10	1-4	<p>Delete</p> <p>“alternate scenarios in which the anticipated fuel and emissions costs were 20% greater than and 20% less than forecasted.”</p> <p>Replace with</p> <p>“alternate scenarios for natural gas prices and the cost of CO₂ emissions. The price of natural gas was varied by approximately 20% greater and 20% lower from the base price forecast. The low and high CO₂ price scenarios, as well as FPL’s base CO₂ price scenario, were developed by ICF International. For the low CO₂ cost scenario ICF assumed a cost of \$0 per ton for all years. For the high CO₂ price scenario, ICF used a high band case which assumed legislative action that would take effect in 2028.”</p>
