Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Art Graham,

Florida's voters have repeatedly supported policies encouraging the spread of rooftop solar. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. It will also slow the shift to eco-friendly solar power from polluting fossil fuels, promoting sea level rise due to global warming, endangering coastal Florida. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Florida produces the fourth most electricity from solar panels in the country, leads the country in new solar jobs, and employs over 12,000 people in the solar industry. "Solar installer" is the fastest growing job in the country, and the solar industry employs 250,000 people nationwide. The COVID-19 crisis could threaten up to half of these jobs. Florida is struggling with a 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

Solar panels and batteries contribute to the resilience of the electric grid and promote energy independence.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering in Florida.

Thank you,
Richard Briggs
111 Oglethorpe Blvd
St. Augustine, FL 32080

Dear Commissioner Art Graham,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,

Dear Commissioner Art Graham,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Susan smitten

Dear Commissioner Art Graham,

Please do not stop net metering! I've invested heavily in solar and I need 17 years to pay it off. I'm not in year 3 and I love that I generate power that does not contribute to sea level rise. Yes! it makes a difference, even if it is tiny.

Please keep solar affordable for the homeowner.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Art Graham,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
gregory brown
