Subject: Net-Metering Works for Floridians

Dear Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,

Andrew Gerber

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

I made the decision to invest in a solar power system for my home for a lot of reasons. It helps take a load off the utility company who continues to produce energy from fossil fuels, and allows me to produce my own sustainable power. The utility company still provides a valuable service for when the sun isn't shining, so the symbiotic relationship between the consumer and the utility should remain balanced. I also invested in solar because of the return on investment based on the net metering laws. It economically allows me a way to invest in the future with a return on investment that is valuable not only to me but to the entire community as we, as a country, should be transitioning to sustainable power supplies and moving off of pollution producing fossil fuel produced power.

With global climate change come increasing numbers of unstable weather patterns producing a greater number of storms and more powerful hurricanes here in Florida. The utilities have not invested in burying their distribution networks and so with every hurricane there is an inevitable loss of power. Having reliable electrical power is an absolute necessity to life. So providing incentives for the public to invest in more solar just makes good sense. Changing net metering would remove one of those incentives and should therefore not be enacted. In fact, the PSC should be encouraging the utilities to move all their vulnerable grid systems underground over time so that huge sums of money are not spent every year to repair the system after every storm.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets. Of course the most drastic crisis has to do with our environment, the increasing CO2 levels in our atmosphere, and how this will affect the lives of our posterity. Sea level rise is happening and Florida is part of ground zero. We should be doing everything possible to encourage adopting solar and other renewable energies.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Laurence Pearson

Dear Commissioner Commissioner Donald J. Polmann,

I "invested" in clean energy back in 2013 when I paid way too much for an electric car... BUT It was both an investment and a way to do something to promote clean energy, and lessen my dependence on fossil fuels.

Now is NOT the time to do anything to inhibit people from helping save our planet. With as expensive as it is you should NOT make it any more difficult for people to support clean energy and solar power production.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

We installed solar panels on our house so that they could make earth-friendly electricity and pay for themselves with the money we save on our electric bill. Many Floridians are already struggling financially because of COVID and its repercussions, and need the net metering money to pay for their solar panels. Florida, at our latitude, is also one of the best places to produce solar electricity, and we should be encouraging more people to install it. Please do not take away net metering! The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Net metering helps pay back the investment I made to have my panels and system installed. That incentive is why I decided to go solar, which helps save our environment and reduces the peak demand for electricity for everyone, including those who don't yet have solar panels.

Please don't remove the net metering incentive for me and other Floridians who want to benefit from this beneficial economic and environmental source of electricity.

Sincerely,
Rollin Raymond
Melbourne Beach, FL 32951
