Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

The cost of home solar installation in Belgium has gone from \$20,000 to \$5,000, without government subsidies. This should happen in Florida, period.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Charles Bertram

Dear Commissioner Andrew Giles Fay,

Preseve the net metering program.

Net metering helps those that choose to participate, a way to invest in their homes and financial future.

There are precious few ways a person can invest that brings financial security to them regardless of interest rates or stock market fluctuations. Roof top solar with net metering is one dependable way, IF you vote to support net metering.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Dear Commissioner Andrew Giles Fay,

The concept of net metering is fair to both sides of the transaction. Solar producers provide power to the grid and pay for the net amount we use. The power companies get the base rate fee even when we use no power from the grid. Removing the net metering approach to this transaction is a very bad deal for all those who have already invested in solar panels to help the environment, and improve the distributed approach to power generation.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Dear Commissioner Andrew Giles Fay,

I am a retired Professional Engineer living in Port St Joe, Florida, and I installed a Photovoltaic Solar System on my house in 2010 and it has been excellent in helping reduce my electric bill significantly. In fact during the cool Spring and Fall seasons the energy produced more than offsets what I use. This helps both my household and the utility company since they do not have to invest in the construction of a costly power generating plant to compensate for the increased loads during the hot summer months when usage peaks. The bonus is a clean energy source as opposed to a polluting and climate changing one. Solar and wind are the "Fuels of the future" and individually owned systems can help in that transition. Keep net metering to promote this valuable, clean, and free resource.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Dear Commissioner Andrew Giles Fay,

The Sunshine State should depend TOTALLY on SUNSHINE for its electricity, providing battery storage for cloudy hours.

There is NO EXCUSE NOT TO DO THIS!

TOTAL SOLAR should be the goal. With implementation dates, starting now.

Look at Germany! A cloudy country! PAYS PEOPLE to install solar and buys their electricity. Regular people are making money selling electricity.

We should have SOLAR installations OVER PARKING LOTS.

There should be SOLAR on commercial rooftops.

There should be SOLAR roofs over highways, even.

The absolute WORST energy source, of course, is nuclear. Dangerous, and the waste lasts thousands of years.

Stay safe!

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

I purchased solar for my home 3 years ago, with the understanding of a net metering process.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Linda Van Dillen
3815 Little Country Rd Parrish, FL 34219-9274

Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Patricia Zopfi

Subject: Protect net metering

Dear Commissioner Andrew Fay,

Keep Net metering in Florida. Allow the industry to evolve into something better. Solar creates more Jobs, more innovation, new technologies, Smarter grids, local grids.

FPL and Duke are investing in solar. There is no discount for the solar they produce. According to their own arguments they should only be aloud to charge the electric usage charge and not fuel charges when they produce solar. If power producers Solar is worth full value then so solar produced by the public.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Subject: please protect net metering

Dear commissioners:

Ahead of Thursday's hearing related to net metering, I ask you to maintain the ability of Florida's residents and businesses to access solar energy by protecting our ability to utilize net metering. Florida is moving toward renewable energy, and we must do so as rapidly as possible in order to avoid the worst impacts of climate change. When we support energy freedom for Floridians we will get to renewable energy faster, and we will have a more resilient system by having diversified sources of energy.

I want to put solar panels on my rooftop one day so that I can better support my family. Net metering helps to make that viable. Please protect net metering!
