Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Robert Hall
Loxahatchee Groves, FL 33470

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

I am a homeowner who has lived in Florida all my life. My wife and I are just starting the process of getting solar panels on our Home. Without net metering I fear that investment will be wasted. I also fear that other Floridians will not continue to green our energy production. We here in Florida are experiencing some of the worst effects of climate change (heat, hurricanes, sea level rise). We need to be setting an example for the world, not making life easier for big energy corporations.

The only sensible argument against net metering is that people who don't have solar panels (usually poorer citizens) end up subsidizing the cost of people that do, because net meeting pays producers who benefit from the utilities existing infrastructure. But I would argue that everyone benefits from the environment being cleaner. And in Florida (unlike some other states) I don't get paid (production credits) for this positive externality, but that is fine for me. I'm not doing this for the money. But it still has to be affordable. If you end net metering, solar panels will not be affordable. You will destroy the environment, you will destroy green jobs. And for what? To line FPL's pockets, that has been done plenty already.

Sincerely,
Barry Solomon

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Judy Kane
Tarpon Springs, FL 34689

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

Solar paneling is our sustainable future. It is in our interest as Americans and Floridians to have the benefit to solar power for homeowners and businesses of net metering for power use.

Amid a public health and economic crisis is not the time to make changes to solar rights that will hurt jobs and take money out of people's pockets.

Going into the pandemic, Florida ranked fourth among the states in electricity produced from solar panels, sustaining an industry employing more than 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, employing 250,000 people. Due to the pandemic, Florida has already lost 22 percent of its workforce due to economic uncertainty, and this could get worse.

It only make sense that Florida people and businesses be able to choose how they power their lives. Solar panels and batteries contribute to the resilience of the electric grid. During hurricane season, Floridians need more tools – not fewer – to weather storms. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

Why would our rights to use solar even a question??

This is NOT Russia!!

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Dear Commissioner Commissioner Julie Imanuel Brown,

As a homeowner whom chose to spend my hard-earned money to have solar panels installed - not only help save our precious environment but to save money in the long run on my energy usage - I want to be treated fairly. In my opinion, laws and regulations are currently "favoring" big business and large corporations while disadvantaging consumers and the "little" guy. Why shouldn't I expect to receive full, fair retail credit from my utility company for the excess energy the solar system I invested in and paid for produces?

Additionally, the middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, Florida produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Barbara Laxon
66 Main St Ste 2 Bradford, PA 16701-6514
