Re: *Cost of Service Load Research Study; Undocketed*

Dear Ms. Cole:

Pursuant to Rule 25-6.0437(7), F.A.C., please find enclosed for filing on behalf of Progress Energy Florida, Inc. an original and seven (7) copies of its Cost of Service Load Research Study Results for the twelve month period ending March 31, 2009.

Thank you for your assistance in this matter. Please feel free to call me at (727) 820-5184 should you have any questions.

Sincerely,

John T. Burnett cms

STUDY BACKGROUND AND OBJECTIVES

The purpose of this study is to meet the requirements of the Cost-of-Service Load Research Rule, Docket No. 820491-EU, Order No. 13026, adopted as Rule 25-6.0437 on February 23, 1984, by the Florida Public Service Commission and as amended on January 6, 2004.

The rule requires that every rate class which accounts for more than one percent of the utility's annual retail sales be sampled every three years. The load research studies must be designed to provide estimates within plus or minus 10% relative accuracy at the 90% confidence level for the summer and winter peak demands and the average of the twelve monthly coincident peaks (15% relative accuracy for the General Service Non-Demand Rate Class).

REPORTING PERIOD

The new sample points were selected during the fall of 2007 and mass memory interval recording meters were installed in the winter of 2007/2008. Formal data collection began on April 1, 2008 and continued through March 31, 2009.

FPSC - COMMISSION CLERK

RESIDENTIAL RATE CLASS SAMPLE

The Residential Rate Class had over 1,450,000 customers when the data collection commenced. Nearly 400,000 customers were on the load management rate at that time. Due to the large number of residences on load management, independent samples were drawn for both the load management residential rate and the standard residential rate. Past experience indicated that a residential sample of 325 would be more than enough to exceed the target accuracy goal. Combined ratio estimation was used for expansion to the class level.

The residential load management and non-load management samples were stratified by housing type:

- 1) single-family detached;
- 2) mobile/manufactured homes; and
- 3) multi-family (apartments, townhouses, condos, etc.)

Table 1 shows the stratum design for the Residential Rate Class sample.

Stratum	Load Management Residential Rate	Standard Residential Rate
Single Family Detached	40	125
Mobile / Manufactured Home	40	40
Multi-Family (Apartments)	40	40
Total	120	205

Table 1 - Residential Sample Design

GENERAL SERVICE NON-DEMAND RATE CLASS SAMPLE

At the time of sample selection in the winter of 2007, the General Service Non-Demand Rate Class consisted of over 124,000 customers. By April 2008 when data collection officially began, Progress Energy Florida had 125,852 General Service Non-Demand customers.

Two dimensional stratification and combined ratio expansion were used for this rate class sample. The technique involved stratification using the billed energy for the winter peak month (February, 2006) and the summer peak month (August, 2006). The Dalenius-Hodges cumulative square root "uf" technique was applied to the class billed energy for the peak month to establish stratum boundaries. Table 2 shows the stratum design for the General Service Non-Demand Rate Class sample.

Stratum	Sample Size
1 - Feb 06 billed energy > 1,200 kWh & Aug 06 energy < 1,700 kWh	15
2 - Feb 06 billed energy > 1,200 kWh & Aug 06 energy > 1,700 kWh	44
3 - Feb 06 billed energy < 1,200 kWh & Aug 06 energy < 1,700 kWh	526
4 - Feb 06 billed energy < 1,200 kWh & Aug 06 energy > 1,700 kWh	15
5 - Census Stratum – customers over >40,000 kWh / month	25
Total	625

Table 2 - General Service Non-Demand Sample Design

GENERAL SERVICE DEMAND RATE CLASS SAMPLE

Two dimensional stratification and combined ratio expansion were used for the General Service Demand Rate Class sample. The technique involved stratification using the peak billed kW and the revenue class data. The Dalenius-Hodges cumulative square root "uf" technique was applied to the class billed demand for the peak month to establish stratum boundaries. All customers in over 1000 kW did not require sampling because each customer in this stratum is metered with a mass memory interval recording meter for billing purposes. Table 3 outlines stratum design for the General Service Demand Rate Class sample.

Stratum	Sample Size
1 – Customers with a billing demand less than 40 kW	102
2 – Customers with a billing demand between 40 kW & 190 kW	58
3 – Customers with a billing demand between 190 kW & 1,000 kW	30
4 – Customers with a billing demand greater than 1000 kW	242
Total	432

Table 3 - General Service Demand Sample Design

INTERRUPTIBLE RATE CLASS

The Interruptible Rate Class did not require sampling because each customer in this class is metered with a mass memory interval recording meter for billing purposes. At the beginning of data collection in April 2008, there were 145 customers in the Interruptible Rate Class.

METERING OF SAMPLE MEMBERS

The sample customer's conventional meter was replaced with a solid-state meter. The solid-state meter records the customer's usage every 15 minutes and stores it in a mass memory chip within the meter. The data from these meters was translated and validated for accuracy in the MV-90 xi software package. Load data was analyzed on a calendar month basis using the MV90 xi Load Research Package to derive the data contained in this report.

SELECTION OF REPLACEMENTS

During the course of the study, a small number of sample points had to be replaced for various reasons. To minimize the amount of replacement necessary, Progress Energy Florida's policy is not to request permission from the customer before load research meters are installed. The selection of replacements was handled differently depending on the rate class.

Replacements for the Residential Rate Class were picked from a list of randomly selected alternates that was generated at the same time the original sample was drawn. When a replacement was needed, it was selected as the first available alternate on the list from within the same stratum as the original sample.

Two replacement lists for the General Service Non-Demand Rate Class were selected. At the time the original sample was drawn, additional random samples were drawn to be used as replacements. The replacement samples were stratified and then ordered by the February 2006 billed energy and matched to the original (ordered) sample by strata.

Two replacement lists for the General Service Demand Rate Class were selected. At the time the original sample was drawn, additional random samples were drawn to be used as replacements. The replacement samples were stratified and then ordered by the February 2006 billed demand and matched to the original (ordered) sample by strata.

STATISTICAL ACCURACY ACHIEVED

Tables 4 through 7 contain the estimated class demands for the coincident and non-coincident peaks for the Residential, General Service Non-Demand, General Service Demand, and Interruptible Rate Classes. Also included are the 90% confidence intervals around the monthly peak demands and their relative accuracy in percentage. The twelve coincident peak averages for all rate classes, their 90% confidence intervals and their relative accuracy are computed for the twelve month period ending March, 2009. The statistics shown in tables 4-7 were obtained using MV90 xi's Load Research software package.

The winter peak hour during the study period occurred at hour ending 0800 on Friday, February 06, 2009 and the summer peak hour occurred at hour ending 1700 on Thursday, August 7, 2008. The target level of statistical accuracy of plus or minus 10% error at the 90% confidence level for the system summer and winter peak was met for the Residential and General Service Demand Rate

Classes. The target level of statistical accuracy of plus or minus 15% error at the 90% confidence level for the system summer and winter peak was met for the General Service Non-Demand Rate Class.

RESIDENTIAL RATE CLASS HOURLY LOAD DATA

The following pages contain the hourly Residential Rate Class load data required under Sections (7) and (8) of Rule 25-6.0437. This hourly data covers the 8,760 hours from April 1st, 2008 through March 31st, 2009 and is on Standard Time. The format of the data is the standard "EEI" format used in the electric utility industry.

APPENDIX A

Development of Load Factors

FLORIDA PUBLIC SERVICE COMMISSION

COMPANY: Progress Energy Florida

DOCKET NO.:

EXPLANATION: For each rate class that is not 100% time metered by time recording meters, provide the estimated historic value and 90% confidence interval by month from the latest load research for (1) contribution to monthly system peaks (coincident), (2) monthly noncoincident peak (class peaks) and (3) monthly customer maximum demand (billing demand for demand classes). For classes, 100% metered with time recording meters provide actual monthly values for the aforementioned demands and identify such as actual values. Also, provide the annual KWH as well as the 12 CP Load Factor, Class NCP Load Factor and the Customer Load Factor for each class.

Type of Data Shown:

Historical Test Year Ended 3/31/09

	Mar-09	14.4	N/A	28.4	N/A	38.1	N/A

Annual Peak: 41.4 MW Annual KWH: 161,988,758

12 Coincident Peak Average: 19.9 MW 12 CP Load Factor: 0.929

90% Confidence Interval: N/A Class (NCP) Load Factor: 0.447

Sum of individual customer maximum demand: 56.0 MW Customer (Billing or Maximum Demand) Load Factor: 0.330

Note: During the study period, there were no interruptions of load, therefore no supplemental data required to adjust measured load to that without load control.

FLORIDA PUBLIC SERVICE COMMISSION

COMPANY: Progress Energy Florida

DOCKET NO.:

EXPLANATION: For each rate class that is not 100% time metered by time recording meters, provide the estimated historic value and 90% confidence interval by month from the latest load research for (1) contribution to monthly system peaks (coincident), (2) monthly noncoincident peak (class peaks) and (3) monthly customer maximum demand (billing demand for demand classes). For classes, 100% metered with time recording meters provide actual monthly values for the aforementioned demands and identify such as actual values. Also, provide the annual KWH as well as the 12 CP Load Factor, Class NCP Load Factor and the Customer Load Factor for each class.

Type of Data Shown:

Historical Test Year Ended 3/31/09
 Projected Test Year Ended ___/___/___
 Prior Year Ended ___/___/___
