

**PROGRESS ENERGY FLORIDA**

**DOCKET No. 110001-EI**

# **Fuel and Capacity Cost Recovery Factors January through December 2012**

## **DIRECT TESTIMONY OF MARCIA OLIVIER**

September 1, 2011

- 1 Q. Please state your name and business address.

2 A. My name is Marcia Olivier. My business address is 299 1<sup>st</sup> Avenue North, St.

3 Petersburg, Florida 33701.

4

5 Q. By whom are you employed and in what capacity?

6 A. I am employed by Progress Energy Service Company, LLC as Supervisor of

7 PEF Regulatory Planning Strategy.

8

9 Q. Have your duties and responsibilities remained the same since your

10 testimony was last filed in this docket?

11 A. Yes.

12

13 Q. What is the purpose of your testimony?

14 A. The purpose of my testimony is to present for Commission approval the fuel

15 and capacity cost recovery factors of Progress Energy Florida (PEF or the

16 Company) for the period of January through December 2012.

DOCUMENT NUMBER - DATE

06328 SEP-1 =

1      **Q. Do you have an exhibit to your testimony?**

2      A. Yes. I have prepared Exhibit No.\_\_(MO-2), consisting of Parts 1, 2 and 3. Part  
3      1 contains our forecast assumptions on fuel costs. Part 2 contains fuel cost  
4      recovery (FCR) schedules E1 through E10, H1, the calculation of the inverted  
5      residential fuel rate, and a schedule that supports the rate of return applied to  
6      capital projects recovered through the fuel clause pursuant to Order No. PSC-  
7      11-0132-PCO-EI. Part 3 contains capacity cost recovery (CCR) schedules.

8

9                          **FUEL COST RECOVERY CLAUSE**

10     **Q. Please describe the fuel cost factors calculated by the Company for the**  
11     **projection period.**

12     A. Schedule E1 shows the calculation of the Company's leveled fuel cost factor  
13     of 5.168 ¢/kWh. This factor consists of a fuel cost for the projection period of  
14     4.83858 ¢/kWh (adjusted for jurisdictional losses), a GPIF penalty of 0.00807  
15     ¢/kWh, and an estimated prior period under-recovery true-up of 0.33364  
16     ¢/kWh. Utilizing this factor, Schedule E1-D shows the calculation and  
17     supporting data for the Company's leveled fuel cost factors for service taken  
18     at secondary, primary, and transmission metering voltage levels. To perform  
19     this calculation, effective jurisdictional sales at the secondary level are  
20     calculated by applying 1% and 2% metering reduction factors to primary and  
21     transmission sales, respectively (forecasted at meter level). This is consistent  
22     with the methodology used in the development of the capacity cost recovery  
23     factors. The leveled fuel cost factor for residential service is 5.175 ¢/kWh.  
24     Schedule E1-D shows the Company's proposed tiered rates of 4.860 ¢/kWh for

1       the first 1,000 kWh and 5.860 ¢/kWh above 1,000 kWh. These rates are  
2       developed in the "Calculation of Inverted Residential Fuel Rate" schedule in  
3       Part 2.

4       Schedule E1-E develops the Time of Use (TOU) multipliers of 1.427 On-peak  
5       and 0.794 Off-peak. The multipliers are then applied to the leveled fuel cost  
6       factors for each metering voltage level which results in the final TOU fuel  
7       factors to be applied to customer bills during the projection period.

8

9       **Q. What is the amount of the 2011 net true-up that PEF has included in the  
10      fuel cost recovery factor for 2012?**

11      A. PEF has included a projected under-recovery of \$123,159,202. This amount  
12      includes a projected actual/estimated over-recovery for 2011 of \$35,666,520  
13      net of the final 2010 true-up under-recovery of \$158,825,721 as included in the  
14      Direct Testimony of Will Garrett on March 1, 2011.

15

16      **Q. What is the change in the leveled residential fuel factor for the  
17      projection period from the fuel factor currently in effect?**

18      A. The projected leveled residential fuel factor for 2012 of 5.175 ¢/kWh is an  
19      increase of 0.399 ¢/kWh or 8% from the 2011 projected leveled residential  
20      fuel factor of 4.776 ¢/kWh.

21

22      **Q. Please explain the increase in the 2012 fuel factor compared with the  
23      2011 fuel factor.**

1      A. The primary driver of the increase in the 2012 fuel factor is the prior period  
2      under-recovery of \$123,159,202 compared to the 2011 forecasted prior period  
3      under-recovery of \$60,501,165 and an increase in fuel costs of \$112,123,385.  
4      The increase in fuel costs is primarily due to higher natural gas generation and  
5      firm purchased power partially offset by lower natural gas prices.

6

7      **Q. Have you made any adjustments to your estimated fuel costs for the**  
8      **period January through December 2012?**

9      A. Yes, we made two adjustments totaling a net reduction of \$118,273,606. 1)  
10     We made an adjustment to include \$12,108 for the depreciation and return on  
11     investment of railcars. 2) We made an adjustment to reduce fuel costs by  
12     \$118,285,714 for expected Nuclear Electric Insurance Limited (NEIL)  
13     replacement power reimbursement payments to be applied within the fuel  
14     clause. Pursuant to an insurance policy held by PEF with NEIL, in the  
15     event an unplanned outage of our nuclear unit (CR-3) extends beyond a  
16     deductible period of 12 weeks, PEF is entitled to receive reimbursement  
17     payments in the amount of \$4.5 million per week for 52 weeks to cover a  
18     portion of the replacement power costs associated with the outage. An  
19     additional 71 weeks of coverage is provided at \$3.6 million per week pursuant  
20     to the insurance policy. The \$118,285,714 of NEIL replacement power  
21     reimbursement payments covers the period of January 1, 2012 through mid-  
22     August 2012. The NEIL payments through mid-August 2012 will cover the  
23     entire eligible payment periods outlined above. These payments, when  
24     received, will be applied to the fuel and capacity clause, consistent with the

1       methodology utilized when allocating costs found within the A-Schedules filed  
2       with the Commission each month.

3

4       **Q. Is PEF proposing to continue the tiered rate structure for residential  
5       customers?**

6       A. Yes. PEF is proposing to continue use of the inverted rate design for  
7       residential fuel factors to encourage energy efficiency and conservation.  
8       Specifically, the Company proposes to continue a two-tiered fuel charge  
9       whereby the charge for a customer's monthly usage in excess of 1,000 kWh  
10      (second tier) is priced one cent per kWh higher than the charge for the  
11      customer's usage up to 1,000 kWh (first tier). The 1,000 kWh price change  
12      breakpoint is reasonable in that approximately 68% of all residential energy is  
13      consumed in the first tier and 32% of all energy is consumed in the second tier.  
14      The Company believes the one cent higher per unit price, targeted at the  
15      second tier of the residential class' energy consumption, will promote energy  
16      efficiency and conservation. This inverted rate design was incorporated in the  
17      Company's base rates approved in Order No. PSC-02-0655-AS-EI.

18

19       **Q. How was the inverted fuel rate calculated?**

20       A. I have included a page in Part 2 of my exhibit that shows the calculation of the  
21      fuel cost factors for the two tiers of the residential rate. The two factors are  
22      calculated on a revenue neutral basis so that the Company will recover the  
23      same fuel costs as it would under the traditional leveled approach. The two-  
24      tiered factors are determined by first calculating the amount of revenues that

1       would be generated by the overall levelized residential factor of 5.175 ¢/kWh  
2       shown on Schedule E1-D. The two factors are then calculated by allocating  
3       the total revenues to the two tiers for residential customers based on the total  
4       annual energy usage for each tier.

5

6       **Q. What is included in Schedule E1, line 3, “Coal Car Investment”?**

- 7       A. The \$12,108 on Line 3 represents the estimated return on investment in rail  
8       cars used to transport coal to Crystal River. The calculation used a rate of  
9       return of 7.88% that was approved in PEF’s rate case Order No. PSC-10-0131-  
10      FOF-EI. A schedule showing the derivation of the debt and equity components  
11      of this rate is included in Exhibit No.  (MO-2), Part 2.

12

13      **Q. How do PEF’s projected gains on non-separated wholesale energy sales  
14      for 2012 compare to the incentive benchmark?**

- 15      A. The total gain on non-separated sales for 2012 is estimated to be \$254,628  
16      which is below the benchmark of \$905,703 by \$651,075. 100% of gains below  
17      the benchmark and 80% of gains above the benchmark will be distributed to  
18      customers based on the sharing mechanism approved by the Commission in  
19      Order No. PSC-00-1744-PAA-EI. Therefore, since the total gain on non-  
20      separated sales was below the benchmark none of the gains will be retained  
21      for the shareholders. The benchmark was calculated based on the average of  
22      actual gains for 2009 of \$1,219,086 and 2010 of \$1,116,387 and estimated  
23      gains for 2011 of \$381,635 in accordance with Order No. PSC-00-1744-PAA-  
24      EI.

1  
2     **Q. Please explain the entry on Schedule E1, line 17, "Fuel Cost of Stratified**  
3     **Sales."**

4     A. PEF has several wholesale contracts with SECI. One contract provides for the  
5         sale of supplemental energy to supply the portion of their load in excess of  
6         SECI's own resources. The fuel costs charged to SECI for supplemental sales  
7         are calculated on a "stratified" basis in a manner which recovers the higher  
8         cost of intermediate/peaking generation used to provide the energy. There are  
9         other SECI contracts for fixed amounts of base, intermediate, peaking and  
10         plant-specific capacity. PEF is crediting average fuel cost of the appropriate  
11         strata in accordance with Order No. PSC-97-0262-FOF-EI. The fuel costs of  
12         wholesale sales are normally included in the total cost of fuel and net power  
13         transactions used to calculate the average system cost per kWh for fuel  
14         adjustment purposes. However, since the fuel costs of the stratified and plant-  
15         specific sales are not recovered on an average system cost basis, an  
16         adjustment has been made to remove these costs and the related kWh sales  
17         from the fuel adjustment calculation in the same manner that interchange sales  
18         are removed from the calculation. This adjustment is necessary to avoid an  
19         over-recovery by the Company which would result from the treatment of these  
20         fuel costs on an average system cost basis in this proceeding, while actually  
21         recovering the costs from these customers on a net higher, stratified or plant-  
22         specific cost basis. Line 17 also includes the fuel cost of sales made to the  
23         City of Tallahassee in accordance with Order No. PSC-99-1741-PAA-EI, as

1       well as sales to Reedy Creek, Gainesville, the City of Homestead and Winter  
2       Park.

3

4       **Q. Please give a brief overview of the procedure used in developing the**  
5       **projected fuel cost data from which the Company's fuel cost recovery**  
6       **factor was calculated.**

7       A. The process begins with a fuel price forecast and a system sales forecast.  
8       These forecasts are input into the Company's production cost simulation model  
9       along with purchased power information, generating unit operating  
10      characteristics, maintenance schedules, and other pertinent data. The model  
11      then computes system fuel consumption and fuel and purchased power costs.  
12      This information is the basis for the calculation of the Company's fuel cost  
13      factors and supporting schedules.

14

15       **Q. What is the source of the system sales forecast?**

16       A. System sales are forecasted by the PEF Finance Department using normal  
17      weather conditions based on 20-year system weighted average weather  
18      conditions, population projections from the Bureau of Economic and Business  
19      Research at the University of Florida and economic assumptions from  
20      Economy.Com.

21

22       **Q. What is the source of the Company's fuel price forecast?**

23       A. The fuel price forecasts for natural gas and fuel oil (residual and distillate) are  
24      based on observable market data in the industry and are prepared jointly by

the Company's Enterprise Risk Management Department and Fuels and Power Optimization Department. For coal, a third party forecast is used. Additional details and forecast assumptions are provided in Part 1 of my exhibit.

**Q. Are current fuel prices the same as those used in the development of the projected fuel factor?**

A. No. Fuel prices can change significantly from day to day, particularly in the storm season. Consistent with past practices, PEF will continue to monitor fuel prices and update the projection filing prior to the November hearing if changes in fuel prices warrant such an update.

## **CAPACITY COST RECOVERY CLAUSE**

**Q. Please explain the schedules that are included in Exhibit (MO-2) Part 3.**

A. The following schedules are included in my exhibit:

## Schedule E12-A – Calculation of Projected Capacity Costs – Year 2012

Page 1 of Schedule E12-A includes estimated 2012 calendar year system capacity payments to qualifying facilities (QF) and other power suppliers, as well as recovery of nuclear costs pursuant to Rule 25-6.0423. The retail portion of the capacity payments is calculated using separation factors consistent with PEF's 2011 Forecasted Earnings Surveillance Report filed March 16, 2011 in accordance with Rule 25-6.1353. Total nuclear costs of \$140,919,397 are made up of \$135,325,074 for the Levy plant and \$5,594,323 for the CR3 Uprate project, derived from the revised direct testimony of

1 Thomas G. Foster filed on August 12, 2011 in Docket No. 110009-EI,  
2 Exhibit\_\_(TGF-2) pages 3-4 and Exhibit\_\_(TGF-5) pages 3-4, respectively.  
3 Schedule E12-A provides dates and MWs associated with the QF and  
4 purchase power contracts.

5

6 Schedule E12-B – Calculation of Estimated/Actual True-Up - Year 2011

7 Schedule E12-B, which is also included in Exhibit \_\_(MO-1) to my direct  
8 testimony filed on August 1, 2011 in the 2011 estimated/actual true-up filing,  
9 calculates the estimated true-up capacity over-recovered balance for calendar  
10 year 2011 of \$20,667,503. This balance is carried forward to Schedule E12-A  
11 to be refunded to customers from January through December 2012.

12

13 Schedule E12-D – Calculation of Energy and Demand Percent by Rate Class

14 Schedule E12-D is the calculation of the currently approved 12CP and 1/13  
15 annual average demand allocators for each rate class.

16

17 Schedule E12-E – Calculation of Capacity Cost Recovery Factors by Rate  
18 Class

19 Schedule E12-E calculates the CCR factors for capacity and nuclear costs for  
20 each rate class based on the 12CP and 1/13 annual average demand  
21 allocators from Schedule E12-D. The CCR factors for each secondary delivery  
22 rate class in cents per kWh are calculated by multiplying total recoverable  
23 jurisdictional capacity (including revenue taxes) from Schedule E12-A by the  
24 class demand allocation factor, and then dividing by estimated effective sales

1 at the secondary metering level. The CCR factors for primary and transmission  
2 rate classes reflect the application of metering reduction factors of 1% and 2%  
3 from the secondary CCR factor. The factors allocate capacity and nuclear  
4 costs to rate classes in the same manner in which they would be allocated if  
5 they were recovered in base rates.

6

7 **Q. Has PEF used the most recent load research information in the**  
8 **development of its capacity cost allocation factors?**

9 A. Yes. The 12CP load factor relationships from PEF's most recent load research  
10 conducted for the period April 2008 through March 2009 are incorporated into  
11 the capacity cost allocation factors. This information is included in PEF's Load  
12 Research Report filed with the Commission on July 31, 2009.

13

14 **Q. What is the 2012 projected average retail CCR factor?**

15 A. The 2012 average retail CCR factor is 1.342 ¢/kWh, made up of capacity and  
16 nuclear costs of 0.959 ¢/kWh and 0.383 ¢/kWh, respectively.

17

18 **Q. Please explain the change in the CCR factor for the projection period**  
19 **compared to the CCR factor currently in effect.**

20 A. The total projected average retail CCR factor of 1.342 ¢/kWh is .098 ¢/kWh or  
21 8% higher than the 2011 factor of 1.244 ¢/kWh. This increase is primarily  
22 attributable to a refund of the prior period over-recovery of \$20,667,503  
23 compared to a prior period over-recovery refunded in 2011 of \$52,311,070. In  
24 addition, nuclear recoveries decreased by \$22,661,263.

1

2   **Q. Does this conclude your testimony?**

3   **A. Yes**

Docket 110001-EI

Average	99.03	15.11	119.84	20.68	109.07	4.50	74.61	3.19	4.73

**Heavy and Light Oil:** The above base market oil price forecasts are the NYMEX forwards. Oil prices projected within the fuel forecast are based on expected contract structures and specifications, and incorporate current hedge positions and transportation costs.

**Coal:** Coal price projections are based on the current coal supply, transportation agreements, and forecasted deliveries. It assumes environmental restrictions on coal quality remain in effect as per current permits: 2.1 lbs. per million BTU sulfur dioxide limit for Crystal River Units 1 and 2. Crystal River 4 and 5 have operating scrubbers which allow for consideration of higher sulfur coal.

**Natural Gas:** The base market natural gas price forecast is the NYMEX Henry Hub forwards. This table includes natural gas market commodity prices only; however, the fuel forecast incorporates hedges and transportation costs. Forecast prices are based on expected contract specifications and incorporate current hedge positions. Firm transportation costs for Florida Gas Transmission and Gulfstream pipeline are based on expected tariff rates and/or negotiated rates. Interruptible transportation rates and availability are based on expected tariff rates and market conditions.

Notes:

- (1) Average 12CP load factor based on load research study filed July 31, 2009 (FPSC rule 25-6.0437 (7))
- (2) Projected mWh sales for the period Jan-Dec 2012
- (3) Calculated: Column 2 / (8,760 hours x Column 1)
- (4) Based on system average line loss analysis for 2010
- (5) Calculated: Column 2 / Column 4
- (6) Calculated: Column 3 / Column 4

- (7) Calculated: Column 6 / 8,760 hours
- (8) Calculated: Column 7 / Total Column 7
- (9) Calculated: Column 6 / Total Column 6
- (10) Calculated: Column 8 x 1/13 + Column 9 x 12/13
