Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Douglas Kennedy

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Eliminating Net Metering will result in fewer people installing solar systems on their homes. The costs will simply be too high. And a sharp drop in demand will cause more trouble for the solar installation industry, one of the fastest-growing job categories in the USA, already being hurt by the ongoing economic troubles of 2020.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not fewer – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets. Florida should be the leader in solar power; we are the Sunshine State after all. But we also need to be moving quickly to clean, renewable energy to save life on this planet. The longer utilities ignore and delay action, the worse the problem is.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

I am looking forward to being a Florida homeowner someday soon. Currently, I rent. But I know when I have that home, I want to power it with solar and do my part to help the planet. Please don't take away my right to make my own energy choices!

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. During hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Rhonda Rodriguez
549 Neptune Bay Cir Saint Cloud, FL 34769-7047

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Richard Baker

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,
Tom Chiotti

Dear Commissioner Andrew Giles Fay,

Climate change is real. Continuing what we've been doing only exacerbates the problem. Solar energy, as well as other eco-friendly power sources, help to improve our future and our children and grandchildren's lives. Why would anyone want to negate their use except for their own economic interest? Don't let one groups greed keep Floridians from trying to improve their future.

Then there's also the economic concerns of Floridian workers. The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is hardly the time to create more uncertainty by making changes to solar rights that will hurt jobs, take money out of people's pockets, and serve to abandon critical efforts to ameliorate climate change.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, a "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half--i.e., 125,000 jobs and families at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty. Without thoughtful, visionary, courageous leadership, this negative pattern could grow worse.

People and businesses in Florida rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience and intelligence of the electric grid. As we enter hurricane season, Floridians need more tools -- not less -- in order to weather all the storms that could be coming our way.

Please pause to intelligently generate a wholesome vision of Florida's energy needs and solutions rather than support more visionless, fossil-fuel status quo which has clearly demonstrated abundant harmfulness and merciless contributions to climate change--as evidence by record-breaking conflagrations in California, Oregon, Australia, and record-breaking domestic and worldwide flooding.

The fossil fuel industry is a dinosaur that has been fed by a gravy train of taxpayer subsidies and ignorance. Fossil fuels were great during the Industrial Revolution, but have long outlived their usefulness. Yet this dinosaur industry continues to pressure and manipulate public servants to "keep doing the same old thing over and over again while expecting different results." This is insanity. We're counting on your sanity, wholesome vision, and thoughtfulness.

Please evaluate something greater and more important than personal interest, and actively support sane solar power, solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Thank you for your integrity, consideration, and support for real solutions.

Sincerely,
Katherine Morgan

Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Many thanks

Sincerely,
Den Giarratana

Dear Commissioner Andrew Giles Fay,

As someone who's former career was in the power generation business, when I moved to Florida in the 1990s I was stunned to know that Florida is, and continues to be, one of the worst states as far as consumer point of use solar systems. Why? Because the electric utilities have been successful in lobbying the legislature to write and pass regulations that prevent consumers from utilizing solar energy at a reasonable cost.

How can Florida be the "Sunshine State" yet have some of the least "consumer friendly" solar power regulations in the nation?

Eliminating or reducing the availability of net metering essentially kneecaps the consumer who wants to reduce their consumption of energy produced by carbon generating sources that contribute to global warming such as coal and natural gas.

Regardless of the effect this change would have on the renewable power/solar industry in Florida, which is significant at the least, it's an affront to the consumer, who should have the right to produce their own power and receive payment for excess power generated and returned to the grid.

I strongly urge you to stand up to utilities who have run roughshod over the end user for years in Florida and vote against the elimination of net metering. After all, who does this benefit the most? Your fellow citizens or the stockholders of the electric utilities?

As a postscript, solar power can and will make a significant difference on how rapidly we as a state can recover from natural disasters, like hurricanes. Why would you do anything that would harm the recovery efforts of the people who live here?

Sincerely,
Daniel Penoff

Dear Commissioner Andrew Giles Fay,

Thank you for your service on the FPSC.

I know that you each work diligently in the public interest and seek to balance competing interests.

I am writing to urge you to continue your support for net metering.

I believe that the long-term increase in resilience that a distributed solar system provides is worthy of your continued support. Net metering is a critical component to make this affordable for home owners like me.

This should complement and not replace the utility scale power generation we have from FP&L. This partnership between homeowners and FP&L is the right thing for my community and for Florida.

With a warming earth increasing the power of storms, an increase in decentralization of power generation is one way to increase our ability to adapt to a changing environment. My partial independence from the grid will help my family and those of my neighbors here in Coral Gables in the event of a prolonged outage such as the one we experienced with Hurricane Andrew. 23 days without power. I don't want to repeat that again.

Thank you for your support.

Sincerely,
Richard Bookman

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Susan Wiley

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Joan Gale
