Re: Docket No. 140158-WS – Application for increase in water and wastewater rates in Highlands County by HC Waterworks, Inc. – Response to OPC’s Letter of Issues and Concerns – Contractual Services and Staff’s Third Data Request

Dear Commission Clerk,

HC Waterworks, Inc. (HC Waterworks) hereby submits its response to the Office of Public Counsel’s (OPC) letter of Issues and Concerns dated March 13, 2015 as well as Staff’s Third Data Request concerning Contractual Services.

Accumulated Depreciation

Order No. PSC-14-0314-PAA-WS (Transfer Order) established HC Waterworks’ rate base. This order was issued as a Proposed Agency Action (PAA) which had a protest ending July 4, 2014. No party including the OPC protested the Transfer Order and Consummating Order No. PSC-14-0351-CO-WS, was issued on July 9, 2014 making the Transfer Order final.

The Transfer Order required the utility to update its general ledger and provide proof of compliance. Thus, the Ordering paragraph of the Transfer Order required HC Waterworks to adjust its books to reflect the rate base approved by the Commission. (page 9) The order cited by the Office of Public Counsel, Order No. 20066, issued September 26, 2008 is discernible and contains a distinct difference than HC Waterworks transfer docket. The Order states:

The utility has also failed to ensure that plant items are recorded in the proper accounts. Staff auditors encountered numerous errors during the audit. The errors discovered by the auditors and agreed to by the utility include the utility’s failure

5320 Captains Court, New Port Richey, Florida 34652

Tel: 727-848-8292

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

to correctly record plant asset retirements and its inappropriate classification of plant accounts, thereby necessitating numerous reclassifications.

In addition, Utilities, Inc. failed to obtain detailed property records from the predecessor owner of the utility. The NARUC Uniform System of Accounts states:

When an existing water system or operating unit is acquired, the utility shall be obligated to obtain, from the party acquired from, all existing records, including records of plant construction dates and costs, and records of accumulated depreciation applicable to such properties.

That is not the case in HC Waterworks' transfer. All records were obtained from the previous owner and were given to the PSC staff auditors during the audit.

The Order continues by stating, "We concur with the utility that the adjustment was overlooked in the two prior audits by our auditors. However, we believe there is ample evidence in the record which supports an adjustment to accumulated depreciation." And also, "Thus, evidence in the record indicates the adjustment was inadvertently overlooked in prior audits."

Again, this is not the case with the HC Waterworks transfer. The auditor did recognize and audit the accumulated depreciation and in fact made a finding on such. The staff of the PSC had this information and the audit finding when making its recommendation to the Commission for decision. It is evident that the previous owner Aqua Utilities Florida, Inc. (AUF) over depreciated these items. However, the purchase price paid to AUF was based on its book value of rate base. HC Waterworks cannot now go back and requests a refund of the monies paid for the purchase.

The Order further states:

Thus, the record is silent as to the actual purchase price paid for this utility. Public Counsel therefore asserted that because the utility has not established its net cost at closing it has not established the harm it suffers by establishing rate base in this docket, in fact rate base may be higher than net closing cost.

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

Again, that is not the case in the HC Waterworks transfer. This was a purchase of assets, not stock. Further the purchase price was well known and disclosed in the transfer application.

The Order also states:

The recognition of net book value in the transfer docket was, arguably, not a necessary or material issue. Certainly that "recognition" is not identical to the specific issue before the Commission in this case: during the transfer case, the Commission was not aware of the accumulated depreciation adjustment that is here at issue.

The Order continues:

Likewise, the commission has the power to modify, and, indeed, it is its duty to modify, its pre-existing orders, when new evidence is presented which warrants a change.

To the extent that prior staff audits did not identify the accumulated depreciation adjustment here at issue, such audits were simply in error. Where fraud, surprise, mistake or inadvertence is shown, the Commission must have the power to alter previously entered final rate orders under extraordinary circumstances. *Richter v. Florida Power Corporation*, 366 So. 2d 798 (2nd DCA 1979), at 800 Proof of a material mistake of fact may prevent the application of the doctrine of *res judicata*. *Gator Shoe Corporation v. Mungia*, 510 So. 2d 1192 (1st DCA 1987)

Again, that is not the case here. There has been no "new" evidence presented and there were no errors in the PSC audit. As previously stated, the audit report fully explained the finding and the staff of the PSC had this information when making its recommendation to the Commission for approval.

The removal of these amounts affect other accounts, not just the Accumulated Depreciation. The removal would also affect the utility's common equity in that it would have the effect of reducing "Additional Paid in Capital" thus reducing the owner's equity and return without leaving any means of recourse for recovery. HC Waterworks would

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

agree to write off these amounts as amortization over a 5 year period with the inclusion of such in the current rate case and resulting rates.

Bad Debt Expense

See HC Waterworks response to OPC's letter of concern – Document No. **01488-15** filed on March 17, 2015. HC Waterworks no longer utilizes a 2% of revenues since it now has operational reports to reconcile to. The bad debt expense is based on the Aged Accounts Receivable Report and reconciled monthly. The bad debt write offs will be filed under separate cover letter requesting confidential treatment due to the customer names, account number, and address.

Administrative Services

It is important to note that as previously addressed in several submitted letters concerning contractual services, for the “Administrative Services” portion, this is derived at by using all currently owned or purchased private regulated utilities and dividing these amounts by the existing ERCs **and future potential ERCs** through growth and potential acquisitions. Thus these costs are lower than actual costs since there is a growth factor of 1,000 ERCs built in for potential acquisitions in the future that have not taken place. If the actual costs were recovered through the actual number of ERCs, the amount per ERC would be higher. These amounts are to cover the monthly operational and administrative expenses for all the regulated utilities, both present and future.

In addition, for the Administrative Services included in the current rate case for HC Waterworks, there are no salaries included for the Manager of Regulated Utilities. The only two employees included in the current rate case include a Utilities Manager and an Accountant. The Utilities Manager oversees the daily operational items of each regulated utility, as well as the

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

future capital improvement requirements. This individual also interacts with the field employees of the Department of Environmental Protection, local Health Departments, Public Service Commission, and the various Water Management Districts. The Utility Manager also interacts with the customers of the various regulated utilities. The Accountant performs all accounting and reporting requirements of the regulated utilities. This includes daily transactions in accounts payable, accounts receivable, bookkeeping, financial statements, etc. The Manager of Regulated Utilities oversees all aspects of each regulated utility and supervises both the Utility Manager and Accountant. The Manager of Regulated Utilities also is responsible for all governmental reporting with the various agencies, including the Public Service Commission. As previously stated, there are no costs associated with this position in the current rate case.

Recently U.S. Water Services Corporation undertook an in-depth analysis of the actual contractual costs of each regulated utility, as well as the administrative costs. The actual Administrative Costs, including the addition of *potential* future ERCs of 1,000 amounted to \$4.52 per ERC per month for the regulated utilities. In the current rate case, the administrative portion of the contractual services was \$3.23 per ERC per month, which is \$1.29 less than the actual costs. For the costs included in the current rate case, if the 1,000 future non-existing ERCs were eliminated, the cost would be \$3.85 per ERC per month. Therefore, in the current costs included in the rate case, U.S. Water Services is subsidizing the regulated utilities by \$38,772 a year by not passing these costs to the existing customers.

In February 2015, U.S. Water Services finalized its in-depth analysis of contractual costs. For HC Waterworks the actual costs water were \$220,787 and wastewater were \$59,037. These again included the *potential* future 1,000 ERCs that do not exist. Thus the utility is being subsidized by \$21,126 for water and \$493 for wastewater.

ADMINISTRATIVE

Salaries

1. The administrative costs include salaries for two positions – Utility Manager and Accountant. We believe that these have been indicated to be annual salaries (see Document No. 02749-14 filed in Docket No. 130194-WS, page 6). Why is overtime included at 5% of the total salary for positions that are salaried?

Response: This was an oversight. The elimination of this oversight reduces the overall administrative costs by \$6,750.55 and lowers the per ERC costs to \$3.14 per month. However, if the 1,000 *future* potential ERCs which currently do not exist is also eliminated, the cost per ERC would be \$3.74 per ERC per month. Therefore, the existing customers are still receiving the benefit of economies of scale by U.S. Water including ERCs which do not exist. The overtime inclusion for Administrative Services has been eliminated in the current Administrative costs models for future revisions to contracts.

Miscellaneous Services:

2. The administrative expense includes salaries for two full time positions. However, the “Organizational and Business Dues and Fees” appears to be based on 2.75 full-time employees (FTE). Are these fees related to the two salaried employees included in the administrative expenses? Why are they applied to 2.75 FTE’s?

Response: There currently are three (3) full-time employees directly responsible for the administrative services of all regulated utilities who charge their time to the regulated utilities. However, there are several other services provided to the private utilities which are not charged to the utilities through the contract amount. Examples are these are engineering and compliance. Although these services are included in the contract, there are no dollar amounts for personnel (employees) included in the contract amount. The engineering services include permitting for both FDEP and the WMDs. These services are provided under Section 2.19 of the U.S. Water contract, but there are no dollar amounts included in the monthly or annual fees. If the utility were to provide this function on a stand-alone basis, there would be additional operation costs associated with this which would be eligible to pass onto the customers as a prudent utility expense. Although the actual cost for permit renewals paid to the state agencies are included as an amortized amount (over the life of the permit), no employee salaries or hours are included. Engineering services would only be included as part of major capital projects if needed. The engineering services would be included in the event of an overall capital project, such as a wastewater plant rehabilitation or replacement or a water treatment system rehabilitation and/or replacement which would be over the \$400 monetary threshold.

The 2.75 FTEs included a portion of a “Compliance” FTE and a portion of an Administrative Assistant. However, there are currently 3 full-time FTEs over the regulated utilities. If the “Organizational and Business Dues and Fees” were lowered to 2

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

full-time employees, the amount of the administrative costs would be lowered by \$16.41 annually and the per ERC monthly cost would remain unchanged.

3. The "Radio and Phone Service" expense is also based on 2.75 FTE's. Are these fees related to the two salaried employees included in the administrative expenses? Why are they applied to 2.75 FTE's?

Response: See response to No. 2 above. If the "Radio and Phone Service" were lowered to 2 full-time employees, the amount of the administrative costs would be lowered by \$757 annually and the per ERC monthly cost would be lowered by \$0.01. However, if the 1,000 *future* potential ERCs which currently do not exist is also eliminated, the cost per ERC would be \$3.83 per ERC per month. There are currently 3 full-time employees over the regulated utilities.

Vehicles:

4. The administrative expense includes salaries for two full time positions. The "Vehicles & Fleet" expenses appear to be based on 1.25 F-150 Trucks. What is the 1.25 based on. Does the accountant make use of a vehicle? If so, what is the justification for the accountant to use a vehicle?

Response: Yes the accountant utilizes a vehicle on certain occasions. This occurs when information is transported to either the outside CPA firm or the post office. In addition, there are no costs included for the Manager of Regulated Utilities vehicle in the current rate case. This has been revised and updated in the most recent revised Administrative Services cost model. This represents a current savings to customers of approximately \$13,500 annually in the current rate case.

5. The "Fuel and Gasoline" expense appears to be based on an expense of \$1,100 per month. This appears high. Using a conservative estimate of 15 mpg and a \$3 per gallon cost, this appears to be about 5,500 miles driven in a month or about 275 miles a day. We believe the utility should justify how this expense was developed.

Response: Based on the most recent analysis, the actual monthly costs for the Administrative Services should be \$479. This is based on the actual fuel costs for 2014 of \$5,745.44. This revision results in an annual reduction of \$9,318 and a reduction in the per ERC costs to \$3.11. However, if the 1,000 *future* potential ERCs which currently do not exist is also eliminated, the cost per ERC would be \$3.70 per ERC per month. Also the actual costs are \$4.52 per ERC monthly.

6. The "Vehicle Maintenance" expense also appears high. This appears to be based on \$200 per month (or \$2,400 per year) for each vehicle. What is the age of the vehicles that require this level of maintenance? We believe the utility should provide all historical expense data used to support this calculation.

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

Response: The actual 2014 costs for Vehicle Maintenance for the Utility Manager was \$1,204. See attached invoices. This position changed vehicles during 2014. The first vehicle was a 2004 model and the current vehicle is a 2011 model. This would result in an annual reduction of \$1,500 and a reduction in the per ERC costs to \$3.21. However, if the 1,000 *future* potential ERCs which currently do not exist is also eliminated, the cost per ERC would be \$3.82 per ERC per month.

HC Waterworks, Inc.

Tools, Materials, and Supplies

6. What is included in this expense? The monthly amount for the water system of \$400 seems high. We believe the utility should provide all historical expense data used to support this calculation.

Response: There are numerous items included in this expense. For starters, all trucks are outfitted with a tools and supplies. See attached listing for initial outfit which totals \$4,108.81. This equates to \$342 per month. In addition, this includes miscellaneous items such as fittings, couplings, piping, elbows, clamps, saddles, etc., and various items to make necessary repairs to the utility's water and wastewater systems. The total costs of these items would be \$1,367.55. See attached list. Thus the total costs would be \$5,476.36. Therefore, HC Waterworks is receiving a subsidy of \$676.36. Since all repairs and/or replacements under the \$400 threshold are included in the annual contract amount and not charged individually to the private utility, the recorded capital is kept to a minimum and the rate base also reflects lower amounts. If each repair/replacement under \$400 was recorded pursuant to the Class C USOA provisions, this would allow an additional return on these amounts in rates. Thus, the owners of both US Water and the private utilities (including HC Waterworks) believe the \$400 monetary threshold provision in the USOA was appropriate for all the private regulated utilities since it provides a benefit to the customers of each utility. This is also consistent with how each regulated utility is being accounted for under the USOA. Each regulated utility is required to maintain their accounts and records under the USOA pursuant to Rule 25-30.115, Florida Administrative Code. Thus, this agreed upon monetary threshold is consistent with the Class B, USOA.

Generator Diesel Fuel

7. How is the water expense of \$200 per month for each generator calculated? Does the utility run each generator at each plant every month? How many hours each month is the generator run and what is the cost and quantity of the fuel used? We believe the utility should provide all historical expense data used to support this calculation.

Response: The generator is tested weekly. This is required by DEP for proper operation of the stand by power. There are three generators at HC Waterworks. The fuel costs were originally estimated at \$200 per month. However, each generator must be tested for 1 hour per week for each generator for a total of 12 hours per month. The

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

generator at Sebring Lakes utilizes an average of 7.4 gallons per hour (100 Kw); the generator at Lake Josephine utilizes an average of 9.1 gallons per hour (125 Kw); and the generator at Leisure Lakes utilizes 2.25 gallons per hour (25 Kw). That would equate to \$675 a month for all three generators based on \$3.00 per gallon. (18.75 gallons X 12 hours X \$3.00). The gallons were obtained from "GeneratorJoe.net" fuel consumption based on size of generator. Therefore, the cost included in the contracted amount does not cover the actual cost for generator testing.

Rule 62-555.350(2), Florida Administrative Code (F.A.C.) states:

(2) Suppliers of water shall keep all necessary public water system components in operation and shall maintain such components in good operating condition so the components function as intended. Preventive maintenance on electrical or mechanical equipment – including exercising of auxiliary power sources, checking the calibration of finished-drinking-water meters at treatment plants, testing of air or pressure relief valves for hydropneumatic tanks, and exercising of isolation valves – shall be performed in accordance with the equipment manufacturer's recommendations or in accordance with a written preventive maintenance program established by the supplier of water; however, in no case shall auxiliary power sources be run under load less frequently than monthly. (emphasis added)

Finally, Rule 62-555.350(15)(d), F.A.C. states,

(15) Suppliers of water who own or operate a community water system serving, or designed to serve, 350 or more persons or 150 or more service connections shall develop a written emergency preparedness/response plan in accordance with Emergency Planning for Water Utilities, AWWA Manual M19, as adopted in Rule 62-555.335, F.A.C., by no later than December 31, 2004, and shall update and implement the plan as necessary thereafter. Said suppliers of water shall coordinate with their Local Emergency Planning Committee and their Florida Department of Law Enforcement Regional Security Task Force when developing their emergency plan and shall include in their plan all of the information in paragraphs (a) through (e) below.

(d) Details about how the water system meets the standby power requirements under subsection 62-555.320(14), F.A.C., and, if applicable, recommendations regarding the amount of fuel to maintain on site, and the amount of fuel to hold in reserve under contracts with fuel suppliers, for operation of auxiliary power sources.

Calibration

8. The Calibration expense is included at \$1,200 per year for the water system and at \$360 per year for the wastewater system. What is being calibrated and how often is the service performed? We believe the utility should provide all historical expense data used to support this calculation.

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

Response: See attached Quote from Universal Controls. HC Waterworks has accepted this quote and will be utilizing this vendor on the water meter calibrations. There are a total of 6 well meters and 3 distribution meters. This contractor charges \$1,200 for the 9 water meters; (3) at Lake Josephine; (3) at Sebring Lakes; and (3) at Leisure Lakes. These meters must be calibrated annually. For the wastewater calibration, this is accomplished in house utilizing U.S. Water Services personnel. The travel time is based on 326 miles for 5 hours. The actual time to calibrate is 1 hour for a total of 6 hours. The Technical hourly rate is \$73.37 based on the Schedule of Fees. Total amount of calibration amounts to \$441.23 annually. (6 x \$73.37). The \$73.37 hourly rate is based in Attachment G of the U.S. Water Contract.

U.S. Water utilizes the RSMeans® Heavy Construction Cost Data to conduct cost analysis. Typically the fees charged by USW are under the RSMeans® costs. RSMeans is a construction estimation database that is used by professional estimators for up to date labor, materials and overhead costs for specific project types and locations. Since 1942, RS Means has been actively engaged in construction cost publishing and consulting throughout North America. RS Means collects data from all facets of the industry, including both the private and public sectors, including federal, state, and municipal agencies, corporations, institutions, construction management firms, hospitals, and associations.

RS Means is the national leader for custom database development to fit any construction or facilities management situation. RS Means has developed and maintains a global cost estimating database for the U.S. Army Corps of Engineers and the Department of Defense. Means has developed a cost index for various building types for the U.S. Department of Labor, Bureau of Labor Statistics.

Further, USWC currently has over 400 service contracts with various cities, counties, federal agencies, private corporations, FGUA, etc. These contracts were subject to the competitively bid process across the state. Thus these contracts were openly bid throughout the open market and were selective through the competitive bid processes of the various statewide clients. Ultimately for these similar contracts, USWC was selected through this open market process for the same type of service, thus demonstrating that its charges and fees for services are below market.

Vehicles

7. The Fuel expense appears to be based on an expense of \$450 per month per vehicle. This appears high. Using a conservative estimate of 15 mpg and a \$3 per gallon cost, this appears to be about 2,250 miles driven in a month or about 112 miles a day. We believe the utility should justify how this expense was developed.

Response: The actual fuel costs for 2014 for the operator for the six month period July through December 2014 was \$2,473 semi-annual or \$4,946 annually. The actual fuel costs for 2014 for the maintenance technician for the six month period July through December 2014 was \$1,723 semi-annual or \$3,446 annually. This totals \$8,392 annually or \$699 a month. See attached Fuel Purchased Report from Fleetmatics for each employee. U.S. Water Services changed vehicle vendors during 2014 to Fleetmatics.

HC Waterworks, Inc.
Response to OPC Letter of Concern &
Staff Third Data Request

8. The "Vehicle Maintenance" expense also appears high. This appears to be based on \$200 per month (or \$2,400 per year) for each vehicle. What is the age of the vehicles that require this level of maintenance? We believe the utility should provide all historical expense data used to support this calculation.

Response: The actual 2014 Vehicle Maintenance expenses for the vehicles utilized for operations and maintenance of HC Waterworks was \$4,730 which equates to \$394 per month for 2014. See Attached Invoices. The vehicle models are a 2007 and a 2008. Thus HC Waterworks is receiving a subsidy of \$2,330 by not passing these costs onto its customers.

Computer Network Systems

9. This expense category includes a line item for "Replacement Hardware" and a line item for "IT Service & Repair to Central Network System". Do these items relate to the same systems? It seems unusual that the service expense is almost as much as the amortization of the hardware costs. What is included in each of these line items? We believe the utility should provide all historical expense data used to support this calculation.

Response: Operator utilizes a laptop computer and the maintenance technician utilizes a tablet. These are required to receive work orders, to complete work orders, to compile required monthly operating reports by state government agencies, and to receive e-mails. The replacement costs included are for 3 year replacements of these items at \$2,100 a piece. The "IT Service" costs are for the ATT&T wireless aircards to provide communication to the laptop and tablet. Due to the remote location of these systems in Highlands County, the aircards are necessary for the laptop and tablets.

Respectfully submitted,

Troy Rendell

PROPER CAR REPAIR AND YOUR SATISFACTION ARE BOTH IMPORTANT TO US. THE WORK WE PERFORMED IS IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATION, GOVERNMENT REGULATIONS AND OUR PRIDE OF WORKMANSHIP. PREVENTATIVE MAINTENANCE IS THE LEAST EXPENSIVE COST OF OPERATING YOUR CAR. LET US SERVICE YOUR CAR REGULARLY TO PREVENT AS MANY MECHANICAL FAILURES AS POSSIBLE. Thank you for giving ALAN JAY CHEVROLET • OLDSMOBILE • CADILLAC • CHEVY TRUCKS Service Department this opportunity to service your automotive needs. If you have any question about your bill or are not completely satisfied with the repairs as performed, please contact your service advisor or our customer relations representative.

PROPER CAR REPAIR AND YOUR SATISFACTION ARE BOTH IMPORTANT TO US. THE WORK WE PERFORMED IS IN ACCORDANCE WITH THE MANUFACTURER'S SPECIFICATION, GOVERNMENT REGULATIONS AND OUR PRIDE OF WORKMANSHIP. PREVENTATIVE MAINTENANCE IS THE LEAST EXPENSIVE COST OF OPERATING YOUR CAR. LET US SERVICE YOUR CAR REGULARLY TO PREVENT AS MANY MECHANICAL FAILURES AS POSSIBLE. Thank you for giving ALAN JAY CHEVROLET · OLDSMOBILE · CADILLAC · CHEVY TRUCKS Service Department this opportunity to service your automotive needs. If you have any questions about your car or are not completely satisfied with the repairs as performed, please contact your service advisor or our customer relations representative.
