Tallahassee FL 32399-0850

Re: Docket No. 130139-EI

Dear Ms. L'Amoreaux:

Enclosed is Gulf Power Company's Responses to Staff's first data request in the above referenced docket.

Sincerely,

A handwritten signature in black ink that reads "Robert L. McGee, Jr." The signature is written in a cursive, flowing style.

Robert L. McGee, Jr
Regulatory and Pricing Manager

md

Enclosures

Penny Buys, Division of Engineering
Julia Gilcher, Office of General Counsel
Beggs & Lane
Jeffrey A. Stone, Esq.

1. Please refer to page 9 of the updated storm hardening plan. With respect to transmission structures, please provide the number of poles inspected for each year from 2010-2012.

ANSWER:

The chart below contains Gulf's response to question 1.

POLES INSPECTED	2010	2011	2012
Metal	1,761	611	362
Concrete & Wood	3,895	2,734	2,618
Total	5,656	3,345	2,980

2. Please refer to page 10 of the updated storm hardening plan.
 - a. Please provide the number of replaced wooden cross-arm with steel for 2010, 2011, and 2012.
 - b. Please provide the dollar amounts for the replacements for each year.
 - c. Please provide the number of replacements expected for 2013, 2014, and 2015.

ANSWER:

The chart below contains Gulf's responses to question 2 parts a, b and c.

	2010	2011	2012	2013*	2014*	2015*
Number of wood cross-arms replaced	163	232	382	200	200	200
Cost of replacement	\$ 847,600	\$1,206,400	\$1,986,400	\$1,040,000	\$1,040,000	\$1,040,000

*** Expected cross-arm replacement & associated cost**

Note: The above replacement costs for 2010 through 2012 are estimates only as the Company does not track these dollars separately.

3. Please refer to page 17 of the updated storm hardening plan. In section 5.0, Gulf explains replacements of critical pole lines with multiple feeders on them, and replacement of wooden poles with concrete.
- a. Please provide the dollar amount for these replacements for 2010, 2011, and 2012.
 - b. Please provide the number of wooden to concrete replacements for the same years.
 - c. Please provide the estimated number of replacements for 2013-2015.

ANSWER:

The chart below contains Gulf's responses to question 3 parts a, b and c.

	2010	2011	2012	2013	2014	2015
Cost*	\$26,842	\$980,634	\$1,325,001			
Concrete Poles Installed	1	42	75			
Estimated Concrete Pole Installations				31	**	**

*Cost shown is the total cost of the storm hardening projects that included at least one concrete pole installation.

**Locations and engineering have not be completed at this time.

4. Please refer to page 19 of the updated storm hardening plan. Please provide all work papers and data associated with the June 1, 2013 deadline. For example, location of inspections, corrections made, completion date of each work order, etc.

ANSWER:

Page 19 of the Storm Hardening Plan includes Sections 8.1 and 8.2, which incorporate two types of feeder patrols.

Section 8.1 refers to visual inspection of the mainline feeders. All mainline feeders have been patrolled and the status of work generated by those company-wide patrols is presented on Attachment A.

Section 8.2 refers to infrared (IR) inspection of the critical equipment on the mainline feeders. All mainline feeder equipment has been inspected and the status of the work generated by those company-wide patrols is presented on Attachment B.

5. Please refer to page 20 of the updated storm hardening plan.
 - a. Please provide the cost associated with the additional initiatives.
 - b. Please provide the number of employees needed for these additional initiatives.
 - c. Please explain how Gulf believes this will better its infrastructure.

ANSWER:

- a. Costs are shown as part of Gulf's response to question 6 under the section labeled "Any Other Key Elements or Proposed Initiatives".

Page 20 of the Storm Hardening Plan refers to Section 8.4; the Additional Initiatives that Gulf has undertaken to improve the electrical distribution infrastructure. Section 8.4.1 refers to the installation of Distribution Automation (DA) equipment to extend the ability to control and segment feeders when faults occur. This protects customers by limiting the number of customers that are affected by a temporary fault or sustained outage. These DA devices are either remotely controlled by the Distribution Control Center (DCC) and/or have an automatic restoration scheme. Section 8.4.2 refers to the installation of Faulted Circuit Indicators (FCI) which are DA devices designed to indicate the passage of fault current. These devices reduce customer outage time by expediting the location of outage causes. Section 8.4.3 refers to the Distribution Supervisory Control and Data Acquisition (DSCADA) System. DSCADA is the communication and computer system that allows the DCC to communicate with and control DA devices in the substation and out on the feeder.

For the 2013-2015 Storm Hardening Plan, Gulf estimates it will spend \$6.94 million to install DA devices on the distribution system and to continue the implementation of the DSCADA system necessary to communicate with and control these devices.

- b. Gulf currently has approximately 12.7 full time equivalent (FTE) employees associated with these additional initiatives. This number includes both Gulf employees and contractors. This number also includes DSCADA and DA engineering, support, construction, and maintenance.

- c. Gulf believes that these initiatives will improve the reliability and performance of the system in several ways:
- 1) Mid-line and lateral reclosers allow the system to isolate faults to minimize the number of customers affected during a momentary or sustained outage.
 - 2) The isolation of sustained outages allows the field personnel to eliminate certain parts of the feeder so that they can find the problem quicker and restore service sooner.
 - 3) Fault Indicators allow larger portions or difficult to patrol portions of a feeder to be eliminated during a sustained outage thus allowing the field personnel to focus their efforts in smaller areas, finding the problem quicker, and restoring service sooner.
 - 4) DSCADA and communication with the DA devices allows the DCC to see the operation of the system in real time and not be dependent on customer calls. Communication with DA devices allows the DCC to remotely operate the DA devices and direct crews while providing them real time information during the restoration of a sustained outage.
 - 5) DSCADA and DA provide daily monitoring of the system that is key to the daily operations and long term maintenance of the distribution system. Event logging and alarms allow engineering and field personnel to be proactive to possible issues on the system and solve those issues before they lead to a momentary or sustained outage.

6. Please complete the table below:

ANSWER:

See page 2 of 2.

ACTIVITY

ACTUAL/ESTIMATED COST

	2010	2011	2012	2013	2014	2015
8 YEAR WOODEN POLE INSPECTION PROGRAM	\$2,174,138	\$2,701,600	\$1,415,988	\$2,061,333	\$2,061,333	\$2,061,333

10 STORM HARDENING INITIATIVES

1	A THREE-YEAR VEGETATION MANAGEMENT CYCLE FOR DISTRIBUTION CIRCUITS	\$4,907,230	\$5,912,112	\$4,290,215	\$5,593,128	\$5,947,800	\$5,947,800
2	AN AUDIT OF JOINT-USE ATTACHMENT AGREEMENTS	\$0	\$337,722	\$0	\$0	\$0	\$0
3	A SIX-YEAR TRANSMISSION STRUCTURE INSPECTION PROGRAM	\$668,369	\$305,890	\$198,796	\$244,526	\$243,345	\$262,908
4	HARDENING OF EXISTING TRANSMISSION STRUCTURES	\$1,326,200	\$2,940,400	\$3,411,400	\$1,040,000	\$1,040,000	\$1,040,000
5	TRANSMISSION AND DISTRIBUTION GIS	\$0	\$0	\$0	\$0	\$0	\$0
6	POST-STORM DATA COLLECTION AND FORENSIC ANALYSIS	\$0	\$0	\$0	Note 1	Note 1	Note 1
7	COLLECTION OF DETAILED OUTAGE DATA DIFFERENTIATING BETWEEN THE RELIABILITY PERFORMANCE OF OVERHEAD AND UNDERGROUND SYSTEMS	\$0	\$0	\$0	\$0	\$0	\$0
8	INCREASED UTILITY COORDINATION WITH LOCAL GOVERNMENTS	\$0	\$0	\$0	\$0	\$0	\$0
9	COLLABORATIVE RESEARCH ON EFFECTS OF HURRICANE WINDS AND STORM SURGE	\$0	\$32,059	\$32,059	Note 2	Note 2	Note 2
10	A NATURAL DISASTER PREPAREDNESS AND RECOVERY PROGRAM	\$0	\$0	\$0	\$0	\$0	\$0
TOTAL		\$9,075,937	\$12,229,783	\$9,348,458	\$8,938,987	\$9,292,478	\$9,312,041

ANY OTHER KEY ELEMENTS OR PROPOSED INITIATIVES

Distribution Automation	\$3,990,831	\$6,356,716	\$4,070,853	\$2,164,148	\$2,164,148	\$1,980,000
Automated Overhead Faulted Circuit Indicators	\$0	\$0	\$119,959	\$100,000	\$100,000	\$100,000
Distribution Supervisory Control and Data Acquisition	\$209,605	\$820,079	\$1,283,511	\$265,852	\$65,852	\$0

Note 1: Cost of Forensic data collection will vary greatly, ranging from zero in non-storm years to \$100,000+ in storm years, depending on the size of the storm and extent of storm damage.

Note 2: Costs cannot be determined at this time.
