Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Pam Stoike
15781 Prentiss Pointe Cir Apt 102 Fort Myers, FL 33908-4190

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Paula Davidson

PV panels need to be on top of every single utility company building, and cover every bit of open square meter of earth the utility company occupies/own, before they attack net meters PV customers. Utilities need to lead by example, net meter them selves.

Sincerely,
Jim Hunt

Dear Commissioner Julie Imanuel Brown,

The concept of net metering is fair to both sides of the transaction. Solar producers provide power to the grid and pay for the net amount we use. The power companies get the base rate fee even when we use no power from the grid. Removing the net metering approach to this transaction is a very bad deal for all those who have already invested in solar panels to help the environment, and improve the distributed approach to power generation.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

The cost of home solar installation in Belgium has gone from \$20,000 to \$5,000, without government subsidies. This should happen in Florida, period.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Charles Bertram

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Dear Commissioner Commissioner Julie Imanuel Brown,

Preseve the net metering program.

Net metering helps those that choose to participate, a way to invest in their homes and financial future.

There are precious few ways a person can invest that brings financial security to them regardless of interest rates or stock market fluctuations. Roof top solar with net metering is one dependable way, IF you vote to support net metering.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Commissioner Julie Imanuel Brown,

I am a retired Professional Engineer living in Port St Joe, Florida, and I installed a Photovoltaic Solar System on my house in 2010 and it has been excellent in helping reduce my electric bill significantly. In fact during the cool Spring and Fall seasons the energy produced more than offsets what I use. This helps both my household and the utility company since they do not have to invest in the construction of a costly power generating plant to compensate for the increased loads during the hot summer months when usage peaks. The bonus is a clean energy source as opposed to a polluting and climate changing one. Solar and wind are the "Fuels of the future" and individually owned systems can help in that transition. Keep net metering to promote this valuable, clean, and free resource.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Subject: I support Solar Choice in the Sunshine State - Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The Sunshine State should depend TOTALLY on SUNSHINE for its electricity, providing battery storage for cloudy hours.

There is NO EXCUSE NOT TO DO THIS!

TOTAL SOLAR should be the goal. With implementation dates, starting now.

Look at Germany! A cloudy country! PAYS PEOPLE to install solar and buys their electricity. Regular people are making money selling electricity.

We should have SOLAR installations OVER PARKING LOTS.

There should be SOLAR on commercial rooftops.

There should be SOLAR roofs over highways, even.

The absolute WORST energy source, of course, is nuclear. Dangerous, and the waste lasts thousands of years.

Stay safe!

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Julie Imanuel Brown,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Sincerely,
Kathryn Roberts

Subject: Protect net metering

Dear Commissioner Julie Brown,

Keep Net metering in Florida. Allow the industry to evolve into something better. Solar creates more Jobs, more innovation, new technologies, Smarter grids, local grids.

FPL and Duke are investing in solar. There is no discount for the solar they produce. According to their own arguments they should only be allowed to charge the electric usage charge and not fuel charges when they produce solar. If power producers Solar is worth full value then so solar produced by the public.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people.
