In the Matter of:

DOCKET NO. 110153-SU

APPLICATION FOR INCREASE IN
WASTEWATER RATES IN LEE COUNTY
BY UTILITIES, INC. OF EAGLE RIDGE.

PROCEEDINGS: COMMISSION CONFERENCE AGENDA
ITEM NO. 9

COMMISSIONERS
PARTICIPATING: CHAIRMAN ART GRAHAM
COMMISSIONER LISA POLAK EDGAR
COMMISSIONER RONALD A. BRISÉ
COMMISSIONER EDUARDO E. BALBIS
COMMISSIONER JULIE I. BROWN

DATE: Tuesday, November 22, 2011

PLACE: Betty Easley Conference Center
Room 148
4075 Esplanade Way
Tallahassee, Florida

REPORTED BY: JANE FAUROT, RPR
Official FPSC Reporter
(850) 413-6732

DOCUMENT NUMBER 110153-SU-09176 DEC 29 -

09176 DEC 29 -

FPSC-COMMISSION CLERK

P R O C E E D I N G S

1
2 **CHAIRMAN GRAHAM:** We need to go Item Number 9.
3 We are going a little off the agenda. Item Number 9.

4 Mr. Fletcher.

5 **MR. FLETCHER:** Commissioner, I'm Bart Fletcher
6 with Commission staff.

7 Item 9 is staff's recommendation to approve a
8 rate increase for Utilities, Inc. of Eagle Ridge. The
9 Office of Public Counsel and the utility are here to
10 address the Commission. Staff is prepared to answer any
11 questions the Commission may have.

12 **CHAIRMAN GRAHAM:** Thank you.

13 Public Counsel, I apologize for not getting to
14 this before 11:00. As you were here, you saw.

15 Please.

16 **MR. REILLY:** Chairman Graham, Commissioners,
17 I'm Steve Reilly. With me is Tricia Merchant. We are
18 with the Office of Public Counsel appearing on behalf of
19 the ratepayers. While we would have made a few more
20 adjustments to the company's request, taken as a whole,
21 the Office of Public Counsel does support the
22 recommendation, and we would like to reserve our
23 comments to respond to any particular issues that the
24 company might make today. Thank you.

25 **CHAIRMAN GRAHAM:** Okay. Thank you.

1 Mr. Friedman.

2 **MR. FRIEDMAN:** Thank you. Mr. Chairman and
3 Commissioners, my name is Marty Friedman of the law firm
4 of Rose Sundstrom and Bentley. We are attorneys for
5 Eagle Ridge Utilities, Inc. Also with me to address the
6 Commission is Mr. Patrick Flynn, who is the Regional
7 Director, and John Williams, who is the Director of
8 Public Affairs. And we are going to address -- would
9 like to address three issues in the staff
10 recommendation.

11 The first issue is Issue Number 3. This is
12 the adjustment that was made by the staff to amortize
13 the cost of the Project Phoenix, which is basically the
14 computer system that Utilities, Inc. at the parent level
15 put into place a couple of years ago. The company
16 allocates the amortization of the computer equipment
17 among all of its systems. Since the system was put in
18 place, the company has sold a number of systems, has
19 several thousand customers less than it had when it put
20 the system in effect. The staff is basically not
21 reallocating among all of the customers of the utility,
22 but basically allocating among the customers of the
23 utilities that existed when the system was put in place.

24 The justification for the staff doing this is
25 that it says, well, you have done it in half a dozen

1 other cases previously, and it wouldn't be fair to
2 change now. And, basically, that is an argument that
3 says maybe we made a mistake before, but let's keep
4 perpetuating that mistake. And I would suggest to you
5 that just because you did something in a prior case,
6 doesn't mean you can't correct it if you find there is a
7 mistake.

8 And I'm going to, in a couple of these other
9 issues that we are going address, you will see where
10 there is an inconsistency in the way the staff treats
11 changing what was done in prior cases. It seems like
12 sometimes they think you can change it, and sometimes
13 they think you shouldn't change it. And that
14 inconsistency, I think, is clear.

15 As you well know, Section 367.0831, the
16 Legislature has determined that the gain or loss on sale
17 of any utility system goes to the shareholders. What
18 the staff is effectively doing in this case by making a
19 reallocation is giving that portion of the allocation of
20 these, to these divested systems, is to basically give
21 that to the existing customers. I would suggest to you
22 that if there was a loss on sale of those systems that
23 you wouldn't see the staff recommending that the
24 allocation be increased because the company lost money
25 on the sale of the systems. And I think you have got to

1 look at it fairly. What is good when you go one way
2 ought to be good when you go the other way. And I think
3 that consistently the staff doesn't see it that way, and
4 I think that we now need to really focus on this and
5 make right the wrong that has been out there.

6 Two undisputed facts. The first undisputed
7 fact is none of the assets of Project Phoenix were sold
8 in any of these sales. Nobody can question that. The
9 computer system, all of it that was put into place
10 remains with Utilities, Inc.

11 The second undisputed fact is, as I mentioned,
12 none of the -- is that the statute is clear, 367.0813 is
13 clear that any gain or sale belongs to the shareholders.
14 And what effectively the staff's position does is it
15 gives the remaining customers the benefit of whatever
16 gain that the utility made on that sale contrary to the
17 Legislature's directive in 367.0813.

18 Now, the staff is going to give you the absurd
19 hypothetical like they have said before, what if Eagle
20 Ridge is the only utility, should they have to pay, you
21 know, the \$26 million for this computer system. That's
22 absurd. Obviously, we wouldn't take that position. But
23 we're not talking about one system paying the whole cost
24 of it, we're talking about several thousand customers
25 that aren't with the system anymore that were when the

1 system went into place. And that is a big difference.

2 I mean, obviously, when you get down to a
3 point you say is it prudent to have a computer system
4 this sophisticated for this few customers. And I think
5 every one of us, including myself, would say no. But
6 until we make that evaluation, we don't just arbitrarily
7 say, well, they sold some customers, so the allocation
8 of that portion of the computer system directed to those
9 customers is lost. They can't ever get it back.
10 Stranded capital, gone, that is not -- that is not the
11 way to do it. It's inconsistent with law and should be
12 inconsistent with sound regulatory policy.

13 What you need to look at is is that computer
14 system a reasonable expenditure, capital expenditure for
15 the customers that it serves at the point in time you
16 make the decision. And so the appropriate regulatory
17 treatment of this should be as you sit here today is
18 that computer system a reasonable expenditure of funds,
19 and I think that the staff has not addressed that. And
20 that's the determination that needs to be made, not some
21 arbitrary, well, the company made money when it sold
22 these systems, so the current customers should benefit.

23 I mean, you could take the staff's position.
24 They are kind of like saying, well, you know, they
25 designed the computer system for -- I don't know how

1 many customers the company has got, 100,000 customers,
2 let's say, and now they have only got 95,000, so you
3 don't need the whole computer system. And that's not
4 the way software works. It's not the way computer
5 systems work. It's not the way businesses work.

6 You could take that same argument and apply it
7 to the postage meter or the copier that the company has
8 got. Utilities, Inc. has got a postage meter and it has
9 got a copier. If it has got less customers, it's
10 probably using those things a little less than it was
11 before. Does that mean that you should make an
12 adjustment to the capital that the company has expended
13 in its copier and postage machines because it may have a
14 couple of less customers? That's not sound regulatory
15 policy. You need to look and see does the company need
16 the asset that it has. Just like a building, just like
17 a car, just like a stamp machine, just like an office.

18 You know, those are determinations you need to
19 make at the point in time that the determination is
20 made. And so the analysis should be, as we sit here
21 today, is that a prudent investment for the number of
22 customers they have? And there has been no analysis
23 like that made by the staff. They have arbitrarily made
24 this determination a long time ago, and they are just
25 sticking with this error, and the error is perpetuating

1 itself. And we are at the point where you need to give
2 it some consideration and deal with it from a sound
3 regulatory practice standpoint, instead of some
4 arbitrary adjustment that the staff has made. So we
5 would suggest to you that you deny the portion of the
6 staff recommendation that made the negative adjustment
7 for the Project Phoenix cost.

8 The second issue that I'm going to have
9 Mr. Flynn deal with is Issue Number 5, which is the
10 issue of used and useful of the water treatment plant.

11 **MR. FLYNN:** Thank you, Mr. Chairman.

12 Utilities, Inc. of Eagle Ridge is comprised of
13 two parts, two separate collection systems and two
14 wastewater plants. Cross Creek is the name of one side
15 and Eagle Ridge the other across -- the opposite side of
16 Dana Boulevard in Fort Myers. The staff recommendation
17 identified that the Cross Creek wastewater plant ought
18 to be 100 percent used and useful, and we don't disagree
19 with that. The staff recommendation was contrary to our
20 request that the Eagle Ridge wastewater plant also be
21 100 percent used and useful. Staff recommended 80
22 percent. My understanding is that's based on the ratio
23 of the average daily flow through the treatment plant
24 compared to the capacity, wastewater water treatment
25 capacity permitted for that facility at Eagle Ridge.

1 However, it is also the case in the staff rec,
2 and in our documents we identified there are only four
3 single-family lots remaining in the Eagle Ridge
4 collection system to offer service to out of about 1,700
5 homes and dwelling units. There is one commercial lot
6 undeveloped comprising about three acres that may also
7 be served at some future time. However, in the total
8 picture of the wastewater facilities, the 80 percent
9 used and useful calculation, in essence, identifies that
10 there is about 20 percent, or about 62,000 gallons of
11 wastewater capacity per day that is considered non-used
12 and useful, and that's supposedly in alignment with
13 service to four single-family lots and one three-acre
14 commercial property. It's out of balance from my
15 perspective.

16 It should be the case that, in essence, the
17 system is built out. We have no customer growth factor
18 built into our MFRs because, in fact, there is no growth
19 in customers. We have had maybe an average of one per
20 year at the most over the last five years. There just
21 isn't any growth. We are essentially a built-out
22 system. And in that context it seems appropriate to
23 consider the Eagle Ridge wastewater plant 100 percent
24 used and useful just as the Cross Creek plant is
25 considered 100 percent used and useful. And there is no

1 growth occurring or has occurred on the Cross Creek side
2 since we bought the system. So from that perspective,
3 it seems to me prudent to identify 100 percent used and
4 useful for both wastewater plants.

5 **MR. FRIEDMAN:** And I would point out that in
6 your rules, 25-30.430 specifically allows the Commission
7 to consider factors such as the extent to which the area
8 served by the plant is built out in making a
9 determination as to the used and usefulness of a
10 wastewater treatment plant. And as Mr. Flynn has
11 pointed out, this system has only got four vacant lots
12 and one commercial lot left. And so if you look at the
13 way the staff has calculated it, basically under the
14 staff's position those four single-family lots, and I
15 think the houses down there use probably 150 gallons a
16 day, perhaps, that those four houses and one commercial
17 property account for 20 percent of the unused and useful
18 portion of the plant. So you have got 20 percent of it
19 being held for four lots -- four residential lots and
20 one commercial lot, and then you have the other
21 80 percent being used by 1700 units. That just defies
22 any logic that you would allocate 80 percent to 1700
23 units, and then allocate 20 percent to four units plus a
24 commercial piece of property.

25 The second aspect -- and we filed this, we

1 filed this application with the argument that it is 100
2 percent used and useful for the reasons that Mr. Flynn
3 has pointed out. And so as a result we didn't put any
4 margin of reserve in. If you are 100 percent built-out,
5 obviously you don't have any margin of reserve. So we
6 didn't put a margin of reserve in.

7 Obviously, if the staff was going to say we
8 are 80 percent used and useful, then it would be logical
9 to say then we must have unused capacity. If we have
10 got unused capacity and unused development out there, we
11 would have to add a margin of reserve factor. So if the
12 staff was going to be true to regulatory principles and
13 say you've got extra capacity, then they should go to
14 the other side of that and say but we need to add some
15 used and usefulness to account for the margin of
16 reserve. They have kind of done a double whammy in this
17 case and said, oh, Utility, we are going to decrease
18 your used and usefulness from 100 down to 80, and we are
19 not giving you any margin of reserve. That's kind of
20 like a double whammy. I mean, it adds insult to injury.
21 So we think that the staff recommendation is in error,
22 and that the wastewater treatment plants should be
23 100 percent used and useful.

24 The final issue is on rate case expense. I'm
25 going to address part of it, and I'm going to have

1 Mr. Williams address the portion dealing with the
2 in-house consultants. The staff made two major
3 adjustments to rate case expense. One was that they
4 made an almost \$20,000 decrease in the outside
5 consultants portion of the rate case expense, the
6 outside financial consultant, accounting for about 133
7 hours of work because what the staff said it, quote,
8 believes, end quote, that many of the hours were spent
9 on review of the company's roll-forward adjustments, and
10 then complains about the lack of description in the time
11 slips of the financial consultant.

12 Now, it's the same time -- the financial
13 consultant is the same one that has put together the
14 MFRs in most of the utility and subsidiary cases. They
15 have done their time slips exactly like they did before,
16 and so there is no -- the staff is inconsistent with the
17 way that it has treated this in the past in making some,
18 quote, belief that a certain amount of time was spent
19 doing something that they thought didn't need to be
20 done.

21 And to add, again, insult to injury is that
22 the staff says, all right, let's figure out how we can
23 guesstimate what that amount of time is. And so what
24 they do is they go back and look at the Lake Utility
25 Services rate case we just finished a couple of months

1 ago, which is a big water and sewer system, whereas this
2 is just a sewer system. And so they looked at that and
3 they said, okay, well, based on that, it was so many
4 hours, and so since those cases -- or we just finished
5 that case, it's kind of like this one, so let's make an
6 adjustment of 133 hours. Just completely arbitrary.

7 It's not like they had this in their mind and
8 asked in a data request. I mean, a lot of these things
9 are just, you know, the companies do things the way they
10 did them before unless somebody tells them, hey, you
11 know, maybe we're going to change the way we want you to
12 do things. But you need to tell them in advance that we
13 are changing the rules, not after you do it, and then
14 say, oh, by the way, you didn't do what we wanted you to
15 do, even though what you did was satisfactory in the
16 past.

17 And no regulated entity or industry should
18 have to guess that the staff is going to change the way
19 that it wants you to do things, and then as a result the
20 company gets penalized for doing it the way they have
21 always done it before. And that is kind of what
22 happened on this issue is that the staff has just
23 decided arbitrarily that, well, you know, they shouldn't
24 spend time on these roll-forwards without any asking how
25 much time did you spend on roll-forwards. What is

1 involved by the financial consultant in doing a
2 roll-forward? Never asked any of those questions. They
3 just waited until they wrote the staff recommendation
4 and wrote it the way they wanted to write it.

5 And their analysis in saying, well, this is
6 what you did in Lucie, so, you know, let's use that as
7 an analogy is wrong, because Lucie has got water and
8 wastewater and this has water. If you just want to be
9 arbitrary you say, well, arbitrarily you would probably
10 have half as many roll-forwards in a wastewater only
11 than you would in a water and wastewater. Again, that
12 is arbitrary, but at least you have given some
13 consideration to the fact that the two systems are
14 different. You can't necessarily equate what's done in
15 one with what is done in the other.

16 And every one of these cases are different. I
17 mean, the time that any person expends in these cases
18 varies drastically depending upon the nuances of the
19 case, and you really don't know that going into it. And
20 so all we can do is do things the way we have done them
21 in the past, and all we ask is that if the rules change,
22 we know about them in advance.

23 The staff is great about looking back and
24 saying, hey, we want to see what we did in the past.
25 Well, if you look at rate case expense in the last case

1 for Eagle Ridge, which was three or four years ago, the
2 staff is recommending rate case expense in this case
3 22 percent less than what they recommended in the prior
4 case. And if you look at the analysis of how they do
5 that, I mean, they zapped out all of the in-house time
6 that Mr. Williams is going to address. They took every
7 bit of that out, again, just arbitrarily. They hadn't
8 done that in the past. They didn't make this same
9 arbitrary adjustment in past rate cases, but they just
10 decided in this one -- a light went off in somebody's
11 head, and they said, hey, why don't we do it this way
12 from now on and to penalize the utility. So, you know,
13 even if you look at the last case, the amount of rate
14 case expense is substantially less, and that kind of
15 belays that this is an arbitrary adjustment that the
16 staff has made.

17 And I'm going to ask Mr. Williams to explain
18 to you the in-house aspect of this rate case expense,
19 because he's in there with it; he's part of that rate
20 case expense.

21 **MR. WILLIAMS:** The majority of our company's
22 expenses in a rate case are done in-house. It is time
23 spent by our employees to prepare the data and get it,
24 you know, put together in the format required by the
25 Commission. And, you know, if I'm working on a specific

1 case, I code that time to this rate case. The same is
2 true of Mr. Flynn and our accountants. And in this
3 particular case for the first time ever, the staff is
4 recommending disallowing all of our in-house rate case
5 expense saying we are already paid salaries. But this
6 is different. This is capitalized time related
7 specifically to this rate case. And when we calculate
8 our total salaries, the cap time is deducted from the
9 salary expense. So it is not being double counted.
10 And, again, this has never been done, and I can't
11 understand why it would be disallowed.

12 **MR. FRIEDMAN:** Just to summarize what
13 Mr. Williams said, when they do the salary calculation
14 for the MFRs they take out the portion of the salary
15 allocation that's related to, quote, what we call rate
16 case expense. So the portion of the salaries that are
17 allocated don't include the same things that are
18 included in the rate case expense.

19 That's all the comments we have, and we are
20 certainly available to answer any questions.

21 **CHAIRMAN GRAHAM:** Staff?

22 **MR. FLETCHER:** Commissioners, I'd like to
23 address Issue 3, the Phoenix Project that the utility
24 raised. First of all, staff has relied on previous
25 Commission decisions, and in those decisions as far as

1 taking into account the divested systems of this
2 utility, as we relied on basically Statute 367.081,
3 which is setting fair, just, and reasonable rates in our
4 recommendations, that the utility or the Commission
5 should acknowledge that the share -- the allocated share
6 of those divested systems for the Phoenix Project.

7 To date, the company in their divested
8 systems, as Mr. Friedman mentioned, has been several
9 thousand reduction in their customers. To take a
10 backdrop to tee this up a little bit is this company,
11 their corporate strategy in the past, and it has been so
12 for decades, was to acquire small systems, develop their
13 own systems and to grow their customer base. And this
14 Phoenix Project was placed into service in 2008, and at
15 that time a certain amount of customer base was designed
16 by DeLoitte & Touche to match those customers.

17 As of the date of this agenda we see about
18 10 percent of the total investment, \$21.6 million,
19 10 percent of that, over 2.3 million is associated with
20 the divested systems. We don't think it is fair, just,
21 and reasonable to reallocate that \$2.3 million to the
22 surviving customers. We don't think that's fair or just
23 or reasonable as contemplated in 367.081.

24 I would defer to staff engineer, Tom Walden,
25 on Issue 5.

1 **MR. WALDEN:** Commissioners, I'm Tom Walden
2 from Commission staff.

3 In our recommendation in Issue 5 we have
4 relied upon Commission rule that dictates how used and
5 useful is to be calculated for a wastewater treatment
6 plant. I believe the company brings up a good point
7 that while there are a few lots yet to be developed,
8 there really hasn't been any growth, and obviously the
9 company would like to have 100 percent used and useful
10 allocation on their plant.

11 I think the real question is is the system
12 really built out? With only four lots left out of 1,700
13 homes, if we were to do a comparison using a lot ratio,
14 there would be a very small amount of treatment plant
15 capacity that would be needed to serve the remaining
16 lots. Using the rule as we did in our recommendation,
17 obviously it causes a used and useful adjustment.

18 I am comfortable using the rule, but certainly
19 as an alternative if we were to rely on just the lot
20 ratio, that would essentially make this Eagle Ridge
21 plant 100 percent used and useful with only four vacant
22 lots. And if we were to approach this circumstance
23 using that alternate approach, recognizing essentially a
24 built-out condition, that would make the wastewater
25 treatment plants 100 percent built-out.

1 **CHAIRMAN GRAHAM:** Item Number 14.

2 **MR. FLETCHER:** Yes. Commissioner, Item 14,
3 particularly on Page 24 of the rec, the accounting
4 consultant fees, initially staff had sent the utility a
5 data request on July 26th of this year and which the
6 utility responded on August 25th of this year. And it
7 is basically the second paragraph on Page 25 of staff's
8 recommendation is delineated below that second Paragraph
9 A through C of the information that staff had required,
10 and this is for each person and each firm providing
11 services, consulting services to the applicant.

12 Originally, we did not see -- in the utility's
13 response in August we didn't receive the detail.
14 Normally in the past for accounting -- this accounting
15 firm in past cases, we received job detail reports or
16 time sheet reports associated with the invoices. And
17 the level of detail that we have seen in the past was
18 not in the detailed report that we saw.

19 An example of the detail that we usually see
20 in past cases is Maria Bravo, which is the accounting
21 associate on August 12th spent one hour, and the detail
22 was review staff's interim recommendation and provide
23 commends to clients. Now, that detail was not provided
24 that specific with the time worked prior to that
25 regarding the MFRs. It just -- the only comments that

1 were made is review MFRs, and some of them have 19
2 hours. It is not specifically what you worked on in
3 your MFR preparation or what were you working on that
4 day. Was it the rate base schedules of the MFRs, was it
5 to audit the utility's roll-forward adjustments? We did
6 not have that detail provided in the response.

7 And I will say that because it wasn't
8 originally asked -- provided in the August response, we
9 did inquire of the utility immediately prior to staff
10 finalizing its revenue requirement, and the utility did
11 provide that job detail report on October 24th. But,
12 again, it didn't have the specificity of detail to
13 isolate what time was spent on roll-forward adjustments.

14 In trying to be consistent with the
15 Commission's decision in its -- at the October 4th
16 agenda for a sister company, Lucie, where they had
17 provided the detail not only for the consulting firm,
18 but also for the WSC in-house employees where we
19 actually had the detailed descriptions and the hours
20 associated with each task. We did not have that in this
21 case, so we relied on the percentage of WSC employees'
22 time where we had the detail regarding the roll-forward
23 adjustments.

24 And that is addressed on Page 25 of our
25 recommendation, and you see in the third paragraph in

1 that case we relied on that percentage to come up with
2 our 133 hours. It is the second to the last sentence of
3 the third paragraph on Page 25. We applied the
4 percentage that the WSC house employees spent on
5 roll-forward adjustments in order to apply that to the
6 hours that the accounting consultant worked on the MFRs.

7 The Commission practice is when something is
8 not supported, that it has previously disallowed all or
9 a portion of rate case expense where there has been lack
10 of support documentation. This was -- again, we don't
11 believe it was arbitrary because we did a follow-up with
12 the utility and asked again for the level of detail that
13 was not previously provided in August. It is detail
14 that we have received in prior cases that has been on
15 those job detail reports, and it just was not provided
16 in this instant case.

17 **CHAIRMAN GRAHAM:** So staff specifically asked
18 for that detail and it just wasn't provided?

19 **MR. FLETCHER:** Yes, Commissioner. And I guess
20 the only other one is the in-house employees. To
21 respond to that, as you can see on Page 27 on Table
22 14-2, staff had looked at the job duties and
23 responsibilities of those who worked to process this
24 case. And in doing so, we wanted to make sure that
25 there was no double recovery in this case as far as --

1 because processing those cases are part of their job
2 duties and descriptions, that is akin to the allocated
3 salaries that not only flow to Eagle Ridge, but all of
4 its sister companies, we looked at the confidential
5 information that the utility supplied in this case. And
6 taking it from the total salary dollars associated with
7 all of these positions and tracking it down to make sure
8 that 100 percent was being allocated down based on the
9 ERC percentage methodologies for the respective
10 positions here, all of it is being allocated down to
11 Eagle Ridge and its sister companies.

12 So we disagree that just a cap, the capitalize
13 time is not being double recovery. I believe it is,
14 because 100 percent of their salary, based on the
15 confidential information, is being allocated down to
16 Eagle Ridge and all of its affiliates. And I guess that
17 concludes staff's comments.

18 **CHAIRMAN GRAHAM:** Public Counsel.

19 **MR. REILLY:** With regard to the Phoenix
20 Project, OPC agrees with the recommendation and the
21 recent previous orders of the Commission to allocate the
22 Phoenix Project costs according to ERCs, but that the
23 Phoenix Project costs previously allocated to divested
24 subsidiaries should not be reallocated to the surviving
25 utilities, because no added benefit is realized by the

1 remaining subsidiaries.

2 We also concur with the recommendation and
3 prior Commission orders that it is not fair, just, or
4 reasonable for the ratepayers to bear additional
5 allocated Phoenix costs just because the company decides
6 to sell some of their subsidiaries. We also agree with
7 the recommendation and recent Commission orders that the
8 divested subsidiaries allocated amounts should be
9 deducted from the total cost of the Phoenix Project
10 before any costs should be allocated to the remaining
11 subsidiaries. And really to do otherwise at this point
12 would be -- and to depart from this recommended
13 methodology would result in an unfair and inconsistent
14 treatment with Utilities, Inc.'s other subsidiaries.

15 Now, the company makes the argument that the
16 recommended methodology violates 367.0813, Florida
17 Statutes, by using gains received by the shareholders on
18 the sale of divested systems to reduce rate base of the
19 remaining systems. We respectfully disagree with that
20 argument. This methodology has nothing to do with using
21 gains on sale. It has everything to do with assessing
22 the benefit to the ratepayers. It makes no difference
23 whether the sale results in a gain or a loss. If the
24 sale results in a reduction of ERCs served by the
25 Phoenix, it would be unfair to increase Eagle Ridge's

1 allocated cost for this system.

2 I'm going to speak briefly to the used and
3 useful issue, as well as to the rate case expense issue,
4 and then I'm going to yield to Ms. Merchant who will
5 talk on two of the issues.

6 Briefly on the used and useful issue, I
7 thought what staff did was a reasonable compromise.
8 When you really look at the actual used and useful
9 calculation for both of the two wastewater treatment
10 plants, you get an 80.13 percent used and useful
11 percentage on the Eagle Ridge system and only a 70.13
12 percent on the Cross Creek system. And what I thought
13 staff did was they acknowledged that although there were
14 only four lots there, which don't add up to a great
15 deal, there was, unlike Cross Creek, a commercial
16 property which could have the potential of substantial
17 additional ERCs on top of those four lots. So it was
18 kind of an acknowledgment that there really was a
19 potential of growth on the one system, so therefore they
20 went ahead and used the actual.

21 But then when they went to Cross Creek, it
22 didn't have the same circumstances. So, in effect, they
23 basically discounted the 70.13 percent and basically
24 imputed or deemed it to be 100 percent. So what staff
25 did was merge the two together, put the 100 percent with

1 the 80 percent and really produced a pretty darn high
2 87.38 percent. And I think it would be far fairer to
3 the customers to at least acknowledge that it is not
4 built out and there is some real potential of ERC usage
5 in that system, and to somehow will be able in the
6 future to capture that excess capacity. And so I do
7 support primary staff recommendation. It seems that
8 today that may have shifted somewhat to a secondary
9 position, which we certainly do not support.

10 Thirdly, on the issue of rate case expense, we
11 agree with staff that the company's requested rate case
12 expense was in large measure unsupported and
13 unreasonable. We support each and every adjustment that
14 staff made. The two -- only the big ones that I talk
15 about would be the accounting consulting fees which
16 staff determined was excessive, unreasonable, and
17 unsupported. Apparently driven primarily from what
18 staff could determine and we could determine was to
19 account for all these numerous roll-forward accounting
20 adjustments to the company's MFR because of the
21 company's failure to properly make adjustments to the
22 company's books in accordance with the adjustments
23 ordered in the company's last rate case and failure of
24 the company to really properly maintain its books in
25 accordance with NARUC system of accounts.

1 And with regard to the WSC in-house fees, OPC
2 agrees with the recommendation that UI proposed rate
3 case expense for 2,106 hours for \$97,534 of WSC in-house
4 fees to complete this single PAA at this point
5 uncontested is unreasonable and unsupported. Not only
6 was the detailed support for these WSC fees virtually
7 nonexistent, but they appear to represent double
8 recovery of the allocated compensation for positions
9 listed in the recommendation. Positions, if you look at
10 those described duties, closely track the very duties
11 that the company seeks from our view as a double
12 recovery from the Eagle Ridge ratepayers in the form of
13 rate case expense. So we do support the staff's
14 adjustments, and I would yield to Ms. Merchant for more
15 detail.

16 **CHAIRMAN GRAHAM:** Ms. Merchant.

17 **MS. MERCHANT:** Good morning. Tricia Merchant
18 with the Office of Public Counsel.

19 I will tell you that Mr. Reilly took a lot of
20 my words here, so -- and staff and the company -- but
21 one of the things I wanted to point out regarding the
22 accounting fees is that if you look at the legal fees
23 and if you look at the engineering fees, the detail
24 provided is much more voluminous. And, you know, you
25 can tell. He wrote a letter to staff; they had a

1 meeting with staff; you don't get that with the
2 accounting fees. And that has been a long-standing
3 Commission practice to document and support your
4 estimate to complete. So I disagree with Mr. Friedman
5 that this is a change in the middle of the road.

6 The second thing I want to talk about is the
7 WSC cost. And Mr. Reilly already pointed out a lot of
8 things, but I want to give you a little history about
9 rate case expense for most of the Utilities, Inc.
10 systems. About ten years ago the WSC costs requested by
11 the company were a pretty small component of the total
12 rate case expense. Then about eight years ago the costs
13 started going up dramatically. They started filing rate
14 cases every four years. And recently, in the last
15 couple of years, you see companies filing every two
16 years. This case was -- the final order in the last
17 case for Eagle Ridge was in April of 2009. So it's
18 pretty close together.

19 Over the last eight years, Utilities, Inc.'s
20 rate case expense requests have ballooned from those
21 more than eight years ago. The number and the hours of
22 the WSC employees have also more than doubled in the
23 rate case expense requests that they have submitted.

24 Additionally, at the conclusion of each rate
25 case, the company is required to submit an actual

1 accounting of all of its rate case expense incurred as
2 of the date when they filed. That's 90 days after the
3 end of the rate case. Looking back at the Eagle Ridge
4 last rate case, the company actually spent \$5,000 less
5 than what the Commission approved in the order. And
6 you're thinking, well, that's pretty close. But the
7 estimate that they included in their -- before staff
8 filed its PAA recommendation was \$133,000 higher than
9 their final actual numbers. So that's a telling fact
10 right there. I have done an analysis of a lot of the
11 different systems of Utilities, Inc., and that's very
12 common. I'm seeing that over and over again in a lot of
13 the different systems.

14 I think that OPC believes that we should stop
15 allowing them to overestimate their rate case expenses.
16 Essentially, what overstated rate case expense is is
17 just higher revenues for them. It doesn't get booked on
18 their accounting records. It's higher rates and charges
19 for them.

20 The other point I wanted to bring out was
21 about the Phoenix system, and I'm having to cut my notes
22 here because everybody put in some other comments. But
23 in 2009 the company told the Commission that the Phoenix
24 would improve accounting, customer service, customer
25 billing, and financial and regulatory reporting

1 functions of Utilities, Inc. and all of its
2 subsidiaries. OPC questions how implementing the new
3 computer system has provided savings and efficiencies to
4 the regulated operations of Utilities, Inc. Rate case
5 expense requested has doubled. Regulatory reporting
6 costs have not improved, and for each and every rate
7 case Utilities, Inc. has to reconcile its books with its
8 MFRs, and it also has to reconcile its MFRs with its
9 annual report. This immediately is an increased rate
10 case cost.

11 OPC argues that Utilities, Inc. should
12 promptly and fully fix these deficiencies in its
13 regulatory reporting requirements. And we talked about
14 this at the Lucie rate case in the last agenda where
15 Lucie was. We fully support staff's adjustment to
16 allocate Phoenix costs. And as Mr. Reilly said, that
17 that didn't have anything to do with whether a gain or
18 loss was incurred on the sale, it had to do with the
19 fairness of those costs. But we also think that the
20 adjustments, the Commission approved adjustments should
21 be made in every single case. And that's one of the
22 later issues in the case. But we haven't seen -- since
23 Lucie, we haven't seen those adjustments being proved
24 that they have been made. So certainly we want to focus
25 the Commission's attention on that, that they need to

1 submit proof that they have made the Commission-ordered
2 adjustments and fix these problems so that rate case
3 expense can be lowered in the future. And with that,
4 that concludes my comments. Thank you.

5 **CHAIRMAN GRAHAM:** Mr. Walden, in Issue Number
6 5 you said with there only being four lots not built
7 out, you are fine with going to 100 percent used and
8 useful?

9 **MR. WALDEN:** If we are to recognize the
10 built-out condition of the service area, yes, sir, we
11 would move to 100 percent used and useful.

12 **CHAIRMAN GRAHAM:** Commission board, can we get
13 a motion on Issue Number 5, or are there any questions
14 on Issue Number 5?

15 Commissioner Edgar.

16 **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.
17 And I did have a question on that point.

18 **CHAIRMAN GRAHAM:** Please.

19 **COMMISSIONER EDGAR:** Thank you.

20 I don't know if you are able to do it
21 precisely, but if the Commission were to choose that
22 other way of calculating used and useful, what would be
23 the result to Issue, I think it's 18. Yes, 18.

24 **MR. WALDEN:** I believe Mr. Fletcher could
25 provide some information in that area. You can see in

1 the recommendation on Issue 5 we made reductions to rate
2 base and adjusted depreciation expense and property
3 taxes. Mr. Fletcher could a better job of --

4 **COMMISSIONER EDGAR:** I wasn't sure if that was
5 a straight-out calculation or if there were other
6 factors.

7 **MR. FLETCHER:** If you give me just one moment,
8 I can give it in 30 seconds.

9 **COMMISSIONER EDGAR:** Sure.

10 **CHAIRMAN GRAHAM:** Mr. Walden, where is your
11 name tag?

12 **MR. WALDEN:** My name tag is on my desk.
13 (Laughter.) I do have my ID badge. (Laughter.)

14 **CHAIRMAN GRAHAM:** Take your time,
15 Mr. Fletcher.

16 **COMMISSIONER EDGAR:** It does not have to be
17 precise. And, Commissioners, it is my approach that the
18 decisions that we make on the individual facts before us
19 on all of the issues, 18 is certainly a fallout of that,
20 and not the beginning point. But yet for context,
21 because there are so many calculations and formulas
22 involved it is helpful, to me anyway in my thought
23 process, to have a feel for what that impact would be.

24 **MR. FLETCHER:** Right. The effect on Issue 18
25 for the interim refund, it would bring it down to

1 approximately 3 percent from the 4.23.

2 **COMMISSIONER EDGAR:** Thank you. I appreciate
3 you doing that so quickly. This issue, the used and
4 useful, I absolutely see the rationale in both types of
5 calculation and believe, as our staff has said, that
6 each is logical. I had a question as we were beginning
7 our discussion today as to the information that we have
8 before us that on the one portion of the utility that
9 from the information I understand there really is either
10 no or miniscule growth potential. To me that makes
11 sense for a finding of used and useful on that which
12 would then be of 100 percent for both pieces. That is
13 something that I see the rationale for. I did want to
14 have a feel for what that would impact the other
15 calculations, and I would be interested in the thoughts
16 of my colleagues.

17 **CHAIRMAN GRAHAM:** Commissioner Brown.

18 **COMMISSIONER BROWN:** Thank you.

19 And actually I happen to be familiar with both
20 Eagle Ridge and Cross Creek having grown up in Fort
21 Myers and think of them as very similar, although Eagle
22 Ridge is a larger subdivision. But I was curious about
23 the commercial lot, because I know Eagle Ridge has some
24 mixed use and there are some condos. What is the scale
25 of that commercial lot?

1 **MR. FLYNN:** The commercial is a three-acre
2 parcel that abuts Tango Boulevard (phonetic). It has on
3 it a single story --

4 **COMMISSIONER BROWN:** In the front.

5 **MR. FLYNN:** Right. It's a vacant sales
6 office. It has been vacant for years. It's on a septic
7 tank, that particular building. It has been that way
8 for long before I was familiar with Eagle Ridge.

9 **COMMISSIONER BROWN:** Thank you.

10 **MR. FLYNN:** It hasn't been used for awhile.

11 **COMMISSIONER BROWN:** And, again, I think they
12 are both -- having, you know, personal knowledge, they
13 are both very similar and they are both very built out,
14 as evidenced by the four residential parcels.
15 Additionally, that commercial lot, I am familiar with
16 that. That has been vacant since I was born, I think.
17 So I would be amenable to hear the other Commissioners
18 on considering that as 100 percent used and useful.

19 **CHAIRMAN GRAHAM:** Commissioner Balbis.

20 **COMMISSIONER BALBIS:** Thank you, Mr. Chairman.

21 And I have a question for the utility
22 following up on Commissioner Brown's question on the
23 remaining lot. The last thing I would want to do is set
24 a precedent where a developer could leave the last
25 remaining lot that is selling for a 25-story high-rise,

1 et cetera. You mentioned it was three acres in size.
2 What is it zoned for? What is the floor-area ratio that
3 is approved? What do you anticipate the development of
4 that parcel to result in?

5 **MR. FLYNN:** I have no information at my
6 disposal today on what its zoning is. I think
7 Commissioner Brown probably has more information than I
8 do on that topic, actually. I guess it has been vacant
9 for a long time, and its use going forward is who knows.
10 I have no idea. It's not -- it's commercial property on
11 a highway frontage, a four-lane or six-lane highway, and
12 its likelihood of being anything other than light
13 commercial is unlikely.

14 **COMMISSIONER BALBIS:** So then regardless of
15 what is built there, I mean, obviously the remaining
16 capacity is the limitation on the wastewater flow to the
17 facility, correct?

18 **MR. FLYNN:** Insignificant. There are
19 62,000 gallons of non-used and useful capacity by
20 staff's rec for four lots that would comprise less than
21 a thousand gallons per day, and this commercial lot,
22 which I'm sure will have minimal volume. In my
23 experience light commercial just does not generate much
24 flow.

25 **COMMISSIONER BRISÉ:** Okay. Thank you. And

1 based on this specific circumstance where we know what
2 the development is, we know the remaining parcel, and we
3 don't have the risk of setting a precedent of allowing
4 other utilities to leave their high consumption or
5 demand parcels for the last amount to play games with
6 this, I would move that we revise staff's recommendation
7 to make Eagle Ridge 100 percent used and useful.

8 **COMMISSIONER EDGAR:** I second it.

9 **CHAIRMAN GRAHAM:** It has been moved and
10 seconded to move staff's recommendation to 100 percent
11 used and useful.

12 Any further discussion on Item Number 5? I'm
13 sorry, Issue Number 5. Seeing none, all in favor say
14 aye.

15 (Vote taken.)

16 **CHAIRMAN GRAHAM:** Any opposed?

17 By your action you have approved Issue
18 Number 5.

19 All right. We still have Issue Number 3 and
20 Issue Number 14 to deal with. Let's start with 3.

21 Commissioner Balbis.

22 **COMMISSIONER BALBIS:** Thank you, Mr. Chairman.

23 And fortunately I believe all of us on this
24 Commission have dealt with this issue previously, and I
25 disagree with the attorney for the utility indicating

1 that we made a mistake in the past. I feel we made the
2 right decision in the past. And I see that -- I haven't
3 seen anything that changes my opinion as to whether or
4 not the portion of the Phoenix system project should now
5 be reallocated to remaining systems. I think the
6 analogy of taking it to the extreme is a good one,
7 because what is to stop them from divesting more and
8 more and using our decision as a basis to now
9 reallocating the cost.

10 So, again, I haven't heard anything today to
11 change my thoughts on that issue, so I would move we
12 move forward with staff's recommendation on Issue 3.

13 **CHAIRMAN GRAHAM:** It has been moved and
14 seconded, the staff recommendation on Issue 3. Any
15 further discussion?

16 Seeing none, all in favor say aye.

17 (Vote taken.)

18 **CHAIRMAN GRAHAM:** Any opposed?

19 By your action you have approved staff
20 recommendation on Issue 3.

21 Issue 14.

22 Commissioner Edgar.

23 **COMMISSIONER EDGAR:** Thank you, Mr. Chairman.

24 I know that we have had pretty full
25 information and some discussion on this already, but I

1 would like to ask the utility to elaborate a bit on one
2 of the points that was raised.

3 I believe in your earlier comments on this
4 item you made the comment that in a staff analysis
5 adjustments that are made reflect a -- I believe you
6 said a change in the rules from the way those costs have
7 been considered in the past. And I would like you to
8 elaborate on -- if indeed I heard you right, what it is,
9 what rules or practice you think is changed in this
10 analysis versus that in the past.

11 **MR. FRIEDMAN:** Thank you, Commissioner Edgar.

12 And if I used the term rule, I apologize,
13 because obviously in the legal sense we think of a rule
14 as having a particular meaning and sacrament. And it
15 certainly isn't the rule, it's the practice of the staff
16 in analyzing rate case expense filings. And with this
17 particular financial consultant, you know, the rate
18 case -- the rate case is the MFRs have got Schedule A,
19 Schedule B, Schedule C. You know, it's just a bunch of
20 different schedules. And so if you look at the time
21 slips that Milian, Swain and Associates uses it just
22 says work on MFRs, prepare MFRs. And it doesn't say
23 Schedule A, you know, worked on Schedule A today or
24 Schedule B.

25 Because the way the MFRs are, as Commissioner

1 Edgar mentioned, when you make an adjustment on one
2 schedule, you know, it automatically is going to affect
3 other schedules. And so it is basically impossible to
4 have the kind of detail that we as lawyers have, or
5 Mr. Seidman as the engineer has. It is easy for us to
6 put a lot of detail in what we do. But when it comes
7 to -- when you are dealing with spending hours going
8 over financial information and putting it into
9 miscellaneous schedules, you can't really put more
10 detail in it than to say we worked on the MFRs. And
11 that's the kind of detail I think that they have used
12 forever.

13 Now, you noticed that Mr. Fletcher mentioned
14 that they put -- they had something that had more detail
15 that said discuss interim rates or something. I mean,
16 that is different than preparing the MFRs. And this
17 roll-forward adjustment is related to the preparing MFRs
18 portion of the financial rate case expense, not the
19 portion of rate case expense after that. Because as
20 Mr. Fletcher pointed out, when they did the projected or
21 after the MFRs, you know, it was related to a specific
22 thing, and it was easy to say we had a conference call
23 with so and so and addressed such and such. That is
24 easy to do. But when you are sitting there for
25 virtually days, you know, I don't know how they do it,

1 you know, working for days going through financial
2 schedules, you just can't get more detail than just I
3 was working on these MFRs and these financial schedules.

4 And so the suggestion that the roll-forwards
5 took up a lot of that time, you know, is just wrong,
6 because it doesn't. The roll-forwards work is done by
7 the company, and it is just financial information that
8 the outside consultants take and disseminate when they
9 compile the MFRs. And so to suggest that the amount of
10 time that the financial consultants spent in the issue
11 of roll-forwards is the same as the amount of time that
12 the company spent in addressing roll-forwards, which is
13 what the staff does in its recommendation, is just
14 pulling it out of the air. And that's all they have
15 done.

16 I mean, there is no way to say how much time,
17 or the relationship between roll-forwards prepared by
18 the company versus roll-forwards prepared by the outside
19 consultant. And then to say let's look at Lucie and
20 make that analysis when you have got a water and
21 wastewater case versus just a wastewater case, I mean,
22 even if you use the staff's analysis to compare Lucie,
23 the adjustment shouldn't be a \$20,000 negative number,
24 it ought to only be ten, because you have got a -- if
25 you are going to presume that the time spent on

1 roll-forwards is the same, you ought to presume then
2 that half of them are on water and half of them are on
3 wastewater. So you still only make half the adjustment
4 the staff made, even if you buy their pulling it out of
5 the air. So worst-case scenario is the adjustment ought
6 to be 10 instead of 20.

7 I hope that answered your question,
8 Commissioner Edgar. I know I tend to get long-winded
9 sometimes.

10 **COMMISSIONER EDGAR:** That's all right. And,
11 yes, you did. Thank you. I would like to ask our staff
12 to speak to this item. Again, you know, the issue of
13 rate case expense for wastewater or water or water and
14 wastewater in small, generally, service areas is one
15 that comes before us frequently. More and more
16 frequently it seems like, and it is one that always
17 gives me some additional pause.

18 We had a long discussion on an earlier item
19 about trying to reduce subjectivity, and sometimes I
20 wonder as careful as we try be when we are reviewing
21 rate case expense and the documents that come with it
22 how much subjectivity enters in, although I know we try
23 very hard to be objective and to look to the
24 documentation. But it seems like at some point the more
25 detail that is provided, perhaps that just provides more

1 opportunity to parse and pare, but yet that sometimes if
2 there is more general documentation that can be helpful
3 or be a concern. So with all of that, and I know it is
4 time to get moving, but I would like to ask the staff to
5 speak to this point of how does the analysis here
6 comport with similar analysis and how we have looked at
7 this type of issue in the past.

8 **MR. FLETCHER:** Commissioner, we, again,
9 request in every case the items that are listed on Page
10 25 of the recommendation, we ask for that detail of task
11 because you try to make -- or staff strives to make
12 consistent decisions as far as many benchmarks, if you
13 will, to look at items. What time was spent on a
14 particular task and that is one the reasons why we have
15 to have that detail.

16 And I would submit to you in the past that we
17 had that detail for this firm. What time was spent on
18 an audit, what time was spent to prepare the rate base
19 schedule, what time for the NOI schedules, what time was
20 it to analyze and review the utility's reconciliation of
21 their general ledger to the MFR amounts. So we rely on
22 that detail in order -- so we can make the analysis to
23 compare what the Commission has approved in the past as
24 far as amount of time spent on a particular task.

25 It simply was not provided in this case.

1 Therefore, we were reached with recommending to the
2 Commission whether we deny -- recommend denying all of
3 it because of lack of support documentation, or knowing
4 that we felt that this was the best approach without
5 having any of that detail is to reach out to a similar
6 company and to basically apply that percentage in this
7 case regarding the roll-forward adjustments. We felt
8 that was best because to remove all of the hours
9 associated with the MFRs, that would -- I don't think
10 that that would have been reasonable, because it is a
11 minimum filing requirement pursuant to Commission rules,
12 so we thought that was a conservative approach in order
13 to deal with the lack of support documentation.

14 And if I may, at the appropriate time, I did
15 want to correct my prior calculation. I hope it doesn't
16 call for another vote on Issue 5. But on Issue 18, I
17 had forgot to take into account the non-used and useful
18 depreciation expense adjustment and the property tax
19 portion. It would reduce the percentage for interim
20 refund on Issue 18 to half a percent from the 4.23
21 percent. And at the appropriate time, assuming the
22 fallouts of the -- if nothing is to change from the rec
23 other than Issue 5, I would recommend that that would
24 just be credited to CIAC. It is such a small
25 percentage, and whenever the Commission has dealt with

1 such small percentages of interim refunds in the past
2 that the Commission has decided to credit CIAC for those
3 rather than avoid the administrative cost of refunding
4 those to the customers.

5 **CHAIRMAN GRAHAM:** Commissioner Edgar, you
6 still have the floor.

7 **COMMISSIONER EDGAR:** Just to follow up on the
8 discussion -- and thank you -- that we were having on
9 Issue 14, I would just hope and ask on a go-forward
10 basis if there is anything that we can do or should do
11 as a Commission so when these types of cases continue to
12 come in, as I know there will be more, not necessarily
13 for this utility, but for others across the state, that
14 we are as clear as we can be as to the documentation
15 that is required and expected, and the analytical
16 approach that will be taken to considering allowances
17 and disallowances for rate case expense, including
18 in-house staff and outside consultants.

19 Thank you, Mr. Chairman.

20 **CHAIRMAN GRAHAM:** Thank you.

21 I don't have any lights on. My feeling is
22 specifically to make sure that we are reaching out to
23 supporting staff. The staff is asking for details. If
24 staff is asking for a report, if staff is asking for
25 something, I think staff needs to get that information

1 so staff can do the best they can moving forward. And I
2 commend staff for, even when they didn't get the
3 specificity that they wanted, they were still able to
4 come forward with a recommendation other than zero.
5 Zero is an easy number to come to. And believe it or
6 not, zero is a number I probably would have supported
7 because, you know, when you ask for some information you
8 need to get it, and there needs to be that supporting
9 documentation.

10 I think that's one of the things that us as a
11 board can do for staff to make sure that, you know, for
12 you to do your job, you need to get the details that
13 you're asking for. If you're not getting those details
14 you're asking for, there is all kinds of speculation of
15 why you're not getting those details. But I think our
16 job to support you guys is to make sure that you get
17 that authority.

18 Commissioner Balbis.

19 **COMMISSIONER BALBIS:** Thank you, Mr. Chairman.

20 I couldn't agree with you more on those
21 statements. I agree that staff needs to get the
22 information and backup it needs to provide a good and
23 sound recommendation to us. And I think that staff came
24 up with a good compromise. It certainly could have
25 disallowed additional rate case expense, and I think

1 this is a good compromise. And, hopefully, that message
2 is sent not only to this utility but others that we need
3 appropriate detail to determine if expenditures are
4 appropriate and prudent. So with that, I would support
5 staff's recommendation on Issue 14.

6 **CHAIRMAN GRAHAM:** It has been moved and
7 seconded, staff recommendation on Issue 14. Is there
8 any further discussion on Issue 14? Seeing none, all in
9 favor, say aye.

10 (Vote taken.)

11 **CHAIRMAN GRAHAM:** Any opposed?

12 Now, let's just wrap this Item Number 9 all up
13 as one big whole. If we could move staff recommendation
14 on all issues on Item Number 9, except for Issue Number
15 Issue 5, and fallout issues from the change in Issue 5.

16 **MR. FLETCHER:** Yes, administrative approval
17 for all the fallout issues. And also with regard to
18 Issue 18, whether the Commission's desire is to credit
19 CIAC or go forward with the refund to the customers, the
20 less than a half a percent.

21 **CHAIRMAN GRAHAM:** Commissioner Edgar, I will
22 go to you on your recommendation.

23 **COMMISSIONER EDGAR:** Mr. Chairman, thank you.
24 As I said when we were discussing this item, this issue
25 of this item a few minutes ago, it is my understanding

1 from the information that we have that there is a logic
2 and a rationale for the calculation of used and useful
3 that could come, basically, to two different numbers.
4 Although a result of three or four or five percent
5 refund certainly is a nicer sounding number than half, I
6 remain comfortable that the analysis that we used in our
7 vote for the calculation of used and useful is
8 appropriate. And I also agree with staff from the
9 numbers that they are sharing with us now, realizing
10 that it's kind of a back-of-the-envelope calculation,
11 that if it is half a percent, that to go to CIAC would
12 be appropriate.

13 **CHAIRMAN GRAHAM:** And for some reason if it
14 goes higher than that when you do the official number,
15 then you may want to consider another path. But just as
16 long as you are as low as you are, I agree with
17 Commissioner Edgar.

18 **MR. FLETCHER:** Okay, Commissioner. We will do
19 just do that administrative thing. If it's still a
20 minimal amount, as a half percent, as I have stated
21 here, then it would still be credited to CIAC. If it
22 goes above that based on the mathematical calculations,
23 then we will credit it to -- recommend or have in the
24 order that it be refunded to the customers.

25 **CHAIRMAN GRAHAM:** Okay. So we have a motion

1 on the floor to approve Item Number 9, the staff
2 recommendation on all items except for Issue Number 5,
3 and then the fallouts from the change in Issue Number 5.
4 That has been moved and seconded.

5 Any further discussion? Seeing none, all in
6 favor say aye.

7 (Vote taken.)

8 **CHAIRMAN GRAHAM:** Any opposed?

9 By your action, you have approved Item
10 Number 9.
