Subject: Energy efficiency and conservation

It is time to get information from Florida utilities about their plans to improve their energy efficiency and conservation efforts.

We need to regain rebates for solar energy and strengthen, not weaken, energy efficiency goals. We need to consider the future and our energy plans must include alternatives to fossil fuels.

Please make sure that utility companies keep our best interests in mind and our future.

Subject: Energy and Efficiency Goals

To the Public Service Commission:

Please set substantial energy saving goals for Florida utilities. Low or zero goals are not in the public interest. People who invest in utilities are not taking a risk -- utility services will always be needed and can't be outsourced to other countries. The investors don't deserve the special favor of zero energy goals.
