Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Giovanni Figueroa
Miami, FL 33157

Dear Commissioner Gary F. Clark,

You have a duty to protect the environment and to serve the best interests of Florida residents and you can help do those by strengthening net metering here in Florida.

Eliminate the 10Kw Tier 1 restriction on home solar and eliminate the onerous and counterproductive requirement for an insurance policy on Tier 2 systems. Residents want to add electric cars and a 10 Kw solar system is too small for household and electric vehicle needs.

The solar industry provides many jobs in Florida. And solar panels and batteries contribute to the resilience of the electric grid and reduce greenhouse gas emissions.

Please defend our solar industry. Please help our solar workers, business owners, and homeowners by preserving and improving net metering here in Florida.

Sincerely,
Walter Kehler

Dear Commissioner Gary F. Clark,

I have begun the installation of solar panels on my home, using net metering. It is unconscionable that the Sunshine State would act to deter residential and business solar energy production. I am not going off the grid. I am putting energy into it. Utility companies try to SELL customers solar energy that they produce in a limited way, instead of offering incentives to increase the solar industry. That industry is growing in a time when the economy is stagnating. I know more and more people who are installing solar. Think about it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

There is no gray area here or confusion about what is right or wrong. What would be one possible reason why you would take away net metering? Who is behind this and how do they stand to benefit? Pretty simple questions to ask, and to answer..

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Dear Commissioner Gary F. Clark,

Net metering injects sorely needed competition and choice into what's essentially a monopoly. It doesn't significantly shift costs to lower-income customers - in fact, it may reduce costs ref: <https://www.freeingenergy.com/distributed-rooftop-solar-raise-electricity-prices-low-income/>. It also has driven innovation like shared solar at Duke Energy: <https://www.duke-energy.com/home/products/renewable-energy/fl-shared-solar> (How can Duke offer near fixed rates/deeply discounted future rates on shared solar, without impacting low-income customers who don't enroll in the program?)

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Colin McDowell

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

I made the decision to invest in a solar power system for my home for a lot of reasons. It helps take a load off the utility company who continues to produce energy from fossil fuels, and allows me to produce my own sustainable power. The utility company still provides a valuable service for when the sun isn't shining, so the symbiotic relationship between the consumer and the utility should remain balanced. I also invested in solar because of the return on investment based on the net metering laws. It economically allows me a way to invest in the future with a return on investment that is valuable not only to me but to the entire community as we, as a country, should be transitioning to sustainable power supplies and moving off of pollution producing fossil fuel produced power.

With global climate change come increasing numbers of unstable weather patterns producing a greater number of storms and more powerful hurricanes here in Florida. The utilities have not invested in burying their distribution networks and so with every hurricane there is an inevitable loss of power. Having reliable electrical power is an absolute necessity to life. So providing incentives for the public to invest in more solar just makes good sense. Changing net metering would remove one of those incentives and should therefore not be enacted. In fact, the PSC should be encouraging the utilities to move all their vulnerable grid systems underground over time so that huge sums of money are not spent every year to repair the system after every storm.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people.
