Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Deborah Simmons

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
BENNIE WOODARD
3645 7th Ave N Saint Petersburg, FL 33713-9022

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Chairman Art Graham,

We installed solar 8 yrs ago and have to pay annual liability insurance costing \$500 a year - in order for FPL t allow us to use it. We also struggled to get the paperwork completed correctly - in other words FLP played hard ball in letting us start.

now, as we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida. Most months we still pay extra to FPL so the few times we qualify for net metering are a big help to offset liability insurance costs. Let Florida be part of the 21st century embracing new technology and benefiting the planet.

Sincerely,
Gillian Whatmore

Subject: Protect our solar rights! Docket: 2020-0000

Dear Chairman Art Graham,

I am hopeful that someone actually reads this versus just tallying it as another form letter sent without any real consideration. I've been through this before (although previously as more of a spectator than a concerned actor). I'm gonna' leave in a lot of the jargon below as some of it is pertinent although you very well should already be aware of it.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

I'm going to personalize this a bit. I am fully in support of net metering and a quid pro quo exchange regarding electricity up to the full annual consumption by a private source. That said, I'd need to see more information to go beyond that. I don't think that private solarization should be seen as a way to earn income but rather to provide diversity to the collection of energy by the system as a whole I saw this mess when I lived in Nevada. Fairness to me is a one for one exchange of KWh with the excess being reimbursed at the wholesale rate.

Where this gets tricky is that states/systems are prone to directly promising or strongly implying that there will be a retail recompense for overage. If that's the case, then you've painted yourselves into a bit of a corner in terms of fairness and equity. At the very least, if that is the case, you should consider a process of change over time to allow the people who are already into the system based on past promises to be treated fairly. You could set a change of policy date and grandfather in those already acting according to the current presumption. That's just a thought. Good luck.

Sincerely,
Robert Sturk
