**Sent:** Sunday, September 13, 2020 8:35 AM  
**To:** Office of Chairman Clark  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Harry Cunningham III  
7423 Valrie Ln Riverview, FL 33569-4641

Dear Commissioner Gary F. Clark,

Watching the fires in California and the rising sea level in South Florida lets you know that climate change is real. The transition to the generation of solar energy is absolutely essential to addressing this crisis. To put policies in place that will inevitably discourage this transition is unthinkable. We should be doing everything in our power to not only encourage the growth of solar power but that we do it as soon as possible. We are simply running out of time.

Net metering is one of those mechanism that encourage this transition. Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

**To:** Office of Chairman Clark  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

Please preserve net metering. We bought our solar system with the understanding that we could sell our electricity back at the retail price. The unit was kind of expensive but we figured we were doing something good for the environment but if net metering goes away then it will become a real economic burden to us. I imagine other people will lose the motivation to install solar which means my local provider could go out of business, which will make it very hard to get mine fixed.

I don't mean to couch everything in my own interest. I think net metering and solar is great for our state and our country's national security. Thank you Charles .

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

As homeowners, my husband and I made a substantial investment in solar panels on our home knowing we may not ever see a complete return on our investment. We do enjoy cutting our electric bill in half but we also felt a commitment to the future with an investment which reduces carbon emissions. As all of us watch the west coast burn and glaciers melt we must all take responsibility to save our planet.

Florida utility companies can not continue to ignore their moral responsibility to the communities they serve.

In addition, this is not the time to create more uncertainty to a fragile economy by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and the industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Bill Ward  
2838 Miriam St S Gulfport, FL 33711-3720

**From:** rib@everyactioncustom.com on behalf of Robert Broida <rib@everyactioncustom.com>  
**Sent:** Sunday, September 13, 2020 4:15 PM  
**To:** Office of Chairman Clark  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

Florida has an amazing natural resource - LOTS of pure SUNSHINE.

I installed solar panels on my house three years ago and was surprised at how well they worked. I believe it is the right of every citizen to use their property and the non-polluting resources on their property to power their family's energy needs. I relied on the state's commonsense solar policies to allow me to take control of my own energy, and choose how to power our household needs.

I complied with all state and local codes, received all necessary inspections, and FPL did the installation of my net metering system. I have all the necessary safety features to prevent backflow of electricity during an emergency - to protect the safety of line workers.

Solar panels contribute to the public good by decreasing the need for power generation by less clean means. They serve as auxiliary power stations to increase the resilience of the electric grid. During an unpredictable hurricane season, Floridians need more tools – not less – in order to weather the storms that are coming our way.

If you believe in American ingenuity, if you believe in self-reliance, if you believe in FREEDOM, please support preserving net metering here in Florida.

Sincerely,  
Robert Broida

**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,  
Melissa Mauriello  
3623 Summerwind Cir Bradenton, FL 34209-5807

**Sent:** Sunday, September 13, 2020 4:09 PM  
**To:** Office of Chairman Clark  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Chairman Gary F. Clark,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,

**To:** Office of Chairman Clark  
**Subject:** I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Gary Clark,

As we struggle with a global pandemic, an economic crisis, and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

**Sent:** Sunday, September 13, 2020 11:51 AM  
**To:** Office of Chairman Clark  
**Subject:** Protect our solar rights! Docket: 2020-0000

Dear Commissioner Gary F. Clark,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

**Subject:** I support Solar Choice in FL - Docket: 2020-0000

Dear Commissioner Gary Clark,

As we struggle with a global pandemic, an economic crisis, civil unrest and an active hurricane season, it is not the time to create more uncertainty by signaling a change in solar policies that are helping to make our state a leader in clean solar power and providing good paying local jobs.

At the start of 2020, Florida was ranked 4th in the nation for solar energy production, employing thousands of people and powering the Sunshine State with clean, affordable, homegrown energy. The economic downturn has already put many of these jobs and future solar development at risk - we don't need sudden regulatory changes in solar policies to create even more uncertainty here in Florida.

Our current net metering rule allows a number of Floridians to grow a segment of the solar market by choosing to power their homes and businesses with Florida's number one natural resource, sunshine. Florida citizens and customers overwhelmingly support the current successful net metering policy allowing compensation for the solar energy they generate and provide to the electricity grid.

Please protect the opportunity for business and homeowners to generate clean solar power and support local jobs by preserving our successful net metering rules here in Florida.

Sincerely,  
Cat Dillard

Dear Commissioner Gary F. Clark,

I am a Florida homeowner, business owner, tax payer, and voter. I am disheartened and disappointed that there appears to be a complete lack of educated foresight as it relates to the rational need to support the advancement of private solar power in the "sunshine state". I do understand the necessity of having a reliable public utility in place, but a leadership position that provides for an ecological as well as a fair and reasonable economical incorporation of the "private sector" is your obligation. Your support of "net metering" is in the best interest of the people whom you serve, the communities in which we live, and the planet that our children will inherit.

Respectfully,

Dr Kirk Whitten  
712 Cherry Street  
Neptune Beach, Fl
