Subject: Against Gulf Power Rate Increase

I wanted to add my NO vote to the proposed Gulf Power rate increase filed on October 12, 2016. With advances in technology and more economical sources of fuel, there should be a rate decrease and not an increase. Electricity is not something that can be avoided – it is a necessity and should be regulated by local, state and federal governments to protect the interests of the public.

This is one instance where I would welcome government intervention.

None of the reasons for the increase are justifiable. You must vote NO to the proposed increase.

Public Service Commission

As a Gulf Power customer living across the bay from the Crist Plant I don't understand the need for the proposed rate increase.

I just see this as an attempt to raise rates with no real improvements to the system. If they were going to go to all natural gas or some other large improvement I would see a justification.

Natural gas is so inexpensive, clean and abundant in the area there's no reason they should still be burning coal from West Virginia.

Bottom line is I'm against this rate increase.
