**Sent:** Monday, September 14, 2020 8:14 AM  
**To:** Office of Commissioner Polmann  
**Subject:** Protect net metering

Dear Commissioner Donald Polmann,

Keep Net metering in Florida. Allow the industry to evolve into something better. Solar creates more Jobs, more innovation, new technologies, Smarter grids, local grids.

FPL and Duke are investing in solar. There is no discount for the solar they produce. According to their own arguments they should only be aloud to charge the electric usage charge and not fuel charges when they produce solar. If power producers Solar is worth full value then so solar produced by the public.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Regards,  
Thomas Nelson

**Sent:** Monday, September 14, 2020 7:17 AM  
**To:** Office of Commissioner Graham; Office of Commissioner Polmann; Office of Chairman Clark; Office of Commissioner Brown; Office of Commissioner Fay  
**Subject:** please protect net metering

Dear commissioners:

Ahead of Thursday's hearing related to net metering, I ask you to maintain the ability of Florida's residents and businesses to access solar energy by protecting our ability to utilize net metering. Florida is moving toward renewable energy, and we must do so as rapidly as possible in order to avoid the worst impacts of climate change. When we support energy freedom for Floridians we will get to renewable energy faster, and we will have a more resilient system by having diversified sources of energy.

I want to put solar panels on my rooftop one day so that I can better support my family. Net metering helps to make that viable. Please protect net metering!

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

In addition, FPL only reimburses customers less than 2 cents per kilowatt hour for excess energy produced from rooftop solar- then resells it for 11 cents. Solar customers should be fairly compensated and not penalized for making clean energy choices. Voters rejected Amendment 1 in 2016, the last time the utilities tried to eliminate net metering and discourage roof top solar. Why is this subject being revisited?

Sincerely,  
Chris Bromfield

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Donald J. Polmann,

My husband and I have been evaluating the cost of solar for the last six months. It is an investment we hope we can do. All the bids have relied on net metering and its benefit. Without this, it clearly would change the whole picture.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Thank you. Protect consumers not corporations and utility companies.

Sincerely,  
Jeanette Hartzell  
2781 SE North Lookout Blvd Port Saint Lucie, FL 34984-6108

**To:** Office of Commissioner Polmann  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Kenneth Eberly

**Sent:** Sunday, September 13, 2020 7:56 PM  
**To:** Office of Commissioner Polmann  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Donald J. Polmann,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
John Kaminska  
1259 Waterside Ln Venice, FL 34285-6461

Dear Commissioner Donald J. Polmann,

RE: Net Metering

My wife and I rely on common sense solar policies to take control of our own electrical energy, and choose how we power our home on a day-to-day basis and during grid failures because of our 20 KWh Pika battery backup .

Our 11.5 KW solar panels and our 20 KWh batteries contribute to the resilience of the electric grid. This is particularly important to me since I depend on a medical device, a CPAP machine to help protect me due to my underlying cardiac issues. During hurricane season, Floridians need more tools – not less – in order to weather all the increasing storms that we are now experiencing. Our grid supply comes from a transformer that serves only 4 homes, so during Hurricane Irma we were without grid power for 2 weeks because we were a low priority for restoration of power. This prompted us to install a solar and battery storage system rather than trying to rely on a fossil fuel powered generator, which assumes that I am able to purchase fuel during or after a hurricane.

Please preserve my ability to pay for my solar system and batteries and our local economy by defending solar workers, business owners, and homeowners like myself from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Jack Merriam

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
jyrki ollikainen

**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Donald Polmann,

This is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

In an effort to reduce the impact of people on the environment I have invested over \$50,000 in a solar PV system to power my home. This decision was based largely on the availability of net metering to offset the cost of my electricity use.

Home solar is beneficial to us individuals and the utility companies as it works best during peak demand times in Florida thus reducing the need for building additional power plants to handle those peaks.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

The current net metering rule allows encourages growth of this segment of the solar market by allowing us to power our homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy we generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

If any changes are made to the net metering policy they should move toward watt for watt net metering and provide for the allowance of complete disconnection from the grid.

Sincerely,  
David Woods
