Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Ron Bauer
550 Temple St. Satellite Beach, FL 32937-3335

The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

My husband and I invested a great deal of money for both a rooftop solar system and battery backup. To take away net metering would unfairly devalue our investment if not entirely destroy its value.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Janis Scharf

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Keval Fox

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse. This does not even consider the economic, social and environmental impact that renewable energy source as solar benefits this country. As a homeowner with solar panels installed one year ago, we have planted the equivalent of over 300 trees and have saved over 40,000 pounds of Carbon dioxide emissions.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Dear Chairman Art Graham,

I am a homeowner who has lived in Florida all my life. My wife and I are just starting the process of getting solar panels on our Home. Without net metering I fear that investment will be wasted. I also fear that other Floridians will not continue to green our energy production. We here in Florida are experiencing some of the worst effects of climate change (heat, hurricanes, sea level rise). We need to be setting an example for the world, not making life easier for big energy corporations.

The only sensible argument against net metering is that people who don't have solar panels (usually poorer citizens) end up subsidizing the cost of people that do, because net metering pays producers who benefit from the utilities existing infrastructure. But I would argue that everyone benefits from the environment being cleaner. And in Florida (unlike some other states) I don't get paid (production credits) for this positive externality, but that is fine for me. I'm not doing this for the money. But it still has to be affordable. If you end net metering, solar panels will not be affordable. You will destroy the environment, you will destroy green jobs. And for what? To line FPL's pockets, that has been done plenty already.

Sincerely,
Barry Solomon
