

BEFORE THE  
FLORIDA PUBLIC SERVICE COMMISSION

DOCKET NO. 100149-WU

In the Matter of:

APPLICATION FOR INCREASE IN  
WATER RATES IN LEE COUNTY BY  
Ni FLORIDA, LLC.

PROCEEDINGS: COMMISSION CONFERENCE AGENDA  
ITEM NO. 7

COMMISSIONERS  
PARTICIPATING: CHAIRMAN ART GRAHAM  
COMMISSIONER LISA POLAK EDGAR  
COMMISSIONER RONALD A. BRISÉ  
COMMISSIONER EDUARDO E. BALBIS  
COMMISSIONER JULIE I. BROWN

DATE: Tuesday, January 25, 2011

PLACE: Betty Easley Conference Center  
Room 148  
4075 Esplanade Way  
Tallahassee, Florida

## P R O C E E D I N G S

\* \* \* \* \*

1  
2  
3           **CHAIRMAN GRAHAM:** Let's move on to Item Number  
4 7.

5           **MR. FLETCHER:** Commissioners, I'm Bart  
6 Fletcher with Commission Staff.

7           Item 7 is Staff's recommendation to  
8 approve a rate increase for Ni Florida, LLC. The  
9 Office of Public Counsel and counsel for the Utility  
10 are here to address the Commission. Staff is  
11 prepared to answer any questions the Commission may  
12 have.

13           **CHAIRMAN GRAHAM:** All right. Who wants to  
14 start off first? Let's start with OPC.

15           **MR. REILLY:** Mr. Chairman, Commissioners,  
16 there are provisions in this recommendation we don't  
17 fully agree with. However, we believe the  
18 recommendation before you strikes a fair balance between  
19 the Company and the customers. We believe the  
20 recommendation more than adequately provides a fair  
21 return to the Company on its investment and utility  
22 property serving the public and compensates the Utility  
23 for all of its reasonable cost in providing service, and  
24 it does this arguably while imposing just and reasonable  
25 rates, rates that the customers can live with and

1 perhaps not protest with this proposed PAA order.

2 We would like to reserve our comments to  
3 respond to the Company, should it desire to critique  
4 any of this recommendation, and would allow us to  
5 perhaps stand down for them to make their comments  
6 and then we would try to respond to anything that  
7 the Company might bring up at this time. Thank you.

8 **CHAIRMAN GRAHAM:** Mr. Friedman.

9 **MR. FRIEDMAN:** Thank you, Mr. Chairman,  
10 Commissioners. My name is Martin Friedman of the Law  
11 Firm of Rose, Sundstrom & Bentley, and we represent Ni  
12 Florida in this proceeding.

13 And we're going to limit our comments to  
14 Issue Number 12, and that deals with the adjustments  
15 made for the Utility's allocated overhead. And I  
16 hope that, that, that you have a handout that we  
17 have prepared that during the break was handed out  
18 to you that, that I think will help to explain the  
19 predicament that we're in.

20 In this issue the Staff adjusted the total  
21 ERCs upon which the corporate overhead was allocated  
22 based upon a post test year addition of 15,000 ERCs.  
23 So there were approximately 5,000 ERCs in the test  
24 year. The, the rate case was, was prepared with  
25 that test year and that number of ERCs. The first

1 month subsequent to the test year a major  
2 acquisition was made and it added 15,000 more  
3 customers, basically tripling the number of, of  
4 customers in the system.

5 In making the Staff recommendation,  
6 however, the Staff has ignored the associated cost  
7 of adding 15,000 new customers to the system, and  
8 also the allocation within the corporate overhead  
9 between the acquisition and the management of  
10 utilities. What they have simply done is taken the  
11 test year expenses and added 15,000 more customers  
12 to allocate it over, which obviously changes that  
13 allocation from, down to about 3.71 percent. And we  
14 don't dispute that that would be the allocation if  
15 we were going to, to do that. The problem is that  
16 in doing that they have ignored the fact that you  
17 can't triple your number of customers without,  
18 number one, adding some expense at the corporate  
19 level. And, and also the fact that after that  
20 acquisition the corporate resources are reallocated  
21 from, from being structured towards acquiring the  
22 utility system more, now it is more into an  
23 operational mode so that substantially all of the  
24 corporate resources are directed towards the  
25 operations as opposed to acquisitions, and the Staff

1 in their recommendation has ignored that allocation.

2 Now while there are economies of scale  
3 associated with the acquisition of these new  
4 customers, it doesn't, it doesn't take away the  
5 requirement that you match the customers with the  
6 expenses. In other words, in this case, in round  
7 numbers, they tripled the number of customers. The  
8 corporate overhead went up 25 percent. So you can  
9 see that's a big, that's a big economies of scale  
10 when you can triple your customers and your overhead  
11 only goes up 25 percent.

12 If you'll look at this handout that we,  
13 that we have, the overhead allocation takes into  
14 consideration two percentages. The first is the  
15 determination of the percentage of corporate  
16 overhead directed towards acquisition as opposed to  
17 the resources towards operations. During the test  
18 year it was prior to this big acquisition of the  
19 Palmetto system, the 15,000 customers, and a  
20 substantial amount of, of time and resources of the  
21 corporate during the test year were directed towards  
22 that acquisition, and that's reflected when you look  
23 at the, the, the sheet under Staff recommendation.  
24 The handout we have, during the test year, only  
25 about 47.09 percent of the corporate resources were

1 directed towards operations as opposed to the major  
2 acquisition they were undertaking.

3 Now if you'll look at the actual 2010 on  
4 that schedule, you'll see that now with those  
5 acquisitions completed, and they were completed in  
6 January of 2010, as I mentioned, the day, the month  
7 after the test year, that the corporate resources  
8 now are directed almost, well, not completely, about  
9 89.22 percent of the corporate resources are now  
10 into the operations.

11 And so the, the problem with the Staff's  
12 recommendation is, number one, is that when you look  
13 at the total corporate overhead, they've ignored  
14 that there is additional cost associated with  
15 tripling your number of customers. And then they've  
16 also ignored the fact that the direction of the  
17 Company is now in operations as opposed to  
18 acquisitions.

19 So our position is that if you're going to  
20 look at post test year changes, the adding of the  
21 15,000 customers, you must also look at the post  
22 test year expenses and the change in the post test  
23 year allocations.

24 So to be true to true ratemaking  
25 principles, you should either stick with the test

1 year and accept the, the concept that the test year  
2 is what we're setting rates on, or you have to  
3 accept that the addition of 15,000 customers comes  
4 at a, at a cost and you've got to balance that.  
5 You've got to have, you've got to match the times.  
6 You can't add the customers that are post test year  
7 and then ignore the post test year expenses.

8 And so we would think -- we suggest to you  
9 that the, the schedule that we have provided is that  
10 the appropriate amount of -- if you want to ignore  
11 the test year concept and say, okay, we're going to  
12 ignore it, there are more customers, let's take  
13 those in consideration, you can't do it in a vacuum  
14 and you need to, to include those. And we have  
15 provided the schedule that shows you the, the  
16 difference in revenue as a result of, of this, of  
17 making the ratemaking process fair and reasonable.

18 With me today is Mr. Ed Wallace who is the  
19 President of Ni Florida, and I'm going to ask him to  
20 make some comments, too. Thank you.

21 **MR. WALLACE:** Thank you. Good morning. I  
22 appreciate the opportunity to be able to  
23 participate. I thought that the Commissioners might  
24 benefit a little bit about maybe having a small  
25 history of Ni America.

1           Ni America was founded in 2007. We're a  
2 company made up of former water and wastewater  
3 executives. We started the company for the sole  
4 purpose that we believe very strongly in; we started  
5 it with a goal to consolidate small and mid-sized  
6 water and wastewater utilities and provide to those  
7 systems the experience and the capital that they  
8 need to bring those systems into compliance, and,  
9 more importantly, to provide a quality of service  
10 that's more at a level of what should be expected if  
11 you were in a larger system or a municipality.

12           We pride ourselves in the fact that we  
13 have a good reputation in every state we're in. We  
14 do as much as we can to meet with Staff in the  
15 beginning before we ever buy a company or go into a  
16 state. And when the Staff asks us to do something,  
17 I believe that we have a history that we do it.

18           In the case in point, in Tamiami, before  
19 we bought Tamiami we were asked to go through it and  
20 look at the map of Tamiami and how many customers  
21 were there and where the map went. We spent a  
22 considerable amount of money to do that. It didn't  
23 really help us from an operating standpoint. It  
24 only helped the Commission because they really  
25 wanted to have an understanding of the service area.

1 We were happy to do that. And since we've owned  
2 Tamiami, we looked at the issues that were there  
3 when we bought it. Tamiami was run by an absentee  
4 owner. It did not have any ability to flush the  
5 system, had leaks throughout the system. During the  
6 time we've owned it, we went through, fixed the  
7 leaks, changed the valves. They're now in a  
8 situation where we can, we have a normal flushing  
9 program that is a constant flushing program, but we  
10 can flush or fix an area of the system without  
11 shutting off the entire system and having to give  
12 them a boil water notice. So we think we've  
13 improved the quality of service significantly.

14 As we all know, 2009 was a really tough  
15 year. And when we started this company, we had 20  
16 staff. And we had a history of buying in the past,  
17 so we believed that we could reach a critical mass  
18 that would absorb an overhead very quickly and we  
19 started the company with that in mind.

20 Unfortunately, the economy, the banking crisis and  
21 the burst in the real estate bubble did not have  
22 that in mind. So very, very quickly we had to  
23 readdress and really think about what our overhead  
24 is.

25 So in the past we were focusing on

1 acquiring companies very quickly. We could do that  
2 because growth, as we all know, is a wonderful  
3 thing. It absolutely helps us all. It allows me to  
4 pay a little more, it allows you to allocate costs a  
5 little bit better. But growth has stopped in  
6 Florida. And so -- and that's true, by the way, in  
7 Texas and our other jurisdictions.

8 So we instantly said, you know what, we're  
9 not a company of 20 anymore, we're a company of  
10 seven. And anybody that's ever been through that  
11 process, it's not, it's not a fun process. All  
12 right? You don't easily let go your friends and  
13 family and associates without some hardships, but  
14 that's what we did. And we did it not because we  
15 wanted to be profitable, we did it because we looked  
16 at our future budgets of what we thought was in the  
17 pipeline, and the goal has to be that our number of  
18 customers that we have are consistent with the  
19 overhead that we can charge. So while at any one  
20 time now we never get there, we still have to be  
21 realistic and say we're going to get here. Okay?

22 So that really kind of brings us to --  
23 pardon me. I'm optically challenged, so I have to  
24 flip back and forth here.

25 But -- so that brings us to really the

1 allocation process to us. I mean, we really take  
2 pride in the fact that we are not trying to  
3 overallocate our overhead. I mean, if you listened  
4 to what Marty said, we really have a three-step  
5 approach. We first deduct any overhead costs that  
6 are related to due diligence. We just take them  
7 off, which we should, by the way. I'm not arguing  
8 that that's a big thing, but we should do that.  
9 Then we go through on an individual-by-individual  
10 basis and we analyze what people do.

11 During the test year we were trying to  
12 close the two companies that we closed in 2009. We  
13 closed Brighton in May and we thought that we would  
14 close Palmetto in the last week of the year. We  
15 didn't, but we thought we would.

16 We go through and analyze people's times.  
17 And so as a result in the test year in 2009 we spent  
18 a majority of our time trying to acquire Brighton  
19 and Palmetto and less than half of our time running  
20 the utilities. So the first thing we did was we  
21 only allocated 47 percent of our total overhead to  
22 all of our utilities. And by the way, we  
23 consistently apply our overhead in every  
24 jurisdiction. We follow the same place everywhere.

25 So we took total overhead of \$2 million,

1 which sounds like a lot, but for seven executives in  
2 a company atmosphere with expenses is not a lot of  
3 money, and we've split that in half, and then we  
4 allocated that to the utilities. Now on an ERC our  
5 policy has always been that we put the company into  
6 our ERC calculation in the month in which we  
7 actually own the company. So in our -- it was our  
8 plan to put Palmetto into our ERC calculation in  
9 December. We would have put it in December had we  
10 closed -- we thought we were going to close but we  
11 didn't. We ended up for reasons not having anything  
12 to do with this case being pushed into January.

13 So from an overall perspective our goal  
14 when we do the allocation process is to come up with  
15 a fair number that is fair both for the customers  
16 and for us. In no way is it a number that is ever  
17 going to make us whole. We're a company that still  
18 loses money even after the Palmetto acquisition.  
19 And it's not a nonreal number; it's a number that  
20 means a lot to us.

21 Now if you look at the overall picture --  
22 I won't go into the Staff's analysis. I think that  
23 Marty did that sufficiently. But if you look at the  
24 overall picture of where we are and what we include  
25 in our overhead number, I thought the Staff did a

1 really nice job of listing out all the things that  
2 we thought we provide to our customers. I mean, if  
3 you look at the Issue 12 in their docket, they say  
4 we provide accounting, accounting reporting  
5 requirements, business development, capital  
6 improvements, cash management, contract  
7 administrations, engineering service, and the list  
8 goes on. That's fine, and we're -- and our goal  
9 again is to provide a professional aspect to this  
10 business, and so the level of service that we  
11 provide is much greater than what a mom and pop  
12 generally provides. But even with that, if you were  
13 to common sense -- let me take one step back.

14           The next thing we do in our allocation  
15 process that we didn't discuss is we really compare  
16 it to what is consistent in the industry. So for us  
17 we looked at quite a number of the businesses in  
18 Florida, we had a list of those, and we basically  
19 said, okay, after this allocation of overhead, how  
20 do we look with companies that are the same size?

21           What we found is O&M expenses were  
22 approximately 90 percent of revenue. After this  
23 allocation, our overhead expenses were approximately  
24 90 percent of O&M expenses. So then we take a  
25 common sense approach. We say, okay, what is

1       \$175,000? Is that a reasonable number to allocate  
2       to a utility with 700 customers? Well, let's ask  
3       that question. In most -- in our experience in most  
4       utilities with more than 500 customers there's four  
5       people at least employed, at least, not to mention a  
6       lot of professionals. Those four people really  
7       represent an owner whose job is to meet with  
8       developers, work on business aspects of the  
9       business, provide ratemaking, look at an overview of  
10      the customers, generally to provide the function  
11      that any owner or chief executive would provide.

12                 And then there is a general office  
13      manager, some sort of service manager that really  
14      runs the office. That person runs the office, they  
15      probably do accounting, they answer the phones, they  
16      talk to customers, they pay bills, they address  
17      issues in the area, they make sure that all the  
18      permits are safe. Those two employees, okay.

19                 Now under any reasonable thought pattern  
20      how much would it cost for those two employees in a  
21      mom and pop? Not to mention the fact that you have  
22      to consider that you have an office, so you have  
23      office expenses, you have rent, you have phones, you  
24      have paper, you have telecommunication, you have  
25      Internet; all those things go into an office. So

1 the question I would have of the Commissioners, is  
2 it really that unreasonable that two people's  
3 salaries and office expenses would be \$170,000 or  
4 \$175,000?

5 Now let me say this, had we put Palmetto  
6 in in December the way we had planned and budgeted,  
7 that number would have been down to \$160,000. Still  
8 a number though that I think the Staff would have  
9 had a problem with.

10 But here's my second question and I'll end  
11 with this. Is it reasonable to think that you could  
12 provide all those services, the services that we  
13 have on the list and the services I discussed, for  
14 \$37,000? Those of you that's ever run an office  
15 knows that's impossible. I mean, my personal  
16 experience as an entrepreneur tells me it costs  
17 \$10,000 a month to run an office. So the idea that  
18 you could do it for 37 is a little bit harsh to me.  
19 So with that I'll stop, and thank you very much for  
20 the opportunity to discuss it.

21 **CHAIRMAN GRAHAM:** Thank you.

22 Staff, would you guys like to comment on  
23 the Utility's comments?

24 **MR. FLETCHER:** Yes, Chairman.

25 With regard to the reason why Staff took

1 into account the purchase of this large system, it  
2 was, it was a known change to us in a data request  
3 response from the Utility in November 19th of last  
4 year. With that great change and knowing the  
5 Utility's methodology of what they did in their  
6 filing, we felt it was appropriate to take that  
7 additional ERCs into account. It's no different  
8 than what the Utility had requested like outside the  
9 test year, which is the pro forma plant that he has  
10 requested in this case. That's out, that's beyond  
11 the test year, and we had -- they provided the  
12 documentation and we recommend they recover that  
13 plant that is beyond the test year.

14 Now in this case, looking at the Utility's  
15 handout, it was provided to Staff this morning, I do  
16 see that the percentage change there in their  
17 handout from 47.09 to 89.22, that was not readily  
18 apparent to me about the, I guess the operational  
19 shift. I, I will agree that if you take on more  
20 customers, the operating expenses might increase. I  
21 agree with that.

22 At the time whenever we got that  
23 information, we looked at it and we had the same  
24 thing that they show here. In September, from  
25 January to September, however, we didn't have any

1 justification explaining the reduction in utility  
2 matter percentage. That wasn't clear to Staff at  
3 that time of their submission. And I will note that  
4 there is actually an increase that I just back, went  
5 back and looked at their data request they provided  
6 on November 19th. And taking the Utility's  
7 methodology, the asterisks that they show under  
8 actual 2010, it has changed a little bit by about,  
9 in the nature of about \$136,000 more from what they  
10 provided to us, which was supposed to be actual from  
11 January to September. In the data request it was  
12 \$1,880,468. And if you used -- and that was based  
13 on actual numbers in their data request response.  
14 And using their methodology on their handout here,  
15 if you take that and divide it by nine and multiply  
16 it by 12, I'm coming up with \$2,507,290. And what  
17 they have in the handout is about \$136,448 more in  
18 their handout here.

19 And I guess Staff's posture at the time  
20 when we received that data request was that we had a  
21 test year. Those were unaudited numbers. We didn't  
22 have a clear indication of the increase in  
23 operational cost versus the cost for acquisitions.  
24 And this company still, if you look at their  
25 website, their corporate strategy is to acquire

1 systems and to work and take over, develop, you  
2 know, smaller systems. And I still think -- I don't  
3 think that the Company is going to change in their  
4 acquisition, but I will agree with some of the  
5 comments that the Utility stated that there will be  
6 a shift in some of those costs. And at this time  
7 I'm not able to, I guess, to speak to the  
8 89.22 percent as far as whether it's going to be  
9 that much of a shift.

10 I can tell you looking at this from the  
11 first time today, I can tell you what they  
12 previously provided as actual cost from what is on  
13 this one, it's \$136,000 more. So I guess that's  
14 really the only comments that I can make.

15 **CHAIRMAN GRAHAM:** Thank you.

16 Mr. Reilly.

17 **MR. REILLY:** Thank you, Mr. Chairman.

18 OPC believes you should look a little bit  
19 at the history, not just of Ni America but also the  
20 history of this particular utility. It's important  
21 to know that Ni Florida purchased this utility in  
22 2008. It's a very small utility, it's about 750  
23 connections, a little over \$200,000 annual gross  
24 revenues, a very simple operation, no water  
25 treatment plant, just a water distribution system of

1 water purchased from Lee County.

2 The problem is Ni Florida paid \$745,000  
3 for this small utility with a rate base of only  
4 \$66,800. So Ni paid about 11 times rate base for  
5 this utility. This extremely high purchase price  
6 creates quite a problem for the investors of Ni  
7 Florida because \$678,000 of their investment earns  
8 absolutely no return. This problem creates a  
9 tremendous pressure to find other ways and means  
10 perhaps through O&M expenses to provide some return  
11 for this, for this money. We believe that most of  
12 this allocated overhead expense for Ni Florida  
13 proposes for Tamiami customers to pay is, is an  
14 attempt to try to recover some of this money for its  
15 parent company, Ni Capital and Ni America. Tricia  
16 Merchant would like to go into the specifics of, of  
17 critiquing this particular issue.

18 **CHAIRMAN GRAHAM:** Ms. Merchant.

19 **MS. MERCHANT:** Good morning. Tricia Merchant  
20 with the Office of Public Counsel.

21 First I want to state that we do agree  
22 with Staff's analysis on this allocation issue. We  
23 don't, we don't disagree with the amount that Staff  
24 has recommended, but we do have some concerns with  
25 the allocation methodology itself for possibly a

1 protest in the future or maybe the next rate  
2 proceeding that comes before the Commission, and I  
3 wanted to address some of those with you today.

4 This is a very small system, as Mr. Reilly  
5 said, but the parent company, Ni America, has pretty  
6 high salaries. And Mr. Wallace said a few minutes  
7 ago that they went from a company of seven -- of 20  
8 employees down to seven employees, but several of  
9 the documents that they've provided throughout the  
10 case show them going from 20 to 19 to 11. So it's  
11 really not clear exactly how many employees they  
12 have at this time.

13 But looking at their 2010 organizational  
14 chart, they have a chairman, they have a president,  
15 they have a regional president, they have four  
16 senior vice presidents and they have two vice  
17 presidents, and those are, I don't know who of the  
18 seven they are right now, but those are all highly  
19 paid individuals that they have at this management  
20 level.

21 They also charge for the parent of Ni  
22 America, which is called Ni Capital. They put in  
23 \$250,000 in corporate management costs for managing  
24 the assets and the debt of the company, which we  
25 don't believe those things are recovered through the

1 rate of return on equity and possibly through debt  
2 costs. So those are not things that we would look  
3 at.

4 We would also be concerned with the level  
5 of corporate travel and rent. They have two  
6 corporate offices for this small number of ERCs. In  
7 2009 they had 5,000 ERCs, and that's equivalent  
8 residential connections. And so those are just some  
9 of the areas of concerns that we have on that.

10 And if you get back -- another point, they  
11 provided us a schedule this morning, we were  
12 concerned with 2009 level of expenses of  
13 \$2.1 million. Now they say they've gone up to 2.6,  
14 which Mr. Fletcher just mentioned. But they also,  
15 in the test year they did not provide any evidence  
16 to support the 47 percent allocated to utility.  
17 They just said this is based on a survey of our  
18 employees and this is the number itself. Now  
19 they've brought the number up to 89 percent. We  
20 would like to see some support behind this  
21 calculation to see if it's a reasonable level.

22 And you look at their organizational  
23 chart, there are a lot, there's several of those  
24 vice presidents that are titled due diligence. So  
25 right off the bat it says to me that this vice

1 president spends time on due diligence and his  
2 salary should be taken immediately out, as  
3 Mr. Wallace said. So I don't believe that they did  
4 take out the due diligence cost in the 2009  
5 allocation. They might do that now in 2010, but in  
6 the calculations that we saw provided to the  
7 auditors that we saw copies of, they didn't do that.  
8 They just took the total gross \$2.1 million and took  
9 it, reduced it by the 47 percent and then allocated  
10 it based on the ERCs.

11 So those are the concerns that we have.  
12 Certainly we, in the long run we agree with Staff's  
13 recommendation. But in the future certainly you  
14 need reasonable affiliate charges. We just want to  
15 have something that we can, that we can put our  
16 hands on and we can say, yes, this is a reasonable  
17 number, this is utility operations, this is due  
18 diligence and belongs to the shareholders. So --  
19 and I'm available for any questions, if you need to  
20 ask me. Thank you.

21 **CHAIRMAN GRAHAM:** Mr. Friedman, and then we'll  
22 come back to the board.

23 **MR. FRIEDMAN:** Thank you. Briefly in response  
24 to what, what Staff has done, it seems like the Staff  
25 has admitted that, that there are additional costs

1 associated with adding, with tripling your number of  
2 customers, but it doesn't -- and even though we provided  
3 in our sixth data request response the financial  
4 information through September, the Staff made no attempt  
5 to, to find out what the real expense was. They just  
6 ignored it, didn't, didn't have any other data requests  
7 about explaining the expense. We gave them the data.  
8 They ignored it. They said, no, we don't need to match  
9 the new expense that you've got with these 15,000 new  
10 customers, we're just going to ignore it. And that's  
11 just wrong from a ratemaking standpoint. You can't  
12 triple your customers and not expect for there to be any  
13 increase in your expenses. And as I pointed out,  
14 there's substantial economies of scale that were  
15 accomplished here.

16           It, you know, this concept of adding  
17 something after the rate case is not something new.  
18 I mean, it happens frequently. And the Staff many  
19 times looks at both sides of it. I know a case we  
20 dealt with recently when the method of treatment at  
21 the sewage treatment plant changed, resulted in  
22 sludge hauling being reduced in the future. We  
23 didn't, nobody knew exactly how much future cost  
24 that was going to be, but they came up with an  
25 estimate of what that future cost was going to be

1 and, and took it into account. And so they reduced  
2 the rates by whatever the, the reduction in the cost  
3 of sludge hauling was going to be as a result of the  
4 expenditure of these funds over here to upgrade the  
5 sewer plant, and, and they obviously at that time  
6 didn't have an actual number.

7           What -- you know, if you're going to do  
8 prospective ratemaking, you're going to have to do  
9 some estimating. You're going to have to use the  
10 best guess. You've got professionals there, you've  
11 got professionals at OPC and the Company has  
12 professionals, and you take that, that wealth of  
13 information and you make a recommendation that's  
14 based on sound ratemaking principles. And that is  
15 if you add customers, you've got to estimate some  
16 addition of expenses to go with those customers.

17           And I think that as, as Mr. Wallace  
18 pointed out, I mean, just look at the bottom line.  
19 What the Company has said in this filing, this  
20 handout that we've got is that all of these duties  
21 that the Staff has pointed out are being, are being  
22 handled at the corporate resource level. All of  
23 those duties are being provided for \$87,000, and I  
24 think that's a, that's a substantial benefit. I  
25 don't think that the Staff recommending \$37,000 --

1 to be able to get all of this expertise for \$37,000  
2 is just unreasonable. You're not going to get it.

3 And, and, and the customers should pay a  
4 fair price, but they should pay a fair price for  
5 getting a good quality of service. And they have  
6 gotten a substantial increase in quality of service  
7 by the addition of, of, of these type of services.  
8 The Company now has shutoff valves. So it used to  
9 be before that whenever there was an outage, excuse  
10 me, whenever there was an outage, the whole park got  
11 shut down and they had to do boil water notices. Ni  
12 came in and put in, and fixed the valves so that  
13 when there's a problem in one part of the system,  
14 they shut it down and they have a very limited area  
15 where they have to deal with, with the boil water  
16 notices. I mean, they have provided a professional  
17 type of, of operation that they didn't have before.  
18 Thank you.

19 **CHAIRMAN GRAHAM:** Thank you, Mr. Friedman.  
20 Just -- Commissioner Brown.

21 **COMMISSIONER BROWN:** I think the crux of the  
22 question is what -- and first I want to commend the  
23 utility company because I think it's clear that the  
24 quality of service is, is good. Customer, customer  
25 satisfaction is there. Obviously, you know, after

1 reading through the letters of the customers I discerned  
2 that there is some hesitation of any rate increases  
3 whatsoever, but that's not the issue that, that I, I  
4 want to talk about.

5 I just want to know what benefits from the  
6 economies of scale these customers are receiving  
7 that they were not receiving before? Specifically  
8 which, which economies of scale here, which  
9 functions of expenses?

10 **MR. WALLACE:** I think the key that the  
11 customer of a small utility gets when we take it over is  
12 the fact that we make it a part of our business to  
13 determine if their level of service is adequate. So we  
14 weren't forced to change the way we did the valves in  
15 the for instance so that we could flush the system.  
16 There were some comments that there should be a flushing  
17 program when, you know, it was looked at by the state.  
18 But we went in there and did that because we felt like  
19 we needed to. We have people on staff that looked at  
20 the service and the level and do that.

21 So what happens in a professional  
22 organization is you have certain people that if you  
23 just had a mom and pop, you couldn't have that. You  
24 couldn't have an Andy Thomas who makes too much  
25 money, whose whole job in the world is to spend time

1 trying to fix small systems for the least amount of  
2 money. We're not a gold plate kind of a company.  
3 We go in there and try to figure out how to fix the  
4 problem without spending a bunch of money. It takes  
5 a pretty smart person to do that. We pride  
6 ourselves that we have a guy on the staff that can  
7 do that and he goes around to do that. That's the  
8 economies of scale.

9           You know, people don't -- you talk about  
10 your cost of service and money. But, but in able to  
11 have the capital to fix these systems as we buy  
12 them, we have to manage that. A small individual  
13 owner doesn't have the capital. That's why it's not  
14 fixed. You don't have the opportunity to do that if  
15 you don't have the ability to go get the capital to  
16 say we're going to fix it. So it really comes in on  
17 overall type of an operation in which can you  
18 provide a better level of service because you have  
19 equity behind you that allows you to do that, they  
20 understand what your plan is, and do you have the  
21 people on staff that have the ability to do that in  
22 a way that's beneficial both for the utility and the  
23 customer?

24           **COMMISSIONER BROWN:** And I guess the  
25 additional question I have is OPC made a very legitimate

1 question about we do need support behind that 89 percent  
2 calculation on the handout. Is that readily available?

3 **MR. WALLACE:** We don't -- should I answer  
4 that?

5 **MR. FRIEDMAN:** Go ahead.

6 **MR. WALLACE:** We don't as a company generally  
7 do time reports, which is the only really thing that  
8 they would, you know, accept, which I appreciate. We  
9 don't do it because there's not many of us.

10 Now we're growing again. I mean, she  
11 rightly said that. We started out back at seven.  
12 But when we bought the South Carolina company, we  
13 had to add some people. We added a South Carolina  
14 president, right, because we hadn't done business in  
15 South Carolina before, and we added a South Carolina  
16 controller. So we're probably back up to 11. Okay?

17 But those people, their duties are pretty  
18 straightforward. Now one of the things that  
19 happened in 2007, it's interesting and I'm glad I  
20 got the chance to talk about it, is we didn't buy  
21 anything in two thousand, sorry, in 2010. We have  
22 no acquisitions in 2010. We have one acquisition in  
23 the pipeline which one guy is working on. Everybody  
24 else in the Company, including the head of due  
25 diligence, did nothing but try to figure out how to

1 absorb these entities in, which is a major company.  
2 And, honestly, Palmetto is a little bit outside of  
3 our experience. We're used to doing 700 to 2,000  
4 customer deals. A 15,000-customer system is a  
5 little bit bigger than we're used to, although it  
6 had all the same attributes: Lacked capital, didn't  
7 have professional management, didn't know how to do  
8 the things that we're able to do. So we thought it  
9 fit our niche even though it was larger. But we put  
10 all hands on deck to take that company in and still  
11 maintain a level of service with our Florida  
12 customers and our Texas customers that were the  
13 same.

14 **MR. FRIEDMAN:** Let me expand on that. We, we  
15 used the same methodology. I mean, they did the same  
16 evaluation that they did for the, for the initial  
17 47 percent and apparently Staff accepted that number.  
18 They did the same thing, as, as Mr. Wallace pointed out,  
19 it's a small company, you can sit in the office and look  
20 around and, and, and tell what people, what people do  
21 without, without having to do time slips. Thank you.

22 **CHAIRMAN GRAHAM:** Staff, it looks like you're  
23 chomping at the bit. No?

24 **MR. FLETCHER:** Bart Fletcher. This is about  
25 the only thing I could add to Mr. Friedman's statements

1 about the 37,000 of allocated cost. That's not the only  
2 cost that Staff has included in the O&M expenses. They  
3 also -- the Utility has retained contractual services,  
4 professional, to run the company as well in Florida,  
5 which we made no adjustment to. So it's not only the  
6 37,000 that's in our rec, and that's included in our O&M  
7 expenses of 43,100 that we made no adjustments to.

8 And just to throw some out there about  
9 the, how the Utility looked at other utilities in  
10 Florida to come up with I guess their percentage of  
11 how much to allocate of their costs down to the  
12 systems, the regulated systems, they did provide in  
13 a data request basically a lot of companies here in  
14 Florida, a mixture of Class A, B and C utilities,  
15 and looked at the cost per customer for those.  
16 Staff had a few concerns about that analysis and the  
17 fact that they were A, B and C utilities.

18 With Tamiami, if you look at it in  
19 isolation, it would be a Class C company. Now Ni  
20 Florida as a whole is basically considered, because  
21 of their corporate structure, a Class A company.  
22 But just for Tamiami, they're a reseller only, and  
23 the mixture that they had in the response to the  
24 data request was A and B companies and they had  
25 treatment plants. Well, with the treatment plants,

1 you can imagine that you're going to have probably a  
2 higher cost of doing business because you're  
3 actually more chemicals, there's just a lot more  
4 function, a lot more oversight that you have to  
5 have, like you have to have somebody there at a  
6 certain time to run the plant. This is a reseller  
7 company where they purchase the water from Lee  
8 County.

9           And Staff does agree with the statements  
10 made by Ms. Merchant that the, what was -- when the  
11 auditors looked at the allocation, their allocation  
12 for the test year was what you do is you take the  
13 gross amount and based on like an informal survey to  
14 the Utility's corporate employees, they basically  
15 came up with that 47.09 percent that is related to  
16 utility matters. So there's nothing in writing,  
17 there are no time sheets. That was just basically  
18 an informal study. Now once you get that amount,  
19 then you allocate it among the ERCs of the systems  
20 that they, that they own once you take the  
21 47 percent.

22           Now I guess Staff was comfortable with our  
23 recommendation and the fact that if you look at  
24 reseller utilities only that are synonymous with  
25 Tamiami Village and you take the methodology that

1 they had in their filing, which is to take the  
2 47.09 percent from the gross amount and you allocate  
3 it based on the ERCs, taking into account that  
4 additional acquisition of the Palmetto system, then  
5 what that yielded was a cost per customer of about  
6 \$275 per customer, and that was in line with some of  
7 the other utilities that we looked at. It was, it  
8 was in line. In fact, it actually worked out to be  
9 where it was comparable to the former utility owner.

10 If you took the last annual report that  
11 was under the prior owner and you were to take their  
12 O&M expenses for 2007, that was the year that they  
13 had, and you take those and index it up using the  
14 Commission price indexes, it is actually \$3 higher,  
15 \$278 cost per customer versus the 275 with Staff's  
16 adjustment. So we were comfortable with our  
17 recommendation that was filed on the 12th.

18 **CHAIRMAN GRAHAM:** Mr. Fletcher, I guess the  
19 question I have is with the information that's in front  
20 of you today, would you be making the same  
21 recommendation that you guys -- that's in front of us  
22 right now?

23 **MR. FLETCHER:** I think I would -- I don't  
24 think it -- I think there was cause that there is some  
25 need for an increase, but without further support I

1 don't know what that number would be.

2 **CHAIRMAN GRAHAM:** Now I guess the question I  
3 have is, and this is to Staff and you can answer it or  
4 whoever needs to answer it, would this be best if we  
5 took, took a two-hour recess and came back after lunch  
6 and looked at these numbers, or do you want to defer  
7 this and come back at the next Agenda Conference?

8 **MR. MAUREY:** Commissioner, Andrew Maurey,  
9 Commission Staff. We'd like to defer the item, not to  
10 just one Agenda though. We would need more time than  
11 that. However, we would also need a waiver from the  
12 Company. We are at the statutory deadline today for  
13 this case. But we would need a waiver from the Company  
14 to extend that to provide additional time to, to review  
15 this information that came before us this morning.

16 **CHAIRMAN GRAHAM:** What sort of waiver? Just  
17 them saying on the record that they'll give you X number  
18 of days?

19 **MR. JAEGER:** Chairman Graham.

20 **CHAIRMAN GRAHAM:** Yes.

21 **MR. JAEGER:** Ralph Jaeger, legal staff.  
22 Basically the statute 367.081(8) says you must vote on  
23 the proposed agency action within five months, and that  
24 would have been December 28th of last year. They waived  
25 it through the 25th, today. And so what, what we'd need

1 is just them saying they would waive 367.081(8) to a  
2 date, whatever date that is, some Agenda in the future.

3 **CHAIRMAN GRAHAM:** What date are you guys  
4 looking for?

5 **MR. MAUREY:** We'd need a little bit of time to  
6 talk amongst ourselves because it, it would require more  
7 than just a conversation.

8 **MR. FLETCHER:** Right. That, that would  
9 require the justification regarding, behind the  
10 89.2 percent. And, and, again, that's the Company time  
11 to respond to certain data requests for that support.  
12 So I guess we'd have to get a little input from the  
13 Company. And as far as Staff's standpoint, to get the  
14 revised revenue calculations to our rate section, I  
15 would say at least about a two-and-a-half, three-month  
16 time period. But that again is dependent upon the, the  
17 Utility responding to those data requests.

18 **CHAIRMAN GRAHAM:** Let's, let's do this. Let's  
19 take -- I've got about seven minutes to 11:00. Let's  
20 take a recess until about 11:00 and you guys can decide  
21 how much time you need, and then we'll find out if they  
22 will, the Company on the record will give us that much  
23 leeway. I have two of the lights on, Balbis and Brown.  
24 Can you guys wait until after the recess?

25 **COMMISSIONER BALBIS:** Yes.

1                   **COMMISSIONER BROWN:** Certainly.

2                   **CHAIRMAN GRAHAM:** Okay. Let's take that  
3 seven-minute recess.

4                   (Recess taken.)

5                   Before I get back to Staff, I had  
6 Commissioner Balbis followed by Commissioner Brown  
7 have their lights on. Commissioner Balbis.

8                   **COMMISSIONER BALBIS:** Thank you, Mr. Chair. I  
9 have a couple of questions for Staff and also possibly  
10 the Utility.

11                   Mr. Fletcher, there's been a lot of  
12 discussion about the acquisition and how it occurred  
13 outside of the test year. Was that a period of  
14 months, weeks, days after the end of the test year?

15                   **MR. FLETCHER:** That was a period of about  
16 seven days.

17                   **COMMISSIONER BALBIS:** Seven days. Okay. The  
18 other, the other question I had, they have the overhead  
19 costs. Okay. And it's one thing if you include the  
20 additional 15,000 customers or not in changing the  
21 distribution of those costs. Was the -- and I don't  
22 know if the question is for you or for the Utility, but  
23 my question is so you have the costs, and assuming that  
24 there's an increase in cost due to additional customers  
25 but the number stays relatively the same, around the

1       \$2 million range, whether it's 2.1, 2.6, but then with  
2       the acquisition and the 15,000 additional customers,  
3       then those costs will be allocated over a greater  
4       amount, which is what Staff did in their recommendation.  
5       So the question, and I think it probably is better for  
6       the Utility, the question is now that the acquisition  
7       has occurred with the additional 15,000 customers, would  
8       you not allocate a portion of those costs to those  
9       customers as well?

10               **MR. FRIEDMAN:** Yes, Commissioner Balbis.  
11       That -- we agree. But what we're saying is if you're  
12       going to add the new customers, you'd have to add the  
13       new cost too. That's our only objection.

14               I mean, the way the Staff is doing it,  
15       it's a known change that occurred after the test  
16       year but we know the customers were added. And so  
17       we, we agree that that's sound ratemaking principle  
18       to add that known, a known change. We're just  
19       saying you have to do the other side of the equation  
20       too. If you're going to add the customers, you've  
21       got to add the, the additional, additional expense  
22       that goes with that.

23               **MR. WALLACE:** Our policy is to add the new  
24       utility in the month that we close. We do it that way  
25       because we can't always be looking backwards, we can

1 only be looking forward. So, you know, in the month  
2 that we have it, we put it in. When we did the original  
3 test year, we put Brighton in in May. All right. And  
4 we had planned on putting Palmetto in in December, but  
5 we would have only put it in for one month because that  
6 would have been the only amount that it incurred.

7 Staff has taken a different position. But  
8 that's -- but the point is that, yes, absolutely, we  
9 put those new utilities in as we go. So in this  
10 year we have a new allocation that's based upon how  
11 much time we're spending and how the Utility fits  
12 into the overall structure on a month-to-month  
13 basis, and we use that consistently through every  
14 jurisdiction.

15 **COMMISSIONER BALBIS:** But as originally filed  
16 it did not include the additional customers and the  
17 overhead costs were only applied to the existing  
18 customers. And I guess I'm glad that Staff brought this  
19 to light because it was only a few days after the end of  
20 the test year because there may have been an opportunity  
21 to -- again, if you're going to collect from the new  
22 customers, again, a portion -- if you don't collect,  
23 you'd have a subsidization issue from the existing  
24 customer, customers to the new customers or you would  
25 have an overcollection issue. So I'm glad Staff pointed

1 this out.

2 And I guess the argument or the next step  
3 would be to discuss what are the appropriate  
4 overhead costs, and if they are applied to all, what  
5 are the additional costs, if any? It may be just  
6 there's additional work to be done and not  
7 necessarily additional cost, but.

8 **MR. FRIEDMAN:** That, that's not reflected.  
9 You know, the MFRs, the minimum filing requirements, the  
10 financial data that utilities have filed are based upon  
11 test year and they don't include what happens after that  
12 test year. And the form, you know, we fill out the  
13 forms and it includes that. So if there's something  
14 that occurs after the test year, whether it's an  
15 increase in customers, a decrease in customers, change  
16 in the type of treatment, change in type of sludge  
17 hauling, you know, all of those things, if it's a known  
18 and identifiable change, it's certainly correct to  
19 include it. And that's why I'm not saying that what the  
20 staff has done in adding the customers is, is not good  
21 ratemaking principles. I'm just saying they didn't go  
22 far enough.

23 **COMMISSIONER BALBIS:** Okay. Thank you.

24 **MR. WALLACE:** Almost the result is, is we're  
25 going to end up with a new test year. I mean, that's

1 basically what would happen if you looked forward.

2 **CHAIRMAN GRAHAM:** Commissioner Brown.

3 **COMMISSIONER BROWN:** My comment was just  
4 about, when I pushed the button was when we were talking  
5 about deferring the item. And I think it's certainly in  
6 the Utility company's best interest as well as the  
7 public interest to defer this item in case there's any  
8 reluctance on the Utility's part because we need to  
9 really analyze and have our Staff analyze the numbers so  
10 that we can make a reasonable decision based on the  
11 information that we have. So I do think it is in the  
12 public interest to defer it as, as much as we can to  
13 analyze it as -- to analyze the information  
14 sufficiently.

15 **MR. FRIEDMAN:** Thank you, Commissioner. And  
16 we did speak with the Staff and I think we've reached an  
17 agreement to, to waive this, the five-month rule for  
18 another two months until the 22nd agenda so that they  
19 can get that additional data.

20 **COMMISSIONER BROWN:** Thank you.

21 **CHAIRMAN GRAHAM:** Staff.

22 **MR. MAUREY:** To be specific, it was to waive  
23 it to the March 22nd agenda.

24 **CHAIRMAN GRAHAM:** You're looking to waive it  
25 to March 22nd?

1                   **MR. MAUREY:** That's correct.

2                   **CHAIRMAN GRAHAM:** And I guess on the record,  
3 the Utility is recipient to that, that you --

4                   **MR. FRIEDMAN:** Mr. Chairman, that's correct.

5                   **CHAIRMAN GRAHAM:** Okay. Ms. Helton, do you  
6 need anything else from us?

7                   **MS. HELTON:** No, sir.

8                   **CHAIRMAN GRAHAM:** All right. Well, then I  
9 move that we -- do we, General Counsel, do we lay this  
10 on the table, do we defer it until then? What's the  
11 terminology we want to do?

12                   **MS. KISER:** I think just defer.

13                   **CHAIRMAN GRAHAM:** So we defer to a date, date  
14 certain, which is March 22nd?

15                   **MS. KISER:** Right. Uh-huh. Yes.

16                   **CHAIRMAN GRAHAM:** Okay. All in favor, say  
17 aye.

18                   (Vote taken.)

19                   Those opposed? We're good. All right.  
20 If there's nothing else to come before us, then we  
21 are, we are adjourned.

22                   (Agenda Conference adjourned.)
