

**IN RE: PETITION ON BEHALF OF DUKE ENERGY FLORIDA, INC.
FOR
FUEL AND CAPACITY COST RECOVERY
FINAL TRUE-UP FOR THE PERIOD
JANUARY THROUGH JULY 2013**

FPSC DOCKET NO. 130001-EI

**GPIF TARGETS AND RANGES FOR
JAUARY THROUGH DECEMBER 2014**

**DIRECT TESTIMONY OF
MATTHEW J. JONES**

AUGUST 31, 2013

1 Q. Please state your name and business address.

**2 A. My name is Matthew J. Jones. My business address is 526 South Church Street,
3 Charlotte, NC 28202.**

4

5 Q. By whom are you employed and in what capacity?

**6 A. I am employed by Duke Energy as Director of Analytics for Fuels and Systems
7 Optimization.**

8

9 Q. What are your responsibilities in that position?

**10 A. As Director of Analytics for Fuels and Systems Optimization, I oversee the analysis
11 and modeling of energy portfolios for Duke Energy Florida (“DEF” or the
12 “Company”), as well as Duke Energy Progress, Inc., Duke Energy Carolinas, Inc.
13 Duke Energy Indiana, Inc. and Duke Energy Kentucky, Inc. These responsibilities
14 include oversight of planning and coordination associated with economic system
15 operations, including production cost modeling, outage coordination, dispatch pricing,
16 fuel burn forecasting, position analysis, and commodities analytics.**

1 **Q. Please describe your educational background and professional experience.**

2 A. I earned a B.A. in Anthropology from State University of New York in 2001. From 2001
3 until 2004, I worked as an Account Representative for National Loop Company in Green
4 Island, NY. From 2004 until 2007, I attended graduate school at Indiana University –
5 Bloomington, where I earned a Master of Business Administration and a Doctor of
6 Jurisprudence, *cum laude*. While at Indiana University, I also studied Comparative and
7 International Law at a study abroad program at Christ Church College at Oxford
8 University. In 2008, I joined Duke Energy as a Commercial Associate, spending a six
9 month rotation working in Business Development Analytics where I worked on Wholesale
10 Ratemaking and another six month rotation in the FERC Legal group where I worked on
11 wholesale contract drafting and compliance issues. In 2009, I entered the Business
12 Development Analytics group where I worked in dispatch pricing, production cost
13 modeling, and fuel burn forecasting for the Duke Energy Carolinas system. In 2010, I
14 entered the Integrated Resource Planning group to help rebuild the Kentucky model in
15 preparation for environmental legislation analysis and later in 2010, I became the Director
16 of Wholesale and Commodities Business Support, where I had the responsibility to
17 manage wholesale ratemaking, dispatch pricing, production cost modeling, fuel burn
18 forecasting, position reporting, budgeting for bulk power marketing, and general analytical
19 support for Fuels Hedging, Bulk Power Marketing, and Wholesale Origination for North
20 and South Carolina, Indiana and Kentucky. In July of 2012, I became the Director of
21 Analytics for Fuels and System Optimization, where, in addition to the responsibilities
22 outlined in the previous question, I also manage the Contract Administration and Fuels
23 System Support organizations.

1 **Q. What is the purpose of your testimony?**

2 A. The purpose of my testimony is to provide a recap of actual reward / penalty for the
3 period of January through December 2012 and also present the development of the
4 Company's GPIF targets and ranges for the period January through December 2014.
5 These GPIF targets and ranges have been developed from individual unit equivalent
6 availability, average net operating heat rate targets, and improvement/degradation ranges
7 for each of the Company's GPIF generating units, in accordance with the Commission's
8 GPIF Implementation Manual.

9

10 **Q. What GPIF incentive amount was calculated for the period January through**
11 **December 2012?**

12 A. DEF's calculated GPIF incentive amount for this period was a reward of \$3,262,447.
13 Please refer to my testimony filed March 15, 2013 for the details of how this incentive
14 amount was calculated.

15

16 **Q. Do you have an exhibit to your testimony?**

17 A. Yes. I have sponsoring Exhibit No. _____ (MJJ-1P), which consists of the GPIF
18 standard form schedules prescribed in the GPIF Implementation Manual and supporting
19 data, including outage rates, net operating heat rates, and computer analyses and graphs
20 for each of the individual GPIF units. This exhibit is attached to my prepared testimony
21 and includes as its first page an index to the contents of the exhibit.

1 Q. Which of the Company's generating units have you included in the GPIF program
2 for the upcoming projection period?

3 A. For the 2014 projection period, the GPIF program includes the following units: Bartow
4 Unit 4, Crystal River Units 4 and 5; and Hines Units 1 through 4. Combined, these units
5 account for 82% of the estimated total system net generation for the period.

6

7 Q. Have you determined the equivalent availability targets and
8 improvement/degradation ranges for the Company's GPIF units?

9 A. Yes. This information is included in the GPIF Target and Range Summary on page 4 of
10 my Exhibit No. ____ (MJJ-1P).

11

12 Q. How were the equivalent availability targets developed?

13 A. The equivalent availability targets were developed using the methodology established for
14 the Company's GPIF units, as set forth in Section 4 of the GPIF Implementation Manual.
15 This includes the formulation of graphs based on each unit's historic performance data for
16 the four individual unplanned outage rates (i.e., forced, partial forced, maintenance, and
17 partial maintenance outage rates), which in combination constitute the unit's equivalent
18 unplanned outage rate (EUOR). From operational data and these graphs, the individual
19 target rates are determined through a review of three years of monthly data points. The
20 unit's four target rates are then used to calculate its unplanned outage hours for the
21 projection period. When the unit's projected planned outage hours are taken into account,
22 the hours calculated from these individual unplanned outage rates can then be converted
23 into an overall equivalent unplanned outage factor (EUOF). Because factors are additive

1 (unlike rates), the unplanned and planned outage factors (EUOF and POF) when added to
2 the equivalent availability factor (EAF) will always equal 100%. For example, an EUOF
3 of 15% and POF of 10% results in an EAF of 75%.

4 The supporting tables and graphs for the target and range rates are contained in pages
5 41-77 of my exhibit in the section entitled "Unplanned Outage Rate Tables and Graphs."

6

7 **Q. Please describe the methodology utilized to develop the improvement/degradation**
8 **ranges for each GPIF unit's availability targets?**

9 A. The methodology described in the GPIF Implementation Manual was used. Ranges were
10 first established for each of the four unplanned outage rates associated with each unit.
11 From an analysis of the unplanned outage graphs, units with small historical variations in
12 outage rates were assigned narrow ranges and units with large variations were assigned
13 wider ranges. These individual ranges, expressed in term of rates, were then converted
14 into a single unit availability range, expressed in terms of a factor, using the same
15 procedure described above for converting the availability targets from rates to factors.

16

17 **Q. Were adjustments made to historical unit availability to account for significant**
18 **anomalies in the historical project?**

19 A. No.

20

21 **Q. Have you determined the net operating heat rate targets and ranges for the**
22 **Company's GPIF units?**

- 1 A. Yes. This information is included in the Target and Range Summary on page 4 of my
2 Exhibit No. ____ (MJJ-1P).

3

4 **Q. How were these heat rate targets and ranges developed?**

- 5 A. The development of the heat rate targets and ranges for the upcoming period utilized
6 historical data from the past three years, as described in the GPIF Implementation
7 Manual. A “least squares” procedure was used to curve-fit the heat rate data to a linear
8 relationship with Net Operating Factor (NOF), and ranges at a 90% confidence level were
9 also established assuming a normal distribution. The analyses and data plots used to
10 develop the heat rate targets and ranges for each of the GPIF units are contained in pages
11 26-40 of my exhibit in the section entitled “Average Net Operating Heat Rate Curves.”

12

13 **Q. Were adjustments made to historical heat rates to account for estimated net output
14 changes associated with scrubber and SCR installations?**

- 15 A. No. All scrubbers and SCRs were in service prior to the historical data period.

16

17 **Q. How were the GPIF incentive points developed for the unit availability and heat
18 rate ranges?**

- 19 A. GPIF incentive points for availability and heat rate were developed by evenly spreading
20 the positive and negative point values from the target to the maximum and minimum
21 values in the case of availability, and from the neutral band to the maximum and minimum
22 values in the case of heat rate. The fuel savings (loss) dollars were evenly spread over the

range in the same manner as described for incentive points. The maximum savings (loss) dollars are the same as those used in the calculation of the weighting factors.

Q. How were the GPIF weighting factors determined?

A. To determine the weighting factors for availability, a series of simulations was made using a production costing model in which each unit's maximum equivalent availability was substituted for the target value to obtain a new system fuel cost. The differences in fuel costs between these cases and the target case determine the contribution of each unit's availability to fuel savings. The heat rate contribution of each unit to fuel savings was determined by multiplying the BTU savings between the minimum and target heat rates (at constant generation) by the average cost per BTU for that unit. Weighting factors were then calculated by dividing each individual unit's fuel savings by total system fuel savings.

Q. What was the basis for determining the estimated maximum incentive amount?

A. The determination of the maximum reward or penalty was based upon monthly common equity projections obtained from a detailed financial simulation performed by the Company's Corporate Model.

Q. What is the Company's estimated maximum incentive amount for 2013?

A. The estimated maximum incentive for the Company is \$20,529,186. The calculation of the estimated maximum incentive is shown on page 3 of my Exhibit No. ____ (MJJ-1P).

1 Q. **Should the Commission consider termination of the existing GPIF mechanism at**
2 **this time?**

3 A. No. DEF believes that the GPIF mechanism is useful. While DEF does not directly base
4 generation performance decisions on GPIF considerations/results, the GPIF does allow
5 the Commission to view monthly detail on specific generation unit performance and
6 further allows the Commission to conduct an annual analysis of generation performance
7 trends over time.

8

9 Q. **Should the Commission make any modifications to the GPIF?**

10 A. DEF believes the current GPIF process and structure have and continue to encourage
11 utilities to efficiently operate their base load plants. However, as indicated in a previous
12 interrogatory response, DEF could support revising the method by which the maximum
13 GPIF reward is calculated, whereby the new process sets the maximum allowed incentive
14 dollars at 50 percent of the maximum attainable fuel savings; the reward and penalty
15 amounts would then be calculated as a linear interpolation from maximum allowed
16 incentive dollars, thereby preserving the symmetrical relationship between rewards and
17 penalties. DEF believes this revision directly ties the utility reward (penalty) to the
18 resulting fuel savings or loss experienced by the ratepayer.

19

20 Q. **Does this conclude your testimony?**

21 A. Yes.

**GPIF Targets and Ranges for
January through December 2014**

PLANNED OUTAGE SCHEDULES

Duke Energy Florida
Period of: January 2014 - December 2014

<u>Plant/Unit</u>	<u>Planned Outage Dates</u>	<u>Reason for Outage</u>
Bartow 4	03/29 (0001) - 04/26 (2400)	Balance of Plant, Combustion Turbine & Steam Turbine Inspection
Bartow 4	11/17 (0001) - 12/12 (2400)	Balance of Plant, Combustion Turbine Inspection
Crystal River 4	11/16 (0001) - 12/05 (2400)	Balance of Plant
Crystal River 5	02/22 (0001) - 03/14 (2400)	Balance of Plant
Hines 1	02/28 (0001) - 03/07 (2400)	Combustion Turbine Inspection
Hines 1	3/14 (0001) - 3/21 (2400)	Combustion Turbine Inspection
Hines 1	11/1 (0001) - 12/12 (2400)	Generator Rotor Maintinence, Turbine Valve Maintinence
Hines 2	03/22 (0001) - 03/28 (2400)	Combustion Turbine Inspection
Hines 2	4/19 (0001) - 4/26 (2400)	Combustion Turbine Inspection
Hines 2	10/04 (0001) - 10/31 (2400)	Balance of Plant, Major Inspection
Hines 3	03/01 (0001) - 03/21 (2400)	Balance of Plant, Combustion Turbine Inspection
Hines 3	9/20 (0001) - 10/03 (2400)	Combustion Turbine Inspection
Hines 3	11/16 (0001) - 11/22 (2400)	Combustion Turbine Inspection
Hines 4	03/29 (0001) - 04/18 (2400)	Balance of Plant, Turbine Valve Maintinence
Hines 4	11/06 (0001) - 11/14 (2400)	Combustion Turbine Inspection
Hines 4	12/06 (0001) - 12/12 (2400)	Combustion Turbine Inspection
