Subject: Support Solar Choice in Florida - Docket: 2020-0000

Dear Florida PSC Commissioners,

It is NOT appropriate to create more uncertainty / change in solar policies that will help our state to lead in clean solar power and provide good paying local jobs.

At the start of 2020, Florida ranked 4th in the nation for solar energy production, employed thousands of people and powered our State with clean, affordable, and SUSTAINABLE energy.

The economic downturn puts these jobs & future solar development at risk - it would be WRONG to make sudden regulatory changes in solar policies & create more uncertainty here.

The current net metering rule lets some Floridians grow a part of the solar market by choosing to power their homes and businesses with a prime sustainable resource, natural sunshine.

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect this so business & homeowners can generate clean solar power to support local jobs.
Please preserve success of net metering rules in Florida.

Sincerely,
James Harper
Tampa, FL 33611
