PROCEEDINGS: HEARING

COMMISSIONERS  
PARTICIPATING: CHAIRMAN MATTHEW M. CARTER, II  
COMMISSIONER LISA POLAK EDGAR  
COMMISSIONER NANCY ARGENZIANO  
COMMISSIONER NATHAN A. SKOP  
COMMISSIONER DAVID E. KLEMENT

PLACE: Betty Easley Conference Center  
Room 148  
4075 Esplanade Way  
Tallahassee, Florida

DATE: Monday, November 2, 2009

REPORTED BY: LINDA BOLES, RPR, CRR  
Official FPSC Reporter  
(850) 413-6734

DOCUMENT NUMBER-DATE

11254 NOV 12 8

FLORIDA PUBLIC SERVICE COMMISSION

FPSC-COMMISSION CLERK

## 1 APPEARANCES:

2 LEE L. WILLIS, ESQUIRE, and JAMES D. BEASLEY,  
3 ESQUIRE, Ausley & McMullen, Post Office Box 391,  
4 Tallahassee, 32302, appearing on behalf of Tampa  
5 Electric Company.

6 JEFFREY STONE, ESQUIRE, RUSSELL A. BADDERS,  
7 ESQUIRE, and STEVEN GRIFFIN, ESQUIRE, Beggs & Lane, Post  
8 Office Box 12950, Pensacola, Florida 32591-2950,  
9 appearing on behalf of Gulf Power Company.

10 CAPTAIN ALLAN JUNGELS, USAF, c/o  
11 AFLSA/JACL-ULT 139 Barnes Drive, Suite 1, Tyndall AFB,  
12 Florida 32403-5319, appearing on behalf of Federal  
13 Executive Agencies.

14 JOHN W. McWHIRTER, JR., ESQUIRE, c/o McWhirter  
15 Law Firm, 400 North Tampa Street, Suite 2450, Tampa,  
16 Florida 33602, appearing on behalf of Florida Industrial  
17 Power Users Group.

18 JOHN T. BUTLER, ESQUIRE, and R. WADE  
19 LITCHFIELD, ESQUIRE, Florida Power & Light Company, 700  
20 Universe Boulevard, Juno Beach, Florida 33408-0420,  
21 appearing on behalf of Florida Power & Light Company.

22

23

24

25

1 APPEARANCES (Continued):

2 JOHN T. BURNETT, ESQUIRE, Progress Energy  
3 Service Co., LLC, Post Office Box 14042, St. Petersburg,  
4 Florida 33733-4042, and GARY V. PERKO, ESQUIRE, Hopping  
5 Law Firm, Post Office Box 6526, Tallahassee, Florida  
6 32314, appearing on behalf of Progress Energy and  
7 Progress Energy Service Company, LLC.

8 PATRICIA CHRISTENSEN, ESQUIRE, and CHARLES  
9 BECK, ESQUIRE, Office of Public Counsel, c/o The Florida  
10 Legislature, 111 West Madison Street, #812, Tallahassee,  
11 Florida 32399-1400, appearing on behalf of the Citizens  
12 of Florida.

13 CECILIA BRADLEY, ESQUIRE, Office of the  
14 Attorney General, The Capitol PL-01, Tallahassee,  
15 Florida 32399-1050, appearing on behalf of the Citizens  
16 of the State of Florida.

17 MARTHA BROWN, ESQUIRE, and ANNA WILLIAMS,  
18 ESQUIRE, ESQUIRE, FPSC General Counsel's Office, 2540  
19 Shumard Oak Boulevard, Tallahassee, Florida 32399-0850,  
20 appearing on behalf of the Florida Public Service  
21 Commission Staff.

22 SAMANTHA CIBULA, ESQUIRE, FPSC General  
23 Counsel's Office, 2540 Shumard Oak Boulevard,  
24 Tallahassee, Florida 32399-0850, appearing as advisor to  
25 the Commission.

## P R O C E E D I N G S

\* \* \* \* \*

1  
2  
3           **CHAIRMAN CARTER:** Staff, you're recognized for  
4 the 07 docket.

5           **MS. BROWN:** Yes, Mr. Chairman. There are also  
6 proposed stipulations on all issues in this docket and  
7 all witnesses have been excused.

8           **CHAIRMAN CARTER:** Okay.

9           **MS. BENNETT:** We ask that the prefiled  
10 testimony of all witnesses found on Page 4 of the  
11 Prehearing Order be inserted into the record as though  
12 read.

13           **CHAIRMAN CARTER:** The prefiled testimony of  
14 the witnesses will be inserted into the record as though  
15 read.

16           **MS. BROWN:** We have also prepared a  
17 Comprehensive Stipulated Exhibit List and we ask that  
18 this be moved into the record. The list itself is  
19 Exhibit 1 and all other exhibits on the list should be  
20 numbered as indicated, and we ask that that be entered  
21 into the record.

22           **CHAIRMAN CARTER:** Without objection, show it  
23 done.

24           (Exhibits 1 through 34 marked for  
25 identification and admitted into the record.)

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **TESTIMONY OF TERRY J. KEITH**

4                   **DOCKET NO. 090007-EI**

5                   **APRIL 1, 2009**

6

7

8           **Q.     Please state your name and address.**

9           A.     My name is Terry J. Keith, and my business address is 9250 West Flagler  
10           Street, Miami, Florida, 33174.

11          **Q.     By whom are you employed and in what capacity?**

12          A.     I am employed by Florida Power & Light Company (FPL) as Director, Cost  
13           Recovery Clauses in the Regulatory Affairs Department.

14          **Q.     Please state your education and business experience.**

15          A.     I graduated from North Carolina Agricultural & Technical State University  
16           with a Bachelor's degree in Accounting in 1977. I subsequently earned a  
17           Master of Business Administration degree from the University of  
18           Wisconsin in 1982. Prior to joining FPL in 1986, I held various accounting  
19           positions at Phillips Petroleum Company and later Centel Corporation. At  
20           FPL, I held positions of increasing responsibility in the Accounting  
21           Department, including various supervision assignments relating to  
22           accounting research, financial reporting, development and application of  
23           overhead rates, and property accounting. I spent ten years in the  
24           Regulatory Affairs Department as Principal Regulatory Coordinator and

1 later as Regulatory Issues Manager primarily responsible for managing  
2 and coordinating regulatory accounting and finance dockets. In 2008, I  
3 assumed my current position as Director, Cost Recovery Clauses, where I  
4 am responsible for providing direction as to the appropriateness of cost  
5 recovery through a cost recovery clause and the overall preparation and  
6 filing of all cost recovery clause documents including testimony and  
7 discovery.

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to present for Commission review and  
10 approval the Environmental Cost Recovery (ECR) Clause true-up costs  
11 associated with FPL Environmental Compliance activities for the period  
12 January through December 2008.

13 **Q. Have you prepared or caused to be prepared under your direction,  
14 supervision or control an exhibit in this proceeding?**

15 A. Yes, I have. My Exhibit TJK-1 contained in Appendix I, consists of eight  
16 forms.

17 ● Form 42-1A reflects the final true-up for the period January through  
18 December 2008.

19 ● Form 42-2A consists of the final true-up calculation for the period.

20 ● Form 42-3A consists of the calculation of the interest provision for the  
21 period.

22 ● Form 42-4A reflects the calculation of variances between actual and  
23 estimated/actual costs for O&M Activities.

24 ● Form 42-5A presents a summary of actual monthly costs for the

1 period for O&M Activities.

2 • Form 42-6A reflects the calculation of variances between actual and  
3 estimated/actual costs for Capital Investment Projects.

4 • Form 42-7A presents a summary of actual monthly costs for the  
5 period for Capital Investment Projects.

6 • Form 42-8A consists of the calculation of depreciation expense and  
7 return on capital investment. Form 42-8A, Pages 49 through 52  
8 provide the beginning of period and end of period depreciable base by  
9 production plant name, unit or plant account and applicable  
10 depreciation rate or amortization period for each Capital Investment  
11 Project.

12 **Q. What is the source of the actuals data which you present by way of**  
13 **testimony or exhibits in this proceeding?**

14 A. Unless otherwise indicated, the actuals data are taken from the books  
15 and records of FPL. The books and records are kept in the regular  
16 course of FPL's business in accordance with generally accepted  
17 accounting principles and practices, and with the provisions of the  
18 Uniform System of Accounts as prescribed by this Commission.

19 **Q. Please explain the calculation of the Net True-up Amount.**

20 A. Form 42-1A, entitled "Calculation of the Final True-up" shows the  
21 calculation of the Net True-Up for the period January 2008 through  
22 December 2008, an over-recovery of \$2,694,124, which I am requesting  
23 to be included in the calculation of the ECR factors for the January  
24 through December 2010 period.

1 The actual End-of-Period under-recovery for the period January through  
2 December 2008 of \$3,034,452 (shown on Form 42-1A, line 3) adjusted for  
3 the estimated/actual End-of-Period under-recovery for the same period of  
4 \$5,728,576 (shown on Form 42-1A, line 6) results in the Net True-Up  
5 over-recovery for the period January through December 2008 (shown on  
6 Form 42-1A, line 7) of \$2,694,124.

7 **Q. Have you provided a schedule showing the calculation of the End-of-**  
8 **Period true-up?**

9 A. Yes. Form 42-2A, entitled "Calculation of Final True-up Amount," shows  
10 the calculation of the Environmental End of Period true-up for the period  
11 January through December 2008. The End of Period true-up shown on  
12 page 2 of 2, Lines 5 plus 6 is an under-recovery of \$3,034,452.  
13 Additionally, Form 42-3A shows the calculation of the Interest Provision of  
14 \$107,061 which is applicable to end of period true-up under-recovery of  
15 \$3,141,513.

16 **Q. Is the true-up calculation consistent with the true-up methodology**  
17 **used for the other cost recovery clauses?**

18 A. Yes, it is. The calculation of the true-up amount follows the procedures  
19 established by the Commission as set forth on Commission Schedule A-2  
20 "Calculation of the True-Up and Interest Provisions" for the Fuel Cost  
21 Recovery Clause.

22 **Q. Are all costs listed in Forms 42-4A through 42-8A attributable to**  
23 **Environmental Compliance Projects approved by the Commission?**

24 A. Yes, they are.

1 **Q. How did actual expenditures for January through December 2008**  
2 **compare with FPL's estimated/actual projections as presented in**  
3 **previous testimony and exhibits?**

4 **A. Form 42-4A shows that total O&M project costs were \$3,625,159, or**  
5 **22.1% lower than projected and Form 42-6A shows that total capital**  
6 **investment project costs were \$433,470 or 1.3% lower than projected.**  
7 **Individual project variances are provided on Forms 42-4A and 42-6A.**  
8 **Return on Capital Investment, Depreciation and Taxes for each project for**  
9 **the actual period January through December 2008 are provided on Form**  
10 **42-8A.**

11 **Q. Please explain the reasons for the significant variances in O&M**  
12 **Projects and Capital Investment Projects.**

13 **A. The variances in FPL's 2008 O&M expenses and capital expenditures**  
14 **primarily relate to the following projects:**

15 **1. Continuous Emission Monitoring Systems – O&M (Project 3a)**  
16 **Project expenditures were \$101,577 or 10.6% lower than previously**  
17 **projected. This variance occurred due to the following reasons:**

- 18 **• Replacement of the CEMS stack sampling tubing bundle at the**  
19 **Manatee site was not completed and invoiced until early 2009.**
- 20 **• Costs associated with the repair of CEMS equipment at the Ft.**  
21 **Lauderdale plant were lower than projected as a result of vendor**  
22 **improvements in monitoring system reliability.**

- 1           • Emission Stack Testing group costs were lower than projected as  
2           a result of lower cost for the analysis of stack test samples and  
3           reductions in CEMS analytical gas used by the test group.

4           **2. Maintenance of Stationary Above Ground Fuel – O&M (Project**  
5           **5a)**

6           Project expenditures were \$254,259 or 16.8% higher than previously  
7           estimated. The variance is a result of project scope changes at the Martin  
8           and FT. Myers plants and Turkey Point Unit 1, which were not included in  
9           the original estimates. Roof corrosion was found on the light oil, metering  
10          and additive tanks at Martin Units 1 and 2, which needed to be painted  
11          and repaired for compliance. The coating of the light oil main storage  
12          tank at Martin Units 3 and 4 deteriorated sooner than expected so the  
13          tank was entirely painted. At the Ft. Myers plant, the roof of one of the  
14          two light oil main storage tanks that was originally estimated to be  
15          “touched up” was entirely coated due to the level of deterioration found.  
16          Coating to the bottom plate of the metering tank at Turkey Point Unit 1  
17          was done in order to extend the tank’s useful life.

18          **3. Oil Spill Cleanup/Response Equipment – O&M (Project 8a)**

19          Project expenditures were \$36,017 or 13.0% higher than previously  
20          projected as a result of higher than expected costs from replacement of  
21          spill response consumable materials (sorbent boom, pads, blankets,  
22          degreasers, etc.) that were used in response to unplanned oil spills at the  
23          Canaveral, Fort Lauderdale, Martin, Riviera, and Turkey Point plants.

24          **4. RCRA Corrective Action – O&M (Project 13)**

1 Project expenditures were \$13,919 or 21.4% lower than previously  
2 projected. Based upon a Florida Department of Environmental Protection  
3 (FDEP) evaluation report, Turkey Point did not require any further  
4 projected work resulting in lower actual costs.

5 **5. Disposal of Noncontainerized Liquid Waste – O&M (Project**  
6 **17a)**

7 Project expenditures were \$75,757 or 22.8% lower than previously  
8 projected due to less than projected cleaning activities at the Sanford,  
9 Martin, and Canaveral plants. As a result of FPL system dispatch  
10 generation needs, these facilities were not able to take their ash collection  
11 basins out of service to perform planned cleaning activities. In addition,  
12 lower than projected use of residual oil at the Martin and Cape Canaveral  
13 plants resulted in lower than anticipated costs from reduced ash  
14 concentration in the basins.

15 **6. Substation Pollutant Discharge Prevention and Removal –**  
16 **Distribution – O&M (Project 19a)**

17 Project expenditures were \$592,509 or 36.3% lower than previously  
18 projected. The variance was due to difficulties in obtaining equipment  
19 clearances to perform equipment leak repair and regasketing work at  
20 substations due to weather related issues.

21 **7. St. Lucie Turtle Net – O&M (Project 21)**

22 Reported project expenditures were \$4,352 versus a projection of zero.  
23 This is due to a misclassification of \$4,352 associated with the St. Lucie  
24 Cooling Water System Inspection & Maintenance Project, which was

1 inadvertently charged to the St. Lucie Turtle Net Project. These charges  
2 were subsequently removed from the St. Lucie Turtle Net Project and  
3 correctly charged to the St. Lucie Cooling Water System Inspection &  
4 Maintenance Project.

5 **8. Pipeline Integrity Management – O&M (Project 22)**

6 Project expenditures were \$280,158 or 67.6% lower than previously  
7 projected. This variance is primarily due to the deferral of the pipeline  
8 inspection at the Martin Terminal. As a result of lower than projected  
9 residual oil use to meet FPL system dispatch generation needs, required  
10 available space within storage tanks was insufficient for recovery of oil  
11 during planned use of Pipeline Inspection Gauge (PIG) work. Pipeline  
12 PIG inspection work was deferred to 2009 when FPL anticipates sufficient  
13 tank space can be accommodated.

14  
15 Additionally, pipeline inspection at the Manatee Terminal was not  
16 performed as planned as a result of changes to the inspection protocol  
17 that were identified. FPL deferred inspections to 2009 to utilize a new  
18 technology, Pipeline Current Mapping, which requires additional  
19 permitting that did not allow the job to be completed in 2008.

20  
21 The remainder of the variance was related to the Martin Terminal 30"  
22 pipeline integrity project to maintain compliance with DOT requirements.  
23 Inspection of 2.9 miles of the Terminal pipeline identified that less than

1 anticipated pipeline cover work and fill material would be required  
2 resulting in lower than originally projected costs for the project.

3 **9. SPCC – Spill Prevention, Control and Countermeasures –**  
4 **O&M (Project 23)**

5 Project expenditures were \$51,167 or 6.8% lower than previously  
6 projected. The variance is primarily due to the shifting into 2009 of some  
7 of the development work on the FRP/SPCC plans due to the EPA's  
8 extension of the due date for updating the plans to November 20, 2009.  
9 Additionally, the overall actual contracted price for the required facility  
10 upgrades was less than originally budgeted.

11 **10. Port Everglades ESP – O&M (Project 25)**

12 Project expenditures were \$511,370 or 25.7% lower than previously  
13 projected. Due to the relative cost of oil and gas, less oil and more gas  
14 was burned than originally expected at the plant, and as a result less  
15 O&M activities were needed for the ESPs. Consequently, less ash was  
16 created and the chemical injection system was not used. This resulted in  
17 lower costs of chemicals and ash disposal.

18 **11. Lowest Quality Water Source – O&M (Project 27)**

19 Project expenditures were \$27,819 or 11.3% higher than previously  
20 projected. This variance is due to the process change made to  
21 monitoring and reporting LQWS usage in the third quarter 2008.  
22 Previously, LQWS calculations were based on a 90%/10% distribution.  
23 The process change was initiated to improve the monitoring and reporting  
24 of LQWS, which is part of FPL's compliance responsibility. The new

1 calculation is now based on gallons consumed/used and tracked  
2 electronically with installed equipment. This technology has improved the  
3 way FPL measures and reports LQWS.

4 **12. CWA 316(b) Phase II Rule – O&M (Project 28)**

5 Project expenditures were \$38,489 or 10% lower than previously  
6 projected. This variance is attributable to the suspension of the 316b rule,  
7 thereby extending the scheduled completion dates for the proposed work.

8 In addition, the request for proposal and resulting budget were structured  
9 on a per facility basis. A single consultant was awarded all of the  
10 contracts for the FPL facilities, which resulted in several economies of  
11 scale. The most significant improvement was the ability to schedule  
12 simultaneous project meetings addressing multiple facilities instead of  
13 addressing each facility in separate meetings. This resulted in a decrease  
14 in costs associated with these meetings.

15 **13. HBMP – O&M (Project 30)**

16 Project expenditures were \$5,758 or 28.8% higher than previously  
17 projected. The extended drought conditions resulted in additional data  
18 collected and analyzed due to extended time on emergency diversion  
19 curves.

20 **14. St. Lucie Cooling Water System Inspection and Maintenance –**  
21 **O&M (Project 34)**

22 Project expenditures were \$2,318,958 or 46.4% lower than previously  
23 projected. The variance is primarily due to weather delays in the Fall of  
24 2008 resulting in work being deferred to the Spring of 2009.

1           **15. Low Level Radioactive Waste – O&M (Project 36)**

2           Project expenditures were \$119,384 or 99.3% lower than previously  
3           projected. FPL originally projected that it would make O&M expenditures  
4           prior to the development of the project schedule, plan and conceptual  
5           design for the facility, but these expenditures were not incurred.

6           **16. CAIR Compliance – Capital (Project 31)**

7           Project depreciation and return on investment were \$234,524 or 2.9%  
8           lower than originally anticipated. Costs associated with Plant Scherer Unit  
9           4 and FGD controls were less than originally projected. The lower costs  
10          were primarily due to delays in contractual agreements for engineering  
11          and construction of the controls. The project is expected to be placed in  
12          service in 2012 and total project estimates remain unchanged.

13          **17. CAMR Compliance – Capital (Project 33)**

14          Project depreciation and return on investment were \$97,500 or 6.2%  
15          lower than anticipated. Costs for installation of the Plant Scherer  
16          Baghouse were less than originally projected, primarily as a result of  
17          delays in contractual agreements for procurement and engineering  
18          services. The project is expected to be placed in service in 2010 on  
19          schedule and total project estimates remain unchanged.

20          **18. Martin Plant Drinking Water System Compliance – Capital**  
21          **(Project 35)**

22          Project depreciation and return on investment were \$0 compared to a  
23          projection of \$9,930. The project was delayed due to FDEP requests for  
24          additional documentation and/or process explanation. Each request

1 required review and professional engineer stamp in order to meet FDEP  
2 Drinking Water Section requirements. FDEP worked closely with FPL to  
3 meet all the requirements, however, the unanticipated requests delayed  
4 projected cash outlays. This project was placed in service January 2009.

5 **19. DeSoto Next Generation Solar Energy Center – Capital**  
6 **(Project 37)**

7 Project depreciation and return on investment were \$16,569 or 56.9%  
8 lower than anticipated, primarily attributable to the Engineering,  
9 Procurement, Construction (EPC) contractor being behind plan for  
10 achieving engineering deliverable milestones in December 2008. The  
11 engineering deliverables were achieved by January 2009 and have not  
12 impacted the overall project costs or schedules.

13 **20. Space Coast Next Generation Solar Energy Center – Capital**  
14 **(Project 38)**

15 Project depreciation and return on investment were \$27,738 or 592.6%  
16 higher than anticipated. This variance is due to the recognition of the land  
17 lease liability in 2008. The original projections assumed the land lease  
18 liability would be recognized in 2009 when the unit is placed in service.

19 **21. Martin Next Generation Solar Energy Center – Capital (Project**  
20 **39)**

21 Project depreciation and return on investment were \$48,195 or 58.9%  
22 lower than anticipated, primarily attributable to delays in procurement of  
23 major solar field equipment and better than expected payment terms. The  
24 2008 projection included purchase order awards and payments for solar

1 field mirrors, solar field tubes, heat exchangers, and the EPC contract.  
2 Due to the change in market conditions and increased market knowledge,  
3 mirrors and heat exchanger awards were postponed to 2009 (no schedule  
4 impact) while the tubes and the EPC purchase orders have payment  
5 terms less than projected.

6 **Q. Does this conclude your testimony?**

7 **A. Yes, it does.**

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **TESTIMONY OF TERRY J. KEITH**

4                   **DOCKET NO. 090007-EI**

5                   **August 3, 2009**

6

7

8   **Q.     Please state your name and address.**

9   A.     My name is Terry J. Keith and my business address is 9250 West Flagler  
10         Street, Miami, Florida, 33174.

11 **Q.     By whom are you employed and in what capacity?**

12 A.     I am employed by Florida Power & Light Company (FPL or the Company)  
13         as Director, Cost Recovery Clauses in the Regulatory Affairs Department.

14 **Q.     Have you previously testified in this docket?**

15 A.     Yes, I have.

16 **Q.     What is the purpose of your testimony in this proceeding?**

17 A.     The purpose of my testimony is to present for Commission review and  
18         approval the Estimated/Actual True-up associated with FPL's  
19         environmental compliance activities for the period January 2009 through  
20         December 2009.

21 **Q.     Have you prepared or caused to be prepared under your direction,  
22         supervision or control an exhibit in this proceeding?**

23 A.     Yes, I have. My exhibit TJK-2 consists of eight forms, PSC Forms 42-1E  
24         through 42-8E, included in Appendix I. Form 42-1E provides a summary

1 of the Estimated/Actual True-up amount for the period January 2009  
2 through December 2009. Forms 42-2E and 42-3E reflect the calculation  
3 of the Estimated/Actual True-up amount for the period. Forms 42-4E and  
4 42-6E reflect the Estimated/Actual O&M and Capital cost variances as  
5 compared to original projections for the period. Forms 42-5E and 42-7E  
6 reflect jurisdictional recoverable O&M and Capital project costs for the  
7 period. Form 42-8E (pages 13 through 72) reflects return on capital  
8 investments, depreciation, and taxes by project.

9 **Q. Please explain the calculation of the ECRC Estimated/Actual True-up**  
10 **amount you are requesting this Commission to approve.**

11 A. Forms 42-2E and 42-3E show the calculation of the ECRC  
12 Estimated/Actual True-up amount. The calculation for the  
13 Estimated/Actual True-up amount for the period January 2009 through  
14 December 2009 is an over-recovery, including interest, of \$3,602,753  
15 (Appendix I, Page 4, line 5 plus line 6). This Estimated/Actual True-up  
16 over-recovery of \$3,602,753 consists of January through June 2009  
17 actuals and revised estimates for July through December 2009, compared  
18 to original projections for the same period.

19 **Q. Are all costs listed in Forms 42-1E through 42-8E attributable to**  
20 **environmental compliance projects previously approved by the**  
21 **Commission?**

22 A. Yes, with the exception of the Turkey Point Cooling Canal Monitoring  
23 Plan, which is discussed and supported in the testimony of Randall  
24 LaBauve, and the Manatee Temporary Heating System Project, which is

1 discussed and supported in the testimony of Randall LaBauve, which was  
2 filed on April 13, 2009.

3 **Q. How do the Estimated/Actual project expenditures for January 2009**  
4 **through December 2009 period compare with original projections?**

5 A. Form 42-4E (Appendix I, Page 7) shows that total O&M project costs were  
6 \$3,541,997 or 21.6% lower than projected and Form 42-6E (Appendix I,  
7 Page 10) shows that total capital investment project costs were  
8 \$5,080,664 or 6.7% lower than projected. Below are variance  
9 explanations for those O&M Projects and Capital Investment Projects with  
10 significant variances. Individual project variances are provided on Forms  
11 42-4E and 42-6E. Return on Capital Investment, Depreciation and Taxes  
12 for each project for the Estimated/Actual period are provided on Form 42-  
13 8E (Appendix I, Pages 13 through 72).

14

#### 15 O&M Project Variances

16

##### 17 **1. Air Operating Permit Fees (Project No. 1) - O&M**

18 O&M project expenditures are estimated to be \$1,007,915 or 51.5% lower  
19 than originally projected, primarily due to Cape Canaveral, Riviera, Cutler,  
20 Port Everglades 1 and 2, and Sanford 3 being placed in reserve status,  
21 which will reduce emission totals for 2009. Reserve status is based on  
22 current system demand and operating needs and is subject to change at  
23 any time.

1           **2.     Maintenance of Stationary Above Ground Fuel Storage Tanks**  
2                           **(Project No. 5a) - O&M**

3           O&M project expenditures are estimated to be \$323,924 or 30.3% higher  
4           than originally projected. The following project activities were identified  
5           after the filing of the original 2009 estimates:

6           1) After initial estimates and purchase orders were issued there was a  
7           scope change for Tank 801 located at the Port Everglades Terminal. Per  
8           the specification of the purchase order, loose paint was removed by high  
9           pressure water blasting. After the water blasting was complete, only a  
10          very thin coat of primer was left on the tank and FPL had to apply primer  
11          on the entire shell plate as opposed to spot priming which was in the  
12          original scope of work.

13          2) Due to increasing oil spill events, management decided to conduct a  
14          condition assessment of the fuel infrastructure system to identify any  
15          immediate concerns. The inspection found that the light oil piping and  
16          pipe supports of Port Everglades Plant Tanks 903 and 904 were corroded  
17          and needed to be repaired and replaced.

18          3) Tanks 2, 3, and 5 at the Fort Lauderdale Plant were developing severe  
19          corrosion. FPL decided to re-paint the tanks in an effort to effectively  
20          maintain the coating of the tanks, which prevents premature deterioration  
21          of the tank.

22          4) A painting project scheduled for 2010 for the Port Everglades Terminal  
23          Tank 901 was implemented in 2009 to interrupt on-going corrosion of the

1 tank. This was also done to effectively maintain the coating and prevent  
2 premature deterioration.

3

4 **3. RCRA Corrective Action (Project No. 13) - O&M**

5 O&M project expenditures are estimated to be \$36,258 or 72.5% lower  
6 than originally projected. The RCRA project was established in  
7 anticipation of receiving a Florida Department of Environmental Protection  
8 (FDEP) Final Report in December 2008. Due to internal resource  
9 limitations at FDEP, as of June 20, 2009, a report has yet to be issued.  
10 No further actions are anticipated for the remainder of 2009.

11

12 **4. Substation Pollutant Discharge Prevention & Removal –**  
13 **Distribution (Project No. 19a) - O&M**

14 O&M project expenditures are estimated to be \$196,392 or 7.3% higher  
15 than previously projected. This variance is primarily due to an increase in  
16 field support that resulted in an increase in leak repair/regasketing work  
17 conducted this year. In addition, to prevent impacts to the environment  
18 from leaking equipment, and to decrease soil remediation costs resulting  
19 from such impacts, FPL has aggressively increased its oil pad absorbent  
20 change-out program.

21

22 **5. Pipeline Integrity Management – Distribution (Project No. 22) -**  
23 **O&M**

24 O&M project expenditures are estimated to be \$210,628 or 526.6% higher

1 than originally projected. The variance is primarily due to the deferral to  
2 April 2009 of the In-Line Inspection (Smart Pigging) activities scheduled  
3 for the Martin Plant in December 2008. Due to lower than projected  
4 residual oil use to meet FPL system dispatch generation needs, required  
5 available space within storage tanks was insufficient for recovery of oil  
6 during planned use of Pipeline Inspection Gauge (PIG) work.

7  
8 **6. Spill Prevention, Control, and Countermeasures - SPCC**  
9 **(Project No. 23) - O&M**

10 O&M project expenditures are estimated to be \$176,252 or 25.6% higher  
11 than originally projected. This variance is primarily due to revisions made  
12 to the SPCC plans, which are required when oil-filled equipment is either  
13 relocated or removed or when new oil-filled equipment is installed at  
14 substations. In addition, FPL has increased substation inspections to  
15 provide more frequent information to better manage the oil pad absorbent  
16 change-out program stated in Project No. 19a. Finally, additional upgrade  
17 projects listed below were identified through the Fleet Request System  
18 requiring engineering and planning work in 2009.

- 19 • Port Everglades Units 1&2 - Add impervious bottoms to  
20 existing oil trap, and increase metering tank areas secondary  
21 containments.
- 22 • Port Everglades Units 3&4 - Add oil/water separator to replace  
23 two existing oil traps, and increase metering tank areas  
24 secondary containments.

- 1                   ● Port Everglades and Fort Lauderdale - Modify drainage at
- 2                   main transformers at the gas turbine power parks.
- 3                   ● Port Everglades Terminal - Repair secondary containment
- 4                   berm around the fuel oil tanks.
- 5                   ● Fort Myers - Add secondary containment at 12 gas turbines.

6

7           **7. Port Everglades Electrostatic Precipitator – ESP (Project No.**  
8           **25) - O&M**

9           O&M project expenditures are estimated to be \$226,484 or 9.9% lower  
10           than originally projected, primarily due to fewer running hours as a result  
11           of lower demand for generation. Also, lower natural gas prices resulted in  
12           more natural gas and less oil being burned than originally expected at the  
13           plant. Consequently, less ash was created with an associated reduction  
14           in use of the chemical injection system resulting in lower costs of  
15           chemicals and ash disposal.

16

17           **8. Lowest Quality Water Source - LQWS (Project No. 27) – O&M**

18           O&M project expenditures are estimated to be \$46,192 or 17.9% higher  
19           than originally projected, primarily due to a process change made to  
20           monitoring and reporting LQWS usage in third quarter 2008, which has  
21           improved the way FPL measures and reports LQWS. Previously, LQWS  
22           calculations were based on a 90%/10% distribution of water consumed  
23           between Sanford Units 4 and 5 and Sanford Unit 3 respectively. Due to  
24           the minimal usage of Unit 3 and because most water, if not all, is being

1 consumed by Units 4 and 5, FPL made the distribution according to  
2 operational hours. The new calculation is based on gallons  
3 consumed/used and is tracked electronically.

4  
5 **9. CWA 316(b) Phase II Rule (Project No. 28) – O&M**

6 O&M project expenditures are estimated to be \$837,121 or 137.9% lower  
7 than originally projected, primarily due to the following issues:

8  
9 The Environmental Protection Agency (EPA) has initiated new Section  
10 316(b) rulemaking consistent with the ruling of the U.S. Court of Appeals  
11 for the Second Circuit and a new rule has been delayed following the U.S.  
12 Supreme Court decision in early 2009. Therefore, the planned work  
13 under the EPA Clean Water Act 316(b) section has been delayed as a  
14 result of ongoing litigation concerning the appropriateness and application  
15 of the rule and EPA's efforts to rewrite the rule. Until the additional  
16 rulemaking by the EPA is complete, the 316(b) project will be on standby  
17 and work will resume following promulgation of the revised rule.

18  
19 Additionally, an adjustment of \$188,000 was made per Order No. PSC-  
20 04-0987-PAA-EI issued on October 11, 2004, for the netting of  
21 environmentally related study costs in base rates from actual costs  
22 incurred for 2008.

23  
24 **10. Selective Catalytic Reduction (SCR) Consumables (Project**

1                   **No. 29) – O&M**

2                   O&M project expenditures are estimated to be \$56,991 or 16.3% lower  
3                   than originally projected primarily due to lower than projected generation  
4                   from Manatee Unit 3 and Martin Unit 8 as a result of lower than originally  
5                   projected system demand. Also, the direct correlation of ammonia prices  
6                   to natural gas prices, due to the use of natural gas in ammonia, reduced  
7                   the costs for purchase of anhydrous ammonia to lower levels than  
8                   originally projected.

9

10                  **11. CAIR Compliance Project (Project No. 31) – O&M**

11                  O&M project expenditures are estimated to be \$487,919 or 30.3% lower  
12                  than originally projected. The following project activities were identified  
13                  after the filing of the original 2009 estimates:

14                  1) The planned outage at Martin 2, which impacts the 800MW Unit  
15                  Cycling Project, changed from September to December 2009 thereby  
16                  reducing planned activities for 2009.

17                  2) At St. Johns River Power Park (SJRPP) Unit 2, lower than expected  
18                  costs for purchase of anhydrous ammonia and additional under-runs  
19                  occurred due to the in-service date of Unit 2 being postponed from its  
20                  original in-service date of January 2009 to March 2009.

21

22                  **12. St. Lucie Cooling Water System Inspection & Maintenance**  
23                  **(Project No. 34) – O&M**

24                  O&M project expenditures \$1,323,040 or 73.5% lower than originally

1 projected, due to the deferral to 2010 of pipe cleaning activities. Since  
2 these activities must be completed during a refueling outage, and  
3 unfavorable weather and ocean conditions have historically been an issue  
4 in completing planned activities, FPL has deferred these activities until the  
5 next refueling outage, which is planned for the Spring of 2010.

6  
7 **13. Low Level Radioactive Waste Project (Project No. 36) – O&M**

8 O&M project expenditures are estimated to be 1,000,887 or 100.1% lower  
9 than originally projected. Original project estimates, which were  
10 determined during the initial development of the project schedule, plan  
11 and conceptual design of the facility, were classified as O&M. After  
12 review of internal procedures and completion of several cost analyses and  
13 estimates, FPL determined the construction of a Low Level Waste Interim  
14 Storage Facility at Port St. Lucie and Turkey Point qualifies as a capital  
15 project.

16  
17 **14. DeSoto Next Generation Solar Energy Center (Project No. 37)**  
18 **– O&M**

19 O&M project expenditures are estimated to be \$230,375 or 49.3% lower  
20 than originally projected. The variance is primarily due to a change in the  
21 estimated final completion date of the project from July 2009 to October  
22 2009. Estimated O&M prior to the revised commercial in-service date of  
23 the plant were therefore significantly reduced.

1           **15.    Space Coast Next Generation Solar Energy Center (Project**  
2           **No. 38) – O&M**

3           O&M project expenditures are estimated to be \$10,240 or 51.2% higher  
4           than originally projected. Original O&M cost estimates were based on the  
5           construction of a 500 KW site as compared to the current plan for a 900  
6           KW site.

7

8           **16.    Greenhouse Gas Reduction Program (Project No. 40) – O&M**

9           O&M project expenditures are estimated to be \$50,000 or 100% lower  
10          than originally projected. The variance is primarily due to the delay in the  
11          FDEP promulgating a final rule providing guidance to utilities regarding  
12          the required date to join The Climate Registry as well as the delay of the  
13          EPA proposal for the establishment of a national mandatory greenhouse  
14          gas reporting requirement. FPL is proposing to delay implementation of  
15          the Greenhouse Gas Reduction Program until either the FDEP  
16          promulgates a final rule providing guidance to utilities for participation in  
17          The Climate Registry or the EPA promulgates a final rule requiring the  
18          mandatory reporting of Greenhouse Gases.

19

20          **17.    Manatee Temporary Heating System (Project No. 41) – O&M**

21          This project was not anticipated when original estimates for 2009 were  
22          filed on August 29, 2008. O&M expenditures are estimated to be  
23          \$12,500. Please see Randall LaBauve's testimony filed on April 13, 2009.

1       **18. Turkey Point Cooling Canal Monitoring Plan (Project No. 42) –**  
2       **O&M**

3       This project was not anticipated when original estimates for 2009 were  
4       filed on August 29, 2008. O&M expenditures are estimated to be  
5       \$200,000. Please see Randall LaBauve’s testimony in this filing.

6  
7       **19. Amortization of Gains on Sales of Emissions Allowances –**  
8       **O&M**

9       Gains are estimated to be \$638,787 or 65% lower than originally  
10      projected, primarily due to the dollar value per SO<sub>2</sub> allowance changing  
11      significantly from 2008 to 2009. In 2008, the 125,000 auctioned  
12      allowances sold at \$380 per allowance compared to 2009 where the value  
13      dropped to \$62 per allowance. Allowance values have been dropping due  
14      to regulation uncertainty on the future of the CAIR and Acid Rain program  
15      as well as the abundance of the number of allowances in circulation.

16

17                                   **Capital Project Variances**

18

19       **20. St. Lucie Turtle Net (Project No. 21) – Capital**

20      Project depreciation and return on investment are estimated to be  
21      \$23,293 or 16.9% lower than originally projected, primarily due to lower  
22      than projected costs of the turtle net. In addition, the project was  
23      completed earlier than estimated in the 2009 projections.

1           **21. Pipeline Integrity Management (Project No. 22) - Capital**

2           Project depreciation and return on investment are estimated to be \$6,395  
3           or 100% lower than originally projected. The installation of leak detection  
4           devices at the Martin 30" pipeline has been postponed due to the  
5           continuation of analyses on other technology options.

6

7           **22. Clean Air Interstate Rule (CAIR) Compliance (Project No. 31) –**  
8                           **Capital**

9           Project depreciation and return on investment are estimated to be  
10           \$910,830 or 3.9% lower than originally projected, due to revising the  
11           Martin Plant Fall outage schedule from September to December 2009.  
12           The revised outage schedule will result in the deferral of certain 2009  
13           capital activities and expenditures associated with the 800 MW cycling  
14           project. Secondly, costs associated with FGD controls at Plant Scherer  
15           Unit 4 were less than originally projected. This was primarily due to  
16           delays in contractual agreement for engineering, construction and  
17           procurement of the controls. The project is expected to be placed in  
18           service in 2012 and total project estimates remain unchanged.

19

20           **23. Clean Air Mercury Rule (CAMR) Compliance (Project No. 33) –**  
21                           **Capital**

22           Project depreciation and return on investment are estimated to be  
23           \$661,242 or 11.1% higher than originally projected, primarily due to  
24           contract progress payments for engineered materials occurring earlier

1 than originally forecasted. Additionally, site common construction  
2 activities associated with foundation and pilings were completed earlier  
3 than estimated. The CAMR controls are on schedule to be completed in  
4 2010 and total project estimates remain unchanged.

5

6 **24. St. Lucie Cooling Water System Inspection & Maintenance**  
7 **(Project No. 34) – Capital**

8 Project depreciation and return on investment are estimated to be  
9 \$19,518 or 100% lower than originally projected, primarily due to delays in  
10 engineering and testing activities associated with the installation of the  
11 turtle excluders, which has postponed the in-service date of the project  
12 from December 2009 to December 2010.

13

14 **25. DeSoto Next Generation Solar Energy Center (Project No. 37)**  
15 **– Capital**

16 Project depreciation and return on investment are estimated to be  
17 \$353,819 or 3.2% lower than originally projected, primarily due to lower  
18 than projected site preparation costs. Original estimates were prepared  
19 prior to final site surveys and plans. Additionally, costs associated with  
20 the construction of a facility wind wall have been removed from estimates,  
21 as the wind wall was not required to comply with Florida Building Codes.

22

23 **26. Space Coast Next Generation Solar Energy Center (Project**  
24 **No. 38) – Capital**

1 Project depreciation and return on investment are estimated to be  
2 \$150,585 or 10% lower than originally projected due to excluding the  
3 lease cost from depreciation to reflect a depreciation period consistent  
4 with FPL's in-service date of the entire solar project. Additionally,  
5 changes in the timing of capital expenditures lowered the net average  
6 investment.

7

8 **27. Martin Next Generation Solar Energy Center (Project No. 39) –**  
9 **Capital**

10 Project depreciation and return on investment are estimated to be  
11 \$4,305,455 or 36.5% lower than originally projected due to the timing of  
12 procurement of major solar field equipment. This included awarding  
13 purchase orders and payments for solar field mirrors, solar field tubes,  
14 heat exchangers, and the engineering, procurement, construction (EPC)  
15 contract. Due to lower commodity prices and increased market  
16 knowledge, mirrors and heat exchanger awards were postponed into  
17 2009, which led to the cumulative average net investment being  
18 significantly lower than originally expected.

19

20 **28. Manatee Temporary Heating System Project (Project No. 41) –**  
21 **Capital**

22 This project was not anticipated when original estimates for 2009 were  
23 filed on August 29, 2008. Project depreciation and return on investment  
24 are estimated to be \$22,849. Please see Randall LaBauve's testimony

1 filed on April 13, 2009.

2 **Q. Does this conclude your testimony?**

3 **A. Yes, it does.**

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **TESTIMONY OF TERRY J. KEITH**

4                   **DOCKET NO. 090007-EI**

5                   **AUGUST 28, 2009**

6

7

8   **Q.     Please state your name and address.**

9   A.     My name is Terry J. Keith and my business address is 9250 West Flagler  
10         Street, Miami, Florida, 33174.

11 **Q.     By whom are you employed and in what capacity?**

12 A.     I am employed by Florida Power & Light Company (FPL or the Company)  
13         as Director, Cost Recovery Clauses in the Regulatory Affairs Department.

14 **Q.     Have you previously testified in this docket?**

15 A.     Yes, I have.

16 **Q.     What is the purpose of your testimony in this proceeding?**

17 A.     The purpose of my testimony is to present for Commission review FPL's  
18         Environmental Cost Recovery Clause (ECRC) projections for the January  
19         2010 through December 2010 period.

20 **Q.     Is this filing by FPL in compliance with Order No. PSC-93-1580-FOF-  
21         EI, issued in Docket No. 930661-EI?**

22 A.     Yes. The costs being submitted for the projected period are consistent  
23         with that order.

24 **Q.     Have you prepared or caused to be prepared under your direction,**

1 **supervision or control an exhibit in this proceeding?**

2 A. Yes. Exhibit TJK-3 consists of seven documents, PSC Forms 42-1P  
3 through 42-7P provided in Appendix I. Form 42-1P summarizes the costs  
4 being presented at this time. Form 42-2P reflects the total jurisdictional  
5 costs for O&M activities. Form 42-3P reflects the total jurisdictional costs  
6 for capital investment projects. Form 42-4P consists of the calculation of  
7 depreciation expense and return on capital investment for each project.  
8 Form 42-5P gives the description and progress of environmental  
9 compliance activities and projects for the projected period. Form 42-6P  
10 reflects the calculation of the energy and demand allocation percentages  
11 by rate class. Form 42-7P reflects the calculation of the 2010 ECRC  
12 factors.

13 **Q. Please describe Form 42-1P.**

14 A. Form 42-1P (Appendix I, Page 2) provides a summary of projected  
15 environmental costs being presented for the period January 2010 through  
16 December 2010. Total environmental costs, adjusted for revenue taxes,  
17 amount to \$168,558,816 (Appendix I, Page 2, Line 5) and include  
18 \$174,734,516 of environmental project costs (Appendix I, Page 2, Line  
19 1c) decreased by the estimated/actual true-up over-recovery of  
20 \$3,602,753 for the January 2009 - December 2009 period (Appendix I,  
21 Page 2, Line 2), and by the final true-up over-recovery of \$2,694,222 for  
22 the January 2008 – December 2008 period (Appendix I, Page 2, Line 3).

23 **Q. Please describe Forms 42-2P and 42-3P.**

24 A. Form 42-2P (Appendix I, Pages 3 and 4) presents the environmental

1 project O&M costs for the projected period along with the calculation of  
2 total jurisdictional costs for these projects, classified by energy and  
3 demand. Form 42-3P (Appendix I, Pages 5 and 6) presents the  
4 environmental project capital investment costs for the projected period.  
5 Form 42-3P also provides the calculation of total jurisdictional costs for  
6 these projects, classified by energy and demand.

7

8 The method of classifying costs presented in Forms 42-2P and 42-3P is  
9 consistent with Order No. PSC-94-0393-FOF-EI for all projects.

10 **Q. Please describe Form 42-4P.**

11 A. Form 42-4P (Appendix I, Pages 7 through 65) presents the calculation of  
12 depreciation expense and return on capital investment for each project for  
13 the projected period.

14 **Q. Please describe Form 42-5P.**

15 A. Form 42-5P (Appendix I, Pages 66 through 123) provides the description  
16 and progress of environmental projects included in the projected period.

17 **Q. Please describe Form 42-6P.**

18 A. Form 42-6P (Appendix I, Page 124) calculates the allocation factors for  
19 demand and energy at generation. The demand allocation factors are  
20 calculated by determining the percentage each rate class contributes to  
21 the monthly system peaks. The energy allocators are calculated by  
22 determining the percentage each rate contributes to total kWh sales, as  
23 adjusted for losses, for each rate class.

24 **Q. Please describe Form 42-7P.**

1 A. Form 42-7P (Appendix I, Page 125) presents the calculation of the  
2 proposed 2010 ECRC factors by rate class.

3 **Q. Is FPL proposing any adjustments in its base rate proceeding**  
4 **(Docket No. 080677-EI) that impact the ECRC?**

5 A. Yes. In the testimonies of Kim Ousdahl and Marlene Santos filed in  
6 Docket No. 080677-EI, FPL discusses several adjustments to move items  
7 between base rates and clause recovery. One adjustment impacting the  
8 ECRC is to recover bad debt expense associated with clause revenues  
9 through the related cost recovery clause instead of base rates.

10 **Q. Has FPL included this proposed adjustment in the calculation of its**  
11 **2010 ECRC factors?**

12 A. No, however FPL has quantified the impact of this adjustment on the  
13 ECRC and will revise its 2010 ECRC factors to be consistent with the  
14 Commission's decision in Docket No. 080677-EI.

15  
16 If approved in Docket No. 080677-EI, the bad debt expense associated  
17 with ECRC revenues for 2010 will be \$496,753. This amount does not  
18 result in an increase to the ECRC portion of the 2010 Residential 1,000  
19 kWh bill.

20 **Q. Are all costs listed in Forms 42-1P through 42-7P attributable to**  
21 **Environmental Compliance projects previously approved by the**  
22 **Commission?**

23 A. Yes, with the exception the National Emission Standard for Hazardous Air  
24 Pollutants (NESHAP) Information Collection Request Project, the Turkey

1 Point Cooling Canal Monitoring Plan, and the Manatee Temporary  
2 Heating System Project, which are discussed and supported in the  
3 testimony of Randall R. LaBauve.

4 **Q. Does this conclude your testimony?**

5 **A. Yes, it does.**

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**  
2                   **FLORIDA POWER & LIGHT COMPANY**  
3                   **TESTIMONY OF RANDALL R. LABAUVE**  
4                   **DOCKET NO. 090007-EI**

5                   **April 13, 2009**

6  
7   **Q.    Please state your name and address.**

8   A.    My name is Randall R. LaBauve and my business address is 700  
9        Universe Boulevard, Juno Beach, Florida 33408.

10 **Q.    By whom are you employed and in what capacity?**

11 A.    I am employed by Florida Power & Light Company (FPL) as Vice  
12        President of Environmental Services.

13 **Q.    Have you previously testified in predecessors to this docket?**

14 A.    Yes, I have.

15 **Q.    What is the purpose of your testimony in this proceeding?**

16 A.    The purpose of my testimony is to present for Commission review and  
17        approval FPL's plans for a new environmental compliance project, the  
18        Manatee Temporary Heating System Project (the "MTHS Project").

19 **Q.    Have you prepared, or caused to be prepared under your**  
20 **direction, supervision, or control any exhibits in this proceeding?**

21 A.    Yes, I am sponsoring the following exhibits:

- 22        • Exhibit RRL-1 – Manatee Heating System Conceptual Location of  
23        Pumps and Heater.

1 • Exhibit RRL-2 - Florida Department of Environmental Protection  
2 (FDEP) Industrial Wastewater Facility Permit Number FL00001546 for  
3 Plant Riviera (PRV).

4 • Exhibit RRL-3 – PRV Manatee Protection Plan (MPP).

5 • Exhibit RRL-4 – U.S. Fish and Wildlife Service letter to FPL.

6 **Q. Please briefly describe FPL's proposed project.**

7 **A.** In September 2008, FPL received a determination of need from this  
8 Commission to undertake a major modernization project at PRV,  
9 which will convert the existing conventional steam units into a highly  
10 efficient, clean-burning, gas-fired combined cycle unit (the  
11 "Modernization Project") to be named the Riviera Beach Next  
12 Generation Clean Energy Center (RBEC). The proposed activity  
13 under the MTHS Project is to install an electric heating system in  
14 2009, in order to provide a temporary "manatee refuge" by discharging  
15 warm water when necessary into the manatee embayment area until  
16 the PRV is converted to the RBEC. Primary activities integral to the  
17 MTHS Project include installing the pipes, pumps, and heater,  
18 interconnection to the FPL power system, and testing and operating  
19 the system. A conceptual location of the temporary heating system is  
20 included as Exhibit RRL-1.

21 **Q. Please describe the environmental law or regulation requiring the**  
22 **project.**

23 **A.** FPL is proposing the MTHS Project in order to help ensure that we  
24 can comply with FPL's PRV MPP, which is Specific Condition 13 to the

1 Industrial Wastewater Facility (IWWF) Permit Number FL00001546,  
2 issued by the FDEP for the PRV on February 10, 2004. Specific  
3 Condition 13 to the IWWF permit states that "the permittee shall  
4 continue compliance with the facility's Manatee Protection Plan  
5 approved by the Department on December 21, 2000." The IWWF  
6 permit containing Specific Condition 13 is attached as Exhibit RRL-2.  
7 FPL's Manatee Protection Plan is attached as Exhibit RRL-3. Note  
8 that the Manatee Protection Plan refers to "Specific Condition 12,"  
9 which has been renumbered as Specific Condition 13 in the current  
10 IWWF permit.

11  
12 Additionally, the Lake Worth Lagoon is considered by the United  
13 States Fish and Wildlife Service ("FWS") as Critical Habitat for the  
14 manatee (42 FR 47840). The manatee is also protected by the Marine  
15 Mammal Protection Act of 1972 (16 U.S.C. 1361, et. seq.), and the  
16 Endangered Species Act of 1973 (16 U.S.C. 1531, et. seq.). On June  
17 24, 2008, the FWS provided comments in a letter to FPL regarding the  
18 Modernization Project. In those comments, the FWS noted that the  
19 Marine Mammal Protection Act and the Endangered Species Act do  
20 not permit incidental takes. The FWS indicated that measures would  
21 be necessary to protect the manatees from cold water impacts during  
22 the transition period of the Modernization Project. A copy of the FWS  
23 letter to FPL is attached as Exhibit RRL-4.

1 **Q. How has FPL complied with Specific Condition 13 to the IWWF**  
2 **Permit in the past?**

3 **A.** Historically, FPL has provided warm water to the manatee embayment  
4 area by discharging a portion of the once-through cooling water  
5 discharge into the manatee embayment area. The remainder of the  
6 once-through cooling water is discharged approximately 1900 feet  
7 from the plant into the Lake Worth Lagoon.

8 **Q. What is a manatee embayment area?**

9 **A.** The term "manatee embayment" refers to the discharge area  
10 previously used for PRV Units 1 and 2 (retired in 1983 and 1991,  
11 respectively) and now used to discharge a portion of the once-through  
12 cooling water discharge from Units 3 and 4. The embayment opens  
13 directly into the Lake Worth Lagoon.

14 **Q. What is the significance of FPL providing warm water to the**  
15 **embayment area?**

16 **A.** The Florida manatee, a subspecies of the West Indian manatee found  
17 only in the southeastern United States, is listed as endangered under  
18 both the U.S. Endangered Species Act and Florida state law. Most  
19 manatees congregate at confined warm-water refuges when coastal  
20 water temperatures begin to fall below 68°F. The exact thresholds at  
21 which manatees succumb to cold and die are uncertain and can vary  
22 between individuals. However, when extremely cold winter  
23 temperatures occur, large numbers of manatees may die or have their  
24 health impaired. Many of the natural warm water habitats historically

1 used by manatees are no longer available to them. The outflows from  
2 power plants, like the PRV, have provided a valuable substitute for  
3 these lost natural resources.

4  
5 The entire Lake Worth Lagoon is considered by the United States Fish  
6 and Wildlife Service as Critical Habitat for the manatee (42 FR 47840).  
7 Manatees are known to inhabit the Lake Worth Lagoon year-round  
8 and they congregate at the PRV embayment area during colder  
9 temperatures because of the warm water discharged from the plant.

10 **Q. How many manatees can be found in Lake Worth Lagoon and the**  
11 **embayment area?**

12 **A.** During a survey conducted by the Florida Fish and Wildlife  
13 Conservation Commission in February 2007, 237 manatees were  
14 observed gathered near the existing PRV (PBCERM, 2008).

15  
16 Aerial surveys for manatees were conducted by Mote Marine  
17 Laboratory on behalf of FPL in February 2007. On February 7, 2007,  
18 288 manatees were observed in the vicinity of PRV, including 25  
19 calves. On February 17, 2007, 141 manatees were observed,  
20 including 11 calves.

21  
22 In the winter of 2008-2009, Mote Marine Laboratory conducted three  
23 surveys at PRV. On January 18, 2009, 183 manatees were observed,

1 on January 24, 2009, 454 manatees were observed and on February  
2 6, 2009, 388 manatees were observed.

3 **Q. Why does FPL now need a different heating source for PRV?**

4 A. Implementing the Modernization Project will require that the existing  
5 units be dismantled and substantially rebuilt. During this construction  
6 period, the units will not be available to provide warm water for  
7 compliance with the MPP. The current schedule for the Modernization  
8 Project requires that the existing conventional steam units be taken  
9 out of service no later than 2011 to begin the conversion.

10 **Q. Please describe the temporary heating system.**

11 A. The temporary heating system will include a 30-million Btu per hour  
12 electric heater along with pumps, piping, and electrical equipment.  
13 The intake piping and pumps for the system will be installed in the  
14 existing Units 1 and 2 intake structure located approximately 500 feet  
15 north of the system discharge. Seawater will be pumped through the  
16 electric heater and discharged into the manatee embayment area  
17 when the ambient water temperature falls below 61°F. The water  
18 depth in this area is approximately 4 to 6 feet. The temporary heating  
19 system is predicted to provide approximately 0.9 acres of water at or  
20 above 68°F during conditions under which the present MPP requires  
21 that FPL endeavor to provide heated water for manatee protection.

22 **Q. How did FPL determine the size of the electric heater?**

1 **A.** To determine the size of the heater required to comply with the MPP  
2 obligation, FPL retained an environmental services firm to build a  
3 computer model to calculate the minimum thermal outputs required.

4 **Q.** **Why does the temporary heating system need to be installed in**  
5 **2009?**

6 **A.** While the existing units would not have to be taken out of service until  
7 2011, FPL has projected that it can save approximately \$10 million in  
8 O&M costs for PRV during 2009 and 2010 by keeping the existing  
9 units in inactive reserve status until they are dismantled for the  
10 Modernization Project. FPL's rate case Minimum Filing Requirements  
11 (MFRs) reflect these projected savings. Inactive reserve status would  
12 allow the units to be returned to service if major unit outages, changes  
13 in load growth or other factors indicated a greater than expected need  
14 for them to meet reserve requirements, but the units could not be  
15 returned to service quickly enough to respond to a sudden cold-  
16 weather event that required warming water in the manatee  
17 embayment area.

18  
19 In short, the Modernization Project dictates that FPL have an  
20 alternative heating source at PRV by 2011, but the cost savings of  
21 keeping the existing units in inactive reserve status can be achieved  
22 only if an alternative heating source is put in place in 2009, in time for  
23 the Winter of 2009-2010, which may require that the embayment area  
24 be warmed. The MTHS Project will help to avoid potential adverse

1 impacts from cold water to manatees congregating at PRV's manatee  
2 embayment area during the annual period from November 15 to March  
3 31.

4 **Q. Please explain why FPL decided to put PRV into inactive reserve**  
5 **status.**

6 **A.** The current economic slowdown has resulted in FPL projecting lower  
7 electric load demands and lower electricity sales. FPL reviewed its  
8 generation operating fleet and decided to temporarily place some of its  
9 older, less efficient units, including PRV, into inactive reserve status as  
10 a cost-savings measure. This means FPL will be reducing daily  
11 staffing at, and operations and maintenance expenses for, these units,  
12 while still keeping them ready with adequate notice to respond to  
13 significant changes in projected demand increases, as well as to  
14 return PRV to normal operations when needed to satisfy future load  
15 growth. FPL will perform the required normal maintenance at the  
16 inactive reserve units over a longer time horizon, thereby reducing  
17 costs while at the same time ensuring that the plant can resume  
18 operations efficiently when needed.

19 **Q. Why can't the PRV units be returned from inactive reserve status**  
20 **quickly enough to meet MPP requirements during 2009-2010?**

21 **A.** FPL's Power Generation Division experts estimate that to return PRV  
22 to an operating condition requires at least thirty (30) days.  
23 Furthermore, an extended period of plant inactivity at the aged PRV

1 could increase the difficulties required to bring it to an active status for  
2 purposes of warming the water.

3  
4 With the PRV units in inactive reserve status, FPL cannot depend on  
5 them to meet the obligation to provide a warm water refuge for  
6 manatees. Even with advanced notice of inclement weather, there  
7 would not be enough time to bring the PRV units back online in time to  
8 provide warm water. Furthermore, the cost of trying to accelerate the  
9 return of the units to service from inactive reserve status could be  
10 substantial.

11 **Q. Could FPL return PRV to active service status and run it during**  
12 **the winter of 2009 to provide warm water for manatees instead of**  
13 **installing the temporary heating system in 2009?**

14 **A.** Yes. FPL could prepare PRV at the start of the winter season to be  
15 available for operation on short notice, but this would involve a  
16 significant cost for personnel and maintenance. Keep in mind that  
17 FPL inevitably must purchase a temporary heating system when the  
18 existing PRV units are dismantled to implement the Modernization  
19 Project. Therefore, by incurring the costs necessary to make PRV  
20 available during wintertime, FPL would only be deferring the cost of  
21 the temporary heating system for a couple of years, not avoiding those  
22 costs. The annual costs for the temporary heating system in years  
23 2009 and 2010 are much lower than the staffing and maintenance

1 expenditures that would be necessary to keep the units available just  
2 for manatee heating during these winters.

3 **Q. What conclusions did FPL reach regarding the alternatives for**  
4 **providing warm water to manatees at PRV?**

5 **A.** As I discussed earlier, FPL will eventually need a temporary heating  
6 system at PRV because there will be no other viable source of warm  
7 water for manatees during the construction of the Modernization  
8 Project. Accelerating the installation of the heating system, however,  
9 will allow FPL and its customers to enjoy approximately \$10 million in  
10 savings by keeping the existing units in inactive reserve, which is a  
11 savings of more than double the entire cost of the temporary heater.  
12 Additionally, the temporary heating system is less costly to operate in  
13 comparison to operating PRV out of economic dispatch just for water  
14 heating. It can thus be reasonably concluded that the temporary  
15 heating system is the better alternative for FPL to pursue, resulting in  
16 the most cost effective means to produce warm water for the  
17 manatees and the least burdensome on FPL's customers.

18  
19 Also, other impacts support the decision to install the temporary  
20 heating system. From an environmental impact basis, installing the  
21 temporary heating system allows FPL to respond quicker to weather  
22 threats to manatees since the heating system is as close to pushing a  
23 button for an immediate response as possible. From a resource  
24 impact basis, operating the temporary heating system requires less

1 fuel and lower O&M costs to accomplish the same objective as  
2 operating PRV.

3  
4 Analysis of these alternatives supports a conclusion that the prudent  
5 course of action is to allow PRV to remain in inactive reserve status  
6 and to install a heating system for use during the five winter seasons  
7 between now and the expected RBEC commercial operation date of  
8 June 2014.

9 **Q. How did FPL calculate the approximate \$10 million cost saving**  
10 **from placing PRV into inactive reserve status?**

11 **A.** FPL calculated PRV's average annual total base O&M expense from  
12 2000 to 2007 to be approximately \$7.1 million. The cost of  
13 maintaining the plant in inactive reserve status is approximately \$2.7  
14 million and \$1.5 million in 2009 and 2010, respectively. Thus, savings  
15 of \$4.4 million in 2009 and \$5.6 million in 2010 accrue to FPL's  
16 customers.

17 **Q. When will FPL begin the MTHS Project?**

18 **A.** Due to the prescribed annual period for providing warm water and the  
19 time required to design, purchase, and install the heating system and  
20 perform integral activities such as making the interconnection to the  
21 FPL power system, the MTHS Project will begin immediately. Upon  
22 the commercial operation of the RBEC (scheduled for 2014), the  
23 heating system will be dismantled and removed because it will no

1 longer be needed. The modernized combined cycle unit will provide a  
2 regular source of warm water to comply with the MPP.

3 **Q. Has FPL estimated the cost of the proposed MTHS Project?**

4 **A.** Estimated capital costs for the temporary heating system in 2009 are  
5 \$4.7 million. These estimates include expenditures for the equipment,  
6 design and engineering of the system, labor for installation, and  
7 interconnection to the FPL power system. Because FPL does not  
8 expect to need the temporary heating system once the modernized  
9 combined cycle unit goes into service and plans to dismantle the  
10 system at that time, FPL proposes to amortize the system over 56  
11 months (i.e., from November 2009 through June 2014). FPL will incur  
12 removal costs for the temporary heating system in 2014, which will be  
13 offset by any salvage value that FPL is able to obtain for the system.  
14 Because FPL cannot accurately predict either the removal costs or the  
15 salvage value at this time, we have assumed that they net to zero for  
16 the purpose of the current cost projections and will true up the  
17 projections later as better information becomes available. Of course,  
18 any surplus of salvage value over removal costs would be returned to  
19 customers via the Environmental Cost Recovery Clause (ECRC).

20  
21 After installation and commissioning is complete, FPL expects to incur  
22 O&M costs associated with materials and supplies necessary to  
23 maintain the heating system. FPL's annual O&M estimates for 2010  
24 through 2014 are \$50,000. These projected O&M costs do not include

1 the energy costs to operate the temporary heating system. FPL  
2 cannot predict how often the system will operate, however, the energy  
3 costs will not be significant nor will they be recovered through the  
4 ECRC process.

5 **Q. Has FPL estimated its 2009 ECRC recovery amount for the MTHS**  
6 **Project?**

7 **A.** FPL plans to place the temporary heating system into service by early  
8 November 2009. Based on that in-service date, FPL has projected  
9 approximately \$234,000 in amortization expense and return on  
10 investment associated with the temporary heating system during the  
11 remainder of 2009.

12 **Q. Please describe the measures FPL has taken to ensure that costs**  
13 **of the MTHS Project have been minimized.**

14 **A.** FPL's Engineering and Construction Division has retained an  
15 engineering firm to perform a study to identify the most cost-effective  
16 approach to providing a temporary heating system. Using a  
17 performance specification for the recommended equipment, FPL's  
18 Integrated Supply Chain (ISC) group, participating in the MTHS  
19 Project, will solicit bids from multiple suppliers to determine the source  
20 providing the overall best value. The ISC group provides enterprise-  
21 wide leadership, direction, and operation of a fully integrated supply  
22 chain supporting the procurement, materials management, and logistic  
23 needs of FPL and the MTHS Project. ISC's objective is to drive down  
24 costs to FPL and ensure the delivery of the highest quality goods and

1 services. Well-established corporate policies and procedures dictate  
2 that for the MTHS Project, the materials supply contract and the  
3 construction contract will be competitively bid.

4  
5 FPL's Project Controls group has established a scope, budget, and  
6 schedule to meet the needs of the MTHS Project. Project Controls is  
7 also responsible for tracking all MTHS Project costs through various  
8 approval processes, procedures, and databases.

9 **Q. Is FPL also considering a temporary heating system at the Cape**  
10 **Canaveral Plant?**

11 **A.** Yes. The permits for the Cape Canaveral Plant have similar  
12 requirements for maintaining water temperatures to protect manatees.  
13 FPL expects to make a decision on how to provide temporary water  
14 heating at the Cape Canaveral Plant this Fall and, if a temporary  
15 heating system is required, may petition to amend the MTHS Project  
16 to include the costs for that system as well.

17 **Q. Is FPL recovering through any other mechanism the costs for the**  
18 **MTHS Project for which it is petitioning for ECRC recovery?**

19 **A.** No.

20 **Q. Does this conclude your testimony?**

21 **A.** Yes, it does.

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**

2                   **FLORIDA POWER & LIGHT COMPANY**

3                   **TESTIMONY OF RANDALL R. LABAUVE**

4                   **DOCKET NO. 090007-EI**

5                   **August 3, 2009**

6                   **(REVISED SEPTEMBER 25, 2009)**

7

8   **Q.    Please state your name and address.**

9    A.    My name is Randall R. LaBauve and my business address is 700  
10          Universe Boulevard, Juno Beach, Florida 33408.

11   **Q.    By whom are you employed and in what capacity?**

12   A.    I am employed by Florida Power & Light Company (FPL) as Vice  
13          President of Environmental Services.

14   **Q.    Have you previously testified in predecessors to this docket?**

15   A.    Yes, I have.

16   **Q.    What is the purpose of your testimony in this proceeding?**

17   A.    The purpose of my testimony is to present for Commission review and  
18          approval FPL's plans for a new environmental compliance project, the  
19          Turkey Point Cooling Canal Monitoring Plan (the "CCM Plan").

20   **Q.    Have you prepared, or caused to be prepared under your  
21          direction, supervision, or control any exhibits in this proceeding?**

22   A.    Yes, I am sponsoring the following exhibits:

- 1           ● RRL-5 – Florida Department of Environmental Protection
- 2                   (FDEP) Conditions of Certification (PA 03-45A2) Special
- 3                   Conditions IX and X.
- 4           ● RRL-6 - DRAFT Turkey Point Plant Groundwater, Surface
- 5                   Water, and Ecological Monitoring Plan, dated July 16, 2009
- 6           ● RRL-7 - CCM Plan Objectives and Strategies

7   **Q,   Please describe the cooling canal system at the Turkey Point**  
8   **Plant.**

9   A.   The cooling canal system is a 5,900-acre closed cycle system that is  
10       used by Turkey Point Units 1 through 4 for condenser and auxiliary  
11       equipment cooling and by Unit 5 to discharge cooling tower blowdown.  
12       This closed cycle system does not have a point source discharge  
13       directly into Biscayne Bay, and cooling water is constantly recycled  
14       through the plant. Some water is lost via evaporation and seepage.  
15       Make-up water principally consists of inflows from groundwater  
16       beneath the cooling canals and rainwater. As a result of the natural  
17       evaporation process, water in the cooling canal system is hypersaline,  
18       meaning that it has a high salt content. The cooling canal system is a  
19       permitted industrial wastewater facility.

20   **Q.   Please describe current monitoring efforts at the Turkey Point**  
21   **Plant.**

22   A.   In 1972, FPL and the South Florida Water Management District  
23       (SFWMD) (previously known as the Central and Southern Florida  
24       Flood Control) entered into an agreement that defined the current

1 monitoring efforts for the cooling canal system. Monitoring efforts  
2 originally utilized up to 87 monitoring wells. These wells monitored the  
3 water in the vicinity of Biscayne Bay and to the west of the cooling  
4 canal for temperature and conductivity. Monitoring efforts were scaled  
5 back over the years as data being produced and reviewed by  
6 regulatory agencies indicated that the operation of the cooling canal  
7 system was having no significant impact on the regional environment.  
8 The current version of the agreement is the Fourth Supplemental  
9 Agreement between FPL and the SFWMD, dated July 15, 1983.  
10 Currently, only four groundwater monitoring wells are required to be  
11 sampled at quarterly intervals for salinity, temperature and water level.

12  
13 FPL also monitors surface water elevations along five transects that  
14 measure water levels in the westernmost feeder canal in the cooling  
15 canal system, the Interceptor Ditch (ID) and the L-31E Canal as part of  
16 the Interceptor Ditch Operations Plan within the Turkey Point Plant.  
17 These water levels provide input to the operation of the ID to restrict  
18 inland movement of cooling canal water.

19  
20 In addition to these monitoring efforts required by the current  
21 agreement, other related but independent monitoring efforts are also  
22 ongoing. As part of radiological monitoring requirements for the  
23 Nuclear Regulatory Commission, the Florida Department of Health  
24 Services conducts quarterly to semi-annual monitoring of direct

1 radiation, air particulates, surface water, sediment, fish, crustaceans,  
2 groundwater and leafy vegetation. To date, no evidence has been  
3 found of any radiological levels of concern.

4 **Q. Please describe the environmental law or regulation requiring the**  
5 **CCM Plan.**

6 A. On January 18, 2008, FPL submitted an application for power plant  
7 site certification under the Florida Electrical Power Plant Siting Act  
8 ("PPSA"), section 403.501 et seq, Florida Statutes for the Turkey Point  
9 Uprate Project in Homestead, Florida. On October 29, 2008, the  
10 FDEP Siting Office issued the Conditions of Certification (PA 03-  
11 45A2). Conditions of Certification IX and X require FPL to develop a  
12 monitoring plan for the cooling canal system and the areas  
13 surrounding the cooling canal system. Conditions of Certification IX  
14 and X are included as Exhibit RRL-5.

15  
16 Condition IX, "Biscayne Bay Surface Water Monitoring", which is  
17 imposed by the FDEP, requires FPL to submit a monitoring plan within  
18 180 days following certification of Units 3 and 4, which will include:

- 19 • specific conductivity (salinity) and temperature monitoring  
20 within the surface waters of Biscayne Bay, including the  
21 Biscayne Bay Aquatic Preserve;
- 22 • a minimum of five monitoring stations located near shore in the  
23 vicinity of the Turkey Point Plant; and

- 1           • specific monitoring locations, sampling frequencies and  
2           methods and specific parameters to be monitored.

3           Condition X, "Surface Water, Ground Water, and Ecological  
4           Monitoring" sets the framework for new monitoring and, as may be  
5           needed, abatement or mitigation measures for approval of FPL's  
6           Turkey Point Units 3 and 4 Uprate Application. This condition is  
7           imposed by the SFWMD, Miami-Dade Department of Environmental  
8           Resources Management (DERM), and the FDEP and requires the  
9           establishment of relevant baseline conditions, determination of the  
10          extent and effect of the cooling canal system on the surface water,  
11          groundwater, and nearby ecological communities, and detection of  
12          changes that may occur as a result of the Uprate Project.

13  
14          The Conditions of Certification require that the CCM Plan be  
15          incorporated into the Fifth Supplemental Agreement and include an  
16          assessment of potential impacts to the surface water and groundwater  
17          including wetlands, as needed, in the vicinity of the cooling canal  
18          system.

19  
20          The CCM Plan will collect relevant data which will enable a reasonable  
21          assessment of the effects of the cooling canal system and the Uprate  
22          Project. The resources where the effects are of highest interest  
23          include:

- 1           ● fresh groundwater to the west of the cooling canal system,  
2           where groundwater supplies are withdrawn;
- 3           ● surface water in Biscayne Bay and littoral zone;
- 4           ● surface water in adjacent freshwater canals;
- 5           ● freshwater wetlands immediately to the west of the cooling  
6           canal system; and
- 7           ● coastal wetlands (mangroves) immediately east of the cooling  
8           canal system.

9   **Q. Please describe the newly required CCM Plan.**

10   **A. On February 18, 2009, pursuant to Conditions IX and X of the FDEP**  
11   **October 29, 2008 Final Order Approving Site Certification, FPL**  
12   **submitted its initial draft of the proposed CCM Plan associated with**  
13   **FPL's Turkey Point Uprate Project to SFWMD. This CCM Plan**  
14   **requires an assessment of baseline conditions to provide information**  
15   **on the vertical and horizontal extent of the hypersaline groundwater**  
16   **plume and the extent and effect of that plume on groundwater and**  
17   **surface water quality, if any. Comments, concerns and requests for**  
18   **revisions or action items have been received from the SFWMD as well**  
19   **as the FDEP, DERM and incorporated into the current draft of the**  
20   **proposed monitoring plan, dated July 16, 2009. The draft CCM Plan is**  
21   **included as Exhibit RRL-6.**

22

23           The CCM Plan has not yet been finalized or agreed upon by FPL and  
24           the agencies and is therefore subject to change based on input from

1 the agencies. FPL expects the CCM Plan to be approved by mid  
2 September 2009.

3

4 The objective of FPL's CCM Plan is to implement the Conditions of  
5 Certification IX and X, which state that "the Revised Plan shall be  
6 designed to be in concurrence with other existing and ongoing  
7 monitoring efforts in the area and shall include but not necessarily be  
8 limited to surface water, groundwater and water quality monitoring,  
9 and ecological monitoring to:

- 10 • delineate the vertical and horizontal extent of the hypersaline  
11 plume that originates from the cooling canal system and to  
12 characterize the water quality including salinity and  
13 temperature impacts of this plume for the baseline condition;
- 14 • determine the extent and effect of the groundwater plume on  
15 surface water quality as a baseline condition; and
- 16 • detect changes in the quantity and quality of surface and  
17 groundwater over time due to the cooling canal system  
18 associated with the Uprate Project. The Revised Plan shall  
19 include installation and monitoring of an appropriate network of  
20 wells and surface water stations."

21 **Q. Please describe the proposed activities associated with the CCM**  
22 **Plan.**

23 **A. The CCM Plan will provide information to determine the extent and**  
24 **effects of the hypersaline cooling canal system water on both surface**

1 and groundwater and its potential impacts on Biscayne Bay and the  
2 multi-jurisdictional lands around the Turkey Point Plant. The CCM  
3 Plan includes monitoring of surface water, groundwater, and  
4 ecological conditions prior to implementation of Uprate modifications  
5 and after implementation of the Uprate Project. Prior to the start-up of  
6 the Uprate Project and following implementation of the Uprate Project,  
7 data will be collected using monitoring that addresses ground and  
8 surface water levels, salinity, temperature, tracer components, tidal  
9 influences, preferential groundwater flow paths, surface and ground  
10 water quality, rainfall, and associated ecological conditions.

11 **Q. Please describe the strategy that FPL will implement to meet the**  
12 **objectives of the CCM Plan.**

13 **A.** The CCM Plan has been designed to focus on the objectives as they  
14 relate to the cooling canal system and the Uprate Project and those  
15 resources that may be affected adjacent to the cooling canal system.  
16 Exhibit RRL-7 provides the objectives of the CCM Plan and the  
17 strategy FPL will implement to meet the objectives.

18 **Q. Please describe the adaptive approach that will be used in the**  
19 **CCM Plan.**

20 **A.** To effectively build on the information gained as the monitoring effort  
21 progresses, an adaptive approach will be utilized. The intent of the  
22 adaptive approach is to facilitate the addition or elimination of  
23 sampling so that the most relevant information is collected and  
24 analyzed. By remaining flexible, the objectives of the CCM Plan can

1 be more effectively met in a reasonable manner while being fully  
2 protective of the environmental resources.

3 **Q. How will results of the CCM Plan be reported?**

4 A. Comprehensive monitoring reports will be submitted for  
5 documentation of site conditions and activities. The reports will  
6 include a summary of the cooling canal system operations and  
7 operational changes that result in changes in physical or chemical  
8 characteristics of cooling water effluent or flow rates. A description of  
9 monitoring activities, station modifications and station operational  
10 summaries, and results of surface and groundwater data collection for  
11 the period will be included. The reports will also provide analyses of  
12 the key findings from the cooling canal system, including any  
13 additional characterization and testing, and the surrounding areas as  
14 related to the surface, groundwater, and ecological monitoring efforts.  
15 The reports will include a completeness evaluation of specific plan  
16 objectives and recommendations for adjustments (additions or  
17 deletions) to the monitoring program along with rationales. An  
18 updated monitoring schedule will be included in the report.

19  
20 The reports will be submitted every six months during the pre Uprate  
21 period and initially during the post Uprate period. The frequency of  
22 report submittals may be allowed to decrease over time pending  
23 evaluation of the data and approval by the lead agency.

24

1 The semi-annual reports will typically include four to six months of new  
2 data that is assessed in conjunction with previous findings. The  
3 annual reports will typically have 10 to 12 months of new data.

4 To facilitate communication and keep the applicable agencies  
5 apprised of the monitoring efforts and any significant findings,  
6 quarterly meetings will be held. Issues of concern or suggested  
7 improvements in the monitoring effort commensurate with focused  
8 objectives of the Conditions of Certification should be discussed.

9 **Q. When will FPL begin the CCM Plan?**

10 A. The original date set for completion of negotiations was July 31, 2009,  
11 but because the parties were not able to come to an agreement, the  
12 completion date has been extended to October 16, 2009. The parties  
13 expect to have an approved plan by mid-September; therefore the  
14 earliest start date is the middle of September, 2009.

15 **Q. Has FPL estimated the cost of the proposed CCM Plan?**

16 A. Yes. O&M and Capital estimates for the total project are \$7.2 million  
17 and \$2.7 million, respectively.

18 **Q. Has FPL estimated its 2009 ECRC recovery amount for the CCM  
19 Plan?**

20 A. O&M and Capital estimates for 2009 are \$200,000 and \$800,000,  
21 respectively. These costs are associated with the purchase of probes,  
22 wiring calibrations, flow meters, solar panels and batteries, as well as  
23 creating transects for ecological monitoring and a bathymetric survey.

1           These activities may be modified per the approval of the final CCM  
2           Plan expected in September, 2009.

3   **Q.    Has FPL estimated its 2010 ECRC recovery amount for the CCM**  
4           **Plan?**

5   A.    O&M and Capital estimates for 2010 are \$3,400,000 and \$1,800,000  
6           respectively. These costs are associated with project management,  
7           electronic data set-up and management, installation of well clusters,  
8           conducting ecological monitoring, instrument maintenance and  
9           preparing reports. As mentioned above, required activities may be  
10          modified per the approval of the final CCM Plan expected in  
11          September, 2009.

12 **Q.    How will FPL ensure that the costs incurred are prudent and**  
13          **reasonable?**

14 A.    FPL will use competitive bidding for this project. FPL maintains a  
15          strong market presence allowing it to leverage corporate-wide  
16          procurement activities to the specific benefit of individual project  
17          procurement activities. Maintaining a relationship with a range of  
18          service providers, when available, offers the opportunity to assess  
19          capabilities, respond to changing resource loads and remain  
20          knowledgeable of current market trends and cost of service.

21 **Q.    How is the current monitoring effort at FPL's Turkey Point Plant**  
22          **being recovered?**

23 A.    Costs associated with the current monitoring efforts at the Turkey  
24          Point Plant are being recovered through FPL's current base rates.

1 Costs associated with the current interceptor ditch operation and  
2 monitoring of the four remaining wells are approximately \$50,000 per  
3 year. The current draft of the CCM Plan calls for the installation of  
4 several more monitoring wells and monitoring equipment at various  
5 locations in and around the Turkey Point Plant, as well as data  
6 collection and reporting. These activities will be incremental to FPL's  
7 current monitoring efforts.

8 **Q. Is FPL recovering through any other mechanism the costs for the**  
9 **CCM Plan for which it is petitioning for ECRC recovery?**

10 A. No. FPL is only requesting recovery of incremental activities  
11 associated with the CCM Plan. The costs associated with the current  
12 monitoring efforts are not included in FPL's estimates for the CCM  
13 Plan.

14 **Q. What are the next steps after the data is gathered and the reports**  
15 **are written?**

16 A. If the FDEP, in consultation with SFWMD and DERM, determines that  
17 the pre- and post-Uprate monitoring data: (1) is insufficient to evaluate  
18 changes as a result of this project; (2) indicates harm or potential harm  
19 to the waters of the State including ecological resources; (3) exceeds  
20 State or County water quality standards; or (4) is inconsistent with the  
21 goals and objectives of the CERP Biscayne Bay Coastal Wetlands  
22 Project, then additional measures may be required to evaluate or to  
23 abate such impacts. The potential additional measures that might be  
24 required include but are not limited to:

- 1           • the development and application of a 3-dimensional coupled  
2           surface and groundwater model (density dependent) to further  
3           assess impacts of the Uprate Project on ground and surface  
4           waters; such model shall be calibrated and verified using the  
5           data collection during the monitoring period;
- 6           • mitigation measures to offset such impacts of the Uprate  
7           Project necessary to comply with State and local water quality  
8           standards, which may include methods and features to reduce  
9           and mitigate salinity increases in groundwater including the use  
10          of highly treated reuse water for recharge of the Biscayne  
11          aquifer or wetlands rehydration;
- 12          • operational changes in the cooling canal system to reduce any  
13          such impacts; and/or
- 14          • other measures to abate impacts as may be described in the  
15          revised plan.

16   **Q. Does this conclude your testimony?**

17   **A. Yes.**

1                   **BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION**  
2                   **FLORIDA POWER & LIGHT COMPANY**  
3                   **TESTIMONY OF RANDALL R. LABAUVE**  
4                   **DOCKET NO. 090007-EI**  
5                   **AUGUST 28, 2009**  
6                   **(REVISED SEPTEMBER 25, 2009)**  
7

8   **Q.     Please state your name and address.**

9   A.     My name is Randall R. LaBauve and my business address is 700  
10         Universe Boulevard, Juno Beach, Florida 33408.

11 **Q.     By whom are you employed and in what capacity?**

12 A.     I am employed by Florida Power & Light Company (FPL) as Vice  
13         President of Environmental Services.

14 **Q.     Have you previously testified in this docket?**

15 A.     Yes, I have.

16 **Q.     What is the purpose of your testimony in this proceeding?**

17 A.     The purpose of my testimony is to present for Commission review and  
18         approval a new environmental project – The National Emission Standards  
19         for Hazardous Air Pollutants (NESHAP) Information Collection Request  
20         (ICR) Compliance Project. Additionally, my testimony discusses the  
21         expansion of the Manatee Temporary Heating System (MTHS) Project  
22         originally filed in this docket on April 13, 2009, to cover the Cape  
23         Canaveral Plant (PCC). Finally, my testimony provides a brief update on  
24         the St. Lucie Cooling Water System Inspection and Maintenance Project,

1 approved in Docket No. 070007-EI, Order No. PSC-07-0922-FOF-EI,  
2 issued on November 16, 2007.

3 **Q. Have you prepared, or caused to be prepared under your direction,  
4 supervision, or control, an exhibit in this proceeding?**

5 **A. Yes. I am sponsoring the following exhibits:**

- 6 ● RRL-8 – NESHAP ICR Public Notice
- 7 ● RRL-9 – Electric Utility Steam Generating Unit Hazardous Air  
8 Pollutant Information Collection Effort Burden Statement - Part B
- 9 ● RRL-10 – Florida Department of Environmental Protection (FDEP)  
10 Industrial Wastewater Facility (IWWF) Permit Number FL0001473  
11 for Plant Cape Canaveral (PCC)
- 12 ● RRL-11 - PCC Manatee Protection Plan (MPP)
- 13 ● RRL-12 – U.S. Fish and Wildlife Service (USFWS) letter to FPL
- 14 ● RRL-13 – Florida Fish and Wildlife Conservation Commission's  
15 (FWC) "FWC Staff Report For Florida Power and Light Company  
16 – Cape Canaveral Energy Center (CCEC)"
- 17 ● RRL-14 – Manatee Heating System Conceptual Location of  
18 Pumps and Heater

19

20 **NESHAP ICR Compliance Project**

21

22 **Q. Please describe the law or regulation requiring the NESHAP ICR  
23 Compliance Project.**

1 A. The Environmental Protection Agency (EPA) regulates Hazardous Air  
2 Pollutants (HAPs) through authority granted to the agency under Section  
3 112 of the Clean Air Act (CAA). EPA promulgates NESHAP emission  
4 standards under 40 CFR Part 63 for stationary source categories. In  
5 setting HAP emission limitations and performance standards for source  
6 categories EPA reviews available information and where additional  
7 information is needed EPA issues an ICR to affected sources under  
8 authority granted to it by Section 114 of the CAA.

9  
10 The ICR for NESHAP for coal and oil-fired utility steam generating units  
11 was proposed by the EPA and noticed in the Federal Register on July 2,  
12 2009. The NESHAP ICR Public Notice is included as Exhibit RRL-8.  
13 EPA has proposed to require survey information, fuel analyses, and  
14 emission stack testing to determine whether coal and oil-fired electric  
15 utility steam generating units emit HAPs listed under CAA section 112(b).  
16 FPL anticipates that the final ICR will be published in the Federal  
17 Register by December of 2009. To comply with the EPA deadlines, FPL  
18 will need to complete all required activities within six months of issuance  
19 of the final ICR. To comply with the March 13, 2007 D.C. Circuit Court of  
20 Appeals decision on Maximum Achievable Control Technology standards  
21 and the court's vacatur of the Clean Air Mercury Rule, EPA has proposed  
22 the NESHAP ICR to collect sufficient information to identify HAP emission  
23 standards for the best performing sources for coal and oil-fired utility  
24 steam generating units.

1 **Q. Why has FPL proposed the NESHAP ICR project prior to EPA**  
2 **publishing a final ICR?**

3 A. FPL anticipates that EPA will propose a final ICR for coal and oil-fired  
4 utility steam generating units this year as a result of the U.S. Court of  
5 Appeals decision, which requires that EPA gather sufficient data prior to  
6 setting a new standard and also as a result of the Court's vacatur of the  
7 Clean Air Mercury Rule, which requires that EPA establish standards for  
8 mercury and nickel emissions from coal and oil-fired steam electric  
9 generating units. As I've stated earlier, the proposed ICR would require  
10 emission testing and fuel analyses to be completed within six months of  
11 the final ICR at 471 plants across the U.S. for which there exists a limited  
12 number of companies that have demonstrated expertise in the analyses  
13 specified by EPA. FPL believes it must begin its plan to respond to a final  
14 ICR due to the near certainty that the ICR will be issued, due to the short  
15 time frame in which FPL would be required to respond, and also due to  
16 the limited availability of contractors needed for emission testing and fuel  
17 analyses.

18 **Q. Does FPL plan to file comments with EPA regarding the ICR?**

19 A. Yes. FPL will file specific comments related to several aspects of the  
20 proposal including the scope of the information request and extensive  
21 proposed testing, the requirement to test sources which will be replaced,  
22 and the relatively short proposed timelines for compliance with the ICR.

23 **Q. How will the NESHAP ICR affect FPL?**

24 A. FPL currently owns and operates 17 oil-fired electric utility steam

1 generating units and owns a portion of 3 coal-fired electric utility steam  
2 generating units that are the subject of the proposed ICR. EPA's  
3 proposed ICR requires that FPL provide historical baseline operating and  
4 fuel quality data for all of its existing coal and oil-fired electric utility steam  
5 generating units for its survey and also provide additional data obtained  
6 through fuel sampling and stack emission testing for a portion of the  
7 affected units. For its co-owned coal-fired units FPL will require the  
8 operators of those units to complete reporting requirements and to  
9 arrange for fuel and emission testing where required by the ICR under the  
10 terms of its operating agreements. FPL would be responsible for its share  
11 of costs for compliance with the ICR.

12 **Q. Please describe the activities FPL will initiate as a result of this**  
13 **project.**

14 **A.** The information collection for this ICR consists of two components: 1) the  
15 preparation, submittal, and quality assurance check of data from all coal-  
16 and oil-fired units and 2) the emission stack testing, fuel testing, and  
17 quality assurance of data for units and facilities identified in the ICR  
18 Statement of Burden – Part B, which is included as Exhibit RRL-9.

19  
20 As to the first component, EPA has proposed to collect the data required  
21 for all affected units through use of an electronic survey. FPL is currently  
22 evaluating resource needs associated with the required data collection,  
23 submittal and quality assurance. FPL has identified that it will need  
24 contractor services to assist in the collection and submittal of the first

1 component of the ICR to comply with the EPA required submittal of survey  
2 results within 3 months of the published date of the final ICR.

3

4 For the second component of the ICR, FPL will use outside consulting  
5 firms for emission stack testing activities, required coal and oil testing for  
6 HAPs identified in the ICR, and for the data entry and quality assurance of  
7 test data submitted to EPA for the ICR. Results of stack testing and fuel  
8 analyses must be submitted to EPA within 6 months of the final published  
9 date of the ICR.

10 **Q. What are the compliance dates for this project?**

11 **A.** Comments on the proposed ICR must be filed by August 31, 2009.  
12 Based on promulgation of previous EPA ICRs, FPL anticipates that the  
13 EPA's proposed NESHAP ICR will be approved by the Office of  
14 Management and Budget and published in the Federal Register by  
15 November or December of 2009. Compliance deadlines for submittal of  
16 information would likely be February or March of 2010 for submittal of  
17 survey information and May or June of 2010 for stack emission testing  
18 and fuel analyses.

19 **Q. Is FPL recovering through any other mechanism the costs for**  
20 **NESHAP ICR Project for which it is petitioning for ECRC recovery?**

21 **A.** No. FPL is only requesting recovery of incremental activities associated  
22 with NESHAP ICR Project compliance with EPA requirements. Costs  
23 associated with similar activities required to comply with existing state and  
24 federal regulations are not included in FPL's estimates for this project.

1 **Q. Has FPL estimated the cost of the NESHAP ICR Project?**

2 A. The total cost of the project will depend on the requirements established  
3 in the final NESHAP ICR published in the Federal Register. To estimate  
4 the project costs for the NESHAP ICR, FPL has preliminarily relied upon  
5 the EPA estimates from the ICR Statement of Burden- Part B for those  
6 activities which FPL anticipates will be performed by outside firms. Costs  
7 for activities identified in the ICR which FPL expects to be completed by  
8 in-house resources have not been included in estimates and FPL does  
9 not plan to recover those costs through the ECRC NESHAP ICR Project.  
10 Specific details related to EPA's estimates for costs are provided in the  
11 ICR Statement of Burden – Part B. FPL has estimated a preliminary  
12 ECRC NESHAP ICR project cost of approximately \$3.3 million for  
13 contractor and professional services required by the project. Because of  
14 EPA's tight compliance deadlines in the proposed rule, FPL anticipates  
15 that all of the costs associated with the ICR Project will be incurred in  
16 2010.

17 **Q. How will FPL ensure that the costs incurred are prudent and**  
18 **reasonable?**

19 A. Consistent with our standard practice for all contractor services  
20 procurements, FPL proposes to competitively bid stack emission testing,  
21 fuel analyses, and quality assurance activities to ensure costs for  
22 activities performed by outside firms are prudently incurred. FPL will  
23 revise project estimates as specific costs become available through  
24 contractor specific bids and costs.

1

2 **Manatee Temporary Heating System Project – Cape Canaveral Plant**

3

4 **Q. Please briefly describe FPL's filing dated April 13, 2009, requesting**  
5 **approval of the MTHS Project.**

6 **A. On April 13, 2009, FPL petitioned and I filed testimony in this docket**  
7 **requesting recovery of the MTHS Project, for the installation of an electric**  
8 **heating system at the Riviera Plant (PRV) in 2009, in order to provide a**  
9 **"manatee refuge" by discharging warm water when necessary into the**  
10 **manatee embayment area until PRV is converted to the Riviera Beach**  
11 **Next Generation Clean Energy Center. The MTHS Project will ensure**  
12 **that FPL complies with its PRV MPP, which is required by Specific**  
13 **Condition 9 (originally numbered 13) to the IWWF Permit Number**  
14 **FL00001546, issued by the FDEP for PRV on February 10, 2004.**

15

16 **Primary activities integral to the MTHS Project at PRV include installing**  
17 **the pipes, pumps, and heater, interconnection to the FPL power system,**  
18 **and testing and operating the system.**

19 **Q. Was FPL considering the need for a temporary heating system at**  
20 **PCC at the time of your April 13, 2009 filing?**

21 **A. Yes. In my testimony dated April 13, 2009, I mention that the IWWF**  
22 **permit and the MPP for PCC have similar requirements for maintaining**  
23 **water temperatures to protect manatees and that FPL would amend its**  
24 **MTHS Project to include the costs for a system at PCC. However, FPL's**

1 plans for PCC were not sufficiently finalized at that time to include them in  
2 the petition or my testimony.

3 **Q. Please briefly describe FPL's proposed project at PCC.**

4 A. In September 2008, FPL received a Determination of Need from this  
5 Commission to undertake a major modernization project at PCC, which  
6 will convert the existing conventional steam units into a highly efficient,  
7 clean-burning, gas-fired combined cycle unit (the "Modernization Project")  
8 to be named the Cape Canaveral Next Generation Clean Energy Center  
9 (CCEC).

10

11 The activities at PCC will include the installation of an electric heating  
12 system, pumps, piping, interconnection to the FPL electrical distribution  
13 system testing and operating the system in 2010, monitoring the physical  
14 conditions of the manatee embayment area, monitoring manatee  
15 distribution and abundance and engaging with jurisdictional agencies to  
16 begin long-term planning to reduce potential adverse affects from any  
17 future reduction of warm water production at the CCEC.

18

19 Since the original MTHS filing, the activities under the MTHS Project at  
20 PCC have been better defined since FWC proposed its Conditions of  
21 Certification for the project in August 2009.

22 **Q. Please describe the environmental law or regulation requiring the**  
23 **MTHS Project at PCC.**

24 A. FPL is proposing the MTHS Project at PCC in order to ensure compliance

1 with PCC's existing MPP during the construction of CCEC, affirmatively  
2 respond to the USFWS letter of June 24, 2008, and comply with FWC's  
3 proposed Conditions of Certification for the CCEC.

4  
5 The FDEP issued IWWF Permit Number FL0001473 to FPL's PCC on  
6 August 10, 2005. Specific Condition 9 of the IWWF permit states that  
7 "the Permittee shall continue compliance with the facility's MPP approved  
8 by the Department on December 21, 2000." The MPP requires FPL to  
9 provide warm water for manatees during winter months when certain  
10 weather conditions are present. FPL will apply for a renewal of the PCC  
11 IWWF permit in late January 2010.

12  
13 The IWWF permit containing Specific Condition 9 is included as Exhibit  
14 RRL-10 and FPL's MPP for PCC is included as Exhibit RRL-11. Note that  
15 the Manatee Protection Plan refers to "Specific Condition 13," which has  
16 been renumbered as Specific Condition 9 in the current IWWF permit.

17  
18 On June 24, 2008, the FWS provided comments in a letter to FPL  
19 regarding the Modernization Project. The FWS indicated that measures  
20 would be necessary to protect the manatees from cold water impacts  
21 during the transition period of the Modernization Project. A copy of the  
22 FWS letter to FPL is included as Exhibit RRL-12. Further, the manatees  
23 are protected by the federal Marine Mammal Protection Act of 1972 (16  
24 U.S.C. 1361, et. seq.) and the Endangered Species Act of 1973 (16

1 U.S.C. 1531, et. seq.). Additionally, the Indian River Lagoon is  
2 considered by the USFWS as Critical Habitat for the manatee (42 FR  
3 47840).

4  
5 As a commenting agency to the Florida Electrical Power Plant Siting Act  
6 Site Certification process, FWC proposed Conditions of Certification  
7 regarding manatee protection to be required in the final Conditions of  
8 Certification. FWC subsequently wrote its agency report ("FWC Staff  
9 Report for Florida Power and Light Company – Cape Canaveral Energy  
10 Center (CCEC)") and filed it with the FDEP as part of the FPL CCEC Site  
11 Certification Application process. In the report, FWC has proposed  
12 Conditions of Certification regarding protections for the manatees in the  
13 interim period between PCC decommissioning and CCEC post-  
14 commercial operation, which is September 2010 through March 2015.

15  
16 The Conditions of Certification include specific actions FPL must take in  
17 exchange for FWC's approval of CCEC. The proposed Conditions of  
18 Certification address the Interim Warm-Water Refuge Heating System for  
19 manatee protection, environmental monitoring, biological monitoring, and  
20 the development of a long-term manatee strategy. A copy of the "FWC  
21 Staff Report for Florida Power and Light Company – Cape Canaveral  
22 Energy Center (CCEC)" is included as Exhibit RRL-13.

23 **Q. How has FPL complied with the PCC MPP in the past?**

24 **A. FPL has successfully complied with the PCC MPP in the past by**

1 discharging warm water from plant operation into the Indian River Lagoon  
2 via two once-through cooling water discharge structures (one discharge  
3 structure per unit). As noted in the MPP, at times when the ambient water  
4 temperature has fallen below 61°F as measured at the plant intake, PCC  
5 has endeavored to operate in a manner that maintains the water  
6 temperature in an adequate portion of the discharge area, for at least one  
7 unit, at or above 68°F, until such time as the intake water temperature  
8 reached 61°F, unless otherwise authorized by the Bureau of Protected  
9 Species Management (BPSM) and the USFWS, or unless safety or  
10 reliability of the plant would have been compromised.

11 **Q. When will FPL begin the MTHS Project at PCC?**

12 **A.** FPL will begin the MTHS Project at PCC upon receipt of the CCEC Site  
13 Certification determination from the Siting Board. FPL's current MTHS  
14 Project schedule assumes the Siting Board determination will be received  
15 January 19, 2010.

16 **Q. Why does the heating system at PCC need to be installed in 2010?**

17 **A.** Decommissioning of PCC is scheduled for April 2010. To comply with  
18 FWC's conditions of certification for CCEC and allow time for testing prior  
19 to the winter manatee season, FPL must install the heating system by  
20 September 15, 2010.

21 **Q. What is a manatee embayment area?**

22 **A.** The term "manatee embayment" refers to the PCC intake canal,  
23 beginning at the western most extent of the canal and including all waters  
24 within the canal between the peninsula and the southern shoreline up to

1 the southern shoreline's eastern-most point. The embayment opens into  
2 the Indian River Lagoon. The location of the manatee embayment is  
3 shown on Exhibit RRL-14.

4 **Q. What is the significance of FPL providing warm water to the**  
5 **embayment area?**

6 A. The Florida manatee, a subspecies of the West Indian manatee found  
7 only in the southeastern United States, is listed as endangered under both  
8 the U.S. Endangered Species Act and Florida state law. Most manatees  
9 congregate at confined warm-water refuges when coastal water  
10 temperatures begin to fall below 68°F. The exact threshold at which  
11 manatees succumb to cold and die is uncertain and can vary between  
12 individual manatees. However, when extremely cold winter temperatures  
13 occur, large numbers of manatees may die or have their health impaired.  
14 Many of the natural warm water habitats historically used by manatees are  
15 no longer available to them. The outflows from power plants, like PCC,  
16 have provided a substitute for these lost natural resources.

17  
18 Manatees are known to inhabit the Indian River Lagoon year-round, and  
19 they congregate at the PCC discharge area during colder temperatures  
20 because of the warm water discharged from the plant.

21 **Q. How many manatees can be found in Indian River Lagoon and the**  
22 **discharge area?**

23 A. On February 6, 2009, 540 manatees were sighted in the vicinity of PCC  
24 during an aerial survey.

1 **Q. Why does FPL now need a different heating source for PCC?**

2 A. Implementing the Modernization Project will require that the existing PCC  
3 units be dismantled and substantially rebuilt. During this construction  
4 period, the units will not be available to provide warm water for  
5 compliance with the MPP. The current schedule for the Modernization  
6 Project requires that the existing conventional steam units be taken out of  
7 service no later than April 2010 to begin the conversion.

8 **Q. Please describe the heating system to be installed at PCC.**

9 A. The heating system to be installed at PCC will include a 30-million Btu per  
10 hour electric heating system including pumps, piping, and electrical  
11 equipment. The electric heating system will be located to discharge warm  
12 water into the western end of the intake canal, where the water depth is  
13 approximately 11.5 to 14 feet deep. The intake for the system will be  
14 located approximately 1,000 feet east of the system discharge. When the  
15 ambient water temperature falls below an established threshold, sea  
16 water will be pumped from the intake location through an inlet pipe to the  
17 heater, and the heated water will be discharged into the west end of the  
18 intake canal, which will serve as the interim period manatee embayment  
19 area. The heating system is predicted to provide approximately 2.05  
20 acres of water at or above 68°F during conditions under which heating is  
21 needed. A conceptual location of the heating system is included in Exhibit  
22 RRL-14.

23 **Q. How did FPL determine the size of the electric heater?**

24 A. To determine the size of the heater required to comply with the MPP

1 obligation, FPL retained an environmental services firm (Golder  
2 Associates) to develop a computer model to calculate the required  
3 thermal outputs of the heating system.

4 **Q. What conclusions did FPL reach regarding the alternatives for  
5 providing warm water to manatees at PCC?**

6 A. As I discussed earlier, FPL will need a heating system at PCC because  
7 there will be no other viable source of warm water for manatees during  
8 the construction of the Modernization Project. All alternatives considered  
9 included a boiler or heater as part of an intake and discharge system that  
10 could be installed and operated to provide a sufficient warm water area.  
11 After studying commercially available system components, it was  
12 concluded that the heating system chosen was the best alternative for  
13 FPL to pursue, resulting in the most cost effective means to produce  
14 warm water for the manatees.

15 **Q. What will happen to the MTHS at PCC when the modernization is  
16 completed in 2013?**

17 A. The PCC MTHS is specifically required during the modernization process.  
18 FPL will evaluate the disposition of the MTHS at PCC as the  
19 modernization process is being completed. This evaluation will take into  
20 account providing the maximum value for FPL's customers while  
21 providing the desired environment for the manatees.

22 **Q. What resources does FPL anticipate will be needed to operate the  
23 MTHS at PCC?**

24 A. Based on FPL's earlier work on the MTHS at PRV, FPL anticipates using

1 two operators. These operators will be incremental employees whose  
2 sole responsibility will be to operate, maintain, and repair the MTHS and  
3 these operators will be trained on the operation and maintenance of the  
4 MTHS at PCC. Each operator will work separately in a twelve-hour shift  
5 during weather critical days. Furthermore, FPL will develop a Best  
6 Management Practices (BMP) manual that will address, among other  
7 topics, operations, maintenance, troubleshooting, and repair of the MTHS  
8 at PCC.

9 **Q. Please describe the other Conditions of Certification relevant to the**  
10 **MTHS project at PCC.**

11 **A.** As found in the environmental monitoring section of the proposed  
12 Conditions of Certification for the CCEC project, FWC requires FPL to  
13 monitor the physical conditions in the manatee embayment area. FWC  
14 also requires FPL to monitor manatee distribution and abundance as  
15 prescribed in the biological monitoring section of the proposed Conditions  
16 of Certification for the CCEC project. The development of a long-term  
17 manatee strategy in the proposed Conditions of Certification requires FPL  
18 to engage with jurisdictional agencies to begin long-term planning to  
19 reduce potential adverse affects from any future reduction of warm water  
20 production at CCEC.

21 **Q. Please describe the activities and resources FPL anticipates are**  
22 **needed to comply with the PCC Conditions of Certification.**

23 **A.** Environmental monitoring includes writing an Environmental Monitoring  
24 Plan, evaluating the heating system, deploying temperature monitoring

1 stations to measure air and water temperatures, and preparing  
2 environmental monitoring reports. Biological monitoring includes writing a  
3 Biological Monitoring Plan, conducting aerial surveys, tagging manatees  
4 and conducting telemetry studies, hiring specially-trained manatee  
5 observers, providing manatee observation platforms, and preparing  
6 biological monitoring reports. FPL will also perform activities required  
7 under the long-term manatee strategy mentioned above. Most, if not all,  
8 of the long-term strategy activities will occur after 2015 because of the  
9 requirements to coordinate activities with agencies protecting the  
10 manatees and the need to have future plant life plans for CCEC  
11 developed.

12 **Q. Has FPL estimated the cost of the proposed MTHS project and**  
13 **associated activities needed to comply with the PCC Conditions of**  
14 **Certification?**

15 **A. Estimated capital costs for the heating system in 2010 are \$4.68 million.**  
16 **This estimate includes expenditures for the equipment, design and**  
17 **engineering of the system, labor for installation, interconnection to the**  
18 **FPL power system, and the development of the BMP manual.**

19  
20 **After installation and commissioning is complete, FPL expects to incur**  
21 **O&M costs associated with materials and supplies necessary to maintain**  
22 **the heating system at PCC. FPL's annual O&M estimates for years 2010**  
23 **through 2015 are \$202,249, \$318,931, \$286,600, \$298,000, \$268,000,**  
24 **\$138,500 respectively. The materials and supplies which are expected to**

1 be required for operation and maintenance of the heating system may  
2 include replacement heating elements, heater control components,  
3 electrical fuses, pump seals, and miscellaneous consumable items such  
4 as grease/oil for motor maintenance, gaskets, paint and rags. These  
5 projected O&M costs do not include the energy costs to operate the  
6 heating system. FPL cannot predict how often the system will operate,  
7 however, the energy costs will not be significant nor will they be recovered  
8 through the ECRC process.

9  
10 Regarding compliance with the additional PCC Conditions of Certification,  
11 FPL estimated that environmental monitoring will cost a total of \$865,000  
12 which includes expenses for consultants, instruments, equipment, and  
13 production of documents. Biological monitoring is estimated to total  
14 \$920,000, which includes expenses for consultants, survey flights,  
15 instruments, equipment, and production of documents. The development  
16 of a long-term manatee strategy is estimated to total \$110,000 which  
17 includes expenses for consultants, workshops, and production of  
18 documents.

19 **Q. Has FPL estimated its 2010 ECRC recovery amount for the MTHS**  
20 **project and related PCC Conditions of Certification?**

21 **A.** FPL plans to place the heating system at PCC into service by September  
22 15, 2010. Based on that in-service date, FPL has projected  
23 approximately \$160,684 in amortization expense and return on  
24 investment associated with this heating system during the remainder of

1 2010. During 2010, FPL projects spending approximately \$202,249 for  
2 environmental monitoring, biological monitoring and the long-term  
3 strategy development, which are required by the PCC Conditions of  
4 Certification.

5 **Q. Please describe the measures FPL has taken to ensure that costs of**  
6 **the PCC MTHS project and related PCC Conditions of Certification**  
7 **have been minimized.**

8 **A. FPL's Engineering and Construction Division has retained an engineering**  
9 **firm, Worley Parsons, to perform a study to identify the most cost-effective**  
10 **approach to providing a heating system at PCC. Using a performance**  
11 **specification for the recommended heater, FPL's Integrated Supply Chain**  
12 **(ISC) group, participating in the MTHS Project, solicited bids from multiple**  
13 **suppliers, identified the supplier that provided the overall best value, and**  
14 **has secured pricing for the heater component of the PCC MTHS. The**  
15 **ISC group provides enterprise-wide leadership, direction, and operation of**  
16 **a fully integrated supply chain that will also support the procurement of**  
17 **other materials and equipment, as well as the construction services**  
18 **needed to complete the MTHS at PCC. ISC's objective is to drive down**  
19 **costs to FPL and ensure the delivery of the highest quality goods and**  
20 **services.**

21

22 FPL's Project Controls group has established a scope, budget, and  
23 schedule to meet the needs of the MTHS Project. Project Controls is also  
24 responsible for tracking all MTHS Project costs through various approval

1 processes, procedures, and databases.

2

3 Regarding the FWC Conditions of Certification, FPL has developed its  
4 estimates by working with the FWC staff and an independent expert in  
5 manatee studies to assess the costs and expenses for environmental  
6 monitoring, biological monitoring, and developing a long-term manatee  
7 strategy.

8

9 **Q. Is FPL recovering through any other mechanism the costs for the**  
10 **PCC MTHS project and related PCC Conditions of Certification for**  
11 **which it is petitioning for ECRC recovery?**

12 **A. No.**

13

14 **St. Lucie Cooling Water System Inspection and Maintenance Project**

15

**Update**

16

17 **Q. Please provide an update on the St. Lucie Cooling Water System**  
18 **Inspection and Maintenance Project.**

19 **A. As I will explain below, the St. Lucie Cooling Water System Inspection and**  
20 **Maintenance Project (the "Project") has evolved substantially as to the**  
21 **required scope of project activities. In addition, FPL has encountered**  
22 **considerable challenges related to the conditions under which the Project**  
23 **work must be performed.**

24 **Q. Please describe the evolution of the scope of Project activities.**

1 A. In anticipation of a Biological Opinion (BO) to be issued by the National  
2 Marine Fisheries Service (NMFS) pursuant to section 7 of the federal  
3 Endangered Species Act, 16 USC Section 1531 (ESA), on January 5,  
4 2007, FPL submitted a petition to the Florida Public Service Commission  
5 (FPSC) for approval of the Project. In the affidavit supporting the petition,  
6 FPL stated that the purpose of the Project was to inspect and, as  
7 necessary, clean up or repair any conditions found during the inspection  
8 that could contribute to injuries and/or deaths of endangered species,  
9 thus helping to keep FPL in compliance with the ESA. The affidavit  
10 further stated that, while the initial project activity consisted of inspection  
11 and cleaning of the intake pipes, additional inspection, maintenance  
12 and/or modification activities could be required in the future to comply with  
13 the ESA.

14  
15 The major change to the required scope relates to the decision by the  
16 NMFS that FPL needs to install exclusion devices at the velocity cap  
17 openings in order to prevent large organisms such as adult sea turtles  
18 from entering the intake pipes. This change in the NMFS's position is  
19 largely a result of the discovery that a nesting female sea turtle had been  
20 drawn through an intake pipe into the cooling canal and laid eggs on the  
21 bank of the canal, and that the hatchlings then were drawn into plant  
22 cooling water intakes where they were trapped and died.

23  
24 On August 4, 2008, I filed an update to the Project providing details on the

1 specifications of the exclusion device, stating "the exclusion devices  
2 consist of a support structure installed in the opening of the velocity caps,  
3 which will support panels containing a mesh with 20 inch openings  
4 installed at approximately 45 degrees." The testimony also stated that  
5 the conceptual design had been submitted to the Nuclear Regulatory  
6 Commission (NRC) for review. Although the devices are intended to  
7 exclude a variety of sea life, I will refer to them as "turtle excluders" for  
8 simplicity.

9 **Q. What is the status of the inspection and cleaning of the St. Lucie**  
10 **Plant Cooling Water System?**

11 **A.** The inspection of the intake pipes and velocity caps was completed  
12 during the scheduled 2007 Spring refueling outage. The results of the  
13 inspection provided details for what additional work was needed to clean  
14 and remove/minimize debris or structural obstructions.

15  
16 FPL established a project team to plan and manage the scope of the pipe  
17 cleaning and debris removal. Generally, the cleaning included the ceiling,  
18 floor and columns of the velocity caps, along with the vertical risers and  
19 the easternmost 375' of the intake pipes. The work also called for removal  
20 of marine growth, unevenness of the concrete and other obstacles and  
21 protrusions that could potentially harm marine life.

22  
23 As with the inspection work, the cleaning and debris removal has to be  
24 performed during unit outages, to allow the flow in the pipe that is being

1 cleaned to be blocked off for safety reasons. Initially, FPL expected to  
2 complete that work during scheduled outages in 2007, but that has not  
3 proved to be possible. The 12' diameter south intake pipe and 200' of the  
4 12' diameter north intake pipe were completed in 2007, representing  
5 approximately 57% of the estimated total footage. The vertical risers for  
6 the two 12' velocity cap structures were also completed in 2007,  
7 representing approximately 66% of the total area. The 2007 cleaning work  
8 was delayed approximately 40% of the calendar time because of adverse  
9 weather conditions.

10

11 No pipe cleaning work was performed during the scheduled 2008 Fall  
12 refueling outage because of adverse weather conditions. Work also  
13 could not be performed during the scheduled 2009 Spring refueling  
14 outage because of a very short outage window. Therefore, the remaining  
15 intake pipe and velocity cap cleaning has been scheduled for the 2010  
16 and 2012 Spring refueling outages.

17 **Q. Please describe the adverse weather conditions that have led to**  
18 **project delays.**

19 **A. Weather conditions have a direct impact on the diving operations since**  
20 **the cleaning of the intake pipe and velocity caps is performed manually by**  
21 **divers. Diving operations are considered a high risk activity. Because of**  
22 **the high risk nature of diving operations and the importance of diver**  
23 **safety, very stringent dive rules are in place to protect divers. The dive**  
24 **restrictions are very dependent on sea conditions which are, in turn,**

1 greatly influenced by the weather conditions. In addition to storms and  
2 lightning, sea conditions such as wave height, wave surge, and visibility  
3 are influenced by the weather and have limits that restrict when divers can  
4 be in the water. Although conditions are generally good for dive  
5 operations during the spring and summer months when the cleaning is  
6 performed, during the duration of the Project, weather has often resulted  
7 in lost time or non-productive days where weather would not allow dive  
8 operations to start or days when weather limited productive dive time.

9 **Q. Please describe the activities that FPL is undertaking as a result**  
10 **of the NMFS requirement that turtle excluders be installed.**

11 **A.** The 2007 inspection identified inconsistencies in the size and shape of  
12 the windows in the velocity cap structures where the turtle excluders are  
13 to be installed. These inconsistencies are believed to be due to a  
14 combination of biofouling, marine growth, protrusions of various  
15 construction materials in the velocity cap windows and the uneven  
16 placement of concrete. Together, these factors have made it impractical  
17 to design and install turtle excluders having standard dimensions,  
18 meaning that each excluder would have to be customized to the window  
19 where it would be installed. Therefore, unless steps are taken to allow the  
20 installation of standardized excluders, the design, testing, and installation  
21 would not be cost effective. In addition, the reduced area of the windows  
22 due to the obstructions has created vortices from which organisms cannot  
23 escape. Cost estimates to remove this excess concrete (by concrete  
24 cutting methods) as well as other obstacles and protrusions in the window

1 openings were not contemplated in any of the original project cost  
2 projections.

3  
4 The removal of excess concrete required for the installation of the turtle  
5 exclusion devices is scheduled to resume in 2010 and continue through  
6 2012. The concrete removal in the 16' pipe will be completed in 2011,  
7 which in turn will allow the 16' velocity cap turtle exclusion devices to be  
8 installed. The 12' velocity caps' concrete removal is expected to be  
9 completed in the Spring of 2012, and the turtle exclusion devices installed  
10 in the Summer of 2012.

11 **Q. What impact have these challenging work conditions and scope**  
12 **changes had on the projected cost of the Project?**

13 **A.** As one would expect, they have increased the projected cost  
14 considerably. The original cost estimate for the inspection and  
15 cleaning/debris removal was approximately \$3 million to \$6 million,  
16 although the petition cautioned at the time that the full scope and hence  
17 cost of the Project could not be predicted until the inspection was  
18 complete. In 2008, I estimated the cost of the turtle excluders to be  
19 approximately \$3.75 million. However, those estimates did not take into  
20 account (1) the extremely adverse work conditions that would drastically  
21 limit the amount of productive dive time, or (2) the need to physically cut  
22 out large sections of concrete and other protrusions in order to eliminate  
23 dangerous obstacles and create regular window dimensions for the turtle  
24 excluders. These changed conditions have increased FPL's estimate of

1 the total project cost from the approximately \$10 million just mentioned, to  
2 over \$21 million today.

3

4 FPL's estimated costs for 2010 are \$4.2 million. Of that total, \$2.8 million  
5 of capital expenses are projected for concrete removal activities, and \$1.4  
6 million of O&M expenses projected for pipe cleaning activities.

7 **Q. How will FPL ensure that the costs incurred are prudent and**  
8 **reasonable?**

9 A. Consistent with our standard practice for all contractor services  
10 procurements, FPL competitively bid all of the concrete cutting and diving  
11 activities to ensure costs for activities performed by outside firms were  
12 prudently incurred. FPL will revise project estimates as specific costs  
13 become available through contractor specific bids and costs. FPL will  
14 continue to perform due diligence over the life of this project to minimize  
15 costs, which may include investigating alternative concrete cleaning and  
16 cutting techniques, changes in diving operations that may include  
17 changes to types of work platforms and stations, diver working hours, or  
18 other methodologies to ensure the projects costs are prudent and  
19 reasonable and that any costs for weather delays are minimized

20 **Q. Is FPL recovering these Project costs through any other**  
21 **mechanism?**

22 A. No.

23 **Q. Does this conclude your testimony?**

24 A. Yes.

## 1                   BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2                                   DIRECT TESTIMONY OF

3   WILL GARRETT

4   ON BEHALF OF

5                                   PROGRESS ENERGY FLORIDA

6   DOCKET NO. 090007-EI

7   April 1, 2009

8

9       **Q.    Please state your name and business address.**10      **A.    My name is Will Garrett. My business address is 299 First Avenue North, St.**  
11           **Petersburg, FL 33701.**

12

13      **Q.    By whom are you employed and in what capacity?**14      **A.    I am employed by Progress Energy Service Company, LLC as Controller of**  
15           **Progress Energy Florida (PEF).**

16

17      **Q.    What are your responsibilities in that position?**18      **A.    As legal entity Controller for PEF, I am responsible for all accounting matters that**  
19           **impact the reported financial results of this Progress Energy Corporation entity. I**  
20           **have direct management and oversight of the employees involved in PEF**  
21           **Regulatory Accounting, Property Plant and Materials Accounting, and PEF**  
22           **Financial Reporting and General Accounting.**

1 **Q. Please describe your educational background and professional experience.**

2 **A.** I joined the company as Controller of PEF on November 7, 2005. My direct  
3 relevant experience includes over 2 years as the Corporate Controller for DPL, Inc.  
4 and its major subsidiary, Dayton Power and Light, headquartered in Dayton, Ohio.  
5 Prior to this position, I held a number of finance and accounting positions for 8  
6 years at Niagara Mohawk Power Corporation, Inc. (NMPC) in Syracuse, New  
7 York, including Executive Director of Financial Operations, Director of Finance  
8 and Assistant Controller. As the Director of Finance and Assistant Controller, my  
9 responsibilities included regulatory proceedings, rates, financial planning, and  
10 providing testimony on a variety of matters before the New York Public Service  
11 Commission. Prior to joining NMPC, I was a Senior Audit Manager at Price  
12 Waterhouse (PW) in upstate New York, with 10 years of direct experience with  
13 investor owned utilities and publicly traded companies. I am a graduate of the State  
14 University of New York in Binghamton, with a Bachelor of Science in Accounting  
15 and I am a Certified Public Accountant in the State of New York.

16

17 **Q. Have you previously filed testimony before this Commission in connection**  
18 **with Progress Energy Florida's Environmental Cost Recovery Clause**  
19 **(ECRC)?**

20 **A.** Yes.

21

1 **Q. What is the purpose of your testimony?**

2 **A.** The purpose of my testimony is to present for Commission review and approval,  
3 Progress Energy Florida's Actual True-up costs associated with Environmental  
4 Compliance activities for the period January 2008 through December 2008.

5

6 **Q. Are you sponsoring any exhibits in support of your testimony?**

7 **A.** Yes. I am sponsoring Exhibit No. WG-1, which consists of eight forms and Exhibit  
8 No. WG-2, which provides details of four capital projects by site.

9

10 Exhibit No. WG-1 consists of the following:

- 11 • Form 42-1A reflects the final true-up for the period January 2008 through  
12 December 2008.
- 13 • Form 42-2A reflects the final true-up calculation for the period.
- 14 • Form 42-3A reflects the calculation of the Interest Provision for the period.
- 15 • Form 42-4A reflects the calculation of variances between actual and  
16 estimated/actual costs for O&M activities.
- 17 • Form 42-5A presents a summary of actual monthly costs for the period of  
18 O&M activities.
- 19 • Form 42-6A reflects the calculation of variances between actual and  
20 estimated/actual costs for Capital Investment Projects.
- 21 • Form 42-7A presents a summary of actual monthly costs for the period for  
22 Capital Investment Projects.

- 1                   ● Form 42-8A, pages 1 through 13, consist of the calculation of depreciation  
2                   expense, property tax expense, and return on capital investment for each  
3                   project that is being recovered through the ECRC.

4

5                   Exhibit No. WG-2 consists of detailed support for the following capital projects:

- 6                   ● Pipeline Integrity Management (Capital Program Detail (“CPD”), pages 1  
7                   through 2)
- 8                   ● Above Ground Storage Tank Secondary Containment (CPD, pages 3  
9                   through 8)
- 10                  ● Clean Air Interstate Rule (“CAIR”) Combustion Turbines (“CTs”)(CPD,  
11                   pages 9 through 12)
- 12                  ● CAIR/Clean Air Mercury Rule (“CAMR”) (CPD, page 13)

13

14                  **Q.     What is the source of the data that you will present by way of testimony or**  
15                  **exhibits in this proceeding?**

16                  **A.     The actual data is taken from the books and records of PEF. The books and records**  
17                  **are kept in the regular course of our business in accordance with generally accepted**  
18                  **accounting principles and practices, and provisions of the Uniform System of**  
19                  **Accounts as prescribed by Federal Energy Regulatory Commission (FERC) and any**  
20                  **accounting rules and orders established by this Commission.**

21

22

23

1 **Q. What is the final true-up amount for which PEF is requesting for the period**  
2 **January 2008 through December 2008?**

3 **A.** PEF is requesting approval of an under-recovery amount of \$14,193,035 for the  
4 calendar period ending December 31, 2008. This amount is shown on Form 42-1A,  
5 Line 1.

6  
7 **Q. What is the net true-up amount PEF is requesting for the January 2008**  
8 **through December 2008 period which is to be applied in the calculation of the**  
9 **environmental cost recovery factors to be refunded/recovered in the next**  
10 **projection period?**

11 **A.** PEF has calculated and is requesting approval of an under-recovery amount of  
12 \$4,320,606 reflected on Line 3 of Form 42-1A, as the adjusted net true-up amount  
13 for the January 2008 through December 2008 period. This amount is the difference  
14 between the actual under-recovery amount of \$14,193,035 and the actual/estimated  
15 under-recovery of \$9,872,429, as approved in Order PSC-08-0775-FOF-EI, for the  
16 period of January 2008 through December 2008.

17  
18 **Q. Are all costs listed in Forms 42-1A through 42-8A attributable to**  
19 **environmental compliance projects approved by the Commission?**

20 **A.** Yes, they are.

21

22

1   **Q.    How did actual O&M expenditures for January 2008 through December 2008**  
2           **compare with PEF's estimated/actual projections as presented in previous**  
3           **testimony and exhibits?**

4   **A.    Form 42-4A shows that total O&M project variance was \$4,096,097 or 10% higher**  
5           **than projected. Following are variance explanations for those O&M projects with**  
6           **significant variances. Individual project variances are provided on Form 42-4A.**

7                   **O&M Project Variances**

8           **1.   Substation Environmental Investigation, Remediation, and Pollution**

9                   **Prevention (Project No. 1):** The project expenditure variance was \$980,253 or  
10                   20% higher than projected. This variance is primarily attributable to higher  
11                   amounts of subsurface contamination encountered during remediation of  
12                   substations that was not evident during the original visual environmental  
13                   inspections. This project is further discussed in Corey Zeigler's testimony.

14

15           **2.   Distribution System Environmental Investigation, Remediation, and**

16                   **Pollution Prevention (Project No. 2):** The project expenditure variance was  
17                   \$4,068,602 or 27% higher than projected. This variance is primarily  
18                   attributable to the higher unit cost than forecasted and the carryover of  
19                   uncompleted work from the 2007 work plan. This project is further discussed  
20                   in Corey Zeigler's testimony.

21

22

1           **3. SO<sub>2</sub> Emissions Allowances Program (Project No. 5):** The SO<sub>2</sub> Emissions  
2           Allowances O&M project expenditures variance was \$1,032,657 or 7% lower  
3           than projected. The majority of the variance is being driven by the higher use of  
4           natural gas at the Anclote and Bartow plants than was projected during 2008,  
5           and the quality of the coal burned at Crystal River having a lower SO<sub>2</sub> content.  
6           The higher use of natural gas and coal used at the Crystal River plant resulted in  
7           lower SO<sub>2</sub> emissions and therefore lower emission allowance requirements.

8  
9           **Q.     How did actual Capital recoverable expenditures for January 2008 through**  
10           **December 2008 compare with PEF's estimated/actual projections as presented**  
11           **in previous testimony and exhibits?**

12           **A.     Form 42-6A shows that the total Capital Investment project recoverable costs**  
13           variance was \$36,501 higher than projected for an immaterial difference from  
14           projected. Actual costs and variance by individual project are provided on Form  
15           42-6A. Return on Capital Investment, Depreciation, and Taxes for each project for  
16           the period are provided on Form 42-8A, pages 1 through 13.

17  
18           **Q.     How did actual Crystal River CAIR/CAMR – Base (Project No. 7.4) capital**  
19           **expenditures for January 2008 through December 2008 compare with PEF's**  
20           **estimated/actual projections as presented in previous testimony and exhibits?**

21           **A.     These capital expenditures qualify for Allowance for Funds Used During**  
22           Construction ("AFUDC") and therefore will not be included in the capital  
23           recoverable costs until the associated pollution controls are placed in service. PEF  
24           reprojected total capital expenditures to be \$527,427,410 in 2008 (PSC-08-0775-

1 FOF-EI, Exhibit LC-1 Schedule 42-8E pg.9) as part of the Estimated/Actual filing.  
2 Actual expenditures in 2008 were \$524,059,008 or \$3,368,402 (1%) lower than  
3 projected. This variance is primarily due to an unused contingency within the  
4 project.

5

6 **Q. Does this conclude your testimony?**

7 **A. Yes, it does.**

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

COREY ZEIGLER

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

April 1, 2009

**Q. Please state your name and business address.**

A. My name is Corey Zeigler. My business address is 299 First Avenue North, St. Petersburg, Florida 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Florida (PEF) as Manager, Environmental Permitting & Compliance.

**Q. What are your responsibilities in that position?**

A. Currently, my responsibilities include managing environmental permitting and compliance activities for Energy Delivery Florida. Energy Delivery Florida is part of the Florida Distribution Business unit of which I support the Distribution and Transmission Operation and Planning Department.

1 **Q. Please describe your educational background and professional experience.**

2 A. I received a Bachelors of Science degree in General Business Administration  
3 and Management from the University of South Florida. Prior to holding this  
4 role I was the Health and Safety Manager for Progress Energy Florida  
5 Transmission and Delivery. I have 17 years experience in the utility industry  
6 holding various operational, supervisor and managerial roles at Progress Energy.

7  
8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to explain material variances between the actual  
10 project expenditures versus the Estimated/Actual project expenditures for  
11 environmental compliance costs associated with PEF's Substation  
12 Environmental Investigation, Remediation, and Pollution Prevention Program  
13 (Project 1 & 1a), the Distribution System Environmental Investigation,  
14 Remediation, and Pollution Prevention Program (Project 2), and Sea Turtle  
15 (Project 9) for the period January 2008 through December 2008.

16  
17 **Q. How did actual O&M expenditures for January 2008 through December  
18 2008 compare with PEF's estimated / actual projections as presented in  
19 previous testimony and exhibits for the Substation System Program?**

20 A. The project expenditure variance for the Substation System Program was  
21 \$980,253 or 20% more than projected. This increase is primarily attributable to  
22 higher amounts of subsurface contamination encountered during remediation of

1 substations that was not evident during the original visual environmental  
2 inspections.

3

4 **Q. How did actual O&M expenditures for January 2008 through December**  
5 **2008 compare with PEF's estimated / actual projections as presented in**  
6 **previous testimony and exhibits for the Distribution System Program?**

7 A. The project expenditure variance for the Distribution System Program was  
8 \$4,068,602 or 27% more than projected. This increase is driven by a higher unit  
9 cost associated with remediation sites that took longer than one day (as  
10 originally projected) to complete because of soil conditions or extent of the  
11 contamination.

12

13 **Q. How did actual O&M expenditures for January 2008 through December**  
14 **2008 compare with PEF's estimated / actual projections as presented in**  
15 **previous testimony and exhibits for the Sea Turtle Program?**

16 A. Actual O&M expenditures are in line with PEF's previously filed  
17 Estimated/Actual projections. The actual expenditures on the Sea Turtle Project  
18 were \$110,572, compared to the Estimated/Actual projection of \$106,711 for an  
19 immaterial variance of \$3,861 in 2008.

20

21 **Q. Does this conclude your testimony?**

22 A. Yes.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

COREY ZEIGLER

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

AUGUST 3, 2009

**Q. Please state your name and business address.**

A. My name is Corey Zeigler. My business address is 299 First Avenue North, St. Petersburg, Florida 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Florida (PEF) as Manager, Environmental Permitting & Compliance.

**Q. What are your responsibilities in that position?**

A. Currently, my responsibilities include managing environmental permitting and compliance activities for Energy Delivery Florida. Energy Delivery Florida is part of the Florida Distribution Business unit of which I support the Distribution and Transmission Operation and Planning Departments.

1 **Q. Please describe your educational background and professional experience.**

2 A. I received a Bachelors of Science degree in General Business Administration  
3 & Management from the University of South Florida. Prior to holding this  
4 role, I was the Health and Safety Manager for Progress Energy Florida's  
5 Delivery and Transmission Operations and Planning Departments. I have 17  
6 years experience in the utility industry, holding various operational, supervisor  
7 and managerial roles at Progress Energy.

8

9 **Q. What is the purpose of your testimony?**

10 A. The purpose of my testimony is to explain material variances between the  
11 Estimated/Actual project expenditures versus the original cost projections for  
12 environmental compliance costs associated with Progress Energy Florida  
13 (PEF)'s Substation Environmental Investigation, Remediation, and Pollution  
14 Prevention Program (Projects 1 & 1a).

15

16 **Q. Please explain the variance between the Estimated/Actual project  
17 expenditures and the original projections for the Substation System  
18 Program (project 1 & 1a) for the period January 2009 to December 2009.**

19 A. O&M project expenditures for the Substation System Program are estimated to  
20 be \$2,728,164 or 40% lower than originally projected. The decrease is driven  
21 by scheduling conflicts that resulted in multiple sites being rescheduled from the  
22 first half of 2009 to the fourth quarter of 2009 and into 2010, multiple sites  
23 containing less contamination than originally projected, and recent scope

1 changes to the remediation taking place at the West Lake Wales substation site.  
2 A Site Assessment Report for this substation is being prepared and will be  
3 submitted to the Florida Department of Environmental Protection in the  
4 upcoming months.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

**COREY ZEIGLER**

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

AUGUST 28, 2009

**Q. Please state your name and business address.**

A. My name is Corey Zeigler. My business address is 299 First Avenue North, St. Petersburg, Florida 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Florida as Manager, Environmental Permitting and Compliance.

**Q. Have you previously filed testimony before this Commission in connection with Progress Energy Florida's Environmental Cost Recovery Clause?**

A. Yes, I have.

**Q. Have your duties and responsibilities remained the same since you last filed testimony in this proceeding?**

A. Yes.

1 **Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to provide estimates of the costs that will be  
3 incurred in the year 2010 for Progress Energy Florida's ("PEF's" or  
4 "Company's") Substation Environmental Investigation, Remediation, and  
5 Pollution Prevention Program (Project #1), which was previously approved in  
6 PSC Order No. PSC-02-1735-FOF-EI, Distribution System Environmental  
7 Investigation, Remediation, and Pollution Prevention Program (Project #2),  
8 which was previously approved in PSC Order No. PSC-02-1735-FOF-EI, and  
9 the Sea Turtle Coastal Street Lighting Program (Project #9), which was  
10 previously approved in PSC Order No. PSC-05-1251-FOF-EI.

11

12 **Q. Have you prepared or caused to be prepared under your direction,  
13 supervision or control any exhibits in this proceeding?**

14 A. Yes. I am co-sponsoring the following portions of the schedule (TGF-3)  
15 attached to Thomas G. Foster's testimony:

- 16 ● 42-5P page 1 of 14 - Substation Environmental Investigation,  
17 Remediation, and Pollution Prevention
- 18 ● 42-5P page 2 of 14 - Distribution System Environmental Investigation,  
19 Remediation, and Pollution Prevention
- 20 ● 42-5P page 9 of 14 - Sea Turtle - Coastal Street Lighting

21

22

1 **Q. What costs do you expect to incur in 2010 in connection with the Substation**  
2 **System Investigation, Remediation and Pollution Prevention Program**  
3 **(Project #1)?**

4 A. For 2010, we estimate PEF will incur total O&M expenditures of approximately  
5 \$2,075,411 in remediation costs for the Substation System Investigation,  
6 Remediation and Pollution Prevention Program. This amount includes  
7 estimated costs for remediation activities at 69 substation sites that have already  
8 been identified as requiring remediation.

9  
10 **Q. What steps is the Company taking to ensure that the level of expenditures**  
11 **for the Substation System Program is reasonable and prudent?**

12 A. PEF works annually with the Florida Department of Environmental Protection  
13 (“FDEP”) to determine the specific substation sites to be remediated to ensure  
14 compliance with FDEP criteria. The Company also provides quarterly reports to  
15 FDEP on progress made in remediating substation sites. To ensure the level of  
16 expenditures is reasonable and prudent; the Company closely monitors  
17 remediation work and provides quarterly reports to the FDEP on progress made  
18 in remediating the sites.

19  
20  
21

1 **Q. What costs do you expect to incur in 2010 in connection with the**  
2 **Distribution System Investigation, Remediation and Pollution Prevention**  
3 **Program (Project #2)?**

4 A. For 2010 we estimate total Operations and Maintenance (“O&M”) expenditures  
5 of approximately \$8,880,800 for the Distribution System Investigation,  
6 Remediation and Pollution Prevention Program to perform remediation activities  
7 at approximately 751 sites. This estimate assumes approximately 154 3-phase  
8 transformer sites at an average cost of \$15,800 per site, approximately 597  
9 single-phase transformer sites at an average cost of \$10,800 per site as well as  
10 program management costs. The average cost per site was based upon PEF’s  
11 analysis of the prior two years of invoices associated with the remediation of the  
12 TRIP sites.

13  
14 **Q. What steps is the Company taking to ensure that the level of expenditures**  
15 **for the Distribution System program is reasonable and prudent?**

16 A. To ensure the level of expenditures is reasonable and prudent; the Company  
17 closely monitors remediation work and provides quarterly reports to the FDEP  
18 on progress made in remediating distribution sites.

19  
20 **Q. What costs do you expect to incur in 2010 in connection with the Sea**  
21 **Turtle/Street Lighting Program (Project #9)?**

22 A. For 2010, the projected expenses for the Sea Turtle/Street Lighting Program are  
23 \$21,800. This amount includes \$1,800 in O&M costs and \$20,000 in capital

1 expenditures to ensure compliance with sea turtle ordinances in Franklin and  
2 Gulf Counties and the City of Mexico Beach. The capital expenditures will be  
3 spent on modifications and/or replacement of applicable lighting fixtures. The  
4 estimated O&M projections include research costs associated with street light  
5 technology studies.

6

7 **Q. What steps is the Company taking to ensure that the level of expenditures**  
8 **for the Sea Turtle/Street Lighting Program is reasonable and prudent?**

9 A. PEF is cooperating with local governments and appropriate regulatory agencies  
10 to develop compliance plans that allow flexibility to make only those  
11 modifications necessary to achieve compliance. PEF will ensure that evaluation  
12 of each streetlight requiring modification occurs so that only those activities  
13 necessary to achieve compliance are performed in a reasonable and prudent  
14 manner. In addition, PEF will evaluate emerging technologies and incorporate  
15 their use where reasonable and prudent.

16

17 **Q. Does this conclude your testimony?**

18 A. Yes, it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

PATRICIA Q. WEST

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

April 1, 2009

**Q. Please state your name and business address.**

A. My name is Patricia Q. West. My business address is 299 First Avenue North, St. Petersburg, Florida 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by the Environmental, Health and Safety Services Section of Progress Energy Florida ("PEF" or "Company") as Manager of Environmental Services / Power Operations Group. In that position, I have responsibility to provide regulatory support and obtain necessary environmental permits for the implementation of compliance strategies pertaining to environmental requirements for power generation facilities in Florida.

**Q. Please describe your background and experience in the environmental field.**

A. I obtained my B.A. degree in Biology from New College of the University of South Florida in 1983. I was employed by the Polk County Health Department from 1983-1986 and by the Florida Department of Environmental Protection

1 ("DEP") from 1986-1990. At DEP, I was involved in compliance and  
2 enforcement efforts associated with petroleum storage facilities. In 1990, I  
3 joined Florida Power Corporation as an Environmental Project Manager and  
4 then held progressively responsible positions in the company's environmental  
5 services department, including the position of team leader for the integration of  
6 the environmental functions of Florida Power and Carolina Power and Light. I  
7 previously served as Manager of Water Programs in the Environmental Services  
8 Section of PEF's Technical Services Department and as Manager of  
9 Environmental Programs and Strategy. In 2005, I assumed my present position  
10 as Manager of Environmental Services / Power Operations Group.

11

12 **Q. Have you previously filed testimony before this Commission in connection**  
13 **with Progress Energy Florida's Environmental Cost Recovery Clause?**

14 A. Yes, I have.

15

16 **Q. What is the purpose of your testimony?**

17 A. This testimony provides PEF's Actual True-Up costs associated with the  
18 following environmental compliance activities under my responsibility for the  
19 period January 2008 through December 2008. In addition, I am sponsoring  
20 Exhibit No. \_\_ (PQW-1), which is PEF's review of the efficacy of its Integrated  
21 Clean Air Compliance Plan and of retrofit options in relation to expected  
22 environmental regulations.

23

24 **Q. What current PSC-approved projects are you responsible for?**

1 A. I am responsible for Pipeline Integrity Management (Project No. 3);  
2 Aboveground Storage Tank Secondary Containment (Project No. 4), Phase II  
3 Cooling Water Intake (Project No. 6), CAIR / CAMR Peaking / Demand  
4 (Project No. 7.2), Arsenic Groundwater Standard (Project No. 8), Modular  
5 Cooling Towers (Project No. 11), and the Greenhouse Gas Inventory and  
6 Reporting (Project No. 12).

7

8 **Q. Please summarize the total variances between actual O&M expenditures**  
9 **for these projects and the Estimated/Actual projections presented in prior**  
10 **testimony.**

11 A. The overall total combined O&M variance for all of these projects was \$40,434  
12 over the Estimated/Actual costs for 2008.

13

14 **Q. Have there been any recent developments concerning the Clean Air**  
15 **Interstate Rule (CAIR)?**

16 A. In July 2008, the U.S. Circuit Court of Appeals for the District of Columbia  
17 issued a decision vacating CAIR in its entirety. However, in response to EPA's  
18 petition for rehearing, the court requested briefs from the parties regarding  
19 whether CAIR should be remanded to EPA without vacatur of CAIR. On  
20 December 23, the court decided to remand CAIR without vacatur, thereby  
21 leaving the rule and its compliance obligations in place. Thus, PEF must  
22 continue to move forward with its Integrated Clean Air Compliance Plan ("Plan  
23 D") in order to meet the impending CAIR compliance deadlines.

1 **Q. Have there been any recent developments concerning the Clean Air**  
2 **Mercury Rule (CAMR)?**

3 A. Yes. In February 2008, the U.S. Court of Appeals for the District of Columbia  
4 (D.C.) Circuit vacated the federal CAMR regulations. On October 17, 2008 EPA  
5 petitioned the U.S. Supreme Court to review the CAMR vacatur decision.  
6 However, on January 29, 2009, EPA withdrew its petition and announced its  
7 intention to proceed with a Maximum Achievable Control Technology (MACT)  
8 rulemaking. It is impossible to predict when EPA will complete the MACT  
9 rulemaking process or what the emissions standard will be. In any event,  
10 because mercury component of PEF's Plan D relies on the co-benefit of  
11 selective catalytic reduction ("SCR") and scrubbers rather than mercury-specific  
12 controls until 2017, the Plan provides flexibility to respond to any rules EPA  
13 may adopt in response to the D.C. Circuit's decision.

14  
15 **Q. In Order No. PSC-07-0922-FOF-EI issued in Docket 070007-EI on**  
16 **November 16, 2007, the Commission directed PEF to file as part of its**  
17 **ECRC true-up testimony "a yearly review of the efficacy of its Plan D and**  
18 **the cost-effectiveness of PEF's retrofit options for each generating unit in**  
19 **relation to expected changes in environmental regulations." Has PEF**  
20 **conducted such a review?**

21 A. Yes.

22  
23 **Q. Please summarize the conclusions of PEF's review.**

1 A. Based on project milestones achieved to date, PEF remains confident that Plan  
2 D will have the desired effect of achieving timely compliance with the  
3 applicable regulations in a cost-effective manner. No new or revised  
4 environmental regulations have been adopted that have a direct bearing on  
5 PEF's compliance plan. Although DEP is in the process of developing a cap-  
6 and-trade program to regulate CO<sub>2</sub> emissions, no regulations have been adopted  
7 to date and there currently are no demonstrated retrofit options to reduce CO<sub>2</sub>  
8 emissions from fossil fuel-fired electric generating units. Moreover,  
9 abandoning the Crystal River Units 4 and 5 emission control projects is not a  
10 viable option in light of the imminent 2009 and 2010 CAIR deadlines. As I  
11 previously discussed, although EPA is proceeding with the adoption of new  
12 MACT standards for utility hazardous air pollutant emissions as a result of a  
13 federal court decision vacating the federal CAMR rules, this development does  
14 not immediately impact PEF's implementation of Plan D because the plan relies  
15 primarily on installation of NO<sub>x</sub> and SO<sub>2</sub> controls to reduce mercury emissions  
16 and does not contemplate installation of mercury-specific controls until 2017.  
17 For these reasons, PEF's Plan D continues to represent the most cost-effective  
18 alternative for achieving and maintaining compliance with the applicable  
19 regulatory requirements.

20  
21 **Q. Does this conclude your testimony?**

22 A. Yes it does.

1                   BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION  
2                   DIRECT TESTIMONY OF  
3                   PATRICIA Q. WEST  
4                   ON BEHALF OF  
5                   PROGRESS ENERGY FLORIDA  
6                   DOCKET NO. 090007-EI  
7                   AUGUST 3, 2009  
8

9   **Q.    Please state your name and business address.**

10   A.    My name is Patricia Q. West. My business address is 299 First Avenue North,  
11           St. Petersburg, FL 33701.  
12

13   **Q.    By whom are you employed and in what capacity?**

14   A.    I am employed by the Environmental Health and Safety Services Section of  
15           Progress Energy Florida (“Progress Energy” or “Company”) as Manager of  
16           Environmental Services / Power Generation Florida.  
17

18   **Q.    What are your responsibilities in that position?**

19   A.    I am responsible for ensuring that environmental technical and regulatory  
20           support is provided to the implementation of compliance strategies associated  
21           with the environmental requirements for power generation facilities in Florida.  
22

1 **Q. Have you previously filed testimony before this Commission in connection**  
2 **with Progress Energy Florida's Environmental Cost Recovery Clause**  
3 **(ECRC)?**

4 A. Yes, I have.

5

6 **Q. Have your duties and responsibilities remained the same since you last filed**  
7 **testimony in this proceeding?**

8 A. Yes.

9

10 **Q. What is the purpose of your testimony?**

11 A. The purpose of my testimony is to explain material variances between the  
12 Estimated/Actual project expenditures and the original cost projections for  
13 environmental compliance costs associated with PEF's, Aboveground Storage  
14 Tank Secondary Containment Program, Arsenic Groundwater Standard Project,  
15 the Integrated Clean Air Compliance Program, Thermal Discharge Permanent  
16 Cooling Tower, and the Greenhouse Gas Inventory and Reporting Program, for  
17 the period January 2009 through December 2009. I also will describe a new  
18 Total Maximum Daily Loads for Mercury Program for which PEF is seeking  
19 recovery in this docket.

20

21 **Q. What current PSC-approved projects are you responsible for?**

22 A. I am responsible for Pipeline Integrity Management (Project No. 3);  
23 Aboveground Storage Tank Secondary Containment (Project No. 4), Phase II  
24 Cooling Water Intake (Project No. 6), CAIR/CAMR Peaking - Demand (Project

1 No. 7.2), CAIR/CAMR Crystal River (Project No. 7.4), Arsenic Groundwater  
2 Standard (Project No. 8), Underground Storage Tanks (Project 10), Modular  
3 Cooling Towers (Project No. 11), Thermal Discharge Permanent Cooling Tower  
4 (Project No. 11.1), Greenhouse Gas Inventory and Reporting (Project No. 12),  
5 and the Mercury Total Daily Maximum Loads Monitoring (Project No. 13).

6

7 **Q. Please explain the variance between the Estimated/Actual capital**  
8 **expenditures and the original projections for the Above Ground Tank**  
9 **Secondary Containment Program (Project No. 4) for the period January**  
10 **2009 to December 2009.**

11 A. PEF is projecting capital expenditures to be \$872,377 or 65% higher for this  
12 program than originally projected. This variance is mainly attributable to the  
13 decision to upgrade Turner Tank 7 rather than retire it and expenses that were  
14 delayed from 2008 to 2009 due to Tropical Storm Fay and the subsequent  
15 flooding that followed.

16

17 **Q. Please explain the variance between the Estimated/Actual project**  
18 **expenditures and the original projections for the CAIR/CAMR Crystal**  
19 **River (Project No. 7.4) for the period January 2009 to December 2009.**

20 A. PEF is projecting O&M expenditures to be \$532,581 or 13% lower for this  
21 program than originally projected. This variance is attributable to an outage  
22 scheduling adjustment from May 2009 to June 2009 of the Crystal River  
23 Selective Catalytic Reduction (SCR) (7.4c) project, and Crystal River Urea to  
24 Ammonia System (project 7.4d) resulting in lower than projected ammonia

1 consumption. Also, contributing to the variance is the decrease in the expected  
2 monthly cost of ammonia and limestone from the original 2009 projection.

3

4 **Q. Please explain the variance between the Estimated/Actual project**  
5 **expenditures and the original projections for the Arsenic Groundwater**  
6 **Standard (Project No. 8) for the period January 2009 to December 2009.**

7 A. PEF is projecting O&M expenditures to be \$77,669 or 100% lower for this  
8 program than originally projected. PEF continues working with the FDEP to  
9 address potential groundwater arsenic issues and to develop a compliance plan.

10

11 **Q. Please explain the variance between the Estimated / Actual project**  
12 **expenditures and the original projections for the Thermal Discharge**  
13 **Permanent Cooling Tower (Project 11.1) for the period January 2009 and**  
14 **December 2009.**

15 A. PEF is projecting capital expenditures to be \$2,440,619 or 21% lower for this  
16 project in 2009 than originally forecast. This variance is mainly attributable to  
17 the refinement of project costs reflecting design changes due to anticipated  
18 scope reductions and associated procurement requirements.

19

20 **Q. Please explain the variance between the Estimated / Actual project**  
21 **expenditures and the original projections for the Green House Gas**  
22 **Inventory and Reporting (Project 12) for the period January 2009 and**  
23 **December 2009.**

1 A. PEF is projecting O&M expenditures to be \$42,680 or 75% lower for this  
2 program than originally projected. This variance is the result of preparing the  
3 inventory report with internal resources rather than external consultants during  
4 the first two quarters of the year. A third party consultant will be hired for  
5 verification of the report, as required by the Climate Registry, and those are the  
6 expenses now projected for 2009.

7  
8 **Q. Is PEF requesting recovery of 2009 costs for any new environmental**  
9 **programs?**

10 A. Yes. On March 4, 2009 PEF filed a petition requesting recovery of costs  
11 associated with a new study of Total Daily Maximum Loads (TDML) for  
12 mercury in State waters and rules regulating mercury emissions from various  
13 sources including, potentially, coal-fired power plants.

14  
15 **Q. Why is the Company implementing this new program?**

16 A. Section 303(d) of the federal Clean Water Act requires each state to identify  
17 state waters not meeting water quality standards and establish a TMDL for the  
18 pollutant or pollutants causing the failure to meet standards. Under a 1999  
19 federal consent decree, TMDLs for over 100 Florida water bodies listed as  
20 *impaired for mercury* must be established by September 12, 2012. DEP has  
21 initiated a research program to provide the necessary information for setting the  
22 *appropriate TMDLs for mercury*. Among other things, the study will assess the  
23 relative contributions of mercury-emitting sources, such as coal-fired power  
24 plants, to mercury levels in surface waters. In turn, DEP could seek to use this

1 information to attempt to impose new regulatory requirements on mercury-  
2 emitting sources, such as coal-fired power plants. Additionally, in a separate  
3 effort, DEP's Division of Air Resources Management is in the process of  
4 developing rules to regulate mercury emissions from various sources, which  
5 may include coal-fired power plants.

6  
7 DEP has invited stakeholders to participate in the design and completion of the  
8 mercury TMDL study. PEF believes it is prudent to participate in the TMDL  
9 study and in the parallel air rulemaking effort to ensure that the relative  
10 contributions of mercury-emitting sources, such as power plants, are  
11 appropriately analyzed so that future environmental compliance costs are  
12 minimized. Accordingly, PEF is participating in the mercury TMDL study and  
13 air rulemaking proceedings through its membership in the Florida Electric  
14 Power Coordinating Group's Environmental Committee (FCG). To ensure that  
15 the ongoing regulatory efforts are based on good science, the FCG is contracting  
16 with various consultants to participate in the monitoring and modeling of  
17 mercury emissions and their fate in the environment.

18

19 **Q. Has the Company projected the costs it will incur for the new program?**

20 Yes. PEF estimates the total project costs to be approximately \$92,000 for the  
21 remainder of 2009, approximately \$36,000 for 2010 and approximately \$38,000  
22 for 2011.

23

24

1 **Q. Do the costs for the new program qualify for recovery through the ECRC?**

2 A. Yes. Costs for the new program meet the requirements for ECRC recovery  
3 previously established by the Commission. Specifically, the expenditures are  
4 being prudently incurred after April 13, 1993; the activities are legally required  
5 to comply with a governmentally imposed environmental requirement which  
6 was created, or whose effect was triggered, after the minimum filing  
7 requirements (MFRs) were submitted in PEF's last rate case (Docket No.  
8 050078-EI); and none of the costs of the new program are being recovered  
9 through base rates or any other cost recovery mechanism.

10

11 **Q. Has the Commission previously approved recovery of costs for similar**  
12 **activities associated with development of environmental compliance**  
13 **measures?**

14 A. Yes. As the Commission recognized in Order No. PSC-08-0775-FOF-EI issued  
15 in Docket 08-0007-EI on November 24, 2008: "Utilities are expected to take  
16 steps to control the level of costs that must be incurred for environmental  
17 compliance. An effective way to control the costs of complying with a  
18 particular environmental law or regulation can be participation in the regulatory  
19 and legal processes involved in defining compliance." Based on that  
20 understanding, the Commission has previously approved recovery through the  
21 ECRC of costs incurred by utilities for technical analyses and other activities  
22 associated with participation in development of regulatory compliance  
23 measures. See e.g., Order No. PSC-08-0775-FOF-EI issued in Docket No.  
24 080007-EI (Nov. 24, 2008) (costs for participating in rulemaking and legal

1 proceedings related to EPA's Section 316(b) Phase II rules); Order No. PSC-05-  
2 1251-FOF-EI issued in Docket No. 050007-EI (Dec. 22, 2005) (costs associated  
3 with technical analysis and legal challenges to Clean Air Interstate Rule); and  
4 Order No. PSC-00-0476-PAA-EI issued in Docket No. 991834-EI (Mar. 6,  
5 2000) (costs associated with participating in ozone modeling study).

6

7 **Q. Does this conclude your testimony?**

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

**PATRICIA Q. WEST**

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

August 28, 2009

**Q. Please state your name and business address.**

A. My name is Patricia Q. West. My business address is 299 1<sup>st</sup> Avenue North, St. Petersburg, Florida, 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by the Environmental Health and Safety Services Section of Progress Energy Florida (“Progress Energy” or “Company”) as Manager of Environmental Services / Energy Supply Florida. In that position I have responsibility to ensure that environmental technical and regulatory support is provided during the implementation of compliance strategies associated with the environmental requirements for power generation facilities in Florida.

**Q. Have you previously filed testimony before this Commission in connection with Progress Energy Florida’s Environmental Cost Recovery Clause?**

A. Yes, I have.

1   **Q.    Have your duties and responsibilities remained the same since you last filed**  
2       **testimony in this proceeding?**

3    A.    Yes.

4

5   **Q.    What is the purpose of your testimony?**

6    A.    This testimony provides estimates of the costs that will be incurred in the year  
7       2010 for environmental programs that fall within the scope of my  
8       responsibilities to support Progress Energy's power generation group. These  
9       programs include the Pipeline Integrity Management Program (Project 3),  
10      Aboveground Storage Tanks Secondary Containment Program (Project 4),  
11      Phase II Cooling Water Intake 316(b) Program (Project 6), the Integrated Air  
12      Compliance Program associated with combustion turbines (Project 7.2) and  
13      operation of the air emission controls at Crystal River Units 4 and 5 (Project  
14      7.4), Arsenic Groundwater Standard Program (Project 8), Underground Storage  
15      Tank Program (Project 10), the Modular Cooling Tower Program (Project 11),  
16      the Thermal Discharge Permanent Cooling Tower (Project 11.1) , the Green  
17      House Gas Inventory and Reporting Program (Project 12), and the Mercury  
18      TMDL project (Project 13).

19

20

21

22

23

1 **Q. Have you prepared or caused to be prepared under your direction,**  
2 **supervision or control any exhibits in this proceeding?**

3 A. Yes. I am co-sponsoring the following portions of the schedule (TGF-3)  
4 attached to Thomas G. Foster's testimony:

- 5 • 42-5P page 3 of 14 - Pipeline Integrity Management
- 6 • 42-5P page 4 of 14 - Above Ground Storage Tank Containment
- 7 • 42-5P page 6 of 14 - Phase II Cooling Water Intake
- 8 • 42-5P page 8 of 14 - Arsenic Groundwater Standard
- 9 • 42-5P page 10 of 14 - Underground Storage Tanks
- 10 • 42-5P page 11 of 14 - Modular Cooling Towers
- 11 • 42-5P page 12 of 14 - Crystal River Thermal Discharge Project
- 12 • 42-5P page 13 of 14 - Greenhouse Gas Inventory and Reporting
- 13 • 42-5P page 14 of 14 - Mercury Total Daily Maximum Loads Monitoring

14

15 **Q. What costs do you expect to incur in 2010 in connection with the Pipeline**  
16 **Integrity Management Program (Project 3)?**

17 A. For 2010, we project that Progress Energy will incur a total of \$ \$1,218,000 in  
18 O&M and no capital expenditures to comply with the Pipeline Integrity  
19 Management ("PIM") regulations (49 CFR Part 195).

20

21 PEF is projecting to spend \$193,000 in O&M on PIM Program Implementation  
22 which includes general program management and oversight by PEF employees  
23 and contractors who assist with program requirements which include regulatory  
24 review, auditing and procedures management, document updates, High

1 Consequence Area (HCA) reviews, spill analyses, integrity assessment planning,  
2 pipeline mapping, data integration, risk analyses, preventive and mitigative  
3 measures update, and review of alarms and abnormal operating conditions. An  
4 additional \$630,000 in O&M will be required to implement risk reduction  
5 projects, including bollards at main line valve (MLV)-5, depth of cover repairs  
6 and erosion control, atmospheric corrosion inspection and repairs, control room  
7 management implementation, pipeline refurbishment MLV operator columns,  
8 testing and repair of anodes, Haines Bayshore on-site construction monitor,  
9 emergency casing extensions, and public awareness mailing and drills. The  
10 Five-Year Reassessment effort will require \$395,000 in O&M expenditures to  
11 management the assessment process, including third party review of results,  
12 repairs and validation reviews, updating risk analysis and biennial review, and  
13 assessment anomaly ranking and documentation close-out.

14

15 **Q. What steps is the Company taking to ensure that the level of expenditures**  
16 **for the Pipeline Integrity Management Program is reasonable and prudent?**

17 A. As additional work is identified to comply with the PIM regulations, Progress  
18 Energy Florida will identify qualified suppliers of the necessary services through  
19 a competitive bidding process.

20

21 **Q. What costs do you expect to incur in 2010 in connection with the**  
22 **Aboveground Storage Tank Secondary Containment Program (Project 4)?**

23 A. Progress Energy is projecting to spend \$638,000 in capital expenditures in 2010.  
24 These costs are for the tank upgrade work at Bartow which includes: cleaning

1 the tank, performing required inspections, installing and testing new steel double  
2 bottom, and preparing and coating the new bottom.

3

4 **Q. What steps is the Company taking to ensure that the level of expenditures**  
5 **for the Aboveground Storage Tank Secondary Containment Program is**  
6 **reasonable and prudent?**

7 A. As additional work is identified to comply with the Aboveground Storage Tank  
8 regulations, Progress Energy Florida will identify qualified suppliers of the  
9 necessary services through a competitive bidding process.

10

11 **Q. What costs do you expect to incur in 2010 in connection with the Phase II**  
12 **Cooling Water Intake Program (Project 6)?**

13 A. Progress Energy is not anticipating any costs to be incurred in 2010.

14

15 **Q. What costs do you expect to incur in 2010 in connection with combustion**  
16 **turbines as part of the Integrated Clean Air Compliance Program (Project**  
17 **7.2)?**

18 A. PEF expects to incur \$67,300 in O&M expenditures for the operation and  
19 maintenance of predictive emissions monitoring systems at the combustion  
20 turbine sites. O&M costs for ongoing software vendor support of these new  
21 systems will be \$47,300; and \$20,000 for air emissions testing in the event that  
22 such testing is required after maintenance activities.

23

1 **Q. Are there additional costs that you expect to incur in 2010 in connection**  
2 **with operation of air emission controls at Crystal River Units 4 and 5 as**  
3 **part of the Integrated Clean Air Compliance Program (Project 7.4)?**

4 A. PEF estimates that \$23,056,328 in O&M costs will be spent to support the  
5 operation and maintenance of the new air emissions controls that were installed  
6 at the Crystal River Energy Complex as outlined in the PEF Integrated Clean  
7 Air Plan. Labor costs are expected to be \$3,506,004. This estimate is based  
8 upon current staffing levels which were developed after review of similar  
9 operations outside of Progress Energy as well as comparison of similar units  
10 within the Company. A&G expenses of \$16,871 related to the incremental  
11 positions that were created for support of the Integrated Clean Air Compliance  
12 Program project. Contractor expenses are expected to be \$2,021,458 for such  
13 activities as post-construction modifications not covered by warrantee, new  
14 chimney maintenance, limestone and gypsum handling, urea handling, cleaning  
15 of pond systems, additional security, gypsum sampler and sample analysis, truck  
16 scale maintenance, and contracted equipment maintenance and repairs.  
17 Miscellaneous costs for safety equipment and other employee costs are  
18 estimated at \$231,759, with parts and materials expected to be \$984,975.  
19 Reagent costs (net gypsum sales / disposal, limestone, urea / ammonia, and  
20 dibasic acid) are expected to total \$16,295,261.

21

22

1    **Q.    What steps is the Company taking to ensure that the level of expenditures**  
2           **for the operation of the Crystal River 4 and 5 controls is reasonable and**  
3           **prudent?**

4    A.    Expenditures will be managed by plant operations personnel and benchmarked  
5           against other similar operations. Additional operating and maintenance  
6           personnel are only being added as the new equipment and systems are being  
7           commissioned and placed into service. The system designs have been reviewed  
8           and adjusted to minimize operating and maintenance expenditures as well as  
9           capital expenditures.

10

11   **Q.    What costs do you expect to incur in 2010 in connection with the Arsenic**  
12           **Groundwater Standard Program (Project 8)?**

13   A.    Progress Energy continues to work with the Florida Department of  
14           Environmental Protection to comply with the terms of the renewed industrial  
15           wastewater permit for the Crystal River Energy Complex (January 9, 2007) and  
16           the modified Conditions of Certification (November 29, 2007; and June 5,  
17           2009). Given this level of uncertainty regarding this program, PEF is not  
18           projecting any costs specific to the Arsenic program in 2010.

19

20

21

22

1 **Q. What steps is the Company taking to ensure that the level of expenditures**  
2 **for the Arsenic Groundwater Standard Program is reasonable and**  
3 **prudent?**

4 A. As additional work is identified to comply with the Arsenic standard, Progress  
5 Energy Florida will identify qualified suppliers of the necessary services through  
6 a competitive bidding process.

7

8 **Q. What costs do you expect to incur in 2010 in connection with the**  
9 **Underground Storage Tanks Program (Project 10)?**

10 A. PEF is not anticipating any expenditures in this program during 2010.

11

12 **Q. What costs do you expect to incur in 2010 in connection with the Modular**  
13 **Cooling Tower Program (Project 11)?**

14 A. PEF is projecting to spend approximately \$4.2 million in O&M expenditures in  
15 2010. These costs are for rental fees associated with the five-year lease  
16 agreement that began in 2006.

17

18 **Q. What costs do you expect to incur in 2010 in connection with the Thermal**  
19 **Discharge Permanent Cooling Tower (Project 11.1) for 2010?**

20 A. PEF is projecting to spend approximately \$34.6 million in ECRC capital  
21 expenditures in 2010. These costs are associated with equipment procurement,  
22 site preparation, and construction activities associated with the cooling tower  
23 basin, intake/discharge structures, and related systems/structures.

24

1 **Q. What costs do you expect to incur in 2010 in connection with the Green**  
2 **House Gas Inventory and Reporting Program (Project 12)?**

3 A. PEF is projecting to spend approximately \$22,500 in O&M in 2010. These  
4 costs are for annual Climate Registry fee as well as consulting fees and third-  
5 party verification of the inventory.

6

7 **Q. What steps is the Company taking to ensure that the level of the**  
8 **expenditure for the Green House Gas Inventory and Reporting Program is**  
9 **reasonable and prudent?**

10 A. In 2009 Progress Energy issued a request for proposal to multiple consultants  
11 with expertise in the area of green house gas inventory validation. Bids were  
12 received and reviewed. A contract effective in May 2009 was established and  
13 verification services will be conducted under this contract.

14

15 **Q. What costs do you expect to incur in 2010 in connection with the Mercury**  
16 **TMDL Program (Project 13)?**

17 A. Consistent with the March 4, 2009, Petition seeking approval of this new  
18 program, PEF expects to spend \$36,077 in 2010. These costs will cover  
19 ongoing participation in the FCG / FDEP effort with modeling results and data  
20 analyses to be used in the development of upcoming rules.

21

22

23

1 Q. **What steps is the Company taking to ensure that the level of the**  
2 **expenditure for the Mercury TMDL Program is reasonable and prudent?**

3 A. PEF's has agreed to this level of expenditure in support of the FCG effort with  
4 FDEP. No additional funds can be spent without PEF's review and concurrence.

5

6 Q. **Does this conclude your testimony?**

7 A. Yes it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

**KEVIN MURRAY**

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

AUGUST 28, 2009

**Q. Please state your name and business address.**

A. My name is Kevin Murray. My business address is 299 First Avenue North, Saint Petersburg, Florida, 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Florida ("PEF") as General Manager of Plant Construction Projects.

**Q. What are your responsibilities as General Manager of Florida Construction Projects?**

A. As General Manager of Plant Construction Projects, I am responsible for the oversight of PEF's major fossil generation projects, including the Crystal River Units 4 and 5 air quality control system projects.

1 **Q. Please describe your educational background and professional experience.**

2 A. I received my Bachelor of Science Degree in Mechanical Engineering from the  
3 University of Arizona. I have 15 years of professional experience in engineering  
4 and project management within the electric power industry. I started my career in  
5 the power industry with Westinghouse Power Generation (now Siemens) based in  
6 Orlando, where I was employed as an engineer working on power plant proposals.  
7 During this time, I received an award for my work on a project in Thailand. I went  
8 to work for El Paso Corporation as an engineer and then as a project manager. I  
9 was involved in both North and South America, including 1-year residency in  
10 Brazil. I joined Progress Energy in 2004 and served as the director of engineering  
11 for the Company's new fossil power projects. In 2008, I was promoted to General  
12 Manager of Projects for Progress Energy Florida, which includes responsibility for  
13 implementing the Crystal River Units 4 and 5 air quality control system projects.

14

15 **Q. Have you previously submitted testimony in this proceeding?**

16 A. No.

17

18 **Q. What is the purpose of your testimony?**

19 A. The purpose of my testimony is to update the Commission on the Crystal River  
20 Units 4 and 5 air quality control system project ( "Crystal River Project") included  
21 in PEF's Integrated Clean Air Compliance Plan. I also will present PEF's current  
22 estimates of the costs that will be incurred in the 2010 for the Crystal River  
23 Project.

24

1 **Q. Have you prepared or caused to be prepared under your direction,**  
2 **supervision or control any exhibits in this proceeding?**

3 A. Yes. I am co-sponsoring the following portions of the schedule (TGF-3)  
4 attached to Thomas G. Foster's testimony:

5 • 42-5P page 7 of 14 - Integrated Clean Air Compliance Plan (CAIR)

6

7 **Q. How far along is PEF in implementing the Crystal River Project?**

8 A. The Crystal River Project remains on schedule to meet the in-service dates set  
9 forth in the Integrated Clean Air Compliance Plan approved by the Commission in  
10 2007. Through July 2009, we have incurred or have committed to incur capital  
11 costs of approximately \$995.8 million and \$93.2 million of AFUDC on the  
12 Project. This represents approximately 88 percent of the total projected costs of  
13 the Project, as presented in the Integrated Clean Air Compliance Plan approved by  
14 the Commission in Docket No. 070007-EI

15

16 **Q. What project milestones do you expect to achieve in 2010?**

17 A. We currently expect to achieve several significant project milestones in 2010. In  
18 [REDACTED], we expect to place the Crystal River Unit 4 selective catalytic ("SCR")  
19 system and the Unit 4 Flue Gas Desulfurization ("FGD" or "scrubber") system  
20 into service. In his pre-filed testimony, Mr. Foster explains the impact of placing  
21 these controls and associated equipment in-service on PEF's ECRC factors.

22

23

1 **Q. What are PEF's projected 2010 expenditures for the Crystal River Project**  
2 **(Project 7.4)?**

3 A. As shown in Form 42-4P page 9 in Exhibit No. \_\_ (TGF-3) to the testimony of  
4 Thomas G. Foster. PEF currently is projecting to spend approximately \$58.1  
5 million in capital expenditures on the Crystal River Project in 2010. The scope of  
6 work for 2010 includes the finalization of the Unit 4 SCR and FGD projects.

7

8 **Q. What measures are PEF implementing to ensure that the level of**  
9 **expenditures for the Crystal River Project is reasonable and prudent?**

10 A. PEF will continue to implement the measures discussed in prior testimony to  
11 ensure that costs incurred are reasonable and prudent. Among other things, we  
12 will continue to regularly track project expenditures against the detailed project  
13 scopes to ensure that PEF receives what it contracted for and that any scope  
14 changes are properly evaluated and documented. We also will continue to  
15 conduct regularly scheduled meetings with the primary contractors and senior  
16 management to maintain supervision of the project, to ensure that management  
17 remains fully informed, and to ensure that management expectations are  
18 communicated to the outside vendors and the project team

19

20 **Q. Does this conclude your testimony?**

21 A. Yes, it does.

## 1                   BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2                                   DIRECT TESTIMONY OF

3                                   **DALE WILTERDINK**

4                                   ON BEHALF OF

5                                   PROGRESS ENERGY FLORIDA

6                                   DOCKET NO. 090007-EI

7                                   April 1, 2009

8

9   **Q. Please state your name and business address.**10  A. My name is Dale W. Wilterdink. My business address is 15760 West Power Line Street,  
11    Crystal River, Florida 34428.

12

13  **Q. By whom are you employed and in what capacity?**14  A. I am employed by Progress Energy Florida ("PEF") as Manager of Plant Construction  
15    Projects.

16

17  **Q. What are your responsibilities as Manager of Plant Construction Projects?**18  A. I serve as Project Manager for the Crystal River Units 4 and 5 air quality control system  
19    project ("Crystal River Project") included in PEF's Integrated Clean Air Compliance  
20    Plan, which the Commission approved in Docket No. 070007-EI. As Project Manager, I  
21    have primary overall responsibility and accountability for the Crystal River Project. I  
22    provide direct management of all aspects of the project, including the installation of Flue  
23    Gas Desulfurization ("FGD" or "scrubber"), Low NOx Burners (LNBs), Selective  
24    Catalytic Reduction ("SCR") and other related activities, such as installation of a new

1 stack, common limestone preparation/dewatering system, coal pile liners, ponding, and  
2 the water supply system. I also work with members of my project team to ensure that  
3 key stakeholders throughout the Company, including senior management, remain  
4 informed about the status of the Crystal River Project.

5

6 **Q. Please describe your educational background and professional experience.**

7 A. I received a B.S. degree in Chemistry and a Masters in Business Administration from  
8 Grand Valley State University. I have over twenty six years experience in the power  
9 industry, including direct project management for large, multi-unit air pollution control  
10 projects. Prior to joining Progress Energy, I worked air quality control system projects  
11 for URS Corporation, Advatech (a joint venture between URS and Mitsubishi Heavy  
12 Industries), Marsulex (formerly General Electric Environmental Services), and Grand  
13 Haven Board of Light and Power.

14

15 **Q. Are you sponsoring any exhibits with your testimony?**

16 A. Yes. I am sponsoring Exhibit No. \_\_ (DW-1), which is an organization chart showing  
17 the organizational structure the Company has established for management and oversight  
18 of internal company personnel and contractors involved in the Crystal River Project.

19

20 **Q. What is the purpose of your testimony?**

21 A. The purpose of my testimony is to summarize the status of PEF's implementation of the  
22 Crystal River Project, including the variance between actual 2008 Project expenditures  
23 and the Estimated/Actual projection submitted in Docket No. 080007-EI. I also will

1 describe some of the measures PEF has taken to ensure that the costs incurred for the  
2 Crystal River Project are reasonable and prudent.

3

4 **Q. What is the current status of the Crystal River Project?**

5 A. The Crystal River Project is on schedule to meet the in-service dates set forth in the  
6 Integrated Clean Air Compliance Plan approved by the Commission in Docket No.  
7 070007-EI. Over the past year, we have achieved several significant project milestones  
8 including:

- 9 • Completion of the access road in April, 2008;
- 10 • Completion of the vehicle barrier system in May, 2008;
- 11 • Completion of the flue gas chimney shell in May, 2008;
- 12 • Completion of the Unit 5 FGD absorber tower in September, 2008; and
- 13 • Completion of Unit 4 LNB/AH in December, 2008

14 As discussed in the annual review of PEF's compliance plan sponsored by PEF witness  
15 Patricia Q. West, there are uncertainties associated with all major construction projects  
16 including the Crystal River Project. At this time, however, the Crystal River Project is  
17 on-schedule to achieve the in-service dates set forth in PEF's Commission-approved  
18 Integrated Clean Air Compliance Plan.

19

20 **Q. How do the actual project expenditures for the Crystal River Project compare with**  
21 **PEF's estimated/actual projections for the period January 2008 to December 2008?**

22 A. The actual total expenditures for the Crystal River Projects in 2008 were \$524,059,008  
23 million, which is \$3,368,402 million (1%) less than projected in PEF's Estimated/Actual  
24 projection. The difference is attributable to the unused portion of the project's

1 contingency that is used to manage acknowledged risks that are likely to occur during  
2 the project. Risks projected to occur during 2008 did not materialize, but may still occur  
3 during the remainder of the project.

4

5 **Q. Please describe the management structure being used to oversee implementation of**  
6 **the Crystal River Project?**

7 A. PEF has established an organizational structure to ensure prudent decision-making and  
8 project oversight as implementation of the Integrated Clean Air Compliance Plan  
9 proceeds. The specific team for the Crystal River Project is as shown in Exhibit No. \_\_\_  
10 (DW-1). The Company has assigned me to be the dedicated Project Manager with  
11 primary overall responsibility and accountability for the Crystal River Project. I oversee  
12 all of the internal team members as well as all of the external contractors working on the  
13 project. My project management team, which also includes a dedicated Project Engineer  
14 and Project Controls personnel, regularly works with Company personnel from other  
15 departments, including Environmental Services, Corporate Services, Fossil Generation,  
16 Legal, Regulatory Planning, and Health and Services as needed. The Company also has  
17 appointed the Project Assurance Department to support and advise the project  
18 management team.

19

20 To promote efficient integration of the new equipment with current operations, the  
21 Company also has established a Plant Integration Team (PIT) that will be involved  
22 through the startup and commissioning process. The PIT was established early in the  
23 life of the Project to allow for plant operational input into the technical and functional  
24 requirements incorporated in the Project design, the operational design features, the

1 anticipated operation of the new systems and the performance guarantees. During the  
2 construction phase, the PIT provides interface between me and plant operations and has  
3 the primary responsibility for developing operational maintenance procedures for the  
4 new equipment. The PIT also will participate in startup integration for commercial  
5 operation.

6

7 **Q. Has the Company implemented policies and procedures to ensure proper**  
8 **management of the Crystal River Project and to control project costs?**

9 A. Yes. The project is being implemented in accordance with the Generation and  
10 Transmission Construction Department's policies and procedures, which prescribe  
11 specific requirements for project management, quality assurance/quality control  
12 (QA/QC), schedule management, cost accounting and reporting, and other aspects of the  
13 project implementation. These policies and procedures reflect the collective experience  
14 and knowledge of the Company. They have been tested on other capital projects of this  
15 nature and reflect lessons learned from those projects. They also are consistent with best  
16 practices for capital project management in the industry.

17

18 **Q. Are employees involved in the Crystal River Project trained in the Company's**  
19 **project management and cost control policies and procedures?**

20 A. Yes, they are. The project management team for the Crystal River Project has been  
21 trained in these policies and procedures.

22

23 **Q. Does the Company verify that the project management and cost control policies**  
24 **and procedures are followed?**

1 A. Yes, it does. PEF uses internal audits to verify that its program management and  
2 oversight control are in place and being implemented.

3

4 **Q. Has the Company implemented other mechanisms to ensure proper oversight and**  
5 **review of the Crystal River Project?**

6 A. Yes. We have implemented several mechanisms to ensure proper oversight and review  
7 of the Crystal River Project. My project management team and I work closely with the  
8 Project Assurance Department to identify key project decisions and milestones to ensure  
9 that adequate documentation is prepared and maintained. Among other things, the  
10 project management team regularly prepares Project Cost Reports to track project  
11 expenditures against the detailed project scopes to ensure that PEF receives what it  
12 contracted for and that any scope changes are properly evaluated and documented.

13

14 We also conduct a wide variety of meetings to maintain supervision of the project and to  
15 ensure that Company management remains fully informed. We conduct regularly  
16 scheduled, monthly meetings with the EPC contractor (EPCR) and primary FGD and  
17 SCR design and procurement contractor (B&W) to review construction progress and the  
18 remaining scope of work. Following those meetings, we hold regular monthly meetings  
19 with executive management to review the status of the project and its costs, as well as  
20 the administration of the various contracts. Executives from EPCR and B&W  
21 participate in these meetings to ensure that management expectations are communicated  
22 to the outside vendors as well as the project team.

23 **Q. Does this conclude your testimony?**

24 A. Yes, it does.

## 1                   BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2                                   DIRECT TESTIMONY OF

3                                   **DALE WILTERDINK**

4                                   ON BEHALF OF

5                                   PROGRESS ENERGY FLORIDA

6                                   DOCKET NO. 090007-EI

7                                   AUGUST 3, 2009

8

9   **Q. Please state your name and business address.**10  A. My name is Dale W. Wilterdink. My business address is 15760 West Power Line Street,  
11       Crystal River, Florida 34428.

12

13  **Q. By whom are you employed and in what capacity?**14  A. I am employed by Progress Energy Florida ("PEF") as Manager of Plant Construction  
15       Projects.

16

17  **Q. What are your responsibilities as Manager of Plant Construction Projects?**18  A. I serve as Project Manager for the Crystal River Units 4 and 5 air quality control system  
19       project ("Crystal River Project") included in PEF's Integrated Clean Air Compliance  
20       Plan, which the Commission approved in Docket No. 080007-EI. As Project Manager, I  
21       have primary overall responsibility and accountability for the Crystal River Project. I  
22       provide direct management of all aspects of the project, including the installation of Flue  
23       Gas Desulfurization ("FGD" or "scrubber"), Low NOx Burners (LNBS), Selective  
24       Catalytic Reduction ("SCR") and other related activities, such as installation of a new

1 stack, common limestone preparation/dewatering system, coal pile liners, ponding, and  
2 the water supply system. I also work with members of my project team to ensure that  
3 key stakeholders throughout the Company, including senior management, remain  
4 informed about the status of the Crystal River Project.

5  
6 **Q. Please describe your educational background and professional experience.**

7 A. I received a B.S. degree in Chemistry and a Masters in Business Administration from  
8 Grand Valley State University. I have over twenty six years experience in the power  
9 industry, including direct project management for large, multi-unit air pollution control  
10 projects. Prior to joining Progress Energy, I worked air quality control system projects  
11 for URS Corporation, Advatech (a joint venture between URS and Mitsubishi Heavy  
12 Industries), Marsulex (formerly General Electric Environmental Services), and Grand  
13 Haven Board of Light and Power.

14  
15 **Q. Are you sponsoring any exhibits with your testimony?**

16 A. Yes. I am sponsoring Exhibit No. \_\_ (DW-1), which is an organization chart showing  
17 the organizational structure the Company has established for management and oversight  
18 of internal company personnel and contractors involved in the Crystal River Project.

19  
20 **Q. What is the purpose of your testimony?**

21 A. The purpose of my testimony is to summarize the status of PEF's implementation of the  
22 Crystal River Project, including Estimated/Actual project expenditures for 2009. I also  
23 will describe some of the measures PEF has taken to ensure that the costs incurred for  
24 the Crystal River Project are reasonable and prudent.

1 **Q. What is the current status of the Crystal River Project?**

2 A. The Crystal River Project is on schedule to meet the in-service dates set forth in the  
3 Integrated Clean Air Compliance Plan approved by the Commission in Docket No.  
4 070007-EI, and reaffirmed in the stipulation approved in Docket No. 080007-EI. The  
5 Project has achieved several significant milestones including:

- 6 • Completion of the access road in April, 2008;
- 7 • Completion of the vehicle barrier system in May, 2008;
- 8 • Completion of the flue gas chimney shell in May, 2008;
- 9 • Completion of the Unit 5 FGD absorber tower in Sept, 2008;
- 10 • Completion of Unit 4 low NOx burner in December, 2008; and
- 11 • Completion of the Unit 5 SCR in June 2009

12 As discussed in the annual review of PEF's compliance plan there are uncertainties  
13 associated with all major construction projects including the Crystal River Project. At  
14 this time, however, the Crystal River Project is on-schedule to achieve the in-service  
15 dates set forth in PEF's Commission-approved Integrated Clean Air Compliance Plan.

16

17 **Q. How do the Estimated/Actual capital investment activities for the Crystal River**  
18 **Project compare with the original projections for the period January 2009 to**  
19 **December 2009?**

20 A. PEF's estimate of the total capital revenue requirements for the Crystal River Projects in  
21 2009 will be approximately \$11.1million or 31% lower than originally projected. This  
22 variance is due to the change of in-service dates of the Unit 5 SCR and FGD projects.  
23 As a result of an extended spring outage, The Unit 5 SCR and related SCR Common  
24 projects' in-service dates were delayed from May to June and July, respectively. The

1 Unit 5 FGD and related FGD Common and Gypsum projects' in-service dates were  
2 moved from November to December because of a change in PEF's companywide outage  
3 schedule.

4

5 **Q. Does PEF expect to incur CAIR costs in 2009 that were not anticipated at the time**  
6 **of the Company's 2009 projection filing?**

7 A. Yes. Specifically, additional sootblowers and intelligent sootblowing systems have been  
8 included in this filing and are needed in an area which is expected to encounter  
9 potentially severe slagging when burning the new fuel source at Crystal River Units 4  
10 and 5 that will result from the installation and operation of CAIR equipment. The  
11 intelligent sootblowing system identifies these critical slagging and fouling areas and  
12 determines how often and how much sootblowing is needed throughout the boiler and  
13 convection pass to help maintain unit stability and reliability, as well as minimize boiler  
14 tube erosion. These projects have not been included in filings to this point due to the  
15 relatively new and on-going nature of the operating experience gathered within our  
16 company.

17

18 **Q. What measures has the Company taken to minimize the risk of costs increases for**  
19 **the Crystal River Project?**

20 A. Since the inception of the Crystal River Project, PEF has sought to minimize the risk of  
21 future cost increases to PEF and its customers and to allocate risk where it can be best  
22 managed. We implemented a contracting strategy that enabled PEF to negotiate  
23 contracts that mitigate the risk of price increases without jeopardizing construction time-  
24 frames necessary to ensure compliance with the applicable regulatory requirements. For

1 the Engineering, Procurement and Construction (EPC) contract, which represents the  
2 majority of costs for the Crystal River Project, this strategy included an aggressive “open  
3 book” scoping assessment which enabled the Company to identify the costs for project  
4 components in detail to provide greater cost certainty. As part of the detail review  
5 process, Progress Energy personnel and outside engineers carefully reviewed the  
6 reasonableness of the scope and associated quantities of commodities, equipment,  
7 subcontracts, labor and other project indirect components submitted by EPC contractor  
8 (Environmental Partners Crystal River or “EPCR”), as well as the prices quoted by  
9 EPCR.

10  
11 We negotiated a portfolio of fixed price, lump sum contracts including the EPC contract,  
12 as well as contracts with the primary FGD and SCR design and procurement contractor  
13 (Babcock & Wilcox or “B&W”), and the vendors of major equipment such as scrubber  
14 towers (Stebbins Engineering and Manufacturing Company), flue gas chimney  
15 (Commonwealth Dynamics, Inc.), and SCR catalyst (CERAM Environmental, Inc.).  
16 These contracts, which PEF submitted for the Commission’s review in Docket No.  
17 070007-EI, also incorporate a payment milestone structure with associated liquidated  
18 damages to ensure timely performance. This contracting strategy has enabled PEF to  
19 mitigate cost and performance risks.

20  
21 **Q. Please describe the management structure being used to oversee implementation of**  
22 **the Crystal River Project?**

23 A. PEF has established an organizational structure to ensure prudent decision-making and  
24 project oversight as implementation of the Integrated Clean Air Compliance Plan

1 proceeds. The specific team for the Crystal River Project is as shown in Exhibit  
2 No.\_\_(DW-1). The Company has assigned me to be the dedicated Project Manager with  
3 primary overall responsibility and accountability for the Crystal River Project. I oversee  
4 all of the internal team members as well as all of the external contractors working on the  
5 project. My project management team, which also includes a dedicated Project Engineer  
6 and Project Controls personnel, regularly works with Company personnel from other  
7 departments, including Environmental Services, Corporate Services, Fossil Generation,  
8 Legal, Regulatory Planning, and Health and Services as needed. The Company also has  
9 appointed a designated Project Assurance Advisor to support and advise the project  
10 management team.

11

12 To promote efficient integration of the new equipment with current operations, the  
13 Company also has established a Plant Integration Team (PIT) that will be involved  
14 through the startup and commissioning process. The PIT was established early in the  
15 life of the Project to allow for plant operational input into the technical and functional  
16 requirements incorporated in the Project design, the operational design features, the  
17 anticipated operation of the new systems and the performance guarantees. During the  
18 construction phase, the PIT provides interface between me and plant operations and has  
19 the primary responsibility for developing operational maintenance procedures for the  
20 new equipment. The PIT also will participate in startup integration for commercial  
21 operation.

22

23

1 **Q. Has the Company implemented policies and procedures to ensure proper**  
2 **management of the Crystal River Project and to control project costs?**

3 A. Yes. The project is being implemented in accordance with the Generation  
4 Construction Department's policies and procedures, which prescribe specific  
5 requirements for project management, quality assurance/quality control (QA/QC),  
6 schedule management, cost accounting and reporting, and other aspects of the project  
7 implementation. These policies and procedures reflect the collective experience and  
8 knowledge of the Company. They have been tested on other capital projects of this  
9 nature and reflect lessons learned from those projects. They also are consistent with best  
10 practices for capital project management in the industry.

11

12 **Q. Are employees involved in the Crystal River Project trained in the Company's**  
13 **project management and cost control policies and procedures?**

14 A. Yes, they are. The project management team for the Crystal River Project has been  
15 trained in these policies and procedures.

16

17 **Q. Does the Company verify that the project management and cost control policies**  
18 **and procedures are followed?**

19 A. Yes, it does. PEF uses internal audits to verify that its program management and  
20 oversight control are in place and being implemented.

21

22

23

1 **Q. Has the Company implemented other mechanisms to ensure proper oversight and**  
2 **review of the Crystal River Project?**

3 A. Yes. We have implemented several mechanisms to ensure proper oversight and review  
4 of the Crystal River Project. My project management team and I work closely with the  
5 Project Assurance Advisor to identify key project decisions and milestones to ensure that  
6 adequate documentation is prepared and maintained. Among other things, the project  
7 management team regularly prepares Project Cost Reports to track project expenditures  
8 against the detailed project scopes to ensure that PEF receives what it contracted for and  
9 that any scope changes are properly evaluated and documented.

10

11 We also conduct a wide variety of meetings to maintain supervision of the project and to  
12 ensure that Company management remains fully informed. We conduct regularly  
13 scheduled, monthly meetings with the EPC contractor (EPCR) and primary FGD and  
14 SCR design and procurement contractor (B&W) to review construction progress and the  
15 remaining scope of work. Following those meetings, we hold regular monthly meetings  
16 with executive management to review the status of the project and its costs, as well as  
17 the administration of the various contracts. Executives from EPCR and B&W  
18 participate in these meetings to ensure that management expectations are communicated  
19 to the outside vendors as well as the project team.

20

21 The Company also reviews the feasibility of the Crystal River Project with senior  
22 management through the Company's Integrated Project Plan ("IPP") process, which has  
23 been established for gaining management approval for expenditures of significant funds.  
24 The original IPP for the Crystal River Project was prepared in October 2007 in

1 conjunction with the execution of the final EPC contract. Among other things, the IPP  
2 outlined the scope of the project, project costs, the Company's risk management  
3 strategy, and the economic evaluation discussed in the Integrated Clean Air Compliance  
4 Plan submitted to and approved by the Commission in last year's docket.

5

6 **Q. Does this conclude your testimony?**

7 A. Yes, it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

JOSEPH MCCALLISTER

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

April 1, 2009

**Q. Please state your name and business address.**

A. My name is Joseph McCallister. My business address is 410 South Wilmington Street, Raleigh, North Carolina 27601.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Carolinas (PEC) in the capacity of Director, Gas, Oil and Power.

**Q. What are your responsibilities in that position?**

A. I am responsible for the procurement of natural gas, fuel oil and emission allowances and the power trading and optimization on behalf of PEC and Progress Energy Florida (PEF).

1 **Q. Have you previously provided testimony before this Commission in**  
2 **connection with PEF's Environmental Cost Recovery Clause?**

3 A. Yes. In last year's docket (No. 080007-EI); I presented testimony outlining  
4 PEF's overall approach to procuring emission allowances as part of its  
5 Integrated Clean Air Compliance Plan and preparation for the compliance  
6 requirements of the Clean Air Interstate Rule (CAIR).

7

8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to summarize PEF's actions to date related to its  
10 emission allowance procurement strategy as part of its Integrated Clean Air  
11 Compliance Strategy in preparation for the requirements under the CAIR.

12

13 **Q. How does PEF determine how many emission allowances it needs to**  
14 **purchase?**

15 A. As part of the fuel and generation forecasts, expected emissions are projected.  
16 The forecasts are generated periodically and are based on input assumptions  
17 such as generation availability and capacity, planned generation outage  
18 schedules, purchase power contracts, fuel and emissions price forecasts, planned  
19 environmental equipment installations and load projections. To determine if the  
20 Company needs to purchase emission allowances for compliance requirements  
21 in the current or future time periods, PEF compares the forecasts of the  
22 emissions that will be generated to the number of emissions allowances that PEF  
23 owns through allocations, purchases and accumulated inventory. The Integrated

1 Clean Air Compliance Plan stated that for the PEF system, the expected quantity  
2 of emissions generated based on the forecasts was greater than the number of  
3 allowances that PEF owns for the respective periods. As a result, PEF projected  
4 the need to purchase allowances from the market in order to comply with the  
5 regulations.

6

7 **Q. How did CAIR impact PEF's procurement activities for emission**  
8 **allowances?**

9 A. CAIR established an updated cap-and-trade system for SO<sub>2</sub> and NO<sub>x</sub> and covers  
10 28 eastern states and the District of Columbia. CAIR established modified  
11 sulfur dioxide (SO<sub>2</sub>) annual compliance requirements under Title IV of the  
12 Clean Air Act by requiring 2.0 SO<sub>2</sub> allowances to be submitted per ton of SO<sub>2</sub>  
13 emissions beginning with 2010 annual compliance filings, and 2.86 SO<sub>2</sub>  
14 allowances to be submitted per ton of SO<sub>2</sub> emission starting with 2015 annual  
15 compliance filings. In addition, CAIR established new seasonal and annual  
16 emission compliance requirements for nitrogen oxides (NO<sub>x</sub>). Beginning in  
17 2009, CAIR requires affected sources to complete a seasonal NO<sub>x</sub> emission  
18 allowance compliance submittal for the May 1 through September 30 time  
19 period as well as an annual NO<sub>x</sub> emission allowance compliance submittal for  
20 the January 1 through December 31 time period each year.

21

22 **Q. What strategy has PEF pursued for procuring emissions allowances to**  
23 **ensure compliance with CAIR?**

1 A. PEF's overall procurement strategy for meeting emissions allowance  
2 requirements is to buy allowances over time based on forecasted compliance  
3 needs. PEF believes a procurement strategy of buying emissions allowances  
4 over time is a reasonable and prudent approach to ensure that compliance  
5 requirements are met while reducing price risk and volatility for customers.

6  
7 As part of its Integrated Clean Air Compliance Plan, PEF forecasted the need to  
8 purchase both seasonal and annual NOx emissions allowances in order to  
9 comply with CAIR beginning with 2009 operations. For that reason, and  
10 consistent with its strategy, PEF has purchased seasonal and annual NOx  
11 allowances over time to gradually increase inventories to the levels necessary to  
12 achieve compliance.

13

14 **Q. Have there been any recent developments associated with CAIR?**

15 A. Yes. As discussed in my pre-filed testimony and the pre-filed testimony of  
16 Patricia Q. West and Michael Kennedy in the 080007-E1 Docket, the Court  
17 issued a decision vacating CAIR on July 11, 2008. As a result, PEF stopped  
18 purchasing CAIR emissions allowances in light of the uncertainty created by the  
19 Court's decision. More recently, on December 23, 2008, the Court issued a  
20 revised decision that remanded CAIR back to the EPA without vacating the rule.  
21 CAIR now remains in effect in its original form until new rules consistent with  
22 the Court's finding are developed and adopted. Since CAIR is in effect per the  
23 December 23, 2008 ruling, the Annual NOx emissions market has begun trading

1           again and PEF has resumed procuring allowances consistent with its strategy  
2           and requirement to comply with the CAIR.

3

4   **Q.   How do actual purchases of emission allowances for the period January**  
5       **2008 through December 2008 compare with PEF's estimated/actual**  
6       **projections as presented in previous testimony?**

7   A.   Actual purchases of 2008 emission allowances are in line with PEF's previously  
8       filed Estimated/Actual projections. The actual revenue requirements on the  
9       inventory of SO<sub>2</sub> and NO<sub>x</sub> emission allowances were \$9,664,191, compared to  
10      the Estimated/Actual projection of \$9,616,405 for an immaterial variance (0%)  
11      in 2008.

12

13   **Q.   Does this conclude your testimony?**

14   A.   Yes it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

JOSEPH MCCALLISTER

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

August 3, 2009

**Q. Please state your name and business address.**

A. My name is Joseph McCallister. My business address is 410 South Wilmington Street, Raleigh, North Carolina 27601.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Carolinas (PEC) in the capacity of Director, Gas, Oil and Power.

**Q. What are your responsibilities in that position?**

A. I am responsible for the procurement of natural gas, fuel oil and emission allowances and for power trading and optimization on behalf of PEC and Progress Energy Florida (PEF).

1 **Q. Have you previously provided testimony before this Commission in**  
2 **connection with PEF's Environmental Cost Recovery Clause?**

3 A. Yes. In Docket No. 080007-EI I presented testimony outlining PEF's overall  
4 approach to procuring emission allowances as part of its Integrated Clean Air  
5 Compliance Plan and preparation for the compliance requirements of the Clean  
6 Air Interstate Rule (CAIR).

7  
8 **Q. What is the purpose of your testimony?**

9 A. The purpose of my testimony is to summarize PEF's actions to date related to its  
10 emission allowance procurement strategy as part of its Integrated Clean Air  
11 Compliance Strategy in preparation for the requirements under the CAIR.

12

13 **Q. How does PEF determine how many emission allowances it needs to**  
14 **purchase?**

15 A. As part of the fuel and generation forecasts that are generated periodically by the  
16 company, expected emissions are projected. The forecasts are based on input  
17 assumptions such as generation availability and capacity, planned generation  
18 outage schedules, purchase power contracts, fuel and emissions price forecasts,  
19 planned environmental equipment installations and load projections. To  
20 determine if the Company needs to purchase emission allowances for  
21 compliance requirements in the current or future time periods, PEF compares the  
22 forecasts of the emissions that will be generated to the number of emissions

1 allowances that PEF owns through allocations, purchases and accumulated  
2 inventory.

3

4 **Q. How did CAIR impact PEF's procurement activities for emission**  
5 **allowances?**

6 A. CAIR established an updated cap-and-trade system for SO<sub>2</sub> and NO<sub>x</sub> and covers  
7 28 eastern states and the District of Columbia. CAIR established a modified  
8 sulfur dioxide (SO<sub>2</sub>) annual compliance requirements under Title IV of the  
9 Clean Air Act by requiring that for vintage years 2010-2014, 2.0 allowances are  
10 required per ton of SO<sub>2</sub> emissions, and for the 2015 and later vintages, 2.86 SO<sub>2</sub>  
11 allowances are required per ton of SO<sub>2</sub> emissions. In addition, CAIR established  
12 new seasonal and annual emission compliance requirements for nitrogen oxides  
13 (NO<sub>x</sub>). Beginning in 2009, CAIR requires affected sources to complete a  
14 seasonal NO<sub>x</sub> emission allowance compliance submittal for the May 1<sup>st</sup> through  
15 September 30<sup>th</sup> time period as well as an annual NO<sub>x</sub> emission allowance  
16 compliance submittal for the January 1<sup>st</sup> through December 31<sup>st</sup> time period each  
17 year. As part of its Integrated Clean Air Compliance Plan, PEF forecasted the  
18 need to purchase both seasonal and annual NO<sub>x</sub> emissions allowances in order  
19 to comply with CAIR beginning with 2009 operations. For that reason, and  
20 consistent with its strategy, PEF has purchased seasonal and annual NO<sub>x</sub>  
21 allowances over time to gradually increase inventories to the levels necessary to  
22 achieve compliance.

23

1 **Q. How did Estimated/Actual Emissions expense for the period January 2009**  
2 **through December 2009 compare with PEF's original 2009 O&M**  
3 **projections?**

4 A. The project expenditure variance for the Estimated/Actual SO<sub>2</sub> and NO<sub>x</sub>  
5 emission expenses are \$52,637,496, compared to the original projection of  
6 \$71,976,198 for a variance of \$(19,338,701) or -27% in 2009. There are two  
7 primary drivers to explain the lower expenses. First, actual emissions have been  
8 lower than forecasted emissions due to lower power demand and fuel switching  
9 from coal-fired and oil-fired generation to gas-fired generation when  
10 economically and operationally feasible. Second, the weighted average cost –  
11 the per allowance cost at which emissions are expensed – is lower than the  
12 original projection. The weighted average price is lower because fewer  
13 allowances needed to be purchased for this time period and the average price for  
14 procured allowances was lower than original projections.

15

16 **Q. How do the Estimated/Actual revenue requirements on inventory of**  
17 **emission allowances for the period January 2009 through December 2009**  
18 **compare with PEF's original projections?**

19 A. The revenue requirements on the inventory of SO<sub>2</sub> and NO<sub>x</sub> emission  
20 allowances are estimated to be \$681,439 or 10% higher than originally  
21 projected. Revenue requirements were higher due to the larger inventory  
22 balance that is reprojected throughout the year attributable to the lower power  
23 demand and fuel switching as described above.

1 Q. Does this conclude your testimony?

2 A. Yes it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

**JOSEPH McCALLISTER**

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

August 28, 2009

**Q. Please state your name and business address.**

A. My name is Joseph McCallister. My business address is 410 South Wilmington Street, Raleigh, North Carolina 27601.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Carolinas (PEC) in the capacity of Director, Gas, Oil and Power.

**Q. What are your responsibilities in that position?**

A. I am responsible for the procurement of natural gas, fuel oil and emission allowances and for power trading and optimization on behalf of PEC and Progress Energy Florida (PEF).

1 **Q. Have your duties and responsibilities remained the same since you last filed**  
2 **testimony in this proceeding?**

3 A. Yes.

4

5 **Q. What is the purpose of your testimony?**

6 A. The purpose of my testimony is to present PEF's projected costs related to its  
7 emission allowance procurement strategy as part of its Integrated Clean Air  
8 Compliance Strategy to comply with the requirements under the Clean Air  
9 Interstate Rule (CAIR).

10

11 **Q. Do you have any exhibits to your testimony?**

12 A. I am co-sponsoring the Description and Progress Report for Environmental  
13 Compliance Activities and Projects, Form 42-5P page 5 of 14, portion of the  
14 schedule attached to Thomas G. Foster's testimony.

15

16 **Q. What costs do you expect to incur in 2010 in connection with the SO<sub>2</sub>/NO<sub>x</sub>**  
17 **Emissions Allowances Program (Project #5)?**

18 A. For 2010, we estimate PEF will incur total O&M expenditures of approximately  
19 \$10,207,630 in costs for the sulfur dioxide (SO<sub>2</sub>) and nitrogen oxides (NO<sub>x</sub>)  
20 Emissions Allowances Program.

21

1 **Q. What steps is the Company taking to ensure that the level of expenditures**  
2 **for the SO<sub>2</sub>/NO<sub>x</sub> Emissions Allowances Program is reasonable and**  
3 **prudent?**

4 **A.** PEF's overall procurement strategy for complying with regulatory emissions  
5 program requirements is to buy allowances over time based on forecasted  
6 compliance needs. PEF believes a strategy of procuring emissions allowances  
7 over time is a reasonable and prudent approach to ensure that compliance  
8 requirements are met.

9  
10 As part of its Integrated Clean Air Compliance Plan, PEF forecasted the need to  
11 purchase both seasonal and annual NO<sub>x</sub> emissions allowances in order to  
12 comply with CAIR NO<sub>x</sub> requirements for 2010 operations. For that reason, and  
13 consistent with its strategy, PEF purchased seasonal and annual NO<sub>x</sub> allowances  
14 over time to gradually increase inventories to the levels necessary to achieve  
15 compliance.

16  
17 PEF forecasts that it has sufficient allowances to comply with CAIR SO<sub>2</sub> and  
18 NO<sub>x</sub> requirements for 2010 operations.

19

20 **Q. Does this conclude your testimony?**

21 **A.** Yes it does.

BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

DIRECT TESTIMONY OF

THOMAS G. FOSTER

ON BEHALF OF

PROGRESS ENERGY FLORIDA

DOCKET NO. 090007-EI

AUGUST 3, 2009

**Q. Please state your name and business address.**

A. My name is Thomas G. Foster. My business address is 299 First Avenue North,  
St. Petersburg, FL 33701.

**Q. By whom are you employed and in what capacity?**

A. I am employed by Progress Energy Service Company, LLC as Supervisor of  
Regulatory Planning Florida.

**Q. What are your responsibilities in that position?**

A. I am responsible for regulatory planning and cost recovery for Progress  
Energy Florida, Inc. ("PEF"). These responsibilities include: regulatory  
financial reports; and analysis of state, federal and local regulations and  
their impact on PEF. In this capacity, I am also responsible for the  
Environmental Cost Recovery Clause (ECRC) Actual/Estimated filing,  
made as part of Docket No.090007.

1 **Q. Please describe your educational background and professional experience.**

2 A. I joined Progress Energy on October 31, 2005 as a Senior Financial analyst in  
3 the Regulatory group. In that capacity I supported the preparation of testimony  
4 and exhibits associated with various Dockets. In late 2008, I was promoted to  
5 Supervisor Regulatory Planning. Prior to working at Progress I was the  
6 Supervisor in the Fixed Asset group at Eckerd Drug. In this role I was  
7 responsible for ensuring proper accounting for all fixed assets as well as various  
8 other accounting responsibilities. I have 6 years of experience related to the  
9 operation and maintenance of power plants obtained while serving in the United  
10 States Navy as a Nuclear operator. I received a Bachelors of Science degree in  
11 Nuclear Engineering Technology from Thomas Edison State College. I received  
12 a Masters of Business Administration with a focus on finance from the  
13 University of South Florida and I am a Certified Public Accountant in the State  
14 of Florida.

15  
16 **Q. What is the purpose of your testimony?**

17 A. The purpose of my testimony is to present, for Commission review and  
18 approval, Progress Energy Florida's Estimated/Actual True-up costs associated  
19 with Environmental Compliance activities for the period January 2009 through  
20 December 2009.

21

22

23

1 **Q. Have you prepared or caused to be prepared under your direction,**  
2 **supervision or control any exhibits in this proceeding?**

3 A. Yes. I am sponsoring the following exhibits:

4 1. Exhibit No. \_\_TGF-1, which consists of PSC Forms 42-1E through 42-  
5 8E; and

6 2. Exhibit No. \_\_TGF-2, which provides details of capital projects by site.

7 These forms provide a summary and detail of the Estimated/Actual True-up  
8 O&M and Capital Environmental costs and revenue requirements for the period  
9 January 2009 through December 2009.

10

11 **Q. What is the Estimated/Actual True-up amount for which PEF is requesting**  
12 **recovery for the period of January 2009 through December 2009?**

13 A. The Estimated/Actual True-up amount for 2009 is an over-recovery, including  
14 interest, of \$24,075,581 as shown in Exhibit No. \_\_ (TGF-1), Form 42-1E, Line  
15 4. This amount will be added to the final true-up under-recovery of \$4,320,606  
16 for 2008 shown on Form 42-2E, Line 7-a, resulting in a net over-recovery of  
17 \$19,754,975 as shown on Form 42-2E, Line 11. The detailed calculations  
18 supporting the estimated true-up for 2009 are contained in Forms 42-1E through  
19 42-8E.

20

21

1 **Q. Are any of the costs listed in Forms 42-1E through 42-8E attributable to**  
2 **Environmental Compliance projects that have not previously been**  
3 **approved by the Commission?**

4 A. No, with the exception of a new environmental program related to development  
5 of a new Total Maximum Daily Limits for Mercury in State waters and rules  
6 regulating mercury emissions from various sources including, potentially, coal-  
7 fired power plants. This new program is discussed and supported in the  
8 testimony of Ms. Patricia Q. West.

9

10 **Q. Please explain the purpose of Form 42-8E p.10 ?**

11 A. This schedule is simply a breakout of the return on the reagent inventory and  
12 associated reagent and byproduct expenses due to the CAIR projects. These  
13 costs are included in Form 42-5E and 42-7E as appropriate. The expected costs  
14 associated with these reagents and byproducts had previously been presented in  
15 the 2009 projection on Form 42-2P.

16

17 **Q. How do the Estimated/Actual O&M expenditures for January 2009**  
18 **through December 2009 compare with original projections?**

19 A. Form 42-4E shows that total O&M project costs are projected to be \$22,720,636  
20 or 24% lower than originally projected. Following are variance explanations for  
21 those O&M projects with significant variances. Individual project variances are  
22 provided on Form 42-4E.

23

1 **O&M Project Variances:**

2 **1. Transmission and Distribution Substation Environmental Investigation,**  
3 **Remediation, and Pollution Prevention (Project #1) - O&M**

4 Total O&M project costs are estimated to be \$2,728,164 or 40% lower than  
5 previously projected. As discussed in the testimony of Corey Zeigler, this  
6 variance is primarily attributable to variance in the recent scope changes to  
7 the remediation taking place at the West Lake Wales substation site.

8

9 **5. Emissions Allowances (Project #5) – O&M**

10 SO<sub>2</sub> expenses are estimated to be \$19,338,701 or 27% lower than originally  
11 projected. As discussed in the testimony of Joseph McCallister, this  
12 variance is primarily being driven by lower projected tons of emissions. The  
13 decrease in tons is attributable to lower SO<sub>2</sub> content in fuel, as well as lower  
14 energy requirements than projected.

15

16 **8. CAIR/CAMR Crystal River (Project #7.4) – O&M**

17 Total O&M project costs are estimated to be \$532,581 or 13% lower than  
18 originally projected. As discussed in the testimony of Patricia West, this  
19 variance is mainly attributable to an outage scheduling adjustment from May  
20 2009 to June 2009 of the Crystal River Selective Catalytic Reduction (SCR)  
21 (7.4c) project, and Crystal River Urea to Ammonia System (project 7.4d)  
22 resulting in lower than projected ammonia consumption.

23

1           **9. Arsenic Groundwater Standard (Project #8) – O&M**

2           Total O&M project costs are estimated to be \$77,669 or 100% lower than  
3           originally forecasted. This variance is due to the work being postponed until  
4           finalization of a compliance plan and schedule with FDEP. This project is  
5           further discussed in Ms. West's testimony.

6

7           **10. Greenhouse Gas Inventory and Reporting (Project #12) – O&M**

8           Total O&M project costs are estimated to be \$42,680 or 75% lower than  
9           originally forecasted. As discussed in the testimony of Patricia West, this  
10          variance is mainly attributable to the result of preparing the inventory report  
11          with internal resources rather than external consultants during the first two  
12          quarters of the year.

13

14          **11. Mercury Total Daily Maximum Loads Monitoring (Project #13)**

15          **- O&M**

16          Total O&M project costs are estimated to be \$92,164 or 100% higher than  
17          originally forecasted. As discussed in the testimony of Patricia West, PEF  
18          filed a petition requesting recovery of costs associated with development of  
19          a new Total Daily Maximum Load for mercury in State waters and rules  
20          regulating mercury emissions from various sources including, potentially,  
21          coal-fired power plants.

22

1 **Q. How do the Estimated/Actual Capital recoverable investments for January**  
2 **2009 through December 2009 compare with PEF's original projections?**

3 **A.** Total recoverable capital investments itemized on Form 42-6E, are projected to  
4 be \$10,273,396 or 23% lower than originally projected. Below are variance  
5 explanations for those approved Capital Investment Projects with significant  
6 variances. Individual project variances are provided on Form 42-6E. Return on  
7 Capital Investment, Depreciation and Taxes for each project for the  
8 Estimated/Actual period are provided on Form 42-8E, pages 1 through 14.

9

10 **Capital Investment Project Variances:**

11 **1. Above Ground Tank Secondary Containment (Project #4.x) – Capital**  
12 Capital expenditures are expected to be \$872,377 or 65% higher than  
13 projected, resulting in an increase in revenue requirements of \$143,986, due  
14 to the decision to upgrade Turner Tank 7 rather than retire it. This project is  
15 further discussed in Ms. West's testimony.

16

17 **2. Emissions Allowances (Project #5) – Capital**

18 The revenue requirements on the inventory of sulfur dioxide (SO<sub>2</sub>) and  
19 nitrogen oxide (NO<sub>x</sub>) emission allowances are estimated to be \$681,439 or  
20 10% higher than originally projected. As discussed in the testimony of  
21 Joseph McCallister the revenue requirements were higher due to the larger  
22 inventory balance that is reprojected throughout the year attributable to the

1 lower power demand and fuel switching from coal-fired generation to gas-  
2 fired generation when economically feasible.

3

4 **3. CAIR/CAMR (Project #7.x) – Capital**

5 Project revenue requirements are estimated to be \$11,069,225 or 31% lower  
6 than originally projected. This variance is primarily attributable to the  
7 change of in-service dates of the Unit 5 SCR and FGD projects. This project  
8 is further discussed in Dale Wilterdink's testimony.

9

10 **Q. Does this conclude your testimony?**

11 **A. Yes, it does.**

1                   BEFORE THE FLORIDA PUBLIC SERVICE COMMISSION

2                   DIRECT TESTIMONY OF

3                   **THOMAS G. FOSTER**

4                   ON BEHALF OF

5                   PROGRESS ENERGY FLORIDA

6                   DOCKET NO. 090007-EI

7                   AUGUST 28, 2009

8

9   **Q.   Please state your name and business address.**

10  A.   My name is Thomas G. Foster. My business address is 299 First Avenue North,  
11       St. Petersburg, FL 33701.

12

13  **Q.   By whom are you employed and in what capacity?**

14  A.   I am employed by Progress Energy Service Company, LLC, as Supervisor of  
15       Regulatory Planning Florida.

16

17  **Q.   Have you previously filed testimony before this Commission in connection  
18       with PEF's Environmental Cost Recovery Clause (ECRC)?**

19  A.   Yes, I have.

20

21  **Q.   Have your duties and responsibilities remained the same since you last filed  
22       testimony in this proceeding?**

23  A.   Yes.

1 **Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to present, for Commission review and  
3 approval, PEF's calculation of the revenue requirements and its ECRC factors  
4 for application on customer billings during the period January 2010 through  
5 December 2010. My testimony addresses the capital and operating and  
6 maintenance ("O&M") expenses associated with PEF's environmental  
7 compliance activities for the year 2010 and actions to date related to its emission  
8 allowance procurement strategy as part of its Integrated Clean Air Compliance  
9 Plan for complying with the Clean Air Interstate Rule (CAIR) and related  
10 regulatory requirements.

11

12 **Q. Have you prepared or caused to be prepared under your direction,  
13 supervision or control any exhibits in this proceeding?**

14 A. Yes. I am sponsoring the following exhibits:

- 15 1. Exhibit No. \_\_ (TGF-3), which consists of PSC Forms 42-1P through 42-  
16 7P; and  
17 2. Exhibit No. \_\_ (TGF-4), which provides details of four capital projects by  
18 site.

19 The following individuals will also be co-sponsors of Forms 42-5P pages 1  
20 through 14 as indicated in their previously filed testimony:

- 21 • Mr. Zeigler will co-sponsor Forms 42-5P pages 1, 2 and 9  
22 • Ms. West will co-sponsor Forms 42-5P pages 3, 4, 6, 8, 10, 11, 12, 13  
23 and 14

- 1           • Mr. McCallister will co-sponsor Forms 42-5P page 5  
2           • Mr. Murray will co-sponsor Forms 42-5P page 7  
3

4   **Q.    What is the total recoverable revenue requirement relating to the**  
5           **projection period January 2010 through December 2010?**

6    A.    The total recoverable revenue requirement including true-up amounts and  
7           revenue taxes is \$234,002,435 as shown on Form 42-1P, Line 5 of Exhibit No.  
8           \_\_(TGF-3).  
9

10   **Q.    What is the total true-up to be applied in the period January 2010 through**  
11           **December 2010?**

12   A.    The total true-up applicable for this period is an over-recovery of \$19,754,975.  
13           This consists of the final true-up of under-recovery of \$4,320,606 for the period  
14           from January 2008 through December 2008 and an estimated true-up over-  
15           recovery of \$24,075,581 for the current period of January 2009 through  
16           December 2009. The detailed calculation supporting the estimated true-up was  
17           provided on Forms 42-1E through 42-8E of Exhibit No. \_\_ (TGF-1) filed with  
18           the Commission on August 3, 2009.  
19  
20  
21

1    **Q.    Are all the costs listed in Forms 42-1P through 42-7P attributable to**  
2    **Environmental Compliance projects previously approved by the**  
3    **Commission?**

4    **A.    Yes, with the exception of the Total Maximum Daily Loads for Mercury Project,**  
5    **which is discussed below. PEF's 2010 ECRC projections include the following**  
6    **projects that have been previously approved by the Commission:**

7  
8    PEF's Integrated Clean Air Compliance Plan (Program No.7), which the  
9    Commission approved as a prudent and reasonable means of complying with  
10    CAIR and related regulatory requirements in Order No. PSC-07-0922-FOF-EI.

11

12    The Substation and Distribution System O&M programs (Nos. 1 and 2) were  
13    previously approved by the Commission in Order No. PSC-02-1735-FOF-EI.

14

15    The Pipeline Integrity Management Program (No. 3) and the Above Ground  
16    Tank Secondary Containment Program (No. 4) were previously approved in  
17    Order No. PSC-03-1348-FOF-EI.

18

19    The recovery of SO<sub>2</sub> Emission Allowances (No. 5) was previously approved in  
20    Order No. PSC-95-0450-FOF-EI; however, the costs were moved to the ECRC  
21    Docket from the Fuel Docket beginning January 1, 2004 at the request of Staff  
22    to be consistent with the other Florida IOUs.

23

1 The Phase II Cooling Water Intake 316(b) Program (No. 6) was previously  
2 approved in Order No. PSC-04-0990-PAA-EI.

3  
4 The Sea Turtle Lighting Program (No. 9), the Arsenic Groundwater Standard  
5 Program (No. 8), and the Underground Storage Tanks Program (No. 10) were  
6 previously approved in Order No. PSC-05-1251-FOF-EI.

7  
8 The Modular Cooling Tower Program (No. 11) was previously approved by the  
9 Commission in Order No. PSC-07-0722-FOF-EI.

10  
11 The Crystal River Thermal Discharge Compliance Project (No. 11.1) and the  
12 Greenhouse Gas Inventory and Reporting Project (No. 12) were previously  
13 approved in Order No. PSC-08-0775-FOF-EI.

14

15 **Q. What is the Total Maximum Daily Loads for Mercury Project?**

16 A. On March 4, 2009, PEF submitted a petition for approval to recovery costs to be  
17 incurred as a result of PEF's participation in studies related to the Florida  
18 Department of Environmental Protection's ("FDEP's") development of Total  
19 Maximum Daily Loads ("TMDLs") for mercury in Florida waters, as well as  
20 separate rules to regulate mercury emissions from various sources including,  
21 potentially, coal-fired power plants. As discussed in PEF's Petition and the pre-  
22 filed testimony of Ms. Patricia Q. West submitted on August 3, 2009, the  
23 program qualifies for cost recovery under the ECRC and is consistent with

1 Commission policy encouraging utilities to take efforts to control environmental  
2 compliance.

3

4 **Q. Have you prepared schedules showing the calculation of the recoverable  
5 O&M project costs for 2010?**

6 A. Yes. Form 42-2P contained in Exhibit No. \_\_ (TGF-3) summarizes the  
7 recoverable O&M cost estimates for these projects in the amount of  
8 \$46,919,229.

9

10 **Q. Have you prepared schedules showing the calculation of the recoverable  
11 capital project costs for 2010?**

12 A. Yes. Form 42-3P contained in Exhibit No. \_\_ (TGF-3), summarizes the cost  
13 estimates projected for these projects. Form 42-4P, pages 1 through 15, shows  
14 the calculations of these costs that result in recoverable jurisdictional capital  
15 costs of \$206,669,820.

16

17 **Q. Please explain why the beginning balance in the Capital Program Detail  
18 Exhibit No. \_ (TGF-4) for the CAIR project (7.4k) does not tie to the 2009  
19 Estimated/Actual filing?**

20 A. Subsequent to the 2009 Estimated/Actual filing it was noticed that Project (7.4k)  
21 was not placed into service in December 2009. Therefore, to properly reflect  
22 this project in 2010, PEF included the correct beginning balances for plant in-  
23 service (line 2) and accumulated depreciation (line 3). Also, PEF properly

1 included a true-up in line 7c – Other for the equity and debt components that  
2 should have been in the 2009 Estimated/Actual filing. Finally, a true-up was  
3 also placed in line 8e – Other for the depreciation and property taxes that should  
4 have been included in the 2009 Estimated/Actual filing.

5

6 **Q. Have you prepared schedules providing the description and progress**  
7 **reports for all environmental compliance activities and projects?**

8 A. Yes. Form 42-5P, pages 1 through 14, contained in Exhibit No. \_\_ (TGF-3) with  
9 provides each project description and progress, as well as the projected  
10 recoverable cost estimates.

11

12 **Q. What is the total projected jurisdictional costs for environmental**  
13 **compliance activities in the year 2010?**

14 A. The total jurisdictional capital and O&M costs of \$253,589,049 to be recovered  
15 through the ECRC, are calculated on Form 42-1P, contained in Exhibit No.  
16 \_\_ (TGF-3).

17

18 **Q. Please describe how the proposed ECRC factors were developed.**

19 A. The ECRC factors were calculated as shown on Forms 42-6P and 42-7P contained  
20 in Exhibit No. \_\_ (TGF-3). The demand component of class allocation factors  
21 were calculated by determining the percentage each rate class contributes to the  
22 monthly system peaks and then adjusted for losses for each rate class. This  
23 information was obtained from PEF's July 2009 load research study. The energy  
24 allocation factors were calculated by determining the percentage each rate class

1 contributes to total kilowatt-hour sales and then adjusted for losses for each rate  
2 class. Form 42-7P presents the calculation of the proposed ECRC billing factors  
3 by rate class.  
4

5 **Q. Have you made any changes in how the costs associated with Project 7 are**  
6 **being allocated to the different rate classes?**

7 A. Yes. Project 7 capital and O&M costs are being allocated to the retail rate classes  
8 on an energy basis as opposed to a production demand basis. Previously, pursuant  
9 to the settlement in Docket 050078, PEF's last Rate Case, PEF was allocating the  
10 costs of this project to the rate classes on a demand basis. Beginning in 2010, PEF  
11 will no longer be operating under this settlement and as such believes the costs  
12 associated with this project are more appropriately allocated to the retail rate  
13 classes on an energy basis. This is consistent with the stipulation approved for  
14 TECO in Order PSC-04-1187 in Docket No. 040007. This is also consistent with  
15 Order No. PSC-94-0044 where the Commission ordered that costs associated with  
16 the compliance with the Clean Air Act Amendments of 1990 (CAAA) be allocated  
17 to the rate classes in the ECRC on an energy basis due to the strong nexus between  
18 the level of emissions which the CAAA seeks to reduce and the number of  
19 kilowatt hours generated.  
20  
21  
22  
23  
24  
25

1 **Q. Please explain why you provided three separate billing factors?**

2 A. PEF has provided the allocation of the retail revenue requirements to the rate  
3 classes three ways: 12CP and 50% AD as proposed by the Company in Docket #  
4 090079-EI, 12CP and 25% AD as recently approved for Tampa Electric in Docket  
5 # 080317-EI, and 12CP and 1/13th AD, the Company's currently approved  
6 method.

7

8 **Q. Why are the ECRC factors for the Curtailable (CS) and Interruptible (IS)**  
9 **rate classes presented both individually and combined in your exhibit TGF-3?**

10 A. As explained in the direct testimony of William C. Slusser Jr. in Docket 090079-  
11 EI, these rate classes should be combined and treated as one rate class since their  
12 load characteristics are similar. The ECRC factors for these rate classes are  
13 presented both individually and combined on page 42-7P, in my exhibit TGF-3,  
14 pending the outcome of the Commission decision in Docket No. 090079-EI.

15

18

19

20

21

22

23

24

25

1 **Q. What are PEF's proposed 2010 ECRC billing factors by the various rate**  
 2 **classes and delivery voltages?**

3 **A.** The computation of PEF's proposed ECRC factors for customer billings in 2010 is  
 4 shown on Form 42-7P, contained in Exhibit No. \_\_ (TGF-3). In summary, these  
 5 factors are as follows:

RATE CLASS	ECRC FACTORS	ECRC FACTORS	ECRC FACTORS
	12CP & 50%AD	12CP & 25%AD	12CP & 1/13AD
Residential	0.655 cents/kWh	0.656 cents/kWh	0.656 cents/kWh
General Service Non-Demand			
@ Secondary Voltage	0.647 cents/kWh	0.646 cents/kWh	0.646 cents/kWh
@ Primary Voltage	0.641 cents/kWh	0.640 cents/kWh	0.640 cents/kWh
@ Transmission Voltage	0.634 cents/kWh	0.633 cents/kWh	0.633 cents/kWh
General Service 100% Load Factor	0.630 cents/kWh	0.628 cents/kWh	0.627 cents/kWh
General Service Demand			
@ Secondary Voltage	0.636 cents/kWh	0.635 cents/kWh	0.634 cents/kWh
@ Primary Voltage	0.630 cents/kWh	0.629 cents/kWh	0.628 cents/kWh
@ Transmission Voltage	0.623 cents/kWh	0.622 cents/kWh	0.621 cents/kWh
Interruptible & Curtailable			
@ Secondary Voltage	0.616 cents/kWh	0.615 cents/kWh	0.614 cents/kWh
@ Primary Voltage	0.610 cents/kWh	0.609 cents/kWh	0.608 cents/kWh
@ Transmission Voltage	0.604 cents/kWh	0.603 cents/kWh	0.602 cents/kWh
Lighting	0.637 cents/kWh	0.634 cents/kWh	0.632 cents/kWh

6

1 **Q. When is PEF requesting that the proposed ECRC billing factors be made**  
2 **effective?**

3 A. PEF is requesting that its proposed ECRC billing factors be made effective with  
4 the first bill group for January 2010 and continue through the last bill group for  
5 December 2010.

6

7 **Q. Please summarize your testimony.**

8 A. My testimony supports the approval of an average environmental billing factor of  
9 0.644 cents per kWh which includes projected capital and O&M revenue  
10 requirements of \$234,002,435 associated with a total of 13 environmental projects  
11 and a true-up over-recovery provision of \$19,754,975. My testimony also  
12 demonstrates that the projected environmental expenditures for 2010 are  
13 appropriate for recovery through the ECRC.

14

15 **Q. Does this conclude your testimony?**

16 A. Yes, it does.

STATE OF FLORIDA )

CERTIFICATE OF REPORTER  
COUNTY OF LEON )

I, LINDA BOLES, RPR, CRR, Official Commission Reporter, do hereby certify that the foregoing proceeding was heard at the time and place herein stated.

IT IS FURTHER CERTIFIED that I stenographically reported the said proceedings; that the same has been transcribed under my direct supervision; and that this transcript constitutes a true transcription of my notes of said proceedings.

I FURTHER CERTIFY that I am not a relative, employee, attorney or counsel of any of the parties, nor am I a relative or employee of any of the parties' attorneys or counsel connected with the action, nor am I financially interested in the action.

DATED THIS 27<sup>th</sup> day of November, 2009.

Linda Boles  
LINDA BOLES, RPR, CRR  
FPSC Official Commission Reporter  
(850) 413-6734
