Subject: Protect net metering

Dear Commissioner Andrew Fay,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and homeowners from additional uncertainty by preserving net metering here in Florida.

Regards,
CONNIE HORST

Subject: Change of NET metering rules for consumer solar installations

I had solar cells installed at the end of December, 2019. It took the utility six weeks to install the two way meter and connect my solar cells to the grid. With net metering, my estimate is that I will pay off my investment in 8 or 9 years and then start to make any "profit". As investments go, while conservative, there are plenty of more profitable investments that I could have made. The main reason I have made the investment was to reduce my carbon footprint and do a little bit to slow climate change. If there is any question as to if climate change is real and there are consequences, there have been two destructive hurricanes that seem to have brewed up over night, Laura and now Sally this year.

The advantage to the utilities is that I produce excess power during the middle of the day when the air conditioning load is the highest. During peak times, utilities end up running their less efficient peaking units and the costs can be much more expensive. They are getting my power with no investment on their part and at a relatively low cost. If the rules of net metering are changed in the future, turning a consumer investment in solar cells from nominal to poor, there will fewer installations of solar cells. Fine for the profits of the utilities, bad for me and society.

Subject: Protect our solar rights! Docket: 2020-0000

Dear Commissioner Andrew Giles Fay,

Time and time again, Florida's voters have made their support for policies meant to encourage the spread of rooftop solar clear. In 2016 voters rejected the utility-driven "Amendment 1", which would have prohibited the subsidization of solar energy, and approved 'Amendment 4', which provided tax exemptions for rooftop solar customers.

Florida is in the middle of a public health and economic crisis. Undermining the rights of solar customers to receive full compensation for the power they produce will hurt jobs and take money out of people's pockets. Now is not the time to create more uncertainty by changing the fundamental economic landscape of the solar industry.

Before COVID-19, the Sunshine state produced the fourth most electricity from solar panels in the country, led the country in new solar jobs, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could threaten up to 125,000 of these jobs across the United States. Florida is struggling with an above 10% unemployment rate since May and the economic hardship could get worse if you end retail-rate net metering.

People and businesses across the state rely on commonsense solar policies to take control of their own energy. Solar benefits Floridians' safety too. Solar panels and batteries contribute to the resilience of the electric grid. As we progress through hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, homeowners, and our environment from additional uncertainty by preserving retail compensation for net metering here in Florida.

Thank you,
Tina Henize

Dear Commissioners,

I strongly support net metering. I own rooftop solar and net metering let's me save money and save fossil fuel use by Duke.

Duke is getting into solar which is great but that doesn't mean that consumers should suffer.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.
