(k) amount should be reduced to reflect a
12 contribution rate of .30 instead of .50 or a reduction of 40%.

13

14 Q. WOULD A REDUCTION OF 40% REDUCE THE 401(K) AMOUNT
15 BELOW HISTORICAL COSTS?

16 A. Yes. But the historical costs are not comparable because they include
17 another special add on available to employees that is called the
18 performance match. This performance match is based on the Company
19 exceeding net income targets and the filing presumably does not assume
20 the Company exceeding the net income target.

21

1 Q. WOULD A 40% REDUCTION BE COMPARABLE TO THE EFFECTIVE
2 CONTRIBUTION MADE IN PRIOR YEARS WHEN THE .30
3 CONTRIBUTION RATE WAS IN EFFECT?

4 A. It is in the range of reasonableness. For example in 2006, the cost
5 included a fixed match of .30 and a performance match of .15 for a total of
6 .45. The cost for the year was \$3.789 million and 66.67% (.30/.45) of that
7 is \$2.526 million. The \$2.526 million estimated fixed match is 1.5% of the
8 total 2006 compensation of \$168.885 million. The 2009 cost per the
9 Company is \$4.977 million and reducing that 40% results in a cost of
10 \$2.986 million. The \$2.986 million is also 1.5% of the total compensation
11 for the year 2009 of \$205.133 million. The other years estimated 401(k)
12 expense varies from estimated 1.4% to 2.0%. Thus, reducing the fixed
13 401(k) contribution by 40% yields a result in the range of reasonableness
14 when compared to past results.

15

16 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING?

17 A. The 2009 401(k) cost (Retirement Savings Plan) should be reduced
18 \$1.991 million reducing the total employee benefits for 2009 to \$71.813
19 million.

20

21 Q. WHAT IS THE CONCERN WITH MEDICAL COSTS?

1 A. The costs shown in the filing may not reflect a proper level of employee
2 contributions. However, the Company did not make available sufficient
3 information to evaluate the employee sharing.

4

5 Q. WAS A REQUEST MADE FOR THE EMPLOYEE'S SHARE OF MEDICAL
6 COSTS?

7 A. Yes. The Company was requested to "Provide for each of the years 2003-
8 2007 the active employees and retired employees share of medical
9 benefits, respectively." The response to OPC Interrogatory No. 57
10 provided the Company's share of active employees and retired
11 employee's medical benefits. Since the response was not sufficient, no
12 recommendation can be made at this time.

13

14 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO EMPLOYEE
15 BENEFITS?

16 A. As shown on Exhibit HWS-1, Schedule C-5, the employee benefits
17 expense should be reduced \$1,461,650. The jurisdictional adjustment is
18 \$1,420,208.

19

20

21 VI. DIRECTORS & OFFICERS LIABILITY INSURANCE

22 Q. WHAT HAS THE COMPANY INCLUDED IN 2009 FOR DIRECTORS
23 AND OFFICERS LIABILITY INSURANCE?

1 A. The response to OPC Interrogatory No. 101 indicates the Directors and
2 Officers Liability Insurance (DOL) cost allocated to Tampa Electric for
3 2009 is \$1,700,908.

4
5 Q. IS THE COST OF THIS INSURANCE AN APPROPRIATE COST TO
6 INCLUDE IN RATES?

7 A. No. In 2003 the amount of DOL insurance expensed was \$654,392. In
8 2007 the expense allocated to Tampa Electric was \$1,763,351. That
9 represents an increase of 169.5%. The increase began to occur after
10 2002 as the result of the claims against officers and directors. This
11 insurance protects officers and directors from claims that are made
12 because of decisions that plaintiffs and agencies believed to be
13 inappropriate.

14
15 Q. WHY SHOULDN'T THIS INSURANCE BE ALLOWED WHEN THE COST
16 OF OTHER INSURANCE IS?

17 A. As was previously stated, this insurance initially protects officers and
18 directors when decisions that they have made are challenged and/or
19 determined to be bad business decisions. The extra factor with DOL
20 insurance is that the primary plaintiffs are shareholders. In effect the DOL
21 insurance provides shareholders protection against their own decisions
22 such as the hiring of the Board of Directors who, in turn hire the officers of
23 the Company. The benefit from settlements from this insurance flows

1 through to shareholders. Therefore, shareholders should be responsible
2 for the cost of this insurance.

3

4 Q. IS THERE ANY BENEFIT TO RATEPAYERS?

5 A. No. In other proceedings where I have testified, companies have claimed
6 that ratepayers benefit because the insurance is necessary to attract and
7 retain competent directors and officers. However, there has not been any
8 evidence presented that showed that the companies were unable to
9 attract and/or retain officers and directors when shareholders were
10 required to pay the cost of the coverage. Ratepayers do not receive any
11 of the proceeds from decisions and/or settlements in directors and officer
12 litigation, so ratepayers should not be responsible for the cost of protecting
13 shareholders from their own decisions.

14

15 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING?

16 A. The entire \$1,700,908 for DOL insurance should be removed from rates.
17 On a jurisdictional basis the adjustment is \$1,650,815.

18

19 Q. WHAT IF THE COMMISSION DECIDES THAT SOME BENEFIT MAY
20 FLOW THROUGH TO RATEPAYERS?

21 A. If the Commission can identify a benefit that ratepayers receive then I
22 would recommend that the Company's request be limited to the 2003
23 expense of \$654,392 reducing the 2009 rate year request \$1,046,516.

1

2 VII. TREE TRIMMING

3 Q. WOULD YOU EXPLAIN THE COMPANY'S REQUEST FOR TREE
4 TRIMMING?

5 A. The Company is asking for \$16,073,444 for distribution tree trimming and
6 \$1,797,519 for transmission vegetative management. The transmission
7 request appears reasonable but the distribution tree trimming request of
8 \$16,073,044 is excessive.

9

10 Q. WHAT IS THE REASON THE COMPANY IS REQUESTING THE \$16
11 MILLION FOR DISTRIBUTION TREE TRIMMING?

12 A. The Company's witness Haines stated that the increase in tree trimming is
13 because the Company has to be on a three-year tree trimming cycle and
14 that the increase is driven by increases in contractor rates "mainly caused
15 by escalating fuel costs." The Company testimony also states that
16 beginning in 2005, the Company has ramped up its vegetation
17 management program so it could continue to progress to a three-year tree
18 trim cycle by 2010.

19

20 Q. WHAT IS YOUR CONCERN WITH THE COMPANY'S REQUEST?

21 A. My concern is how the Company has managed its tree trimming over the
22 years. Back in Docket No. 920324-EI, the Company requested funding for
23 a two-year trimming cycle. Yet sixteen years later the Company is

1 progressing towards a three-year trim cycle. Based on the response to
2 OPC Interrogatory No.109, the Company has approximately 6,121 miles
3 of overhead distribution facilities, but the Company cannot identify how
4 many miles of distribution requires trimming. A key problem the Company
5 has with moving to a three year cycle is that it does not know how many
6 miles on the system actually requires trimming per year.

7
8 Q. WHY WOULDN'T YOU BASE THE TRIMMING ON THE 6,121 MILES?

9 A. Not all of the system miles have trees along them that require trimming,
10 therefore the number of miles could be 5,000 or it could be 4,500. Either
11 way it is imperative for the Company to know how many miles per year
12 require trimming before they make a request for funding that would
13 support a three-year cycle.

14
15 Q. WHAT OTHER CONCERNS ARE THERE WITH THE COMPANY'S
16 REQUEST?

17 A. The response to OPC Interrogatory No. 67 provided the number of miles
18 trimmed from 1998 through 2007. The Company appears to have been
19 close to an estimated three-year trim cycle from 1998 to 2000 when they
20 trimmed a combined 5,382 miles. Then beginning in 2001, the annual
21 number of miles trimmed began to decline until it reached a low of 786
22 miles in 2003. The cost of trimming is impacted by the frequency of the
23 trim cycle without question. The longer you wait, the more growth occurs

1 which increases the cost for trimming. Had the Company continued at the
2 rate that they were on in the period 1998-2000, the cost for trimming
3 would be less for a comparable number of miles. It was the Company's
4 decision to reduce the trim cycle in 2001. Because there is a rate case
5 and they can ask for increased costs from ratepayers, they want to make
6 up for their previous decision to defer trimming from 2001 through 2007.
7 This is not appropriate and should not be allowed.

8
9 Another concern is Mr. Haines stated that the increase in contractor costs
10 was mainly caused by the escalating fuel costs. That being said, the
11 contractors costs must now be revisited given the significant reduction in
12 fuel costs that has occurred.

13

14 Q. WHAT ARE YOU RECOMMENDING FOR TREE TRIMMING?

15 A. As shown on Exhibit HWS-1, Schedule ~~C-5~~^{C-6}, the Company should be
16 allowed \$12,084,876 for tree trimming. That reduces the Company's
17 request for distribution tree trimming of \$16,073,444 by \$3,988,568.

18

19 Q. HOW DID YOU DETERMINE YOUR RECOMMENDED COSTS?

20 A. The estimated cost is based on 1,530 trim miles at the same \$7,897 rate
21 that the Company paid in 2007. This provides for an increase in miles and
22 takes into consideration the fact that the escalating fuel costs are now
23 back to 2005 levels. With that change in fuel rates, an aggressive position

1 would take the 2005 cost per mile and escalate that using the Company
2 indices on Schedule C-40 resulting in a \$5,993 ($\$5,024 \times$
3 $(2.35243/1.97212)$) rate per mile. My recommendation is more than
4 reasonable given today's economic conditions and the volatility in cost per
5 mile over the past ten years.

6
7 Q. ARE ~~THEY~~ ^{THERE} ANY OTHER RECOMMENDATIONS WITH RESPECT TO
8 TREE TRIMMING THAT YOU WOULD LIKE TO MAKE?

9 A. Yes. Given the history of the Company and how the two-year cycle
10 discussed in 1993 never materialized and the fact that trimming has been
11 curtailed since 2000, I would recommend that the Commission require the
12 Company to meet the allowed trim budget. If they fail to do so that they
13 establish a regulatory liability for any unexpended funds and utilize that in
14 subsequent years.

15
16 VIII. POLE INSPECTIONS

17 Q. WHAT ARE YOU RECOMMENDING WITH REGARD TO THE
18 COMPANY'S REQUEST FOR POLE INSPECTIONS?

19 A. As shown on Exhibit HWS-1, Schedule C-7, the Company's request for
20 \$1,573,778 should be reduced \$236,013 to \$1,337,765. Again historically
21 the Company has not attempted to inspect a high number of poles in any
22 one year. Now that the Commission has approved a pole inspection
23 program, the Company has an eight-year inspection cycle. The eight-year

1 inspection cycle requires an inspection of 40,750 poles per year. Indexing
2 the 2007 average cost per pole of \$30.63, results in a 2009 average cost
3 per pole of \$32.83. The \$32.83 multiplied by the annual inspection
4 requirement of 40,750 poles equals a cost of \$1,337,765.

5
6 Q. WHY IS THE 2007 COST PER POLE A REASONABLE AMOUNT TO BE
7 INDEXED?

8 A. It represents the most recent annual actual rate available and is just
9 slightly above the average of the previous four years that fluctuated from
10 year to year.

11
12 IX. TRANSMISSION INSPECTIONS

13 Q. WHY ARE YOU RECOMMENDING AN ADJUSTMENT TO THE
14 COMPANY'S TRANSMISSION INSPECTION COST REQUEST?

15 A. The Company's request for \$642,773 is more than twice the five year
16 average of \$277,760 expended for transmission inspections. The
17 significant increase has not been justified. Tampa Electric provided no
18 documentation that supports doubling of the costs from 2007 historic costs
19 to the projected 2009 test year.

20
21 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING?

22 A. As shown on Exhibit HWS-1, Schedule C-8, the Company's request for
23 \$642,773 should be reduced \$318,846 (\$268,233 on a jurisdictional basis)

1 to \$323,927. The recommended expense level of \$323,927 was
2 determined by indexing the 2007 expense of \$302,195.

3
4
5 X. SUBSTATION PREVENTIVE MAINTENANCE

6 Q. ARE YOU RECOMMENDING AN ADJUSTMENT TO THE COMPANY'S
7 REQUEST FOR SUBSTATION PREVENTIVE MAINTENANCE OF
8 \$2,256,610?

9 A. Yes. Based on information supplied in response to discovery, the
10 Company is asking for a significant increase in preventive maintenance on
11 substation infrastructure due to aging. The problem is as shown on
12 Exhibit HWS-1, Schedule C-9, the Company spent on average \$761,581
13 for preventive maintenance over the five years 2003-2007. Now with an
14 increase in rates being requested, the Company increased the required
15 annual expense to \$2,256,610, almost three times the average spent over
16 the last five years and more than two times the amount expensed in 2007.
17 Despite the suggested urgent need, the Company planned to spend
18 approximately 69% of the 2009 requested amount in the interim year
19 2008.

20
21 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO THE
22 COMPANY'S REQUEST FOR PREVENTIVE MAINTENANCE?

1 A. As shown on Exhibit HWS-1, Schedule C-9, the Company's request for
2 \$2,256,610 should be reduced to \$1,199,425, a reduction of \$1,057,185
3 (\$973,201 on a jurisdictional basis). The recommended spending for 2009
4 is based on an indexed 2007 expense of \$1,118,958. Tampa Electric
5 should have been spending the needed amount on maintenance to
6 provide safe and reliable service. It is not appropriate for a Company to
7 limit maintenance expenditures over the years and then when a rate case
8 is filed simply claim that a significant increase in spending is required.
9 The Company should have to prove that it is spending what is needed to
10 provide safe and reliable service and then with an establish effort shown,
11 they will have justified the needed increase.

12

13 XI. GENERATION MAINTENANCE

14 Q. DID YOU INQUIRE ABOUT THE COMPANY'S REQUEST TO
15 INCREASE MAINTENANCE ON ITS GENERATION FACILITIES?

16 A. The Company has indicated that cost increases have incurred and that the
17 planned maintenance forecasted for 2009 is typical of the past and
18 expected to continue in the future. To evaluate the historic changes in
19 cost and the Company's significant increase in 2009 expense (not typical
20 of the past), the Company was requested to provide historical information
21 and a detailed listing of the maintenance projects for 2008 and 2009.
22 Although there is no dispute that prices have increased for materials and
23 services over the years, the historical expenditures as provided in

1 response to OPC Interrogatory No. 48 do not provide any justification for a
2 significant increase in 2009 costs. Moreover, the response to OPC
3 Interrogatory No. 82 did not provide sufficient detail to justify the projected
4 increases for 2008 and 2009. Thus, Tampa Electric did not provide
5 documentation to support the need for the increase over and above an
6 indexed increase in historical costs.

7
8 Q. HOW DID YOU MAKE THIS DETERMINATION?

9 A. Specific maintenance accounts were identified and a request was made
10 for detail on accounts 511, 512, 513 and 554¹. The accounts were
11 selected based on the significant increases projected. As shown on
12 Exhibit HWS-1, Schedule C-10, the Company has averaged from 2003-
13 2007, \$49.475 million in maintenance expense recorded in accounts 511,
14 512 and 513. Next as shown on Exhibit HWS-1, Schedule C-10, line 9,
15 the indexed average expense was determined to be \$59.291 million for
16 accounts 511, 512 and 513 for the time period 2003-2007. The
17 Company is requesting for the three respective accounts, in 2009, a sum
18 of \$69.151 million. An increase of approximately \$10 million over the 2009
19 indexed historical average.

20

¹ Account 554 was excluded because it was determined that this account was requested in error
and the expense was less than \$1 million

1 To determine the reasonableness of the Company's projection, a
2 comparison was made of the historical costs, the historical indexed costs,
3 and the Company's request. Also considered was the detailed listing of
4 maintenance projects provided in response to OPC Interrogatory No. 82.
5 The detail provided in response to OPC Interrogatory No. 82 listed
6 maintenance for the Big Bend Units for 2008 and 2009. Using the
7 response to OPC Interrogatory No. 48, it was determined that the
8 difference between the 2009 costs and the 2007 actual project costs was
9 \$6.88 million. Adding this \$6.88 million increase for 2009 to the indexed
10 2007 cost of \$53.791 million resulted in an estimated cost for 2009 of
11 \$60.671 million. Since the \$60.671 million was greater than the historic
12 indexed average of \$59.291 million, I used the \$60.671 million, which was
13 the more generous, substantiated cost. Utilizing the calculated estimate
14 for 2009 (which factors in price increases and the Company's detailed
15 project information) the Company's request of \$69.151 million has been
16 overstated by \$8.48 million. As shown on Exhibit HWS-1, Schedule C-10,
17 an adjustment of \$8.48 million should be made to reflect an increased
18 level of spending that is considered more reasonable. The adjustment on
19 a jurisdictional basis would be \$8.173 million.

20

21

1 XII. RATE CASE EXPENSE

2 Q. IS THERE A CONCERN WITH THE COMPANY'S REQUESTED RATE
3 CASE EXPENSE?

4 A. Yes. The Company's total projected amount requested is considered
5 excessive and the amortization period is too short.

6
7 Q. WHY DO YOU BELIEVE THAT THE AMOUNT PROJECTED IS
8 EXCESSIVE?

9 A. The Company is not a small company with limited human resources that
10 would require significant assistance in assembling a rate filing. However,
11 they have projected contracted services other than legal of \$2.123 million
12 for this proceeding. Including the legal fees, the Company has projected a
13 total of \$3.153 million of expense for this rate case. The Company is well
14 aware of its requirements and it is of great concern that the Company is
15 compelled to hire an outside contractor to oversee its rate request. This
16 concern is heightened because cost for Huron Consulting Services, L.L.C
17 included in the filing is \$1.31 million, yet the contract provided in response
18 to OPC POD No. 111 shows a revised contract amount of only \$468,000.
19 Contributing to the high cost is the excessive average hourly rate that the
20 Company has agreed to pay. The Company, in response to OPC
21 Interrogatory No. 121, explained that the difference between the contract
22 amount and the amount included in the filing is what the Company
23 projects will ultimately be incurred. Apparently contract amendments and

1 cost are not a concern. In addition, the Company has included in its
2 request \$116,000 for J. M. Cannell, who as of the date of the response to
3 OPC Interrogatory No. 86 had not yet been retained.

4
5 Q. HOW DID YOU DETERMINE WHAT SERVICES THAT HURON
6 CONSULTING SERVICES, L.L.C. WAS PROVIDING?

7 A. In an attempt to understand why a Company the size of Tampa Electric
8 would require someone to oversee a rate filing, the Company was asked
9 to "explain in detail why the Company required the services of Huron
10 Consulting Services, L.L.C." The response to OPC Interrogatory No. 86
11 states that "Huron Consulting Group assisted Tampa Electric in MFR
12 review and quality control, expert testimony on tax matters and assistance
13 in the discovery process." In reviewing the contract provided in response
14 to OPC POD No. 111, the tasks included MFR Review, Tax Analysis and
15 Support, Pro Forma Review/Revenue Requirements and Data Request
16 Responses. Generally, in a rate case the company's employees will
17 respond to discovery and the lawyers will review the responses. In this
18 case it appears that the Company has an extra layer of review inserted,
19 adding extra costs above and beyond what may really be necessary.

20
21 Q. WHY IS THE AMORTIZATION PERIOD TOO SHORT?

22 A. The Company has not filed for a rate increase for years. If they were
23 allowed to amortize the cost over a three year period and were fortunate

1 enough to stay out half as long as they did since the last filing, they would
2 continue to recover rate case expense when no expense is being incurred.
3 Even the recommendation of a five year amortization period is short given
4 Tampa Electric's history of long time periods between rate cases.

5
6 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO RATE CASE
7 EXPENSE AND RATE BASE?

8 A. First, I recommended that the J.M. Cannell cost for \$116,000 be removed
9 since Tampa Electric has not entered into a contract for his services, there
10 is no justification for including these costs. Next, it is recommended that
11 the \$1.31 million for Huron Consulting Services, L.L.C. be reduced to the
12 contracted amount of \$468,000 as identified in the response to OPC POD
13 No. 111. As shown on Exhibit HWS-1, Schedule C-11, after reducing the
14 projected costs from \$3.153 million to \$2.196 million the amortization was
15 calculated using five years instead of three. The result is a reduction to
16 amortization expense of \$612,000 and a reduction of \$652,000 to the
17 amount included in rate base for unamortized rate case expense.

18
19 XIII. OFFICE SUPPLIES AND EXPENSE

20 Q. ARE THERE CONCERNS WITH THE COMPANY'S REQUEST FOR
21 OFFICE SUPPLIES AND EXPENSE IN ACCOUNT 921?

22 A. Yes. The Company was requested in OPC Interrogatory No. ~~96~~⁶⁵ to provide
23 a detailed analysis that shows how the projected test year amount was

1 determined. The response did not provide an analysis' or documentation
2 to support the increased cost. It simply stated that the projected test year
3 amount was based primarily on historical spending adjusted for
4 contractual agreements, additions for new activities, and removal of
5 activities no longer applicable. The response went on to say that the
6 primary drivers for the increase was increased training, higher information
7 technology costs, building maintenance and miscellaneous expenses.
8 The response to OPC Interrogatory No. 116 provided some added detail,
9 but again the response was quite general.

10

11 Q. WHAT ADJUSTMENT ARE YOU RECOMMENDING TO THE
12 PROJECTED OFFICE SUPPLIES AND EXPENSE?

13 A. The Company's request of \$11.181 million should be reduced \$2.363
14 million to \$8.818 million. The calculation of this adjustment is shown on
15 Exhibit HWS-1, Schedule C-12. On a jurisdictional basis the expense
16 should be reduced \$2.295 million. This adjustment is required because
17 the Company failed to provide sufficient justification for the increase of
18 39% over the 2007 test year expense of \$8.067 million.

19

20

21 XIV. DEFERRED INCOME TAXES

22 Q. ARE THERE SOME CONCERNS WITH THE COMPANY'S POSITION
23 ON INCOME TAXES?

1 A. Yes. The Company has proposed changes in accounting for income
2 taxes based on the recommendation of Mr. Felsenthal which are not
3 warranted. Mr. Felsenthal's recommendations rely on letter rulings for
4 other companies that are not applicable to anyone but the company
5 requesting the ruling. Second, the Company has consistently accounted
6 for deferred taxes and investment tax credits for years under the method
7 that Mr. Felsenthal now claims is incorrect, despite repetitive audits where
8 no errors were found by the Internal Revenue Service (IRS). Further, Mr.
9 Felesenthal bases his position on the incorrect assumption that the
10 projected costs for 2009 are in reality part historic and part projected.

11

12 Q. WHAT DO YOU MEAN THAT THE PRIVATE LETTER RULING IS ONLY
13 APPLICABLE TO THE COMPANY REQUESTING THE RULING?

14 A. Every private letter ruling specifically states that the ruling is only directed
15 to the taxpayer that requested it and states that a private letter ruling may
16 not be used or cited as precedent (emphasis added). The limitation on the
17 use or citing should apply in a rate proceeding just as it applies under IRS
18 regulations.

19

20 Q. WHAT IF THE COMMISSION ELECTS TO PLACE SOME RELIANCE ON
21 THE PRIVATE LETTER RULINGS?

22 A. If the Commission chooses to place any reliance on the private letter
23 rulings they have to realize that the facts addressed by each letter ruling

1 are specific to each company. The letter rulings that Mr. Felsenthal
2 provided in response to OPC POD No. 109 do not reveal all the important
3 facts that must be known if any credence should be placed on the ruling
4 themselves.

5
6 Q. WHAT DO YOU MEAN THE FACTS ARE NOT REVEALED?

7 A. A letter ruling is issued in reply to a request made by a company. The
8 information supplied by Mr. Felsenthal does not include the letter request
9 that provides the background information. Next, two of the three letter
10 rulings that Mr. Felsenthal has relied on do not identify the period used so
11 again facts are missing. Finally, the letter ruling 9029040 states that no
12 where in the IRS Regulations do they explain what is meant by historical
13 and future (Bates 22195). Further, while there is no dispute that all the
14 rulings supplied by Mr. Felsenthal use the same definition of historic and
15 future, the IRS could apply a different definition in a subsequent letter
16 ruling since each letter ruling only applies to an individual company.

17
18 The letter ruling 9029040, as stated earlier does not identify the periods
19 which is important because if that ruling is based on an end of period rate
20 base, the facts are definitely different from the facts in this case. The
21 letter rulings for 9202029 and 9313008 do discuss an average rate base.
22 But this average rate base appears to be an average determined using the
23 beginning of the period balance and the end of the period balance (Bates

1 22213 and 22216), not a 13-month average balance. Finally, the letter
2 rulings each make reference to the fact that the ruling is based the
3 taxpayers representations and/or solely on the information provided by a
4 specific company. Further, those representations are not all known and
5 may very well be different from the facts that would apply to Tampa
6 Electric.

7
8 Q. WHAT DO THE IRS REGULATIONS SAY?

9 A. In response to OPC POD No. 109, Mr. Felsenthal provided the IRS
10 Regulation 1.167(l)-1(h)(6) on which he is relying. Within the regulations,
11 are examples of how to prorate the deferred tax balances. Examples 2
12 and 3, both state that you are to assume the facts that are in example 1
13 "except for." The "except for" in examples 2 and 3 did not change the
14 example 1 fact that the rate base is an end of the year rate base. The
15 regulations state that the reserve for deferred taxes used in setting rates is
16 not to exceed the reserve that existed through out the year. The reserve
17 for deferred taxes is to be the amount at the beginning of the period and
18 the pro rata portion of any projected increases during the year. A thirteen
19 month average reflects the deferred tax balance at the beginning of a year
20 and the pro rata portion of each month added during the year. The
21 regulations do specify that the pro rata calculation is done based on days
22 so the determination that must be made is whether the calculation based
23 on days is materially different to require a change in rate making across

1 the country that has utilized a pro-ration based on months. The letter
2 rulings that Mr. Felsenthal has provided do not provide any insight as to
3 whether the use of a thirteen month issue was addressed. To make a
4 determination the facts and circumstance of a specific company have to
5 be evaluated on a stand alone basis.

6
7 Q. WHAT IF MR. FELSENTHAL'S POSITION IS ADOPTED?

8 A. If Mr. Felsenthal's position is adopted that would mean the Company has
9 been in violation of normalization requirements at least since rates were
10 set in February 1993. And based on the fact that the letter ruling 9029040
11 was issued April 23, 1990, the Company cannot claim that clarification did
12 not exist during the 1992 rate proceeding. If the Company believes that
13 this proposal is correct, I recommend that the Company be required to
14 request a letter ruling of its own, but until that happens the Company
15 should be required to calculate the deferred tax balance on a consistent
16 basis with the methodology employed for at least the last sixteen years.

17
18 XV. AMORTIZATION OF ITC

19 Q. THE RESPONSE TO OPC INTERROGATORY NO. 36 INDICATES THAT
20 THE COMPANY HAS MADE AN ADJUSTMENT TO THE
21 AMORTIZATION OF ITC INCREASING THE REVENUE REQUIREMENT,
22 HOW DID YOU BECOME AWARE OF THIS ADJUSTMENT?

1 A. The adjustment was identified in the response to OPC Interrogatory No.
2 36. The question pertained to adjustments proposed by Mr. Felsenthal in
3 his pre-filed testimony and this was not one that was specifically detailed
4 by Mr. Felsenthal. The Company's response, OPC Interrogatory No. 103,
5 did not provide any additional information as to how the change was
6 reflected in the filing, only that the Company now amortizes the ITC over a
7 different period of time. Absent the appropriate detail the adjustment
8 identified is questionable. As indicated by Mr. Larkin an adjustment to
9 reverse the ITC amortization change identified by Mr. Felsenthal should
10 be made. However, since we do not have the detail to identify how the
11 adjustment was reflected in the filing, we are unable to make an
12 adjustment as part of our recommended cost of service at this time.

13

14 Q DOES THIS COMPLETE YOUR TESTIMONY?

15 A. Yes, it does at this time. There are still outstanding discovery requests
16 which may affect my adjustment or require additional adjustments.

17

18

1 BY MS. CHRISTENSEN:

2 Q. Mr. Schultz, did your prefiled testimony
3 contain exhibits, Appendix 1 and HWS-1?

4 A. Yes, it did.

5 Q. Do you have any changes to those exhibits?

6 A. I have one change that I have found on
7 Schedule C-5, line 3.

8 CHAIRMAN CARTER: Which one are you referring
9 to?

10 THE WITNESS: Exhibit HWS-1, Schedule C-5.

11 CHAIRMAN CARTER: Okay.

12 THE WITNESS: Line 3, the description is
13 wrong. It should say "Adjusted Benefits."

14 BY MS. CHRISTENSEN:

15 Q. With that modification to your exhibits, are
16 they otherwise correct today?

17 A. To the best of my knowledge, yes, they are.

18 MS. CHRISTENSEN: I would ask that
19 Mr. Schultz's exhibits be marked 51 and 52, as they are
20 in the Comprehensive Exhibit List.

21 CHAIRMAN CARTER: That's noted for the record.

22 BY MS. CHRISTENSEN:

23 Q. Mr. Schultz, can you please summarize your
24 testimony?

25 A. My testimony basically addresses certain costs

1 that were evaluated in the company's request. The
2 company made projections. I asked some discovery
3 questions. I looked at the responses to my discovery,
4 to staff's discovery, and made some determinations as to
5 whether in my opinion those costs were supported and
6 were justified by the company or whether they were costs
7 that should be paid for by ratepayers. I made my
8 adjustments in accordance with what I determined from
9 that analysis.

10 For instance, in payroll, I made an adjustment
11 to the number of people that were included. I didn't
12 believe the company has justified the increase that they
13 were reflecting in the filing.

14 Incentive comp, I based my recommendation
15 based upon the information provided by the company in
16 responses to discovery, and I concluded that their goals
17 didn't justify incentive comp being paid for by
18 ratepayers.

19 Maintenance costs, I concluded that based upon
20 the information provided, there wasn't justification,
21 and there is a concern that the costs had been deferred
22 from prior years.

23 With respect to rate case, I examined those
24 costs and found them to be excessive, in my opinion, as
25 far as what a company should have incurred, and taking

1 into consideration the size of the company.

2 And with respect -- I made my adjustments
3 taking into consideration the economic conditions of the
4 country at this point as to what's going on, and also I
5 reflected the fact -- I made mention of the fact that
6 the company has basically ignored these economic
7 conditions and they've ignored changes that are
8 occurring within other companies.

9 Q. Mr. Schultz, does that conclude your summary?

10 A. Yes, it does.

11 CHAIRMAN CARTER: Excellent timing.

12 THE WITNESS: Thank you.

13 MS. CHRISTENSEN: I would tender the witness
14 for cross-examination.

15 CHAIRMAN CARTER: Thank you. You're
16 recognized.

17 MR. HART: Thank you, Mr. Chairman.

18 CROSS-EXAMINATION

19 BY MR. HART:

20 Q. Mr. Schultz, I would like to look at your
21 Exhibit C-6 and talk to you for a few minutes about tree
22 trimming.

23 CHAIRMAN CARTER: Can you hear?

24 THE WITNESS: I'm there.

25 CHAIRMAN CARTER: Get a little -- pull your

1 mike a little closer to you. There you go.

2 BY MR. HART:

3 Q. Now, although you and the company approached
4 this differently, your cost per mile actually turned out
5 to be very close. Do you have a calculator there?

6 A. No, I don't.

7 Q. Well, if you take -- you do use -- well, you
8 understand the system miles to be approximately 6,120?

9 A. The total system miles, yes, are 6,121.

10 Q. Now, a third of that is approximately 2,040?

11 A. A third of the system miles, yes, sir.

12 Q. Right. Now, if we take the, as shown on line
13 14 of your schedule, the 16,073,440, if we divide that
14 16,073,444, by 2,040, would you accept, subject to
15 check, that that number is \$7,879 per mile?

16 A. I'm accept that, subject to check, yes, sir.

17 Q. And that's only an \$18 difference than your
18 per mile calculation of 7,897 that you used in your
19 number?

20 A. Assuming your calculation is correct, yes,
21 sir.

22 Q. So the result of that is that the real
23 difference between you and the company is whether it
24 should be a four-year cycle or a three-year cycle?

25 A. Not entirely. That does reflect 1,530 miles

1 being trimmed, and that's on the assumption that the
2 company would get to a four-year cycle in 2009.

3 What I would like to point out is, if you'll
4 look at the miles trimmed on that schedule, the company
5 was at or near a three-year cycle at one point in time.
6 They elected to defer trimming and reduce the amount of
7 trimming.

8 Now, you don't jump right back in and all of a
9 sudden be able to get back to a three-year cycle.
10 You're not going to have that happen, because you're
11 going to run into problems with the cutting that's
12 getting done. They may say that they want to do it.
13 That doesn't mean it will happen. I've been through
14 enough of these cases with tree trimming that I've
15 gotten a good familiarity with that.

16 Another problem is how the costs were arrived
17 at that the company has reflected in the filing.
18 Mr. Haines, I believe it was, made reference to the fact
19 that --

20 Q. Well, I really think you're not answering my
21 question now. I've given you quite a bit of latitude to
22 talk about tree trimming, but my question was just that
23 based on your cost per the calculation used in your
24 exhibit and taking the number that we calculated of
25 7,879, that those two cost numbers, the one you used and

1 the mathematical calculation I gave you, were very
2 similar. And what I asked you was, if you take the cost
3 numbers times the 1,530 or the 2,040, that accounts for
4 the difference between the two numbers, doesn't it?

5 A. You did say that. But if I may -- and it's
6 not going to be phrased exactly. You said essentially
7 the difference between your number and our number is
8 that you're looking at a four-year cycle versus our
9 three-year cycle. And I said no, that's not essentially
10 the difference, because not only have I factored in
11 going to a four-year cycle here, it's also factoring in
12 other items such as costs that the company has a
13 different approach on in the company's calculation, and
14 I've described some of that in my testimony.

15 Q. Well, what I want to talk about for a second
16 here is the math. Between the \$12,084,000 that you used
17 and supported in your number, the only difference in
18 those numbers is 510 times the cost per mile, between
19 your number and the company's number?

20 A. If you're speaking strictly of the math, yes,
21 you're right, but that's not the difference between your
22 positions in this case.

23 Q. Well, I didn't ask you about that. I just
24 asked you about this calculation. At least in terms of
25 the calculations you used and the calculation, although

1 they approached it differently, that results from the
2 numbers the company used, the cost per mile is very
3 similar in the two calculations; isn't that correct?

4 A. That's correct. But the cost that the company
5 had is based on one methodology, and the cost that I
6 calculated for the cost per mile is calculated a totally
7 different way.

8 Q. That is correct. But we're talking about the
9 difference in the results. If we use your cost numbers,
10 the cost for being on a three-year cycle -- if we use
11 your cost per mile number, the cost for being on a
12 three-year cycle would be approximately \$16 million;
13 isn't that correct?

14 A. That's correct.

15 Q. Okay. Now, there has been discussion in this
16 case about whether you should be on a three-year cycle
17 or a four-year cycle or some other cycle, but at least
18 based on the cost per mile, the philosophical difference
19 is on how many miles per year should be trimmed; isn't
20 that correct?

21 A. Could you rephrase, restate that?

22 Q. The philosophical difference between the
23 parties is how frequently tree trimming should occur,
24 should it be a three-year cycle, should it be on a
25 four-year cycle, should it be on a five-year cycle.

1 That's what we've been talking about.

2 A. Well, again, as I alluded to earlier, I'm not
3 saying that the company shouldn't be on a three-year
4 cycle. I'm saying it's presumptuous to assume that you
5 will be on a three-year cycle in 2009.

6 Q. The cost that would be required to be on a
7 three-year cycle, if we use your cost per mile number
8 that you used, to be on a three-year cycle would take
9 \$16 million.

10 A. And I agreed with that. That would be the
11 case.

12 Q. Now, are you aware that the Commission's
13 approved storm hardening plan for Tampa Electric is a
14 three-year cycle for tree trimming?

15 A. I'm aware that there is the plan there, yes,
16 sir.

17 Q. Now, you're not proposing, are you, that the
18 Commission require Tampa Electric to be on a three-year
19 cycle, but allot them the money for a four-year cycle?
20 You're not proposing that, are you?

21 A. No. I'm proposing what I believe the company
22 will do to get to a three-year cycle. History has shown
23 what happens with the company. The company will have
24 costs, they'll incur the costs, and then all of a sudden
25 they'll defer the maintenance.

1 This is not something that's unusual in the
2 utility world. I've gone through this in many cases
3 where companies will say, "We're going to get on this
4 cycle. We need this money," they get the money, and
5 then after they've been there maybe -- I mean, they
6 might have the money, and they might not even expend it
7 because they don't follow through with all of it,
8 because tree trimming is always something that has been
9 a target, in my experience, to be reduced if times get
10 tough and you need to find some money someplace.

11 Q. Have you been in a situation with a company
12 where they had a commission-required storm hardening
13 plan that required three-year tree trimming and had the
14 company not follow it?

15 A. I've had where -- I wouldn't say -- I can't
16 say -- they don't call it storm hardening, but I've had
17 where the company has been ordered to do a certain level
18 of trimming and they didn't achieve it. So what was
19 happening there -- and I've made this recommendation,
20 and I made a similar recommendation here, is that if
21 you're going to give them some money, you make sure that
22 they spend it, and if they don't spend it, they have to
23 create a regulatory liability to reflect the unspent
24 portion.

25 Q. But would it be fair to say then that you're

1 not opposed to a three-year cycle, and you're not
2 opposed to this cost per mile that you used in your
3 calculation in order to determine the cost of a
4 three-year cycle?

5 A. I've already said that I'm not opposed to the
6 three-year cycle. I'm not opposed to my cost. I just
7 don't believe the company will accomplish that.

8 Q. I would like to look at your Exhibit C-10. Is
9 it fair to say that what you're trying to accomplish
10 with this exhibit is to look at general maintenance,
11 O&M, and determine whether the company's proposal for
12 2009 is more than you think is reasonable or
13 historically correct?

14 A. I would say that's a fair assessment.

15 Q. Now, what you did in this was, you took the
16 numbers between 2003 and 2007, you took the actual
17 numbers, you indexed them to bring them to current
18 dollars, and you calculated that the average O&M cost
19 for generation during that period was approximately
20 \$60 million?

21 A. That's correct.

22 Q. And you looked at the company's number of
23 69 million and said it's 8 million too high?

24 A. That's correct.

25 Q. Now, when you made your calculation of O&M,

1 you didn't realize, did you, that in your numbers, the
2 2003 through 2007, there were no dredging expenses?

3 A. You're wrong there. There is dredging
4 expenses. In the rebuttal testimony, what they said is,
5 they took out some of the dredging expenses, but they're
6 not all out. There's still some in there.

7 Q. There's some in which years?

8 A. In 2009 is what I'm talking about.

9 Q. The question -- what did I ask you?

10 A. You asked about the dredging expenses.

11 Q. I asked you in your 2003 to 2007 numbers when
12 you calculated historical averages, you did not realize
13 that there were no dredging expenses in the 2003 to 2007
14 numbers.

15 A. Oh, I'm not sure -- I guess based on the
16 testimony that has been presented, I would have to
17 assume that's correct.

18 Q. Okay. So to make these O&M in the company's
19 projection an apples-and-apples to what you calculated
20 for historical, you would have to take out all of the
21 2009 dredging expenses if you wanted to get O&M expenses
22 without dredging?

23 A. Oh, no. I would never agree to that. First
24 of all, you're not going to get a perfect
25 apples-to-apples comparison, because there's costs that

1 were incurred in 2003 that haven't been incurred in
2 2007. There's costs that are in 2004 that aren't in
3 2008, and the same goes with 2009. I mean, it depends
4 upon -- I mean, we're talking different plants. If you
5 want to take to it an extreme, I think it's Mr. -- let
6 me reference his -- yes, Mr. Hornick indicated that the
7 cost for the outages that's reflected in these is
8 considered atypical. So 2009 also has that. And in
9 your assessment, we would have to take out all those
10 costs too to make them comparable. But that's not the
11 case, because you have to take a look and see what has
12 been done historically and assume that something similar
13 will happen. That's why we're taking an averaging of
14 these costs and looking at that to see what's what with
15 them.

16 Q. Well, if we take -- with regard to plant O&M
17 maintenance, the type of things that's done to tubing,
18 machines, turbines, those are similar from year to year,
19 aren't they, the type of expense?

20 A. Oh, they can vary, depending upon the level of
21 maintenance that's being done at the different plants.

22 Q. But they're repairs to turbines, they're
23 repairs to boilers, they're repairs to machines, they're
24 repairs to tubing. I realize it's to different tubes in
25 different plants, but they're the same types of repairs,

1 aren't they?

2 A. They can be from one year to the next.

3 Q. Now, dredging doesn't have any similarity to
4 any of those types of expenses, does it?

5 A. No. It's part of your maintenance costs.

6 Q. But you know that in the \$69 million number of
7 the company, the company has put 6.9 million of dredging
8 expenses in the company numbers? In this 69,151 on your
9 schedule, line 11, it has how much dredging expense in
10 it?

11 A. Okay. You're right. 6.9, yes.

12 Q. Okay. If we were to take the 6.9 out of the
13 69, we get what? 62,251?

14 A. Subject to check.

15 Q. And you've calculated the number, historical
16 number to be indexed and averaged to be 60,671,000; is
17 that correct?

18 A. That's correct.

19 Q. So without the dredging expenses, the O&M
20 expenses that you've calculated to be appropriate and
21 the ones that the company has used are a couple of
22 million apiece, a million and a half apart?

23 A. I don't want to be nonresponsive, but I'm --

24 Q. Well, the question is, if you take the
25 6.9 million out of the company's projected 69 million,

1 what's the difference between that result and your
2 number? That's the question.

3 A. The difference would be like 1-point-some
4 million dollars. But I have to caveat that difference,
5 because that 60 million that I have there does not
6 reflect the true average index of maintenance costs.
7 That reflects the average plus \$6 million of extra costs
8 associated with the increase -- the atypical maintenance
9 that Mr. Hornick discussed.

10 Q. Well, what that means is that even with
11 atypical expenses in 2009, they're only a million and a
12 half dollars more; isn't that correct?

13 A. That's correct, including the atypical
14 expenses.

15 MR. HART: All right? We have no further
16 questions of this witness?

17 CHAIRMAN CARTER: Ms. Bradley.

18 CROSS-EXAMINATION

19 BY MS. BRADLEY:

20 Q. I had a couple of questions. I'm sorry.
21 Yesterday, I think it was -- I've lost track of time,
22 but Ms. Merrill testified -- I believe it was Merrill --
23 that they had to do an incentive compensation plan in
24 order to hire good employees and to get them to do their
25 job. And is that common with utility companies?

1 A. The explanation is common. That's a typical
2 one, it's required to motivate our employees, it's
3 required to attract and maintain employees. I hear it
4 in every rate case I've been in.

5 Q. I didn't ask that very well. What I was
6 trying to say, is this type of incentive compensation
7 plan common with utilities?

8 A. Incentive compensation is common with
9 utilities. However, a main factor to reflect when
10 you're evaluating this is the fact that they say we need
11 this to make our salaries commensurate, comparable to
12 other utilities, and we have these studies that we base
13 this analysis on. What isn't recognized when the
14 company says that is the fact that these compensations
15 they're comparing them to do not reflect any adjustments
16 other commissions may have made to that compensation.
17 You have jurisdictions where it's totally eliminated,
18 partially eliminated from rates.

19 Q. Okay, sir. You mentioned something also about
20 the overtime dollars and it not being --

21 MR. HART: Mr. Chairman, we object to
22 additional direct testimony.

23 CHAIRMAN CARTER: You're recognized. I beg
24 your pardon?

25 MR. HART: We object to additional direct

1 testimony.

2 CHAIRMAN CARTER: Response, Ms. Bradley?

3 MS. BRADLEY: I just had some questions about
4 his testimony.

5 CHAIRMAN CARTER: Ms. Helton.

6 MS. CHRISTENSEN: It's not additional direct
7 testimony.

8 CHAIRMAN CARTER: I didn't recognize you
9 Ms. Christensen.

10 MS. BRADLEY: And I didn't actually finish my
11 question.

12 CHAIRMAN CARTER: Whoa, whoa. Hold the phone.

13 MS. HELTON: Mr. Chairman, I think that it is
14 inappropriate for the intervenor witnesses to bring on
15 additional direct testimony through what I call friendly
16 cross. You can call it what you would like. I believe
17 that if they had a position that they wanted to bring
18 forward and make a direct case, then they could have
19 brought a witness into the record as well.

20 MS. CHRISTENSEN: Commissioner, may I respond?

21 CHAIRMAN CARTER: No, you may not. I sustain
22 the objection. Move on.

23 MS. BRADLEY: I don't know where to go,
24 because I hadn't finished the question, so --

25 CHAIRMAN CARTER: Well, ask another one.

1 MS. BRADLEY: Can I ask for some direction,
2 because I'm getting really --

3 CHAIRMAN CARTER: I gave all of you directions
4 the other day that we started from. We said that we're
5 not going to have friendly cross. We said we're going
6 to ask you to talk to your witnesses about being direct
7 to the questions. And also you've got -- the case
8 before us is a case where the company is requesting a
9 rate increase, and you as intervenors have positions,
10 some of them similar, some of them may not be similar.
11 But those that are similar, I asked you not to be
12 redundant with those. So those -- I mean, if you want
13 me to state the same thing I stated the other day, I'll
14 do that again with those directions, but we're not
15 getting anywhere here.

16 MS. BRADLEY: My problem is, I've looked in
17 the rules of evidence, the civil procedure, the
18 administrative rules, your rules -- I even had our
19 librarian go in on West Law. I've asked a number of
20 people, and no one can point to the rule that defines
21 friendly cross. And I don't want to do something I'm
22 not supposed to, but if I don't know what I'm not
23 supposed to do, I have problems with that.

24 CHAIRMAN CARTER: Even though this is not your
25 first time here, Ms. Bradley, Ms. Helton, would you read

1 from the rules of procedure, please.

2 MS. HELTON: Mr. Chairman, maybe -- where I
3 seek guidance sometimes -- and some of y'all know this.
4 One of my favorite judges is Judge Padovano, who has
5 written a treatise on Florida civil practice. And in
6 Section 19.6 of his treatise, he talks about -- he
7 doesn't call it friendly cross, but I essentially think
8 it's the same thing as friendly cross. When you have a
9 multi-party proceeding like we have here for this
10 hearing, and where you have sides that are aligned, he
11 talks about the appropriateness or the inappropriateness
12 of the parties involved to cross-examine witnesses. So
13 with your pleasure, Mr. Chairman, I would like to read
14 this paragraph into the record.

15 CHAIRMAN CARTER: You're recognized.

16 MS. HELTON: "If there is one party on each
17 side of the case, each would have the right to
18 cross-examine the witnesses called by the other.
19 Likewise, if there are multiple parties on one side of
20 the case, all parties on one side would have a right to
21 cross-examine a witness called by the party on the other
22 side. It is more difficult, however, to determine
23 whether a party has a right to cross-examine a witness
24 called by another party on the same side of the case. A
25 party who is aligned on the same side of the litigation

1 as the party calling the witness should be allowed to
2 cross-examine the witness if the interests of the
3 parties are adverse to each other. On the other hand, a
4 party who is aligned on the same side of the litigation
5 with a party having a common interest should not be
6 allowed to cross-examine a witness called by that party.
7 Co-parties having common interests in the litigation
8 should not be allowed to cross-examine witnesses called
9 by each other."

10 CHAIRMAN CARTER: My ruling stands. Let's
11 proceed.

12 MS. BRADLEY: If I can have just a second to
13 find out where I was.

14 CHAIRMAN CARTER: You may.

15 BY MS. BRADLEY:

16 Q. Ms. Abbott testified yesterday, and there were
17 some questions about a case she had handled a couple of
18 years ago that she was paid I think something like
19 \$4,000 -- I'm trying to think -- a month, or a quarter,
20 or whatever it was. And did you see that testimony
21 about what she was paid? Are you familiar with what she
22 was paid in the Oklahoma case versus what she's being
23 paid now?

24 MR. HART: Mr. Chairman, I don't understand
25 how that's relevant to this witness's testimony, perhaps

1 even the case, but I certainly don't understand how it's
2 relevant to what he has testified to and would object to
3 the testimony.

4 CHAIRMAN CARTER: Objection on the basis of
5 relevancy, Ms. Bradley, to be heard on the objection.

6 MS. BRADLEY: Well, he's testifying about the
7 things that they have billed for and their different
8 amounts that they are claiming and all of that, and one
9 of the things I believe is the cost of the case and all
10 of that, and I think it certainly goes to that and the
11 reasonableness of that.

12 CHAIRMAN CARTER: Ms. Helton.

13 MS. HELTON: I have to confess here, I haven't
14 read the direct testimony that Mr. Schultz filed, but
15 let me ask this. Did you -- and I guess maybe this
16 question is better directed to Ms. Christensen. Did he
17 address the rate case expense and the rate case expense
18 associated with each of the witnesses that TECO has
19 hired?

20 MS. CHRISTENSEN: His testimony certainly
21 addresses rate case expense, and the proper amortization
22 and the total rate case expense is discussed in there.
23 I believe the additional amount was evidence that was
24 brought forward in testimony at the hearing, so he would
25 not have addressed that in his testimony, since it was

1 only developed through live testimony at the hearing.

2 MS. HELTON: My recollection of the MFRs for
3 rate case expense is that the company would put -- file
4 in the MFRs at the beginning of the case what its
5 expenses are associated -- or projected expenses are
6 associated with each witness that it's hiring or each
7 consultant it's hiring. So did the company -- didn't
8 the company do that for Ms. Abbott, and wouldn't he have
9 had the chance to have addressed the reasonableness of
10 her cost then or expense then?

11 MS. CHRISTENSEN: Let me be clear. He has
12 testimony in his prefiled testimony regarding rate case
13 expense, and I believe he does address all of the
14 different rate case expenses that were requested. The
15 thing that I was clarifying was that the information
16 regarding the \$4,000 and the 2,500 for testimony related
17 to the Oklahoma case was developed during live
18 testimony, and since it was developed during live
19 testimony, that was not addressed in his prefiled
20 testimony, and that's why I wanted to make that
21 clarification.

22 MR. HART: Mr. Chairman?

23 CHAIRMAN CARTER: Let's -- hang on.

24 MR. HART: Only if I need to be heard.

25 CHAIRMAN CARTER: No. Commissioners, we're

1 beginning to bog down in trivialities here. Let me just
2 take a moment to consult with our legal staff. And
3 again, I admonish the attorneys to remember my remarks.
4 It seems like forever ago, but I believe it was Tuesday
5 morning. What day was it? Was it Tuesday? Let's take
6 -- I need about 10 minutes with staff.

7 (Short recess.)

8 CHAIRMAN CARTER: We are back on the record.
9 Staff, you're recognized.

10 MS. HARTMAN: Mr. Chairman, over the break I
11 took an opportunity to relook at Judge Padovano's
12 passage that I read to you, and I've conferred with
13 staff, and based on my discussions with staff, it's my
14 understanding that the AG's Office has adopted the
15 position of the Office of Public Counsel for each of the
16 issues to which Mr. Schultz is testifying. And based on
17 my reading of Judge Padovano, where he says a party who
18 is aligned on the same side of the litigation with a
19 party having a common interest should not be allowed to
20 cross-examine a witness called by that party -- our
21 practice during this proceeding has been to allow the
22 parties a little bit of latitude. However, based on
23 where we are, my suggestion is that the objection be
24 sustained.

25 CHAIRMAN CARTER: And the objection will be

1 sustained. And it seems, Ms. Bradley, that we're
2 bolstering that, because the AG's Office has adopted the
3 positions of OPC. This is an OPC witness, and so --
4 it's getting late.

5 MS. BRADLEY: I have no further questions, but
6 I would like to proffer my questions.

7 CHAIRMAN CARTER: Let me see if I can set a
8 time certain for -- because I don't think that we
9 should -- why don't you -- let me just take a moment
10 here, because -- are you saying now that you're not
11 adopting the position of OPC? Let's be real clear,
12 because that's what you said from the very beginning,
13 that the Attorney General's Office had adopted the
14 positions of OPC. Is that what you're saying you're not
15 doing now, for the record?

16 MS. BRADLEY: No, sir. We adopted the
17 positions rather than writing them out. I guess next
18 time I'll write them all out.

19 CHAIRMAN CARTER: And this witness is
20 sponsored by OPC. This is their witness.

21 MS. BRADLEY: Yes, sir.

22 CHAIRMAN CARTER: And you heard the reading
23 from Judge Padovano, and you've heard my ruling, so what
24 more do you want, Ms. Bradley?

25 MS. BRADLEY: I'm just asking to proffer my

1 questions for the record.

2 MS. HELTON: I think for her to be able to
3 preserve her objection, that would be appropriate.

4 Let me ask this, though, because it's been --
5 this is a late night, and my recollection on -- I think
6 there are several ways we could go about that. If
7 Ms. Bradley has one way in which she is suggesting she
8 would like to do that, or --

9 MS. BRADLEY: Unfortunately, if it was my
10 witness, I would know his response to these questions,
11 and I could summarize it. But since I don't know, since
12 he's not my witness, then I don't have any way to
13 proffer other than to ask him the questions and to have
14 him to answer.

15 CHAIRMAN CARTER: But the problem -- and we're
16 still discussing it. The problem is that you've adopted
17 the position of OPC. This is an OPC witness. You've
18 adopted the position of OPC, and since they've offered
19 this witness for those issues, you've adopted those
20 issues. It's bolstering.

21 MS. BRADLEY: Mr. Chairman, I understand your
22 ruling, and I'm not --

23 CHAIRMAN CARTER: I'm just talking it through
24 with you. In the context of what -- I just don't know
25 from the standpoint of judicial economy or for the

1 efficacy of what we're doing here -- I mean, help me
2 understand where you're going.

3 MS. BRADLEY: Well, a proffer --

4 CHAIRMAN CARTER: Maybe I can help you get
5 there.

6 MS. BRADLEY: -- is required to preserve the
7 issue for appellate purposes.

8 MS. HELTON: Mr. Chairman, can I make this
9 suggestion? It's my understanding that Mr. Stewart has
10 family issues and that he needs to be brought to the
11 stand tonight. Maybe if we could set aside -- and
12 that's probably not the right terminology --
13 Mr. Schultz, let Mr. Hart, Ms. Bradley and I discuss how
14 to proceed with respect to this particular issue, and
15 then we can see if we can get that resolved and not have
16 to do it here on the record.

17 CHAIRMAN CARTER: Okay. Let's do that. So
18 we'll take a temporary recess on this issue for those --
19 you guys get together with staff. Ms. Bradley, at this
20 point in time, we need to talk to -- is it Mr. --

21 MR. WILLIS: Mr. Chairman.

22 CHAIRMAN CARTER: Mr. Twomey, are you --

23 MR. WILLIS: Mr. Chairman.

24 CHAIRMAN CARTER: One second. One second.

25 Yes, sir.

1 MR. WILLIS: I believe that we can expedite
2 Mr. Stewart's testimony, and we can do that while this
3 other discussion is going on.

4 MR. TWOMEY: Yes, sir.

5 CHAIRMAN CARTER: Mr. Twomey, you're
6 recognized.

7 MR. TWOMEY: Yes, sir, Mr. Chairman. Thank
8 you. I believe I'm correct in understanding that no
9 other party has questions of Mr. Steve Stewart,
10 including the company, in which case we could expedite
11 this by stipulating his testimony in without cross, and
12 that would eliminate the need for having him called to
13 the stand and giving his summary.

14 CHAIRMAN CARTER: Commissioners? Any quick
15 questions for Mr. Stewart, Commissioners?

16 Okay. So, Mr. Twomey, you'll offer his
17 prefiled testimony, so then we'll say that the prefiled
18 testimony of witness Stewart will be entered into the
19 record as though read.

20

21

22

23

24

25

1 BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2

3 TESTIMONY

4 OF

5 STEPHEN A. STEWART

6

7 **Q. Please state your name, address and occupation?**

8 A. My name is Stephen A. Stewart. My address is 2904 Tyron Circle,

9 Tallahassee, Florida, 32309. I am testifying as a consultant to AARP.

10 **Q. Please describe your educational background and business**11 **experience?**

12 A. I graduated from Clemson University with a Bachelor of Science degree in

13 Electrical Engineering in December 1984. I received a Master's degree in

14 Political Science from Florida State University in August 1990.

15 I was employed by Martin Marietta Corporation and Harris Corporation as

16 a Test Engineer from January 1985 until October 1988. In July 1989, I accepted

17 an internship with the Science and Technology Committee in the Florida House of

18 Representatives. Upon expiration of the internship I accepted employment with

19 the Office of the Auditor General in August 1990, as a program auditor. In this

20 position I was responsible for evaluating and analyzing public programs to

21 determine their impact and cost-effectiveness.

22 In October 1991, I accepted a position with the Office of Public Counsel

23 ("Public Counsel") with the responsibility for analyzing accounting, financial,

24 statistical, economic and engineering data of Florida Public Service Commission

1 (“Commission”)-regulated companies and for identifying issues and positions in
2 matters addressed by the Commission. I left the Public Counsel in 1994 and
3 worked as a consultant for the Florida Telephone Association for one year.

4 Since 1995 I have been employed by two privately held companies,
5 United States Medical Finance Company (“USMED”) and Real Estate Data
6 Services Inc. I worked with USMED for approximately four years as Director of
7 Operations. I founded Real Estate Data Services in 1999 and I am currently its
8 President and CEO.

9 Over the last twelve years I have also worked for the Public Counsel on a
10 number of utility related issues. In the last several years I have also served as a
11 consultant to, and provided testimony for, AARP.

12 **Q. Are you sponsoring any exhibits in this case?**

13 A. Yes. I am sponsoring Exhibit No. ____ (SAS-1), entitled “Exhibit of
14 Stephen Stewart on Behalf of AARP”. It consists of one document that is four
15 pages long and details my qualifications and experience.

16 **Q. What is the purpose of your testimony?**

17 A. I am appearing on behalf of AARP in opposition to Tampa Electric
18 Company’s (“TECO”) request for an increase in their Annual Accrual for the
19 Storm Damage Reserve from \$4 million to \$20 million and an increase in their
20 target amount for the Storm damage Reserve from \$55 million to \$120 million. I
21 believe TECO has failed to take into account the opportunity to recover storm
22 damage costs under the state’s new securitization law, when determining the
23 appropriate level for the Storm Damage Reserve. My review indicates that a

1 Storm Damage Reserve Level of \$55 million would have been large enough to
2 withstand the storm damage from most, but not all, storm seasons over the last 14
3 years. Keeping the Storm Damage Reserve at the current level of \$55 million
4 would allow the Commission to retain the \$4 million a year Storm Damage
5 Accrual, which would reduce TECO's proposed rate increase by \$16 million per
6 year. Going forward, any Storm Damage Reserve deficiencies resulting from
7 excessive losses could be dealt with by a separate surcharge in the same manner
8 such a surcharge was earlier approved by this Commission for Florida Power &
9 Light Company ("FPL") and Progress Energy Florida ("PEF"). Keeping the
10 Storm Damage Reserve Level as low as is reasonably possible will minimize the
11 financial impact on customers' rates during these trying economic times, while
12 still allowing TECO and the Commission the flexibility to address TECO's
13 prudent storm recovery costs from year to year.

14 **Q. Please summarize TECO's recommendation for the appropriate level**
15 **of the Storm Damage Reserve and Annual Accrual.**

16 A. Two witnesses, Mr. Harris and Mr. Carlson, address the Annual Accrual
17 and Storm Damage Reserve issues on behalf of TECO. Mr. Harris provides a
18 historic statistical analysis indicating an expected annual cost for windstorm
19 losses of \$17.8 million. Mr. Carlson offers his "professional judgment" as a basis
20 for changing the Annual Accrual from \$4 million to \$20 million and the
21 appropriate level of the Storm Damage Reserve from \$55 million to \$120 million.
22 Mr. Carlson claims the request is based on three fundamental objectives: (1) to
23 achieve an effective balance between rate stability and long-term cost for

1 customers; (2) to build a reserve sufficient to cover the majority of loss events in
2 order to mitigate the need for a surcharge to customers immediately after such an
3 event; and (3) to design a reserve to cover the higher probability events and not
4 the lower probability, high severity events.

5 **Q. How do you understand that TECO arrived at its requested Storm**
6 **Damage Reserve of \$120 million and Annual Accrual of \$20 million based**
7 **upon the testimony of Messrs. Harris and Carlson?**

8 A. Mr. Harris's describes in his testimony a Storm Loss Analysis based on a
9 probabilistic approach using proprietary software. The Storm Loss Analysis
10 indicates an expected annual uninsured cost to TECO's system from all storms
11 estimated to be \$17.8 million. Mr. Harris's also describes in his testimony a
12 Reserve Performance Analysis using a dynamic financial simulation analysis
13 approach. This highly technical analysis concludes that "higher accrual levels will
14 result in a lower probability of negative reserve balances." Mr. Harris makes no
15 recommendation with regards to the Annual Accrual level or the appropriate
16 Storm Reserve Damage level.

17 **Q. How did Mr. Carlson transform Mr. Harris's analysis into the TECO**
18 **request?**

19 A. TECO witness Carlson recommends changing the Annual Accrual from
20 \$4 million to \$20 million and the appropriate level of the Storm Damage Reserve
21 from \$55 million to \$120 million based on his "professional judgment" as it
22 relates to both TECO's storm experience in 2004 and the analysis conducted by
23 Mr. Harris. Mr. Carlson makes this recommendation within a current regulatory

1 framework set forth by this Commission that he concludes is “sound.” This
2 framework consists of three major components: (1) an annual storm accrual,
3 adjusted over time as circumstances change; (2) a storm reserve adequate to
4 accommodate most, but not all, storm years; and (3) a provision for utilities to
5 seek recovery of costs that go beyond the storm reserve.

6 **Q. Do you object to Mr. Carlson’s analysis or deny that the selection of**
7 **an appropriate Reserve and Accrual may involve subjective considerations?**

8 A. No, I agree that the analysis is inherently subjective. However, I believe
9 that the testimony indicates Mr. Harris’s analysis and Mr. Carlson’s
10 recommendation violates one of Mr. Carlson’s “fundamental objectives.” In
11 addition, I believe Mr. Carlson’s own testimony supports no change in the Annual
12 Accrual or the Storm Damage Reserve level.

13 **Q. Would you please elaborate?**

14 A. Yes. Mr. Carlson states on page 3 of his testimony that a fundamental
15 objective of his analysis is to “design a reserve to cover the higher probability
16 events and not the lower probability, high severity events.” However, both he and
17 Mr. Harris admit that the impact of the low probability hurricane season of 2004
18 has biased their recommendations and analysis. First, Mr. Carlson, in his
19 testimony on page 13, clearly states he relied on the experience of 2004 in
20 reaching his conclusions. However, Mr. Carlson does not address the impact on
21 his professional judgment of the less severe events between 1994 and 2004.
22 Additionally, Mr. Harris acknowledges, on page 10 of his testimony, that the

1 addition of the year 2004 into his analysis “increased the long-term hurricane
2 hazard in the Tampa area by about 60 percent over the prior modeled hazard”.

3 **Q. Is there evidence that the current Annual Accrual and Storm Damage**
4 **Reserve is sufficient?**

5 A. Yes. Mr. Carlson’s testimony on pages 4 and 5 indicates that the annual
6 storm damage accrual of \$4 million and the current \$55 million Storm Damage
7 Reserve target set forth in 1994 by this Commission, based on the regulatory
8 framework Mr. Carlson approves of, offered sufficient coverage until the
9 abnormal storm season of 2004.

10 **Q. In your view, if the current situation is sufficient, why is TECO**
11 **seeking a change?**

12 A. It seems the only reason TECO is seeking a change in the Annual Accrual
13 and the Storm Damage Reserve now is because they have this base rate case
14 pending before the Commission and because 2004 was an abnormal storm year.

15 **Q. Do you have any other evidence that indicates the current situation is**
16 **sufficient?**

17 A. Yes. In this Commission’s investigation of FPL’s petition for issuance of
18 a storm recovery financing order in Docket No. 060038-EI, Mr. Harris presented
19 the same type of analysis as in this case and found the expected annual uninsured
20 cost from all windstorms to be \$73.7 million and recommended a Storm Damage
21 Reserve of \$650 million. However, in that case, based on testimony from
22 intervenors, including mine on behalf of AARP, the Commission approved a
23 storm damage reserve level of \$200 million as opposed to the \$650 level

1 requested by FPL. The Commission-approved amount of \$200 million is
2 approximately 3 times the expected annual uninsured cost in that case. If the FPL
3 ratio found in Docket No. 060038-EI was applied to this case, the Storm Damage
4 Reserve level would be roughly 3 times the expected annual uninsured cost of
5 approximately \$17 million. This would result in a Storm Damage Reserve target
6 of \$54 million. The current target established by the Commission is \$55 million.

7 **Q. Are there any other factors that would indicate that the current target**
8 **established by the Commission is appropriate?**

9 A. Yes. The Securitization legislation passed in 2006, which is now at
10 Section 366.8260, Florida Statutes, arguably greatly reduces the necessity for a
11 reserve and lessens the importance of the target level. Before the Securitization
12 legislation, utilities collected a Commission-approved storm accrual each year to
13 help pay for storm damage. The accrual was not designed to guarantee recovery
14 of every penny of storm damage costs. In fact utilities might only recover storm
15 damage expenses that caused them to earn less than a fair rate of return. Under the
16 earlier policy, the utilities had a financial risk and were understandably interested
17 in keeping the reserve level as high as possible. However, the Securitization
18 legislation guarantees the recovery of all reasonable and prudent expenses for
19 storm damage. Therefore, no matter the amount of storm damage, TECO is
20 statutorily guaranteed recovery of its storm expenses as long as they are deemed
21 prudent by the Commission.

22 **Q. Do you have any additional concerns with TECO's request?**

1 A. Yes. A large storm damage reserve will allow a utility to charge larger
2 storm-related losses against the reserve without having to prove the expenses
3 were reasonable and prudent in an adversarial hearing. I believe history suggests
4 that the review of storm damage expenses is less stringent when the expenses are
5 paid from an existing reserve versus when the utility must document the expenses
6 in an evidentiary hearing addressing an additional recovery mechanism.

7 Consequently, I believe the likelihood for closer scrutiny would argue for a lower
8 Storm Damage Reserve level, rather than the higher amount requested by TECO.

9 **Q. What evidence supports your review that storm damage expenses are**
10 **less stringent when the expenses are paid from a reserve versus when the**
11 **utility must document the expenses in a hearing?**

12 A. It is my understanding that from 1996 to 2002 when FPL covered storm
13 damage expenses with funds from an existing Storm Reserve, there were no
14 hearings and consequently little chance for a review of expenses by affected
15 parties. Forcing a hearing for all but the most minimal storm damage occurrences
16 guarantees a more thorough review and the reduced likelihood that inappropriate
17 expenditures will be charged to the Reserve.

18 **Q. Based on your reasoning, why does TECO need a Reserve at all?**

19 A. Given the passage of the Securitization legislation subsequent to this
20 Commission's orders addressing the level of Reserve required or desired, it is not
21 entirely clear that a Reserve is essential. However, I believe it is reasonable for
22 the Commission to approve a Reserve that meets the historically-stated threshold
23 of covering the costs of most, if not all, storms.

1 **Q. What do you think is the proper level of the Storm Damage Reserve?**

2 A. Based on my analysis I think an adequate and appropriate Storm Damage
3 Reserve should be \$55 million. TECO should be allowed to accrue the current
4 level of \$4 million a year until it reaches \$55 million after which the accrual
5 should cease and rates should be reduced by the appropriate amount.

6 **Q. What is this recommendation based on?**

7 A. This recommendation is based on the prior decision of this Commission
8 with regards to FPL's Storm Damage Reserve and follows roughly the same ratio
9 of predicted annual average storm damage to the Storm Damage Reserve level.
10 Additionally, in the event the Reserve were depleted by damages exceeding the
11 Reserve balance, TECO could immediately file for interim and permanent
12 surcharge relief and, given recent Commission precedent, should expect to get it.

13 **Q. Does this conclude your testimony?**

14 A. Yes.

21

22

23

1 CHAIRMAN CARTER: Are there any exhibits?

2 MR. TWOMEY: Yes, sir. There's one exhibit
3 consisting of four pages of his experience and
4 qualifications. It has been pre-identified --

5 CHAIRMAN CARTER: Exhibit 53?

6 MR. TWOMEY: Exhibit 53, yes, sir, and we
7 would ask --

8 CHAIRMAN CARTER: Is there any objection?

9 MR. TWOMEY: -- that that be moved.

10 CHAIRMAN CARTER: Without objection, show it
11 done.

12 (Exhibit 53 was admitted into the record.)

13 CHAIRMAN CARTER: And Mr. Stewart may be
14 excused.

15 MR. TWOMEY: Thank you, sir. Appreciate it.

16 CHAIRMAN CARTER: Thank you, Mr. Twomey.
17 Thank you, Mr. Willis.

18 MR. WAHLEN: Can you give us just a second?

19 CHAIRMAN CARTER: Sure. We're in recess.

20 (Short recess.)

21 CHAIRMAN CARTER: Okay. Let's do this.
22 Ms. Helton, before -- do we need to do anything before
23 I -- I'm just going to allow Ms. Bradley to ask her
24 questions, get them on the record, and we can go from
25 there. Is there anything we need to do prior to that?

1 MS. HELTON: I just think we need to make the
2 record clear, Mr. Chairman, that this line of
3 cross-examination is not part of the record upon which
4 the Commission can make its decision. This is purely a
5 proffer that Ms. Bradley is creating to preserve her
6 appellate rights.

7 CHAIRMAN CARTER: Make it so. Let the record
8 so state and, Ms. Bradley, you're recognized. You may
9 proceed.

10 MS. BRADLEY: Thank you, sir.

11 * * *

12 Thereupon, the following testimony of

13 HELMUTH W. SCHULTZ III

14 was proffered by the Office of the Attorney General:

15 EXAMINATION

16 BY MS. BRADLEY:

17 Q. I think I was asking you about if you were
18 familiar with the charges which Abbott had in the
19 Oklahoma case a couple of years ago versus the charges
20 that she is making in this case.

21 A. I have heard some discussion --

22 CHAIRMAN CARTER: Turn your microphone on. Is
23 it on?

24 A. I have heard some discussion with respect to
25 Ms. Abbott's fees, and there was limitations in

1 Oklahoma. I'm also familiar with the fact that
2 Ms. Abbott has used the retainer portion in other
3 jurisdictions too, because I'm familiar with the
4 witness.

5 Q. With your familiarity with this witness, in
6 the past two years, has there been that great an
7 increase among comparable persons?

8 A. I would -- I guess you would have to say that
9 would depend upon the jurisdiction you're in and to what
10 extent she was required to provide that testimony. It
11 varied. This number is high. I've seen it lower.

12 MS. BRADLEY: If I may have just a moment.

13 CHAIRMAN CARTER: No problem. Take your time.

14 BY MS. BRADLEY:

15 Q. I think I was asking you about the additional
16 employees. No, I was asking you about the overtime pay
17 and the fact that you had noted that there was no
18 breakdown.

19 A. That's correct.

20 Q. Was there sufficient detail to determine
21 whether a company -- the Feds or anyone else to
22 determine whether a company is in compliance with
23 federal overtime laws?

24 A. Based on what's projected in the projections,
25 I would say no, because the overtime hasn't been

1 identified. We have no clue what's in there for
2 overtime in 2009.

3 Q. There was a question about the number of
4 additional employees, and Ms. Wehle said they didn't
5 track vacancies. Is this something that's common among
6 utilities?

7 A. I've not heard that. I mean, I've been in
8 rate cases since 1976, and I typically will inquire as
9 to vacancies to develop a vacancy rate, depending upon
10 how a company puts together payroll. And it's usually
11 something that's pretty easily accomplished, so I find
12 it unusual that they wouldn't track vacancies. But I
13 also found it unusual that they didn't track -- well,
14 they don't budget for the overtime. They don't budget
15 based upon employee complement, so I have to say that
16 there's more than one unusual item in this case.

17 MS. BRADLEY: Okay. I don't think I have
18 anything further. Thank you, sir. Thank you,
19 Mr. Chairman.

20 CHAIRMAN CARTER: Does this complete your
21 proffer?

22 MS. BRADLEY: Yes, sir.

23 CHAIRMAN CARTER: Okay. Thank you. Let's
24 proceed.

25 (Conclusion of proffered testimony.)

MS. KAUFMAN: Mr. Chairman?

CHAIRMAN CARTER: Ms. Kaufman.

MS. KAUFMAN: Thank you. We understand your ruling in regard to Ms. Bradley, and so FIPUG would simply -- not to prolong this any further, we just would adopt Ms. Bradley's proffer as well for preserving the record on appeal.

CHAIRMAN CARTER: Okay.

MS. KAUFMAN: Thank you.

CHAIRMAN CARTER: Mr. Wright.

MR. WRIGHT: Thank you, Mr. Chairman. I have the friendliest cross-examination of all. No questions.

CHAIRMAN CARTER: You know what, I always thought there was something about you that I liked.

Commissioners, I'm going to go to staff, and then I'll come back to the bench. Staff, you're recognized.

MR. YOUNG: No questions.

CHAIRMAN CARTER: Commissioners, anything from the bench? Redirect?

MS. CHRISTENSEN: Yes, just briefly.

REDIRECT EXAMINATION

BY MS. CHRISTENSEN:

Q. You were asked questions today about tree

1 trimming. Do you know whether any other Florida
2 companies have a longer tree trimming cycle, such as a
3 six-year cycle for the feeders and a three-year cycle
4 for the mains?

5 A. Yes, I became aware of that in the deposition
6 that was taken of the company witness.

7 Q. And are you aware of whether or not those are
8 as a result of the Commission's storm hardening
9 initiatives?

10 A. That's my understanding from that deposition,
11 yes.

12 Q. And do you know whether or not Tampa Electric
13 could ask to receive its storm hardening plan revised
14 related to tree trimming based on the money it receives
15 as a result of the rate case?

16 A. I can't say that I am.

17 MS. CHRISTENSEN: No further questions.

18 CHAIRMAN CARTER: Okay. Exhibits?

19 MS. CHRISTENSEN: I would move Mr. Schultz's
20 Exhibits 51 and 52 into the record.

21 CHAIRMAN CARTER: Any objections? Without
22 objection, show it done.

23 (Exhibits 51 and 52 were admitted into the
24 record.)

25 CHAIRMAN CARTER: Anything further for this

1 witness from any of the parties? Staff?

2 Thank you. You may be excused.

3 THE WITNESS: Thank you.

4 CHAIRMAN CARTER: Commissioners, I think we've
5 reached the point of diminishing return. You know, I
6 don't want to us get too goofy. Let's do this. We'll
7 start tomorrow morning at 9:00. We're adjourned.

8 (Proceedings recessed at 8:10 p.m.)

9 (Transcript follows in sequence in Volume 14.)

CERTIFICATE OF REPORTER

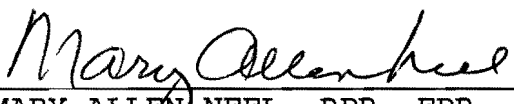

STATE OF FLORIDA:

COUNTY OF LEON:

I, MARY ALLEN NEEL, Registered Professional Reporter, do hereby certify that the foregoing proceedings were taken before me at the time and place therein designated; that my shorthand notes were thereafter translated under my supervision; and the foregoing pages numbered 1949 through 2150 are a true and correct record of the aforesaid proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor relative or employee of such attorney or counsel, or financially interested in the foregoing action.

DATED THIS 29th day of January, 2008.

MARY ALLEN NEEL, RPR, FPR
2894-A Remington Green Lane
Tallahassee, Florida 32308
(850) 878-2221
