**Subject:** Please defend solar workers, business owners, and Florida residents by preserving net metering here in Florida.

Dear FL PSC Commissioners,

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. The COVID-19 crisis could put half, 125,000, of these jobs at risk in communities across the United States. Florida has already lost 22% of its workforce due to economic uncertainty, and this could get worse.

People and businesses across the state rely on common sense solar policies to take control of their own energy, and choose how they power their lives.

Solar panels and batteries contribute to the resilience of the electric grid. As we enter hurricane season, Floridians need more tools – not less – in order to weather all the storms that are coming our way.

Please defend solar workers, business owners, and Florida residents from additional uncertainty by preserving net metering here in Florida

Sincerely,

Roberto Bueno

Dear FL PSC Commissioners,

Floridians should be able to choose solar power as an alternative power source.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. Before this crisis began, "solar installer" was the fastest growing job in the country, and our industry employed 250,000 people. Dear FL PSC Commissioners,

Taking away net metering is exactly the wrong thing to do. I look for the day that every other single-family home in Florida has solar panels on its roof. That day will come much sooner with net metering.

The middle of a public health and economic crisis is not the time to create more uncertainty by making changes to solar rights that will hurt jobs and take money out of people's pockets.

Before COVID-19, the Sunshine state produced the 4th most electricity from solar panels in the country, and employed over 12,000 people. **Subject:** Meeting with Utility Companies Tomorrow Regarding Net Metering

Commissioners,

As a resident of Florida my entire life, it is very important to me that we retain our current net metering policies. Floridians voted down Amendment 1 a few years ago because net metering is a successful and beneficial program that has lowered utility costs for me and my neighbors, created jobs in our community, and supported clean energy. I firmly believe renewable energy sources are the inevitable way of the future. I hope utility companies can find a way to invest in these sources for their grids rather than ruining the well-liked net metering policy.

Thank you,

Bryn Taylor
