Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Pete Martinez

FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

carrie rogers

ALL YOU REALLY HAVE TO DO IS CONSIDER PEOPLE (WHO ARE YOUR VERY CUSTOMERS - WITHOUT WHICH YOU WOULD MAKE NO PROFIT) -- CONSIDER PEOPLE OVER PROFIT - IN ORDER TO MAKE MORE PROFIT. DUH! YOU HAVE THE RESOURCES TO GO INTO GREEN ENERGY WHICH BUILDS UP EVERYTHING - INCLUDING YOUR PROFIT. IT'S REALLY QUITE SIMPLE.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Phyllis Fay

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

John Forrest

Dec 8, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

sylvia Ford

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Julie Imanuel Brown
FL

Dear Commissioner Imanuel Brown,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Claudia Engels

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Liliana G

US Electric Utilities & IPPs: Who Said Demand Response was Going Away?

[Click here for the full report](#)

Extension requested in DR case, suggesting likely referred to Supreme Court

On Friday afternoon, the Solicitor General (SG) filed for an extension of time to file for Cert before the Supreme Court (until Jan 15th from Dec 16th) in the Demand Response (DR) case significantly impacting the PJM Capacity Market (appeal of FERC's Order 745). We read the SG's decision to ask for an extension as suggestive they are likely to formally request that the Supreme Court to take up the issue. While not definitive that the SG will either ultimately decide to file for a Cert request in January, nor that the Supreme Court would take it up (4 of 9 justices are required)— this could in turn provide a potential further stay of the rules *through* the next PJM capacity auction in May, a significant reversal of a previous positive YoY driver (+\$60/MW-day).

Looking towards an extension on stay through the next capacity auction

A decision to provide a further stay (likely through the term of the next PJM Capacity auction in May 2015) would remain with the original three-panel DC Circuit panel that over-turned the rules; given the initial request for a stay was approved, we suspect any further petition would be similarly granted. A final decision as to whether or not to take up the case before the Supreme Court would not be due until March (leaving the market in meaningful suspense); the timeline would suggest the case would likely be argued in the Fall Term if taken up.

DR could be back in capacity auction – removing a major positive YoY driver

If the courts were to grant a stay (and Supreme Court to accept the case), we suspect PJM would likely allow Demand Response to continue to participate as a Supply side resource, much as it did in the past. We had previously estimated the court decision as driving a +\$60/MW-day impact on 2018/19 auction, given the rollback of roughly ~7-9GW of supply (between 70-77% depending on who you ask).

But wait – if CP reforms happen, this will likely put some DR out too

Focus will shift ever more towards the other pillar of YoY capacity price improvement – implementation of the Capacity Performance (CP) scheme. We read the scheme's meaningfully more stringent standards on capacity participation (including DR) could yet serve to meaningfully drive out this resource nonetheless. As approved by the Board of Governors (but yet to be filed with FERC), the scheme would remove Limited DR outright (2.3GW cleared in last year's auction), as well as place substantially greater performance standards on annual products. We suspect DR products would likely need to be 'bundled' in order to meet the new standards (at least for annual products, which accounted for ~1.5GW in the latest auction); we estimate this could be reduced materially. Meanwhile the bulk of DR (7.1GW last year) was Summer Extended, which would continue to be allowed to clear as a base product through the transition period. Most DR would likely be phased out under 100% CP mandate by the 2020/21 auction under the current transition plan proposed by PJM. Net-net, we estimate at least a ~2GW decline (~\$15/MW-day impact) in the auction just from CP reforms alone.

What does this mean for the PJM thesis? Weakened a bit more.

Following a week with PJM equities off meaningfully on concerns of weaker demand – and a perceived weakening in the Capacity Performance Scheme – we expect next week to prove more of the same (at least out of the gates early next week). We suspect the latest 'pullback' on reforms will lend itself to investor disquiet about the 'sustainability' of the promised capacity price uplift. While we appreciate the concern, we maintain that pricing trajectories remain constructive, with prices clearing in a range between \$150-200/MW-day, rather than our previous \$200+/MW-day. We reiterate our belief that pricing is fundamentally tied to changes in bidding practices (given wider latitude authorized under the CP) than any other single factor.

But why is the SG willing to touch on a mundane issue of jurisdiction?

It appears White House officials – and others within the administration – continue to advocate for the rules to be over-turned as part of an effort to implement its Clean Power Plan(CPP)/111(d) compliance—and wider carbon reduction targets. Given the limited dispatch of Demand Response (and hence limited carbon reduction impacts), as well as little relevance around jurisdiction as to whether DR can be used to reduce carbon, the arguments around its relevance to the CPP seem a tad hollow; although we do appreciate why the administration would not want the resulting energy price inflation and corresponding churn in the industry.

States leading the charge on over-turn of the appeals court decision too--

We also note significant state participation on this issue, with the overturn of this issue an increasingly bipartisan subject (PA, CA, and MD appear to be leading a state-level lobbying effort); this would appear to drive some of the SG's interest. That said, it is clear that DR jurisdiction under FERC (vs. individual state programs) is eminently easier to do manage, with the practical implication that a transition period to state-level jurisdiction would result in at least an multi-year drop decline in DR participation (if states opted to re-constitute programs at all).

Ultimately how does this play out? Supreme Court could keep DR with FERC

Seeing the DC Circuit Court of Appeals' decision as a complete surprise to most parties – and following meaningful public outcry over the decision, we would not be surprised if the Supreme Court were to over-turn the prior court's decision. Seeing the issue of DR jurisdiction as ambiguous and largely unaddressed in existing law, we suspect there is wide latitude to arrive at a different interpretation.

What is the (new) composition of our 2018/19 PJM capacity estimate?

We include the pieces of the YoY walk to our initial estimate once more in the Figure below. We emphasize that a stay in the Order 745 case could yet drive a -\$46/MW-day revision to our estimate below (as the +\$62/MW-day DR impact is replaced with a +\$16/MW-day to reflect a 2 GW decline in DR participation under the proposed CP rules (new point estimate would be \$158/MW-day). We continue to see an informal range of \$150-200/MW-day as more DR could yet come out of the auction than we estimate, with the changes in offer caps a further 'offset'.

Figure 1: Analysis of Potential Clearing Price for 2018/2019 Delivery Year

Potential Clearing Price 2018/19	GW	~\$ Sensitivity	~\$/MW-Day Impact
Potential Impact from New Rules			
Demand Response (DR)	7.7	8	62
Capacity Performance (CP) - midpoint of MM analysis	-	-	60
Incremental bidding behaviors (UBSe)			10
Holdback	4.1	8	33
Revised load forecast	-4.4	8	-35
Demand curve	-	-	10
Incremental supply	7	(8)	-56
- Total \$/MW-Day Impact (A)	-	-	84
Clearing Price in 2017/18 \$/MW-Day (B)			120
Potential clearing price 2018/19 (A+B)			204

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES AT END OF NOTE.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Statement of Risk

Risks for Utilities and Independent Power Producers (IPPs) primarily relate to volatile commodity prices for power, natural gas, and coal. Risks to IPPs also stem from load variability, and operational risk in running these facilities. Rising coal and, to a certain extent, uranium prices could pressure margins as the fuel hedges roll off Competitive Integrations. Further, IPPs face declining revenues as in the money power and gas hedges roll off. Other non-regulated risks include weather and for some, foreign currency risk, which again must be diligently accounted in the company's risk management operations. Major external factors, which affect our valuation, are environmental risks. Environmental capex could

escalate if stricter emission standards are implemented. We believe a nuclear accident or a change in the Nuclear Regulatory Commission/Environment Protection Agency regulations could have a negative impact on our estimates. Risks for regulated utilities include the uncertainty around the composition of state regulatory Commissions, adverse regulatory changes, unfavorable weather conditions, variance from normal population growth, and changes in customer mix. Changes in macroeconomic factors will affect customer additions/subtractions and usage patterns.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission.

Analyst Certification: Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage ¹	IB Services ²
Buy	FSR is > 6% above the MRA.	47%	34%
Neutral	FSR is between -6% and 6% of the MRA.	42%	28%
Sell	FSR is > 6% below the MRA.	11%	21%
Short-Term Rating	Definition	Coverage ³	IB Services ⁴
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	less than 1%	less than 1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	less than 1%	less than 1%

Source: UBS. Rating allocations are as of 30 September 2014.

1:Percentage of companies under coverage globally within the 12-month rating category. 2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months. 3:Percentage of companies under coverage globally within the Short-Term rating category. 4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: **Forecast Stock Return (FSR)** is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: **UK and European Investment Fund ratings and definitions are:** **Buy:** Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

To: Office of Commissioner Balbis
Subject: Please Deny FPL's Request for Fracked Gas

Dec 7, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mary Ann Russo

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Manuel Trujillo

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Alan Berkowitz

Subject: Please Deny FPL's Request for Fracked Gas

Dec 7, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jose A Rodriguez

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

As a Floridian and a taxpayer, I urge that the Florida Public Service commission deny any permits that allow fracking in Florida. With so much free sunshine in Florida, the Solar Industry should be given taxbreaks and strongly encouraged in Florida. With such porous limerock in Florida, Fracking would lead to a contaminated aquifer. Deny Florida Power and Light permits to frack. I agree with the rest of this message.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Stewart And Linda Schulman

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Franklyn Matteson

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Taylor Brown

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Michael Lehman

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

jacqueline mason

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

NO FRACKING IN OUR BEAUTIFUL STATE!!!!!!!!!! IT WILL NO LONGER BE BEAUTIFUL!!!!!!!!!!!!!!

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Maria Henderson

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

Have you heard of sink holes? Do you know thr geology of Florida? Have you heard of the environmental issues already impacting our aquifer?

Yes all of these are linked to why we should not crack in Florida.

There are already numerous reports on the issues with fracking in states that have a "better" geological framework to handle facking. Floridas geology is soft pourous limestone. Think of your kitchen sponge full of water, that is our geology and water supply. It is fragile and vulnerable. Because of our geology, fracking in Florida is an environmental disaster waiting to happen. Please encourage more investment into wind and solar. Florida is probably one of the best places for these technologies. And all of the nah sayers that claim we don't have enough sunlight need only look to Germany and other countries with far less sun that are doing just fine. Why not invest in clean energies now, rather than destructive ones?

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Lori Triggs

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Ramona Mayer

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Danielle Herring

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Adam Biggs

FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health. - Instead of contaminating the air and water of our Sunshine State, we need to focus on green energy like Solar and wind. Say NO to fracking!

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Rotraud Coffey

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

I know that you and your legislators are bought and paid for by big business, in this case our large utilities, so I don't really expect you to do what is right for Florida and its environment. You have already demonstrated your lack of concern for Florida's citizens and environment with your dismantling of incentives for renewable energy.

Even though I am probably tilting at another windmill, I urge you to deny FPL's request to get into the fracking business.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Emma Young

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dennis Vallianatos

Based solely on both the problems resulting from fracking, and the industry's refusal to divulge the chemicals used in the process, fracking should be outlawed.

Why is it important for government to be transparent but not so for companies using potentially cancer causing chemicals with long active lives?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jill Rupprecht

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Magda Santiago

Nominations, tax extenders on tap in Congress' final days

By Edward Felker

Lawmakers hope to wrap up the 113th Congress this week, but not before Democrats confirm a number of Obama administration nominees and Republicans put crude exports and the Renewable Fuel Standard under the spotlight.

The week will also see the last days in power for Sen. Mary Landrieu, D-La., who was ousted by GOP Rep. Bill Cassidy in their runoff election on Saturday. Her defeat puts Sen. Maria Cantwell, D-Wash., in line to take the top Democratic post on the Senate Energy and Natural Resources Committee in January.

The week starts with Senate votes on Monday to confirm Jeffery M. Baran to an extension of his term on the Nuclear Regulatory Commission, through June 2018, and confirm Ellen D. Williams to head the Energy Department Advanced Research Projects Agency-Energy.

That leaves four other pending Energy Department nominees up for possible votes this week or later, if lawmakers stay in Washington past the Senate's planned adjournment Thursday.

Democrats also want to confirm Colette Honorable to the Federal Energy Regulatory Commission in the coming days, following her nomination hearing last week in which Republicans also said they support her for the post.

Votes are expected this week on the annual defense programs authorization bill, which includes a number of public lands provisions.

The bill has drawn criticism from Interior Secretary Sally Jewell, who on Saturday called "profoundly disappointing" a provision to give Rio Tinto about 2,400 acres in the Tonto National Forest in Arizona that the company has been seeking to mine for copper, according to The Washington Post.

Yet to be scheduled for Senate action is House-passed legislation to renew about 50 expired tax breaks, worth \$44.7 billion, which includes the wind Production Tax Credit. The one-year extension, through this year, fell short of the two-year tax breaks extensions sought by the wind industry and the bipartisan leadership of the Senate Finance Committee.

The Republican-led House has still to pass and send to the Senate a spending bill to keep the government open past Thursday. While talks on that matter continue, Republicans plan to use committee hearings to highlight their views on the federal biofuels mandate, nuclear power and crude oil exports.

The House Oversight and Government Reform Committee's energy panel, headed by Sen.-elect James Lankford, R-Okla., holds a hearing Wednesday on the Renewable Fuel Standard.

The hearing will examine the decision by the Environmental Protection Agency to delay final action on the 2014 rule setting required ethanol and biodiesel usage in transportation fuels.

On Thursday the Energy and Commerce Committee's energy subcommittee examines the crude export ban, with testimony from Energy Information Administration head Adam Sieminski.

Finally, the House Science, Space and Technology Committee's energy panel on Thursday looks at the future of U.S. nuclear power, with Peter Lyons, who heads the Energy Department's nuclear power office, scheduled to testify.

Obama, GOP-led Congress prepare for veto showdowns

By Charles Babington and Jim Kuhnhenn

WASHINGTON (AP) — Veto brinkmanship between congressional Republicans and President Barack Obama was virtually absent in his first six years in office, but it's about to unleash itself on Washington.

Until now, controversial Republican-backed legislation rarely reached the president's desk because Senate Democrats blocked it. Starting in January, however, Republicans will control both the House and Senate, and Obama may have to decide more often whether to sign or veto GOP-crafted bills.

Obama gave lawmakers an early taste of veto politics recently when he forced congressional leaders to drop a proposed package of tax breaks that were popular with many Republican constituents. Some Democrats did support the plan, but liberals and the White House said it tilted too heavily toward corporations, not lower-income workers.

The White House also has promised to veto any bills restricting the president's major changes to immigration policies, setting up likely showdowns early next year. And the Keystone XL pipeline may also be an issue where the Obama administration is forced to consider whether to unleash a veto.

Mishaps at nuke repository lead to \ \$54M in fines

By Susan Montoya Bryan

ALBUQUERQUE, New Mexico (AP) — New Mexico on Saturday levied more than \ \$54 million in penalties against the U.S. Department of Energy for numerous violations that resulted in the indefinite closure of the only U.S. underground nuclear waste repository.

The state Environment Department delivered a pair of compliance orders to Energy Secretary Ernest Moniz, marking the state's largest penalty ever imposed on the federal agency. Together, the orders outline more than 30 state-permit violations at the Waste Isolation Pilot Plant in southeastern New Mexico and at Los Alamos National Laboratory.

The orders and the civil penalties that come with them are just the beginning of possible financial sanctions the Energy Department could face in New Mexico. The state says it's continuing to investigate and more fines are possible.

The focus has been on a canister of waste from Los Alamos that ruptured in one of the Waste Isolation Pilot Plant's storage rooms in February. More than 20 workers were contaminated, and the facility was forced to close, putting in jeopardy efforts around the U.S. to clean up tons of Cold War-era waste.

Survey: US gasoline prices fall 12 cents per gallon

By The Associated Press

CAMARILLO, Calif. (AP) — A national survey reveals the average price of regular gasoline has plunged another 12 cents a gallon over the past two weeks, to \ \$2.72.

Industry analyst Trilby Lundberg said Sunday that the decline continues a nationwide trend.

Lundberg says lower crude oil prices are continuing to drive prices down, along with an abundant oil supply and the rising value of the U.S. dollar.

The highest-priced gas in the Lower 48 states was found in San Francisco at \ \$3.04 a gallon. The lowest was in Albuquerque at \ \$2.38 a gallon.

Sticky issues re-emerge at UN climate talks

By Karl Ritter

LIMA, Peru (AP) — The momentum from a historic U.S.-China pact to resist global warming is showing signs of fading at U.N. climate talks as the familiar rich-poor conflict persists over who should do what to keep the planet from overheating.

Last month's joint emissions pledges by Presidents Xi Jinping and Barack Obama spurred hopes for a global climate deal a year from now in Paris. But heading into the second half of the Dec. 1-12 Lima talks, China and the U.S. remain on opposing sides on a series of vital issues.

Time remains to work things out; environment ministers are just starting to arrive. The conference's high-level phase begins Tuesday.

But a number of areas of discord remain.

Fuel to the fire? Fuel exports soar under Obama

By Dina Cappiello

GARDI SUGDUP, Panama (AP) — As the Obama administration makes headway at home in the fight against global warming, it has helped stoke record exports of fossil fuels that are contributing to rising levels of pollution elsewhere.

U.S. exports of diesel and gasoline have doubled since President Barack Obama took office, and the carbon embedded in them has meet political goals by taking it off America's pollution balance sheet. But that does not necessarily help the planet.

The U.S. is sending more fuel than ever to other parts of the world, where efforts to address resulting pollution are just getting underway, if advancing at all.

Under Obama, the U.S. has reduced more carbon pollution from energy than any other nation, about 475 million tons between 2008 and 2013, according to U.S. Energy Department data. Less than one-fifth of that amount came from burning less gasoline and diesel.

Despite these efforts, pollution linked to global warming is rising worldwide.

Green Climate Fund - who's pledged and who hasn't

By Karl Ritter

LIMA, Peru (AP) — Among the most significant achievements of the U.N. climate talks, the Green Climate Fund is intended to become a key channel of money to help poor countries take action to fight climate change and deal with its impacts.

With Norway's pledge of \$258 million on Friday, the fund has received promises of \$10 billion, and is expected to start considering projects for funding next year.

However, the 24-member board — split equally between developed and developing countries — first needs to adopt some rules on what kind of projects should get financing.

Sizemore is the fourth generation of his family to mine coal in Harlan County. He knows he'll probably be the last.

For over a century, life in Central Appalachia has been largely defined by the ups and downs of the coal industry. Through all the bust years, there was always the promise of another boom.

There is a growing sense in these mountains that this downturn is different, deeper. That for a variety of reasons — economic, environmental, political — coal mining will not rebound this time.

[More](#)

Private forest owners aging, parcels shrinking

By Wilson Ring

MONTPELIER, Vt. (AP) — The age of forest landowners across the country is increasing and the size of parcels they own is shrinking — and that has state, federal and private experts fearing for the long-term health of millions of acres of American woodlands.

The concerns of forestry professionals are more subtle than the typical worries over large-scale development: as the parcels of land get smaller the people who own them might not have the same commitment to the forests as the previous landowners.

"Our alarm bells are starting to go off, not because landowners are suddenly older, but because it's been going on long enough now that we are really beginning to see the impacts," said Mary Sisock, an assistant professor of extension forestry at the University of Vermont, who has worked on the issue across the country.

Owners of smaller parcels are less likely to invest in a forestry management plans, and managing for wildlife is more difficult than on larger plots, Sisock said. And once the land gets cut up it's more likely it will be developed, and once developed there's no chance it will ever again be a working forest, she said.

Proposed Iran federal budget reduces oil reliance

By The Associated Press

TEHRAN, Iran (AP) — Iranian President Hasan Rouhani has presented parliament a

draft budget that would reduce the government's reliance on oil revenues.

The \$72 billion budget, unveiled Sunday, is about 6 percent more than the previous year's budget of \$68 billion.

Oil revenues will make up just 33 percent of the proposed budget for the next Iranian calendar year that begins March 21, while it was 50 percent the previous year.

The proposed budget predicts an exchange rate of \$1 U.S. dollar to 28,500 Iranian rials. The rial is currently 33,000 to \$1.

The budget comes as sanctions over the country's nuclear program have eased amid negotiations with world powers. Negotiators hope for a final nuclear deal by July.

Algeria oil company to maintain investment plan

By The Associated Press

ALGIERS, Algeria (AP) — Algerian state oil company Sonatrach won't cut back spending on its next five-year plan despite the precipitous decline of oil prices, its director announced Sunday.

Said Sahnoun, Sonatrach CEO, said that the next five year plan budgets \$90 billion to improve production even as oil prices hit five-year lows of around \$65 a barrel.

The plan includes developing oil and gas fields, improving transportation of products and investment in petrochemical and refining capacity.

Sonatrach's exports provide Algeria with 98 percent of its hard currency and the aging fields have seen declining production.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Rafaela Martinez

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mary Ann Turner

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Lora Vannoord

US IPP Weekly Power Points: After Hawaii, Who's Next?

[Please click here for the full report.](#)

We look at M&A once more following NextEra's bid for Hawaiian last week

In this week's Power Points, we ask what the implications of the latest [NEE-HE deal](#) is for the rest of the sector, looking into implications on the potential DR Supreme Court case, and explore recent developments at Pattern and JustEnergy as they relate to the balance of the sector. We suspect smids may generally do well this coming week, benefitting from the NEE bid halo, while the merchants are likely to suffer another tough slog as PJM datapoints continue to disappoint of late. We emphasize a meaningfully contrasting outlook between regulated utilities, with multi-year high multiples – amidst a multi-year low in implied multiples for IPPs and integrated utilities alike.

So who's next? Fast growing smids are the clear target.

With the media now reporting NEE was not alone in pursuing HE, citing some interest from SRE, we see credibility to potential bids on other smid caps. NEE's bid was not reactionary to near-term moves in share prices, but rather, reflects a multi-year interest in the state following its initial work on transmission development. With a clear premium placed out there in recent deals for large-caps to re-deploy meaningful cash flow into cash-strapped utilities (including WEC-TEG as well), we see a variety of potential targets. **We emphasize other targets with meaningful ratebase growth (but less significant EPS growth due to EPS dilution) include POR, PNM, PNW, LNT, TE, among others.** Moreover, we *even* see ITC as a potential candidate should concerns around ROE prove too substantial (and shares continue to compress relative to peers). The theme is accretive ratebase growth. In contrast, we emphasize smid equities with slower ratebase growth like EDE and AVA are unlikely to be targets, seeing little opportunity to deploy cash & multi-state jurisdictions a further issue. Even UIL appears a target once more following the formal termination of its interest in Philadelphia Gas Works last week (promising an 8.3% ratebase CAGR) – and yet further New England opportunity. While we have predicted a slowdown in power consolidation seeing market power considerations (see our note here), we see the emergence of more pure-play T&D utilities amidst pressures to continue to grow despite slower growth opportunities as accentuating the potential for further regulated M&A in 2015.

Smid deals matter for transmission ROE peer group as well

With the upper end of the transmission ROE peer group comprised of AEE, TE, ITC, UIL, and POR, we see some risk that consolidation could yet remove higher-growth peers from the peer set, implicitly bringing down the group. With companies typically removed for calculation purposes as of deal announcement, we see this as the risk to the transmission ROE (offset by potential interest rate upside risk). See the full list of peers in our latest ROE Mark-to-Market here. This argues for settlement of cases sooner.

So with the change in DR, how will IPPs respond?

With the likelihood of DR upside diminishing in the next PJM auction following Friday's indication the Solicitor General intends to seek an extension (and likely file for Cert before the Supreme Court), we believe investors will need to be patient in reading through upside from CP reforms until actually approved in Feb. See our full note on DR.

The great regulatory 'unwinding' with two potential supreme court cases

Regulatory 'uncertainty' in the sector has never seemed so acute. With two major industry cases likely to go to the Supreme Court in our view – the latest period provides the greatest judicial upset in the sector in some time. While we suspect limited risk around MATS implementation (with companies already indicating they will *not* seek a stay), the court case around DR throws the industry into substantial uncertainty leading into 2015 (with the case unlikely to be resolved before the May 2015 auction – and even some risk around 2016 as well). See our MATS supreme court case thoughts here

Why does DR matter so much? Stakes over DR supreme court battle are big

Following the latest indication that the Solicitor General (SG) intends to file for Cert before the Supreme Court, we emphasize the stakes are quite high. We flag that rhetoric from states of late have promised to challenge the fundamental 'competitiveness' of capacity markets without DR should they lose. Meanwhile, the DR reforms was poised to be among the clearest upside datapoints into the capacity auction next year as the program was restructured under state initiatives. We also flag concerns from groups around the repercussions of if the decision were to stand around the viability of continued bidding of energy efficiency (EE) into the capacity auction as well. Ultimately, we see the decision to take up the issue to the court by the administration is a broader reflection of this groundswell of reaction to taking DR out of the market. Given the legal language ambiguity –and clear pressure from consumers on this issue – the Supreme Court appears more likely than not to overturn in our view. The gating question had been whether the SG and administration would bother on the issue seeing it as a simple one of jurisdiction (seeing it as simply a manner of re-constituting DR programs under states – a matter of time and form rather than substance.)

As a reminder, the original premise over which Order 745 was litigated around so-called 'LMP-G' issue (how DR should be paid in power markets) was already seemingly resolved in the appeals court, with FERC conceding on this issue. Altogether, the importance of this case appears to be growing, signaling the administration (and underlying states) appear poised to advocate hard here.

EIMA Extension Taking Form But Faces Quinn Challenge, For Now

Throughout 2014 and as recently as EEI, our meetings with Ameren management has touched upon their interest in moving to extend the Electric Infrastructure Modernization Act (EIMA) formula ratemaking mechanism in Illinois and key steps has been taken in that direction. The Illinois Senate Executive Committee voted 12-1 (Democrat Heather Steans voted against the House Bill) to support the extension of the EIMA to 2019, two years past its scheduled expiration in 2017. The Illinois Senate voted 40-4 to approved the law change as well. Opposition to the proposed Bill has come from the current IL Governor Pat Quinn, IL Attorney General Lisa Madigan, the Citizens Utility Board (CUB), as well as other consumer advocates. Governor Quinn could veto the latest extension following his veto of the first EIMA which was subsequently overridden by legislature's vote. Governor Guinn is serving the balance of his term and will be succeeded by Governor elect Bruce Rauner (R) on January 12th. Even if Quinn vetos and is successful in the near-term, the legislature could overcome his veto once again or positive action could be taken under Rauner with the next General Assembly.

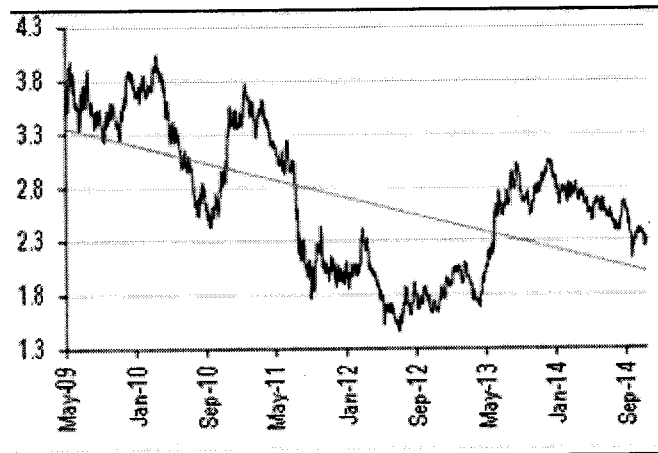

Path to EIMA extension looks clear, even if facing short-term obstacles.

Figure 1: 30-Year Treasury Rates: EIMA = 30YR + 580BP

Source: FactSet

Figure 2: 10-Year Treasury Rates

Source: FactSet

Despite the opposition to the Act Exelon believes that the formula rate making in Illinois has been a success and that both it and Ameren have done a good job of communicating the benefits with regulators/legislature which increases the probability of having the mechanism extended in the future. The general perception of the EIMA remains relatively constructive, suggesting that the structure remains in place despite initial opposition (although the actual level of the formula ROE will clearly be re-debated on any reset). As a reminder, currently electric ROEs are tied to the moving average 30-year treasury plus 580bp. Exelon and Wisconsin Electric (assuming its contemplated TEG transaction closes) would still like to see the EIMA expanded to cover gas investments but we understand that there has been staff pushback. *House Bill 3975*

Unlikely that EIMA gets expanded to gas investments at this time.

A Retailer Regroups and Dives into Solar

We see JustEnergy as at the tip of a major convergence in the sector, with retailers poised to meaningfully leverage their sales networks to cross-sell solar products beyond basic energy services to residential customers. We see this as shifting the landscape for traditional solar players, who have enjoyed relatively limited 'competition' from utility peers out west thus far. We expect the expansion in the Eastern US will see a meaningfully different adoption and deployment characteristics. The lines are being drawn at present with retailers – and solar companies 'picking partners'. JustEnergy appears poised to announce its solar strategy 'imminently' (we read within weeks); meanwhile, we flag NRG's upcoming January 15th Analyst Day will have a similar tinge (see our latest notes: NRG Energy: Further Redefining the Solar Opportunity and Looking at Solar through an Electric Retail Lense).

JustEnergy will announce its solar partnership structure within weeks

Leveraging its extensive and painstakingly built sales channels

Management from **Just Energy Group Inc. (JE)** took to the road last week to discuss its recovery and growth plan after recent asset sales and debt reduction. While the core business of JE is electric and gas retail marketing (customer base split 58% Commercial and 42% Consumer, by consumption), going forward, JE plans to expand aggressively into residential solar, primarily through marketing partnerships that would not require any significant capital outlays (especially debt). It is anticipated that this could grow to ~10% of EBITDA by the time the ITC program expires in two years (but with significantly faster growth than the rest of the company). Management believes its existing sales channels are particularly valuable to other developers of distributed solar panel systems and it plans to leverage its existing relationships with customers to maximize sales with these engineering and design partners. A full 31% of new residential electric contracts in the most recent 2Q signed up under its JustGreen banner (averaging 87% of consumption), with 202K JustGreen customers added in the past year. Management notes that if residential solar sales occurred at just a fraction of these levels, JE would be in a "leading market position in this segment." In building this new business out, the company would likely share some of its ~\$500 NPV/customer with partners to capture solar sales on the front end, with the upside of "\$1000's" of NPV/solar customer on the back end. Estimates appear to be in a range of \$0.60-0.80/kW in Origination Income (lower end of that spectrum for NY, higher elsewhere). This would suggest premiums for finding customers for larger systems (7kW) scale up to \$4,000 range per customer. JE might also choose to take an equity position in these partnerships should attractive opportunities arise to do so (15%-20% ROE target), although does not appear poised to do per management's view of its current share price.

Rapid expansion into solar through partnerships that could bring in "\$1000s" of NPV per customer; could grow to 10% of EBITDA over the next two years.

Origination income appears to be as high as ~\$4,000 per customer

Residential solar has been last at the dance; can partnerships change that?

As we noted last summer, high customer acquisition costs for residential solar are estimated at \$2,500/customer and climbing, incentivizing the type of arbitrage between retail electric customer acquisition costs in the low \$100's that JE is now preparing to exploit. Both Direct and Crius Energy Trust (KWH) executed similar partnerships with SolarCity over the past year. However, while JE appears to be going after residential customers, our discussions have indicated that the higher margin opportunities lie with mid-sized C&I instead (mid-high teens IRRs). By comparison, NEE has stated that residential sales tend to hit returns only in the single digits due to high customer acquisition costs and limited scale economics. JustEnergy suggests the returns are actually higher for residential (*we see a real debate emerging – with meaningfully different views depending on the company*). It remains to be seen whether retail partnership strategies can leverage the sales channels to a sufficient degree to reduce these upfront costs and turn residential into an attractive opportunity set for all.

It remains to be seen whether retail partnership strategies can leverage the sales channels to a sufficient degree to reduce these upfront costs and turn residential into an attractive opportunity set for all.

But who owns the customer? Just Energy wants to continue to do so.

Different from Direct Energy and Crius' focus on solar, JustEnergy wants to continue to be responsible for billing the customer through the life cycle of the relationship, allowing it not just to continue to sell its commodity for whatever it does indeed take from the grid, but also other opportunities eventually as well. The thought process is also that retail margins for customers under a solar contract could (quite) meaningfully expand as customers

feel committed (we sense this could be a \$20+/MWh margin opportunity albeit on thinner volumes). It's unclear what other services would yet be 'cross-sold' under these residential relationships.

Rather than selling the customer to a solar company, JE wants to remain the face to customer

Credit remains the key – how low can you go?

With many residential retail customers targeted for residential retail in states with Purchase of Receivables (POR) program, we sense customers with lower credit quality than would typically qualify for solar are typically targeted (not specific to JustEnergy). We suspect up to half of targeted residential customers according to some industry executives could well 'not qualify' for retail based on their credit profiles. Minimums on solar appear to be 680 FICO scores, with some latitude on 650+ of late.

Targeting for retail electric customers is different than solar credit quality minimum.

Asset sales and debt reduction ease pressure as strategy turns to solar

The company closed the sale of subsidiary Hudson Energy Solar Corp (HES) on Nov 5 (to TERP) and expects to close the \$505M sale of National Home Services (NHS) by yearend. The sale of Terra Grain Fuels was closed in Dec 2013. As a result of the exclusion of \$273M of NHS debt (discontinued ops), Debt/EBITDA was reduced from 6.4x at the end of last year to 4.3x in Sept 2014, with a proforma expectation of 3.6x post-closing HES and NHS and an official long-term target of 4.0x (although management aims for something closer to 3.0x in the coming years). Improved cash flow also helps, with the annual dividend cut this year to \$0.50/sh from \$0.84 previously, reducing the payout ratio to ~75% vs a target of <65% that management intends to reach by keeping the dividend flat as earnings rise going forward. The current dividend yield is 9%. Among its capital structure, JE holds a \$105M high yield (9.75%) note maturing June 2018, \$330M convertible debentures maturing June 2017, \$100M convertible debentures maturing Sept 2018, and \$150M convertible Eurobonds. With the high yield note a lower priority (a later maturity), the company plans to negotiate with holders of the convertible debentures to refinance them on more favorable terms, with management stating that the issuance of equity to holders would be undesirable.

The company plans to negotiate with holders of the convertible debentures to refinance them on more favorable terms.

Residential solar and international expansion are core growth targets

With a more national/international profile planned going forward, 3% of customers are in the UK, 25% in Canada, and 72% in the US. NHS was sold as too regional a business, whereas HES was sold as a tax-driven commercial operation that doesn't fit management's plan to leverage the company's sales strength toward residential solar.

Retail contracting trouble appears to have passed; volatility is a friend

EBITDA is driven by customer additions, with no Consumer division gross margins in the first year as customer aggregation costs are expensed (full margins are realized in following years over contracts that typically range 3-5 years). While FY 2014 EBITDA growth was 22% yoy, higher customer attrition in that year has reduced EBITDA growth in the current FY 2015 to single digits. However, high volatility in the gas and electricity markets this year has been a boon to signing up new customers, and JE reports adding a net 194k customers in the latest six-month reporting period, the highest since 2011. This is expected to return EBITDA growth back to double digits next year, with gross margin up 17% in the latest six months ending Sept 2014.

With winter premiums already high, the question is another polar vortex already baked into forwards?

Commodity and weather hedging leave mostly credit risk exposure

Typically, consumer contracts are fixed price and back-to-back hedged, including the use of weather hedges, to lock in margins. Commercial contracts more typically embed variable rate commodity pricing and are therefore largely unexposed to energy market risk. Bad debt expense was up 25% in the most recent six month period due largely to seasonally higher Texas billing, but the company continues to project a full year increase of only 2%-3%.

A note of caution on legal issues -

The company spent \$4M in extraordinary legal costs in 2Q15 to defend itself in Ohio against a class action lawsuit brought by door-to-door sales representatives who claim they are entitled to minimum wage and overtime under Ohio laws and the federal Fair Labor Standards Act. A jury trial was completed on Oct 6 in the plaintiffs' favor, with potential award amounts to be determined separately. About 1,800 plaintiffs opted in to the federal claims and another 8,000 were certified in the Ohio overtime claims.

West Coast Canadian LNG Project Decision Delayed on Cost

Petronas-led Pacific NorthWest LNG stated last week that it would delay a final investment decision for its \$11.4B Lelu Island LNG export terminal in British Columbia. A decision may not be available until early Spring 2015 according to press reports, which also speculate that the announcement could be an attempt to pressure suppliers for the 5-year construction project to reduce pricing in the face of lower oil prices. Roughly \$8B of the project cost is expected to be spent overseas for components. If completed by 2019, Lelu Island would export 12.8M tons per year through two trains. In addition to the export terminal, TransCanada has proposed to build a \$5B, 900-kM pipeline (Prince Rupert Gas Transmission; PRGT) to deliver natural gas to the liquefaction plant. Along with Malaysian Petronas (62% ownership), other partners in the project include China Petroleum & Chemical Corp. (15%), India's state-run Indian Oil Corp. Ltd. (10%), Japan Petroleum Exploration (10%) and Petroleum Brunei (3%).

- **How do we read this for Sempra?** With compressing oil outlook at least suggesting a delay in the ability to contract up export terminals like Cheniere, we flag is putting its credibility to the test in maintaining its confidence in pursuing further contract announcements and MOUs in 1H15. We're cautiously optimistic noting mgmt's confidence on an array of potential counterparties, but note continuing flurry of datapoints around oil should limit meaningful appreciation of shares until its Analyst Day in our mind (we view a YieldCo announcement as only a modest development likely).

As The Wind Blows: PEGI's Latest Thoughts on The Market

Putting the latest wind deals in context

Pattern Energy Group Inc (PEGI) was involved in the process on both the Alta Wind and First Wind portfolios but ultimately was beat out by peer YieldCos, NRG Yield and TerraForm Power, respectively. On Alta Wind PEGI commented that it viewed the CAFD multiple (~12x) as fair for a typical project but management perceived issues on the project level that caused concern.

PEGI passed on both Alta Wind and First Wind deals but for different reasons.

With First Wind, PEGI also thought the YieldCo portion of the portfolio was fairly valued but perceived a larger valuation discrepancy on the developmental side; given FirstWind's development interest in both New England and Hawaii – we see this as the second renewable 'transaction' around the state following NEE. Despite losing out on First Wind, management viewed the transaction as a positive for the industry as the wind businesses continue to mature and the market ascribes more value to the developmental stage of companies – an advancement that would clearly benefit PEGI.

Figure 3: PEGI Current Portfolio

YieldCo's becoming development vehicles directly too?

PEGI "unreservedly believes that investors are okay with owning developmental assets in a YieldCo" if the developer has a track record of success like Pattern does. As of September PEGI owned 214MW of wind under construction between Panhandle 2 and Grand Renewable but Panhandle 2 reached commercial operations last month. While NextEra Energy Partners has recently announced ROFO transactions involving assets not quite in commercial operations (a matter of months), this is typically a strategy not seen in YieldCos currently. Ultimately PEGI views the integrated business model as a strength but the mismatch between its contracted generation cash flows and its development needs was a factor in forming its YieldCo.

Are YieldCo investors growing more comfortable with developmental risk? PEGI believes yes and points to First Wind deal.

For further details on the FirstWind transaction, [please refer to our recent Power Point \(Page 3\)](#).

Expanding its Horizons

Management shared the development cost profile it is seeing across North America which ranged from \$1,500/kW for Panhandle wind to \$3,000-\$3,500/kW for Ontario wind given the very strict permitting requirements. The Northeast US continues to be a market that management monitors but is not a top market given the current return profile. Texas remains attractive following CREZ and it sees further transmission buildout as further supporting more wind opportunities. For example, Pattern's 400-mile Southern Cross Project could support 3GW of additional wind resources. The Conejo solar development in Chile exhibits management's willingness to expand technologies as well as geographies. PEGI continues to focus on the US and Canada but is interested to grow in Chile, Japan, and Mexico. Chile is particularly attractive given the USD-denominated power market with PEGI relying primarily on fixed-price contracts to temper economic concerns.

PEGI sees opportunities to expand in Chile and Japan among other areas.

We agree with PEGI – and **emphasize the Ontario market is likely to prove among the most important markets for future YieldCo project acquisitions and development.** See our latest note detailed write up here.

PTC Certainty -> Looking towards a one-year deal in next couple weeks

PEGI sees credibility to a one-year tax extenders package including PTCs given that there could be too much pushback on Congress' inability to take action. At the end of the day, PEGI believes that as wind becomes more and more economic, the ultimate fate of the PTC is not as large of a factor as it has been in the past. Management appears to favor a mechanism which provides long-term certainty rather than the 'boom/bust' cycle we are currently in. With the ability to safe harbor capacity, the large developers such as NextEra and Pattern are much less exposed to uncertainty in the tax law given their strong financial position.

PEGI sees a one-year PTC extension as most likely, echoing comments we have heard of late.

This would drive an effective extension until end of 2016.

We see a 2-year extension of PTC as much more meaningful. With a 1-year extension of PTCs only really extending eligible through the end of 2014 (too little time to really react), we see sizably more value in a 2-year deal (through end of 2015), which would provide a further 2-years leeway to complete the project (end of 2017). With the PTC contributing quite modestly to the 'cost' of any tax extenders bill we wouldn't doubt it gets a relatively low shake at things

Meanwhile, solar advocates continue to discuss need for comparable legislative safe harbor language to allow for project development – allowing projects to only start construction (~5-10%) capex by *end* of 2016 in order to qualify.

(More) Technological Improvements for Wind to Come?

PEGI has naturally seen the rate of technological improvement for wind turbines slow recently from the ~75% seen in the last five years but still sees robust advancements available in the neighborhood of further 25% (this is in contrast to other industry . A lot of the improvements are incremental which can add ~100bp to capacity factors but it still sees the technological improvements as being a key factor in achieving grid parity with natural gas-fired generation, potentially next decade.

Rate of technological improvement is slowing but mgmt still sees 20%+.

Utility Events in the Week Ahead:

Monday (12/8):

Dial-in: 877 491 0064; Passcode 948845

(2) UBS Access: Conference Call on PJM's Storage Opportunity via Regulation & Ancillary Markets (10AM ET)

Dial-in: 800 728 2056; Passcode: 21741122

(3) UBS: New Jersey Power & Utilities Dinner

Tuesday (12/9):

(1) UBS: Toronto Power & Utilities Dinner

Wednesday (12/10):

(1) UBS Access: Meetings with Electric Vehicle & Solar Expert (NYC)

(2) UBS: Minneapolis Power & Utilities Dinner

Thursday (12/11):

(1) UBS Renewable Equipment Meeting: 2pm

Friday (12/12):

(1) PA/PJM Energy Roundtable: NYC

Timing Uncertain:

Federal: Tax Extenders bill by ~mid-month (*week of 15th is last week under current administration*)

DYN/DUK: Close on pending asset transaction (& DYN/ECP).

Closing in on deal close for Dynegy this month? Clear potential.

As we enter December, we flag the upcoming close of its two pending deals (Duke and Equipower). While mgmt has cautioned deal timing could slip into 1Q, we see a formal close as likely also accompanied by an update (increase) on synergy targets, much as it did with the Ameren Genco (IPH) transaction. We see synergy upside as more in the \$10-30 Mn ballpark initially vs. ~\$40 Mn target delineated initially predicated on implementing best practices across Duke coal portfolio (as well as vice-versa). Having received HSR early termination on Nov 10th, a close remains on track, potentially requiring some behavioral limitations in how plants participate in energy/capacity market. We flag '15 guidance notionally assumes FY of contributions.

www.ubs.com/investmentresearch

This report has been prepared by UBS Securities LLC. **ANALYST CERTIFICATION AND REQUIRED DISCLOSURES AT END OF NOTE.** UBS does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Statement of Risk

Risks for Utilities and Independent Power Producers (IPPs) primarily relate to volatile commodity prices for power, natural gas, and coal. Risks to IPPs also stem from load variability, and operational risk in running these facilities. Rising coal and, to a certain extent, uranium prices could pressure margins as the fuel hedges roll off Competitive Integrations. Further, IPPs face declining revenues as in the money power and gas hedges roll off. Other non-regulated risks include weather and for some, foreign currency risk, which again must be diligently accounted in the company’s risk management operations. Major external factors, which affect our valuation, are environmental risks. Environmental capex could escalate if stricter emission standards are implemented. We believe a nuclear accident or a change in the Nuclear Regulatory Commission/Environment Protection Agency regulations could have a negative impact on our estimates. Risks for regulated utilities include the uncertainty around the composition of state regulatory Commissions, adverse regulatory changes, unfavorable weather conditions, variance from normal population growth, and changes in customer mix. Changes in macroeconomic factors will affect customer additions/subtractions and usage patterns.

Required Disclosures

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage ¹	IB Services ²
Buy	FSR is > 6% above the MRA.	47%	34%
Neutral	FSR is between -6% and 6% of the MRA.	42%	28%
Sell	FSR is > 6% below the MRA.	11%	21%
Short-Term Rating	Definition	Coverage ³	IB Services ⁴
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	less than 1%	less than 1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	less than 1%	less than 1%

Source: UBS. Rating allocations are as of 30 September 2014.

1:Percentage of companies under coverage globally within the 12-month rating category. 2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months. 3:Percentage of companies under coverage globally within the Short-Term rating category. 4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. Market Return Assumption (MRA) is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). Under Review (UR) Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. Short-Term Ratings reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. Equity Price Targets have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; Neutral: Neutral on factors such as structure, management, performance record, discount; Sell: Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction. It is published solely for information purposes; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. No representation or warranty, either express or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in this document ("the Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party.

Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. Investments involve risks, and investors should exercise prudence and their own judgement in making their investment decisions. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors. Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

This document and the Information are produced by UBS as part of its research function and are provided to you solely for general background information. UBS has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. In no circumstances may this document or any of the Information be used for any of the following purposes:

- (i) valuation or accounting purposes;
- (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or
- (iii) to measure the performance of any financial instrument.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

Research will initiate, update and cease coverage solely at the discretion of UBS Investment Bank Research Management. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results. The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS Investment Bank as a whole, of which investment banking, sales and trading are a part.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Subject: Please Deny FPL's Request for Fracked Gas

Dec 8, 2014

Commissioner Eduardo Balbis
FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jacqueline Arias

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jen Wiggs

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

ALL YOU REALLY HAVE TO DO IS CONSIDER PEOPLE (WHO ARE YOUR VERY CUSTOMERS - WITHOUT WHICH YOU WOULD MAKE NO PROFIT) -- CONSIDER PEOPLE OVER PROFIT - IN ORDER TO MAKE MORE PROFIT. DUH! YOU HAVE THE RESOURCES TO GO INTO GREEN ENERGY WHICH BUILDS UP EVERYTHING - INCLUDING YOUR PROFIT. IT'S REALLY QUITE SIMPLE.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Phyllis Fay

Subject: UBS Access: Conf Call on PJM's Storage Opportunity (*TODAY* 12/8 @ 10am ET) *Reminder*
Attachments: UBS Access Conf Call on PJM's Storage Opportunity (next Mon 12 8 @ 10am ET).ics; Stasis Energy_UBS Access_12.8.14.pdf; disclaim.txt

Good Morning,

As a reminder, we will be hosting our call on the **'Merchant' Opportunity for Energy Storage in PJM *TODAY* December 8th @ 10am ET** with Steve Lichtin, Co-Founder & CEO of **Stasis Energy**. The focus of the call will be on the niche of shorter-duration batteries to take advantage of ancillary service and regulation markets in PJM to provide quick dispatch to the grid both up and down. While much of the discussion around batteries has focused on California and load shifting from solar, balancing the grid during shorter duration remains another integral value proposition, with MWs already under development in PJM today. AES' existing storage systems take advantage of the PJM economics for example. We hope you can join us for this timely event.

Please refer to attached slides.

Kind regards,

~Julien

Good morning Clients,

As a reminder, our European colleagues will be hosting a call ***TODAY*** at 9:00AM EST on the latest with European capacity markets as attention turns to Germany. Please refer to below for details; we hope you can join us. ***Slides are attached***

Have a nice weekend.

~Julien.

Conference Call - Capacity markets: What potential for Germany? Monday, December 8th 2014

Capacity markets are a key topic of interest for utility investors across Europe, as several governments are in the process of implementing remuneration schemes for conventional power stations that otherwise would be out of the money. The topic is particularly controversial in German politics, and bulls claim it could be a meaningful swing factor of E.ON's/RWE's earnings in conventional power generation if implemented. We will host a conference call with an expert who consults the German government on this theme.

Host and moderator:

Patrick Hummel, UBS Pan-European Utilities Research

Speaker:

Dr Jens Perner, Associate Director, Frontier Economics

Biography of expert: Jens is Associate Director at Frontier's Cologne office. He provides regulation, competition, market design and strategy advice to clients in North-West Europe. Jens has over 15 years of experience in the energy sector where he has advised a number of:

- Major European energy companies (RWE, EnBW, E.ON, DONG etc.),
- Industry associations in Germany (BDEW/VDEW),
- Public offices, including the German, Austrian, Dutch, Swiss and Luxemburg energy regulators (BNetzA, E-Control, BFE, Elcom and ILR, respectively), the European Commission, the German Federal Ministry of Economic Affairs

Date & Time:

Monday December 8th 2014

New York 09:00 // London 14:00 // Paris 15:00 // Tokyo 22:00

Dial in details for listening are included in the accompanying email. **North American Dial-in: +1 877 491 0064; Conference ID: 948845**

Please see attachment for disclosures and disclaimers.

FL

Dear Commissioner Balbis,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Tonya Andreacchio

We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment? Why can't they expand solar and wind turbine options? We need our state to stay clean with as little pollution as possible.

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Brenda Murray

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Mark Grzegorzewski

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

terry griffo

FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

frederick sall

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Judy Loose

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Alyce Strong

Subject: FPL fracking proposal

Art Graham
Florida PSC Chairman

Dear Chairman Graham,

It is unconscionable for the PSC to consider approving FPL's fracking proposal both from an environmental standpoint and the burden on FPL ratepayers, who would pay for the power company's exploration costs with no guarantee of savings on this risk-filled gamble.

As PSC Chairman, you are morally obligated to be aware of the identified problems of fracking everywhere it is being done -- to the environment (increased earthquakes, decreased water quality), and to human health and well-being -- as well as the heavy potential risks of the Sabal Trail pipeline that would traverse 16 Florida counties.

It is questionable if the PSC even has the authority to approve FPL's request. You already know it would be fought in the courts at a cost to all Floridians. Those who are FPL customers also would underwrite their self-serving efforts with \$750 million raised through rate increases that FPL says will allegedly save money 'over the next 50 years.'

I am an FPL customer with a condo in Ft. Myers, recently retired and on a budget like multiple thousands of FPL ratepayers. Will the PSC force us to fund such a risk that has no assurance of success and may literally do great harm to environmental/human health from Oklahoma through Florida? Duke and other power companies are watching, hoping the commission you chair will set a precedent that would allow them to follow suit.

Environmentalists country-wide and many FPL customers also are intently watching the PSC, especially its leader, to protect the people and land from this dubious, profit-seeking misadventure.

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

In addition to these risks, this project could cost customers an estimated \$750 million a year, while allowing Florida Power & Light to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Vickie Machado

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Jann Levin

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

NO FRACKING IN FLORIDA - LAND OF THE SINKHOLES. Ask any property insurance company - they know fracking results in tremors, earthquakes and unstable ground. We all know that oil companies do not pay for the damage they cause. Citizens do not want to pay for damage caused by oil companies.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Linda Kirkland

Subject: Please Deny FPL's Request for Fracked Gas

Dec 6, 2014

Chairman Art Graham
FL

Dear Chairman Graham,

I urge you to deny Florida Power & Light's request to get into the gas drilling business by investing in drilling companies like PetroQuest.

If this request is approved, Florida Power & Light could start investing in the extraction of natural gas. Drilling for natural gas or oil using a form of extreme extraction known as fracking can contaminate air and water and endanger public health.

Reports say this investment would be funded by customers, while Florida Power & Light would be able to reap a 10.5% profit.

This proposal could also encourage the development of more fracking across our region. Fracking has been shown to be inherently unsafe and would have negative economic and environmental impacts for all Floridians.

Just recently, a bill was introduced by Senators Soto and Bullard that would ban fracking in the state of Florida. We are closer than ever before to doing away with this dangerous form of energy extraction. Why should we devote money to unsustainable energy when we have the ability to invest in local, renewable energy that would promote Florida-based jobs, lower energy costs and offer a more sustainable option for the environment?

I urge you to protect the people of Florida by denying Florida Power & Light's request for fracked natural gas.

Sincerely,

Dan McCarthy

Dear Florida Public Service Commission:

FPL's proposal to charge its customers for an investment in gas production is insane. It is beyond current law and policy and way beyond their expertise and control in a highly complex, competitive business and market.

Please save us and them from themselves.

Sincerely,

Lee Denson

Florida Public Service Commission

Dear Florida Public Service Commission:

I have a home in Southwestern PA where hydraulic fracturing has reeked havoc with the environment. The state of PA did not act quickly enough to put necessary regulations into place before the rush and it is now too late to out the genie back in the bottle. It has not lowered our fuel prices nor has it been good for landowners who were tricked into "selling" their mineral rights to big drilling and production companies from out of state at laughably low prices. Now that the industry has its foothold, local communities are trying to fight back but it's a slow and unrewarding process. Florida Power should stay away from this loser of an idea and under no circumstances should attempt to pass along its exploratory costs to consumers. The Commission can and must prevent this.

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Margaret Bryant

Dear Florida Public Service Commission:

We do not support oil exploration in other states or in Florida at the expense of taxpayers. Florida's ecosystem is so fragile already, the aquifers not adequate for our overdevelopment, and the Everglades shrinking by the minute. This is unconscionable . Drilling in the Everglades, mining for limestone, and now the potential for fracking exploration? Where is our sense of preserving what minuscule amount of natural beauty we have left and protecting the health of our residents? Putting Economic interests above environmental stewardship is of the lowest moral character. Please stop this nonsense!!

June Miller RN. PhD

Comments:

There is absolutely no way that citizens of Florida should pay any type of anything for FPL to start fracking in our great state. Do the research on how bad fracking is for end results - our land here in Florida cannot sustain fracking.... would you like to see the entire state of Florida underwater, full of sink holes? Then allow fracking to happen - majority of Floridians do not wish to have this in the state.

Subject: No FPL Fracking

This taxpayer and voter strongly opposes fracking anywhere anytime but especially opposes it in Florida!

Let's get with the times and become a leader in solar and wind energy...we certainly possess the means. Not only will we slash our carbon output, we'll establish jobs across new sectors.

To borrow an axiom from Monday Night Football...Come on Man!

Florida Public Service Commission

Dear Florida Public Service Commission:

As a Florida Power and Light (FPL) customer and Floridian, I am writing to respectfully request that you deny the FPL Woodford proposal and associated proposed guidelines that would allow FPL to charge its customers to get into the business of oil and gas production. This proposal is bad for FPL customers as well as Florida's environment and tourism-based economy.

FPL's request to use Advanced Cost Recovery to allow it to charge up to 750 million to its customers for oil and gas production is completely outside of the appropriate use of that provision, and really constitutes new law and policy beyond the scope and authorities of the Public Service Commission.

The FPL Woodford proposal will not protect its customers from fluctuating gas prices as those are based on market forces and cost of production well outside FPL's control. This proposal cannot guarantee the savings it promises to FPL customers and FPL is not experienced or knowledgeable in the oil and gas production, making this unacceptably financially risky to its customers like me.

Not only should the Woodford proposal be denied due to it being completely procedurally inappropriate and excessively financially risky, but it would set a dangerous negative precedent in allowing other utilities to follow suit and FPL to pursue other gas projects funded by its customers without having regulatory review and approval. This is completely unacceptable and we urge you to deny this proposal accordingly.

Thank you for your time and consideration of my input on this important decision and I am counting on you to protect Floridians by denying FPL's Woodford proposal.

Sincerely,

Patricia Holt

A Division of the American Petroleum Institute

DAVID R. MICA, Executive Director
Eric R. Hamilton, Associate Director

December 2, 2014

Chairman Art Graham
Florida Public Service Commission
2540 Shumard Oak Blvd.
Tallahassee, FL 32399-0850

Dear Chairman Graham:

As Executive Director of the Florida Petroleum Council, I want to commend the Public Service Commission's discussions associated with the use of natural gas as a growing source of energy generation in Florida, such as the discussions on Florida Power & Light Company's petition regarding Fuel and Purchased Power Cost Recovery with Generating Performance Incentive Factor (Docket number 140001-E1). Natural gas has provided Floridians with a reliable, clean source of electricity for decades, and the use of natural gas as an economic driver is projected to expand in the future.

As you are aware, America is experiencing an energy renaissance as a result of technological advances in the oil and natural gas industry that has been a significant economic driver. Exploration and production delivered \$476 billion to the U.S. economy in 2010—equal to roughly 60 percent of the 2009 federal stimulus. It's a stimulus that didn't need an act of Congress and which, with the right policies, can be repeated over and over—helping to drive broader economic recovery. Floridians are beneficiaries of increased domestic access to oil and natural gas that goes beyond lower prices. For example, Berg Steel Pipe Corporation in Panama City announced just this month that it will be adding 175 additional employees to the payroll related to two major contracts to provide 1600 miles of pipe for natural gas pipelines.

With a surplus of any commodity comes an interest in expanding its use. The Legislature passed and the Florida Department of Agriculture and Consumer Services is implementing incentives to convert trucking fleets from diesel fuel to natural gas. The five year program has already been successful in doubling the number of fueling sites with additional projects planned. As the density of fueling locations continues to increase, the incentive to convert more vehicles to natural gas could be compelling.

The U.S. Department of Energy has also begun approving permits for LNG export facilities. Again, Florida will benefit as one of the facilities planned by Carib Energy, which is authorized

to ship up to 40 million cubic feet per day, will be constructed in Martin County. Natural gas exports will improve the U.S. balance of trade and encourage additional exploration and production further adding to the U.S. economy.

The natural gas revolution has also reversed decades-long trends of locating chemical and manufacturing plants overseas. The less expensive energy and feedstock potential has made the U.S. competitive and promises to further propel the economy forward.

Floridians, as well as Americans in general, will reap the benefits of policies that open additional domestic resources for oil and natural gas that leads to further energy security. In addition to providing reliable and affordable energy, clean burning natural gas has the potential to positively impact our economy in many ways.

Sincerely,

REFERENCE DOCKET NUMBER 140001-EI

Yes folks, its another grand deception foisted upon the average person by Florida Power and Light (FPL) to get in on the latest and proven the worst technology, fracking without having to be responsible for anything and still making big bucks.

If anyone has read their June 25, 2014 “press Release” there are 5 simple paragraphs vaguely describing how great a deal this is for NextEra Energy, Inc. The company name and the content of the proposal just don’t seem to ring true, but then nothing with FPL ever does.

Now the “CAUTIONARY STATEMENTS” portion of the release is hysterical. NextEra, FPL and anyone who has ever heard of them are absolved from everything. It appears some first year law student used every adjective and adverb they could find in the dictionary. I am surprised they left out “our executives don’t have to tell anyone who they work for”.

FPL’s proposal is as phony as those who run the company. You can hear them in the board room “let’s partner up with an Oklahoma Company and let them poison and destroy aquifers while we stand proud with our bright Chiclet teeth and say we only bought gas from them because we always do what’s best for our rate payers”.

The best part is, these FPL mental magicians want the ratepayers to fund this “Wally World” adventure in proven junk science and deadly practices. I just love the thought of contributing to other people misery with my money. But no worries its in Oklahoma not Florida, “where we are leaders in our industry”.

BEWARE!!! When one reads very carefully, FPL wants way more than just this approval for Florida. This is just their impolite dipping their toe in the water to see if the State has any guts to tell them to get lost.

What a load of MEADOW MUFFINS! This poorly managed and ill conceived project and company, would have you believe its best for

all involved. Best for whom? Me? I didn't exercise \$5 million dollars in stock options as one "senior management" person did in 2013.

Ask FPL if they have any data on fracking in upstate New York where wells are being polluted and destroyed and water is trucked into some areas. Did they check for clusters of epidemiologic data about illnesses in areas where fracking occurs?

Why these sneaky little imps don't have too, after all it's just a "partnership". A partnership with proven deadly potential, what could be better for Florida than lending support to the exportation of death to other states. But the smiling men of FPL will tout the lowest rates in Florida while some family in Oklahoma will have no potable water and unexplained illnesses.

I urge the PSC to deny FPL's lame attempt to export its own "poisonous" propaganda to us and real poison to other states.

NOTE TO PSC: Here come the Tar Sands Requests next.

Good Morning Public Service Council,

My name is David Weaver and I am a resident of Fort Myers, FL. I read an article today in our local news paper about FP&L plans to have customers pay for Fracking in Oklahoma. I feel this is dangerous and wrong on many levels and I am opposed to it as a Citizen of the State of Florida.

Subject: CONCERNED CITIZEN AND DUKE ENERGY CUSTOMER

Good morning,

As a Pinellas County native and life long resident, I am very concerned to learn that Duke Energy, along with FP&L are proposing rate increases to their consumers to "explore fracking". This is alarming considering Duke's customers have already paid billions of dollars for a failed nuclear project without refund. Not to mention the potentially harmful effects to our precious environment that fracking can cause.

Instead of spiking our energy rates to pay for this endeavor and cutting renewable/efficient energy programs, we should be investing in renewable energy, and rewarding companies and consumers who invest in it.

This is an outrage, and as a resident and tax payer, I'm asking the Commission to deny the proposal from Duke and FP&L, and have encouraged everyone that I know to do the same.

We will not stand for being raped by a huge corporate monopoly that will benefit no one but said company.

Comments:

I am writing to express my opposition to the proposed FP&L venture to pass the costs and RISKS of Fracking for Natural Gas on to its customers. Corporations MUST BEAR the RISK for their own Ventures! The current drop in oil and gas prices makes fracking a losing venture! The alleged reserves in the Woodford Shale Region have been proven to be exaggerated by a factor of 10. Keep in mind Exxon/Mobil just lost 900 million in Romania on overestimated shale reserves. If FP&L had any REAL FAITH in this venture they would accept the risks themselves. The alleged savings over 50 years would seem to amount to a few

dollars per year to each customer while the risk could be more than 750 million per year to the body of customers. This amounts to Corporate Theft allowed by Public Servants! Serve the people and nip this debacle in the bud.

Commissioners ,

Fracking destroys the water supply of every area where it is being utilized. This is not the way to go. FPL and every company involved with Natural Gas fracking is risking our water supply now and in the future. It is not worth the trade off. FPL is supposed to diversify its portfolio and 62% Natural Gas use is not diversification. You need to do your job and make FPL diversify. There are many ways to produce electricity and it is your duty to make sure FPL does not rely on one source only. Regards
Alexandria Larson

COMPLAINT INFORMATION

Complaint: Other Complaint against Duke Energy Florida, Inc. d/b/a Duke Energy
Details:

I am a small business owner who has not taken a pay check in over 3 years. I would like to know who is responsible for the electric bill of my business increasing 82% per KWH. I am on a demand rate and my understanding is that a rate change increasing the fuel and demand charge and decreasing the energy charge was approved by the PUC. What resulted was although I used 205 KWH less in December than November, my bill was \$155.45 (58%) higher. When I called the Duke Energy company they recommended that I switch to a flat rate to eliminate the demand charge. It still would have been a substantial increase.

My complaint is the total disregard for the results of your actions. What will happen when the summer comes and the airconditioning usage kicks in. What plans are in place to undo this mess. My business can not withstand this increase.

COMPLAINT INFORMATION

Complaint: Improper Billing against Duke Energy Florida, Inc. d/b/a Duke Energy

Details:

Dear Florida Public Service Commission,

Since Duke Energy failed to respond on a timely basis to my request, I have no alternative but to address my concerns regarding Duke Energy directly to you. As a frugal consumer I monitor my usage and consumption closely and when saw that my January 2014 electric bill had double in cost I was quite upset. I understand that Duke Energy presented before your commission to authorize an additional seven (7) percent increase in their billing rates to Duke Energy customers and this percentage was passed and now customers such as myself are struggle to pay these highly outrages bills. I am requesting an immediate credit adjustment on my Duke Energy utility bill.

How could you have allowed this to happen when Duke Energy has already fleeced almost \$1 billion from its customers? Since you and your commission alone have allowed these funds to be collected while the energy companies have perpetrated outright lies, it is up to you to correct both past and future funding mistakes. A starting point would be to force Duke Energy to begin providing credits on their Florida customers bills on a monthly basis in order to reverse the funding errors you allowed to happen. If you allow the seven percent rate increase, I demand that you mail me a copy of Duke Energys presentation and your reasons for approving same; along with the voting records of each commissioner regarding this matter.
