Subject: Florida needs strong energy efficiency standards

Dear Ms. Brown,

Florida will be severely impacted if climate change isn't stopped. We're facing more flooding, compromised drinking water, and life-threatening heat waves as a result of rising temperatures and rising sea levels.

A cost-effective way to reduce harmful greenhouse gas emissions is through increasing energy efficiency standards for energy utilities. Investing in energy efficiency standards has the potential to reduce energy bills for Floridians and create quality manufacturing and construction jobs, all while reducing greenhouse gas emissions.

I urge you to set strong energy efficiency goals this year. Several utilities have proposed goals of zero or close to zero in energy savings through efficiency standards. These ridiculous "goals" are unacceptable.

Please prioritize the well-being of Floridians and work to lower energy bills and greenhouse gas emissions by setting energy efficiency savings goals of 2% for the state's utilities.

Sincerely,

Felicia Sunderland

Subject: Urgent! Florida needs strong energy efficiency standards

Dear Ms. Brown,

We have turned our backs on the environment and our home for long enough. The results have been devastating and this is our last chance to change our ways. The way we respond will tell the story of how much we care about the future of our children. "The top threats to biodiversity are a result of humans living unsustainably. Natural systems cannot sustain this level of change."

Jacob Malcom, Director, Center for Conservation Innovation,
on the recent Intergovernmental Science-Policy Platform
on Biodiversity & Ecosystem Services (IPBES) report
