Subject: Support Solar Choice in Florida - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

It is NOT appropriate to create more uncertainty / change in solar policies that will help our state to lead in clean solar power and provide good paying local jobs.

At the start of 2020, Florida ranked 4th in the nation for solar energy production, employed thousands of people and powered our State with clean, affordable, and SUSTAINABLE energy.

The economic downturn puts these jobs & future solar development at risk - it would be WRONG to make sudden regulatory changes in solar policies & create more uncertainty here.

The current net metering rule lets some Floridians grow a part of the solar market by choosing to power their homes and businesses with a prime sustainable resource, natural sunshine.

Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect this so business & homeowners can generate clean solar power to support local jobs.
Please preserve success of net metering rules in Florida.

Sincerely,
James Harper
Tampa, FL 33611

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Rich Siegel
