Emily—the attachment Mr. Friedman provided will be uploaded to the matrix as a supplement to the previous response, but I also wanted to forward you Mr. Friedman's response as well. Let us know if you would like any additional clarification.

Thanks!

Amber

Staff Interrogatory 162(b) is that no further testing of TTHM has been completed since August 10, 2016 even though the August 10, 2016 TTHM value was 81.3 ug/L.

Subject: RE: UIF's - ROG No. 162

Walt,

See the attached **“Bear Lake TTHM & HAA5 data table”**. Regarding sample location #1, 3701 Anna Drive, once the Locational Annual Average at that site dropped below 80 ug/L, the monitoring frequency was reduced to one sampling event per year per DEP rule. The next sampling event will occur in August 2017. Therefore, the response to Staff Interrogatory 162(b) is that no further testing of TTHM has been completed since August 10, 2016 even though the August 10, 2016 TTHM value was 81.3 ug/L.

If this does not answer staff's question let me know. Regards, Marty

Subject: FW: UIF's - ROG No. 162

Marty,

Can you get a corrected response to staff on the following?

After staff reviewed UIF's Response to Staff's 6th ROGs No. 162, the response does not appear to address the question. Our question is referencing Bear Lake's 8/10/16 test results, but UIF's response cites results from 8/12/15. Attached is the PDF with UIF's response to ROG No. 162.

I also attached the test results for Bear Lake, which are dated 8/10/16. I thought maybe UIF had listed the wrong date, but the results they list are different numbers than the 2016 results.

Name	MCL	Units	Sample date:		
			MFR's 8/10/2016	MFR's 8/10/2016	UIF Response 8/15/2015
Total Haloacetic Acids (HAA5)	60	ug/L	46.30	16.90	124
Total Trihalomethanes (TTHM)	80	ug/L	81.3	73.5	52.0

Thanks,
Walt
